NATURE

A WEEKLY JOURNAL OF SCIENCE

"To the solid ground
Of nature trusts the Mind that builds for aye"—Wordsworth

195

Volume 191

JULY 1, 1961, to SEPTEMBER 30, 1961

LONDON
MACMILLAN AND CO., LTD.
NEW YORK: ST. MARTIN'S PRESS, INC.

DATES and PAGINATION of WEEKLY ISSUES

RB326

INDEX

AARONS, Dr. Jules, and others : Very-Low-Frequency Modulation of Discrete Frequency Solar Noise Bursts, 56
Abel-Smith, Dr. Brian : Appointed to the University of London readership in social administration at the London School of Economics and Political Science, 651
Ability (Regenerative) : Adaptive Value of (Dr. A. E. Needham), 720
Ability (Swimming), of Non-aquatic Reptiles (R. R. Tercafs), 125
Abnormal Conditions : Electrical Activity of a Giant Nerve Cell under (Dr. Yutaka Oomura, Sachio Ozaki and Takashi Maéno), 1265
Abnormal Foetal Haemoglobins (Prof. E. Silvestroni and I. Bianco), 397
Abnormal Form of Female Rat Flea, *Xenopsylla cheopis* Roths. (M. I. D. Sharma and G. C. Joshi), 727
Abnormal Human Haemoglobins : Thalassaemia and the (Dr. Harvey A. Itano and Prof. Linus Pauling), 398
Abood, Dr. L. G., and others : Distribution of Piperidine in the Brain and its Possible Significance in Behaviour, 201
  Outflux of Inorganic and Organic Phosphate during Membrane Depolarization of Excitable Tissues, 395
Aborigines (Groote Eylandt) : Classification of Kin, Age Structure and Marriage amongst the (Dr. Frederick G. G. Rose), *review* by Dr. R. Needham, 6
Abrahamson, Seymour : Chromosome Rearrangements induced by X-Rays in Immature Germ Cells of *Drosophila*, 523
Absence of Lysogeny in *Pasteurella pestis* (Dr. D. A. Smith), 522
Absence (Virtual), of Glutathione Instability of the Erythrocytes among Armenians in Iran (Dr. J. E. Bowman and Dr. D. G. Walker), 221
Absorbing Object (Homogeneously) : The Feulgen-Stained Somatic Cell Nucleus as a (Dr. Simon Iversen), 150
Absorption (Infra-Red) : Quantitative Analysis of Milk and other Emulsions by (Dr. J. D. S. Goulden), 905
Absorption (Intestinal) : Enhancement of Inhibition of, by Cetrimide–Phloridzin Combination (J. A. Nissim), 37
Absorption (Ultrasonic), of Polymer Solutions (Dr. G. Gooberman), 693
Absorption Correction : Elimination of the, in the Viscometry of Dilute Solutions of High Polymers (H. van Oene and Prof. L. H. Cragg), 1160
Absorption Heights (Ionospheric) : A Method of Estimating, from Recovery Times (Syed Ziauddin), 1084
Absorption and Distribution of Calcium-45 in the Rat : Effect of Serotonin on (Prof. S. Garattini, E. Grossi, P. Paoletti, R. Paoletti and M. Poggi), 185
Absorption Bands of Lead Monoxide : Rotational Analysis of (Dr. R. F. Barrow, J. L. Deutsch and D. N. Travis), 374
Absorption Spectra of γ-Irradiated Lead Silicate Glass (R. S. Barker, T. K. Harrison, D. A. Richardson and R. Rimmer), 374
Absorption Spectra (Ultra-violet), of 3,4-Benzopyrene : Effect of Ozone on the Fluorescence and (Z. Morlin and K. M. Sáringer), 907
Absorption Spectra (Ultra-violet), of Proteins in Deuterium Oxide (Dr. G. H. Beaven and Elizabeth Bailey), 914
Absorption Spectroscopy (Atomic) : Determination of Lead in Urine by (J. B. Willis), 381
Absorptions (Electron Spin Resonance), induced by Light in Adsorbed Layers of Cyanine Dyes in Silver Bromide Microcrystals (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Abstract Set Theory (Prof. Abraham Fraenkel), second edition, *review* by Dr. R. G. Cooke, (June 17, 1047), *erratum*, 126
Abstracts : Gas Chromatography, 1958 (edited by C. E. H. Knapman, assisted by C. G. Scott), *review* by A. Goldup, 1135
  Gas Chromatography, 1959 (edited by C. E. H. Knapman, assisted by C. G. Scott), *review* by A. Goldup, 1135
Abstracts of Efficiency in the Hospital Service (Ministry of Health), 441
Abstracts (Biological and Medical), Ltd. : Publication of *Index Biologicus*, 544
Abstracts (Technical Education), from British Sources (National Foundation for Educational Research in England and Wales), Vol. 1, No. 1, September–December, 1960, 21
Academy of Sciences of the U.S.S.R. : Mathematical Tables, Vol. 12, A Collection of Tables and Nomograms for the Processing of Observations made on Artificial Earth Satellites (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
Acarapis woodi (Rennie) : Distribution of (Prof. J. E. Eckert), 933
Acaricidal Properties of Di-(*p*-chloro-phenyl)-trifluoromethylcarbinol (K. R. S. Ascher and R. Cwilich), 1322
Accelerators (Electron Linear) : Pulse-shortening in (Dr. M. C. Crowley-Milling, T. R. Jarvis, C. W. Miller and G. Saxon), 483
Acceptance Sampling : Statistical Quality Control and (Birmingham College of Advanced Technology Course on), 337
Acceptor Molecule : Electron Affinity of the, in Charge-Transfer Complexes (Dr. M. E. Peover), 702
Accessory Respirator Organs in Air-breathing Fishes : A Hydrostatic Function of the (Dr. S. Z. Qasim and R. Hasan), 396
Accretion (Terrestrial), from the Solar Wind (Dr. Ronald Frith), 1182 ; (Dr. E. R. Harrison), 1182 ; (C. M. de Turville), 1183
Acetate : Synthesis of Succinate from (D. D. Davies), 1093
Acetate (Cellulose) Membranes : Use of, for Detecting Penicillinase-producing Organisms (Prof. R. Knox and J. T. Smith), 926
Acetic Acid (Glacial) : Use of, for Killing Parasitic Nematodes for Collection Purposes (Bjørn Berland), 1320
Acetone in the Blood and the Exhaled Air of Diabetic Patients : Rapid Infra-Red Determination of (Dr. Richard S. Stewart, Edward A. Boettner and Bruce T. Stubbs), 1008
Acheson, R. M. : An Introduction to the Chemistry of Heterocyclic Compounds, *review*, 320
Achievements in Physics, *review* by Prof. W. E. Burcham, 423
Achievements (The Major), of Science (A. E. E. McKenzie), *review* by J. M. Eyles, 110
Acid : Thyroglobulin—Effect of (Dr. A. D. Litonjua), 356
Acid (Mild), and Alkaline Hydrolysis of *M*- and *N*-Blood Group Substances: Products of (Dr. Elzbieta Romanowska), 1408
Acid Buffers : Solubility of Denatured Haemoglobin Variants in (I. D. Fraser and Dr. A. B. Raper), 355
Acid-Hydrolysis (Partial), of a Mucopolysaccharide without Appreciable *N*-Deacetylation of Hexosamine (Dr. T. J. Painter and Prof. W. T. J. Morgan), 39
Acid Mucopolysaccharide in Cockroach Ganglia (Doreen E. Ashhurst), 1224
Acid–Sulphate–Chloride Waters : Hot Spring Areas with (Dr. A. J. Ellis and S. H. Wilson), 696
Acid-stable Penicillins : Some Novel (F. P. Doyle, J. H. C. Nayler, H. Smith and E. R. Stove), 1091
Acoustical Training : A Take-Over Bid in (Prof. E. J. Richards), 748
Acoustics (Underwater) : Advanced Study Institute on (Imperial College of Science and Technology, London), 229
N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds : N,N'-Alkylene-*bis*(Acrylamides),—a New Series of Anti-tumour Agents (A. S. Tomcufcik, S. D. Willson, A. W. Vogel and A. Sloboda), 611
Actinomyces : Manual of Bacteria and, *review* by Dr. K. Zinnemann, 1333
Actinomycete : Prodigiosin in an (Jerome J. Perry), 77
Actinomyceten : Diagnostik der Bakterien und (Prof. N. A. Krassilnikov), *review* by Dr. K. Zinnemann, 1333
Action of Antigen–Antibody Complexes : Mechanism of—their Effect on Mast Cells (Dr. Ivan Mota), 572
Action of Calcium Chloride on Mortar and Concrete (M. Lawrence and H. E. Vivian), 125, *erratum*, 1145
Action of Carbon Dioxide on 6-Aminopenicillanic Acid (F. R. Batchelor, D. Gazzard and J. H. C. Nayler), 910
Action of the Hypothalamus (John Erskine Malcolm), 606
Action of Influenza Viruses, Receptor-destroying Enzyme and Proteases on Blood Group Agglutinogen M^g. (Prof. Georg F. Springer and Dr. Karlheinz Stalder), 187
Action of Neuraminidase on Haptoglobin (Prof. Max E. Rafelson, jun., Lise Cloarec, Jean Moretti and Max F. Jayle), 279
Action of Plasmin in Cartilage Matrix *in vivo* (Dr. C. H. Lack, A. J. Anderson and S. Y. Ali), 1402
Action of the Sucker of *Echeneis* : Structure and (Prof. B. Bonnell), 403
Action of Tetracycline on the Level of Properdin (Vl. Kubelka and M. Rybák), 820
Action (Auxin) : Improbability of the Chelation Hypothesis of (Dr. D. D. Perrin), 253
Action (Epinephrine) : Potentiation of (Prof. R. Imaizumi, Y. Hashimoto and M. Oka), 186
Action (Mutagenic), of the Alkylating Agents : Specificity of the (Prof. Bernard S. Strauss), 730
Action (Thyroid Protease) : Thyroglobulin—Evidence of (Dr. A. D. Litonjua), 357
Action Potential in Cells of *Chara* (A. B. Hope), 811
Actions (Potent), on Mammalian Neurones : Analogues of Glutamic and γ-Amino-*n*-butyric Acids having (Dr. J. C. Watkins and Dr. D. R. Curtis), 1010
Activation of Amino-Acids in Micro-organisms which produce Antibiotics (Dr. O. Ciferri, Dr. M. Di Girolamo and Dr. A. Bendicenti Di Girolamo), 411
Activation (Amino-Acid), in Tissues of Early Embryos (Dr. Elizabeth M. Deuchar), 1006
Activation (Neutron) : Rapid Determination of Ytterbium in Aqueous Solutions and in Thulium Oxide by (Minoru Okada), 1090
Active Cation Transport as a Pace-maker of Respiration (Dr. R. Whittam), 603
Active Components (Biologically), from Commercial Trypan Blue : Chromatographic Separation of (J. Dijkstra and J. Gillman), 803
Active Muscle Fibre : Ionic Currents in Membrane of (Dr. H. Jenerick), 1074
Active Substances (Pharmacologically), present in the Central Nervous System (Dr. Paul V. Buday), 245
Active Trisaccharides (Two Serologically), isolated from Human Blood-Group *A* Substance (I. A. F. Lister Cheese and Prof. W. T. J. Morgan), 149
Active, Sleeping and Torpid Hummingbirds : Thyroid Function in (Prof. C. J. Shellabarger, R. C. Lasiewski and G. E. Hyncik), 1318
Activities (Biological), of Steroids in relation to Cancer—Proceedings of a Conference sponsored by the Cancer Chemotherapy National Service Center, National Cancer Institute, National Institutes of Health, United States Department of Health, Education and Welfare (edited by Gregory Pincus and Erwin P. Vollmer), *review* by E. Reid, 1235
Activity of Enzymes of the Urea Cycle in Rat Liver : Effect of Adrenalectomy on the (Patricia McLean), 1302
Activity of Glutamic Acid Decarboxylase in Insect Nerve Tissue (Dr. N. Frontali), 178
Activity of Nitrate-Reductase in *Aerobacter aerogenes* : Inhibition by Oxygen of Biosynthesis and (Francis Pichinoty and Liliane D'Ornano), 879

Activity of the Reticulo-Endothelial System : Sensitivity of Mice to Bacterial Lipopolysaccharide following Alteration of (Dr. G. N. Cooper and Dr. A. E. Stuart), 294
Activity (Anthelmintic) : Pyridine Derivatives with (A. P. Phillips and R. B. Burrows), 707
Activity (L-Asparaginase), of Guinea Pig Serum : Evidence that the, is responsible for its Antilymphoma Effects (J. D. Broome), 1114
Activity (Biological), of a Tri-o-Cresyl Phosphate Metabolite (Prof. John E. Casida, Morifusa Eto and Ronald L. Baron), 1396
Activity (Circulating Thyrotrophic) : Increase of the Rate of Release of Thyroidal Iodine-131 and of, at Early Stages of Propylthiouracil Treatment in the Rat (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Activity (Electrical), of a Giant Nerve Cell under Abnormal Conditions (Dr. Yutaka Oomura, Sachio Ozaki and Takashi Maéno), 1265
Activity (Enzymic), of the Central Nervous System (Neurochemical Commission of the World Federation of Neurology International Symposium on), 1349
Activity (Glucose-6-phosphatase), in Liver and Kidney at Birth : Changes in (M. J. R. Dawkins), 72
Activity (Indoleacetic Acid Oxidase), of *Lupinus albus* L. exposed to Different Photoperiods : Effect of Gibberellic Acid on Growth and (F. Sági and A. S. Garay), 824
Activity (Mechanical), of Muscle and that of Blood Coagulation : Controlling Mechanism of the (Dr. Masahiro Fujino, Saburo Yamaguchi, Masa Takauji, Kohki Uchida, Masahide Yasuda and Tatsuaki Matsushima), 80
Activity (Mitochondrial α-Glycerophosphate Dehydrogenase), in Skeletal Muscle : Direct Relationship of Phosphorylase and (Dr. A. G. E. Pearse), 504
Activity (Oxytocinase), of Plasma of Pregnant Women (Stig E. J. Melander), 176
Activity (Phagocytic), of the Reticulo-Endothelial System of Mice : Effect of Added Vitamins on the (J. Cordingley and Prof. T. Nicol), 82
Activity (Thromboplastic), of Red Cells (Dr. James A. Inglis and Dr. June W. Halliday), 821
Activity (Transaminase), in the Cactus Plant : Diurnal Variation in (S. K. Mukerji, G. G. Sanwal and Prof. P. S. Krishnan), 516
Activity (Uterine) : Effect of Bradykinin on (Dr. B. Berde and Dr. K. Saameli), 83
β-Activity (Gross), in the Thames River (Conn.), (D. M. Skauen, T. Hatfield, D. Hanlon and J. S. Rankin, jun.), 1017
Acute Experimental Uraemia : Elimination of Bovine Serum Albumin in (Dr. G. Gowland, F. G. Smiddy, Dr. R. G. Burwell and F. M. Parsons), 1210
Acute Myeloid Leukaemia (Transplantable) : Effect of Calf Thymus Histone on Rats bearing (Dr. Lubomir Hnilica and Dr. Viktor Holoubek), 922
Adam, Dr. H. M. : Appointed reader in pharmacology at the University of Edinburgh, 443
Adaptive Value of Regenerative Ability (Dr. A. E. Needham), 720
Added Vitamins : Effect of, on the Phagocytic Activity of the Reticulo-Endothelial System of Mice (J. Cordingley and Prof. T. Nicol), 82
Addison, Prof. C. C. : Inorganic Polymers, 1047
Additional Anaphylactic Site : Pinnal Anaphylaxis, an (Dr. J. G. Feinberg), 712
Adductor Muscles ('Quick' and 'Catch'), in Brachiopods (Dr. M. J. S. Rudwick), 1021
Adducts of Urea and Thiourea obtained by means of a Sublimation Technique (B. Casu), 802
Adelberg, Edward A. (selected by) : Papers on Bacterial Genetics, *review* by L. B. Quesnel, 320
Adenine from Hydrogen Cyanide : Mechanism of Synthesis of, under Possible Primitive Earth Conditions (Prof. J. Oró), 1193
Adenosine Triphosphate : Electron Spin Resonance of (D. B. Russell and S. J. Wyard), 65
Adenosine Triphosphate Synthesis in Erythrocytes : A Positive Feedback Mechanism of (Makoto Nakao, Takashi Motegi, Toshiko Nakao, Saburo Yamazoe and Haruhisa Yoshikawa), 283
Adhikari, S., and others : Lipids of the Common Pea (*Pisum sativum* L.) with special reference to the Occurrence of Galactolipids, 1301
Adjuvants : Effectiveness of Lipid and Lipidophilic Substances as (D. W. Dresser), 1169
Adler, Saul : Immunity to Protozoa (Immunity in Leishmaniasis), 552
Administration of Endotoxin : Increase in Specific Bactericidal Antibodies after (J. Gabriel Michael, James L. Whitby and Maurice Landy), 296
Administration of Lysergic Acid Diethylamide : Effect of, on Serotonin-Levels in the Body (Dr. D. V. Siva Sankar, D. Barnara Sankar, Edward Phipps and Eleanor Gold), 499
Administration (Oral), of D-Glucosaccharo-1,4-Lactone : Inhibition of β-Glucuronidase by (S. Akamatsu, Dr. A. Kiyomoto, S. Harigaya and S. Ohshima), 1298
Administration (Parenteral), of the Vitamin : Metabolites of Vitamin B_{12} in Bile after (Dr. John B. Stokes), 807
Adrenalectomy : Effect of, on the Activity of Enzymes of the Urea Cycle in Rat Liver (Patricia McLean), 1302
Adrenalectomy and Corticosteroids : Effect of, on Distribution of Radioactivity in Protein of Cell Fractions from Myocardial Slices (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Adrenergic Neurone : The (Sir Lindor Brown), 1143
Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine (A. L. A. Boura, F. C. Copp, A. F. Green, H. F. Hodson, G. K. Ruffell, M. F. Sim, E. Walton and E. M. Grivsky), 1312
Adsorbed Layers of Cyanine Dyes on Silver Bromide Microcrystals : Electron Spin Resonance Absorptions induced by Light in (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Adsorbents of High Surface Area : Measurements of Heats of Adsorption of Organic Vapours on, using a Continuous Flow Calorimeter (G. H. Bell and A. J. Groszek), 1184
Adsorption (Heats of), of Organic Vapours on Adsorbents of High Surface Area using a Continuous Flow Calorimeter : Measurements of (G. H. Bell and A. J. Groszek), 1184
Adsorption Studies by Electron Bombardment : Evaporated Carbon Films of Large Area for (A. E. Bell, J. Pritchard and Prof. K. W. Sykes), 487
Adult Birds : Comparison of the Serum Protein Fractions of the Newly Hatched Chick with those of, using Starch-gel Electrophoresis (A. Amin), 703
Adult Education, Universities Council for : Report for 1959-60, 861
Adult Rats (New-born and) : Collagen Fractions in the Skin of (Nestor Gonzalez Cadavid, Berta Denduchis and Roberto E. Mancini), 1297
Adult Rats (Normal) : Stimulation by Heparin of Parenchymal Liver Cell Proliferation in (Dr. M. Zimmerman and Evemarie Celozzi), 1014
Advanced Research Projects Agency, and others (sponsored by the) : A Symposium on Space Trajectories (edited by the Technical Staff, Research Division, Radiation Incorporated), *review* by D. G. King-Hele, 1334
Advanced Study Institute Programme, 1962 (NATO), 442
Advanced Study Institute on Underwater Acoustics at the Imperial College of Science and Technology, London, 229
Advanced Technology, Birmingham College of : Course on Statistical Quality Control and Acceptance Sampling, 337
Advanced Technology, Welsh College of (Dr. A. Harvey), 127
Advanced Technology in Britain : Control of Colleges of, 20
Advancement of Basic Science : Disease and the (edited by Dr. Henry K. Beecher), *review* by Sir George Pickering, 530
Advancements in Space Research : Further, 631
Advances in Agronomy (edited by A. G. Norman), Vol. 12, *review* by G. V. Dyke, 213
Advances in Fluorine Chemistry (edited by Prof. M. Stacey, Prof. J. C. Tatlow and Dr. A. G. Sharp), Vol. 1, *review* by Dr. Richard Dresdner, 319
Advances in Processing Cereals : Recent (Food Group of the Society of Chemical Industry Symposium on), 755
Advisory Council (Regional), for Technological Education, London and Home Counties : Regional Development Plan for Courses for the Diploma in Technology, 1044
Aedes aegypti : Experimental Transmission of *Borrelia anserina* (Sakharoff 1891) by (J. A. Roberts), 1225
Aedes aegypti var. *Queenslandensis* : Blood-Feeding, Fecundity and Ageing in (Dr. M. M. J. Lavoipierre), 575
Aerobacter aerogenes : Induced Enzyme Synthesis in Aqueous Suspensions of Starved Stationary Phase (R. E. Strange), 1272
  Inhibition by Oxygen of Biosynthesis and Activity of Nitrate-Reductase in (Francis Pichinoty and Liliane D'Ornano), 879
Aerodynamics : Incompressible (edited by Bryan Thwaites), *review* by Prof. Leon Trilling, 315
Aeronautical Research in Asia and Africa, 1043
Aeronautics, College of (Cranfield) : Appointment of Prof. A. H. Lefebvre to the chair of aircraft propulsion, 1042
Affinity (Electron), of the Acceptor Molecule in Charge-Transfer Complexes (Dr. M. E. Peover), 702
Africa : A Poikilohydrous, Poikilochlorophyllous Angiosperm from (Dr. D. J. Hambler), 1415
Africa's First Science Museum (Murray Schoonraad), 848
Africa (East) : Medical Research in, 226
Africa (Eastern and North-Eastern) : Birds of (C. W. Mackworth-Praed and C. H. B. Grant), second edition, *review* by Sir Landsborough Thomson, 9
Africa (Asia and) : Aeronautical Research in, 1043
African Bibliographies : A Bibliography of, covering Territories South of the Sahara (South African Public Library, Grey Bibliographies No. 7), fourth edition, 959
African Jurisprudence (Prof. M. Gluckman), 991
African States (Modern) : Convervation of Nature and Natural Resources in (International Union for the Conservation of Nature and the Commission for Technical Co-operation in Africa Conference on), 958
African Wildlife : New Hope for, 958
African (East) Council for Medical Research : Report for 1959-60, 226
African (East and West) Stocks of *Papilio dardanus* (Lep.) : Genetics of a Difference in the Male Genitalia of (J. R. G. Turner, C. A. Clarke and P. M. Sheppard), 935
African (South) Animal Life—Results of the Lund University Expedition in 1950-1951, Vol. 7 (edited by Bertil Hanstrom, Per Brinck and Gustaf Rudebeck), *review* by Prof. O. Lowenstein, 1135
African (South) Museum : Annual Report for 1959-60, 1044
African (South) Public Library : Grey Bibliographies No. 7, A Bibliography of African Bibliographies, covering the Territories South of the Sahara, fourth edition, 959
African (West) Estuary : Seasonal Fluctuations and Distribution of Nitrite in a Tropical (J. C. D. Watts), 929
Africans in Northern Rhodesia : Blindness in (Dr. C. M. Phillips), 753
Africans in Rhodesia : Diabetes Mellitus in (Dr. M. Gelfand and W. R. Carr), 227
Afterglow Emission (New), associated with Metastable Nitrogen Atoms (L. Herman, and R. Herman), 346
Aftergut, S., and Brown, G. P. : Electronic Properties of Imidazole, 379
Afzelius, Björn A. : Flimmer-flagellum of the Sponge, 1318
Agammaglobulinaemia : Immunoelectrophoretic Examination of (Fred Rosen, Charles A. Janeway and Prof. David Gitlin), 1109
Agar Disk Method for the Direct Observation of Nematode-trapping Fungi in the Soil (Roderic C. Cooke), 1411
Agarwala, Dr. S. C., and others : Effect of Excess Supply of Heavy Metals on Barley during Germination, with special reference to Catalase and Peroxidase, 726
Age : Distribution of Human Chromosome Counts in relation to (Patricia A. Jacobs, W. M. Court Brown and Dr. Richard Doll), 1178
  Frequency of the 'Alpha' Rhythm, Reaction Time and (Dr. Walter W. Surwillo), 823
Age of Bed I, Olduvai Gorge, Tanganyika (Dr. L. S. B. Leakey, Dr. J. F. Evernden and Dr. G. H. Curtis), 478
Age of the Orogeny and Granites in South-West England (T. R. Owen), 486 ; (N. E. Butcher), 486
Age (A Great), for Science (Dr. Warren Weaver), 312
Age (The New), in Physics (Prof. Sir Harrie Massey), *review* by Prof. W. E. Burcham, 423
Age-Dependent Mortality in Fish : Expected Rate of Senescence and (Dr. Alex Comfort), 822
Age-Determinations (Preliminary), in the Lizard Area (J. A. Miller and D. H. Green), 159
Age Measurements on Antarctic Rocks (Queen Maud Land), (Sarah Deutsch, Prof. E. E. Picciotto and M. Reinharz), 1286

Age Structure and Marriage amongst the Groote Eylandt Aborigines: Classification of Kin, (Dr. Frederick G. G. Rose), *review* by Dr. R. Needham, 6
Age and Kinship in Australia, *review* by Dr. R. Needham, 6
Ageing: Research into Problems of, 1145
  Research Highlights in (United States Department of Health, Education and Welfare, Public Health Service Publication No. 854), 1145
Ageing and the Semi-skilled—a Survey in Manufacturing Industry on Merseyside (Alistair Heron and Sheila M. Chown, assisted by M. S. Featherstone and Catherine Cunningham), 1249
Ageing (Blood-Feeding, Fecundity and), in *Aedes aegypti* var. *Queenslandensis* (Dr. M. M. J. Lavoipierre), 575
Agents (Adrenergic Neurone-blocking), related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine (A. L. A. Boura, F. C. Copp, A. F. Green, H. F. Hodson, G. K. Ruffell, M. F. Sim, E. Walton and E. M. Grivsky), 1312
Agents (Alkylating): Specificity of the Mutagenic Action of the (Prof. Bernard S. Strauss), 730
Agents (Anabolic), and Histamine Metabolism (Dr. K. S. Kim), 1368
Agents (Antimicrobial), and Chemotherapy (American Society for Microbiology Interscience Conference on), 651, 1250
Agents (Anti-tumour): N,N'-Alkylene-*bis*(Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a New Series of (A. S. Tomcufcik, S. D. Willson, A. W. Vogel and A. Sloboda), 611
Agents (Chemical): Induction of Tumours by Polyoma Virus—Enhancement by (K. E. K. Rowson, F. J. C. Roe, J. K. Ball and Dr. M. H. Salaman), 893
Ages: The Frequency of Meteorite Falls throughout the (Prof. Herbert Dingle), 482; (Prof. Hans Pettersson), 482
Agglutinogen M^g (Blood Group): Action of Influenza Viruses, Receptor-destroying Enzyme and Proteases on (Prof. Georg J. Springer and Dr. Karlheinz Stalder), 187
Aggregates (Natural Soil): Role of Polysaccharides in Stabilization of (Dr. D. J. Greenland, G. R. Lindstrom and Dr. J. P. Quirk), 1283
Agrell, I. P. S., and Christensson, E. G.: Influence of Polyvalent Ions on Histones isolated from Different Tissues, 284
Agricultural Botany, National Institute of: Appointment of D. B. MacKay as chief officer of the Official Seed Testing Station, 856
Agricultural Materials: Strontium-90 in Milk and, in the United Kingdom, 1959-1960 (Agricultural Research Council, Report No. 4), 20
Agricultural Problems in Developing Countries (Nutrition Society Symposium on), 1250
Agricultural Research Council: Report No. 4, Strontium-90 in Milk and Agricultural Materials in the United Kingdom, 1959-1960, 20
  Survey of Farm Buildings in Britain, 440
  Bibliography of Research Publications on Farm Buildings, Section 5, Buildings for the Drying and Storage of Grain, 440
Agricultural Science, Australian Institute of: *Australian Journal of Experimental Agriculture and Animal Husbandry*, No. 1, 544
Agricultural Science, Easter School in: Proceedings of the University of Nottingham Seventh (1960)—Digestive Physiology and Nutrition of the Ruminant (edited by Dr. D. Lewis), *review* by Dr. I. W. McDonald, 1334
Agriculture at Bangor, 439
Agriculture: The Revolution in (Sir William Slater), 991
Agriculture, Ministry of (in the Government of Northern Ireland): Leaflets on the Raising of Crops and Animals, 959
Agriculture and Horticulture in Northern Ireland: Aids to, 959
Agriculture (Experimental), and Animal Husbandry (Australian Journal of), No. 1 (Australian Institute of Agricultural Science), 544
Agronomy: Advances in (edited by A. G. Norman), Vol. 12, *review* by G. V. Dyke, 213
Ahmed, K., and others: Electron Transport System and Phosphoproteins of Mitochondria, 1309
Aids to Agriculture and Horticulture in Northern Ireland, 959
Aims, Organization and Methods of University Extra-Mural Libraries in Great Britain (E. P. Pritchard), 649
Ainsworth, Dr. G. C.: Storage and Retrieval of Biological Information, 12
  Ainsworth and Bisby's Dictionary of the Fungi, fifth edition, *review* by Prof. John Colhoun, 109
Ainsworth and Bisby's Dictionary of the Fungi, fifth edition, by Dr. G. C. Ainsworth, *review* by Prof. John Colhoun, 109
Air at Ground Level: Seasonal Variations of Caesium-137 in (K. G. Vohra, V. S. Bhatnagar and C. Rangarajan), 747
Air at a Reduced Pressure: Bio-Assay of Erythropoietin in Mice made Polycythaemic by Exposure to (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Air within the Stratosphere: World-Wide Circulation of (P. Goldsmith and F. Brown), 1033
Air (Clean), National Society for: Fumifugium, or the Smoake of London Dissipated (John Evelyn), reprint, 752
  Twenty-eighth Conference, 1250
Air (Exhaled), of Diabetic Patients: Rapid Infra-Red Determination of Acetone in the Blood and the (Dr. Richard D. Stewart, Edward A. Boettner and Bruce T. Stubbs), 1008
Air (Ground-Level): Comparison of Beryllium-7 and Caesium-137 Radioactivity in (Dr. P. F. Gustafson, M. A. Kerrigan and S. S. Brar), 454
Air-breathing Fishes: A Hydrostatic Function of the Accessory Respiratory Organs in (Dr. S. Z. Qasim and R. Hasan), 396
Air Force Cambridge Research Laboratories, United States (Thermal Radiation Laboratory of the Geophysical Research Directorate): Conference on Electrically Exploded Wires, 1250
Air Showers (Extensive), in the Atmosphere: Photography of Cerenkov Light from (D. A. Hill and N. A. Porter), 690
Air-Swallowing, a Mechanism in Photic Reversal of the Beetle *Trypodendron* (Prof. Kenneth Graham), 519
Aira Caldera, Kyusyu, Tokyo: Gravity Survey on the (Izumi Yokoyama), 966
Aircraft Establishment (Royal), Farnborough: Open Days (Peter Sanderson), 232
Aircraft Propulsion at the College of Aeronautics, Cranfield, 1042
Aisenberg, Dr. Alan C.: The Glycolysis and Respiration of Tumours, *review* by Prof. F. Dickens, 1335
Aisenberg, Dr. Alan C., and Morris, Harold P.: Energy Pathways of Hepatoma No. 5123, 1314
Aitken, Prof. A. C.: *Obituary* of Prof. H. W. Turnbull, 223
Aizawa, Kazuyuki, and others: Isolation of Anthraquinone from Humus, 415
Akamatsu, A., and others: Inhibition of β-Glucoronidase by Oral Administration of D-Glucosaccharo-1,4-Lactone, 1298
Albe-Fessard, Prof. D. (Bowsheer, Dr. D. R., and): Assessment of Pain (Somatic Sensations), 1353
Albert, Prof. Z., and others: Histochemical Demonstration of Gamma-Glutamyl Transpeptidase, 767
Alberta, Research Council of: Information Series No. 23, Alberta Sub-bituminous Coals as Drilling Fluid Thinners (E. J. Jensen), 1144
Alberta Sub-bituminous Coals as Drilling Fluid Thinners (E. J. Jensen), 1144
Albumin (Bovine Serum): Elimination of, in Acute Experimental Uraemia (Dr. G. Gowland, F. G. Smiddy, Dr. R. G. Burwell and F. M. Parsons), 1210
Albumin (Serum): Splitting of, during Electrophoresis on Paper (J. V. McLoughlin), 1305
Alcock, Dr. C. B.: Appointed reader in chemical metallurgy at the Imperial College of Science and Technology, London, 443, 1349
Alchohol (Phenethyl), and Tyrosol: Formation of, during Fermentation of a Synthetic Medium lacking Amino-acids (R. Stevens), 913
Alcohol (Polyvinyl): Effect of, on the Distribution of Iodine-131 in the Internal Organs, Fluids and Excreta of Rabbits (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Alcohol Consumption (Water and): Comparison between, in Six Animal Species in Free-choice Experiments (Dr. Alpo Arvola and Dr. Olaf Forsander), 819
Alcohol Dehydrogenase (Liver): An Inhibitor of, in Preparations of Reduced Diphosphopyridine Nucleotide (Dr. Keith Dalziel), 1098
Alcohol and Sodium Chloride: Serum Lipids in relation to the Intake of (Erling Lund, Torben Geill, Prof. Henrik Dam and Gunhild Kristensen), 1095
Alcohols: Peak-Shift Technique in Gas–Liquid Chromatography—Trimethylsilyl Ether Derivatives of (Stanley H. Langer and Peter Pantages), 141
Alcohols (Long-Chain), and Glycol Monoalkyl Ethers: Compressibility and Specific Evaporation Resistance of the Monolayers of (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Alcohols and Sugars: Regulation of Pyrogallol Oxidations by (B. Z. Siegel, S. M. Siegel and N. S. Goodman), 180
Alderson, Dr. Thomas: Mechanism of Mutagenesis induced by Formaldehyde—the Essential Role of the 6-Amino Group of Adenylic Acid (or Adenosine) in the Mediation of the Mutagenic Activity of Formaldehyde, 251
Aldosterone: Stimulation by, of Sodium Transport in the Loop of Henle (Dr. J. Crabbé), 817
Aldosterone Excretion and Potassium Retention in Subjects living at High Altitude (P. J. Ayres, Rona C. Hurter, Dr. E. S. Williams and J. Rundo), 78
Aldosterone (Anti-) *SC* 5233: Electrolyte Retention produced by the (J. B. Farmer and B. Petch), 1308
Aldred, Cyril: Appointed keeper of the Department of Art and Ethnography of the Royal Scottish Museum, Edinburgh, 648; work of, 648
Aldridge, D. D.: Norwich Meeting of the British Association for the Advancement of Science, 16
Alexander, Dr. P.: Effects of Ionizing Radiation on Organic and Biological Solids (Sulphur Compounds as Protective Agents), 1151
Alexander, Dr. P., and Block, R. J. (edited by): A Laboratory Manual of Analytical Methods of Protein Chemistry (including Polypeptides), Vol. 1, The Separation and Isolation of Proteins, *review* by Dr. D. T. Elmore, 320
Alexander, Pauline, and Nixon, Dr. D. A.: Foetal and Neonatal Physiology (The Foetal Kidney), 344
Algae (Marine), of the Eastern Tropical and Subtropical Coasts of the Americas (Prof. William Randolph Taylor), *review* by Prof. Lily Newton, 1234
Algological Study on the Eastern Coasts of the Americas, *review* by Prof. Lily Newton, 1234
Ali, Dr. M. Asgar: Appointed to an I.C.I. research fellowship in the University College of North Staffordshire, 229
Ali, Prof. M. A.: Effect of Thyroxine plus Thiourea on the Early Development of the Chum Salmon (*Oncorhynchus keta*), 1214
Ali, S. Y., and others: Action of Plasmin on Cartilage Matrix *in vivo*, 1402
Aliens: Weeds and (Sir Edward Salisbury), *review* by Dr. Alec Lazenby, 842
Alkaline Hydrolysis of *M*- and *N*-Blood Group Substances: Products of Mild Acid and (Dr. Elzbieta Romanowska), 1408
Alkaline Phosphatase: Distribution of (Phosphatases in *Schistosoma mansoni*), (Dr. D. L. H. Robinson), 473
Alkaloidal Fraction from the Bark of the Jamaican Shade Tree *Pithecolobium samath* Benth.: Pharmacology of the (B. E. Leonard and Dr. H. S. A. Sherratt), 287
Alkaloids (Heat-Labile), from Plants: Extraction of (Dr. A. R. Mattocks), 1281
Alkylated Derivatives (Reduced), of some Myeloma Globulins and Bence-Jones Proteins: Comparison of (Dr. M. D. Poulik and Dr. G. M. Edelman), 1274
Alkylating Agents: Specificity of the Mutagenic Action of the (Prof. Bernard S. Strauss), 730
N,N'-Alkylene-*bis*(Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a New Series of Anti-tumour Agents (A. S. Tomcufcik, S. D. Willson, A. W. Vogel and A. Sloboda), 611
Allam, D. S., and Lee, W. H.: Ultrasonic Velocity in Aqueous Silver Nitrate Solution, 1388
Allan, Dr. D. A.: At the sixty-seventh Annual Conference of the Museums Association (Ideal Display of Natural History Objects should include the Clinical and the Artistic), 553
  Retirement from the directorship of the Royal Scottish Museum, Edinburgh, 648; work of, 648
Allanson, J. T.: Appointed to the second chair of electrical engineering at the University of Birmingham, 647; work of, 647
Allard, Prof. R. W.: Principles of Plant Breeding, *review* by Dr. Kenneth S. Dodds, 636
Alleged Anticomplementary Effect of Aspirin (K. W. Anderson), 1012
'Alleles' (Amino-Acid): Non-Randomness in (Richard V. Eck), 1284

Allelic Series : Limitations of Geometrical Models for Complementation Mapping of (Prof. Elof Axel Carlson), 788
Allen, Dr. Clifford : *Obituary* of Prof. C. G. Jung, 223
  Jungian Psychology, *review*, 1235
Allen, C. P. : Blood Groups in Infra-human Species (Blood Groups of Chickens), 654
Allen, Prof. G. C. : The Structure of Industry in Britain, 1332
Allen, jun., Dr. Harry C. : Appointed chief of the Analytical and Inorganic Chemistry Division of the United States National Bureau of Standards, 1346 ; work of, 1346
Allen, Dr. J. A. : A Biology of Crustacea, *review*, 111
Allen, Dr. P. E. M., and Patrick, C. R. : Generation of Radicals in Pairs and the Kinetics of Radical Chain Reactions in Solution, 1194
Allen, Richard, and others : Very-Low-Frequency Modulation of Discrete Frequency Solar Noise Bursts, 56
Allen, Dr. T. K., and Bickerton, Dr. R. J. : Experiments on the Compression of Plasma in Cusp Geometry, 794
Alletson, D. L., and others : Inorganic Polymers (Dialkyl Tin Oxides), 1047
Allogibberic Acid : Effects of Gibberellic Acid and, on Flowering and Internode-length in *Pisum sativum* (I. C. Murfet and H. N. Barber), 514
Alloy (Magnesium) : Effect of Chloride Concentration on the Aqueous Corrosion of a (D. de G. Jones and H. G. Masterson), 165
α-Amylase : Effect of, on the Ehrlich Mouse Ascites Tumour (Dr. F. Steckerl, A. Ofodile, R. R. Campbell and G. H. Friedell), 1113
α-Glycerophosphate Dehydrogenase (Mitochondrial), in the Nervous System : Histochemical and Homogenization Studies of (R. Hess and Dr. A. G. E. Pearse), 718
α-Glycerophosphate Dehydrogenase Activity (Mitochondrial), in Skeletal Muscle : Direct Relationship of Phosphorylase and (Dr. A. G. E. Pearse), 504
α-Keto-Acid Hydrazones : Application of the Nickel Reaction and Thermal Isomerization of, for their Chromatographic Analysis (A. M. Tokushige and Dean E. S. Cook), 797
α-Particles (Polonium-210) : Circumscribing Irradiation of Surface Structures of Cylindrical Animal and Plant Cells with (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
'Alpha' Rhythm, Reaction Time and Age : Frequency of the (Dr. Walter W. Surwillo), 823
α-Tocopherol : Myopathy affecting the Rottnest Quokka (*Setonix brachyurus*) reversed by (B. A. Kakulas), 402
α-Virginis (Spica) Nebula (Walter A. Feibelman), 1083
α- and β-Forms of Selected Sugars : Relative Sweetness of (Rose Marie Pangborn and Sandra C. Gee), 810
Alteration of Activity of the Reticulo-Endothelial System : Sensitivity of Mice to Bacterial Lipopolysaccharide following (Dr. G. N. Cooper and Dr. A. E. Stuart), 294
Alterations of Conscious Awareness : Spike and Wave Discharges and (L. Goldie and J. M. Green), 200
Altitude (High): Aldosterone Excretion and Potassium Retention in Subjects living at (P. J. Ayres, Rona C. Hurter, Dr. E. S. Williams and J. Rundo), 78
Ambrózi, A. : At the Second International Measurement Conference (An Electronic Statistical Quality Control Apparatus which indicates Average and Variance Directly), 1350
Amelin, V. M. (Zhongolovich, I. D., and) : A Collection of Tables and Nomograms for the Processing of Observations made on Artificial Earth Satellites, *review* by D. G. King-Hele, 1135
America, Geological Society of : Special Paper 65, The Floors of the Oceans, I, The North Atlantic—Text to accompany the Physiographic Diagram of the North Atlantic (Bruce C. Heezen, Marie Tharp and Maurice Ewing), *review* by Dr. G. E. R. Deacon, 531
America (Latin) : Nutrition in (Food and Agriculture Organization of the United Nations Meetings on), 959
American : The Victorian—Lithographs from the Harry T. Peters 'American on Stone' Collection (Antony N. B. Garvan and Peter C. Welsh), 226
'American on Stone' Collection (Harry T. Peters) : The Victorian American —Lithographs from the (Antony N. B. Garvan and Peter C. Welsh), 226
American Academy of Arts and Sciences : Monograph Prizes, 442
American Academy of Neurology (Section on Neurochemistry) : Symposium on the Neurochemistry of Nucleotides and Amino Acids (edited by Roscoe O. Brady and Donald B. Tower), *review* by Dr. R. V. Coxon, 318
American Association of Clinical Chemists (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
American Astronautical Society, and others (sponsored by the) : A Symposium on Space Trajectories (edited by the Technical Staff, Research Division, Radiation Incorporated), *review* by D. G. King-Hele, 1334
American Bacteriologists, Society of (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
American Chemical Society (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
American Grants for Nuclear Equipment in Argentina, Brazil and Israel, 442
American Institute of Mining, Metallurgical and Petroleum Engineers (Iron and Steel Institute and the Metallurgical Society of the) : Special Meeting in the United States and Canada, 651
American Mathematical Society : Proceedings of Symposia in Applied Mathematics, Vol. 10, Combinatorial Analysis (edited by Richard Bellman and Marshall Hall, Jr.), *review* by Prof. L. S. Goddard, 321
American Orchid Society, and others : Third World Orchid Conference, London, 1960—Proceedings of the, *review* by V. S. Summerhayes, 213
American Philosophical Society : Year Book 1960, 335
  History of the American Philosophical Society (E. G. Conklin), 335
American Revolution : Drug Supplies during the (George B. Griffenhagen), 761
American Society for Cell Biology : Symposium on Cell Continuity, 1045
  Symposium on Cell Diversification, 1045
  Symposium on Characteristics of Cell Interfaces, 1045
American Society for Microbiology : Inter-Science Conference on Antimicrobial Agents and Chemotherapy, 651, 1250
American Society for Testing Materials (Committee *E*-14), (Mass Spectrometry Group of the Institute of Petroleum and the) : Conference on Mass Spectrometry, 24
American Electricity Plant : New, 22
Americas : Algological Study on the Eastern Coasts of the, *review* by Prof. Lily Newton, 1234
  Marine Algae of the Eastern Tropical and Subtropical Coasts of the (Prof. William Randolph Taylor), *review* by Prof. Lily Newton, 1234
Amides (Primary) : A New Relation between the N–H Stretching Frequencies of (Prof. P. G. Puranik and K. Venkata Ramiah), 796
Amiel, Dr. J. L. : Awarded a grant from the Lady Tata Memorial Trust, for research on leukaemia and allied diseases, 228
Amin, A. : Comparison of the Serum Protein Fractions of the Newly Hatched Chick with those of Adult Birds using Starch-gel Electrophoresis, 708
Amines in Rumen Liquid of Cattle : Keto-Acids and (Dr. C. J. G. van der Horst), 73
Amines (Catechol) : Interaction of Hydrocortisone, the Sulphydryl Group, and the (Dr. Sidney Roston), 490
Amino-Acid Activation in Tissues of Early Embryos (Dr. Elizabeth M. Deuchar), 1006
Amino-Acid 'Alleles' : Non-Randomness in (Richard V. Eck), 1284
Amino-Acid Composition of Serum Mucoprotein in Rheumatic Fever (Prof. D. O'Brien, C. H. M. Walker and D. Walker), 922
Amino-Acid Esters : Effect of, on the Growth of Fibroblast Cultures (Dr. I. Fehér, A. Döklen and V. Selmeci), 494
Amino-Acid Liberation from Proteins by Enzyme or 'Heat Catalysed' Hydrolysis (S. M. Hardy), 1061
Amino-Acid Mixtures from Protein Hydrolysates : A Simplified Method for separating, on One Ion-Exchange Column during Preparation (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Amino-Acid Replacements : Non-Random Occurrence of (C. R. Woese), 1196
Amino-Acid Sequences : Immunochemical Distinction between Insulins with Identical (Dr. Solomon A. Berson and Dr. Rosalyn S. Yalow), 1392
Amino-Acids, *review* by Sir Hans Krebs, 1132
Amino Acids : Chemistry of the (Dr. Jesse P. Greenstein and Dr. Milton Winitz), *review* by Sir Hans Krebs, 1132
  Complexes of Vermiculite with (G. F. Walker and W. G. Garrett), 1389
  Formation of Phenethyl Alcohol and Tyrosol during Fermentation of a Synthetic Medium lacking (R. Stevens), 913
  The Neurochemistry of Nucleotides and—a Symposium of the Section on Neurochemistry, American Academy of Neurology (edited by Roscoe O. Brady and Donald B. Tower), *review* by Dr. R. V. Coxon, 318
Amino-Acids concerned with the Biosynthesis of Urea : Prevention of Ammonia Toxicity by (Dr. Francesco Salvatore and Dr. Vincenzo Bocchini), 705
Amino-Acids in Micro-organisms which produce Antibiotics: Activation of (Dr. O. Ciferri, Dr. M. Di Girolamo and Dr. A. Bendicenti Di Girolamo), 411
Amino-Acids (Iodinated) : A Spray Method for the Simultaneous Detection of Iodide and, on Filter Paper Chromatograms (Dr. A. Van Zyl and M. Bhaga), 275
Amino-Acids (Sulphur) : Metabolism of the, and of Sulphate in *Blattella germanica* (Richard J. Block and S. Mark Henry), 392
Amino-Acids and Globin in Duck Blood *in vitro* : Intermediate Pool between (L. Bianco, G. Giustina and E. Lazzarini), 40
γ-Amino-*n*-butyric Acids (Glutamic and) : Analogues of, having Potent Actions on Mammalian Neurones (Dr. J. C. Watkins and Dr. D. R. Curtis), 1010
Amino-derivatives of 11β, 17α, 21-Trihydroxy-3,20-Dioxo-1,4-Pregnadiene (J. Tóth, Z. Tuba and L. Szporny), 607
2-Aminoethanol : Decreased Urinary Excretion of, by Irradiated Human Beings (Dr. Ralph R. Cavalieri, M. T. Van Metre and W. I. Sivertsen), 1303
6-Aminopenicillanic Acid : Action of Carbon Dioxide on (F. R. Batchelor, D. Gazzard and J. H. C. Nayler), 910
  Identification of a Compound related to, isolated from Culture Media of *Penicillium chrysogenum* (A. Ballio, Prof. E. B. Chain, F. Dentice di Accadia, M. Mauri, K. Rauer, M. J. Schlesinger and Sondra Schlesinger), 909
  Simple, Quick Methods for Detection of (J. Uri and F. Sztaricskai), 1223
6-Aminopenicillanic Acid from Benzylpenicillin : A Method for Isolating Bacteria capable of producing (Prof. Yukio Kameda, Yukio Kimura, Etsuko Toyoura and Tomoo Omori), 1122
Aminopeptidase (Human Serum Leucine) : Sub-fractionation of (Prof. Clyde A. Dubbs, Charlotte Vivonia and Jean M. Hilburn), 1203
Aminopeptidase (Leucine), in the Mammary Gland of the Cow and Rat (Prof. S. Talanti and Prof. Väinö K. Hopsu), 86
Amitotically : Deoxyribonucleic Acid Content of Nuclei dividing (Prof. K. W. Cleland), 504
Ammocoete Species : Oocyte Numbers as a Diagnostic Character for the Identification of (Dr. M. W. Hardisty), 1215
Ammonia Toxicity : Prevention of, by Amino-acids concerned in the Biosynthesis of Urea (Dr. Francesco Salvatore and Dr. Vincenzo Bocchini), 705
Amos, Dr. D. B. : Blood Groups in Infra-human Species (The Classical *H*-2 System of Tissue and Red Cell Antigens), 654
Amounts of Material in the Neurosecretory System of the Desert Locust : Induced Changes in the (Dr. K. C. Highnam), 199
α-Amylase: Effect of, on the Ehrlich Mouse Ascites Tumour (Dr. F. Steckerl, A. Ofodile, R. R. Campbell and G. H. Friedell), 1113
Anabolic Agents and Histamine Metabolism (Dr. K. S. Kim), 1368
Analogues of Glutamic and γ-Amino-*n*-butyric Acids having Potent Actions on Mammalian Neurones (Dr. J. C. Watkins and Dr. D. R. Curtis), 1010
Analysis : Combinatorial—Proceedings of the American Mathematical Society Symposia in Applied Mathematics, Vol. 10 (edited by Richard Bellman and Marshall Hall, Jr.), *review* by Prof. L. S. Goddard, 321
  Job (H. E. Roff and T. E. Watson), 336
  Organic (edited by John Mitchell, Jr., I. M. Kolthoff, E. S. Proskauer and A. Weissberger), Vol. 4, *review* by Dr. D. T. Lewis, 741
  Use of the Rotating Hanging Mercury Drop in—Anodic Stripping using a Rotating Mercury Drop (Dr. J. J. Engelsman and A. M. J. M. Claassens), 240 ; Trace Analysis with a Rotating Hanging Mercury Drop (Dr. M. van Swaay and R. S. Deelder), 1241

Analysis by Gas Chromatography : Detection by Ionization of Atmospheric Gases during (Dr. Arthur Karmen, Laura Giuffrida and Robert L. Bowman), 906
Analysis of Organic Compounds, *review* by Dr. D. T. Lewis, 741
Analysis of Polarized Light by the Bee's Eye (Prof. Donald Kennedy and Dr. Edward R. Baylor), 34
Analysis of Satellite Data (Prof. D. G. Parkyn), 896
Analysis of the Thymus Influence in Leukaemogenesis (Dr. J. F. A. P. Miller), 248
Analysis (Chromatographic) : Application of the Nickel Reaction and Thermal Isomerization of Alpha-Keto-Acid Hydrazones for their (A. M. Tokushige and Dean E. S. Cook), 797
Analysis (Chromatographic), of Infectious Ribonucleic Acid from Poliovirus (C. Cocito, A. Prinzie and P. De Somer), 573
Analysis (Comparative), of Inactivating Efficiency of Radiation on Different Organisms (Dr. M. Terzi), 461
Analysis (Discriminant), in Biometrical Genetics (Dr. S. K. Jain), 1420
Analysis (Inorganic) : The Use of Organic Reagents in (A. I. Busev and N. G. Polianskii), translated from the Russian by J. T. Greaves, *review* by Dr. D. T. Lewis, 1336
Analysis (Mathematical) : Modern Style in, *review* by Prof. L. S. Goddard, 6
Analysis (Modern) : Foundations of (Prof. J. Dieudonné), *review* by Prof. L. S. Goddard, 6
Analysis (Nodal), of Associated Populations (Prof. W. T. Williams and J. M. Lambert), 202
Analysis (Quantitative), of Milk and other Emulsions by Infra-Red Absorption (Dr. J. D. S. Goulden), 905
Analysis (Rotational), of Absorption Bands of Lead Monoxide (Dr. R. F. Barrow, J. L. Deutsch and D. N. Travis), 374
Analysis (Structural) : Basic Approaches to, *review* by Prof. R. C. Coates, 1134
Analysis (Trace), with a Rotating Hanging Mercury Drop (Use of the Rotating Hanging Mercury Drop in Analysis), (Dr. M. van Swaay and R. S. Deelder), 241
Analysis (Urine) : Determination of Caesium-137/Potassium Ratios in Diet and in the Human Body by (A. Morgan and Gloria M. Arkell), 1100
Analysis (X-Ray), of Diamond : Synthesis and (H. Ll. D. Pugh, J. Lees and J. A. Bland), 865
Analytical Chemistry in Nuclear Reactor Technology (Oak Ridge National Laboratory Fifth Conference on), 651
Analytical Methods of Protein Chemistry, including Polypeptides : A Laboratory Manual of (edited by Dr. P. Alexander and R. J. Block), Vol. 1, The Separation and Isolation of Proteins, *review* by Dr. D. T. Elmore, 320
Anaphylactic Sensitivity : A New Test for detecting—the Basophil Reaction (Prof. Walter B. Shelley and Lennart Juhlin), 1056
Anaphylactic Site : Pinnal Anaphylaxis, an Additional (Dr. J. G. Feinberg), 712
Anaphylactoid Reaction in Rats (J. M. Harris and Dr. G. B. West), 399
Anaphylaxis : Pinnal—an Additional Anaphylactic Site (Dr. J. G. Feinberg), 712
Anatomy at Oxford, 957
Anatomy (Human) : Atlas of (edited by Prof. Ferenc Kiss and Prof. János Szentágothai), Vol. 1, Osteology, Syndesmology, Myology ; Vol. 2, Splanchnology, Endocrine Glands, Heart ; Vol. 3, Nervous System, Vascular System, Lymphatic System, Sense Organs, *review* by Prof. J. M. Yoffey, 1232
    Illustrations of, *review* by Prof. J. M. Yoffey, 1232
Anatomy (Veterinary), at Liverpool, 648
Ancient Mesopotamia : Ecological Aspects of Irrigation in (Hans Helback), 227
Andersen, A. C., and others : Failure of a Dog to Discriminate between Strontium-90 and Calcium given Orally, 713
Anderson, A. J., and others : Action of Plasmin on Cartilage Matrix *in vivo*, 1402
Anderson, Dr. D. R. (Owen, Dr. R. D., and) : Blood Groups in Infra-human Species (A Study of Blood Groups in the Rhesus Monkey), 653
Anderson, Hugh C. : Differential Thermogravimetry versus Differential Thermometry in Studying the Pyrolysis of Polymers, 1088
Anderson, Dr. J. S. : Inorganic Polymers (What is an Inorganic Polymer ?), 1046
Anderson, Dr. J. S. (Emeléus, Prof. H. J., and) : Modern Aspects of Inorganic Chemistry, third edition, *review* by Prof. J. R. Partington, 637
Anderson, K. W. : Alleged Anticomplementary Effect of Aspirin, 1012
Anderson, Prof. M. L. : Four Decades of State Forestry in Great Britain, 656
    Forest Products Research in Britain, 760
    Forest Insect Pests and Diseases in Canada, 1260
Andresen, Dr. E.: Blood Groups in Infra-human Species (Blood Groups of Pigs), 654
Andrew, Prof. J. H. : *Obituary* by Dr. W. R. Maddocks, 121
Andrews, J. R., and Berry, R. T. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Survival Curves of Mouse Leukaemic Cells which grow normally under Anoxic Conditions in the Animal), 341
Andrews, W. H. H., and others : Fructose and Lactic Acid Metabolism in the Perfused Liver of Premature Lambs, 1307
Andrianov, Prof. K. A. : Inorganic Polymers, 1046
Angiosperm from Africa : A Poikilohydrous, Poikilochlorophyllous (Dr. D. J. Hambler), 1415
Angiosperm Fruit : An Early Cretaceous (Hanterivian), from California (M. E. J. Chandler and D. I. Axelrod), 442
Angiosperms ? : How Old are the (D. I. Axelrod), 442 ; (—. Scott, —. Barghoorn, and —. Leopold), 442
Angle (Low-) Light Scattering and the Molecular Weight of Deoxyribonucleic Acid (Dr. Sidney Katz), 280
Anglesey : Littoral Interstitial Species from, representing Three Families New to Britain (P. J. S. Boaden), 512
Anglo-American Corporation of South Africa, Ltd. : Grant of £15,000 a year for seven years, to continue the work of the Research Institute of African Geology in the University of Leeds, 650
Aniline Oxidation initiated by Ultrasonic Waves (Dr. Wiktor Wawrzyczek), 701
Animal Biology and the Medical Sciences : The Use of Radioisotopes in (International Atomic Energy Agency, the Food and Agriculture Organization and the World Health Organization of the United Nations, Conference on), 959
Animal Cell, Tissue and Organ Cultures in Radiobiology : Use of (New York Academy of Sciences Symposium on), 340
Animal Diseases : Animal Experiments in the Control of (Research Defence Society Pamphlet on), 226
Animal Ecology (Tropical), Nuffield Unit of : Appointment of Dr. R. M. Laws as senior investigator, 651
Animal Experiments in the Control of Animal Diseases (Research Defence Society Pamphlet on), 226
Animal Health Trust : Research Awards, 1250
Animal House : Hazards of the (Laboratory Animals Centre Discussion on), 339
Animal Husbandry (*Experimental Agriculture and*), *Australian Journal of*, No. 1 (Australian Institute of Agricultural Science), 544
Animal Life : South African—Results of the Lund University Expedition in 1950-1951, Vol. 7 (edited by Bertil Hanstrom, Per Brinck and Gustaf Rudebeck), *review* by Prof. O. Lowenstein, 1135
Animal Origin (Sea Cucumber) : A New Triterpenoid Sapogenin of (Takao Matsuno and Toshihiko Yamanouchi), 75
Animal Sounds and Communication (edited by Dr. W. E. Lanyon and Dr. W. N. Tavolga), *review* by Dr. W. H. Thorpe, 741
Animal Species (Six), in Free-choice Experiments : Comparison between Water and Alcohol Consumption in (Dr. Alpo Arvola and Dr. Olof Forsander), 819
Animal Welfare, Universities Federation for : Annual Summer Congress, 755
    Symposium on the Assessment of Pain, 1353
Animal and Plant Cells (Cylindrical) : Circumscribing Irradiation of Surface Structures of, with Polonium-210 α-Particles (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
Animals : Calories/gm. in Species of (Prof. L. B. Slobodkin and S. Richman), 299
    Sounds used by, *review* by Dr. W. H. Thorpe, 741
Animals other than Man : Blood Groups of (Dr. D. G. Gilmour), 653
Animals (Domestic), and Poultry in India : Occurrence of *Salmonellae* in (V. K. Sharma and Prof. C. M. Singh), 622
Animals (Experimental) : Demonstration of Anti-Depressant or Stimulant Properties of Imipramine in (Dr. D. R. Maxwell and Helen T. Palmer), 84
Animals (Man and) : Assessment of Pain in, 1353
Anisotropic Elastic Media : Surface Waves in (V. T. Buchwald and A. Davis), 899
Anisotropy Axis Dispersion : Variation of, with Thickness of Nickel-Iron Films (H. Clow), 996
Annual of the British School at Athens : Nos. 53-54, 1958-1959, *review* by Dr. Hugh Plommer, 212
Annual Reports on the Progress of Chemistry for 1959 (edited by Dr. R. S. Cahn), Vol. 61, *review* by Prof. J. R. Partington, 637
Anodic Stripping using a Rotating Mercury Drop (Use of the Rotating Hanging Mercury Drop in Analysis), (Dr. J. J. Engelsman and A. M. J. M. Claassens), 240
Anomalies (Resistivity), in Palladium Hydride : Heat Capacity and (Paul Mitacek, jun., and Prof. J. G. Aston), 271
Anomalous Branched Tapeworms, *Hymenolepis nana* (Cestoda ; Hymenolepididae), in a Colony of *DBA/1* Mice : A Natural Population of (Dr. Donald Heyneman), 297
Anopheles gambiae Giles : Maxillary Index in (L. K. H. Goma), 405
Ansell, W. F. H. : Mammals of Northern Rhodesia, *review* by R. W. Hayman, 8
Anstis, S. M., and others : Measuring Visual Constancy for Stationary or Moving Objects, 416
Antarctic Meteorology : Melbourne Symposium on, *review* by H. H. Lamb, 210
Antarctic Meteorology—Proceedings of the Symposium held in Melbourne, 1959 (Commonwealth of Australia, Bureau of Meteorology), *review* by H. H. Lamb, 210
Antarctic Rocks (Queen Maud Land) : Age Measurements on (Sarah Deutsch, Prof. E. E. Picciotto and M. Reinharz), 1286
Antenna (Cross-) of the Proposed Benelux Radio Telescope (Prof. W. N. Christiansen and Dr. J. A. Högbom), 215
Anthelmintic (Highly Effective), for Sheep ; Thiabendazole, a (Hugh McL. Gordon), 1409
Anthelmintic Activity : Pyridine Derivatives with (A. P. Phillips and R. B. Burrows), 707
Antheridium of *Pythium debaryanum* Hesse : Meiosis in the Oogonium and (Dr. Eva Sansome), 827
Anthocyanins (The First), appearing during the Ripening of Blueberries (Dr. Heikki Suomalainen and A. J. A. Keränen), 498
Anthony, Prof. A., and others : Oxygen Electrode for Measurement of Tissue Slice Respiration, 969
Anthraquinone : Isolation of, from Humus (Kyoichi Kumada, Akio Suzuki and Kazuyuki Aizawa), 415
Antialdosterone *SC* 5233 : Electrolyte Retention produced by the (J. B. Farmer and B. Petch), 1308
Antibiotics : Activation of Amino-Acids in Micro-organisms which produce (Dr. O. Ciferri, Dr. M. Di Girolamo and Dr. A. Bendicenti Di Girolamo), 411
Antibodies to Trophoblasts during the Post-Partum Period (J. F. Hulka, K. C. Hsu and S. M. Beiser), 510
Antibodies (Specific Bactericidal) : Increase in, after Administration of Endotoxin (J. Gabriel Michael, James L. Whitby and Maurice Landy), 296
Antibody (Anti-*D*) : Specific Inhibition of, by Colominic Acid (Prof. William C. Boyd and Egli Reeves), 511
Antibody (Antigen–) Complexes : Mechanism of Action of—their Effect on Mast Cells (Dr. Ivan Mota), 572
Antibody Response in Rabbits following Injection of Sheep Erythrocytes into Lateral Ventricle of Brain (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
Antibody Titre : Rise of, in Cell-free Spleen Preparations Incubated *in vitro* (Dr. Dieter H. Sussdorf), 770
Anticancer Properties of Thio-diglycollic Acid (M. B. Sahasrabudhe, M. V. Narurkar, L. B. Kotnis, B. D. Tilak, L. C. Shah and V. N. Gogte), 388
Anticomplementary Effect (Alleged), of Aspirin (K. W. Anderson), 1012
Anti-*D* Antibody : Specific Inhibition of, by Colominic Acid (Prof. William C. Boyd and Egli Reeves), 511

Anti-Depressant or Stimulant Properties of Imipramine : Demonstration of, in Experimental Animals (Dr. D. R. Maxwell and Helen T. Palmer), 84
Anti-Diego in Monozygotic Twins : The Diego Factor in a Puerto Rican Family—a Case of (Dr. Hubert J. Van Peenan, Dr. John Scudder, James A. Jack and Erika Awer), 188
Antifungal Substance from *Pisum sativum* L. : Pisatin, an (Dawn R. Perrin and W. Bottomley), 76
Antigen in Lesions of Molluscum Contagiosum (Dr. William L. Epstein, Irene P. Senecal and Dr. Alan M. Massing), 509
Antigen (*Rh*-like), in Red Cells of the Sheep : Occurrence of an (B. Urbaschek and Prof. K. Trautwein), 193
Antigen–Antibody Complexes : Mechanism of Action of—their Effect on Mast Cells (Dr. Ivan Mota), 572
Antiglobulin Consumption Test (Positive) : Nature of the Coating Globulin causing a (D. Nelken), 1110
Antiglobulin Tests : A Relation between the Reactivity of Human Red Cells to, and their Surface Structure (Judith E. Davis, Prof. H. N. Green and Pamela W. Tymms), 923
Anti-Haemophilic Globulin (Freeze-dried): Stability of (F. Nour-Eldin), 503
Anti-Leucocyte Cytoplasm, Anti-Leucocyte Nuclei and Anti-Platelets in Disseminated Lupus Erythematosis (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Anti-Leucocyte Nuclei and Anti-Platelets (Anti-Leucocyte Cytoplasm,), in Disseminated Lupus Erythematosis (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Antilymphoma Effects : Evidence that the L-Asparaginase Activity of Guinea Pig Serum is responsible for its (J. D. Broome), 1114
Antimicrobial Agents and Chemotherapy (American Society for Microbiology Interscience Conference on), 651, 1250
Antimicrobial Substances from Ferns (Prof. Jasper C. Maruzzella), 518
Antimonide (Indium), at High Pressures : Melting and Polymorphism of (A. Jayaraman, R. C. Newton and Dr. G. C. Kennedy), 1288
Antioxidant : Selenomethionine as an (H. S. Olcott, W. Duane Brown and J. Van der Veen), 1201
Antioxidant (New), from Oats : Isolation of a (Dr. D. G. H. Daniels and H. F. Martin), 1302
Anti-Platelets (Anti-Leucoyte Cytoplasm, Anti-Leucocyte Nuclei and), in Disseminated Lupus Erythematosis (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Anti-Sporulation Effect of Copper Fungicides : Significance of the, in the Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Anti-Tumour Agents : N,N'-Alkylene-*bis* (Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a New Series of (A. S. Tomcufcik, S. D. Willson, A. W. Vogel and A. Sloboda), 611
Antony, T. Therattil : Inactivation and Reactivation of Chymotrypsin, 178
Aorta (Human), during Growth : Increase in Elastin Content of the (Dr. V. Scarselli), 710
Aortic Tissue (Human) : Degree of Polymerization of Hyaluronic Acid isolated from (Dr. Sv. Bertelsen and K. Marcker), 386
Apennines (Northern) : Structure of the (Sir Edward Bailey and Prof. W. J. McCallien), 1136
Apertures : Minimum Energy Theorem for Flow of Dry Granules through (R. L. Brown), 458
Aplysia depilans : The Path of the Giant Cell Axons in (Dr. G. M. Hughes and L. Tauc), 404
Apothecaries of London, Worshipful Society of : Second Annual Report and List of Members (1960-61) of the Faculty of the History of Medicine and Pharmacy, 21
  Maccabaean Prize and Medal for 1962, 650
Apparatus (An Experimental), for Contact Microradiography at 200-500 V. (Dr. A. Recourt and G. H. F. de Vries), 1185
Apparent Cytoplasmic Inheritance of Tyrosinase Competence in *Streptomyces scabies* (Prof. K. F. Gregory and Wei-jen Shyu), 465
Apparent Recession of Nebulae and the Nature of Radio Stars (Dr. N. S. Japolsky), 480
Appearance of the *T*-Phase (R. Green), 997
Apple Seedlings : Shortening the Juvenile Phase of (A. I. Campbell), 517
Appleby, Dr. Robert M. : Continuation of the Great Glen Fault beyond the Moray Firth, 1190
Apples : Determination by Mass Spectrometry of the Structure of Proline Derivatives from (Dr. K. Biemann, G. G. J. Deffner and Prof. F. C. Steward), 380
  Preparation of Mitochondria from the Peel of (Dr. J. D. Jones and Dr. A. C. Hulme), 370
Application to Cosmic Rays : Fission and Spallation Phenomena and their (European Organization for Nuclear Research and the Max Planck Institute, Heidelberg, Conference on), 24
Application of Current Steps in Motoneurones : Potential Changes produced by (T. Araki, Dr. M. Ito and T. Oshima), 1104
Application of the Nickel Reaction and Thermal Isomerization of Alpha-Keto-Acid Hydrazones for their Chromatographic Analysis (A. M. Tokushige and Dean E. S. Cook), 797
Applications of Solar Energy, 228
Applications (Practical), of Nuclear Energy (International Atomic Energy Agency Courses on), 1143
Applied Bacteriology, Society for : Election of Officers, 754
  Symposium on Bacteria of the Intestine, 1151
Applied Biologists, Association of : Provincial Meeting at the University College of North Wales, Bangor, 856
Applied Chemical Kinetics : Inversion of a Laplace Transform arising from a Problem in (T. Wood), 589
Applied Mathematics at Belfast, 19
Applied Mathematics at Manchester, 647
Applied Mechanics (Theoretical and) : Proceedings of the Fifth Congress on, 855
Applied Mechanics (Theoretical and), Indian Society of, and Unesco : Symposium on Non-Linear Physical Problems, 855
Applied Science (Museum of), of Victoria, Melbourne : Report for 1959-60, 124
Applied Spectroscopy, Society of (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Applied Statics : Energy Principles in (T. M. Charlton), *review* by Prof. R. C. Coates, 1134
Appraisal of Phenomenology : An, *review* by F. I. G. Rawlins, 5
Appreciable *N*-Deacetylation of Hexosamine : Partial Acid-Hydrolysis of a Mucopolysaccharide without (Dr. T. J. Painter and Prof. W. T. J. Morgan), 39
Apprenticeship and Technical Education, 737
Apprenticeship and Training (House of Commons Debate on), 737
Approach (Holistic), to Selenology (Brian Warner), 586
Approach (A New), to Biology Teaching (Dr. L. H. Finlayson), 554
Approach (A New), to General Relativity, *review* by Dr. G. J. Whitrow, 424
Approaches (Basic), to Structural Analysis, *review* by Prof. R. C. Coates, 1134
Aprovechamiento de la Tierra en Nicaragua : Estudios Ecologicos para el (Dr. B. W. Taylor), 1259
Aptekman, Dr. P. M. (Bogden, Dr. A. E., and) : Blood Groups in Infrahuman Species (Inherited Haemagglutinogens of Rats and their Relationship to Histocompatability Factors), 654
Aqueous Corrosion of a Magnesium Alloy : Effect of Chloride Concentration on the (D. de G. Jones and H. G. Masterson), 165
Aqueous Silver Nitrate Solution : Ultrasonic Velocity in (D. S. Allam and W. H. Lee), 1388
Aqueous Solution of 5-Hydroxytryptophan treated with X-Rays : Formation of 5-Hydroxytryptamine in an (M. Jović and Z. Supek), 383
Aqueous Solutions : Ultrasonic Velocity in, of some Electrolytes (M. G. Seshagiri Rao and Prof. R. Ramachandra Rao), 164
Aqueous Solutions and in Thulium Oxide : Rapid Determination of Ytterbium in, by Neutron Activation (Minoru Okada), 1090
Aqueous Suspensions of Starved Stationary Phase *Aerobacter aerogenes* : Induced Enzyme Synthesis in (R. E. Strange), 1272
Araki, T., and others : Potential Changes produced by Application of Current Steps in Motoneurones, 1104
Arbiter, Prof. Nathaniel, and Harris, Prof. Colin C. : Power Requirements and Scale-up in Flotation, 268
Arbor Virus Group B : Infectious Ribonucleic Acids derived from Mouse Brains infected with Two Kinds of (Prof. Masahiro Nakamura), 624
Archaeology of Old Smyrna, *review* by Dr. Hugh Plommer, 212
Archer, G. T. : Release of Heparin from the Mast Cells of the Rat, 90
Archibald, Dr. A. R., and others : Teichoic Acids and the Structure of Bacterial Walls, 570
Area (High Surface) : Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of, using a Continuous Flow Calorimeter (G. H. Bell and A. J. Groszek), 1184
Areas of Isolated or Overlapping Normal Probability Curves : Calculation of the (Dr. D. Morison Smith and John C. Bartlet), 688
Argemone mexicana L. and *A. ochroleuca* Sweet : Intra-ovarian Pollination in *Eschscholzia californica* Cham., (Prof. P. Maheshwari and Kusum Kanta), 304
Argentina, Brazil and Israel : Grants from the United States to the International Atomic Energy Agency for Nuclear Equipment in, 442
Argersinger, Jr., Dr. William J., and others: Inorganic Chemistry, *review* by Dr. M. F. Lappert, 1133
Arkell, Gloria M. (Morgan, A., and): Determination of Caesium-137/Potassium Ratios in Diet and in the Human Body by Urine Analysis, 1100
Arm Bone (Australopithecine Upper) : An Australopithecine Scoop made from a Right (Prof. Raymond A. Dart), 372
Armed Forces (United States) : Technical Reports of the, 1347
Armenians in Iran : Virtual Absence of Glutathione Instability of the Erythrocytes among (Dr. J. E. Bowman and Dr. D. G. Walker), 221
Arms and Security, a Mathematical Study of the Causes and Origins of War (Dr. Lewis F. Richardson), edited by Nicolas Rashevsky and Ernesto Trucco, *review* by Sir Cyril Burt, 427
Armstrong, J., and Quilliam, Dr. T. Andrew : Nerve Endings in the Mole's Snout, 1379
Armstrong, J. J., and others : Teichoic Acids and the Structure of Bacterial Walls, 570
Armstrong, L. D., and Christensen, G. N. : Influence of Moisture Changes on Deformation of Wood under Stress, 869
Armstrong, Dr. Terence : Soviet Polar Research, *review*, 841
Armytage, Prof. W. H. G. : A Social History of Engineering, *review* by Prof. M. Postan, 946
Arnstein, H. R. V., and White, A. M. : Vitamin B_{12} and Intrinsic Factor (Biological Function of Vitamin B_{12}), 1155
Aromatic Hydrocarbons (Condensed Ring) : π-Electronic Excitation and Ionization Energies of (Dr. J. B. Birks and M. A. Slifkin), 761
Aromatic Hydrocarbons (Polycyclic) : Non-Enzymic Hydroxylation of (F. Dewhurst and G. Calcutt), 808
Aromatic Keto-Acids : Side-Reactions during Hydrogenolysis of 2,4-Dinitrophenylhydrazones of (Dr. John H. Menkes), 285
Arrangement (Number and), of Osteons in Corresponding Regions of Homotypic Long Bones (Dr. G. Marotti), 1400
Art : Australian Rock, 854
Art and the Engineer (Prof. Misha Black), 949
Art of Interviewing, 228
Art (Cave), of the Conjola District, New South Wales (F. D. McCarthy), 854
Artefact (Tissue Dilution)—a Re-interpretation of Variations in Levels of Succinic Dehydrogenase during Chemical Carcinogenesis (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Arthrobacter : Auxin Production by Species of (Dr. H. Katznelson and Dr. J. C. Sirois), 1323
Arthropod Transmission of Micro-organisms (Dr. John Macleod), 885
Arthur, D. W. G., and Whitaker, E. A. (compiled by) : Orthographic Atlas of the Moon (edited by Gerard P. Kniper), Edition 'A' showing the Standard Orthographic Coordinate Grid, Part I, Central Area, *review* by D. H. P. Jones, 424
Artificial Earth Satellites : A Collection of Tables and Nomograms for the Processing of Observations made on (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
Artificial Haematites (Natural and) : Hydrogen Reduction Characteristics of (John Henderson), 268
Artificial Production of Buds from the Embryos of *Cuscuta reflexa* (Prof. P. Maheshwari and B. Baldev), 197
Artificial Rations Low in Magnesium : Rapid Development of Hypomagnesaemia in Lactating Cows given (J. A. F. Rook), 1019
Arts : Infra-Red, *review* by Dr. E. S. Waight, 315
Arts and Sciences, American Academy of : Monograph Prizes, 442

Arvola, Dr. Alpo, and Forsander, Dr. Olof : Comparison between Water and Alcohol Consumption in Six Animal Species in Free-choice Experiments, 819
Ärzte : Parasitologie für (Prof. Otto Jírovec), *review* by Prof. G. Lapage, 107
Asahina, E. : Intracellular Freezing and Frost Resistance in Egg-Cells of the Sea Urchin—Intracellular Freezing as a Cause of Frost-killing in relatively Rapidly Frozen Cell Suspensions, 1263 ; A Mechanism to Prevent the Seeding of Intracellular Ice in Freezing Living Cells, 1264
Asbestos Filter Pads for Virus Filtration : A Method of treating (N. St. G. Hyslop), 305
Ascarylose : Dideoxysugars of *Pasteurella pseudotuberculosis*-specific Polysaccharides, and the Occurrence of (Dr. D. A. L. Davies), 43
Ascher, K. R. S., and Cwilich, R. : Acaricidal Properties of Di-(*p*-chlorophenyl)-trifluoromethylcarbinol, 1322
Ascidian Tadpole : Electron Microscope Observations of the Receptors in the Sensory Vesicle of the (Noël Dilly), 786
Ascites Tumour (Ehrlich Mouse) : Effect of Alpha-Amylase on the (Dr. F. Steckerl, A. Ofodile, R. R. Campbell and G. H. Friedell), 1113
Ascitic Hepatoma : Comparison of Pyridine Nucleotides in the Liver and in an (M. Wintzerith N. Klein, L. Mandel and Prof. P. Mandel), 467
L-Ascorbic Acid : Conversion of L-Galactono-γ-lactone into, by Plants (Dr. G. A. D. Jackson, R. B. Wood and M. V. Prosser), 282
L-Ascorbic Acid formed from D-Glucose by the Strawberry (*Fragaria*) : Identity of (Dr. Frank A. Loewus and Stanley Kelly), 1059
Ashcroft, N. W. : Elected to a Research Studentship in physics at Churchill College, Cambridge, 856
Ashhurst, Doreen E. : An Acid Mucopolysaccharide in Cockroach Ganglia, 1224
Asia (South-East) : Ecto- and Endo-Parasites of, *review* by P. F. Mattingly, 948
Asia and Africa : Aeronautical Research in, 1043
Aso, Prof. Kiyoshi, and others : Isolation of Nigerose and Kojibiose from Dextrans, 278
L-Asparaginase Activity of Guinea Pig Serum : Evidence that the, is responsible for its Antilymphoma Effects (J. D. Broome), 1114
Aspects of Haematology : Some, *review* by Dr. M. E. Nutt, 7
Aspects of Optical Lens Performance : Some, Part 1, Secondary Flare in Lenses (K. Hacking) ; Part 2, The Design of Lens Hoods (W. N. Sproson), 1355
Aspects of the Physics of Space Research : Some (Institute of Physics and the Physical Society Residential Symposium on), 229
Aspects (Biochemical), of Resistance to 6-Mercaptopurine in Human Epidermoid Carcinoma Cells in Culture (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
Aspects (Chemical), of the Structure of Small Peptides (Dr. Dorothy Wrinch), *review* by Prof. H. N. Rydon, 105
Aspects (Ecological), of Irrigation in Ancient Mesopotamia (Hans Helback), 227
Aspects (Modern), of Inorganic Chemistry (Prof. H. J. Emeléus and Dr. J. S. Anderson), third edition, *review* by Prof. J. R. Partington, 637
Aspirin : Alleged Anticomplementary Effect of (K. W. Anderson), 1012
Assay (Bio-) of Erythropoietin in Mice made Polycythaemic by Exposure to Air at a Reduced Pressure (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Assay (Urinary): Assessment of Chronic Exposure to Radio-strontium by (Dr. C. L. Comar and Jay Georgi), 390
Assay Procedure : A Nemin (E. J. Winkler, Shimpei Kuyama and Prof. David Pramer), 155
Assessing the Damage caused by *Heterodera rostochiensis* Woll. (E. B. Brown), 937
Assessment of Chronic Exposure to Radio-strontium by Urinary Assay (Dr. C. L. Comar and Jay Georgi), 390
Assessment of Pain (Universities Federation for Animal Welfare Symposium on), 1353
Assignment Problem : A Combinatorial (Prof. C. Radhakrishna Rao), 100
Assistance (Technical), to Overseas Countries (June 17, 1039), *errata*, 24
Associated Electrical Industries, Ltd. : Appointment of L. J. Davies as responsible for the direct supervision of the four Research Laboratories at Aldermaston, Harlow, Manchester and Rugby, 1142
  Appointment of Dr. J. E. Stanworth as director of research, 1142 ; *erratum*, 1349
Associated Populations : Nodal Analysis of (Prof. W. T. Williams and J. M. Lambert), 202
Association of Haemoglobin *N* and Microcythaemia in a Sardinian Family (Prof. E. Silvestroni and I. Bianco), 1208
Associations (The Biotic), of Cockroaches (Dr. Louis M. Roth and Dr. Edwin R. Willis), *review* by David R. Ragge, 106
Astbury, Prof. W. T. : *Obituary* by Dr. I. MacArthur, 331 ; *obituary* by Dame Kathleen Lonsdale, 332
Astbury, the late Prof. W. T., and Beighton, E. : Structure of Feather Keratin, 171
Aston, Prof. J. G. (Mitacek, jun., Paul, and) : Heat Capacity and Resistivity Anomalies in Palladium Hydride, 271
Astronautical Society (American), and others (sponsored by the) : A Symposium on Space Trajectories (edited by the Technical Staff, Research Division, Radiation Incorporated), *review* by D. G. King-Hele, 1334
Astronautics, International Academy of : Daniel and Florence Guggenheim International Astronautics Award to be given to Sir Bernard Lovell, 856
  Symposium on Space-Flight and Re-entry Trajectories, 960
Astronomy : Background to, *review* by Dr. M. A. Hoskin, 840
Astronomy in the Making, *review* by Colin A. Ronan, 314
Athens, British School at : The Annual of the, Nos. 53-54, 1958-1959, *review* by Dr. Hugh Plommer, 212
Atherosclerosis in Rabbits: Effects of Carrageenin on Serum Lipids and (Dr. Katsumi Murata), 189
Atlantic : Evidence of an Eastward Equatorial Undercurrent in the, from Measurements of Current Shear (Arthur D. Voorhis), 157
Atlantic (North) : The (The Floors of the Oceans, I, Text to accompany the Physiographic Diagram of the North Atlantic), (Bruce C. Heezen, Marie Tharp and Maurice Ewing), (Geological Society of America, Special Paper 65), *review* by Dr. G. E. R. Deacon, 531
Atlas of Human Anatomy (edited by Prof. Ferenc Kiss and Prof. János Szentágothai), Vol. 1, Osteology, Syndesmology, Myology ; Vol. 2, Splanchnology, Endocrine Glands, Heart ; Vol. 3, Nervous System, Vascular System, Lymphatic System, Sense Organs, *review* by Prof. J. M. Yoffey, 1232
Atlas (Orthographic), of the Moon (compiled by D. W. G. Arthur and E. A. Whitaker), edited by Gerard P. Kuiper, Edition 'A' showing the Standard Orthographic Coordinate Grid, Part 1, Central Area, *review* by D. H. P. Jones, 424
Atmosphere : Photography of Cerenkov Light from Extensive Air Showers in the (D. A. Hill and N. A. Porter), 690
Atmosphere (Upper): Density of the, determined by Satellite Orbits, and its Variation during 1957-61 (D. G. King-Hele and D. M. C. Walker), 114
Atmospheric Gases : Detection by Ionization of, during Analysis by Gas Chromatography (Dr. Arthur Karmen, Laura Giuffrida and Robert L. Bowman), 906
Atom (Recoil-) Reactions at Low Temperature (Slobodanka Veljković and Dr. Garman Harbottle), 1287
Atomic Absorption Spectroscopy : Determination of Lead in Urine by (J. B. Willis), 381
Atomic Energy, Soviet Journal of : Supplement No. 6, Fast-Neutron Spectroscopy (B. V. Rybakov and V. A. Sidorov), (edited by N. A. Vlasov), translated from the Russian, *review* by Dr. P. A. Egelstaff, 8
Atomic Energy Agency (International) : Appointment of Dr. Arno Sigvard Eklund as director-general, 338
  Grants from the United States for Nuclear Equipment in Argentina, Brazil and Israel, 442
  International Conference on Plasma Physics and Controlled Nuclear Fission Research, 443
  Purpose, Origin, Structure, Growth and Achievements, 1143
  Courses on Practical Applications of Nuclear Energy, 1143
Atomic Energy Agency (International), and others : Conference on the Use of Radioisotopes in Animal Biology and the Medical Sciences, 959
Atomic Energy Authority (United Kingdom) : Progress on the Advanced Gas-cooled Reactor at Windscale, 853
  Seventh Annual Report (1960-61), 857
Atomic Energy Commission (United States), and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
Atomic Energy Levels in Crystals (J. L. Prather), 1348
Atomic Energy Research Establishment (United Kingdom) : Course on the Principles of Radiation Protection, 856
Atomic Energy Research and Development in Britain, 857
Atomic Existence : A Concept of (Prof. W. H. Watson), 658
Atomic Problem : The—a Challenge to Physicists and Mathematicians (Lancelot Law Whyte), *review* by Prof. R. Eisenschitz, 214
Atomic Radiations and Living Organisms (R. H. Mole), 556
Atomic Research : New Trends in, and their International Significance (Dr. L. Kowarski), 853
Atomic Structure of Graphite and Graphitization (Dr. G. E. Bacon), 27
Atomic and Nuclear Physics (Prof. Robert S. Shankland), second edition, *review* by Dr. E. B. Paul, 8
Atoms (Bridgehead Nitrogen) : Heterocyclic Systems with (William L. Mosby), Part 1, *review* by Dr. G. L. Buchanan, 425
Atoms (Metastable Nitrogen) : New Afterglow Emission associated with (L. Herman and R. Herman), 346
Atractyloside : Inhibition of Phosphorylation by (Dr. A. Bruni and A. R. Contessa), 818
Attention in Peripheral Vision : Effect of (Arthur Thomson), 732 ; (B. Babington Smith), 732
Attitude (Scientific), to Management, *review* by T. H. Hawkins, 209
Audiogenic Seizure : Psychophysiology, Neuropharmacology and Biochemistry of (Centre National de la Recherche Scientifique International Meeting on), 959
Auerbach, Dr. Charlotte : Chemical Genetics, *review*, 841
Augmentation of Toxicity of Monoamine Oxidase Inhibitor by Thyroid Feeding (Richard N. Carrier and Dr. Paul V. Buday), 1107
Augustat, S. : At the International Starch Conference (Degradation of Starch by Physical Means), 236
Augustin, R. : Immunity to Protozoa (Local Immunity to Coccidiosis), 553
Auroral Zone : Electric Currents associated with Geomagnetic Disturbances in the (Dr. F. J. Scrase), 963
Austenite : Transformation of Cathodically Impregnated and Cooled (E. G. Ramachandran and C. Dasarathy), 998
Australia : Age and Kinship in, *review* by Dr. R. Needham, 6
  Future of Nuclear Physics in (Prof. E. W. Titterton), 639
Australia (Commonwealth of) Bureau of Meteorology: Antarctic Meteorology—Proceedings of the Symposium held in Melbourne, 1959, *review* by H. H. Lamb, 210
Australia (Commonwealth of) Scientific and Industrial Research Organization : Overall Management of the Chemical Research Laboratories, 23
  Post-Doctoral Fellowships in Protein Chemistry, 336
  Conference on Food Science, 337
  Retirement of N. A. Esserman as director of the National Standards Laboratory, 542
  Appointment of I. E. Newnham as chief of the Division of Mineral Chemistry, 543
  New Laboratories for the Division of Food Preservation, 546
  Division of Food Preservation Conference on Food Science, 546
Australia (South), Royal Society of : Verco Medal presented to Dr. R. L. Specht, 1247
Australian Institute of Agricultural Science : *Australian Journal of Experimental Agriculture and Animal Husbandry*, No. 1, 544
Australian Journal of Experimental Agriculture and Animal Husbandry, No. 1 (Australian Institute of Agricultural Science), 544
Australian Mammal Society : Election of Officers for 1961-62, 755
Australian Mathematical Society : Second Summer Research Institute, 1145
Australian National University, Canberra : Hon.D.Sc. degree awarded to Sir Rudolph Peters and to Dr. J. L. Pawsey, 443
Australian Rock Art, 854
Australian Schools : Promotion of Science in, 543
Australian (Western) Museum : Annual Report for 1959-60, 335
Australopithecine Scoop made from a Right Australopithecine Upper Arm Bone (Prof. Raymond A. Dart), 372
Australopithecine Upper Arm Bone : An Australopithecine Scoop made from a Right (Prof. Raymond A. Dart), 372
Author and Publisher (Dr. D. Richter), 131
Auto-Immunological Precipitin possibly due to Fibrinolysins : Demonstration by Paper Electrophoresis of an (Marion I. Cooper and J. R. Sykes), 1212

Automation and Computation : Conference on, 1030
Autoradiographic Effect : An (Stuart McLean), 690 ; (A. H. Meleka and W. Barr), 692
Autoxidation of Haemoglobin : Reactions of Haemoproteins with Hydrogen Peroxide and the Supposed Formation of Hydrogen Peroxide during the (Prof. D. Keilin), 769
Auxin Action : Improbability of the Chelation Hypothesis of (Dr. D. D. Perrin), 253
Auxin Production by Species of *Arthrobacter* (Dr. H. Katznelson and Dr. J. C. Sirois), 1323
Average Extinction Coefficient for Re-absorption of Fluorescence Radiation through Uranin Solution (Dr. K. K. Rohatgi and G. S. Singhal), 799
Avery, D. G. (Conn, G. K. T., and) : Infrared Methods, *review* by Dr. E. S. Waight, 315
Avian Lymphomatosis : Cell Transplants of, treated with Hydrogen Peroxide (Dr. V. L. Sanger), 1406
Aviation, Ministry of : Grant of £2,470 to the University of Leeds, for a research project in the Department of Metallurgy, Houldsworth School of Applied Science, 650
Aviation and Cosmonautical Medicine (C.E.R.M.A. International Congress on), 338
Avirulent Strain of *Salmonella typhimurium* : Resistance to Infection with *Salmonella paratyphi C* in Mice parasitized with a relatively (Dr. J. G. Howard), 87
Awa, A. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Effect of Radiation on the Chromosomes of Leucocytes cultured from the Human Buffy Coat), 340
Award for Blood Transfusion work (Oliver Memorial Fund), 336
Awards for Science Teachers in Training (Arthur Guinness Son and Co., Ltd.), 338
Awards (Grants and), for 1962 (Lalor Foundation), 1348
Awards (Technological), National Council for : Report for 1960-61, 754
Awareness (Conscious) : Spike and Wave Discharges and Alterations of (L. Goldie and J. M. Green), 200
Awer, Erika, and others : The Diego Factor in a Puerto Rican Family—a Case of Anti-Diego in Monozygotic Twins, 188
Axelrod, D. I. : How Old are the Angiosperms?, 442
Axelrod, D. I. (Chandler, M. E. J., and) : An Early Cretaceous (Hanterivian) Angiosperm Fruit from California, 442
Axenic Seedlings of *Drosera* (Richard M. Burger), 724
Axis Dispersion (Anisotropy) : Variation of, with Thickness of Nickel-Iron Films (H. Clow), 996
Axon, Dr. H. J. : Microstructural and Chemical Identity of the Bear Creek and Narraburra Iron Meteorites, 1287
Axons (Giant Cell), in *Aplysia depilans*: The Path of the (Dr. G. M. Hughes and L. Tauc), 404
Aylward, Francis, and Wills, Pamela : Isolation of Sterol Esters from Human Faeces, 1397
Ayres, P. J., and others : Aldosterone Excretion and Potassium Retention in Subjects living at High Altitude, 78
6-Aza-Uracil : Chromosomal Elimination induced by (M. Collette Mahoney, Dr. E. R. Witkus and Dr. C. A. Berger), 627
Azotobacter : Oxygen Inhibition of Respiration in (M. J. Dilworth and C. A. Parker), 520

BAARLI, Johan, and others : Radiocaesium and Potassium in Norwegians, 436
Babcock, G. E., and others : Ultracentrifugal Differences in Soybean Protein Composition, 1395
Bacharach, A. L. : At the Scientific Publications Council Meeting on the Publication of Scientific Books (Ownership of Copyright), 131 ; (Contractual Relationships), 132
Backeberg, Curt : Die Cactaceae, Band 5, Cereoideae (Boreocactinae), *review* by N. Y. Sandwith, 1336
Background to Astronomy, *review* by Dr. M. A. Hoskin, 840
Backscatter Observations (Trans-Equatorial), of Magnetically Controlled Ionization (J. A. Thomas), 792
Backward Children in Britain : Education of, 1052
Bacon, Dr. G. E. : Atomic Structure of Graphite and Graphitization, 27
Bacteria of the Intestine (Society for Applied Bacteriology Symposium on), 1151
Bacteria capable of Producing 6-Aminopenicillanic Acid from Benzylpenicillin : A Method for Isolating (Prof. Yukio Kameda, Yukio Kimura, Etsuko Toyoura and Tomoo Omori), 1122
Bacteria (Dextran-producing) : Intracellular Glycosidases of (Dr. R. W. Bailey and Prof. E. J. Bourne), 277
Bacteria (Knallgas), *Hydrogenomonas* : Formation and Utilization of Poly-β-Hydroxybutyric Acid by (Prof. H. G. Schlegel, G. Gottschalk and R. von Bartha), 463
Bacteria (Numbers and Types of), from the Rhizosphere of Pasture Plants—Possible Occurrence of *L*-Forms (G. Jagnow), 1220
Bacteria and Actinomyces : Manual of, *review* by Dr. K. Zinnemann, 1333
Bacteria or Sulphydryl Compounds for Normal Growth : Spontaneous Development of *L* Forms of Streptococci requiring Secretions of (Ayala Frenkel and Dr. Willy Hirsch), 728
Bacterial Genetics : Papers on (selected by Edward A. Adelberg), *review* by L. B. Quesnel, 320
Bacterial Lipopolysaccharide : Sensitivity of Mice to, following Alteration of Activity of the Reticulo-Endothelial System (Dr. G. N. Cooper and Dr. A. E. Stuart), 294
Bacterial Plant Diseases of Central Europe : Some, *review* by Dr. W. J. Dowson, 4
Bacterial Plant Pathogens (C. Stapp), translated by A. Schoenfeld, *review* by Dr. W. J. Dowson, 4
Bacterial Viruses : Papers on (selected by Gunther S. Stent), *review* by L. B. Quesnel, 320
  X-Ray Diffraction Studies of (Dr. A. C. T. North and Prof. Alexander Rich), 1242
Bacterial Walls : Teichoic Acids and the Structure of (Dr. A. R. Archibald, J. J. Armstrong, Prof. J. Baddiley and J. B. Hay), 570
Bactericidal Antibodies (Specific) : Increase in, after Administration of Endotoxin (J. Gabriel Michael, James L. Whitby and Maurice Landy), 296
Bacteriologists (American), Society of (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Bacteriology (Applied), Society for : Election of Officers, 754
  Symposium on Bacteria of the Intestine, 1151
Baddeley, A. D. : Stimulus-Response Compatibility in the Paired-Associate Learning on Nonsense Syllables, 1327
Baddiley, Prof. J., and others : Teichoic Acids and the Structure of Bacterial Walls, 570
Bailar, Prof. J. C. : Inorganic Polymers (Co-ordination Polymers), 1047
Bailey, Sir Edward, and McCallien, Prof. W. J. : Structure of the Northern Apennines, 1136
Bailey, Elizabeth (Beaven, Dr. G. H., and) : Ultra-violet Absorption Spectra of Proteins in Deuterium Oxide, 914
Bailey, Dr. R. W., and Bourne, Prof. E. J. : Intracellular Glycosidases of Dextran-producing Bacteria, 277
Bainbridge, V. : Warm-water Species in the Plankton off Newfoundland during Winter Months, 1216
Baird, jun., S. L., and others : Spin Resonance and Electrical Conductivity of Indole–Iodine, 168
Baker, Dr. George : Awarded the Research Medal of the Royal Society of Victoria, 1247 ; work of, 1247
Baker, H., and others : Vitamin-Levels in Blood and Serum, 78
Baker, Dr. J. R., and Vickerman, K. : Parasite Biology (Significance of the Trypanosomatid Kinetoplast), 134
Baker, W. T. : Appointed health physicist at the University of Sheffield, 337
Baking Industries Research Association (British) : New Laboratory Wing (Dr. G. A. H. Elton), 233
Bakterien und Actinomyceten : Diagnostik der (Prof. N. A. Krassilnikov), *review* by Dr. K. Zinnemann, 1333
Balasubrahmanyan, K., and Jacob, Dr. J. : Occurrence of *Eutrichocheles modestus* (Herbst) in the Near-shore Waters of Porto Novo, South India, 830
Balchin, Prof. W. G. V. : Water Resources in Wales, 135
  Water Resources of the United States, 444
Baldev, B. (Maheshwari, Prof. P., and) : Artificial Production of Buds from the Embryos of *Cuscuta reflexa*, 197
Baldwin, Prof. Ernest : Memoir to mark the Centenary of the birth of Sir Frederick Gowland Hopkins (Van den Berghs, Ltd.), 439, *erratum*, 546
Ball, Dr. C. J. : Appointed lecturer in metallurgy at the University of Sheffield, 337
Ball, J. K., and others : Induction of Tumours by Polyoma Virus—Enhancement by Chemical Agents, 893
Ballio, A., and others : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum*, 909
Ballistic Missile and Space Technology—Proceedings of the Fifth Symposium held at Los Angeles, 1960 (edited by Donald P. LeGalley), Vol. 1, Bioastronautics and Electronics, and Invited Addresses ; Vol. 2, Propulsion and Auxiliary Power Systems ; Vol. 3, Guidance, Navigation, Tracking and Space Physics ; Vol. 4, Re-entry and Vehicle Design, *review* by W. H. Stephens, 1131
Bamber, R. K. : Staining Reaction of the Pit Membrane of Wood Cells, 409
Bananas (Sigatoka Disease of), caused by *Mycosphaerella musicola* Leach : Significance of the Anti-Sporulation Effect of Copper Fungicides in the Control of (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Bangham, Dr. D. R. (Cotes, Dr. P. Mary, and) : Bio-Assay of Erythropoietin in Mice made Polycythaemic by Exposure to Air at a Reduced Pressure, 1065
Banks, Prof. E., and Robbins, M. : Fluoride-compensated Substitution of Bivalent Cations in the Magnetoplumbite Structure, 1387
Baradell, D. L., and others : Space-Flight and Re-entry Trajectories (Dynamics of Terminal Re-entry—Methods of Control for Re-entry from Escape Speeds), 960
Barber, H. N. (Murfet, I. C., and) : Effects of Gibberellic Acid and Allogibberic Acid on Flowering and Internode-Length in *Pisum sativum*, 514
Barber, M. E. : At the Scientific Publications Council Meeting on the Publication of Scientific Books (Ownership of Copyright), 131 ; (Contractual Relationships), 132
Barbiturates and Eye Vergence (Gerald Westheimer and Cyril Rashbass), 833
Barclay-Smith, Phyllis : International Council for Bird Preservation, 550
Bard, Dr. B. J. A. : Appointed chairman of Dracone Developments, Ltd., 443
Bardell, P. R. : Magnetic Materials in the Electrical Industry, second edition, *review* by A. C. Lynch, 428
Barghoorn, —., and others : How Old are the Angiosperms?, 442
Barium Orthotitanate : Infra-Red Spectroscopic Evidence of Four-fold Co-ordination of Titanium in (P. Tarte), 1002
Barium Oxide : Effect of Ultra-Violet Irradiation on the Electrical Conductivity of Cathodes coated with (Dr. C. H. B. Mee), 1383
Bark of the Jamaican Shade Tree *Pithecolobium saman* Benth. : Pharmacology of the Alkaloidal Fraction from the (B. E. Leonard and Dr. H. S. A. Sherratt), 287
Barker, Dr. H. A. : Vitamin B_{12} and Intrinsic Factor (Differences in Chemical Composition and Molecular Structure between Vitamin B_{12} and its Coenzyme), 1154 ; (B_{12} Coenzymes), 1154
Barker, Dr. S. A., and others : Mannosyl D-Glucosamine Hydrochloride Isomers—*N*-Mannosyl D-Glucosamine Hydrochloride, 142
  Mannosyl D-Glucosamine Hydrochloride Isomers—6-O-Mannosyl D-Glucosamine Hydrochloride, 143
Barker, S. K., and others : Absorption Spectra of γ-Irradiated Lead Silicate Glass, 374
Barile, M. F., and others : Immunofluorescence of Pleuropneumonia-like Organisms isolated from Tissue Cell Cultures, 190
Barium-140 in New Zealand Rainwater (G. S. McNaughton and R. N. Woodward), 1344
Barley : Stabilizing Selection for Heading Time in a Bulk-Hybrid Population of (Dr. S. K. Jain), 1123
Barley during Germination : Effect of Excess Supply of Heavy Metals to, with special reference to Catalase and Peroxidase (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Barley Leaf-Spot Disease : Production of Symptoms of, by Culture Filtrate of *Helminthosporium sativum* (S. K. Gayed), 725
Barnett, Dr. C. H., and Marsden, C. D. : Functions of the Mammalian Carotid Rete Mirabile, 88
Barnett, S. F. : Immunity to Protozoa (Immunity in Piroplasmosis), 552

Baron, Ronald L., and others : Biological Activity of a Tri-*o*-Cresyl Phosphate Metabolite, 1396
Baron, Dr. Samuel, and Isaacs, Alick : Mechanism of Recovery from Viral Infection in the Chick Embryo, 97
Barr, W. (Meleka, A. H., and) : An Autoradiographic Effect, 692
Barrier (Electrostatic Diffusion), and Ion Pump : Electrical Properties of Orientated Lipid on a Biological Membrane—an (Dr. J. W. L. Beament), 217
Barrow, Dr. R. F., and others : Rotational Analysis of Absorption Bands of Lead Monoxide, 374
Barson, Dr. C. A. : Appointed a senior Research Fellow in the Department of Chemistry, University of Birmingham, 337
Bartels, R., and others (edited by) : Proceedings of the Fourth Conference on Potato Virus Diseases, Braunschweig 1960 (Biologische Bundesanstalt für Land- und Forstwirtschaft), 657
Bartlett, John C. (Smith, Dr. D. Morison, and) : Calculation of the Areas of Isolated or Overlapping Normal Probability Curves, 688
Bartlett, Prof. M. S. : Stochastic Population Models in Ecology and Epidemiology, *review*, 843
Barton, Prof. D. H. R. : Stereochemistry of Natural Phenolic Compounds (Alkaloid Synthesis), 236
Basch, Dr. R., and Stetson, Dr. C. A. : Blood Groups in Infra-human Species (Assay Method for those Antigens of Mice which elicit Cytotoxin and Haemagglutinin Production), 654
Base Composition (Unusual), of the Ribonucleic Acid of Wild Cucumber Mosaic Virus (H. Yamazaki and Prof. Paul Kaesberg), 96
Bases, R. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Sensitizing Action of Actinomycin *D* and Deuterium Oxide in experiments in which Puck's Single-Cell Technique was employed), 341
Basic Approaches to Structural Analysis, *review* by Prof. R. C. Coates, 1134
Basic Dyestuffs in Clay Mineralogy (Dr. V. S. Ramachandran, K. P. Kacker and N. K. Patwardhan), 696
Basic Science : Disease and the Advancement of (edited by Dr. Henry K. Beecher), *review* by Sir George Pickering, 530
  What is ?, *review* by Sir George Pickering, 530
Basis of the Diploid-like Meiotic Behaviour of Polyploid Cotton (G. Kimber), 98
Basophil Reaction : A New Test for Detecting Anaphylactic Sensitivity—the (Prof. Walter B. Shelley and Lennart Juhlin), 1056
Basu, Santimay, and others : Very-Low-Frequency Modulation of Discrete Frequency Solar Noise Bursts, 56
Batchelor, F. R., and others : Action of Carbon Dioxide on 6-Aminopenicillanic Acid, 910
Batchelor, J. R. : *Obituary* of Dr. P. A. Gorer, 18
Bateman, Dr. Nigel : Simultaneous Eradication of Three Ectoparasitic Species from a Colony of Laboratory Mice, 721
Batra, B. P., and others : Electrical Effects during Dissolution and Precipitation of Electrolytes, 764
Battersea College of Technology : Summer School on Corrosion (Corrosion Problems in the Electrical Power Industry), 651
Baylor, Dr. Edward R. (Kennedy, Prof. Donald, and) : Analysis of Polarized Light by the Bee's Eye, 34
B.B.C. : Saturday Morning Television introduces Science on Saturday, 20
  Facts and Figures about Viewing and Listening, 1051
  Engineering Monograph No. 34, A Mobile Laboratory for U.H.F. and V.H.F. Television Surveys (E. W. Taylor and L. C. Munn), 1355
  Engineering Monograph No. 36, Some Aspects of Optical Lens Performance, Part 1, Secondary Flare in Lenses (K. Hacking), Part 2, The Design of Lens Hoods (W. N. Sproson), 1355
  Engineering Monograph No. 37, An Instrument for Measuring Television Signal-to-Noise Ratio (S. M. Edwardson), 1355
Beam (Supported) : Initial Vibrations of a (Dr. R. V. Sharman and D. White), 692
Beam Reactor (A Molecular), for Examining the Rate, and Primary Products, of Reactive Bimolecular Collisions (C. W. Nutt and A. J. Biddlestone), 798
Beament, Dr. J. W. L. : Electrical Properties of Orientated Lipid on a Biological Membrane—an Electrostatic Diffusion Barrier and Ion Pump, 217
Bean (Pinto) : Relationship of Tobacco Mosaic Virus (TMV) Lesion Number and Concentration to the Rate of Lesion Production on (John Piacitelli and Prof. Vincent Santilli), 624
Bean (Soy-) Protein Composition : Ultracentrifugal Differences in (W. J. Wolf, G. E. Babcock and A. K. Smith), 1395
Bear Creek and Narraburra Iron Meteorites : Microstructural and Chemical Identity of the (Dr. H. J. Axon), 1287
Beard, Dr. David B. : The Dust Cloud about the Earth, 32
Beats between Optical Masers : A Proposal for a Tunable Source of Radiation for the Far Infra-Red using (Dr. D. C. Lainé), 795
Beattie, C. P. : Immunity to Protozoa (Toxoplasmosis), 552
Beatty (Chester) Research Institute (of the Institute of Cancer Research, Royal Cancer Hospital), (Prof. A. Haddow), 430
Beaven, Dr. G. H., and Bailey, Elizabeth : Ultra-violet Absorption Spectra of Proteins in Deuterium Oxide, 914
Beaver, Prof. Paul C. : Control of Soil-transmitted Helminths (United Nations, World Health Organization, Public Health Papers No. 10), 1249
Beaver, Prof. S. H. : Technology and Geography (Presidential Address to Section E (Geography) of the British Association for the Advancement of Science), 986
Beck, Dr. M. T., and Halmos, M. : Stability Constant of Copper (II) Complexes of Reduction Products of 2,2'-Dipyridyl, 1090
Becker, J. V., and others : Space-Flight and Re-entry Trajectories (Dynamics of Terminal Re-entry—Methods of Control for Re-entry from Escape Speeds), 960
Bed of the Sea : Life and Environment on the (Prof. C. M. Yonge), 986
Bee Venom : Effect of, on Concentration of Blood Glucose and Liver Glycogen in Rabbits (Prof. A. H. Mohamed and K. Zaki), 605
Bee's Eye : Analysis of Polarized Light by the (Prof. Donald Kennedy and Dr. Edward R. Baylor), 34
Bee (Honey-) Larval Foods : Chromatographic Investigation of the Methyl Alcohol/Chloroform-soluble Constituents of (N. G. Patel, M. H. Haydak and R. Lovell), 362
Beecher, Dr. H. K. : Assessment of Pain (Effect of Drugs on High-Level Intellectual Performance), 1353
Beecher, Dr. H. K. (edited by) : Disease and the Advancement of Basic Science, *review* by Sir George Pickering, 530
Beesley, W. N. : Parasite Biology (Parasites in relation to Natural Fauna), 135
Beetle *Trypodendron* : Air-Swallowing, a Mechanism in Photic Reversal of the (Prof. Kenneth Graham), 519
Beevers, Prof. H. : Metabolic Production of Sucrose from Fat, 433
  Respiratory Metabolism in Plants, *review* by Prof. W. O. James, 1031
Beevers, Prof. H. (Benedict, C. R., and) : Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate Dehydrogenase in a Non-Photosynthetic Plant Tissue, 71
Behaviour : Distribution of Piperidine in the Brain and its Possible Significance in (Dr. L. G. Abood, F. Rinaldi and Virginia Eagleton), 201
  Sense Organs, Integration and (edited by Talbot H. Waterman), (The Physiology of Crustacea, Vol. 2), *review* by Dr. J. Green, 428
Behaviour (Diploid-like Meiotic), of Polyploid Cotton : Basis of the (G. Kimber), 98
Behaviour (Emotional) : Changes in Visual Gnostic Functions and, following Unilateral Temporal Pole Damage in the 'Split-Brain' Monkey (Dr. J. L. deC. Downer), 50
Behaviour (Stomatal), in *Xanthium pennsylvanicum* : Photoperiodic Effects on (Dr. T. A. Mansfield and Prof. O. V. S. Heath), 974
Beighton, E. (Astbury, the late Prof. W. T., and) : Structure of Feather Keratin, 171
Beilby, Hilda M. : Endowment of £800 made to the Royal College of Science and Technology, Glasgow, to be known as the Kelvin Prizes, 1349
Beilby Memorial Fund : Gold Medal and Prize awarded to Dr. Constantin Edeleanu and to Prof. Jack Nutting, 224
Beiser, S. M., and others : Antibodies to Trophoblasts during the Post-Partum Period, 510
Bell, A. E., and others : Evaporated Carbon Films of Large Area for Adsorption Studies by Electron Bombardment, 487
Bell, G. H., and Groszek, A. J. : Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of High Surface Area using a Continuous Flow Calorimeter, 1184
Bell, Dr. G. H., and others : Biorheology and Microcirculation (Capillary Strength Tests in Scurvy and their Reactions to Vitamins C and P Therapy), 758
Bell, G. M., and others : Discreteness-of-Charge Effect and the Stability Theory of Colloids, 699
Bell, P. R. : Failure of Nucleotides to Diffuse Freely into the Embryo of *Pteridium aquilinum*, 91
Bellman, Richard, and Hall, Jr., Marshall (edited by) : Combinatorial Analysis—Proceedings of the American Mathematical Society Symposia in Applied Mathematics, Vol. 10, *review* by Prof. L. S. Goddard, 321
Ben-Yair, Dr. M. (Heller, Dr. L., and) : Formation of Calcium Chloraluminate by Interaction of Portland Cement with Sea-Water and Chloride Solutions, 488
Bence-Jones Proteins : Comparison of Reduced Alkylated Derivatives of some Myeloma Globulins and (Dr. M. D. Poulik and Dr. G. M. Edelman), 1274
Bendicenti Di Girolamo, Dr. A., and others : Activation of Amino-Acids in Micro-organisms which produce Antibiotics, 411
Bendich, Dr. A., and others : Isolation and Properties of Deoxyribonucleic Acid from Mammalian Sperm, 1375
Bending of Rod-like Polyelectrolytes : Displacement Potentials and (Prof. J. A. Christiansen, the late Dr. C. E. Jensen and Dr. Th. Vilstrup), 484
Benedict, C. R., and Beevers, Dr. H. : Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate Dehydrogenase in a Non-Photosynthetic Plant Tissue, 71
Benelux Radio Telescope : Cross-Antenna of the Proposed (Prof. W. N. Christiansen and Dr. J. A. Högbom), 215
Benfey, B. G., and Varma, D. R. : Stimulation of the Heart of the Spinal Dog by Phenoxybenzamine, 919
Bensasson, Dr. R. : Effects of Ionizing Radiation on Organic and Biological Solids (Use of Electron-Spin Resonance to Identify and Measure the Free Radicals produced by Irradiation), 1150
Bensley, Dr. E. H.: Elected president of the Nutrition Society of Canada, 335
Benson, Dr. F. A. : Appointed to a readership in electronics in the University of Sheffield, 229
Benson-Evans, Kathryn : Environmental Factors and Bryophytes, 255
Bentley, H. R., and Burgan, J. G.: Cigarette Smoke Condensate—Preparation and Routine Laboratory Estimation, second edition (Tobacco Manufacturers' Standing Committee, Research Paper No. 4), 336
3,4-Benzopyrene : Effect of Ozone on the Fluorescence and Ultra-violet Absorption Spectra of (Z. Morlin and K. M. Sáringer), 907
Benzopyridocarbazoles : A New Family of Potent Carcinogens— (Prof. A. Laccasagne, Prof. N. P. Buu-Hoï, F. Zajdela, F. Périn and P. Jacquignon), 1005
Benzylpenicillin : A Method for Isolating Bacteria capable of Producing 6-Amino-penicillanic Acid from (Prof. Yukio Kameda, Yukio Kimura, Etsuko Toyoura and Tomoo Omori), 1122
Berde, Dr. B., and Saameli, Dr. K. : Effect of Bradykinin on Uterine Activity, 83
Berg, Dr. H., and Schweiss, H. : Photo-Polarography with a Flash-Lamp, 1270
Berg, Dr. W. F. : Appointed professor of the Photographic Institute of the Federal Technical College, Zurich, 1043 ; work of, 1043
Bergel, Prof. F. : Progress Reports and Tumour Research, *review*, 1231
Berger, Dr. C. A., and others: Chromosomal Elimination induced by 6-Aza-Uracil, 627
Bergman, I. : Nomenclature of Silica, 270
Bergström, R. M., and others : Circumscribing Irradiation of Surface Structures of Cylindrical Animal and Plant Cells with Polonium-210 α-Particles, 1165
Berkeley, C. : Indigotin Content of Woad, 1414
Berkeley, E. : Swarming of the Polychaete *Odontosyllis phosphorea* Moore, var. *Nanaimoensis* Berkeley, near Nanaimo, B.C., 1321
Berl, W. G., and Wilson, W. E. : Formation of Boron Nitride in Diborane–Hydrazine Flames, 380
Berland, Bjørn : Copepod *Ommatokoita elongata* (Grant) in the Eyes of the Greenland Shark—a Possible Cause of Mutual Dependence, 829
  Use of Glacial Acetic Acid for Killing Parasitic Nematodes for Collection Purposes, 1320

Berlman, Isadore B. : Pyrene Dimers, 594
Bernardi, Dr. Giorgio, and Sadron, Prof. Charles : Kinetics of the Enzymic Degradation of Deoxyribonucleic Acid into Sub-Units, 809
Bernau, S. J. : Elected to a Research Studentship in mathematics at Churchill College, Cambridge, 856
Bernhart, Dr. F. W. : Correlation between Growth-Rate of the Suckling of various Species and the Percentage of Total Calories from Protein in the Milk, 358
Bernhauer, Prof. K. : Vitamin B_{12} and Intrinsic Factor (B_{12} Coenzymes), 1154 ; (Biosynthesis by Different Pathways), 1155
Berries (Blue-) : The First Anthocyanins appearing during the Ripening of (Dr. Heikki Suomalainen and A. J. A. Keränen), 498
Berry (David Anderson) Prize for 1951 of the Royal Society of Edinburgh awarded to (*a*) Dr. H. B. Hewitt and Dr. C. W. Wilson, and (*b*) to Dr. D. H. Sussdorf, 229
Berry, R. T. (Andrews, J. R., and) : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Survival Curves of Mouse Leukaemic Cells which grow normally under Anoxic Conditions in the Animal), 341
Berson, Dr. Solomon A., and Yalow, Dr. Rosalyn S. : Immunochemical Distinction between Insulins with Identical Amino-Acid Sequences, 1392
Bertelsen, Dr. Sv., and Marcker, K. : Degree of Polymerization of Hyaluronic Acid isolated from Human Aortic Tissue, 386
Bertram, Dr. D. S. : Parasite Biology (Role of Arthropods as Vectors of Parasitic Infections), 134
Beryllium Oxide (Irradiated) : Scattering of Long Wave-length Neutrons by (T. M. Sabine, A. W. Pryor and B. S. Hickman), 1385
Beryllium-7 and Caesium-137 Radioactivity in Ground-Level Air : Comparison of (Dr. P. F. Gustafson, M. A. Kerrigan and S. S. Brar), 454
β-Activity (Gross), in the Thames River (Conn.), (D. M. Skauen, T. Hatfield, D. Hanlon and J. S. Rankin, jun.), 1017
β-Forms (α- and), of Selected Sugars : Relative Sweetness of (Rose Marie Pangborn and Sandra C. Gee), 810
β-Glucuronidase : Inhibition of, by Oral Administration of D-Glucosaccharo-1,4-Lactone (S. Akamatsu, Dr. A. Kiyomoto, S. Harigaya and S. Ohshima), 1298
β-Mercaptoethanol : A Morphogenetic Effect of—Distribution of Water in the Embryo (Dr. Peter Tuft), 1072 ; Distribution of Water in the Chick Blastoderm (A. Jurand and Dr. Peter Tuft), 1073
β-Rays in Dry and Wet Condition : Radiation Sensitivity of *Escherichia coli* to (S. B. Bhattacharjee and N. N. Das Gupta), 1015
Bettelheim, Prof. F. A., and others : Interaction of Lipids and Trypsin in Dimethyl Sulphoxide–Water Systems, 565
Bevington, H. L. S., and others : Significance of the Anti-Sporulation Effect of Copper Fungicides in the Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach, 476
Bewick, A. : General Fellowship in chemistry renewed for 1961-62 by the Ramsay Memorial Trust, 337
Bhaga, M. (Van Zyl, Dr. A., and) : A Spray Method for the Simultaneous Detection of Iodide and Iodinated Amino-Acids on Filter Paper Chromatograms, 275
Bhar, Prof. B. N. : Theoretical Expression for Solubility Product, 1004
Bhatnagar, V. S., and others : Seasonal Variations of Caesium-137 in Air at Ground-Level, 747
Bhattacharjee, S. B., and Das Gupta, N. N. : Radiation Sensitivity of *Escherichia coli* to β-Rays in Dry and Wet Condition, 1015
Bhuchar, V. M. : Chromium, Uranium, Tungsten and Nickel Complexes of Thioglycolic Acid, 489
Bianco, I., and others : Haemoglobin *P* in a Family of Southern Italian Extraction, 292
Bianco, I. (Silvestroni, Prof. E., and) : Abnormal Foetal Haemoglobins, 397
  Association of Haemoglobin *N* and Microcythaemia in a Sardinian Family, 1208
Bianco, L., and others : Intermediate Pool between Amino-Acids and Globin in Duck Blood *in vitro*, 40
Bibliographies (African) : A Bibliography of, covering Territories South of the Sahara (South African Public Library, Grey Bibliographies No. 7), fourth edition, 959
Bibliography of African Bibliographies, covering Territories South of the Sahara (South African Public Library, Grey Bibliographies No. 7), fourth edition, 959
Bibliography of Research Publications on Farm Buildings : Section 5, Buildings for the Drying and Storage of Grain (Agricultural Research Council), 440
Bickerton, Dr. R. J. (Allen, Dr. T. K., and) : Experiments on the Compression of Plasma in Cusp Geometry, 794
Bid (A Take-Over), in Acoustical Training (Prof. E. J. Richards), 748
Biddlestone, A. J. (Nutt, C. W., and) : A Molecular Beam Reactor for Examining the Rate, and Primary Products, of Reactive Bimolecular Collisions, 798
Biemann, Dr. K., and others : Determination by Mass Spectrometry of the Structure of Proline Derivatives from Apples, 380
Bihler, Dr. I. : Appointed I.C.I. Research Fellow at the University of Edinburgh, 337
Bilateral Section of the Splanchnic Nerve : Effect of, on Erythropoiesis (Fumimaro Takaku, Kunitake Hirashima and Prof. Shigeo Okinaka), 500
Bile : Metabolites of Vitamin B_{12} in, after Parenteral Administration of the Vitamin (Dr. John B. Stokes), 807
Bimolecular Collisions (Reactive): A Molecular Beam Reactor for Examining the Rate, and Primary Products, of (C. W. Nutt and A. J. Biddlestone), 798
Binding of Tetracycline to Macromolecules : Mediation of Divalent Metal Ions in the (Dr. Kurt W. Kohn), 1156
Binding (Enzymic), of Hydroxylamine by Fumaric Acid (Prof. Nathan Grossowicz and the late Yehudith Lichtenstein), 412
Bio-Assay of Erythropoietin in Mice made Polycythaemic by Exposure to Air at a Reduced Pressure (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Biochemical Aspects of Resistance to 6-Mercaptopurine in Human Epidermoid Carcinoma Cells in Culture (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
Biochemical Changes in Lethal Staphylococcal Infections in Mice (George W. Counts, Dr. Ian M. Smith, Dr. Joseph I. Routh, Dr. Elia Ch. Hazard and J. F. McTavish), 783
Biochemical Disturbances (Nervous and), following Hexachlorobenzene Intoxication (Dr. F. De Matteis, B. E. Prior and Prof. C. Rimington), 363
Biochemical Effect of Deuterium (Dr. Howard J. Ringold, Dr. Sumner Burstein and Dr. Ralph I. Dorfman), 1294
Biochemical Society : Colloquium on the Training of Biochemists, 24, 955
Biochemistry at the University of Melbourne (Prof. V. M. Trikojus), 1238
Biochemistry of Steroids (Erich Heftmann and Erich Mosettig), *review* by Dr. D. T. Elmore, 111
Biochemistry (Psychophysiology, Neuropharmacology and), of Audiogenic Seizure (Centre National de la Recherche Scientifique International Meeting on), 959
Biochemists : A Reference Book for, *review* by Dr. D. Recaldin, 635
  The Training of (Biochemical Society Colloquium on), 24, 955
Biochemists' Handbook (edited by Dr. Cyril Long), *review* by Dr. D. Recaldin, 635
Biological Activities of Steroids in relation to Cancer—Proceedings of a Conference sponsored by the Cancer Chemotherapy National Service Centre, National Cancer Institute, National Institutes of Health, United States Department of Health, Education and Welfare (edited by Gregory Pincus and Erwin P. Vollmer), *review* by E. Reid, 1235
Biological Activity of a Tri-o-Cresyl Phosphate Metabolite (Prof. John E. Casida, Morifusa Eto and Ronald L. Baron), 1396
Biological Communications in the United States : Improving, 23
Biological Control of Conception (Dr. A. S. Parkes), 1256
Biological Incorporation of Implant Material in the Rat (James Calnan), 1017
Biological Information : Storage and Retrieval of (Dr. G. C. Ainsworth), 12
Biological Membrane : Electrical Properties of Orientated Lipid on a—an Electrostatic Diffusion Barrier and Ion Pump (Dr. J. W. L. Beament), 217
Biological Membranes : Transfer of Calcium and Strontium across (United States Atomic Energy Commission, United States National Institutes of Health, United States National Science Foundation and the New York State Veterinary College Conference on), 1250
Biological Photoreceptor : Transfer Function of a (Dr. Lawrence Stark and Dr. Howard T. Hermann), 1173
Biological Serials Record Centre : Establishment of a, 23
Biological Solids (Organic and) : Effects of Ionizing Radiation on (Société de Chimie Physique and the British Biophysical Society Discussion on), 1150
Biological Work : A Sealing Compound for Use in (G. Stotzky, W. Culbreth and Dr. L. B. Mish), 410
Biological Work in Burma : Use of Radiosiotopes in (Dr. Maung Mya Thaung), 875
Biological and Medical Abstracts, Ltd. : Publication of *Index Biologicus*, 544
Biologically Active Components from Commercial Trypan Blue : Chromatographic Separation of (J. Dijkstra and J. Gillman), 803
Biologicus (*Index*) : Publication of (Biological and Medical Abstracts, Ltd.), 544
Biologische Bundesanstalt für Land- und Forstwirtschaft : Proceedings of the Fourth Conference on Potato Virus Diseases, Braunschweig, 1960 (edited by J. Brandes, R. Bartels, V. Völk and C. Wetter), 657
Biologists (Applied), Association of : Provincial Meeting at the University College of North Wales, Bangor, 856
Biology in Britain (Dr. H. V. Wyatt), 960
Biology : Experimental Method in, from the Time of Antonio Vallisneri to the Present (University of Padua Symposium on), 546
  Parasite (Parasitology Group of the Institute of Biology Meeting on), 134
  Pigment Cell (New York Academy of Sciences fifth International Conference on), 1045
Biology, Institute of (Parasitology Group) : Spring Meeting (Parasite Biology), 134
Biology of Crustacea (Dr. J. Green), *review* by Dr. J. A. Allen, 111
Biology for Grammar Schools (Science Masters' Association and the Association of Women Science Teachers), 555
Biology of Micro-organisms, *review* by Prof. B. C. J. G. Knight, 1032
  An Introduction to the (Lilian E. Hawker, A. H. Linton, B. F. Folkes and M. J. Carlile), *review* by Prof. B. C. J. G. Knight, 1032
Biology of Reproduction in *Rubus* (Dr. G. J. Dowrick), 680
Biology of Stentor (Vance Tartar), *review* by Dr. J. A. Kitching, 1133
Biology and Medicine (Experimental), Society for (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Biology Syllabus for Sixth Forms (Gulbenkian Foundation Conference on, at the University of Brimingham), 554
Biology Teaching : A New Approach to (Dr. L. H. Finlayson), 554
Biology (Animal), and the Medical Sciences : The Use of Radioisotopes in (International Atomic Energy Agency, the Food and Agriculture Organization and the World Health Organization of the United Nations, Conference on), 959
Biology (Cell), American Society for : Symposium on Cell Continuity, 1045
  Symposium on Cell Diversification, 1045
  Symposium on Characteristics of Cell Interfaces, 1045
Biology (Marine), or Oceanography : Research in (Challenger Society Grants for), 24
Biometrical Genetics : Discriminant Analysis in (Dr. S. K. Jain), 1420
Biophysical Society, British (Société de Chimie Physique and the) : Discussion on the Effects of Ionizing Radiation on Organic and Biological Solids, 1150
Biörck, Prof. Gunnar, and Paléus, Dr. Sven : Cytochrome c in the Heart of the Turtle, 712
Biorheology and Microcirculation (Medical School of the Hebrew University Seminar on), 757
Biosynthesis of Hydrastine (J. R. Gear and Prof. I. D. Spenser), 1393
Biosynthesis of Isoleucine : Release from the Feedback Inhibition controlling the (Masaya Hayashibe and Teijiro Uemura), 1417
Biosynthesis of Polyenoic Fatty Acids in Human Whole Blood (Dr. F. Leupold and G. Kremer), 805
Biosynthesis of the Pyrethrins (Dr. Mary P. Crowley, Helene S. Inglis, M. Snarey and Dr. E. M. Thain), 281
Biosynthesis of Riboflavin in Cell-free Systems (Prof. T. W. Goodwin and Dr. A. A. Horton), 772
Biosynthesis of Urea : Prevention of Ammonia Toxicity by Amino-Acids concerned in the (Dr. Francesco Salvatore and Dr. Vincenzo Bocchini), 705

Biosynthesis and Activity of Nitrate-Reductase in *Aerobacter aerogenes* : Inhibition by Oxygen of (Francis Pichinoty and Liliane D.Ornano), 879
Biotic Associations of Cockroaches (Dr. Louis M. Roth and Dr. Edwin R. Willis), *review* by David R. Ragge, 106
Birch, H. F., and Friend, M. T. : Resistance of Humus to Decomposition, 731
Bird, Lieut.-Gen. G. W. G. : Haemagglutinins from *Clerodendrum viscosum* Vent, 292
Bird (Oliver) Lecture : Fifth (Dr. A. S. Parkes, Biological Control of Conception), 1256
Bird, R. G. : Parasite Biology (Role of Arthropods as Vectors of Parasitic Infections), 134
Bird, R. G. : Appointed lecturer in the Department of Civil Engineering, University of Birmingham, 337
Bird Preservation, International Council for : Seventh Conference of the European Continental Section (Phyllis Barclay-Smith), 550
Bird Preservation, International Council for (British Section) : Annual Report for 1960, 124
Birds : Effects of Insecticides on, 440
Birds in a Changing World (Phyllis Bond), 133
Birds of Eastern and North-Eastern Africa (C. W. Mackworth-Praed and C. H. B. Grant), second edition, *review* by Sir Landsborough Thomson, 9
Birds (Adult) : Comparison of the Serum Protein Fractions of the Newly Hatched Chick with those of, using Starch-gel Electrophoresis (A. Amin), 708
Birds (European), for Caging : Trade in, 124
Birds (Humming-) : Thyroid Function in Active, Sleeping and Torpid (Prof. C. J. Shellabarger, R. C. Lasiewski and G. E. Hyncik), 1318
Birkbeck College, London : Title of professor emeritus of psychology conferred on Prof. C. A. Mace, 546
Birks, Dr. J. B., and Slifkin, M. A. : π-Electronic Excitation and Ionization Energies of Condensed Ring Aromatic Hydrocarbons, 761
Birmingham College of Advanced Technology : Course on Statistical Quality Control and Acceptance Sampling, 337
Birth : Changes in Glucose-6-phosphatase Activity in Liver and Kidney at (M. J. R. Dawkins), 72
Bisby's (Ainsworth and) Dictionary of the Fungi, fifth edition by Dr. G. C. Ainsworth, *review* by Prof. John Colhoun, 109
Bishop, Dr. J., and others : Control of Specificity in Haemoglobin Synthesis, 1365
Biswas, A. B., and others : Compressibility and Specific Evaporation Resistance of the Monolayers of Long-Chain Alcohols and Glycol Monoalkyl Ethers, 378
Bitensky, L., and others : Tissue Dilution Artefact—a Re-Interpretation of Variations in Levels of Succinic Dehydrogenase during Chemical Carcinogenesis, 1203
Bivalent Cations in the Magnetoplumbite Structure : Fluoride-compensated Substitution of (Prof. E. Banks and M. Robbins), 1387
Black, Prof. Nisha : Art and the Engineer, 949
Black Shale, Oil and Sulphide Ore (Prof. K. C. Dunham), 985
Bladders (Rat) : Incorporation of Phosphorus-32 into Urinary Concretions forming on Zinc Implants in (Dr. Richard F. Keeler and Dr. Stuart A. Lovelace), 715
Blåfield, R. F., and others : Circumscribing Irradiation of Surface Structures of Cylindrical Animal and Plant Cells with Polonium-210 α-Particles, 1165
Blair, Dr. G. W. Scott : Biorheology and Microcirculation, 757
Blair, Dr. G. W. Scott, and Oosthuizen, J. C. : An Invariant Casein Substrate for Rennet Standardization, derivable from Diverse Sources of Cows' Milk, 697
Blake, C. C. F. : Effects of Ionizing Radiation on Organic and Biological Solids (Chemical Changes on Irradiation), 1151
Blake, C. D. : Nematology (*Radopholus similis* causing Root-rot in Banana in New South Wales), 1048
Bland, B. M. : Appointed to the University librarianship in the University of Southampton, 443
Bland, J. A., and others : Synthesis and X-Ray Analysis of Diamond, 865
Blastoderm (Chick) : Distribution of Water in the (A Morphogenetic Effect of Beta-Mercaptoethanol), (A. Jurand and Dr. Peter Tuft), 1073
Blattella germanica : Metabolism of the Sulphur Amino-Acids and of Sulphate in (Richard J. Block and S. Mark Henry), 392
Blight (Leaf) : Susceptibility to, caused by *Cochliobolus heterostrophus*, in Nigerian Varieties of Maize (C. L. M. van Eijnatten), 515
Blin-Stoyle, Dr. R. J. : Appointed professor of theoretical physics at the University of Sussex, 1349
Blindness in Africans in Northern Rhodesia (Dr. C. M. Phillips), 753
Bloch, A. : Damping without Influence on Frequency, 1086
Block, R. J. (edited by Dr. P. Alexander and) : A Laboratory Manual of Analytical Methods of Protein Chemistry (including Polypeptides), Vol. I, The Separation and Isolation of Proteins, *review* by Dr. D. T. Elmore, 320
Block, R. J., and Henry, S. Mark : Metabolism of the Sulphur Amino-Acids and of Sulphate in *Blattella germanica*, 392
Blockage of Transformation of Tryptophan to Nicotinic Acid by Experimental Hepatitis in Mice (M. Piazza, F. Tancredi and Prof. E. Quagliariello), 601
Bloemendal, Dr. H., and others : Modified Cellulose Ion Exchangers and their Use in Ribonucleic Acid Fractionation, 349
Blood : Precorticotrophin in (Dr. P. R. Dasgupta), 1106
Blood and the Exhaled Air of Diabetic Patients : Rapid Infra-Red Determination of Acetone in the (Dr. Richard D. Stewart, Edward A. Boettner and Bruce T. Stubbs), 1008
Blood (Cord) Serums : Haptoglobin Patterns in (A. R. Rausen, P. S. Gerald and Dr. L. K. Diamond), 717
Blood (Duck), *in vitro* : Intermediate Pool between Amino-Acids and Globin in (L. Bianco, G. Giustina and E. Lazzarini), 40
Blood (Human Whole) : Biosynthesis of Polyenoic Fatty Acids in (Dr. F. Leupold and G. Kremer), 805
Blood Cell (Red) : Dimer Formation and Glucose Transfer across the Membrane of the (Dr. W. D. Stein), 1277
Blood Coagulation : Controlling Mechanism of the Mechanical Activity of Muscle and that of (Dr. Masahiro Fujino, Saburo Yamaguchi, Masa Takauji, Kohki Uchida, Masahide Yasuda and Tatsuaki Matsushima), 80
Blood-Feeding, Fecundity and Ageing in *Aedes aegypti* var. *Queenslandensis* (Dr. M. M. J. Lavoipierre), 575
Blood Glucose and Liver Glycogen in Rabbits : Effect of Bee Venom on Concentration of (Prof. A. H. Mohamed and K. Zaki), 605
Blood Group Agglutinogen M^{g} : Action of Influenza Viruses, Receptor-destroying Enzyme and Proteases on (Prof. Georg F. Springer and Dr. Karlheinz Stalder), 187
Blood-Group *A* Substance (Human) : Two Serologically Active Trisaccharides isolated from (I. A. F. Lister Cheese and Prof. W. T. J. Morgan), 149
Blood Group (*M*- and *N*-) Substances : Products of Mild Acid and Alkaline Hydrolysis of (Dr. Elzbieta Romanowska), 1408
Blood Groups of Animals other than Man (Dr. D. G. Gilmour), 653
Blood Groups in Infra-human Species (New York Academy of Sciences Conference on), 653
Blood Sera : Emulsifying Capacity of (Prof. B. Breyer), 174
Blood Serotonin : Changes in, during Exposure to Cold (Dr. Paul Gordon), 183
Blood Transfusion work : Award for (Oliver Memorial Fund), 336
Blood-Typing Compact Human Bone Tissue (H. E. Ezra-Cohn and Prof. S. F. Cook), 1267
'Blood Waves' : Brain Waves and (Henry R. Pantek), 577
Blood and Serum : Vitamin-Levels in (H. Baker, O. Frank, I. Pasher, Dr. H. Sobotka and S. H. Hutner), 78
Bloom, Dr. Joyce L. : Pulmonary Tumours and Group VII in the House-Mouse, 1124
Bloom, Dr. Joyce L. (Falconer, Dr. D. S., and) : Inheritance of Susceptibility to Induced Pulmonary Tumours in Mice, 1070
Blowfly, *Phormia regina* Meigen : Response of the Labellar Hairs of the, to Protein (D. I. Wallis), 917
Blueberries : The First Anthocyanins appearing during the Ripening of (Dr. Heikki Suomalainen and A. J. A. Keränen), 498
Blumer, Max, and Omenn, Gilbert : Fossil Chlorins in a Triassic Sediment, 161
Boaden, P. J. S. : Littoral Interstitial Species from Anglesey representing Three Families New to Britain, 512
Board Makers' Association, British Paper and (Technical Section) : Conference on the Formation and Structure of Paper, 126
Bocchini, Dr. Vincenzo (Salvatore, Dr. Francesco, and) : Prevention of Ammonia Toxicity by Amino-acids concerned in the Biosynthesis of Urea, 705
Böcher, Prof. T. W. : Flora Europaea, 447
Bodard, Dr. M. : Effects of Ionizing Radiation on Organic and Biological Solids (Use of Electron-Spin Resonance to Identify and Measure the Free Radicals produced by Irradiation), 1150
Bodies (Pigment), of the Spinal Neurones of some Teleosts (Prof. A. Stolk), 924
Body : Effect of Administration of Lysergic Acid Diethylamide on Serotonin-Levels in the (Dr. D. V. Siva Sankar, D. Barbara Sankar, Edward Phipps and Eleanor Gold), 499
Body Constituents: Metabolic Stability of (Dr. A. N. Davison and Dr. J. Dobbing), 844
Boeri, Prof. Enzo : *Obituary* by Prof. Britton Chance, 1247
Boettner, Edward A., and others : Rapid Infra-Red Determination of Acetone in the Blood and the Exhaled Air of Diabetic Patients, 1008
Bogden, Dr. A. E., and Aptekman, Dr. P. M. : Blood Groups in Infra-human Species (Inherited Haemagglutinogens of Rats and their Relationship to Histocompatability Factors), 654
Bollard, E. G. (Letham, D. S., and) : Stimulants of Cell Division in Developing Fruits, 1119
Boman, Hans G., and Svensson, Ingvar : Evidence for a New Enzyme connected with Protein Synthesis, 674
Bombardment (Electron) : Evaporated Carbon Films of Large Area for Adsorption Studies by (A. E. Bell, J. Pritchard and Prof. K. W. Sykes), 487
Bombyx mori (Silkworm) : Brain Hormone of the (Mamori Ichikawa and Hironori Ishizaki), 933
    Role of Lipid in the Hardening of the Cuticle in the (Shigemi Kawase), 279
    Sterol Requirements of the (Dr. Toshio Ito), 882
Bond, Dr. Joan, and Cooper, J. G. : Effect of Polyamino Carboxylic Acids on Catalase, 385
Bond, Phyllis : At the Annual Congress of the South-Eastern Union of Scientific Societies (Birds in a Changing World), 133
Bond, T. J., and others : Enzymic Conversion of Tetrahydrofolic Acid to Folinic Acid by Plant Protein, 179
Bond, V. P., and others : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture, 1398
Bond-Lengths in Solid Helium (Dr. A. F. Schuch), 591
Bondi, Prof. H. : Cosmology, second edition, *review* by Prof. W. H. McCrea, 1336
Bone (Australopithecine Upper Arm) : An Australopithecine Scoop made from a Right (Prof. Raymond A. Dart), 372
Bone Tissue (Human) : Blood-Typing Compact (H. E. Ezra-Cohn and Prof. S. F. Cook), 1267
Bones (Homotypic Long) : Number and Arrangement of Osteons in Corresponding Regions of (Dr. G. Marotti), 1400
Bonnell, Prof. B. : Structure and Action of the Sucker of *Echeneis*, 403
Bonner, Dr. T. G. : Title of reader in organic chemistry in the University of London (at Royal Holloway College) conferred on, 229
Bonner, jun., Dr. Walter D., and Voss, Dinor O. : Some Characteristics of Mitochondria Extracted from Higher Plants, 682
Bonnington, S. T. : The British Hydromechanics Research Association, 652
Bonnycastle, Dr. D. D. : Assessment of Pain (Testing of Analgesic Drugs on Animals), 1354
Book (Reference) : Civil Engineering (edited by J. Comrie), *review* by T. M. Charlton, 1032
Book (Reference), for Biochemists, *review* by Dr. D. Recaldin, 635
Books : Recent Scientific and Technical, Supp. iv, July 29 ; Supp. iv, August 26 ; ccccxciii, September 30
Books on the Chemical and Allied Industries (Science Museum Library, London), 22
Books (Scientific) : Publication of (Scientific Publications Council Meeting on), 131

Borden Award of the Nutrition Society of Canada awarded to Dr. Donald Fraser, 335
Borek, Dr. Felix : A New Two-Stage Method for Cross-linking Proteins, 1293
Borenfreund, Dr. E., and others : Isolation and Properties of Deoxyribonucleic Acid from Mammalian Sperm, 1375
Borghese, E. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Film showing the Growth of Mouse Embryonic Lung explanted by the Organ Culture Technique and the Effects of γ-Rays on this Tissue), 342
Borghese, E., and others : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Action of Radiation on Freshly Explanted Cultures of Organized Tissues), 341
Boric Acid: Effect of, on the Phosphoglucomutase of Pea Seeds (Dr. B. C. Loughman), 1399
Born, Prof. G. V. R. : At the Scientific Publications Council Meeting on the Publication of Scientific Books (Contractual Relationships), 132
Borneman, I. D., *et al.* (edited by) : English–Russian Geological Dictionary (T. A. Sofiano), *review* by Dr. S. I. Tomkeieff, 9
Borneo (North), Government of (Royal Society of London in co-operation with the) : North Borneo Expedition 1961, 26
Borneo (North) Expedition 1961 (Royal Society of London in co-operation with the Government of North Borneo), 26
Boron (Polycrystalline) : Electrical Effects observed in (C. H. Carmichael and M. Dore), 485
Boron Nitride : Formation of, in Diborane–Hydrazine Flames (W. G. Berg and W. E. Wilson), 380
Borough Polytechnic, London : Symposium on the Freeze-drying of Foodstuffs, 651
  Lectures on the Technique of Technical Writing, 755
Borrelia anserina (Sakharoff 1891) : Experimental Transmission of, by *Aedes aegypti* (J. A. Roberts), 1225
Borza, Prof. A. : Flora Europaea, 449
Bosch, Dr. L., and others : Modified Cellulose Ion Exchangers and their Use in Ribonucleic Acid Fractionation, 349
Botanical Congress (International) : Symposium on Forest Ecosystem (Montreal, 1959)—Proceedings of the, 755
Botany (Agricultural), National Institute of : Appointment of D. B. MacKay as chief officer of the Official Seed Testing Station, 856
Bottomley, W. (Perrin, Dawn R., and) : Pisatin, an Antifungal Substance from *Pisum sativum* L., 76
Bouillon, A., and Lekie, R. : Cycle and Rhythm in the Ovulation of the Spider *Latrodectus geometricus* C. Koch, 620
Bouldin, D. R. (Hauck, R. D., and) : Distribution of Isotopic Nitrogen in Nitrogen Gas during Denitrification, 871
Boulton, V. R. : At the Second International Measurement Conference (Measuring Systems for Flight Testing of Aircraft), 1350
Bound Forms (Free and), of Vitamin B_{12} : Gel Filtration of Sea-Water—Separation of (Dr. K. W. Daisley), 868
Boura, A. L. A., and others : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine, 1312
Bourne, Prof. E. J. (Bailey, Dr. R. W., and) : Intracellular Glycosidases of Dextran-producing Bacteria, 277
Bourne, Dr. G. H. (edited by) : The Structure and Function of Muscle, Vol. 2, Biochemistry and Physiology ; Vol. 3, Pharmacology and Disease, *review* by Dr. D. H. Sproull, 948
Bovine Insulins (Cod and) : A Comparison of (Dr. S. Wilson and Dr. G. H. Dixon), 876
Bovine Serum Albumin : Elimination of, in Acute Experimental Uraemia (Dr. G. Gowland, F. G. Smiddy, Dr. R. G. Burwell and F. M. Parsons), 1210
Bowden, Dr. F. P., and Montagu-Pollock, H. M. : Slow Decomposition of Explosive Crystals and their Damage by Fission Fragments, 556
Bowen, G. D., and Rovira, A. D. : Plant Growth in Irradiated Soil, 936
Bowen, Trevor : New Laboratory Wing of the British Baking Industries Research Association opened by, 233
Bowers, R. (Stride, A. H., and) : Two Unexplored Records of Quaternary History, 1001
Bowles Memorial Travel Scholarship (Royal Horticultural Society), 1349
Bowman, Dr. J. E., and Walker, Dr. D. G. : Virtual Absence of Glutathione Instability of the Erythrocytes among Armenians in Iran, 221
Bowman, Robert L., and others : Detection by Ionization of Atmospheric Gases during Analysis by Gas Chromatography, 906
Bowsheer, Dr. D. R., and Albe-Fessard, Prof. D. : Assessment of Pain (Somatic Sensations), 1353
Boyd, Prof. William C., and Reeves, Egli : Specific Inhibition of Anti-*D* Antibody by Colominic Acid, 511
Boys (School) : Research by Sixth-Form (J. Heywood), 860
Braams, Dr. R. A. : Effects of Ionizing Radiation on Organic and Biological Solids (Dry Solids are more Sensitive than Wet Solids or Solutions), 1151
Brachiopods : 'Quick' and 'Catch' Adductor Muscles in (Dr. M. J. S. Rudwick), 1021
Bradford Institute of Technology : Course on Recent Developments in the Chemistry and Technology of Polymers, 1349
Bradley, Prof. D. C., and Westlake, A. H. : Structures of Polymeric Titanium Ethoxide and Titanium Oxide Ethoxides, 273
Bradley, Dr. P. B., and others : Tryptamine Receptors in the Central Nervous System, 1068
Brady, Roscoe O., and Tower, Donald B. (edited by) : The Neurochemistry of Nucleotides and Amino Acids—a Symposium of the Section on Neurochemistry, American Academy of Neurology, *review* by Dr. R. V. Coxon, 318
Bradykinin : Effect of, on Uterine Activity (Dr. B. Berde and Dr. K. Saameli), 83
Bragiński, A., and Merceron, Th. : Magnetic Relaxation on Magnetite and in its Solid Solutions with Manganese and Nickel Ferrites, 898
Braganca, Dr. B. M. : Awarded a grant from the Lady Tata Memorial Trust, for research on leukaemia and allied diseases, 228
Brahma, S. K., and Kundu, N. : Effects of *Grewia populifolia* Extracts on the Development of Chick Embryos, 506
Brahmachari, Dr. H. D., and Sarma, G. Raghupathy : Effects of Injections of some Intermediary Metabolites on the 'Insulin Response' of Normal Rabbits, 491, *erratum*, 755
Brain, Sir Russell : Speech, Handedness and Cerebral Dominance, *review*, 840
  Presidential Address at the Universities Federation for Animal Welfare Symposium on the Assessment of Pain, 1353
Brain : Antibody Response in Rabbits following injection of Sheep Erythrocytes into Lateral Ventricle of (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
  Distribution of Piperidine in the, and its Possible Significance in Behaviour (Dr. L. G. Abood, F. Rinaldi and Virginia Eagleton), 201
  Phosphorus Metabolism of (Dr. P. J. Heald), *review* by Dr. R. V. Coxon, 318
Brain of the Leech : Neurosecretion and Granules in Neurones of the (Irvine R. Hagadorn and Richard S. Nishioka), 1013
Brain of the Rat during 'Metrazol' Convulsions : Changes in the Pentose–Nucleic Acid Content of Sub-Cellular Fractions of the (Prof. G. P. Talwar, B. Sadasivudu and V. S. Chitre), 1007
Brain (Living Rat) : Urea Synthesis in the (R. K. Davies, A. J. Defalco, D. Shander, A. Kopelman and Prof. J. Kiyasu), 288
Brain Hormone of the Silkworm, *Bombyx mori* (Mamori Ichikawa and Hironori Ishizaki), 933
Brain Waves and 'Blood Waves' (Henry R. Pantek), 577
Brains : The Economic Use of (Prof. C. F. Carter), 987
Brains (Mouse), infected with Two Kinds of Arbor Virus Group *B* : Infectious Ribonucleic Acids derived from (Prof. Mashiro Nakamura), 624
Brancati, C., and others : Haemoglobin *P* in a Family of Southern Italian Extraction, 292
Branched Polysaccharides : Separation of Linear from, by Precipitation as Iodine Complexes (Blanche D. E. Gaillard), 1295
Branched Tapeworms, *Hymenolepis nana* (Cestoda : Hymenolepididae) : A Natural Population of Anomalous, in a Colony of *DBA*/1 Mice (Dr. Donald Heyneman), 297
Brandes, J., and others (edited by) : Proceedings of the Fourth Conference on Potato Virus Diseases, Braunschweig, 1960 (Biologische Bundesanstalt für Land- und Forstwirtschaft), 657
Brar, S. S., and others : Comparison of Beryllium-7 and Caesium-137 Radioactivity in Ground-Level Air, 454
Bray, A. : At the Second International Measurement Conference (A Novel Technique for Re-using Resistance Strain Gauges), 1351
Brazil and Israel (Argentina,) : Grants from the United States to the International Atomic Energy Agency for Nuclear Equipment in, 442
Breakdown of [2-^{14}C]-Glycine during Paper Chromatography (A. K. Huggins and V. Moses), 668
Breakdown (Enzymic), of Stigmatic Cuticula of Flowers (W. Heinen and H. F. Linskens), 1416
Breaking Wires at High Speed : Ignition of Gas by Sparks produced by (Dr. R. L. Gordon, Dr. H. Lord and D. W. Widginton), 1085
Breeding (Plant) : Principles of (Prof. R. W. Allard), *review* by Dr. Kenneth S. Dodds, 636
Breeds (Rajasthan Sheep) : Composition of the Skin Follicle Population in seven (Sunanda Narayan), 1115
Bremner, P. M., and others : Tuber Bulking in the Potato Crop, 782
Brenner, M. W., and others : Circumscribing Irradiation of Surface Structures of Cylindrical Animal and Plant Cells with Polonium-210 α-Particles, 1165
Bretylium and Guanethidine : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), (A. L. A. Boura, F. C. Copp, A. F. Green, H. F. Hodson, G. K. Ruffell, M. F. Sim, E. Walton and E. M. Grivsky), 1312
Breuil, l'Abbé H. : *Obituary* by Miles Burkitt, 1246
Brewer, Dr. D. F., and Keyston, J. R. G. : Specific Heat and Expansion Coefficient of Liquid Helium-3 under Pressure below 0·1° K., 1261
Brewer, Dr. F. M. : Determination of Uranium as Pyrophosphate, 1290
Breyer, Prof. B. : Emulsifying Capacity of Blood Sera, 174
Bridgehead Nitrogen Atoms : Heterocyclic Systems with (William L. Mosby), Part I, *review* by Dr. G. L. Buchanan, 425
Bridgewater, T. H. : *Obituary* of Geoffrey Parr, 332
Briggs, Michael H. : Organic Constituents of Meteorites, 1137
Briggs, Michael H., and Duncan, R. B. : Odour Receptors, 1310
Brightman, R. : *Obituary* of the Rt. Hon. the Lord McGowan, 1041
Brightness in Extragalactic Radio Sources : Distribution of (A. T. Moffet and P. Maltby), 453
Briles, Dr. W. E. : Blood Groups in Infra-human Species (Blood Groups of Chickens), 654
Brillouin, Dr. Léon : Wave Propagation and Group Velocity, *review* by Prof. M. H. L. Pryce, 104
Brimelow, T. : Solar Energy Technology, 1954-1959 (Library Association, Special Subject List No. 34), 228
Brinck, Per, and others (edited by) : South African Animal Life—Results of the Lund University Expedition in 1950-1951, Vol. 7, *review* by Prof. O. Lowenstein, 1135
Britain : Atomic Energy Research and Development in, 857
  Biology in (Dr. H. V. Wyatt), 960
  Control of Colleges of Advanced Technology in, 20
  Crisis in Mathematical Education in, 103
  Education of Backward Children in, 1052

Calories/gm. in Species of Animals (Prof. L. B. Slobodkin and S. Richman), 299
Calories (Total), from Protein in the Milk : Correlation between Growth-Rate of the Suckling of various Species and the Percentage of (Dr. F. W. Bernhart), 358
Calorimeter (Continuous Flow) : Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of High Surface Area using a (G. H. Bell and A. J. Groszek), 1184
Calvert, D., and others : Discreteness-of-Charge Effect and the Stability Theory of Colloids, 699
Cameron, Margaret : At the Third International Congress of Dietetics (Protein Values of Foods, Meals and Mixtures as eaten by Man), 1344
Campbell, A. I. : Shortening the Juvenile Phase of Apple Seedlings, 517
Campbell, Dr. I. G. M. : Title of reader in chemistry in the University of Southampton conferred on, 443
Campbell, L. G. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 126
Campbell, R. R., and others : Effect of Alpha-Amylase on the Ehrlich Mouse Ascites Tumour, 1113
Canada : Forest Insect Pests and Diseases in (Prof. M. L. Anderson), 1260
Canada, Department of Forestry (Forest Entomology and Pathology Branch): Annual Report of the Forest Insect and Disease Survey (1960), 1260
Canada, National Research Council of : Problems of the North (Translation of *Problemy Severa*), No. 1, 1958 (translated December 1960), *review* by Dr. Terence Armstrong, 841
Canada, Nutrition Society of : Election of Officers, 335
  Borden Award awarded to Dr. Donald Fraser, 335
  Symposium on Current Problems in Nutrition, 335
Canadian Embassy in Washington : Appointment of Dr. E. O. Hughes as scientific attaché, 542
Cancer : Biological Activities of Steroids in relation to—Proceedings of a Conference sponsored by the Cancer Chemotherapy National Service Center, National Cancer Institute, National Institutes of Health, United States Department of Health, Education and Welfare (edited by Gregory Pincus and Erwin P. Vollmer), *review* by E. Reid, 1235
  Eleanor Roosevelt Fellowships for Research on (International Union against Cancer), 125
  Induction of, in Suckled and Unsuckled Female Rats (Prof. Giuliano Briziarelli), 921
  Steroids and, *review* by E. Reid, 1235
Cancer, International Union against : Eleanor Roosevelt Fellowships for Research on Cancer, 125
  Grant from the Gulbenkian Foundation, 754

Cancer Campaign (British Empire) (Yorkshire Council) : Grant of £1,000 to Department of Physical Chemistry in University of Leeds, 650
Cancer Cells (HeLa) (Human), in Culture : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Cancer Hospital (Royal) : The Chester Beatty Research Institute of the Institute of Cancer Research (Prof. A. Haddow), 430
Cancer Institute (United States National), and others (sponsored by the) : Proceedings of a Conference on Biological Activities of Steroids in relation to Cancer (edited by Gregory Pincus and Erwin P. Vollmer), *review* by E. Reid, 1235
Cancer Problem : A Clinical Prospect of the (Prof. D. W. Smithers), *review*, 1336
Cancer (Anti-) Properties of Thio-diglycollic Acid (M. B. Sahasrabudhe, M. V. Narurkar, L. B. Kotnis, B. D. Tilak, L. C. Shah, V. N. Gogte), 388
Cannabis sativa : Essential Oil from Fresh, and its Use in Identification (L. Martin, Dr. D. Morison Smith and C. G. Farmilo), 774
Capacity (Emulsifying), of Blood Sera (Prof. B. Breyer), 174
Capacity (Heat), and Resistivity Anomalies in Palladium Hydride (Paul Mitacek, jun., and Prof. J. G. Aston), 271
Capellaro, David F., and others: A Hypodermic Probe using Fibre Optics, 927
Capillary Columns (Solid-coated) : Deterioration of, on Standing (George M. Rouayheb and William C. Hamilton), 801
Capillary Discharge (Direct-Current) : Pressure Differences in a (D. S. Smith), 265
Capital Expenditure of Colleges and Universities in the United States for research and development in the Natural and Social Sciences in 1958 (United States National Science Foundation), 545
Captive Weaver-Finches (*Quelea quelea*) : Melanism in (Dr. B. Lofts), 993
Capture, Carriage and Deposition (Wettability and the), of Particles by Raindrops (R. R. Davies), 616
Carbohydrate (Multi-) Media : A Micro-method for Performing the Phenylalanine Test on Cultures from (D. J. Stewart), 521
Carbon-14 from Nuclear Explosions as a Short-term Dating System—Use to determine the Origin of Heartwood (Dr. A. T. Wilson), 714
5,10,15 ^{14}C-Farnesol Pyrophosphate : Incorporation of, into *Phycomyces carotenoids* (H. Yamamoto, H. Yokoyama, K. Simpson, T. O. M. Nakayama and C. O. Chichester), 1299
[2-^{14}C]-Glycine : Breakdown of, during Paper Chromatography (A. K. Huggins and V. Moses), 668
^{14}C-Tetrachloroethylene in Mice : Urinary Metabolites in (Dr. Sven Yllner), 820
^{14}C-Uridine : Catalysis of Incorporation of, into Rat Lens Ribonucleic Acid by Rat Lens Enzyme System (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
Carbon Compounds : Chemistry of (edited by Dr. E. H. Rodd), Vol. 4, Part C, Heterocyclic Compounds, *review* by Dr. James D. Loudon, 214
Carbon Dioxide : Action of, on 6-Amino-penicillanic Acid (F. R. Batchelor, D. Gazzard and J. H. C. Nayler), 910
  Irradiation Decomposition of (T. B. Copestake and N. S. Corney), 1192
Carbon Dioxide in Leaves of *Bryophyllum fedtschenkoi* : An Endogenous Rhythm in the Rate of Dark-Fixation of (Diana M. Warren and Malcolm B. Wilkins), 686
Carbon Dioxide and Ethanol as Factors controlling the Growth of Etiolated Oat Seedlings (Dr. C. L. Mer), 260
Carbon Films (Evaporated), of Large Area for Adsorption Studies by Electron Bombardment (A. E. Bell, J. Pritchard and Prof. K. W. Sykes), 487
Carbon Monoxide: Selectivity of Palladium Catalysts for the Oxidation of, in the Presence of Hydrogen (P. Mars and Th. van de Mond), 1003
Carbonates (Water-soluble) : Infra-Red Spectra of (Herman A. Szymanski and Richard Povinelli), 64
Carbonyls : Girard *T* Reagent for (A. M. Gaddis, Rex Ellis and G. T. Currie), 1391
Carboxylic Acids (Polyamino) : Effect of, on Catalase (Dr. Joan Bond and J. G. Cooper), 385
Carcinogenesis (Chemical) : Tissue Dilution Artefact—a Re-interpretation of Variations in Levels of Succinic Dehydrogenase during (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Carcinogenicity (Oxidative Demethylation and), of 4-N-Dimethylaminoazobenzene Derivatives (Prof. Morizo Ishidate and Akira Hanaki), 1198
Carcinogens : Kennaway and the (Prof. Antoine Lacassagne), 743
Carcinogens (Potent) : A New Family of—Benzopyridocarbazoles (Prof. A. Lacassagne, Prof. N. P. Buu-Hoï, F. Zajdela, F. Périn and P. Jacquignon), 1005
Carcinoma (Mouse) : Effect of Irradiated Normal Tissues on the Growth of (Dr. Arthur Compton and Prof. Charles A. Pannett), 1101
Carcinoma Cells (Human Epidermoid), in Culture : Biochemical Aspects of Resistance to 6-Mercaptopurine in (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
Cardiac Contraction and Size of the Heart : Relationship between Velocity of—a Hypothesis (Dr. H. Feinberg), 1373
Carlile, M. J., and others : An Introduction to the Biology of Micro-organisms, *review* by Prof. B. C. J. G. Knight, 1032
Carlsberg Foundation and the Wellcome Trust : Award of Carlsberg–Wellcome Research Fellowships for 1960-61, 754
Carlson, Prof. Elof Axel : Limitations of Geometrical Models for Complementation Mapping of Allelic Series, 788
Carlson, J. B. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Grasshopper Neuroblast Technique for Quantitative Radiation Studies), 342
Carlson, J. G., and others : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Action of Radiation on Freshly Explanted Cultures of Organized Tissues), 341
Carlson, Dr. K. D. : Awarded a United States fellowship in chemistry for 1961-62 by the Ramsay Memorial Trust, 337
Carman, P. C., and others : Kirkendall Effect in Gases, 375
Carmichael, C. H., and Dore, M. : Electrical Effects observed in Polycrystalline Boron, 485
Carnation : Flower Initiation in the, in Response to Photoperiod (Dr. G. P. Harris and Juliet E. Griffin), 614
Carnegie United Kingdom Trust : 47th Annual Report (1960), 756
Caro, Lucien G. : Proposed Use of Magnetic Fields in Electron Microscopic Radio-autography, 1188
Carotid Rete Mirabile (Mammalian) : Functions of the (Dr. C. H. Barnett and C. D. Marsden), 88
Carp, Dr. Richard I., and others : Effects of Heavy Water on Poliovirus Multiplication—Results and Speculations on Mechanism, 250
Carp : Function of Taste Fibres in the (Jihei Konishi and Prof. Yngve Zotterman), 286
Carpenter, E. W., and others : Possible Method for Increasing the Signal-Noise Ratio in the Detection of the First Motion of a Refracted *P*-Wave, 1382
Carr, J. R. : Design and Use of Respirators (Design of Underwater Breathing Apparatus), 656
Carr, W. R. (Gelfand, Dr. M., and) : Diabetes Mellitus in Africans in Rhodesia, 227
Carrageenin : Effects of, on Serum Lipids and Atherosclerosis in Rabbits (Dr. Katsumi Murata), 189
Carriage and Deposition (Wettability and the Capture,), of Particles by Raindrops (R. R. Davies), 616
Carrier, Richard N., and Buday, Dr. Paul V. : Augmentation of Toxicity of Monoamine Oxidase Inhibitor by Thyroid Feeding, 1107
Carrier System (Common), for Sugar Transport in Human Red Cells (Dr. L. Lacko and Dr. M. Burger), 881
Carroll, Dr. K. K. : Quantitative Estimation of Peak Areas in Gas–Liquid Chromatography, 377
Carroll, Patricia M. (Gigg, Dr. Roy, and) : A Convenient Synthesis of Muramic Acid and other 3-O-Ethers of D-Glucosamine, 495
Carrots : Occurrence of Mevalonic Acid in (Prof. V. V. Modi and D. K. Patwa), 1202
Carruthers, Dr. W. : Effects of Smoking, *review*, 108
Carter, Prof. C. F. : The Economic Use of Brains (Presidential Address to Section F (Economics) of the British Association for the Advancement of Science), 987
Cartilage Matrix *in vivo* : Action of Plasmin on (Dr. C. H. Lack, A. J. Anderson and S. Y. Ali), 1402
Casein Substrate (An Invariant), for Rennet Standardization, derivable from Diverse Sources of Cows' Milk (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Casey, James P. : Pulp and Paper—Chemistry and Chemical Technology, Vol. 2, Papermaking, second edition, *review* by Dr. Julius Grant, 1135
Casida, Prof. John E., and others : Biological Activity of a Tri-o-Cresyl Phosphate Metabolite, 1396
Casson, Sir Hugh : At the sixty-seventh Annual Conference of the Museums Association (Display in Museums), 553
Castorseed and its Products (Council for Scientific and Industrial Research, India, Seminar on), 753
Casu, B.: Adducts of Urea and Thiourea obtained by means of a Sublimation Technique, 802
Cat Tissues : Effects of Drugs on Uptake of Isotopic Norepinephrine by (Hans J. Dengler, Herbert E. Spiegel and Elwood O. Titus), 816
Catalase : Effect of Polyamino Carboxylic Acids on (Dr. Joan Bond and J. G. Cooper), 385
Catalase and Peroxidase : Effect of Excess Supply of Heavy Metals to Barley during Germination, with special reference to (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Catalysis of Incorporation of ^{14}C-Uridine into Rat Lens Ribonucleic Acid by Rat Lens Enzyme System (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
Catalysis (Enzyme): Dextransucrase *V* and the Role of Metal Ions in (W. Brock Neely and Julie Hallmark), 385
Catalysts (Palladium), for the Oxidation of Carbon Monoxide in the Presence of Hydrogen : Selectivity of (P. Mars and Th. van de Mond), 1003
Catalytic Chemical System : Sustained Oscillations in a (R. A. Spangler and F. M. Snell), 457
'Catch' ('Quick' and) Adductor Muscles in Brachiopods (Dr. M. J. S. Rudwick), 1021
Catchpole, Dr. Hubert R., and others : Distribution of Sodium and Potassium in certain Cells and Tissues, 1175
Catchpole, J. P. : Awarded the Student's Prize of the Institution of Chemical Engineers, 338
Catechol Amines : Interaction of Hydrocortisone, the Sulphydryl Group, and the (Dr. Sidney Roston), 490
Cathodes coated with Barium Oxide : Effect of Ultra-Violet Irradiation on the Electrical Conductivity of (Dr. C. H. B. Mee), 1383
Cathodically Impregnated and Cooled Austenite : Transformation of (E. G. Ramachandran and C. Dasarathy), 998
Cation Transport (Active), as a Pacemaker of Respiration (Dr. R. Whittam), 603
Cation Vacancies : Quenching of, in Doped Crystals of Sodium Chloride (the late Sir K. S. Krishnan and S. C. Jain), 162
Cations in Oxide Spinels : Dependence on Temperature of the Distribution of (Ranajit K. Datta and Prof. Rustum Roy), 169
Cations (Bivalent), in the Magnetoplumbite Structure : Fluoride-compensated Substitution of (Prof. E. Banks and M. Robbins), 1387
Catsch, Prof. A., and Schindewolf-Jordan, D. : Removal of Internally Deposited Radionuclides by Triethylenetetraamine-hexaacetic Acid, 715
Cattle : Keto-Acids and Amines in Rumen Liquid of (Dr. C. J. G. van der Horst), 73
Caulet, Dr. M., and others : Bacteria of the Intestine (Studies on the Bacterial Flora in the Intestinal Tract of Pigs, 2, Streptococci : Selective Enumeration and Differentiation of the Dominant Groups), 1152
Cause (Possible), of Mutual Dependence : Copepod *Ommatokoita elongata* (Grant) in the Eyes of the Greenland Shark—a (Bjørn Berland), 829
Causes and Origins of War : Arms and Security, a Mathematical Study of the (Dr. Lewis F. Richardson), edited by Nicolas Rashevsky and Ernesto Trucco, *review* by Sir Cyril Burt, 427
Cavalieri, Dr. Ralph R., and others : Decreased Urinary Excretion of 2-Aminoethanol by Irradiated Human Beings, 1303
Cave Art of the Conjola District, New South Wales (F. D. McCarthy), 854
Cave Crayfish : Diurnal Rhythm in (Prof. Frank A. Brown), 929
Caves (Wookey Hole) : Further Observations on a Filamentous Saprophyte from (Dr. A. J. Willis), 724
Cell (Animal), Tissue and Organ Cultures in Radiobiology : Use of (New York Academy of Sciences Symposium on), 340
Cell (Giant Nerve), under Abnormal Conditions : Electrical Activity of a (Dr. Yutaka Oomura, Sachio Ozaki and Takashi Maéno), 1265
Cell (Pigment) Biology (New York Academy of Sciences fifth International Conference on), 1045

Cell (Red Blood) : Dimer Formation and Glucose Transfer across the Membrane of the (Dr. W. D. Stein), 1277
Cell Axons (Giant), in *Aplysia depilans* : The Path of the (Dr. G. M. Hughes and L. Tauc), 404
Cell Biology, American Society for : Symposium on Cell Continuity, 1045
  Symposium on Cell Diversification, 1045
  Symposium on Characteristics of Cell Interfaces, 1045
Cell Continuity (American Society for Cell Biology Symposium on), 1045
Cell Cultures (Tissue) : Immunofluorescence of Pleuropneumonia-like Organisms isolated from (Major W. F. Malizia, M. F. Barile and D. B. Riggs), 190
Cell Dimensions of Layer Lattice Silicates : Surface Symmetry and (E. W. Radoslovich), 67
Cell Diversification (American Society for Cell Biology Symposium on), 1045
Cell Division : Stimulants of, in Developing Fruits (D. S. Letham and E. G. Bollard), 1119
Cell Fractions from Myocardial Slices : Effect of Adrenalectomy and Corticosteroids on Distribution of Radioactivity in Protein of (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Cell Interfaces : Characteristics of (American Society for Cell Biology Symposium on), 1045
Cell Metabolism : Multiple Inhibitions of, by a Single Substance (M. Harris and Dr. G. A. Morrison), 1276
Cell Nucleus (The Feulgen-Stained Somatic), as a Homogeneously Absorbing Object (Dr. Simon Iversen), 150
Cell Proliferation (Parenchymal Liver), in Normal Adult Rats : Stimulation by Heparin of (Dr. M. Zimmerman and Evemarie Celotti), 1014
Cell Surfaces (Mammalian Tissue) : Sialic Acid as a Structural Component of some (Dr. Leonard Weiss), 1108
Cell Transplants of Avian Lymphomatosis treated with Hydrogen Peroxide (Dr. V. L. Sanger), 1406
Cell-free Spleen Preparations Incubated *in vitro* : Rise of Antibody Titre in (Dr. Dieter H. Sussdorf), 770
Cell-free Systems : Biosynthesis of Riboflavin in (Prof. T. W. Goodwin and Dr. A. A. Horton), 772
Cell-stimulating Hormone (Human Pituitary Interstitial) : An Immunological Study of a (N. R. Moudgal and Prof. Choh Hao Li), 192
Cells : Hexosamine and Sialic Acid Contents in (Atsushi Kimuro, Yasushi Nagai, Dr. Koh-Iti Turumi, Yoshiko Kawashima and Haruo Sato), 596
Cells of *Chara* : The Action Potential in (A. B. Hope), 811
Cells from Liver Tissue : Separation and *in vitro* Culture of (Dr. Justine S. Garvey), 972
Cells (Cylindrical Animal and Plant) : Circumscribing Irradiation of Surface Structures of, with Polonium-210 α-Particles (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
Cells (Egg-) of the Sea Urchin : Intracellular Freezing and Frost Resistance in (E. Asahina)—Intracellular Freezing as a Cause of Frost-killing in relatively Rapidly Frozen Cell Suspensions, 1263 ; A Mechanism to Prevent the Seeding of Intracellular Ice in Freezing Living Cells, 1264
Cells (HeLa) (Human Cancer), in Culture : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Cells (Human Epidermoid Carcinoma), in Culture : Biochemical Aspects of Resistance to 6-Mercaptopurine in (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
Cells (Human Red) : Common Carrier System for Sugar Transport in (Dr. L. Lacko and Dr. M. Burger), 881
  A Relation between the Reactivity of, to Antiglobulin Tests and their Surface Structure (Judith E. Davis, Prof. H. N. Green qnd Pamela W. Tymms), 923
Cells (Human and Mouse Tumour) : Selective Uptake of Specifically Bound Cobalt-58 Vitamin B_{12} by (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Cells (Immature Germ), of *Drosophila* : Chromosome Rearrangements induced by X-Rays in (Seymour Abrahamson), 523
Cells (*L*1210) : Cytochemistry of (Dr. H. J. Woodliff), 1313
Cells (Living) : Estimation of Time of Generation of (R. J. M. Fry, S. Lesher and H. I. Kohn), 290
Cells (Mammalian), *in vitro* : Incorporation of Deoxyribonucleic Acid by (Prof. E. R. M. Kay), 387
Cells (Mast) : Mechanism of Action of Antigen–Antibody Complexes—their Effect on (Dr. Ivan Mota), 572
Cells (Mast), in Photosensitivity Reactions (V. J. McGovern), 90
Cells (Mast), of the Rat : Release of Heparin from the (G. T. Archer), 90
Cells (Neurosecretory) : Synaptic Transmission in (Hiromichi Morita, Takaaki Ishibashi and Satory Yamashita), 183
Cells (Normal Rat Hepatic) : Nucleolar Localization of Succinic Dehydrogenase in (P. De, R. Chatterjee and Dr. S. Mitra), 925
Cells (Parental Somatic) : Inclusion of, in Sponge Larvae (Frederick E. Warburton), 1317
Cells (Periodic Acid–Schiff Positive Giant), in the Mouse Thymus Cortex (D. Metcalf and M. Ishidate), 305
Cells (Red) : Thromboplastic Activity of (Dr. James A. Inglis and Dr. June W. Halliday), 821
Cells (Red), of the Sheep : Occurrence of an *Rh*-like Antigen in (B. Urbaschek and Prof. K. Trautwein), 193
Cells (Wood) : Staining Reaction of the Pit Membrane of (R. K. Bamber), 409
Cells and Tissues : Distribution of Sodium and Potassium in certain (Dr. Norman R. Joseph, Dr. Milton B. Engel and Dr. Hubert R. Catchpole), 1175
Cellular Material : Estimation of Protein in (Prof. David Racusen and D. R. Johnstone), 492
Cellulose Acetate Membranes : Use of, for Detecting Penicillinase-producing Organisms (Prof. R. Knox and J. T. Smith), 926
Cellulose Ion Exchangers (Modified), and their Use in Ribonucleic Acid Fractionation (Dr. L. Bosch, G. van der Wende and Dr. H. Bloemendal), 349
Cellulose Microfibrils : Constitution of (D. T. Dennis and Prof. R. D. Preston), 667
Cellulose Paper (Diethyl-amino-ethyl (DEAE)) : Chromatography of Proteins on (C. C. Curtain), 1269
Cellulose-decomposing Microflora on Soil Crumb Plates : Factors influencing the Composition of the (A. Keynan, Y. Henis and P. Keller), 307
Celozzi, Evemarie (Zimmerman, Dr. M., and) : Stimulation by Heparin of Parenchymal Liver Cell Proliferation in Normal Adult Rats, 1014
Cement (Portland) : Formation of Calcium Chloraluminate by Interaction of, with Sea-Water and Chloride Solutions (Dr. L. Heller and Dr. M. Ben-Yair), 488
Centaurus *A* (Radio Source) : Central Component of the (P. Maltby), 793
Central Component of the Radio Source Centaurus *A* (P. Maltby), 793
Central Europe : Some Bacterial Plant Diseases of, *review* by Dr. W. J. Dowson, 4
Central Europe (Western and) : Introduction of the Potato into (V. S. Lekhnovitch), 518
Central Nervous System : Enzymic Activity of the (Neurochemical Commission of the World Federation of Neurology International Symposium on), 1349
  Pharmacologically Active Substances present in the (Dr. Paul V. Buday), 245
  Tryptamine Receptors in the (Dr. J. R. Vane, Dr. H. O. J. Collier and Dr. S. J. Corne, and Dr. E. Marley and Dr. P. B. Bradley), 1068
Central Nervous System of an Insect (*Periplaneta americana* L.) : Exchanges of Sodium Ions in the (J. E. Treherne), 1223
Centrally Produced Geometrical Illusions (S. Papert), 733
Centre National de la Recherche Scientifique : International Meeting on Psychophysiology, Neuropharmacology and Biochemistry of Audiogenic Seizure, 959
Cephalosporins : Colorimetric Detection of Penicillins and, on Paper (Robert Thomas), 1161
Ceramic Research Association (British) : A. T. Green and the, *review* by Prof. R. W. Douglas, 207
Cereals (Processing) : Recent Advances in (Food Group of the Society of Chemical Industry Symposium on), 755
Cerebral Dominance : Speech, Handedness and, *review* by Sir Russell Brain, 840
Cerebral Dominance and its relation to Psychological Function (Prof. O. L. Zangwill), *review* by Sir Russell Brain, 840
Cerenkov Light from Extensive Air Showers in the Atmosphere : Photography of (D. A. Hill and N. A. Porter), 690
Cereoideae (Boreocactinae), (Curt Backeberg), (Die Cactaceae, Band 5), *review* by N. Y. Sandwith, 1336
C.E.R.M.A. : International Congress of Aviation and Cosmonautical Medicine, 338
CERN : International Conference on Elementary Particles, 126
Cetrimide–Phloridzin Combination : Enhancement of Inhibition of Intestinal Absorption by (J. A. Nissim), 37
Chachaty, Dr. C. : Effects of Ionizing Radiation on Organic and Biological Solids (Use of Electron-Spin Resonance to Identify and Measure the Free Radicals produced by Irradiation), 1150
Chadwick, Dr. A. : Appointed lecturer in zoology at the University of Leeds, 228
Chaetomium globosum (Kunze) : Spore Dispersal in (P. A. Dixon), 1418
Chain, Prof. E. B., and others : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum*, 909
Chain Reactions (Radical), in Solution : Generation of Radicals in Pairs and the Kinetics of (Dr. P. E. M. Allen and C. R. Patrick), 1194
Chalcocite and Pyrrhotite in Cold Solution : Formation of Chalcopyrite by Reaction between (W. M. B. Roberts), 560
Chalcopyrite : Formation of, by Reaction between Chalcocite and Pyrrhotite in Cold Solution (W. M. B. Roberts), 560
Challenge to Physicists and Mathematicians : The Atomic Problem—a (Lancelot Law Whyte), *review* by Prof. R. Eisenschitz, 214
Challenger Society : Grants for Research in Marine Biology or Oceanography, 24
Challenger Society (Systematics Society and the) : Symposium on Speciation in the Sea, 229
Chamber Tombs (Prehistoric), of France (Dr. Glyn Daniel), *review* by Prof. C. F. C. Hawkes, 637
Chambers, Ll. G. : The Steady Universe with Charge Excess, 262
  An Unsteady Universe with Excess of Charge, 1082
Chance, Prof. Britton : *Obituary* of Prof. Enzo Boeri, 1247
Chance, Dr. M. R. A. : Assessment of Pain (Central Mechanisms of Pain—Audiogenic Seizures), 1353
Chandler, M. E. J. : The Lower Tertiary Floras of Southern England, 1, Palaeocene Floras, London Clay Flora (Supplement), *review* by Prof. John Walton, 209
Chandler, M. E. J., and Axelrod, D. I. : An Early Cretaceous (Hanterivian) Angiosperm Fruit from California, 442
Changes in Blood Serotonin during Exposure to Cold (Dr. Paul Gordon), 183
Changes in Glucose-6-phosphatase Activity in Liver and Kidney at Birth (M. J. R. Dawkins), 72
Changes in the Membrane during Recurrent Disinhibition of Spinal Motoneurones (Dr. Victor J. Wilson and Paul R. Burgess), 918
Changes in the Pentose-Nucleic Acid Content of Sub-Cellular Fractions of the Brain of the Rat during 'Metrazol' Convulsions (Prof. G. P. Talwar, B. Sadasivudu and V. S. Chitre), 1007
Changes of Permeability of Yeast with Sodium Deoxycholate (Dr. L. Kováč), 698
Changes in Visual Gnostic Functions and Emotional Behaviour following Unilateral Temporal Pole Damage in the 'Split-Brain' Monkey (Dr. J. L. deC. Downer), 50
Changes (Biochemical), in Lethal Staphylococcal Infections in Mice (George W. Counts, Dr. Ian M. Smith, Dr. Joseph I. Routh, Dr. Elia Ch. Hazard and J. F. McTavish), 783
Changes (Induced), in the Amounts of Material in the Neurosecretory System of the Desert Locust (Dr. K. C. Highnam), 199
Changes (Moisture) : Influence of, on Deformation of Wood under Stress (L. D. Armstrong and G. N. Christensen), 869
Changes (Potential), produced by Application of Current Steps in Motoneurones (T. Araki, Dr. M. Ito and T. Oshima), 1104
Changes (Resistivity), due to Formation of *G.P.* Zones (Clusters rich in Solute), (H. Herman and Prof. J. B. Cohen), 63
Changing Flora of South-East England (J. E. Lousley), 133
Changing World : Birds in a (Phyllis Bond), 133
Chapman, J. H., and Molozzi, A. R. : Interpretation of Cosmic Noise Measurements at 3·8 Mc./s. from Satellite 1960 η1, 480
Chapman, Dr. Ross A. : Research in the Food and Drug Directorate, 335

Chara : The Action Potential in Cells of (A. B. Hope), 811
Character (Chemical), of the Pigments of a New Nitrogen-fixing Micro-organism (Gy. Németh, F. Uresch, Prof. G. Fodor and L. Láng), 1413
Character (Diagnostic), for the Identification of Ammocoete Species : Oocyte Numbers as a (Dr. M. W. Hardisty), 1215
Character Recognition : Optical (Information Systems Branch of the Office of Naval Research Information Centre of the United States National Bureau of Standards Symposium on), 1145
Characteristics of Cell Interfaces (American Society for Cell Biology Symposium on), 1045
Characteristics of Mitochondria Extracted from Higher Plants : Some (Dr. Walter D. Bonner, jun., and Dinor O. Voss), 682
Characteristics (Hydrogen Reduction), of Natural and Artificial Haematites (John Henderson), 268
Characterization (Pharmacological), of the Oxytocic Peptides in the Pituitary of a Marine Teleost Fish (*Pollachius virens*), (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Chargaff, Erwin, and Davidson, J. N. (edited by) : The Nucleic Acids, Vol. 3, *review* by Dr. Roy Markham, 742
Charge : An Unsteady Universe with Excess of (Ll. G. Chambers), 1082
Charge ('Effective' Ionic), in Crystals (Dr. W. Cochran), 60
Charge Electrokinetic), of the Human Erythrocyte : Sialic Acids and the (G. M. W. Cook, Dr. D. H. Heard and Dr. G. V. F. Seaman), 44
Charge Excess : The Steady Universe with (Ll. G. Chambers), 262
Charge-Transfer Complexes : Electron Affinity of the Acceptor Molecule in (Dr. M. E. Peover), 702
Charlton, T. M. : Civil Engineering, *review*, 1032
    Energy Principles in Applied Statics, *review* by Prof. R. C. Coates, 1134
Chatt, Dr. J., and Rowe, G. A. : Complex Compounds of Zero-valent Platinum, 1191
Chatterjee, R., and others : Nucleolar Localization of Succinic Dehydrogenase in Normal Rat Hepatic Cells, 925
Chatterjee, S. : Elected to a Postgraduate Studentship (for a course in statistics) at Churchill College, Cambridge, 856
Chayen, J., and others : Tissue Dilution Artefact—a Re-interpretation of Variations in Levels of Succinic Dehydrogenase during Chemical Carcinogenesis, 1203
Cheese, I. A. F. Lister, and Morgan, Prof. W. T. J. : Two Serologically Active Trisaccharides isolated from Human Blood-Group *A* Substance, 149
Cheeseman, Dr. E. A. : Appointed to a personal chair of medical statistics in the Queen's University, Belfast, 20 ; work of, 20
Chelation Hypothesis of Auxin Action : Improbability of the (Dr. D. D. Perrin), 253
Chemi-Luminescence of Luminol : Inhibition of, by means of Oximes (Prof. K. Weber, J. Matković and D. Fleš), 177
Chemi-Osmotic Type of Mechanism : Coupling of Phosphorylation to Electron and Hydrogen Transfer by a (Dr. Peter Mitchell), 144
Chemical Agents : Induction of Tumours by Polyoma Virus—Enhancement by (K. E. K. Rowson, F. J. C. Roe, J. K. Ball and Dr. M. H. Salaman), 893
Chemical Aspects of the Structure of Small Peptides (Dr. Dorothy Wrinch), *review* by Prof. H. N. Rydon, 105
Chemical Carcinogenesis : Tissue Dilution Artefact—a Re-interpretation of Variations in Levels of Succinic Dehydrogenase during (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Chemical Character of the Pigments of a New Nitrogen-fixing Micro-organism (Gy. Németh, F. Uresch, Prof. G. Fodor and L. Láng), 1413
Chemical Composition of Precipitable Water Vapour over the United States (Dr. Henry M. Papée and Dr. Alberto Montefinale), 136
Chemical Defence Experimental Establishment, Porton : Retirement of Dr. E. A. Perren as director, 750
    Appointment of E. E. Haddon as director, 751
Chemical Engineers, Institution of : Student's Prize awarded to J. P. Catchpole, 338
Chemical Factory : Quality Measurement in the (A. J. Clark and C. W. Munday), (Department of Scientific and Industrial Research), 752
Chemical Genetics, *review* by Dr. Charlotte Auerbach, 841
    An Outline of (Prof. Bernard S. Strauss), *review* by Dr. Charlotte Auerbach, 841
Chemical Identity (Microstructural and), of the Bear Creek and Narraburra Iron Meteorites (Dr. H. J. Axon), 1287
Chemical Industry, Society of : Formation of the Industrial Water and Effluents Group, 853
Chemical Industry, Society of (Food Group) : Symposium on Recent Advances in Processing Cereals, 755
Chemical Kinetics (Applied) : Inversion of a Laplace Transform arising from a Problem in (T. Wood), 589
Chemical Laboratory (National) : Report for 1960 ; Report of the Steering Committee and Report of the Director of the National Chemical Laboratory for 1960 (Department of Scientific and Industrial Research), 342
Chemical Literature : Report on Computer Systems for Searching (E. C. Medam and H. R. Koller), (United States National Bureau of Standards Research Information Centre and Advisory Service on Information Processing), 23
Chemical Processing : Technology of, *review* by R. H. Villet, 1131
Chemical Society : Grants for Research in Chemistry, 651
    Symposium on Electron Spin Resonance, 755
Chemical Society (American), (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Chemical Society (Czech) : Conference on Paper Chromatography, 759
Chemical System (Catalytic) : Sustained Oscillations in a (R. A. Spangler and F. M. Snell), 457
Chemical Technology : Encyclopedia of (edited by Raymond E. Kirk and Donald F. Othmer), second Supplement Volume edited by Anthony Standen, *review* by R. H. Villet, 1131
Chemical and Allied Industries : Books on the (Science Museum Library, London), 22
Chemie der Organischen Fluorverbindungen (Milos Hudlicky), *review* by Dr. Richard Dresdner, 319
Chemisorption at Solid–Liquid Interfaces (A. R. Burkin and G. Halsey), 348
Chemistry : Annual Reports on the Progress of, for 1959 (edited by Dr. R. W. Cahn), Vol. 61, *review* by Prof. J. R. Partington, 637
    Fellowships in (Ramsay Memorial Trust Awards for 1961-62), 337
    Fluorine, *review* by Dr. Richard Dresdner, 319
    Grants for Research in (Chemical Society), 651
    Heterocyclic, *review* by Dr. G. L. Buchanan, 425
    Inorganic (Dr. Jacob Kleinberg, Dr. William J. Argersinger, Jr., and Dr. Ernest Griswold), *review* by Dr. M. F. Lappert, 1133
    Nuclear Reactor (Oak Ridge National Laboratory Second Conference on), 651
    Progress in, *review* by Prof. J. R. Partington, 637
    Terpene, *review* by Prof. B. C. L. Weedon, 1234
    Transition-Metal, *review* by Prof. C. A. Coulson, 1233
Chemistry for Grammar Schools (Science Masters' Association and the Association of Women Science Teachers), 555
Chemistry in University College, Dublin, 439
Chemistry of the Amino Acids (Dr. Jesse P. Greenstein and Dr. Milton Winitz), *review* by Sir Hans Krebs, 1132
Chemistry of Carbon Compounds (edited by Dr. E. H. Rodd), Vol. 4, Part C, Heterocyclic Compounds, *review* by Dr. James D. Loudon, 214
Chemistry of Heterocyclic Compounds : An Introduction to the (R.M. Acheson), *review*, 320
Chemistry of a Mucopolysaccharide produced by Guinea Pig Lymphocytes (Helen Muir and A. H. E. Marshall), 706
Chemistry of the Terpenes (Dr. A. R. Pinder), *review* by Prof. B. C. L. Weedon, 1234
Chemistry and Industry : Radioactive Tracers in (Pascaline Daudel), translated by Dr. Ulli Eisner, *review* by Prof. J. R. Partington, 637
Chemistry and the Nervous System, *review* by Dr. R. V. Coxon, 318
Chemistry and the Spectroscope (Prof. R. G. W. Norrish), 984
Chemistry and Technology of Polymers : Recent Developments in the (Bradford Institute of Technology Course on), 1349
Chemistry (Analytical), in Nuclear Reactor Technology (Oak Ridge National Laboratory Fifth Conference on), 651
Chemistry (Co-ordination) : An Introduction to (Dr. D. P. Graddon), *review* by Prof. C. A. Coulson, 1233
Chemistry (Fluorine) : Advances in (edited by Prof. M. Stacey, Prof. J. C. Tatlow and Dr. A. G. Sharp), Vol. 1, *review* by Dr. Richard Dresdner, 319
Chemistry (Inorganic) : Modern Aspects of (Prof. H. J. Emeléus and Dr. J. S. Anderson), third edition, *review* by Prof. J. R. Partington, 637
Chemistry (Organic) : Physical Methods of (edited by Arnold Weissberger), third edition, Parts 3 and 4, *review* by Dr. W. A. Waters, 317
Chemistry (Organo-Phosphorus) : Russian Work in, *review* by Dr. F. G. Mann, 1232
Chemistry (Physical), in Trinity College, Dublin, 333
Chemistry (Protein) : Post-Doctoral Fellowships in (Division of Protein Chemistry of the Australian Commonwealth Scientific and Industrial Research Organization), 336
Chemistry (Protein), including Polypeptides : A Laboratory Manual of Analytical Methods of (edited by Dr. P. Alexander and R. J. Block), Vol. 1, The Separation and Isolation of Proteins, *review* by Dr. D. T. Elmore, 320
Chemistry (Radiation), of Organic Compounds (Dr. A. J. Swallow), *review* by Dr. S. J. Thomson, 317
Chemistry (Transition-Metal) : An Introduction to—Ligand-Field Theory (Dr. Leslie E. Orgel), *review* by Prof. C. A. Coulson, 1233
Chemists (Clinical), American Association of (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Chemotherapy : Antimicrobial Agents and (American Society for Microbiology Interscience Conference on), 651, 1250
Chenkin, Dr. Theodore, and others : Lack of Effect of Coenzyme Q_{10} on Coumarin-induced Hypoprothrombinaemia, 711
Chepstow : Geology of the Country around Monmouth and (Memoirs of the Geological Survey of Great Britain—England and Wales), (Dr. F. B. A. Welch and Dr. F. M. Trotter), 227
Chessin, Prof. M. (Sammons, the late Irene M., and) : Cactus Virus in the United States, 517
Chew, Herman Wen-Geun : Appointed I.C.I. Research Fellow at the University of Edinburgh, 337
Chibcha Indian Tribe : New *Rh* Phenotype, $Dcce^{l}elf$, found in a (Dr. Miguel Layrisse, Zulay Layrisse, Esperanza García, Dr. Johannes Wilbert and Joaquín Parra R.), 503
Chichester, C. O., and others : Incorporation of 5,10,15 ^{14}C-Farnesol Pyrophosphate into *Phycomyces carotenoids*, 1299
Chick (Newly Hatched) : Comparison of the Serum Protein Fractions of the, with those of Adult Birds using Starch-gel Electrophoresis (A. Amin), 708
Chick Blastoderm : Distribution of Water in the (A Morphogenetic Effect of Beta-Mercaptoethanol), (A. Jurand and Dr. Peter Tuft), 1073
Chick Embryo : Mechanism of Recovery from Viral Infection in the (Dr. Samuel Baron and Alick Isaacs), 97
Chick Embryos : Effects of *Grewia populifolia* Extracts on the Development of (S. K. Brahma and N. Kundu), 506
Chicks : Effects of Morphine-like Drugs in (C. Schneider), 607
Chieco-Bianchi, Dr. L. : Awarded a scholarship by the Lady Tata Memorial Trust, for research on leukaemia and allied diseases, 228
Children (Backward), in Britain : Education of, 1052
Chimie Industrielle, Société de : Symposium on Corrosion in the Nuclear Energy Industry, 651
Chimie Physique, Société de, and the British Biophysical Society : Discussion on the Effects of Ionizing Radiation on Organic and Biological Solids, 1150
Chitin Columns : Chromatography of Tobacco Mosaic Virus (TMV) on (P. M. Townsley), 626
Chitre, V. S., and others : Changes in the Pentose-Nucleic Acid Content of Sub-Cellular Fractions of the Brain of the Rat during 'Metrazol' Convulsions, 1007
Chitwood, B. G. : Nematology (Holotype and Allotype Specimens of *Meloidogyne* Species and Sub-species), 1048
Chiyoda Kogaku Seiko K.K. : Minolta Planetarium Projectors, 753
Chloraluminate (Calcium) : Formation of, by Interaction of Portland Cement with Sea-Water and Chloride Solutions (Dr. L. Heller and Dr. M. Ben-Yair), 488
Chloride Concentration : Effect of, on the Aqueous Corrosion of a Magnesium Alloy (D. de G. Jones and H. G. Masterson), 165
Chloride Solutions : Formation of Calcium Chloraluminate by Interaction of Portland Cement with Sea-Water and (Dr. L. Heller and Dr. M. Ben-Yair), 488

Chloride (Calcium) : The Action of, on Mortar and Concrete (M. Lawrence and H. E. Vivian), 125, *erratum*, 1145
Chloride (Picryl), in Guinea Pigs : Passive Transfer of Contact Sensitivity to, with Subcellular Material (Dr. J. L. Turk), 915
Chloride (Sodium) : Quenching of Cation Vacancies in Doped Crystals of (the late Sir K. S. Krishnan and S. C. Jain), 162
  Serum Lipids in relation to the Intake of Alcohol and (Erling Lund, Torben Geill, Prof. Henrik Dam and Gunhild Kristensen), 1095
Chlorin (Metal) Complexes in Recent Sediments as Initial Precursors to Petroleum Porphyrin Pigments (G. W. Hodgson and Eric Peake), 766
Chlorins (Fossil), in a Triassic Sediment (Max Blumer and Gilbert Omenn), 161
Di-(*p*-chlorophenyl)-trifluoromethylcarbinol : Acaricidal Properties of (K. R. S. Ascher and R. Cwilich), 1322
Chlorophyll in the Leaves of Etiolated Pea Plants : Correlative Inhibition of Formation of (Jiří Ulehla), 613
Chloroplasts (Isolated) : Oxidation-Reduction Reactions of Plastoquinone in (Dr. E. R. Redfearn and J. Friend), 806
Chlorpromazine : Semiconductivity of (Dr. F. Gutmann and A. Netschey), 1390
Choaripour, R., and others : Serum Factor *Gm*^{a} among the Iranians, 717
Choice (Free-) Experiments : Comparison between Water and Alcohol Consumption in Six Animal Species in (Dr. Alpo Arvola and Dr. Olof Forsander), 819
Cholestasis (Extrahepatic) : Immunological Study of Experimentally Induced (Dr. Roy G. Shorter and R. G. Lack), 610
Cholesterogenesis : Effect of Pituitary Growth Hormone on (Dr. A. L. Green-Baum and R. S. Leal), 600
Cholesterol in the Tapetum Lucidum of the Eye of the Opossum, *Didelphis virginiana* (Antoinette Pirie), 708
Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine : Adrenergic Neurone-blocking Agents related to (A. L. A. Boura, F. C. Copp, A. F. Green, H. F. Hodson, G. K. Ruffell, M. F. Sim, E. Walton and E. M. Grivsky), 1312
Cholinergic Mechanism in Sympathetic Transmission : Lack of Evidence for a (Dr. J. E. Gardiner and Dr. J. W. Thompson), 86
Cholinergic Transmission in Fish Muscle (K. Krnjević), 1403
Cholinesterase (Human Serum), with Fluoride : Differential Inhibition of—Recognition of Two New Phenotypes (Prof. H. Harris and Mary Whittaker), 496
Chorover, S. L., and others : Cross-modal Transfer in Man, 1225
Chosen Few : The—an Examination of some Aspects of University Selection in Britain (W. D. Furneaux), *review* by Dr. W. H. King, 947
Chown, Sheila M. (Heron, Alistair, and), assisted by M. S. Featherstone and Catherine Cunningham : Ageing and the Semi-Skilled—a Survey in Manufacturing Industry on Merseyside (Medical Research Council, Memorandum No. 40), 1249
Christensen, G. N. (Armstrong, L. D., and) : Influence of Moisture Changes on Deformation of Wood under Stress, 869
Christensen, Dr. Tyge (Saltman, Dr. Paul, and) : Relative Volumes of Cytoplasm and Vacuole in *Nitella*, 825
Christiansen, Prof. J. A., and others : Displacement Potentials and Bending of Rod-like Polyelectrolytes, 484
Christiansen, Prof. W. N., and Högbom, Dr. J. A. : Cross-Antenna of the Proposed Benelux Radio Telescope, 215
Christiensson, E. G. (Agrell, I. P. S., and) : Influence of Polyvalent Ions on Histones isolated from Different Tissues, 284
Chromatid (Sub-) Structure and Chromosome Duplication in *Vicia faba* (W. J. Peacock), 832
Chromatin (Sex) : Peripheral Position of (Dr. Charles P. Miles), 626
Chromatograms (Filter Paper) : A Spray Method for the Simultaneous Detection of Iodide and Iodinated Amino-Acids on (Dr. A. Van Zyl and M. Bhaga), 275
Chromatographic Analysis : Application of the Nickel Reaction and Thermal Isomerization of Alpha-Keto-Acid Hydrazones for their (A. M. Tokushige and Dean E. S. Cook), 797
Chromatographic Analysis of Infectious Ribonucleic Acid from Poliovirus (C. Cocito, A. Prinzie and P. De Somer), 573
Chromatographic Fractionation of Hog Thyroglobulin (Prof. Nobuo Ui, Osamu Tarutani, Yoichi Kondo and Hiroko Tamura), 1199
Chromatographic Investigation of the Methyl Alcohol/Chloroform-soluble Constituents of Honeybee Larval Foods (N. G. Patel, M. H. Haydak and R. Lovell), 362
Chromatographic Separation of Biologically Active Components from Commercial Trypan Blue (J. Dijkstra and J. Gillman), 803
Chromatography : Paper (Czech Chemical Society Conference on), 759
Chromatography of Proteins on Diethyl-amino-ethyl (DEAE) Cellulose Paper (C. C. Curtain), 1269
Chromatography of Tobacco Mosaic Virus (TMV) on Chitin Columns (P. M. Townsley), 626
Chromatography (Gas) : Detection by Ionization of Atmospheric Gases during Analysis by (Dr. Arthur Karmen, Laura Giuffrida and Robert L. Bowman), 906
  Determination of Hydrogen in Gaseous Mixtures by (P. J. Kipping), 270
  Integration with Ionization Detectors in (P. M. E. M. van der Grinten and Dr. A. Dijkstra), 1195
  Role of Pressure Gradients in obtaining Minimum Time in (Prof. J. Calvin Giddings), 1291
Chromatography (Gas) Abstracts, 1958 (edited by C. E. H. Knapman, assisted by C. G. Scott), *review* by A. Goldup, 1135
Chromatography (Gas) Abstracts, 1959, (edited by C. E. H. Knapman, assisted by C. G. Scott), *review* by A. Goldup, 1135
Chromatography (Gas–Liquid) : Peak-Shift Technique in—Trimethylsilyl Ether Derivatives of Alcohols (Stanley H. Langer and Peter Pantages), 141
  Quantitative Estimation of Peak Areas in (Dr. K. K. Carroll), 377
Chromatography (Paper) : Breakdown of [2-^{14}C]-Glycine during (A. K. Huggins and V. Moses), 668
  R_M and Solvent Composition in (Dr. Edward Soczewiński), 68
Chromatography (Pyrolysis and Gas–Liquid), on the Microgram Scale (C. E. Roland Jones and A. F. Moyles), 663
Chromium, Uranium, Tungsten and Nickel Complexes of Thioglycolic Acid (V. M. Bhuchar), 489
Chromone-2-Carboxylic Acid : Some New Esters of (Juan X. de Vries and Kempis Vidal-Beretervide), 171
Chromosomal Elimination induced by 6-Aza-Uracil (M. Collette Mahoney, Dr. E. R. Witkus and Dr. C. A. Berger), 627
Chromosome Counts (Human), in relation to Age : Distribution of (Patricia A. Jacobs, W. M. Court Brown and Dr. Richard Doll), 1178
Chromosome Duplication in *Vicia faba* : Sub-Chromatid Structure and (W. J. Peacock), 832
Chromosome Rearrangements induced by X-Rays in Immature Germ Cells of *Drosophila* (Seymour Abrahamson), 523
X-Chromosome of *Drosophila melanogaster* : Recombination in the (C. N. Law), 1180
Chromosomes of *Neurospora*, 658
Chromosomes (Coccid) : Fracture and Fusion of (Prof. W. Spencer Brown), 1419
Chronic Copper Poisoning of Sheep : Methaemoglobin in (J. R. Todd and R. H. Thompson), 89
Chronic Exposure to Radiostrontium : Assessment of, by Urinary Assay (Dr. C. L. Comar and Jay Georgi), 390
Chubb, J. C. : Parasite Biology (Parasites in relation to Natural Fauna), 135
Chubb, R. C. : Awarded a Research Training Scholarship by the Animal Health Trust, 1250
Chum Salmon (*Oncorhynchus keta*) : Effect of Thyroxine plus Thiourea on the Early Development of the (Prof. M. A. Ali), 1214
Churchill College, Cambridge : Grant of £50,000 from the Gulbenkian Foundation, for three fellowships, 855
  Election of Dr. A. Hewish to a Fellowship, on appointment as College lecturer in physics, 856
  Election of J. A. Miller and R. M. Loynes to Junior Research Fellowships, 856
  Election of N. W. Ashcroft, S. J. Bernau, G. R. G. Lewison, D. McCormack Smyth and W. K. Stell to Research Studentships, 856
  Election of S. Chatterjee and E. A. Kohll to Postgraduate Studentships, 856
Chymotrypsin : Inactivation and Reactivation of (T. Therattil Antony), 178
Ciba Foundation : Symposium on Quinones in Electron Transport (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by A. I. Scott, 321
Ciferri, Dr. O., and others : Activation of Amino-Acids in Micro-organisms which produce Antibiotics, 411
Cigarette Smoke Condensate—Preparation and Routine Laboratory Estimation (H. R. Bentley and J. G. Burgan), second edition, 336
Cilia : An Example of Mechanical Co-ordination of (Dr. M. A. Sleigh), 931
Circulating Eosinophiles in Man : Effects of Corticotrophin, Hydrocortisone and Methopyrapone on the (Dr. N. J. Kothari and Dr. J. C. Saunders), 1105
Circulating Thyrotrophic Activity : Increase of the Rate of Release of Thyroidal Iodine-131 and of, at Early Stages of Propylthiouracil Treatment in the Rat (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Circulation (World-Wide), of Air within the Stratosphere (P. Goldsmith and F. Brown), 1033
Circumscribing Irradiation of Surface Structures of Cylindrical Animal and Plant Cells with Polonium-210 α-Particles (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
cis and *trans* Dichloro- and Dibromo-ethylenes : Ionization Potentials of (Dr. J. Momigny), 1089
Civil Aviation Organization (International), and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
Civil Engineering, *review* by T. M. Charlton, 1032
Civil Engineering Reference Book (edited by J. Comrie), *review* by T. M. Charlton, 1032
Claassens, A. M. J. M. (Engelsman, Dr. J. J., and) : Use of the Rotating Hanging Mercury Drop in Analysis—Anodic Stripping using a Rotating Mercury Drop, 240
Claridge, Dr. M. F., and Lyon, A. G. : Lung-books in the Devonian Palaeocharinidae (Arachnida), 1190
Clark, A. J., and Munday, C. W. : Quality Measurement in the Chemical Factory (Department of Scientific and Industrial Research), 752
Clark, Dr. Desmond : Specimens of very early Pleistocene Age from certain beds in Israel (Bulletin of the British Museum (Natural History), Vol. 5, No. 4), 23
Clark, F. Le Gros : Growing Old in a Mechanized World, *review* by Prof. L. S. Hearnshaw, 532
  At the Third International Congress of Dietetics (History of Human Diet), 1343
Clark, M. A., and others : Production of Neon in Stars, 1381
Clark, R. H., and Fyfe, Prof. W. S. : Ultra-basic Liquids, 158
Clark, W. C. : Nematology (Variability and Accuracy of Linear Measurements used in Systematics, and of Ratios based on them), 1048
Clark, Sir Wilfrid Le Gros : Retirement from the chair of anatomy in the University of Oxford, 957 ; work of, 957
  The Humanity of Man (Presidential Address to the British Association for the Advancement of Science), 977
Clark-Lewis, Dr. J. W. : Stereochemistry of Natural Phenolic Compounds (Stereochemistry of Flavan Derivatives), 235
Clarke, C. A., and others : Genetics of a Difference in the Male Genitalia of East and West African Stocks of *Papilio dardanus* (Lep.), 935
Clarke, Dr. F. J. J. (Jones, Dr. O. C., and) : A New Photometric Technique using a Variable Shutter Device, 1290
Clarkson, Dr. T. W., and others : Dependence on Substrate of the Electrical Potential across the Isolated Gut, 501
Classics : Science and the (Prof. B. Farrington), 1337
Classification of Kin, Age Structure and Marriage amongst the Groote Eylandt Aborigines (Dr. Frederick G. G. Rose), *review* by Dr. R. Needham, 6
Classification of the Tea Plant (Dr. H. H. Mann), 409
Clay Mineralogy : Basic Dyestuffs in (Dr. V. S. Ramachandran, K. P. Kacker and N. K. Patwardhan), 696
Clays : Role of Interparticle Forces in Development of Upper Plastic Limit of (Dr. Raymond Yong and E. T. Selig), 938
Clean Air, National Society for : Fumifugium, or the Smoake of London Dissipated (John Evelyn), reprint, 752
  Twenty-eighth Conference, 1250
Clean Rhodium Film : Reaction of Ethane with a (Dr. Richard W. Roberts), 170
Clear Instance of Rheopectic Flow (J. B. Yannas and R. N. Gonzalez), 1384

Cleland, Prof. K. W. : Deoxyribonucleic Acid Content of Nuclei dividing Amitotically, 504
Clerodendrum viscosum Vent : Haemagglutinins from (Lieut.-Gen. G. W. G. Bird), 292
Climate and Weathered Karroo Dolerites (Dr. H. H. Weinert), 325
Climatology and Conservation in Museums (International Centre for the Study of the Preservation and the Restoration of Cultural Property: Works and Publications 3), 1050
Clinical Chemists, American Association of (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Clinical Prospect of the Cancer Problem (Prof. D. W. Smithers), *review*, 1336
Cloarec, Lise, and others : Action of Neuraminidase on Haptoglobin, 279
Clopine, Marjorie S. : Resources and Treasures of the Library of the United States Naval Observatory, 22
Cloud (The Dust), about the Earth (Dr. J. H. Fremlin), 31; (Dr. David B. Beard), 32 ; (Dr. Fred L. Whipple), 33
Clougherty, E. V., and others : A New Phase formed by High-Pressure Treatment—Face-centred Cubic Molybdenum Monocarbide, 1194
Clover (Kent Wild White), *Trifolium repens* L. : Flower Initiation in, under Controlled Environmental Conditions (R. J. Haggar), 1120
Clow, H. : Variation of Anisotropy Axis Dispersion with Thickness of Nickel-Iron Films, 996
Clusters rich in Solute (*G.P.* Zones) : Resistivity Changes due to Formation of (H. Herman and Prof. J. B. Cohen), 63
Coagulation (Blood) : Controlling Mechanism of the Mechanical Activity of Muscle and that of (Dr. Masahiro Fujino, Saburo Yamaguchi, Masa Takauji, Kohki Uchida, Masahide Yasuda, Tatsuaki Matsushima), 80
Coal : Electronic Microscopic Observations of Structure of Ultra-Thin Sections of Vitrinite in (J. T. McCartney, Sabri Ergun and R. E. Walline), 1361
Coal in Britain : Production of Gas from, 225
Coal in Oxfordshire (Dr. C. J. Stubblefield and Dr. F. M. Trotter), 953
Coal Tar Research Association : *Review of Coal Tar Technology*, Vol. 12, Part 1, January–June 1960, 22
Coal Tar Technology, Review of (Coal Tar Research Association), Vol. 12. Part 1, January–June 1960, 22
Coalescence (Liquid/Liquid) : The Marangoni Effect and (G. D. M. MacKay and S. G. Mason), 488
Coals (Alberta Sub-bituminous), as Drilling Fluid Thinners (E. J. Jensen), 1144
Coastal Inlets, *review* by W. J. Reid, 426
  Stability of (P. Brunn and F. Gerritsen), *review* by W. J. Reid, 426
Coasts (Eastern), of the Americas : Algological Study on the, *review* by Prof. Lily Newton, 1234
Coasts (Eastern Tropical and Subtropical), of the Americas : Marine Algae of the (Prof. William Randolph Taylor), *review* by Prof. Lily Newton, 1234
Coates, Prof. G. E. : Organo-Metallic Compounds, second edition, *review* by Dr. D. S. Payne, 316
Coates, M. E. : Vitamin B_{12} and Intrinsic Factor (B_{12} Coenzymes), 1154
Coates, Prof. R. C. : Basic Approaches to Structural Analysis, *review*, 1134
Coating Globulin causing a Positive Antiglobulin Consumption Test : Nature of the (D. Nelken), 1110
Cobalt-58 Vitamin B_{12} (Specifically Bound) : Selective Uptake of, by Human and Mouse Tumour Cells (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Cobbett, W. G. : At the Twenty-first Meeting of the Research Panel of the British Gelatine and Glue Research Association (Rupture Properties of Gelatine Gels), 857
Coccid Chromosomes : Fracture and Fusion of (Prof. W. Spencer Brown), 1419
Cochliobolus heterostrophus : Susceptibility to Leaf Blight caused by, in Nigerian Varieties of Maize (C. L. M. van Eijnatten), 515
Cochran, Dr. W. : 'Effective' Ionic Charge in Crystals, 60
Cocito, A., and others : Chromatographic Analysis of Infectious Ribonucleic Acid from Poliovirus, 573
Cockcroft, Sir John : Elected president of the Institute of Physics and the Physical Society, 228
  Elected president for 1962 of the British Association for the Advancement of Science, 956 ; work of, 956
Cocking, C. G. : Properties of Isolated Plant Protoplasts, 780
Cockroach Ecology, *review* by David R. Ragge, 106
Cockroach Ganglia : An Acid Mucopolysaccharide in (Doreen E. Ashhurst), 1224
Cockroaches : The Biotic Associations of (Dr. Louis M. Roth and Dr. Edwin R. Willis), *review* by David R. Ragge, 106
Cocksfoot (*Dactylis glomerata* L.) : Effect of Spacing and Nitrogen-level on Floral Initiation in (D. M. Calder and J. P. Cooper), 195
Coconut (*Cocos nucifera* L.) : Possibilities of Vegetative Propagation in the (S. R. Gangolly and K. M. Pandalai), 1218
Cocos nucifera L. (Coconut) : Possibilities of Vegetative Propagation in the (S. R. Gangolly and K. M. Pandalai), 1218
Cod and Bovine Insulins : A Comparison of (Dr. S. Wilson and Dr. G. H. Dixon), 876
Code of Practice for the Display of Sources of Ionizing Radiations at Exhibitions, 1249
Coefficient (Average Extinction), for Re-absorption of Fluorescence Radiation through Uranin Solution (Dr. K. K. Rohatgi and G. S. Singhal), 799
Coefficient (Expansion) : Specific Heat and, of Liquid Helium-3 under Pressure below 0·1° K. (Dr. D. F. Brewer and J. R. G. Keyston), 1261
Coenzyme Q_{10} : Lack of Effect of, on Coumarin-induced Hypoprothrombinaemia (Prof. Murray Weiner, Dr. Theodore Chenkin and Dr. Peter G. Dayton), 711
Coffee Rust *Hemileia vastatrix* B. et Br. : Spore Liberation and Dispersal of (R. W. Rayner), 725
Cohen, Dr. C. : Blood Groups in Infra-human Species (The Rabbit in Comparative Research on Haemolytic Disease of the New-born), 653
Cohen, Prof. J. B. (Herman, H., and) : Resistivity Changes due to Formation of *G.P.* Zones (Clusters rich in Solute), 63
Cohen, Leonard, and Craven, Kenneth : Science Information Personnel—the New Profession of Information combining Science, Librarianship and Foreign Languages, 452
Cohen, S. : Immunity to Protozoa (Use of Gamma-Globulin in the Cure of Malaria), 553
Cold : Changes in Blood Serotonin during Exposure to (Dr. Paul Gordon), 183
Cold Solution : Formation of Chalcopyrite by Reaction between Chalcocite and Pyrrhotite in (W. M. B. Roberts), 560
Cole, Dr. A. J. : Digital Computers, their Use and Control (The Computer in the University), 554
Cole, Dr. A. J., and Iball, Dr. J. : Digital Computers, their Use and Control, 554
Cole, Dr. Anne S. : Soluble Material in the Gastro-intestinal Tract of Rats under Normal Feeding Conditions, 502
Cole, M., and others : Cross-modal Transfer in Man, 1225
Coleridge, J. C. G. : Appointed reader in physiology at the Royal Free Hospital School of Medicine, London, 1349
Colhoun, Prof. John : Dictionary of the Fungi, *review*, 109
Collagen Fractions in the Skin of New-born and Adult Rats (Nestor Gonzalez Cadavid, Berta Denduchis and Roberto E. Mancini), 1297
Collection Purposes : Use of Glacial Acetic Acid for Killing Parasitic Nematodes for (Bjørn Berland), 1320
Collee, Dr. J. G., and others : Bacteria of the Intestine (Studies on the Growth, Sporulation and Carriage of *Clostridium welchii* with special reference to Food Poisoning Strains), 1153
College of Advanced Technology (Birmingham) : Course on Statistical Quality Control and Acceptance Sampling, 337
College of Advanced Technology (Welsh), (Dr. A. Harvey), 127
College of Aeronautics, Cranfield : Appointment of Prof. A. H. Lefebvre to the chair of aircraft propulsion, 1042
College of Science and Technology (Manchester) : Appointment of Ronald Beresford Dew as visiting professor of Industrial Administration, 651
College of Technology (Liverpool) : Postgraduate Courses in Nuclear Studies, 338
Colleges of Advanced Technology in Britain : Control of, 20
Colleges and Universities in the United States : Capital Expenditure of, for research and development in the Natural and Social Sciences in 1958 (United States National Science Foundation), 545
  Report on Scientists and Engineers engaged in research and development in, for 1958 (United States National Science Foundation), 225
Collier, Dr. H. O. J. : Assessment of Pain (Testing of Analgesic Drugs on Animals), 1354
Collier, Dr. H. O. J., and others : Tryptamine Receptors in the Central Nervous System, 1068
Collinson, Dr. E. : Effects of Ionizing Radiation on Organic and Biological Solids (Scavenging of Radicals is more effective in the Solid and with Aromatic Compounds), 1150
Collisions (Reactive Bimolecular) : A Molecular Beam Reactor for Examining the Rate, and Primary Products, of (C. W. Nutt and A. J. Biddlestone), 798
Colloids : Discreteness-of-Charge Effect and the Stability Theory of (Dr. S. Levine, D. Calvert and G. M. Bell), 699
Colombani, J., and others : Anti-Leucocyte Cytoplasm, Anti-Leucocyte Nuclei and Anti-Platelets in Disseminated Lupus Erythematosis, 1209
Colombani, M., and others: Anti-Leucocyte Cytoplasm, Anti-Leucocyte Nuclei and Anti-Platelets in Disseminated Lupus Erythematosis, 1209
Colominic Acid : Specific Inhibition of Anti-*D* Antibody by (Prof. William C. Boyd and Egli Reeves), 511
Colonial Microbiological Research Institute, Trinidad : Closing of the, 20
Colony of *DBA/1* Mice : A Natural Population of Anomalous Branched Tapeworms, *Hymenolepis nana* (Cestoda : Hymenolepididae), in a (Dr. Donald Heyneman), 297
Colony of Laboratory Mice : Simultaneous Eradication of Three Ecto-parasitic Species from a (Dr. Nigel Bateman), 721
Color Council, Inter-Society (U.S.A.), (Colour Group (Great Britain)), and the : Maxwell Colour Centenary Conference, 10
Colorimetric Detection of Penicillins and Cephalosporins on Paper (Robert Thomas), 1161
Colour Centenary : The Maxwell (Prof. W. D. Wright), 10
Colour Group (Great Britain), and the Inter-Society Color Council (U.S.A.) : Maxwell Colour Centenary Conference, 10
Colour (Leaf) : Measurement of (J. Philip Grime), 614
Colouring in Factories (Factory Buildings Studies No. 8, Department of Scientific and Industrial Research), 336
Colwell, R. R., and Liston, Prof. J. : Taxonomy of *Xanthomonas* and *Pseudomonas*, 617
Colwyn Medal of the Institution of the Rubber Industry awarded to Dr. L. R. G. Treloar, 755
Comar, Dr. C. L., and Georgi, Jay : Assessment of Chronic Exposure to Radiostrontium by Urinary Assay, 390
Combination (Cetrimide–Phloridzin) : Enhancement of Inhibition of Intestinal Absorption by (J. A. Nissim), 37
Combinatorial Analysis—Proceedings of the American Mathematical Society Symposia in Applied Mathematics, Vol. 10 (edited by Richard Bellman and Marshall Hall, Jr.), *review* by Prof. L. S. Goddard, 321
Combinatorial Assignment Problem (Prof. C. Radhakrishna Rao), 100
Comets of 1618 : The Controversy on the (Galileo Galilei, Horatio Grassi, Mario Guiducci and Johann Kepler), translated by Stillman Drake and Dr. C. D. O'Malley, *review* by Colin A. Ronan, 314
Comfort, Dr. Alex : Expected Rate of Senescence and Age-dependent Mortality in Fish, 822
Commercial Trypan Blue : Chromatographic Separation of Biologically Active Components from (J. Dijkstra and J. Gillman), 803
Commercial and Industrial Education, British Association for : Interviewin in Twenty-six Steps (John S. Gough), 228
  New Routes to Further Education—Papers presented at the B.A.C.I.E. Spring Conference, London (1961), 739
Common Carrier System for Sugar Transport in Human Red Cells (Dr. L. Lacko and Dr. M. Burger), 881
Common Pea (*Pisum sativum* L.) : Lipids of the, with special reference to the Occurrence of Galactolipids (S. Adhikari, Dr. F. B. Shorland and R. O. Weenink), 1301
Commons, House of : Debate on Shipping and Shipbuilding, 543
  Debate on Apprenticeship and Training, 737
  Debate on Science, 837
  Adjournment Debate on the Research Work of the Nature Conservancy, 962
  Debate on the Social Sciences, 1354
Commonwealth Bursaries Scheme, Royal Society and Nuffield Foundation : Awards, 126
Commonwealth Fund, New York : Harkness Fellowships for 1962, 1045

Commonwealth Universities Yearbook 1961 (Association of Universities of the British Commonwealth), *review*, 843
Commonwealth of Australia Bureau of Meteorology : Antarctic Meteorology—Proceedings of the Symposium held in Melbourne, 1959, *review* by H. H. Lamb, 210
Commonwealth of Australia Scientific and Industrial Research Organization : Overall management of the Chemical Research Laboratories, 23
  Post-Doctoral Fellowships in Protein Chemistry, 336
  Conference on Food Science, 337
  Retirement of N. A. Esserman as director of the National Standards Laboratory, 542
  Appointment of I. E. Newnham as chief of the Division of Mineral Chemistry, 543
  New laboratories for the Division of Food Preservation, 546
  Division of Food Preservation Conference on Food Science, 546
Commonwealth (British), Association of Universities of the : Commonwealth Universities Yearbook 1961, *review*, 843
Communication : Animal Sounds and (edited by Dr. W. E. Lanyon and Dr. W. N. Tavolga), *review* by Dr. W. H. Thorpe, 741
Communication (Long-Range Radio), by Satellite Microwave Dipoles—the West Ford Project, 1237
Communications : World (Sir Gordon Radley), 987
Communications (Biological), in the United States : Improving, 23
Compact Human Bone Tissue : Blood-Typing (H. E. Ezra-Cohn and Prof. S. F. Cook), 1267
Comparative Analysis of Inactivating Efficiency of Radiation on Different Organisms (Dr. M. Terzi), 461
Comparison of Beryllium-7 and Caesium-137 Radioactivity in Ground-Level Air (Dr. P. F. Gustafson, M. A. Kerrigan and S. S. Brar), 454
Comparison of Cod and Bovine Insulins (Dr. S. Wilson and Dr. G. H. Dixon), 876
Comparison of Pyridine-Nucleotides in the Liver and in an Ascitic Hepatoma (M. Wintzerith N. Klein, L. Mandel and Prof. P. Mandel), 467
Comparison of Reduced Alkylated Derivatives of some Myeloma Globulins and Bence-Jones Proteins (Dr. M. D. Poulik and Dr. G. M. Edelman), 1274
Comparison of the Serum Protein Fractions of the Newly Hatched Chick with those of Adult Birds using Starch-gel Electrophoresis (A. Amin), 708
Comparison of Short-Circuit Current and Net Water Movement in Single Perfused Proximal Tubules of Rat Kidneys (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Comparison between Water and Alcohol Consumption in Six Animal Species in Free-choice Experiments (Dr. Alpo Arvola and Dr. Olof Forsander), 819
Compatibility (Stimulus-Response), in the Paired-Associate Learning of Nonsense Syllables (A. D. Baddeley), 1327
Competence (Tyrosinase), in *Streptomyces scabies* : Apparent Cytoplasmic Inheritance of (Prof. K. F. Gregory and Wei-jen Shyu), 465
Complementation Mapping of Allelic Series : Limitations of Geometrical Models for (Prof. Elof Axel Carlson), 788
Complex (1:1 Crystalline), between 1,3,7,9-Tetramethyluric Acid and Pyrene : Molecular Geometry of a (F. De Santis, E. Giglio, Dr. A. M. Liquori and A. Ripamonti), 900
Complex Compounds of Zero-valent Platinum (Dr. J. Chatt and G. A. Rowe), 1191
Complexes of Vermiculite with Amino-Acids (G. F. Walker and W. G. Garrett), 1389
Complexes (Antigen-Antibody) : Mechanism of Action of—their Effect on Mast Cells (Dr. Ivan Mota), 572
Complexes (Charge-Transfer) : Electron Affinity of the Acceptor Molecule in (Dr. M. E. Peover), 702
Complexes (Chromium, Uranium, Tungsten and Nickel), of Thioglycolic Acid (V. M. Bhuchar), 489
Complexes (Copper (II)), of Reduction Products of 2,2'-Dipyridyl: Stability Constant of (Dr. M. T. Beck and M. Halmos), 1090
Complexes (Iodine) : Separation of Linear from Branched Polysaccharides by Precipitation as (Blanche D. E. Gaillard), 1295
Complexes (Metal Chlorin), in Recent Sediments as Initial Precursors to Petroleum Porphyrin Pigments (G. W. Hodgson and Eric Peake), 766
Component (Central), of the Radio Source Centaurus A (P. Maltby), 793
Component (Structural), of some Mammalian Tissue Cell Surfaces : Sialic Acid as a (Dr. Leonard Weiss), 1108
Components (Biologically Active), from Commercial Trypan Blue : Chromatographic Separation of (J. Dijkstra and J. Gillman), 803
Components (Non-specific Staining), from Fluorescein-labelled Conjugates : Simplified Procedure for removing (G. D. Johnson), 70
Composition : Effect of Spraying with Gibberellic Acid on Yield and (Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid), (R. Stevens, J. B. Roberts and I. H. Williams), 360
Composition of the Cellulose-decomposing Microflora on Soil Crumb Plates : Factors influencing the (A. Keynan, Y. Henis and P. Keller), 307
Composition of the Skin Follicle Population in Seven Rajasthan Sheep Breeds (Sunanda Narayan), 1115
Composition (Amino-Acid), of Serum Mucoprotein in Rheumatic Fever (Prof. D. O'Brien, C. H. M. Walker and D. Walker), 922
Composition (Chemical), of Precipitable Water Vapour over the United States (Dr. Henry M. Papée and Dr. Alberto Montefinale), 136
Compositions (Exothermic) : Solid Propellant and (Dr. James Taylor), *review* by Dr. W. B. Littler, 3
Composition (Sex), of Lamprey Populations (Dr. M. W. Hardisty), 1116
Composition (Solvent), in Paper Chromatography : R_M and (Dr. Edward Soczewiński), 68
Composition (Soybean Protein) : Ultra-centrifugal Differences in (W. J. Wolf, G. E. Babcock and A. K. Smith), 1395
Composition (Unusual Base), of the Ribonucleic Acid of Wild Cucumber Mosaic Virus (H. Yamazaki and Prof. Paul Kaesberg), 96
Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum* : Identification of a (A. Ballio, Prof. E. B. Chain, F. Dentice di Accadia, M. Mauri, K. Rauer, M. J. Schlesinger and Sondra Schlesinger), 909
Compound (New), in the Metabolism of Indole-3-acetic Acid in Plants : 1-(Indole-3-acetyl)-β-D-Glucose, a (Dr. M. H. Zenk), 493
Compound (A Sealing), for Use in Biological Work (G. Stotzky, W. Culbreth and Dr. L. B. Mish), 410
Compound Formation (Ternary), in the System $CaO–Al_2O_3–MgO$ (J. H. Welch), 559
Compounds : N,N'-Alkylene-*bis*(Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related—a New Series of Anti-tumour Agents (A. S. Tomcufcik, S. D. Willson, A. W. Vogel and A. Sloboda), 611
  Gas-Phase Reactions of the Halogens and their (Dr. J. H. Thomas and Dr. E. Whittle), 129
  Heterocyclic (edited by Dr. E. H. Rodd), (Chemistry of Carbon Compounds, Vol. 4, Part C), *review* by Dr. James D. Loudon, 214
  Organo-Metal, *review* by Dr. D. S. Payne, 316
  Organo-Metallic (Prof. G. E. Coates), second edition, *review* by Dr. D. S. Payne, 316
  Sintered High Temperature (Powder Metallurgy Joint Group of the Iron and Steel Institute and the Institute of Metals Symposium on), 1250
Compounds (Carbon) : Chemistry of (edited by Dr. E. H. Rodd), Vol. 4, Part C, Heterocyclic Compounds, *review* by Dr. James D. Loudon, 214
Compounds (Complex), of Zero-valent Platinum (Dr. J. Chatt and G. A. Rowe), 1191
Compounds (Fungitoxic) : Transformation in Plants of Sodium Dimethyldithiocarbamate into other (H. M. Dekhuijzen), 198
Compounds (Heterocyclic) : An Introduction to the Chemistry of (R. M. Acheson), *review*, 320
Compounds (Inorganic) : Co-ordination of the Thiocyanate Group in (A. Turco and C. Pecile), 66
Compounds (Natural Phenolic) : Stereochemistry of (Plant Phenolics Group Symposium on), 234
Compounds (Organic) : Analysis of, *review* by Dr. D. T. Lewis, 741
  'Gel Filtration' of (B. Cortis-Jones), 272
  Radiation Chemistry of (Dr. A. J. Swallow), *review* by Dr. S. J. Thomson, 317
Compounds (Organo-Phosphorus) : Soviet Research on, 1949-1956 (in English translation), *review* by Dr. F. G. Mann, 1232
Compounds (Sulphydryl), for Normal Growth : Spontaneous Development of *L* Forms of Streptococci requiring Secretions of other Bacteria or (Ayala Frenkel and Dr. Willy Hirsch), 728
Compressibility and Specific Evaporation Resistance of the Monolayers of Long-Chain Alcohols and Glycol Monoalkyl Ethers (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Compression of Plasma in Cusp Geometry: Experiments on the (Dr. T. K. Allen and Dr. R. J. Bickerton), 794
Compton, Dr. Arthur, and Pannett, Prof. Charles A. : Effect of Irradiated Normal Tissues on the Growth of Mouse Carcinoma, 1101
Computation : Conference on Automation and, 1030
Computer Systems for Searching Chemical Literature : Report on (E. C. Medam and H. R. Koller), (United States National Bureau of Standards Research Information Centre and Advisory Service on Information Processing), 23
Computers (Digital), their Use and Control (Mathematics Department of Queen's College, St. Andrews, in collaboration with Standard Telephones and Cables, Ltd., Symposium on), 554
Computers (Digital), and Nuclear Reactor Calculations (Ward C. Sangren), *review* by Dr. M. V. Wilkes, 9
Computers and Tabulators (International), Ltd. : Appointment of B. L. J. Hart as principal of the Computer Application Training Centre, 24
Computing Centre : A New (IBM Co.), 23
Computing Systems : Redundancy Techniques for (Information Systems Branch of the United States Office of Naval Research Symposium on), 1349
Comrie, J. (edited by) : Civil Engineering Reference Book, *review* by T. M. Charlton, 1032
Concentration of Blood Glucose and Liver Glycogen in Rabbits : Effect of Bee Venom on (Prof. A. H. Mohamed and K. Zaki), 605
Concentration of Solutes : Cryoscopic Effect of Separation and (Dr. K. S. Rangappa), 1087
Concentration (Chloride) : Effect of, on the Aqueous Corrosion of a Magnesium Alloy (D. de G. Jones and H. G. Masterson), 165
Concentration (High), of (–)-Noradrenaline in *Portulaca oleracea* L. (Dr. P. C. Feng, Prof. L. J. Haynes and Dr. K. E. Magnus), 1108
Concentration (Tobacco Mosaic Virus (TMV), Lesion Number and) : Relationship of, to the Rate of Lesion Production on Pinto Bean (John Piacitelli and Prof. Vincent Santilli), 624
Concentrations (Different Iron) : Electrophoretic and Immuno-electrophoretic Patterns of Extracellular Diphtheria Proteins from Culture Filtrates of (Bertold J. Radola), 382
Concentrations (High Indole-3-Acetic Acid) : Growth Stimulation by (T. A. Truelsen), 1410
Concept of Atomic Existence (Prof. W. H. Watson), 658
Concept of Kind of Tea (W. Wight and R. C. J. H. Gilchrist), 14
Conception : Biological Control of (Dr. A. S. Parkes), 1256
Conchological Society of Great Britain and Ireland and the Malacological Society of London : First European Malacological Congress, 126
Concrete : The Action of Calcium Chloride on Mortar and (M. Lawrence and H. E. Vivian), 125, *erratum*, 1145
Concretions (Urinary), forming on Zinc Implants in Rat Bladders : Incorporation of Phosphorus-32 into (Dr. Richard F. Keeler and Dr. Stuart A. Lovelace), 715
Condensate : Cigarette Smoke—Preparation and Routine Laboratory Estimation (H. R. Bentley and J. G. Burgan), second edition, 336
Condensed Ring Aromatic Hydrocarbons : π-Electronic Excitation and Ionization Energies of (Dr. J. B. Birks and M. A. Slifkin), 761
Condition (Dry and Wet) : Radiation Sensitivity of *Escherichia coli* to β-Rays in (S. B. Bhattacharjee and N. N. Das Gupta), 1015
Conditions (Abnormal): Electrical Activity of a Giant Nerve Cell under (Dr. Yutaka Oomura, Sachio Ozaki and Takashi Maéno), 1265
Conditions (Controlled Environmental) : Flower Initiation in Kent Wild White Clover (*Trifolium repens* L.), under (R. J. Haggar), 1120
Conditions (External) : Effect of, on the Phase of Radio Signals (D. E. Watt-Carter and R. L. Corke), 1286
Conditions (Normal Feeding) : Soluble Material in the Gastro-intestinal Tract of Rats under (Dr. Anne S. Cole), 502
Conditions (Primitive Earth) : Mechanism of Synthesis of Adenine from Hydrogen Cyanide under Possible (Prof. J. Oró), 1193

Conditions (Tuberculous and Non-tuberculous) : Mycobacteriophages isolated from Persons with (Dr. E. Mankiewicz), 1416
Conductivity (Electrical), of Cathodes coated with Barium Oxide : Effect of Ultra-Violet Irradiation on the (Dr. C. H. B. Mee), 1383
Conductivity (Electrical), of Indole–Iodine : Spin Resonance and (B. Smaller, Dr. I. Isenberg and S. L. Baird, jun.), 168
Conductivity (Semi-) of Chlorpromazine (Dr. F. Gutmann and Z. Netschey), 1390
Conferences (Scientific and Technical) : Forthcoming International (Department of Scientific and Industrial Research, List No. 29), 959
Confinement (Magnetic Mirror), of Exploding Wire Plasma (E. J. Seykora), 995
Conflict : The Strategy of (Prof. Thomas C. Schelling), *review* by Sir Cyril Burt, 427
Conjola District, New South Wales : Cave Art of the (F. D. McCarthy), 854
Conjugates (Fluorescein-labelled) : Simplified Procedure for Removing Non-specific Staining Components from (G. D. Johnson), 70
Conklin, E. G. : History of the American Philosophical Society, 335
Conn, G. K. T., and Avery, D. G. : Infrared Methods, *review* by Dr. E. S. Waight, 315
Connexion between Micropulsations and the Ionosphere (C. M. Lock and P. J. Stevens), 584
Conscious Awareness : Spike and Wave Discharges and Alterations of (L. Goldie and J. M. Green), 200
Consden, Dr. R. : Paper Chromatography (Origin and Development of Paper Chromatography), 759
Conservation : Course in, by the Verein Naturpark in the Lüneburger Heide, Germany (International Youth Federation for the Study and Conservation of Nature), 1045
Conservation in Museums : Climatology and (International Centre for the Study of the Preservation and the Restoration of Cultural Property: Works and Publications 3), 1050
Conservation of Nature, International Union for the, and the Commission for Technical Co-operation in Africa : Conference on the Conservation of Nature and Natural Resources in Modern African States, 958
Conservation of Nature, International Youth Federation for the Study and : Course in Conservation, by the Verein Naturpark in the Lüneburger Heide, Germany, 1045
Conservation of Nature and Natural Resources in Modern African States (International Union for the Conservation of Nature and the Commission for Technical Co-operation in Africa, Conference on), 958
Conservation of Water in Great Britain, 421
Considerations (New), on Survival Curves and Target Theory (Dr. E. L. Powers), 1045
Constancy (Visual) : Measuring, for Stationary or Moving Objects (S. M. Anstis, C. D. Shopland and R. L. Gregory), 416
Constant (Planck's) : Theory of the Red Shift and the Nature of (L. Infeld), 1184
Constant (Stability), of Copper (II) Complexes of Reduction Products of 2,2'-Dipyridyl (Dr. M. T. Beck and M. Halmos), 1090
Constituents (Body) : Metabolic Stability of (Dr. A. N. Davison and Dr. J. Dobbing), 844
Constituents (Methyl Alcohol/Chloroform-soluble), of Honeybee Larval Foods : Chromatographic Investigation of the (N. G. Patel, M. H. Haydak and R. Lovell), 362
Constituents (Milk) : Removal of, from the Mammary Gland of the Ewe (A. K. Lascelles), 1404
Constituents (Organic), of Meteorites (Michael H. Briggs), 1137
Constitution of Cellulose Microfibrils (D. T. Dennis and Prof. R. D. Preston), 667
Consumption (Oil), in the United Kingdom during 1960, 123
Consumption (Oxygen), induced by Potassium in Muscle : Inhibition by Physostigmine of the Increase of (Dr. Ivan Novotny and František Vyskočil), 916
Consumption (Water and Alcohol) : Comparison between, in Six Animal Species in Free-choice Experiments (Dr. Alpo Arvola and Dr. Olof Forsander), 819
Consumption Test (Positive Antiglobulin) : Nature of the Coating Globulin causing a (D. Nelken), 1110
Consumption and Refinery Production : U.K. Petroleum Industry Statistics relating to, 1959 and 1960 (Petroleum Information Bureau), 123
Contact Microradiography at 200-500 V. : An Experimental Apparatus for (Dr. A. Recourt and G. H. F. de Vries), 1185
Contact Sensitivity to Picryl Chloride in Guinea Pigs : Passive Transfer of, with Subcellular Material (Dr. J. L. Turk), 915
Contact Stresses and Friction : Effective (Dr. D. H. Trollope), 376
Contensou, P. : Space-Flight and Re-entry Trajectories (Orbital Transfer and Rendezvous), 960
Content of Jobs : The, 336
Contessa, A. R. (Bruni, Dr. A., and) : Inhibition of Phosphorylation by Atractyloside, 818
Continuation of the Great Glen Fault beyond the Moray Firth (Dr. Derek Flinn), 589 ; (Dr. Robert M. Appleby), 1190
Continuity : Cell (American Society for Cell Biology Symposium on), 1045
Continuous Flow Calorimeter : Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of High Surface Area using a (G. H. Bell and A. J. Groszek), 1184
Contraction (Cardiac), and Size of the Heart : Relationship between Velocity of—a Hypothesis (Dr. H. Feinberg), 1373
Control : Digital Computers, their Use and (Mathematics Department of Queen's College, St. Andrews, in collaboration with Standard Telephones and Cables, Ltd., Symposium on), 554
Control of Animal Diseases : Animal Experiments in the (Research Defence Society Pamphlet on), 226
Control of Colleges of Advanced Technology in Britain, 20
Control of Health Hazards from Radioactive Materials : Introductory Manual on the (Medical Research Council, Memorandum No. 39), new edition, 1257
Control of Mitosis-rates in Generating Liver : Influence of Plasma Proteins in the (Dr. J. T. Hemingway), 706
Control of Plasma Calcium in the Calf : Importance of Magnesium in the (Dr. R. H. Smith), 181
Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach : Significance of the Anti-Sporulation Effect of Copper Fungicides in the (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Control of Soil-transmitted Helminths (Prof. Paul C. Beaver), 1249
Control of Specificity in Haemoglobin Synthesis (Dr. J. Bishop, Dr. G. Favelukes, Prof. R. Schweet and Dr. E. Russell), 1365
Control (Biological), of Conception (Dr. A. S. Parkes), 1256
Control (Genetic), of Protein Structure : Haemoglobin *F* and the (Prof. V. M. Ingram), 608 ; (Dr. Wolf W. Zuelzer and Abner R. Robinson), 609
Control (Quality) : Handbook of Textile Testing and (Prof. Elliot B. Grover and Prof. D. S. Hamby), *review* by W. J. Onions, 106
Control (Spiracle), in Dragonflies (Dr. P. L. Miller), 621
Control (Statistical Quality), and Acceptance Sampling (Birmingham College of Advanced Technology Course on), 337
Control (Traffic) : Modern Methods of (Exhibition at the Science Museum, London, by the Westinghouse Brake and Signal Co., Ltd.), 1044
Controlled Environmental Conditions : Flower Initiation in Kent Wild White Clover (*Trifolium repens* L.), under (R. J. Haggar), 1120
Controlled Ionization (Magnetically) : Trans-Equatorial Backscatter Observations of (J. A. Thomas), 792
Controlled Nuclear Fission Research : Plasma Physics and (International Atomic Energy Agency International Conference on), 443
Controlling Mechanism of the Mechanical Activity of Muscle and that of Blood Coagulation (Dr. Masahiro Fujino, Saburo Yamaguchi, Masa Takauji, Kohki Uchida, Masahide Yasuda and Tatsuaki Matsushima), 80
Controversy on the Comets of 1618 (Galileo Galilei, Horatio Grassi, Mario Guiducci and Johann Kepler), translated by Stillman Drake and Dr. C. D. O'Malley, *review* by Colin A. Ronan, 314
Convenient Synthesis of Muramic Acid and other 3-O-Ethers of D-Glucosamine (Dr. Roy Gigg and Patricia M. Carroll), 495
Conversion of Fibrin to Desmofibrin (K. Buluk, T. Januszko and J. Olbromski), 1093
Conversion of L-Galactono-γ-lactone into L-Ascorbic Acid by Plants (Dr. G. A. D. Jackson, R. B. Wood and M. V. Prosser), 282
Conversion (Enzymic), of Tetrahydrofolic Acid to Folinic Acid by Plant Protein (E. H. Byers, J. Stewart and T. J. Bond), 179
Convulsions ('Metrazol') : Changes in the Pentose–Nucleic Acid Content of Sub-Cellular Fractions of the Brain of the Rat during (Prof. G. P. Talwar, B. Sadasivudu and V. S. Chitre), 1007
Cook, E. Fullerton, and others (edited by) : Remington's Practice of Pharmacy, twelfth edition, *review* by Dr. J. H. Gaddum, 8
Cook, Dean E. S. (Tokushige, A. M., and) : Application of the Nickel Reaction and Thermal Isomerization of Alpha-Keto-Acid Hydrazones for their Chromatographic Analysis, 797
Cook, G. M. W., and others : Sialic Acids and the Electrokinetic Charge of the Human Erythrocyte, 44
Cook, Margaret J., and Vlček, Augustin : Sex-Ratio in Mice, 89
Cook, Norman : At the sixty-seventh Annual Conference of the Museums Association (Display of Archaeological Exhibits), 553
Cook, Prof. S. F. (Ezra-Cohn, H. E., and) : Blood-Typing Compact Human Bone Tissue, 1267
Cooke, Roderic C. : Agar Disk Method for the Direct Observation of Nematode-trapping Fungi in the Soil, 1411
Cooled Austenite : Transformation of Cathodically Impregnated and (E. G. Ramachandran and C. Dasarathy), 998
Coombs, Dr. R. A. A., and Dodd, Barbara : Microscopical Technique to determine the Nature of a Stain on a Single Fibre of Clothing or other Material, 753
Cooper, Dr. : Hazards of the Animal House (Handling of Large-scale Experiments with Polio Virus), 339
Cooper, A. Y. : Digital Computers, their Use and Control, 554
Cooper, Dr. Bernard A., and Paranchych, Dr. William : Selective Uptake of Specifically Bound Cobalt-58 Vitamin B_{12} by Human and Mouse Tumour Cells, 393
Cooper, E. A. : Design and Use of Respirators (Ventilation), 655
Cooper, G. A., and Forsyth, D. C. T. : *Pneumodermopsis paucidens* in the North Sea, 1412
Cooper, Dr. G. N., and Stuart, Dr. A. E. : Sensitivity of Mice to Bacterial Lipopolysaccharide following Alteration of Activity of the Reticulo-Endothelial System, 294
  Non-Specific Immunity in Pneumococcal Infection of Mice, 295
Cooper, J. G. (Bond, Dr. Joan, and) : Effect of Polyamino Carboxylic Acids on Catalase, 385
Cooper, J. P. (Calder, D. M., and) : Effect of Spacing and Nitrogen-level on Floral Initiation in Cocksfoot (*Dactylis glomerata* L.), 195
Cooper, Marion I., and Sykes, J. R. : Demonstration by Paper Electrophoresis of an Auto-Immunological Precipitin possibly due to Fibrinolysins, 1212
Cooper, R. A., and Greenshields, R. N. : Sucrases in *Phaseolus vulgaris*, 601
Co-operation (International) : The Urgency of, 943
Co-operation (Technical), in Africa, Commission for (International Union for the Conservation of Nature and the) : Conference on the Conservation of Nature and Natural Resources in Modern African States, 958
Co-operation (Technical), Department of : Work of the, 440
Co-ordination of the Thiocyanate Group in Inorganic Compounds (A. Turco and C. Pecile), 66
Co-ordination (Four-fold), of Titanium in Barium Orthotitanate : Infra-Red Spectroscopic Evidence of (P. Tarte), 1002
Co-ordination (Mechanical), of Cilia : An Example of (Dr. M. A. Sleigh), 931
Co-ordination Chemistry : An Introduction to (Dr. D. P. Graddon), *review* by Prof. C. A. Coulson, 1233
Copeland, Virginia, and others : Biochemical Aspects of Resistance to 6-Mercaptopurine in Human Epidermoid Carcinoma Cells in Culture, 469
Copeman, W. S. C. : Doctors and Disease in Tudor Times, *review* by Sir Russell Brock, 428
Copepod *Ommatokoita elongata* (Grant) in the Eyes of the Greenland Shark—a Possible Cause of Mutual Dependence (Bjørn Berland), 829
Copestake, T. B., and Corney, N. S. : Irradiation Decomposition of Carbon Dioxide, 1192
Copp, F. C., and others : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine, 1312
Copper in Isopods (Dr. W. Wieser), 1020
Copper Fungicides : Significance of the Anti-Sporulation Effect of, in the Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476

Copper Poisoning of Sheep : Methaemoglobin in Chronic (J. R. Todd and R. H. Thompson), 89
Copper (II) Complexes of Reduction Products of 2,2'-Dipyridyl : Stability Constant of (Dr. M. T. Beck and M. Halmos), 1090
Co-precipitated Gels : Tetragonal Mullite-like Phase from (J. Ossaka), 1000
Corbet, G. B. : Origin of the British Insular Races of Small Mammals and of the 'Lusitanian' Fauna, 1037
Cord Blood Serums : Haptoglobin Patterns in (A. R. Rausen, P. S. Gerald and Dr. L. K. Diamond), 717
Cordes, S., and others : Some Properties of the Deoxyribonucleic Acid of Phage Alpha, 1097
Cordingley, J., and Nicol, Prof. T. : Effect of Added Vitamins on the Phagocytic Activity of the Reticulo-Endothelial System of Mice, 82
Coregonus pollan, Thompson (Lough Neagh Pollan) : Furunculosis in (K. U. Vickers and R. McClean), 930
Coremans, Dr. P. : At the sixty-seventh Annual Conference of the Museums Association (Problems of Conservation), 553
Corke, R. L. (Watt-Carter, D. E., and) : Effect of External Conditions on the Phase of Radio Signals, 1286
Corne, Dr. S. J., and others : Tryptamine Receptors in the Central Nervous System, 1068
Corney, N. S. (Copestake, T. B., and) : Irradiation Decomposition of Carbon Dioxide, 1192
Corradetti, A. : Immunity to Protozoa (True Residual Immunity in Rats which had recovered from *Plasmodium berghei* and *Trypanosoma lewisi* Infections), 551
Correction (Absorption) : Elimination of the, in the Viscometry of Dilute Solutions of High Polymers (H. van Oene and Prof. L. H. Cragg), 1160
Correlation between Growth-Rate of the Suckling of various Species and the Percentage of Total Calories from Protein in the Milk (Dr. F. W. Bernhart), 358
Correlative Inhibition of Formation of Chlorophyll in the Leaves of Etiolated Pea Plants (Jiří Úlehla), 613
Corresponding Regions of Homotypic Long Bones : Number and Arrangement of Osteons in (Dr. G. Marotti), 1400
Corrosion : Summer School on—Corrosion Problems in the Electrical Power Industry (Battersea College of Technology), 651
Corrosion in the Nuclear Energy Industry (Société de Chimie Industrielle Symposium on), 651
Corrosion Problems in the Electrical Power Industry (Battersea College of Technology Summer School on Corrosion), 651
Corrosion (Aqueous), of a Magnesium Alloy : Effect of Chloride Concentration on the (D. de G. Jones and H. G. Masterson), 165
Cortex (Mouse Thymus) : Periodic Acid–Schiff Positive Giant Cells in the (D. Metcalf and M. Ishidate), 305
Corticosteroids : Effect of Adrenalectomy and, on Distribution of Radioactivity in Protein of Cell Fractions from Myocardial Slices (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Corticotrophin, Hydrocortisone and Methopyrapone : Effects of, on the Circulating Eosinophiles in Man (Dr. N. J. Kothari and Dr. J. C. Saunders), 1105
Cortis-Jones, B. : 'Gel Filtration' of Organic Compounds, 272
Corundum (Synthetic) : A New Technique for the Production of (E. A. D. White), 901
Coryndon Memorial Museum, Nairobi : Annual Report for 1959, 335
Cosmic Noise Measurements at 3·8 Mc./s. from Satellite 1960 $\eta 1$: Interpretation of (J. H. Chapman and A. R. Molozzi), 480
Cosmic Rays : Fission and Spallation Phenomena and their Application to (European Organization for Nuclear Research and the Max Planck Institute, Heidelberg, Conference on), 24
Cosmology (Prof. H. Bondi), second edition, *review* by Prof. W. H. McCrea, 1336
Cosmonautical Medicine : Aviation and (C.E.R.M.A. International Congress on), 338
Cosslett, Dr. V. E., and Nixon, Dr. W. C. : X-Ray Microscopy, *review* by Prof. Arne Engström, 1332
Cotes, J. E. : Design and Use of Respirators (Physiological Aspects of Respirator Design), 655
Cotes, Dr. P. Mary, and Bangham, Dr. D. R.: Bio-Assay of Erythropoietin in Mice made Polycythaemic by Exposure to Air at a Reduced Pressure, 1065
Cotton : Leaf Curl Virus and the Flavonoid Content of Resistant and Susceptible Strains of (Dr. Esam M. Moustafa), 415
Cotton (Polyploid) : Basis of the Diploid-like Meiotic Behaviour of (G. Kimber), 98
Cotton, Silk and Man-made Fibres Research Association : Appointment of N. G. McCulloch as an honorary life governor, 443
Coulson, Prof. C. A. : Graphite (Electronic Band Structure of Graphite), 27
    Transition-Metal Chemistry, *review*, 1233
Coulson, C. B., and Lord, P. Mary : Isolation and Fractionation of some Damselfly Pigments, 1300
Coumarin-induced Hypoprothrombinaemia : Lack of Effect of Coenzyme Q_{10} on (Prof. Murray Weiner, Dr. Theodore Chenkin and Dr. Peter G. Dayton), 711
Counting Method (γ-Ray) : Measurement of the Thorium Content of Natural Materials by a (Prof. J. H. J. Poole and F. N. Byrne), 62
Countries (Developing) : Agricultural Problems in (Nutrition Society Symposium on), 1250
Countries (Overseas): Technical Assistance to (June 17, 1039), *errata*, 24
Country around Monmouth and Chepstow : Geology of the (Memoirs of the Geological Survey of Great Britain—England and Wales), (Dr. F. B. A. Welch and Dr. F. M. Trotter), 227
Countryside : The Impact of Industrial Development on the (Council for the Preservation of Rural England Conference on), 959
Counts, George W., and others : Biochemical Changes in Lethal Staphylococcal Infections in Mice, 783
Counts (Human Chromosome), in relation to Age : Distribution of (Patricia A. Jacobs, W. M. Court Brown and Dr. Richard Doll), 1178
Coupling of Phosphorylation to Electron and Hydrogen Transfer by a Chemi-Osmotic Type of Mechanism (Dr. Peter Mitchell), 144
Course in Conservation, by the Verein Naturpark in the Lüneburger Heide, Germany (International Youth Federation for the Study and Conservation of Nature), 1045
Course on the Principles of Radiation Protection (Harwell Reactor School of the Atomic Energy Research Establishment), 856
Course on Recent Developments in the Chemistry and Technology of Polymers (Bradford Institute of Technology), 1349
Course on Statistical Quality Control and Acceptance Sampling (Birmingham College of Advanced Technology), 337
Course (Fourteenth International Instructional), by Carl Zeiss, Jena, at the Imperial College of Science and Technology, London, on Fine Measuring Instruments, 1045
Courses for the Diploma in Technology : Regional Development Plan for (Regional Advisory Council for Technological Education, London and Home Counties), 1044
Courses on Practical Applications of Nuclear Energy (International Atomic Energy Agency), 1143
Courses (Postgraduate) in Nuclear Studies (Liverpool College of Technology), 338
Courses (United Kingdom), in Nuclear Energy, 125
Courtaulds, Ltd. : Grant of £1,000 to the Department of Textile industries in the University of Leeds, 650
Courts, Dr. A. : At the Twenty-first Meeting of the Research Panel of the British Gelatine and Glue Research Association (Structural Reorientation of Gelatine in Citrate), 857
    Eucollagen, 1097
Cow and Rat : Leucine Aminopeptidase in the Mammary Gland of the (Prof. S. Talanti and Prof. Väinö K. Hopsu), 86
Cows : Growth of Ryegrass-dominant Pasture grazed by, and Properties of New Zealand Butterfat (F. H. McDowall, W. A. McGillivray and J. C. Hawke), 303
Cows' Milk : An Invariant Casein Substrate for Rennet Standardization, derivable from Diverse Sources of (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Cows (Lactating), given Artificial Rations Low in Magnesium : Rapid Development of Hypomagnesaemia in (J. A. F. Rook), 1019
Cox, E. V. : Vitamin B_{12} and Intrinsic Factor (Relationships between Vitamin B_{12} and Folic Acid), 1156
Coxon, Dr. R. V. : Chemistry and the Nervous System, *review*, 318
Crabbé, Dr. J. : Stimulation by Aldosterone of Sodium Transport in the Loop of Henle, 817
Cracks (Expansion), in Mortar : The Widening of, by Salt Solutions (J. A. Roberts and H. E. Vivian), 125, *erratum*, 1145
Cragg, Prof. L. H. (van Oene, H., and) : Elimination of the Absorption Correction in the Viscometry of Dilute Solutions of High Polymers, 1160
Craggs, Dr. J. W. : Appointed to the newly created chair of mathematics in the University of Leeds, 122 ; work of, 122
Cranbrook, Earl of : Science, Politics and Social Service (Presidential Address to Section X (General) of the British Association for the Advancement of Science), 992
Craven, Kenneth (Cohen, Leonard, and) : Science Information Personnel—the New Profession of Information combining Science, Librarianship and Foreign Languages, 452
Crawford, Dr. B. H. : At the Maxwell Colour Centenary Conference (Some New Results on Large-field Colour Matching), 10 ; (Colour Rendering), 11
Crayfish (Cave) : Diurnal Rhythm in (Prof. Frank A. Brown), 929
Creep : A New Laboratory for Research on, 1049
Cretaceous (Hanterivian) Angiosperm Fruit : An Early, from California (M. E. J. Chandler and D. I. Axelrod), 442
Crisis in Mathematical Education in Britain, 103
Crofton, Dr. H. D. : Parasite Biology (Influence of Temperature and Climatic Conditions on the Level of Helminthic Infestation in Domestic Animals), 134
Crombie, Dr. L. : Stereochemistry of Natural Phenolic Compounds (Absolute Configuration of Rotenone and its Derivatives), 235
Crook, Dr. E. M. : The Training of Biochemists (The M.Sc. Course in Biochemistry at University College, London), 956
Crookes Laboratories : Appointment of Dr. F. A. Robinson as chairman of the board of directors, 546
Crop (Potato) : Tuber Bulking in the (R. W. Radley, M. A. Taha and P. M. Bremner), 782
Crop Production : Importance of Nitrogen in (Prof. N. R. Dhar), 544
Cross, A. C., and others : Dependence on Substrate of the Electrical Potential across the Isolated Gut, 501
Cross, Dr. P. C. : Appointed president and chief executive officer of the Mellon Institute, 439
Cross-Antenna of the Proposed Benelux Radio Telescope (Prof. W. N. Christiansen and Dr. J. A. Högbom), 215
Cross-Linking in Ion-Exchange Polymers : Non-Uniformity of (Dr. E. Glueckauf and R. E. Watts), 904
Cross-Linking Proteins : A New Two-Stage Method for (Dr. Felix Borek), 1293
Cross-Modal Transfer in Man (M. Cole, S. L. Chorover and Dr. G. Ettlinger), 1225
Crosses (Sterile), between Mutations of *Tribolium confusum* Duv. (Prof. John Stanley), 934
Crowley, Dr. Mary P., and others : Biosynthesis of the Pyrethrins, 281
Crowley-Milling, Dr. M. C., and others : Pulse-shortening in Electron Linear Accelerators, 483
Crowther : From Galton to (Prof. George Seth), 989
Crustacea : A Biology of (Dr. J. Green), *review* by Dr. J. A. Allen, 111
    The Physiology of (edited by Talbot H. Waterman), Vol. 2, Sense Organs, Integration and Behaviour, *review* by Dr. J. Green, 428
Cryoscopic Effect of Separation and Concentration of Solutes (Dr. K. S. Rangappa), 1087
Crystal and Molecular Structure of Diphenyl (Dr. G. B. Robertson), 593
1:1 Crystalline Complex between 1,3,7,9-Tetramethyluric Acid and Pyrene : Molecular Geometry of a (F. De Santis, E. Giglio, Dr. A. M. Liquori and A. Ripamonti), 900
Crystallization of Isotactic Polypropylene using a Light Depolarization Technique (J. H. Magill), 1092
Crystallization in Wool Keratin (Dr. Allan Skertchly), 138
Crystallization Kinetics in Polyvinylchloride and Thermoelastic Relaxation induced by Ultrasonics (Dr. V. Nardi), 563
Crystallographic Society of Japan, and others : International Conference on Magnetism and Crystallography, 24
Crystallography : Magnetism and (Science Council, the Physical Society and the Crystallographic Society of Japan International Conference on), 24

Crystals : Atomic Energy Levels in (J. L. Prather), 1348
  'Effective' Ionic Charge in (Dr. W. Cochran), 60
  Epitaxial Growth of, on One-Degree Orientated Substrates (Dr. A. Goswami), 160
Crystals (Doped), of Sodium Chloride : Quenching of Cation Vacancies in (the late Sir K. S. Krishnan and S. C. Jain), 162
Crystals (Explosive) : Slow Decomposition of, and their Damage by Fission Fragments (Dr. F. P. Bowden and H. M. Montagu-Pollock), 556
Crystals (Silver Bromide Micro-) : Electron Spin Resonance Absorptions induced by Light in Adsorbed Layers of Cyanine Dyes on (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Crystals (Single), of Gallium : Thermo-electric Power of (P. Horner), 58
Csáky, Dr. T. Z., and Fernald, G. W. : Localization of the 'Sugar Pump' in the Intestinal Epithelium, 709
Csóka, R. (Füzi, Dr. M., and) : Leptospirosis of White Laboratory Rats, 1123
Cubic Molybdenum Monocarbide (Face-centred) : A New Phase formed by High-Pressure Treatment— (E. V. Clougherty, K. H. Lothrop and J. A. Kafalas), 1194
Cucumber (Wild) Mosaic Virus : Unusual Base Composition of the Ribonucleic Acid of (H. Yamazaki and Prof. Paul Kaesberg), 96
Culbreth, W., and others : A Sealing Compound for Use in Biological Work, 410
Cultural Property, International Centre for the Study of the Preservation and the Restoration of (Rome) : Works and Publications, 3, Climatology and Conservation in Museums, 1050
Culture : Biochemical Aspects of Resistance to 6-Mercaptopurine in Human Epidermoid Carcinoma Cells in (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
  Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Culture (Separation and *in vitro*), of Cells from Liver Tissue (Dr. Justine S. Garvey), 972
Culture (Sterile) : Growth of Fern Embryos in (Prof. Augustus E. DeMaggio and Prof. Ralph H. Wetmore), 94
Culture Filtrate of *Helminthosporium sativum* : Production of Symptoms of Barley Leaf-Spot Disease by (S. K. Gayed), 725
Culture Filtrates of Different Iron Concentrations : Electrophoretic and Immuno-electrophoretic Patterns of Extracellular Diphtheria Proteins from (Bertold J. Radola), 382
Culture Forms of *Trypanosoma rhodesiense* : Cyclical Infection of *Glossina mortisans* with (the late Prof. R. M. Gordon and J. K. Miller), 1317
Culture Media of *Penicillium chrysogenum* : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from (A. Ballio, Prof. E. B. Chain, F. Dentice di Accadia, M. Mauri, K. Rauer, M. J. Schlesinger and Sondra Schlesinger), 909
Cultures from Multi-carbohydrate Media : A Micro-method for Performing the Phenylalanine Test on (D. J. Stewart), 521
Cultures (Animal Cell, Tissue and Organ), in Radiobiology : Use of (New York Academy of Sciences Symposium on), 340
Cultures (Fibroblast) : Effect of Amino-Acid Esters on the Growth of (Dr. I. Fehér, A. Döklen and V. Selmeci), 494
Cultures (Tissue Cell) : Immunofluorescence of Pleuropneumonia-like Organisms isolated from (Mayor W. F. Malizia, M. F. Barile and D. B. Riggs), 190
Cunningham, Catherine (Featherstone M. S. and), (Alistair Heron and Sheila M. Chown, assisted by) : Ageing and the Semi-Skilled—a Survey in Manufacturing Industry on Merseyside (Medical Research Council, Memorandum No. 40), 1248
Cunningham, Prof. G. J., and others : Tissue Dilution Artefact—a Re-interpretation of Variations in Levels of Succinic Dehydrogenase during Chemical Carcinogenesis, 1203
Current (Short-Circuit), and Net Water Movement : Comparison of, in Single Perfused Proximal Tubules of Rat Kidneys (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Current Problems in Nutrition (Nutrition Society of Canada Symposium on), 335
Current Shear : Evidence of an Eastward Equatorial Undercurrent in the Atlantic from Measurements of (Arthur D. Voorhis), 157
Current Steps in Motoneurones : Potential Changes produced by Application of (T. Araki, Dr. M. Ito and T. Oshima), 1104
Currents (Ionic), in Membrane of Active Muscle Fibre (Dr. H. Jenerick), 1074
Currents (Ocean) : Dispersal of Tropical Seeds by (R. Mason), 408
Curriculum (School), in Mathematics (edited by Howard Fehr), (Organization for European Economic Co-operation Report on), 335
Currie, G. T., and others : Girard *T* Reagent for Carbonyls, 1391
Currie, Ronald, and Draper, Laurence : Time-integrated Measurements of Submarine Irradiance, 661
Curtain, C. C. : Chromatography of Proteins on Diethyl-amino-ethyl (DEAE) Cellulose Paper, 1269
Curtis, Dr. D. R., and Watkins, Dr. J. C. : Analogues of Glutamic and γ-Amino-*n*-butyric Acids having Potent Actions on Mammalian Neurones, 1010
Curtis, Dr. G. H., and others : Age of Bed I, Olduvai Gorge, Tanganyika, 478
Curves (Isolated or Overlapping Normal Probability) : Calculation of the Areas of (Dr. D. Morison Smith and John C. Bartlet), 688
Curves (Survival), and Target Theory : New Considerations on (Dr. E. L. Powers), 1045
Cuscuta reflexa : Artificial Production of Buds from the Embryos of (Prof. P. Maheshwari and B. Baldev), 197
Cusp Geometry : Experiments on the Compression of Plasma in (Dr. T. K. Allen and Dr. R. J. Bickerton), 794
Cuthbertson, Dr. W. F. J. : The Training of Biochemists (Industry as a whole not fully aware of the Potential Value of the Trained Biochemist), 955
Cuticle in the Silkworm, *Bombyx mori* : Role of Lipid in the Hardening of the (Shigemi Kawase), 279
Cuticula (Stigmatic), of Flowers : Enzymic Breakdown of (W. Heinen and H. F. Linskens), 1416
Cuttings of *Hevea brasiliensis* : Effect of Ferric Dimethyldithiocarbamate on the Rooting of (G. H. Tinley), 1217
Cwilich, R. (Ascher, K. R. S., and) : Acaricidal Properties of Di-(*p*-chlorophenyl)-trifluoromethylcarbinol, 1322
Cyanide (Hydrogen) : Mechanism of Synthesis of Adenine from, under Possible Primitive Earth Conditions (Prof. J. Oró), 1193
Cyanine Dyes on Silver Bromide Microcrystals : Electron Spin Resonance Absorptions induced by Light in Adsorbed Layers of (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Cycle and Rhythm in the Ovulation of the Spider *Latrodectus geometricus* C. Koch (A. Bouillon and R. Lekie), 620
Cyclical Infection of *Glossina mortisans* with Culture Forms of *Trypanosoma rhodesiense* (the late Prof. R. M. Gordon and J. K. Miller), 1317
Cyclol Revived : The, *review* by Prof. H. N. Rydon, 105
Cyclotrons : Sector-Focused—Proceedings of an Informal Conference, Sea Island, Georgia, 1959 (edited by F. T. Howard), (United States National Academy of Sciences—National Research Council, Nuclear Science Series, Report No. 26, Publication No. 656), *review* by M. Snowden, 532
Cylindrical Animal and Plant Cells : Circumscribing Irradiation of Surface Structures of, with Polonium-210 α-Particles (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
Cytochemistry of *L*1210 Cells (Dr. H. J. Woodliff), 1313
Cytochrome *c* in the Heart of the Turtle (Prof. Gunnar Biörck and Dr. Sven Paléus), 712
Cytology of some Genera of Polypodiaceae in Eastern India (G. Panigrahi and S. N. Patnaik), 1207
Cytoplasm (Anti-Leucocyte), Anti-Leucocyte Nuclei and Anti-Platelets in Disseminated Lupus Erythematosis (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Cytoplasm and Vacuole in *Nitella* : Relative Volumes of (Dr. Paul Saltman and Dr. Tyge Christensen), 825
Cytoplasmic Inheritance (Apparent), of Tyrosinase Competence in *Streptomyces scabies* (Prof. K. F. Gregory and Wei-jen Shyu), 465
Czaja, Dr. A. H. : At the International Starch Conference (Microphotographs showing the manner in which Starch Granules Gelatinize in Water), 236
Czech Chemical Society : Conference on Paper Chromatography, 759

D*ACTYLIS glomerata* L. (Cocksfoot) : Effect of Spacing and Nitrogen-level on Floral Initiation in (D. M. Calder and J. P. Cooper), 195
Dagnall, D., and others : Techniques in Tropical Pathology, *review* by Prof. P. C. C. Garnham, 1236
Dainton, Prof. F. S. : Effects of Ionizing Radiation on Organic and Biological Solids (Scavenging of Radicals is more effective in the Solid and with Aromatic Compounds), 1150
Dairying, National Institute for Research in : Annual Report for 1960, 237
Daisley, Dr. K. W. : Gel Filtration of Sea-Water—Separation of Free and Bound Forms of Vitamin B_{12}, 868
Dalgarno, Dr. A. : Appointed to a chair of quantum mechanics in the Queen's University, Belfast, 19 ; work of, 19
Dalton, Dr. G. C. J. : *Obituary* by Prof. C. N. Watson-Munro, 1142
Dalton's Irish Rival, *review* by Frank Greenaway, 533
Dalziel, Dr. Keith : An Inhibitor of Liver Alcohol Dehydrogenase in Preparations of Reduced Diphosphopyridine Nucleotide, 1098
Dam, Prof. Henrik, and others : Serum Lipids in relation to the Intake of Alcohol and Sodium Chloride, 1095
Damage by Fission Fragments : Slow Decomposition of Explosive Crystals and their (Dr. F. P. Bowden and H. M. Montagu-Pollock), 556
Damage caused by *Heterodera rostochiensis* Woll. : Assessing the (E. B. Brown), 937
Damage in Stainless Steel due to Fission Fragments (P. R. B. Higgins and A. C. Roberts), 1158
Damage (Radiation), to Proteins (U. S. Kumta and A. L. Tappel), 1304
Damage (Unilateral Temporal Pole), in the 'Split-Brain' Monkey : Changes in Visual Gnostic Functions and Emotional Behaviour following (Dr. J. L. deC. Downer), 50
Damping without Influence on Frequency (A. Bloch), 1086
Damselfly Pigments : Isolation and Fractionation of some (C. B. Coulson and P. Mary Lord), 1300
Daniel, Dr. Glyn : The Prehistoric Chamber Tombs of France, *review* by Prof. C. F. C. Hawkes, 637
Daniels, Dr. D. G. H., and Martin, H. F. : Isolation of a New Antioxidant from Oats, 1302
Danon, Dr. D. : Biorheology and Microcirculation (Phase-contrast Microcine Films illustrating Deformation, Shearing and Haemolysis of Normal Human Erythrocytes under Gradually Decreasing Salt Concentration), 758
Darby, Prof. H. C. : The West Riding of Yorkshire, *review*, 208
Darcy, Dr. D. A. : Estimation of Specific Proteins in Serum and other Mixtures, 1163
Dark-Fixation of Carbon Dioxide in Leaves of *Bryophyllum fedtschenkoi* : An Endogenous Rhythm in the Rate of (Diana M. Warren and Malcolm B. Wilkins), 686
Darkening of the Hair in Yellow A^{vy}/a Mice : 5-Methyltryptophan and (Dr. Vivianne T. Nachmias), 934
Darlow, Surg.-Comdr. : Hazards of the Animal House (Provision of Clean Air as a Factor in Preventing the Spread of Infection in the Animal House), 339
Dart, Prof. Raymond A. : An Australopithecine Scoop made from a Right Australopithecine Upper Arm Bone, 372
Darwin : Evolution after (edited by Sol Tax and Charles Callender), Vol. 3, Issues in Evolution, *review* by Dr. P. G. Fothergill, 425
Das, Dr. S. M. : Hydrogen Ion Concentration, Plankton and Fish in Freshwater Eutrophic Lakes of India, 511
Das Gupta, N. N. (Bhattacharjee, S. B., and) : Radiation Sensitivity of *Escherichia coli* to β-Rays in Dry and Wet Condition, 1015
Dasarathy, C. (Ramachandran, E. G., and) : Transformation of Cathodically Impregnated and Cooled Austenite, 998
Dasgupta, Dr. P. R. : Precorticotrophin in Blood, 1106
Dass, R. K., and others : Electrical Effects during Dissolution and Precipitation of Electrolytes, 764
Data : Organic Electronic Spectral, Vol. 1, 1946-1952 (edited by Mortimer J. Kamlet) ; Vol. 2, 1953-1955 (edited by Herbert E. Ungnade), *review* by Dr. E. G. Kellett, 107

Data on Research and Development : Reviews of, No. 27, Report on Scientists and Engineers engaged in research and development in Colleges and Universities in the United States for 1958 (United States National Science Foundation), 225
  Reviews of, No. 28, Capital Expenditure of Colleges and Universities in the United States for research and development in the Natural and Social Sciences in 1958 (United States National Science Foundation), 545
Data (Satellite) : Analysis of (Prof. D. G. Parkyn), 896
Data-processing Centre : A New (IBM Co.), 23
Dating Man's Emergence (Dr. K. P. Oakley), 988
Dating System (Short-term) : Carbon-14 from Nuclear Explosions as a—Use to determine the Origin of Heartwood (Dr. A. T. Wilson), 714
Datta, Ranajit K., and Roy, Prof. Rustum : Dependence on Temperature of the Distribution of Cations in Oxide Spinels, 169
Daudel, Pascaline : Radioactive Tracers in Chemistry and Industry (translated by Dr. Ulli Eisner), *review* by Prof. J. R. Partington, 637
Dauphinee, T. M., and others : At the Second Measurement Conference (Accurate Measurement of Temperature and Depth in the Ocean), 1351
Dausset, Prof. J., and others : Anti-Leucocyte Cytoplasm, Anti-Leucocyte Nuclei and Anti-Platelets in Disseminated Lupus Erythematosis, 1209
Davey, Prof. T. H. : *Obituary* of Prof. R. M. Gordon, 852
Davidson, J. N. (edited by Erwin Chargaff and) : The Nucleic Acids, Vol. 3, *review* by Dr. Roy Markham, 742
Davidson, R. S. : Appointed Brotherton Research Fellow in the Department of Organic Chemistry in the University of Leeds, 650
Davies, A. G., and others : Inorganic Polymers (Dialkyl Tin Oxides), 1047
Davies, C. N. : Design and Use of Respirators, 655
Davies, Dr. D. A. L. : Dideoxysugars of *Pasteurella pseudotuberculosis*-specific Polysaccharides, and the Occurrence of Ascarylose, 43
Davies, D. D. : Synthesis of Succinate from Acetate, 1093
Davies, Prof. J. N. P. : Appointed to the University of London readership in morbid anatomy at the Postgraduate Medical School of London, 229
Davies, L. J. : *Obituary* of Sir Hugh Warren, 1042
  Appointed responsible for the direct supervision of the four Research Laboratories of Associated Electrical Industries, Ltd., at Aldermaston, Harlow, Manchester and Rugby, 1142 ; work of, 1142
Davies, R. K., and others : Urea Synthesis in the Living Rat Brain, 288
Davies, R. R. : Wettability and the Capture, Carriage and Deposition of Particles by Raindrops, 616
Davis, A. (Buchwald, V. T., and) : Surface Waves in Anisotropic Elastic Media, 899
Davis, Bernard D., and others : Influence of Salts on the Uptake of Streptomycin by *Escherichia coli*, 1324
Davis, Dr. E. : Biorheology and Microcirculation (General Nature and Problems of Microcirculation as studied by Optical and Electron Microscopy). 757 ; (Effect of Adrenaline on the Small Blood Vessels of the Conjunctiva and Nailfold), 758 ; (Observations and Experiments on Vasomotion in Human Capillaries), 758
Davis, Judith E., and others : A Relation between the Reactivity of Human Red Cells to Antiglobulin Tests and their Surface Structure, 923
Davison, Dr. A. N., and Dobbing, Dr. J. : Metabolic Stability of Body Constituents, 844
Davison, P. S. : A National Spectra Index—Plans and Problems, 1250
Davisson, E. O. : Vitamin B_{12} and Intrinsic Factor (Efforts to Purify and Isolate Intrinsic Factor), 1155
Dawkins, M. J. R. : Changes in Glucose-6-phosphatase Activity in Liver and Kidney at Birth, 72
Dayton, Dr. Peter G., and others : Lack of Effect of Coenzyme Q_{10} on Coumarin-induced Hypoprothrombinaemia, 711
De, P., and others : Nucleolar Localization of Succinic Dehydrogenase in Normal Rat Hepatic Cells, 925
de Coninck, Prof. : Problems of Systematics and Taxonomy in Nematology Today, 1048
de Forest, Dr. Lee : *Obituary* by Dr. R. L. Smith-Rose, 749
de Haas-van Alphen Effect and the Electronic Structure of Metals (Dr. D. Shoenberg), 126

de Vries, G. H. F. (Recourt, Dr. A., and) : An Experimental Apparatus for Contact Microradiography at 200-500 V., 1185
De Vries, Juan X., and Vidal-Beretervide, Kempis : Some New Esters of Chromone-2-Carboxylic Acid, 171
N-Deacetylation of Hexosamine : Partial Acid-Hydrolysis of a Mucopolysaccharide without Appreciable (Dr. T. J. Painter and Prof. W. T. J. Morgan), 39
Deacon, Dr. G. E. R. : The Ocean Floor, *review*, 531
Deadly Quarrels : Statistics of (Dr. Lewis F. Richardson), edited by Quincy Wright and C. C. Lienau, *review* by Sir Cyril Burt, 427
Deanesley, Dr. R. : Foetal and Neonatal Physiology (Present Position in Foetal Endocrinology), 344
Decades (Four), of State Forestry in Great Britain (Prof. M. L. Anderson), 656
Decades (Four), of State Forestry in New Zealand, 451
Decarboxylase (Glutamic Acid), in Insect Nerve Tissue : Activity of (Dr. N. Frontali), 178
Decarboxylase (Histidine), and Growth (D. Mackay, Joan D. Reid and Dr. D. M. Shepherd), 1311
Decker, Martin T. : Appointed chief of the Tropospheric Measurements Section of the United States National Bureau of Standards Laboratories at Boulder, Colorado, 334 ; work of, 334
Decolorization (Ultrasonic), of Rhodamine *B* : Inhibition of, in Presence of Organic Substances (Prof. Satya Prakash and Sheo Prakash), 1292
Decomposition : Resistance of Humus to (H. R. Birch and M. T. Friend), 731
Decomposition (Irradiation), of Carbon Dioxide (T. B. Copestake and N. S. Corney), 1192
Decomposition (Slow), of Explosive Crystals and their Damage by Fission Fragments (Dr. F. P. Bowden and H. M. Montagu-Pollock), 556
Decrease in Urinary Excretion of Histamine and the Initiation of the Labour Process : Relationship between the (Dr. Halina Wiskont-Buczkowska), 290
Decreased Urinary Excretion of 2-Aminoethanol by Irradiated Human Beings (Dr. Ralph R. Cavalieri, M. T. Van Metre and W. I. Sivertsen), 1303
Deelder, R. S. (van Swaay, Dr. M., and) : Use of the Rotating Hanging Mercury Drop in Analysis—Trace Analysis with a Rotating Hanging Mercury Drop, 241
Deer (Red) Commission : Report for 1959-1960, 29
Defalco, A. J., and others : Urea Synthesis in the Living Rat Brain, 288
Defects (Metabolic) : Nutrition and (Nutrition Society Symposium on), 125
Defence (Perceptual), and Filter Theory (Neville Moray), 940
Deffner, G. G. J., and others : Determination by Mass Spectrometry of the Structure of Proline Derivatives from Apples, 380
Deformation of Wood under Stress : Influence of Moisture Changes on (L. D. Armstrong and G. N. Christensen), 869
Degradation (Enzymic), of Deoxyribonucleic Acid into Sub-Units : Kinetics of the (Dr. Giorgio Bernardi and Prof. Charles Sadron), 809
Degradation (Phosphate-dependent), of Urea (R. C. Valentine and Prof. R. S. Wolfe), 925
Degree of Polymerization of Hyaluronic Acid isolated from Human Aortic Tissue (Dr. Sv. Bertelsen and K. Marcker), 386
Dehydrogenase (Liver Alcohol) : An Inhibitor of, in Preparations of Reduced Diphosphopyridine Nucleotide (Dr. Keith Dalziel), 1098
Dehydrogenase (Mitochondrial α-Glycerophosphate), in the Nervous System : Histochemical and Homogenization Studies of (R. Hess and Dr. A. G. E. Pearse), 718
Dehydrogenase (Succinic) : Nucleolar Localization of, in Normal Rat Hepatic Cells (P. De, R. Chatterjee and Dr. S. Mitra), 925
Dehydrogenase (Succinic), during Chemical Carcinogenesis : Tissue Dilution Artefact—a Re-interpretation of Variations in Levels of (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Dehydrogenase (Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate), in a Non-Photosynthetic Plant Tissue (C. R. Benedict and Dr. H. Beevers), 71
Dehydrogenase Activity (Mitochondrial α-Glycerophosphate), in Skeletal Muscle : Direct Relationship of Phosphorylase and (Dr. A. G. E. Pearse), 504
Dehydrogenases (Heterogeneous Lactic), in Malignant Effusions : Diagnostic Significance of (R. Richterich, K. Zuppinger and E. Rossi), 507
Dekhuijzen, H. M. : Transformation in Plants of Sodium Dimethyldithiocarbamate into other Fungitoxic Compounds, 198
Delbouille, L., and others : Molecular Emission Spectroscopy from 2μ to 12μ by a Michelson Interferometer, 264
Delight : Mathematical, *review* by W. J. Langford, 638
Delorme, Dr. E. J. : Assessment of Pain (Arrangements at the Chester Beatty Research Institute for the Comfort of the Animals used), 1354
δ-Plutonium : Structure of (J. A. C. Marples and J. A. Lee), 1391
Demethylation (Oxidative), and Carcinogenicity of 4-N-Dimethylaminoazobenzene Derivatives (Prof. Morizo Ishidate and Akira Hanaki), 1198
Demographic Yearbook for 1960 (United Nations), 1346
Demonstration of Anti-Depressant or Stimulant Properties of Imipramine in Experimental Animals (Dr. D. R. Maxwell and Helen T. Palmer), 84
Demonstration by Paper Electrophoresis of an Auto-Immunological Precipitin possibly due to Fibrinolysins (Marion I. Cooper and J. R. Sykes), 1212
Demonstration (Histochemical), of Gamma-Glutamyl Transpeptidase (Prof. Z. Albert, Dr. Marian Orlowski and Dr. A. Szewczuk), 767
Demyelinating Diseases (Establishment by the Medical Research Council of a Research Group at the University of Durham on), 1143
Denatured Haemoglobin Variants in Acid Buffers : Solubility of (I. D. Fraser and Dr. A. B. Raper), 355
Denduchis, Berta, and others : Collagen Fractions in the Skin of New-born and Adult Rats, 1297
Denervation : Muscle Target Fibres, a Newly Recognized Sign of (Dr. W. K. Engel), 389
Dengler, Hans J., and others : Effects of Drugs on Uptake of Isotopic Norepinephrine by Cat Tissues, 816
Denitrification : Distribution of Isotopic Nitrogen in Nitrogen Gas during (R. D. Hauck and D. R. Bouldin), 871
Dennis, D. T., and Preston, Prof. R. D. : Constitution of Cellulose Microfibrils, 667
Density of the Upper Atmosphere determined from Satellite Orbits, and its Variation during 1957-61 (D. G. King-Hele and D. M. C. Walker), 114
Density (Population) : Sexual Differentiation in *Hydra* in relation to (Helen D. Park, Christyna Mecca and Anne Ortmeyer), 92
Dent, Prof. H. C. : Universities in Transition, 1027
Dentice di Accadia, F., and others : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum*, 909
Deo, A. V., and others : Compressibility and Specific Evaporation Resistance of the Monolayers of Long-Chain Alcohols and Glycol Monoalkyl Ethers, 378
Deoxycholate (Sodium) : Changes of Permeability of Yeast with (Dr. L. Kováč), 698
Deoxyribonuclease : Effect of Ribonuclease and, on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Deoxyribonucleic Acid : Incorporation of, by Mammalian Cells *in vitro* (Prof. E. R. M. Kay), 387
  Kinetics of the Enzymic Degradation of, into Sub-Units (Dr. Giorgio Bernardi and Prof. Charles Sadron), 809
  Low-Angle Light Scattering and the Molecular Weight of (Dr. Sidney Katz), 280

Deoxyribonucleic Acid in *Drosophila melanogaster* : Induction of Mutations by (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 776

Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398

Deoxyribonucleic Acid from Mammalian Sperm : Isolation and Properties of (Dr. E. Borenfreund, E. Fitt and Dr. A. Bendich), 1375

Deoxyribonucleic Acid of Phage Alpha : Some Properties of the (S. Cordes, H. T. Epstein and Prof. J. Marmur), 1097

Deoxyribonucleic Acid Content of Nuclei dividing Amitotically (Prof. K. W. Cleland), 504

Deoxyribonucleic Acid Structures in the Nucleolus (Dr. Elsa H. J. O'Donnell), 1325

Dependence on Light of Geotropism in Plant Roots (J. V. Lake and G. Slack), 300

Dependence on Substrate of the Electrical Potential across the Isolated Gut (Dr. T. W. Clarkson, A. C. Cross and S. Toole), 501

Dependence on Temperature of the Distribution of Cations in Oxide Spinels (Ranajit K. Datta and Prof. Rustum Roy), 169

Dependence (Mutual) : Copepod *Ommatokoita elongata* (Grant) in the Eyes of the Greenland Shark—a Possible Cause of (Bjørn Berland), 829

Depolarization (Membrane), of Excitable Tissues : Outflux of Inorganic and Organic Phosphate during (Dr. L. G. Abood, Prof. K. Koketsu and I. Koyama), 395

Depolarization Technique (Light) : Crystallization of Isotactic Polypropylene using a (J. H. Magill), 1092

Deposited Radionuclides (Internally) : Removal of, by Triethylenetetraamine-hexaacetic Acid (Prof. A. Catsch and D. Schindewolf-Jordan), 715

Deposition (Wettability and the Capture, Carriage and), of Particles by Raindrops (R. R. Davies), 616

Depressant (Anti-) or Stimulant Properties of Imipramine : Demonstration of, in Experimental Animals (Dr. D. R. Maxwell and Helen T. Palmer), 84

Derivatives : Pyridine and its (edited by Erwin Klingsberg), *review* by Dr. G. L. Buchanan, 425

Derivatives (Amino-) of 11β, 17α, 21-Trihydroxy-3,20-Dioxo-1,4-Pregnadiene (J. Tóth, Z. Tuba and L. Szporny), 607

Derivatives (4-N-Dimethylaminoazobenzene) : Oxidative Demethylation and Carcinogenicity of (Prof. Morizo Ishidate and Akira Hanaki), 1198

Derivatives (Proline), from Apples : Determination by Mass Spectrometry of the Structure of (Dr. K. Biemann, G. G. J. Deffner and Prof. F. C. Steward), 380

Derivatives (Pyridine), with Anthelmintic Activity (A. P. Phillips and R. B. Burrows), 707

Derivatives (Reduced Alkylated), of some Myeloma Globulins : Comparison of, and Bence-Jones Proteins (Dr. M. D. Poulik and Dr. G. M. Edelman), 1274

Derivatives (Trimethylsilyl Ether), of Alcohols : Peak-Shift Technique in Gas–Liquid Chromatography— (Stanley H. Langer and Peter Pantages), 141

Desert Locust : Induced Changes in the Amounts of Material in the Neurosecretory System of the (Dr. K. C. Highnam), 199

Desertomycin Medium : Use of, in Routine Selective Isolation of Fungi Pathogenic to Man (J. Uri and Zs. Herpay), 1015

Design and Use of Respirators (Ergonomics Research Society and the British Occupational Hygiene Society Discussion on), 655

Desmofibrin : Conversion of Fibrin to (K. Buluk, T. Januszko and J. Olbromski), 1093

Detecting Anaphylactic Sensitivity : A New Test for—the Basophil Reaction (Prof. Walter B. Shelley and Lennart Juhlin), 1056

Detecting Penicillinase-producing Organisms : Use of Cellulose Acetate Membranes for (Prof. R. Knox and J. T. Smith), 926

Detection of 6-Amino-penicillanic Acid : Simple, Quick Methods for (J. Uri and F. Sztaricskai), 1223

Detection of the First Motion of a Refracted *P*-Wave : Possible Method for Increasing the Signal-Noise Ratio in the (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382

Detection by Ionization of Atmospheric Gases during Analysis by Gas Chromatography (Dr. Arthur Karmen, Laura Giuffrida and Robert L. Bowman), 906

Detection (Colorimetric), of Penicillins and Cephalosporins on Paper (Robert Thomas), 1161

Detection (Simultaneous), of Iodide and Iodinated Amino-Acids on Filter Paper Chromatograms : A Spray Method for the (Dr. A. Van Zyl and M. Bhaga), 275

Detector (Silicon Semiconductor Nuclear Particle) : Interaction of 14-MeV. Neutrons with a (Dr. W. M. Deuchars and G. P. Lawrence), 995

Detectors (Ionization), in Gas Chromatography : Integration with (P. M. E. M. van der Grinten and Dr. A. Dijkstra), 1195

Deterioration of Solid-coated Capillary Columns on Standing (George M. Rouayheb and William C. Hamilton), 801

Determination of Caesium-137/Potassium Ratios in Diet and in the Human Body by Urine Analysis (A. Morgan and Gloria M. Arkell), 1100

Determination of Hydrogen in Gaseous Mixtures by Gas-Chromatography (P. J. Kipping), 270

Determination of Indium in High-purity Zinc (Naîm Košaric and the late G. Leliaert), 703

Determination of Lead in Urine by Atomic Absorption Spectroscopy (J. B. Willis), 381

Determination by Mass Spectrometry of the Structure of Proline Derivatives from Apples (Dr. K. Biemann, G. G. J. Deffner and Prof. F. C. Steward), 380

Determination of Spontaneous Plasma Fibrinolysis by a Practical Procedure (Dr. H. Yatzidis), 604

Determination of Uranium as Pyrophosphate (Dr. F. M. Brewer), 1290 ; (J. S. Wright, T. J. Hayes and J. A. Ryan), 1291

Determination (Quantitative), of Metadrenaline and Normetadrenaline in Normal Human Urine (Dr. Kaoru Yoshinaga, Dr. Chuichi Itoh, Dr. Nozomu Ishida, Dr. Tatsuo Sato and Dr. Yasuo Wada), 599

Determination (Rapid), of Ytterbium in Aqueous Solutions and in Thulium Oxide by Neutron Activation (Minoru Okada), 1090

Determination (Rapid Infra-Red), of Acetone in the Blood and the Exhaled Air of Diabetic Patients (Dr. Richard D. Stewart, Edward A. Boettner and Bruce T. Stubbs), 1008

Determination (Simultaneous), of Dextran and Glucose in Serum (A. Rédei and S. Nagy), 173

Determinations (Age-), in the Lizard Area : Preliminary (J. A. Miller and D. H. Green), 159

Detonation : Theory of (Ia. B. Zeldovich and A. S. Kompaneets), *review* by Dr. W. L. Murray, 1236

Detonations (Nuclear) : Iron-55 from (Rama, Minoru Koide and Prof. Edward D. Goldberg), 162

Deuchar, Dr. Elizabeth M. : Amino-Acid Activation in Tissues of Early Embryos, 1006

Deuchars, Dr. W. M., and Lawrence, G. P. : Interaction of 14-MeV. Neutrons with a Silicon Semiconductor Nuclear Particle Detector, 995

Deuterium : A Biochemical Effect of (Dr. Howard J. Ringold, Dr. Sumner Burstein and Dr. Ralph I. Dorfman), 1294

Deuterium Oxide : Ultra-violet Absorption Spectra of Proteins in (Dr. G. H. Beaven and Elizabeth Bailey), 914

Deutsch, J. L., and others : Rotational Analysis of Absorption Bands of Lead Monoxide, 374

Deutsch, Sarah, and others : Age Measurements on Antarctic Rocks (Queen Maud Land), 1286

Deutsche Akademie der Naturforscher Leopoldina : Election of new Members, 122

Deutsche Akademie der Wissenschaften zu Berlin : Völkerkundliche Forschungen, Band 3, Classification of Kin, Age Structure and Marriage amongst the Groote Eylandt Aborigines (Dr. Frederick G. G. Rose), *review* by Dr. R. Needham, 6

Developing Countries : Agricultural Problems in (Nutrition Society Symposium on), 1250

Developing Fruits : Stimulants of Cell Division in (D. S. Letham and E. G. Bollard), 1119

Development : Effect on Growth and (Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid), (I. H. Williams), 361

Development of Chick Embryos : Effects of *Grewia populifolia* Extracts on the (S. K. Brahma and N. Kundu), 506

Development in Mice of Prolonged Non-specific Resistance to Sarcoma Implant and Staphylococcus Infection following Repository Injection of Lipopolysaccharide (Samuel J. Prigal), 1111

Development of the Neon Glow Lamp (1911-61), (Prof. H. E. Watson), 1040

Development of Upper Plastic Limit of Clays : Role of Interparticle Forces in (Dr. Raymond Yong and E. T. Selig), 938

Development (Atomic Energy Research and), in Britain, 857

Development (Early), of the Chum Salmon (*Oncorhynchus keta*) : Effect of Thyroxine plus Thiourea on the (Prof. M. A. Ali), 1214

Development (Industrial) : The Impact of, on the Countryside (Council for the Preservation of Rural England Conference on), 959

Development (Rapid), of Hypomagnesaemia in Lactating Cows given Artificial Rations Low in Magnesium (J. A. F. Rook), 1019

Development (Research and), in Scotland, 440

Development (Research and) : Reviews of Data on, No. 27, Report on Scientists and Engineers engaged in research and development in Colleges and Universities in the United States for 1958 (United States National Science Foundation), 225

  Reviews of Data on, No. 28, Capital Expenditure of Colleges and Universities in the United States for research and development in the Natural and Social Sciences in 1958 (United States National Science Foundation), 545

Development (Scientific Research and) : Government Responsibility in, 837

Development (Spontaneous), of *L* Forms of Streptocci requiring Secretions of other Bacteria or Sulphydryl Compounds during Normal Growth (Ayala Frenkel and Dr. Willy Hirsch), 728

Development Plan (Regional), for Courses for the Diploma in Technology (Regional Advisory Council for Technological Education, London and Home Counties), 1044

Developments in the Chemistry and Technology of Polymers : Recent (Bradford Institute of Technology Course on), 1349

Devi, Dr. Anima, and Sarkar, Dr. N. K. : Catalysis of Incorporation of ^{14}C-Uridine into Rat Lens Ribonucleic Acid by Rat Lens Enzyme System, 1094

Device (Variable Shutter) : A New Photometric Technique using a (Dr. O. C. Jones and Dr. F. J. J. Clarke), 1290

Devices (Gas Discharge) : Physics of (Electronics Group of the Institute of Physics and the Physical Society Conference on), 546

Devonian Palaeocharinidae (Arachnida) : Lung-books in the (Dr. M. F. Claridge and A. G. Lyon), 1190

Dew, Ronald Beresford : Appointed visiting professor of industrial administration at the Manchester College of Science and Technology, 651

Dewhurst, F., and Calcutt, G. : Non-Enzymic Hydroxylation of Polycyclic Aromatic Hydrocarbons, 808

Dewing, J. : Inorganic Polymers (BN Polymers), 1047

Dextran and Glucose in Serum : Simultaneous Determination of (A. Rédei and S. Nagy), 173

Dextran-producing Bacteria : Intracellular Glycosidases of (Dr. R. W. Bailey and Prof. E. J. Bourne), 277

Dextrans : Isolation of Nigerose and Kojibiose from (Kazuo Matsuda, Hiroshi Watanabe, Kentaroh Fujimoto and Prof. Kiyoshi Aso), 278

Dextransucrase *V* and the Role of Metal Ions in Enzyme Catalysis (W. Brock Neely and Julie Hallmark), 385

Dhar, Prof. N. R. : Importance of Nitrogen in Crop Production (Presidential Address to the forty-eighth Indian Science Congress), 544

Di Girolamo, Dr. M., and others : Activation of Amino-Acids in Micro-organisms which produce Antibiotics, 411

Di Marco, A. : Vitamin B_{12} and Intrinsic Factor (Biosynthesis by Different Pathways), 1155

Diabetes Mellitus in Africans in Rhodesia (Dr. M. Gelfand and W. R. Carr), 227

Diabetic Patients : Rapid Infra-Red Determination of Acetone in the Blood and the Exhaled Air of (Dr. Richard D. Stewart, Edward A. Boettner and Bruce T. Stubbs), 1008

Diagnostic Character for the Identification of Ammocoete Species : Oocyte Numbers as a (Dr. M. W. Hardisty), 1215

Diagnostic Significance of Heterogeneous Lactic Dehydrogenases in Malignant Effusions (R. Richterich, K. Zuppinger and E. Rossi), 507

Diagnostik der Bakterien und Actinomyceten (Prof. N. A. Krassilnikov), *review* by Dr. K. Zinnemann, 1333

Diamond, Dr. L. K., and others : Haptoglobin Patterns in Cord Blood Serums, 717
Diamond : Synthesis and X-Ray Analysis of (H. Ll. D. Pugh, J. Lees and J. A. Bland), 865
X-Ray Diffraction Spikes of (Y. Yoneda), 1187 ; (Prof. F. C. Frank), 1188
Diborane–Hydrazine Flames : Formation of Boron Nitride in (W. G. Berg and W. E. Wilson), 380
Dibromo-ethylenes (*cis* and *trans* Dichloro- and) : Ionization Potentials of (Dr. J. Momigny), 1089
Di-(*p*-chlorophenyl)-trifluoromethylcarbinol) : Acaricidal Properties of (K. R. S. Archer and R. Cwilich), 1322
Dichloro- and Dibromo-ethylenes (*cis* and *trans*) : Ionization Potentials of (Dr. J. Momigny), 1089
Dickens, David : At the Scientific Publications Council Meeting on the Publication of Scientific Books (Ownership of Copyright), 131
Dickens, Prof. F. : Tumour Metabolism, *review*, 1335
Dickinson, Dr. Anne, and Mocquot, Dr. G. : Bacteria of the Intestine (Studies on the Bacterial Flora in the Alimentary Tract of Pigs, 1, Enterobacteriaceae and other Gram-negative Bacteria), 1152
Dictionary : English–Russian Geological (T. A. Sofiano), (edited by I. D. Borneman, *et al.*), *review* by Dr. S. I. Tomkeieff, 9
Russian–English Geological (T. A. Sofiano), (edited by A. P. Lebedev and V. E. Khain), *review* by Dr. S. I. Tomkeieff. 9
Dictionary of the Fungi (Ainsworth and Busby's), fifth edition by Dr. G. C. Ainsworth, *review* by Prof. John Colhoun, 109
Didelphis virginiana (Opossum) : Cholesterol in the Tapetum Lucidum of the Eye of the (Antoinette Pirie), 708
Dideoxysugars of *Pasteurella pseudotuberculosis*-specific Polysaccharides, and the Occurrence of Ascarylose (Dr. D. A. L. Davies), 43
Diego Factor in a Puerto Rican Family—a Case of Anti-Diego in Monozygotic Twins (Dr. Hubert J. Van Peenen, Dr. John Scudder, James A. Jack and Erika Awer), 188
Diet and in the Human Body : Determination of Caesium-137/Potassium Ratios in, by Urine Analysis (A. Morgan and Gloria M. Arkell), 1100
Dietetic Association (British), and an International Committee of Dietitians : Third International Congress of Dietetics, 1343
Dietetics : Third International Congress of (British Dietetic Association and an International Committee of Dietitians), 1343
Tradition, Science and Practice in (D. F. Hollingsworth), 1343
Diethylamide (Lysergic Acid) : Effect of Administration of, on Serotonin-Levels in the Body (Dr. D. V. Siva Sankar, D. Barbara Sankar, Edward Phipps and Eleanor Gold), 499
Diethyl-amino-ethyl (DEAE) Cellulose Paper : Chromatography of Proteins on (C. C. Curtain), 1269
Dietitians, International Committee of (British Dietetic Association and an) : Third International Congress of Dietetics, 1343
Diets : The Effect of various, upon Sexual Maturity of Mice (J. Szepsenwol), 1112
Dieu, Dr. H. A. : Effects of Ionizing Radiation on Organic and Biological Solids (Chemical Changes on Irradiation), 1151
Dieudonné, Prof. J. : Foundations of Modern Analysis, *review* by Prof. L. S. Goddard, 6
Difference in the Male Genitalia of East and West African Stocks of *Papilio dardanus* (Lep.) : Genetics of a (J. R. G. Turner, C. A. Clarke and P. M. Sheppard), 935
Differences (Pressure), in a Direct-Current Capillary Discharge (D. S. Smith), 265
Differences (Ultracentrifugal), in Soybean Protein Composition (W. J. Wolf, G. E. Babcock and A. K. Smith), 1395
Different Iron Concentrations : Electrophoretic and Immuno-electrophoretic Patterns of Extracellular Diphtheria Proteins from Culture Filtrates of (Bertold J. Radola), 382
Different Organisms : Comparative Analysis of Inactivating Efficiency of Radiation on (Dr. M. Terzi), 461
Different Photoperiods : Effect of Gibberellic Acid on Growth and Indoleacetic Acid Oxidase Activity of *Lupinus albus* L. exposed to (F. Sági and A. S. Garay), 824
Different Tissues : Influence of Polyvalent Ions on Histones isolated from (I. P. S. Agrell and E. G. Christensson), 284
Different Type of Fluorescent Material as an Optical Maser : Use of a (Jordan J. Markham and Dickron Mergerian), 586
Differential Inhibition of Human Serum Cholinesterase with Fluoride—Recognition of Two New Phenotypes (Prof. H. Harris and Mary Whittaker), 496
Differential Staining of Nucleic Acids : Mechanism of (D. J. Goldstein), 407
Differential Thermogravimetry versus Differential Thermometry in Studying the Pyrolysis of Polymers (Hugh C. Anderson), 1088
Differential Thermometry : Differential Thermogravimetry versus, in Studying the Pyrolysis of Polymers (Hugh C. Anderson), 1088
Differentiation (Sexual), in *Hydra* in relation to Population Density (Helen D. Park, Christyna Mecca and Anne Ortmeyer), 92
Diffraction Conference : Annual Pittsburgh (Mellon Institute, Pittsburgh), 755
Diffraction Spikes (X-Ray), of Diamond (Y. Yoneda), 1187 ; (Prof. F. C. Frank), 1188
Diffraction Studies (X-Ray), of Bacterial Viruses (Dr. A. C. T. North and Prof. Alexander Rich), 1242
Diffuse Freely into the Embryo of *Pteridium aquilinum* : Failure of Nucleotides to (P. R. Bell), 91
Diffusion Barrier (Electrostatic), and Ion Pump : Electrical Properties of Orientated Lipid on a Biological Membrane—an (Dr. J. W. L. Beament), 217
2,6-Difluoropyridine (G. C. Finger and L. D. Starr), 595
Digby, Peter S. B. : Mechanism of Sensitivity to Hydrostatic Pressure in the Prawn, *Palaemonetes varians* Leach, 366
Digestion and Nutrition : Ruminant, *review* by Dr. I. W. McDonald, 1334
Digestive Physiology and Nutrition of the Ruminant—Proceedings of the University of Nottingham Seventh Easter School in Agricultural Science, 1960 (edited by Dr. D. Lewis), *review* by Dr. I. W. McDonald, 1334
Digital Computers, their Use and Control (Mathematics Department of Queen's College, St. Andrews, in collaboration with Standard Telephones and Cables, Ltd., Symposium on), 554
Digital Computers and Nuclear Reactor Calculations (Ward C. Sangren), *review* by Dr. M. V. Wilkes, 9
Dijkstra, Dr. A. (van der Grinten, P. M. E. M., and) : Integration with Ionization Detectors in Gas Chromatography, 1195
Dijkstra, J., and Gillman, J. : Chromatographic Separation of Biologically Active Components from Commercial Trypan Blue, 803
Dilly, Noël : Electron Microscope Observations of the Receptors in the Sensory Vesicle of the Ascidian Tadpole, 786
Dils, Dr. R. R. : Appointed lecturer in the Department of Medical Biochemistry and Pharmacology, University of Birmingham, 337
Dilute Solutions of High Polymers : Elimination of the Absorption Correction in the Viscometry of (H. van Oene and Prof. L. H. Cragg), 1160
Viscosity–Temperature Relationships for (Dr. W. R. Moore), 1292
Dilution Artefact (Tissue)—a Re-interpretation of Variations in Levels of Succinic Dehydrogenase during Chemical Carcinogensis (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Dilworth, M. J., and Parker, C. A. : Oxygen Inhibition of Respiration in *Azotobacter*, 520
Dimensions of Electrical and Magnetic Quantities (Dr. A. E. Martin), 588
Dimensions (Cell), of Layer Lattice Silicates : Surface Symmetry and (E. W. Radoslovich), 67
Dimer Formation and Glucose Transfer across the Membrane of the Red Blood Cell (Dr. W. D. Stein), 1277
Dimer Formation and the Transfer of Glycerol across the Erythrocyte Membrane (Dr. W. D. Stein), 352
Dimers : Pyrene (Isadore B. Berlman), 594
Dimethyl Sulphoxide–Water Systems : Interaction of Lipids and Trypsin in (Prof. A. Lukton, H. Donohue and Prof. F. A. Bettelheim), 565
4-N-Dimethylaminoazobenzene Derivatives : Oxidative Demethylation and Carcinogenicity of (Prof. Morizo Ishidate and Akira Hanaki), 1198
Dimethyldithiocarbamate (Ferric) : Effect of, on the Rooting of Cuttings of *Hevea brasiliensis* (G. H. Tinley), 1217
Dimethyldithiocarbamate (Sodium) : Inhibition of Growth and Photosynthesis in Submerged Plants with Tetramethylthiuram Disulphide and, and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
Transformation in Plants of, into other Fungitoxic Compounds (H. M. Dekhuijzen), 198
Dineen, Dr. J. K., and Szenberg, Dr. Aleksander : Regeneration of Elements of Donor Origin in Orthotopically Grafted Skin following the Homograft Response, 153
Dingle, Prof. Herbert : The Frequency of Meteorite Falls throughout the Ages, 482
2,4-Dinitrophenol : Effect of Thyroxine and, on the Rate of Utilization of Glucose (Dr. L. Macho), 604
2,4-Dinitrophenylhydrazones of Aromatic Keto-Acids : Side-Reactions during Hydrogenolysis of (Dr. John H. Menkes), 285
Dioxide (Carbon) : Action of, on 6-Aminopenicillanic Acid (F. R. Batchelor, D. Gazzard and J. H. C. Nayler), 910
Irradiation Decomposition of (T. B. Copestake and N. S. Corney), 1192
Dioxide (Carbon), in Leaves of *Bryophyllum fedtschenkoi* : An Endogenous Rhythm in the Rate of Dark-Fixation of (Diana M. Warren and Malcolm B. Wilkins), 686
Dioxide (Carbon), and Ethanol as Factors controlling the Growth of Etiolated Oat Seedlings (Dr. C. L. Mer), 260
Diphenyl : Crystal and Molecular Structure of (Dr. G. B. Robertson), 593
Diphtheria Proteins (Extracellular), from Culture Filtrates of Different Iron Concentrations : Electrophoretic and Immuno-electrophoretic Patterns of (Bertold J. Radola), 382
Diploid-like Meiotic Behaviour of Polyploid Cotton : Basis of the (G. Kimber), 98
Diploma in Technology : Regional Development Plan for Courses for the (Regional Advisory Council for Technological Education, London and Home Counties), 1044
Diphosphopyridine Nucleotide (Reduced) : An Inhibitor of Liver Alcohol Dehydrogenase in Preparations of (Dr. Keith Dalziel), 1098
Dipoles (Satellite Microwave) : Long-Range Radio Communication by—the West Ford Project, 1237
2,2′-Dipyridyl : Stability Constant of Copper (II) Complexes of Reduction Products of (Dr. M. T. Beck and M. Halmos), 1090
Direct-Current Capillary Discharge : Pressure Differences in a (D. S. Smith), 265
Direct Observation of Nematode-trapping Fungi in the Soil : Agar Disk Method for the (Roderic C. Cooke), 1411
Direct Relationship of Phosphorylase and Mitochondrial α-Glycerophosphate Dehydrogenase Activity in Skeletal Muscle (Dr. A. G. E. Pearse), 504
Directions (Feasible) : Methods of—a Study in Linear and Non-Linear Programming (Dr. G. Zoutendijk), *review* by Dr. M. V. Wilkes, 9
Discharge (Direct-Current Capillary) : Pressure Differences in a (D. S. Smith), 265
Discharges (Spontaneous Spike-), of Vascular Smooth Muscle (Dr. S. Funaki), 1102
Discharges (Wave) : Spike and, and Alterations of Conscious Awareness (L. Goldie and J. M. Green), 200
Discipline (Scientific) : Plant Taxonomy as a (Dr. R. E. Holttum), 990
Discovery : Appointment of Gerald Adrian Leach to the editorship, 1043
Discrete Frequency Solar Noise Bursts : Very-Low-Frequency Modulation of (Dr. Jules Aarons, Santimay Basu, William Kidd and Richard Allen), 56
Discreteness-of-Charge Effect and the Stability Theory of Colloids (Dr. S. Levine, D. Calvert and G. M. Bell), 699
Discriminant Analysis in Biometrical Genetics (Dr. S. K. Jain), 1420
Discrimination (Shape) : Facts and Theories of (Dr. P. C. Dodwell), 578 ; (Dr. N. S. Sutherland), 581
Disease : Doctors and, in Tudor Times (W. S. C. Copeman), *review* by Sir Russell Brock, 428
Disease and the Advancement of Basic Science (edited by Dr. Henry K. Beecher), *review* by Sir George Pickering, 530
Disease (Barley Leaf-Spot) : Production of Symptoms of, by Culture Filtrate of *Helminthosporium sativum* (S. K. Gayed), 725
Disease (Sigatoka), of Bananas caused by *Mycosphaerella musicola* Leach : Significance of the Anti-Sporulation Effect of Copper Fungicides in the Control of (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Disease Virus (Foot-and-Mouth) : Effect of *p*-Fluorophenylalanine on the Multiplication of (F. Brown, D. N. Planterose and Doreen L. Stewart), 414

Diseases : Demyelinating (Establishment by the Medical Research Council of a Research Group at the University of Durham on), 1143
Diseases (Animal) : Animal Experiments in the Control of (Research Defence Society Pamphlet on), 226
Diseases (Bacterial Plant), of Central Europe : Some, *review* by Dr. W. J. Dowson, 4
Diseases (Forest Insect Pests and), in Canada (Prof. M. L. Anderson), 1260
Diseases (Potato Virus) : Proceedings of the Fourth Conference on (Braunschweig, 1960), edited by J. Brandes, R. Bartels, V. Völk and C. Wetter (Biologische Bundesanstalt für Land- und Forstwirtschaft, Braunschweig), 657
Diseases (Virus) : Research into (Pfizer Laboratories for), 20
Disilicide : Uranium (Allan Brown and J. J. Norreys), 61
Disinhibition (Recurrent), of Spinal Motoneurones : Changes in the Membrane during (Dr. Victor J. Wilson and Paul R. Burgess), 918
Disk Method (Agar), for the Direct Observation of Nematode-trapping Fungi in the Soil (Roderic C. Cooke), 1411
Dislikes (Food) : Taste Thresholds and (Dr. R. Fischer, F. Griffin, S. England and S. M. Garn), 1328
Dispersal of Tropical Seeds by Ocean Currents (R. Mason), 408
Dispersal (Spore), in *Chaetomium globosum* (Kunze), (P. A. Dixon), 1418
Dispersal (Spore Liberation and), of Coffee Rust *Hemileia vastatrix* B. et Br. (R. W. Rayner), 725
Dispersion (Anisotropy Axis) : Variation of, with Thickness of Nickel-Iron Films (H. Clow), 996
Displacement Potentials and Bending of Rod-like Polyelectrolytes (Prof. J. A. Christiansen, the late Dr. C. E. Jensen and Dr. Th. Vilstrup), 484
Display of Sources of Ionizing Radiations at Exhibitions : Code of Practice for the, 1249
Disseminated Lupus Erythematosis : Anti-Leucocyte Cytoplasm, Anti-Leucocyte Nuclei and Anti-Platelets in (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Dissolution and Precipitation of Electrolytes : Electrical Effects during (R. P. Rastogi, B. P. Batra and R. K. Dass), 764
Distinction (Immunochemical), between Insulines with Identical Amino-Acid Sequences (Dr. Solomon A. Berson and Dr. Rosalyn S. Yalow), 1392
Distribution of *Acarapis woodi* (Rennie), (Prof. J. E. Eckert), 933
Distribution of Alkaline Phosphatase (Phosphatases in *Schistosoma mansoni*), (Dr. D. L. H. Robinson), 473
Distribution of Brightness in Extra-galactic Radio Sources (A. T. Moffet and P. Maltby), 453
Distribution of Calcium-45 in the Rat : Effect of Serotonin on Absorption and (Prof. S. Garattini, E. Grossi, P. Paoletti, R. Paoletti and M. Poggi), 185
Distribution of Cations in Oxide Spinels : Dependence on Temperature of the (Ranajit K. Datta and Prof. Rustum Roy), 169
Distribution of Human Chromosome Counts in relation to Age (Patricia A. Jacobs, W. M. Court Brown and Dr. Richard Doll), 1178
Distribution of Iodine-131 in the Internal Organs, Fluids and Excreta of Rabbits: Effect of Polyvinyl Alcohol on the (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Distribution of Isotopic Nitrogen in Nitrogen Gas during Denitrification (R. D. Hauck and D. R. Mouldin), 871
Distribution of Piperidine in the Brain and its Possible Significance in Behaviour (Dr. L. G. Abood, F. Rinaldi and Virginia Eagleton), 201
Distribution of Radioactivity in Protein of Cell Fractions from Myocardial Slices : Effect of Adrenalectomy and Corticosteroids on (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Distribution of Sodium and Potassium in certain Cells and Tissues (Dr. Norman R. Joseph, Dr. Milton B. Engel and Dr. Hubert R. Catchpole), 1175
Distribution of Water in the Chick Blastoderm (A Morphogenetic Effect of Beta-Mercaptoethanol), (A. Jurand and Dr. Peter Tuft), 1073
Distribution of Water in the Embryo (A Morphogenetic Effect of Beta-Mercaptoethanol), (Dr. Peter Tuft), 1072
Distribution of X-Ray- and Nitrous Acid-induced Mutations in the Genetic Fine Structure of the ad_7 Locus of *Schizosaccharomyces pombe* (Dr. Herbert Gutz), 1125
Distribution (Latitude), of Ionospheric Irregularities : Scintillations and the (D. G. Singleton), 482
Distribution (Seasonal Fluctuations and), of Nitrite in a Tropical West African Estuary (J. C. D. Watts), 929
Distribution (Spatial), of Free Radicals as studied by Electron Spin Resonance (Robert C. Smith and S. J. Wyard), 897
Distribution (Species), of Nineteen Phenotypes : Serum Transferrins in the Genus *Macaca*— (Prof. Morris Goodman and Emily Poulik), 1407
Distribution Pattern (Intracellular), of Rat Liver Glutamic-Oxalacetic Transaminase (Dr. Herbert J. Eichel and Josef Bukovsky), 243
Disturbance (Travelling), in the *F* Region of the Ionosphere : Group and Phase Velocities of a (Dr. L. H. Heisler and Dr. J. D. Whitehead), 157
Disturbances (Geomagnetic), in the Auroral Zone : Electric Currents associated with (Dr. F. J. Scrase), 963
Disturbances (Nervous and Biochemical), following Hexachlorobenzene Intoxication (Dr. F. De Matteis, B. E. Prior and Prof. C. Rimington), 363
Disulphide (Tetramethylthiuram), and Sodium Dimethyldithiocarbamate : Inhibition of Growth and Photosynthesis in Submerged Plants with, and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
Ditchburn, Prof. R. W. : At the Maxwell Colour Centenary Conference (Complexities of the Visual Process), 10
Diurnal Rhythm in Cave Crayfish (Prof. Frank A. Brown), 929
Diurnal Variation in Transaminase Activity in the Cactus Plant (S. K. Mukerji, G. G. Sanwal and Prof. P. S. Krishnan), 516
Divalent Metal Ions in the Binding of Tetracycline to Macromolecules : Mediation of (Dr. Kurt W. Kohn), 1156
Diverse Sources of Cows' Milk : An Invariant Casein Substrate for Rennet Standardization, derivable from (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Diversification : Cell (American Society for Cell Biology Symposium on), 1045
Dividing Amitotically : Deoxyribonucleic Acid Content of Nuclei (Prof. K. W. Cleland), 504
Division (Cell) : Stimulants of, in Developing Fruits (D. S. Letham and E. G. Bollard), 1119
Dixon, Dr. G. H. (Wilson, Dr. S., and) : A Comparison of Cod and Bovine Insulins, 876
Dixon, P. A. : Spore Dispersal in *Chaetomium globosum* (Kunze), 1418
Djerassi, Prof. Carl : Stereochemistry of Natural Phenolic Compounds (Relative Configuration of the Rotenoids), 236
Dobbing, Dr. J. (Davison, Dr. A. N., and) : Metabolic Stability of Body Constituents, 844
Dobiášová, M., and others : A Simplified Method for Separating Amino-Acid Mixtures from Protein Hydrolysates on One Ion-Exchange Column during Preparation, 1198
Doctors and Disease in Tudor Times (W. S. C. Copeman), *review* by Sir Russell Brock, 428
Dodd, Barbara (Coombs, Dr. R. A. A., and) : Microscopical Technique to determine the Nature of a Stain on a Single Fibre of Clothing or other Material, 753
Dodds, Dr. Kenneth S. : Reviews of Genetics, *review*, 636
Dodgson, Dr. K. S. : The Training of Biochemists, 955
Dodwell, Dr. P. C. : Facts and Theories of Shape Discrimination, 578
Doebbler, Dr. G. F., and others : Recovery and *in vivo* Survival of Rabbit Erythrocytes, 1405
Dog : Failure of a, to Discriminate between Strontium-90 and Calcium given Orally (Dr. Betsy J. Stover, M. Goldman and A. C. Andersen), 713
Dog (Spinal) : Stimulation of the Heart of the, by Phenoxybenzamine (B. G. Benfey and D. R. Varma), 919
Döklen, A., and others : Effect of Amino-Acid Esters on the Growth of Fibroblast Cultures, 494
Dolerites (Weathered Karroo) : Climate and (Dr. H. H. Weinert), 325
Doll, Dr. Richard, and others : Distribution of Human Chromosome Counts in relation to Age, 1178
Domestic Animals and Poultry in India : Occurrence of *Salmonellae* in (V. K. Sharma and Prof. C. M. Singh), 622
Domestic Fowl : Effect of Varying Doses of Undiluted Semen on Fertility in the (G. C. Taneja and R. S. Gowe), 828
Dominance (Cerebral) : Speech, Handedness and, *review* by Sir Russell Brain, 840
Dominance (Cerebral), and its relation to Psychological Function (Prof. O. L. Zangwill), *review* by Sir Russell Brain, 840
Dominance (Social), in Inbred Mouse Strains (Prof. G. Lindzey, H. Winston and M. Manosevitz), 474
Donaldson, W. A. : Digital Computers, their Use and Control (Computers in Industry), 554
Doncaster, C. C. : Nematology (Feeding Mechanisms of Rhabditids and Tylenchids), 1048
Donohue, H., and others : Interaction of Lipids and Trypsin in Dimethyl Sulphoxide–Water Systems, 565
Donor Origin (Regeneration of Elements of), in Orthotopically Grafted Skin following the Homograft Response (Dr. J. K. Dineen and Dr. Aleksander Szenberg), 153
Doped Crystals of Sodium Chloride : Quenching of Cation Vacancies in (the late Sir K. S. Krishnan and S. C. Jain), 162
Dore, M. (Carmichael, C. H., and) : Electrical Effects observed in Polycrystalline Boron, 485
Dorfman, Dr. Ralph I., and others : A Biochemical Effect of Deuterium, 1294
Dorling, J. W. : New Research Laboratories for the Paints Division of Imperial Chemical Industries, Ltd., 25
Dorman, R. G. : Design and Use of Respirators (Fibrous Filters for Protection against Aerosol Particles), 655
D'Ornano, Liliane (Pichinoty, Francis, and) : Inhibition by Oxygen of Biosynthesis and Activity of Nitrate-Reductase in *Aerobacter aerogenes*, 879
Doses (Varying), of Undiluted Semen : Effect of, on Fertility in the Domestic Fowl (G. C. Taneja and R. S. Gowe), 828
Double and Single Spermathecae in Fleas (Siphonaptera), (Hon. Miriam Rothschild), 1322
Douglas, R. H. : Radar Reflectivities of Hail Samples, 266
Douglas, Prof. R. W. : A. T. Green and the British Ceramic Research Association, *review*, 207
Downer, Dr. J. L. deC. : Changes in Visual Gnostic Functions and Emotional Behaviour following Unilateral Temporal Pole Damage in the 'Split-Brain' Monkey, 50
Downie, Dr. C. : Palaeogeological Maps, *review*, 842
Dowrick, Dr. G. J. : Biology of Reproduction in *Rubus*, 680
Dowson, Dr. W. J. : Some Bacterial Plant Diseases of Central Europe, *review*, 4
Doyle, F. P., and others : Some Novel Acid-stable Penicillins, 1091
Doyle, Dr. W. P. : Appointed a lecturer in chemistry at the University of Edinburgh, 443
Dracone Developments, Ltd. : Appointment of Dr. B. J. A. Bard as chairman, 443
Dragonflies : Spiracle Control in (Dr. P. L. Miller), 621
Draper, Laurence (Currie, Ronald, and) : Time-integrated Measurements of Submarine Irradiance, 661
Draškoci, Dr. M., and others : Antibody Response in Rabbits following Injection of Sheep Erythrocytes into Lateral Ventricle of Brain, 288
Dresdner, Dr. Richard : Fluorine Chemistry, *review*, 319
Dresser, D. W. : Effectiveness of Lipid and Lipidophilic Substances as Adjuvants, 1169
Drew, R. M., and others : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture, 1398
Drilling Fluid Thinners : Alberta Sub-bituminous Coals as (E. J. Jensen), 1144
Drinking Water : European Standards for (United Nations, World Health Organization), 1261
Drinking-Water Standards (Nora H. Johnson), 1261
Drosera : Axenic Seedlings of (Richard M. Burger), 724
Drosophila : Chromosome Rearrangements induced by X-Rays in Immature Germ Cells of (Seymour Abrahamson), 523
Drosophila melanogaster : Induction of Mutations by Deoxyribonucleic Acid in (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 776
  Recombination in the X-Chromosome of (C. N. Law), 1180
Drug Directorate (Food and) : Research in the (Dr. Ross A. Chapman), 335
Drug Supplies during the American Revolution (George B. Griffenhagen), 761

Drugs : Effects of, on Uptake of Isotopic Norepinephrine by Cat Tissues (Hans J. Dengler, Herbert E. Spiegel and Elwood O. Titus), 816
Drugs (Morphine-like) : Effects of, in Chicks (C. Schneider), 607
Dry Granules through Apertures : Minimum Energy Theorem for Flow of (R. L. Brown), 458
Dry or Moist Surfaces: A Method of replicating, for Examination by Light Microscopy (Joan Sampson), 932
Dry and Wet Condition : Radiation Sensitivity of *Escherichia coli* to β-Rays in (S. B. Bhattacharjee and N. N. Das Gupta), 1015
Drying (Freeze-) of Foodstuffs (Borough Polytechnic, London, Symposium on), 651
Drying and Storage of Grain : Buildings for the (Bibliography of Research Publications on Farm Buildings, Section 5), (Agricultural Research Council), 440
Dubbs, Prof. Clyde A., and others : Subfractionation of Human Serum Leucine Aminopeptidase, 1203
Dubin, Donald T., and others : Influence of Salts on the Uptake of Streptomycin by *Escherichia coli*, 1324
Duck Blood *in vitro* : Intermediate Pool between Amino-Acids and Globin in (L. Bianco, G. Giustina and E. Lazzarini), 40
Ducts (Excretory), in the Genus *Notopterus* (Lacepede), (Madhu Sudan Sharma), 1118
Duncan, Dr. D. R. : At the Maxwell Colour Centenary Conference (Colour Printing), 11
Duncan, R. B. (Briggs, M. H., and) : Odour Receptors, 1310
Dunham, Prof. K. C. : Black Shale, Oil and Sulphide Ore (Presidential Address to Section C (Geology) of the British Association for the Advancement of Science), 985
Dunn, A. M. : Parasite Biology (Parasites in relation to Natural Fauna), 134
Dunn, Dr. F. L., and others : Isolation of *Plasmodium knowlesi* from Philippine Macaques, 1117
Dunsford, Dr. I., and others : Investigation into Blood Groups in a Paternity Case, 753
Duplication (Chromosome), in *Vicia faba* : Sub-Chromatid Structure and (W. J. Peacock), 832
Durbin, James : Appointed to the University of London chair of statistics at the London School of Economics and Political Science, 1247 ; work of, 1247
Dust Cloud about the Earth (Dr. J. H. Fremlin), 31 ; (Dr. David B. Beard), 32 ; (Dr. Fred L. Whipple), 33
Dux, Dr. E. : International Convention on Starch, 236
Dyes (Cyanine), on Silver Bromide Microcrystals : Electron Spin Resonance Absorptions induced by Light in Adsorbed Layers of (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Dyestuffs (Basic), in Clay Mineralogy (Dr. V. S. Ramachandran, K. P. Kacher and N. K. Patwardhan), 696
Dyke, G. V. : Advances in Agronomy, *review*, 213
Dynamics of the Psyche : The Structure and (C. G. Jung), translated by R. F. C. Hull, *review* by Dr. C. Allen, 1235
Dynkin, E. B. : Theory of Markov Processes (translated from the Russian by D. E. Brown ; edited by T. Köváry), *review* by D. G. Kendall, 321

EABORN, Dr. C. : Appointed professor of chemistry at the University of Sussex, 1349
Eagland, D., and Franks, F. : *p*H of Soap Solutions, 1003
Eagleton, Virginia, and others : Distribution of Piperidine in the Brain and its Possible Significance in Behaviour, 201
Earland, Dr. C., and Raven, D. J. : Lanthionine Formation in Keratin, 384
Early Cretaceous (Hanterivian) Angiosperm Fruit from California (M. E. J. Chandler and D. I. Axelrod), 442
Early Development of the Chum Salmon (*Oncorhynchus keta*) : Effect of Thyroxine plus Thiourea on the (Prof. M. A. Ali), 1214
Early Embryos : Amino-Acid Activation in Tissues of (Dr. Elizabeth M. Deuchar), 1006
Early Stages of Propylthiouracil Treatment in the Rat : Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Earth : The Dust Cloud about the (Dr. J. H. Fremlin), 31 ; (Dr. David B. Beard), 32 ; (Dr. Fred L. Whipple), 33
  The Interior of the (Dr. R. Stoneley), 983
  The Rotation of the (Walter H. Munk and Gordon J. F. Macdonald), *review* by Prof. S. K. Runcorn, 313
Earth Conditions (Primitive) : Mechanism of Synthesis of Adenine from Hydrogen Cyanide under Possible (Prof. J. Oró), 1193
Earth Satellites (Artificial) : A Collection of Tables and Nomograms for the Processing of Observations made on (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
Earthworm in India : Taxonomy of the (G. E. Gates), 227
East Africa : Medical Research in, 226
East African Council for Medical Research : Report for 1959-60, 226
East and West African Stocks of *Papilio dardanus* (Lep.) : Genetics of a Difference in the Male Genitalia of (J. R. G. Turner, C. A. Clarke and P. M. Sheppard), 935
Easter School in Agricultural Science : Proceedings of the University of Nottingham seventh (1960)—Digestive Physiology and Nutrition of the Ruminant (edited by Dr. D. Lewis), *review* by Dr. I. W. McDonald, 1334
Eastern Coasts of the Americas : Algological Study on the, *review* by Prof. Lily Newton, 1234
Eastern India : Cytology of some Genera of Polypodiaceae in (G. Panigrahi and S. N. Patnaik), 1207
Eastern Tropical and Subtropical Coasts of the Americas : Marine Algae of the (Prof. William Randolph Taylor), *review* by Prof. Lily Newton, 1234
Eastern and North-Eastern Africa : Birds of (C. W. Mackworth-Praed and C. H. B. Grant), second edition, *review* by Sir Landsborough Thomson, 9
Eastward Equatorial Undercurrent in the Atlantic : Evidence of an, from Measurements of Current Shear (Arthur D. Voorhis), 157
Eccles, Sir John C. : Elected a Member of the Physiology Section of the Leopoldina German Academy of Sciences, 122
Echeneis : Structure and Action of the Sucker of (Prof. B. Bonnell), 403
Eck, Richard V. : Non-Randomness in Amino-Acid 'Alleles', 1284
Eckert, Prof. J. E. : Distribution of *Acarapis woodi* (Rennie), 933
Ecological Aspects of Irrigation in Ancient Mesopotamia (Hans Helback), 227
Ecologicos (Estudios), para el Aprovechamiento de la Tierra en Nicaragua (Dr. B. W. Taylor), 1259
Ecology : Cockroach, *review* by David R. Ragge, 106
Ecology (Tropical), International Society for : Proceedings of the Symposium on Forest Ecosystem (Montreal, 1959), 755
Ecology (Tropical Animal), Nuffield Unit of : Appointment of Dr. R. M. Laws as senior investigator, 651
Ecology and Epidemiology : Stochastic Population Models in (Prof. M. S. Bartlett), *review*, 843
Economic Use of Brains (Prof. C. F. Carter), 987
Ecto- and Endo-Parasites of South-East Asia, *review* by P. F. Mattingly, 948
Ectoparasitic Species (Three) : Simultaneous Eradication of, from a Colony of Laboratory Mice (Dr. Nigel Bateman), 721
Edeleanu, Dr. Constantin : Awarded a Gold Medal and Prize from the Beilby Memorial Fund, 224 ; work of, 224
Edelman, Dr. G. M. (Poulik, Dr. M. D., and) : Comparison of Reduced Alkylated Derivatives of some Myeloma Globulins and Bence-Jones Proteins, 1274
Edelstam, Dr. C. : *Obituary* of Dr. H. Horn af Rantzien, 121
Edgar, Janice B., and Stocker, Dr. B. A. D. : Metabolic and Genetic Investigations of Nutritionally Exacting Strains of *Staphylococcus pyogenes*, 1121
Edozien, Dr. J. C., and Phillips, E. J. : Partition of Urine Nitrogen in Kwashiorkor, 47
Education : Science and—a Policy Statement (Science Masters' Association and the Association of Women Science Teachers), 555
Education of Backward Children in Britain, 1052
Education by Television, 226
Education in Uganda (Dr. B. E. Lawrence), 990
Education (Adult), Universities Council for : Report for 1959-60, 861
Education (Commercial and Industrial), British Association for : Interviewing in Twenty-six Steps (John S. Gough), 228
  New Routes to Further Education—Papers presented at the B.A.C.I.E. Spring Conference, London (1961), 739
Education (Further) : New Routes to—Papers presented at the B.A.C.I.E. Spring Conference, London, 1961 (British Association for Commercial and Industrial Education), 739
Education (Health) : Teacher Preparation for (United Nations, World Health Organization, Technical Report Series No. 193—Report of a joint WHO/Unesco Expert Committee), 441
Education (Management), Foundation for : Grant of £16,000 a year for seven years to the University of Leeds, 228
Education (Mathematical), in Britain : Crisis in, 103
Education (Technical) : Apprenticeship and, 737
Education (Technical) Abstracts from British Sources (National Foundation for Educational Research in England and Wales), Vol. 1, No. 1, September–December 1960, 21
Education (Technological), Regional Advisory Council for, London and Home Counties : Regional Development Plan for Courses for the Diploma in Technology, 1044
Educational Research in England and Wales, National Foundation for : *Technical Education Abstracts from British Sources*, Vol. 1, No. 1, September–December 1960, 21
Educational Television—a Survey and a Plan (John Wellens), 226
Edwards, Dr. D. K. : Influence of Electrical Field on Pupation and Oviposition in *Nepytia phantasmaria* Stkr. (Lepidoptera : Geometridae), 976
Edwardson, S. M. : An Instrument for Measuring Television Signal-to-Noise Ration (B.B.C. Engineering Monograph No. 37), 1355
Effect : An Autoradiographic (Stuart McLean), 690 ; (A. H. Meleka and W. Barr), 692
Effect of Acid : Thyroglobulin— (Dr. A. D. Litonjua), 356
Effect of Added Vitamins on the Phagocytic Activity of the Reticulo-Endothelial System of Mice (J. Cordingley and Prof. T. Nicol), 82
Effect of Administration of Lysergic Acid Diethylamide on Serotonin-Levels in the Body (Dr. D. V. Siva Sankar, D. Barbara Sankar, Edward Phipps and Eleanor Gold), 499
Effect of Adrenalectomy on the Activity of Enzymes of the Urea Cycle in Rat Liver (Patricia McLean), 1302
Effect of Adrenalectomy and Corticosteroids on Distribution of Radioactivity in Protein of Cell Fractions from Myocardial Slices (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Effect of α-Amylase on the Ehrlich Mouse Ascites Tumour (Dr. F. Steckerl, A. Ofodile, R. R. Campbell and G. H. Friedell), 1113
Effect of Amino-Acid Esters on the Growth of Fibroblast Cultures (Dr. I. Fehér, A. Döklen and V. Selmeci), 494
Effect of Attention in Peripheral Vision (Arthur Thomson), 732 ; (B. Babington Smith), 732
Effect of Bee Venom on Concentration of Blood Glucose and Liver Glycogen in Rabbits (Prof. A. H. Mohamed and K. Zaki), 605
Effect of Bilateral Section of the Splanchnic Nerve on Erythropoiesis (Fumimaro Takaku, Kunitake Hirashima and Prof. Shigeo Okinaka), 500
Effect of Boric Acid on the Phosphoglucomutase of Pea Seeds (Dr. B. C. Loughman), 1399
Effect of Bradykinin on Uterine Activity (Dr. B. Berde and Dr. K. Saameli), 83
Effect of Calf Thymus Histone on Rats bearing Transplantable Acute Myeloid Leukaemia (Dr. Lubomir Hnilica and Dr. Viktor Holoubek), 922
Effect of Chloride Concentration on the Aqueous Corrosion of a Magnesium Alloy (D. de G. Jones and H. G. Masterson), 165
Effect of various Diets upon Sexual Maturity of Mice (J. Szepsenwol), 1112
Effect of Enzyme Injections on Mitosis in Regenerating Liver (Dr. Gaston de Lamirand), 400
Effect of Ethylene Oxide on the Tapping of *Hevea brasiliensis* (D. H. Taysum), 1319
Effect of Excess Supply of Heavy Metals to Barley during Germination, with special reference to Catalase and Peroxidase (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Effect of External Conditions on the Phase of Radio Signals (D. E. Watt-Carter and R. L. Corke), 1286
Effect of Ferric Dimethyldithiocarbamate on the Rooting of Cuttings of *Hevea brasiliensis* (G. H. Tinley), 1217

Effect of *p*-Fluorophenylalanine on the Multiplication of Foot-and-Mouth Disease Virus (F. Brown, D. N. Planterose and Doreen L. Stewart), 414
Effect of 5-Fluorouracil on Hepatic Induced Increase of Tryptophan-Pyrrolase (Sancia Gaetani and M. Antonietta Spadoni), 1296
Effect of Gibberellic Acid on Growth and Indoleacetic Acid Oxidase Activity of *Lupinus albus* L. exposed to Different Photoperiods (F. Sági and A. S. Garay), 824
Effect of Growth and Development (Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid), (I. H. Williams), 361
Effect of Hybridization on the Primary Polydipsic Trait of an Inbred Strain of Mice (Dr. Emanuel Silverstein), 523
Effect of Irradiated Normal Tissues on the Growth of Mouse Carcinoma (Dr. Arthur Compton and Prof. Charles A. Pannett), 1101
Effect on Mast Cells : Mechanism of Action of Antigen–Antibody Complexes —their (Dr. Ivan Mota), 572
Effect of Ozone on the Fluorescence and Ultra-violet Absorption Spectra of 3,4-Benzopyrene (Z. Morlin and K. M. Sáringer), 907
Effect of Pituitary Growth Hormone on Cholesterogenesis (Dr. A. L. Greenbaum and R. S. Leal), 600
Effect of Polyamino Carboxylic Acids on Catalase (Dr. Joan Bond and J. G. Cooper), 385
Effect of Polyvinyl Alcohol on the Distribution of Iodine-131 in the Internal Organs, Fluids and Excreta of Rabbits (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Effect of Population Movements on Malaria Eradication (R. Mansell Prothero), 863
Effect of Red and Far-red Irradiation on the Germination Process in Seeds of *Pinus sylvestris* L. (Bengt Nyman), 1219
Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Effect of Serotonin on Absorption and Distribution of Calcium-45 in the Rat (Prof. S. Garattini, E. Grossi, P. Paoletti, R. Paoletti and M. Poggi), 185
Effect of Sodium Fluoride on Calcium Metabolism of Human Beings (Dr. Clayton Rich and John Ensinck), 184
Effect of Spacing and Nitrogen-level on Floral Initiation in Cocksfoot (*Dactylis glomerata* L.), (D. M. Calder and J. P. Cooper), 195
Effect of Spraying with Gibberellic Acid on Yield and Composition (Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid), (R. Stevens, J. B. Roberts and I. H. Williams), 360
Effect of Thyroxine and 2,4-Dinitrophenol on the Rate of Utilization of Glucose (Dr. L. Macho), 604
Effect of Thyroxine plus Thiourea on the Early Development of the Chum Salmon (*Oncorhynchus keta*), (Prof. M. A. Ali), 1214
Effect of Ultra-Violet Irradiation on the Electrical Conductivity of Cathodes coated with Barium Oxide (Dr. C. H. B. Mee), 1383
Effect of Varying Doses of Undiluted Semen on Fertility in the Domestic Fowl (G. C. Taneja and R. S. Gowe), 828
Effect (Alleged Anticomplementary), of Aspirin (K. W. Anderson), 1012
Effect (Anti-Sporulation), of Copper Fungicides : Significance of the, in the Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Effect (A Biochemical), of Deuterium (Dr. Howard J. Ringold, Dr. Sumner Burstein and Dr. Ralph I. Dorfman), 1294
Effect (Cryoscopic), of Separation and Concentration of Solutes (Dr. K. S. Rangappa), 1087
Effect (The de Haas-van Alphen), and the Electronic Structure of Metals (Dr. D. Shoenberg), 126
Effect (Discreteness-of-Charge), and the Stability Theory of Colloids (Dr. S. Levine, D. Calvert and G. M. Bell), 699
Effect (Kirkendall), in Gases (Prof. E. A. Mason, L. Miller and P. C. Carman), 375
Effect (Lack of), of Coenzyme Q_{10} on Coumarin-induced Hypoprothrombinaemia (Prof. Murray Weiner, Dr. Theodore Chenkin and Dr. Peter G. Dayton), 711
Effect (The Marangoni), and Liquid/Liquid Coalescence (G. D. M. MacKay and S. G. Mason), 488
Effect (A Morphogenetic), of Beta-Mercaptoethanol—Distribution of Water in the Embryo (Dr. Peter Tuft), 1072 ; Distribution of Water in the Chick Blastoderm (A. Jurand and Dr. Peter Tuft), 1073
Effect (Mutagenic), of Radiant Heat Shocks on Phanerogamous Plants (Dr. Bror Pettersson), 1167
Effective Anthelmintic (Highly), for Sheep : Thiabendazole, a (Hugh McL. Gordon), 1409
Effective Contact Stresses and Friction (Dr. D. H. Trollope), 376
'Effective' Ionic Charge in Crystals (Dr. W. Cochran), 60
Effectiveness of Lipid and Lipidophilic Substances as Adjuvants (D. W. Dresser), 1169
Effects of Carrageenin on Serum Lipids and Atherosclerosis in Rabbits (Dr. Katsumi Murata), 189
Effects of Corticotrophin, Hydrocortisone and Methopyrapone on the Circulating Eosinophiles in Man (Dr. N. J. Kothari and Dr. J. C. Saunders), 1105
Effects of Drugs on Uptake of Isotopic Norepinephrine by Cat Tissues (Hans J. Dengler, Herbert E. Spiegel and Elwood O. Titus), 816
Effects of Gibberellic Acid and Allogibberic Acid on Flowering and Internode-Length in *Pisum sativum* (I. C. Murfet and H. N. Barber), 514
Effects of *Grewia populifolia* Extracts on the Development of Chick Embryos (S. K. Brahma and N. Kundu), 506
Effects of Heavy Water on Poliovirus Multiplication—Results and Speculations on Mechanism (Dr. David Kritchevsky, Dr. Richard I. Carp and Dr. Hilary Koprowski), 250
Effects of Inhaled Radioactive Particles—Report of the Subcommittee on Inhalation Hazards, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 848), 556
Effects of Injections of some Intermediary Metabolites on the 'Insulin Response' of Normal Rabbits (Dr. H. D. Brahmachari and G. Raghupathy Sarma), 491, *erratum*, 755
Effects of Insecticides on Birds, 440
Effects of Ionizing Radiation on the Human Haematopoietic System—Report of the Subcommittee on Haematologic Effects, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 875), 556
Effects of Ionizing Radiation on Organic and Biological Solids (Société de Chimie Physique and the British Biophysical Society Discussion on), 1150
Effects of Kinetin and Indole-3-acetic Acid on Multiplication Rates of Paramecium (Mary Annunciata McManus and Kathleen Sullivan), 619
Effects of Light Intensity on Reproduction in S.48 Timothy (*Phleum pratense* L.), (Dr. G. J. A. Ryle), 196
Effects of Morphine-like Drugs in Chicks (C. Schneider), 607
Effects of Radioactivity in the Sea : Research on the, 122
Effects of Smoking, *review* by Dr. W. Carruthers, 108
Effects (Antilymphoma) : Evidence that the L-Asparaginase Activity o Guinea Pig Serum is responsible for its (J. D. Broome), 1114
Effects (Electrical), during Dissolution and Precipitation of Electrolytes (R. P. Rastogi, B. P. Batra and R. K. Dass), 764
Effects (Electrical), observed in Polycrystalline Boron (C. H. Carmichael and M. Dore), 485
Effects (Long-Term), of Ionizing Radiations from External Sources—Report of the Subcommittee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 849), 556
Effects (Photoperiodic), on Stomatal Behaviour in *Xanthium pennsylvanicum* (Dr. T. A. Mansfield and Prof. O. V. S. Heath), 974
Effects (Stress), on Thermoremanent Magnetization (Dr. P. M. Stott and Dr. F. D. Stacey), 585 ; (J. M. Hall), 586
Efficiency in the Hospital Service : Abstracts of (Ministry of Health), 441
Efficiency (Inactivating), of Radiation : Comparative Analysis of, on Different Organisms (Dr. M. Terzi), 461
Effusions (Malignant) : Diagnostic Significance of Heterogeneous Lactic Dehydrogenases in (R. Richterich, K. Zuppinger and E. Rossi), 507
Eftekhari, M., and others : Serum Factor Gm^a among the Iranians, 717
Egelstaff, Dr. P. A. : Fast-Neutron Spectroscopy, *review*, 8
Egg-Cells of the Sea Urchin : Intracellular Freezing and Frost Resistance in (E. Asahina)—Intracellular Freezing as a Cause of Frost-killing in relatively Rapidly Frozen Cell Suspensions, 1263 ; A Mechanism to Prevent the Seeding of Intracellular Ice in Freezing Living Cells, 1264
Ehrenberg, Dr. L. : Effects of Ionizing Radiation on Organic and Biological Solids (Role of Oxygen in Radiation Damage), 1150
Ehrlich Mouse Ascites Tumour : Effect of Alpha-Amylase on the (Dr. F. Steckerl, A. Ofodile, R. R. Campbell and G. H. Friedell), 1113
Eichel, Dr. Herbert J., and Bukovsky, Josef : Intracellular Distribution Pattern of Rat Liver Glutamic-Oxalacetic Transaminase, 243
Eisenschitz, Prof. R. : The Atomic Problem, *review*, 214
Eklund, Dr. Arno Sigvard : Appointed director-general of the International Atomic Energy Agency, 338
Elastic Media (Anisotropic): Surface Waves in (V. T. Buchwald and A. Davis), 899
Elastic Tube : Fatigue in a Fluid-filled Pulsating (Group-Capt. John Erskine Malcolm), 1012
Elastin Content of the Human Aorta during Growth : Increase in (Dr. V. Scarselli), 710
Elbers, Dr. P. F. : Fixation of Yeast Protoplasts for Electron Microscopy, 1022
Elder, H. Y., and Garrod, D. J. : A Natural Hybrid of *Tilapia nigra* and *Tilapia leucosticta* from Lake Naivasha, Kenya Colony, 722
Electric Currents associated with Geomagnetic Disturbances in the Auroral Zone (Dr. F. J. Scrase), 963
Electrical Activity of a Giant Nerve Cell under Abnormal Conditions (Dr. Yutaka Oomura, Sachio Ozaki and Takashi Maéno), 1265
Electrical Conductivity of Cathodes coated with Barium Oxide : Effect of Ultra-Violet Irradiation on the (Dr. C. H. B. Mee), 1383
Electrical Conductivity of Indole–Iodine : Spin Resonance and (B. Smaller, Dr. I. Isenberg and S. L. Baird, jun.), 168
Electrical Effects during Dissolution and Precipitation of Electrolytes (R. P. Rastogi, B. P. Batra and R. K. Dass), 764
Electrical Effects observed in Polycrystalline Boron (C. H. Carmichael and M. Dore), 485
Electrical Engineering at Birmingham, 647
Electrical Engineering at Glasgow, 224
Electrical Engineers, Institution of : Work to be conducted by three specialised Divisions, 544
Electrical Field : Influence of, on Pupation and Oviposition in *Nepytia phantasmaria* Stkr. (Lepidoptera : Geometridae), (Dr. D. K. Edwards), 976
Electrical Industries, Ltd. (Associated) : Appointment of L. J. Davies as responsible for the direct supervision of the four Research Laboratories at Aldermaston, Harlow, Manchester and Rugby, 1142
    Appointment of Dr. J. E. Stanworth as director of research, 1142 ; *erratum*, 1349
Electrical Industry : Magnetic Materials in the (P. R. Bardell), second edition, *review* by A. C. Lynch, 428
Electrical Potential across the Isolated Gut : Dependence on Substrate of the (Dr. T. W. Clarkson, A. C. Cross and S. Toole), 501
Electrical Power Industry : Corrosion Problems in the (Battersea College of Technology Summer School on), 651
Electrical Properties of Orientated Lipid on a Biological Membrane—an Electrostatic Diffusion Barrier and Ion Pump (Dr. J. W. L. Beament), 217
Electrical and Allied Industries Research Association (British) : Annual Report, 450
    New Creep Laboratory, 1049
Electrical and Magnetic Quantities : Dimensions of (Dr. A. E. Martin), 588
Electrically Exploded Wires (Thermal Radiation Laboratory of the Geophysics Research Directorate of the United States Air Force Cambridge Research Laboratories Conference on), 1250
Electricity Plant : New American, 22
Electrode (Oxygen), for Measurement of Tissue Slice Respiration (E. H. Strickland, F. D. Ziegler and Prof. A. Anthony), 969
Electrodialysis Systems : Thermo-electric Phenomena in (Dr. Lloyd H. Shaffer), 591
Electrokinetic Charge of the Human Erythrocyte : Sialic Acids and the (G. M. W. Cook, Dr. D. H. Heard and Dr. G. V. F. Seaman), 44

Electrolyte Retention produced by the Antialdosterone *SC* 5233 (J. B. Farmer and B. Petch), 1308
Electrolytes : Electrical Effects during Dissolution and Precipitation of (R. P. Rastogi, B. P. Batra and R. K. Dass), 764
  Ultrasonic Velocity in Aqueous Solutions of some (M. G. Seshagiri Rao and Prof. R. Ramachandra Rao), 164
Electron Affinity of the Acceptor Molecule in Charge-Transfer Complexes (Dr. M. E. Peover), 702
Electron Bombardment : Evaporated Carbon Films of Large Area for Adsorption Studies by (A. E. Bell, J. Pritchard and Prof. K. W. Sykes), 487
Electron Linear Accelerators : Pulse-shortening in (Dr. M. C. Crowley-Milling, T. R. Jarvis, C. W. Miller and G. Saxon), 483
Electron Microscope : The (M. E. Haine), *review* by Prof. D. Gabor, 316
Electron Microscope Observations of the Receptors in the Sensory Vesicle of the Ascidian Tadpole (Noël Dilly), 786
Electron Microscopic Observations of Structure in Ultra-Thin Sections of Vitrinite in Coal (J. T. McCartney, Sabri Ergun and R. E. Walline), 1361
Electron Microscopic Radioautography : Proposed Use of Magnetic Fields in (Lucien G. Caro), 1188
Electron Microscopy : Fixation of Yeast Protoplasts for (Dr. P. F. Elbers), 1022
Electron Spin Resonance (Chemical Society Symposium on), 755
  Spatial Distribution of Free Radicals as studied by (Robert C. Smith and S. J. Wyard), 897
Electron Spin Resonance of Adenosine Triphosphate (D. B. Russell and S. J. Wyard), 65
Electron Spin Resonance Absorptions induced by Light in Adsorbed Layers of Cyanine Dyes on Silver Bromide Microcrystals (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Electron Transport : Quinones in (Ciba Foundation Symposium on), (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by A. I. Scott, 321
Electron Transport System and Phosphoproteins of Mitochondria (K. Ahmed, J. D. Judah and C. H. Gallagher), 1309
Electron and Hydrogen Transfer : Coupling of Phosphorylation to, by a Chemi-Osmotic Type of Mechanism (Dr. Peter Mitchell), 144
π-Electronic Excitation and Ionization Energies of Condensed Ring Aromatic Hydrocarbons (Dr. J. B. Birks and M. A. Slifkin), 761
Electronic Properties of Imidazole (S. Aftergut and G. P. Brown), 379
Electronic Spectral Data : Organic, Vol. 1, 1946-1952 (edited by Mortimer J. Kamlet) ; Vol. 2, 1953-1955 (edited by Herbert E. Ungnade), *review* by Dr. E. G. Kellett, 107
Electronic Structure of Metals : The de Haas-van Alphen Effect and the (Dr. D. Shoenberg), 126
Electronics Industry : Glass in the, 1143
Electrophoresis on Paper : Splitting of Serum Albumin during (J. V. McLoughlin), 1305
Electrophoresis in a Thin Layer of Starch-Gel followed by a Plastifying Treatment (J. Groulade, Dr. J. M. Fine and C. Ollivier), 72
Electrophoresis (Paper) : Demonstration by, of an Auto-Immunological Precipitin possibly due to Fibrinolysins (Marion I. Cooper and J. R. Sykes), 1212
Electrophoresis (Paper), of Proteins while Preserving the Pattern of their Localization in Tissues (Dr. Zh. A. Medvedev), 1021
Electrophoresis (Starch-gel) : Comparison of the Serum Protein Fractions of the Newly Hatched Chick with those of Adult Birds using (A. Amin), 708
Electrophoretic and Immuno-electrophoretic Patterns of Extracellular Diphtheria Proteins from Culture Filtrates of Different Iron Concentrations (Bertold J. Radola), 382
Electrophysiology of Thermoreceptors (Prof. Herbert Hensel), 1143
Electrostatic Diffusion Barrier and Ion Pump : Electrical Properties of Orientated Lipid on a Biological Membrane—an (Dr. J. W. L. Beament), 217
Elementary Particles (CERN International Conference on), 126
Elements of Donor Origin in Orthotopically Grafted Spin following the Homograft Response : Regeneration of (Dr. J. K. Dineen and Dr. Aleksander Szenberg), 153
Elgindi, D. M. (Oteifa, B. A., and) : Nematology (Radiotracer Techniques using Phosphorus-32 applied to a study of Galling in Tomatoes by *Meloidogyne javanica* and its Effect on Uptake of Nutrient), 1049
Elimination of the Absorption Correction in the Viscometry of Dilute Solutions of High Polymers (H. van Oene and Prof. L. H. Cragg), 1160
Elimination of Bovine Serum Albumin in Acute Experimental Uraemia (Dr. G. Gowland, G. F. Smiddy, Dr. R. G. Burwell and F. M. Parsons), 1210
Elimination (Chromosomal), induced by 6-Aza-Uracil (M. Collette Mahoney, Dr. E. R. Witkus and Dr. C. A. Berger), 627
Ellenbogen, L. : Vitamin B_{12} and Intrinsic Factor (Efforts to Purify and Isolate Intrinsic Factor), 1155
Ellis, Dr. A. J., and Wilson, S. H. : Hot Spring Areas with Acid–Sulphate–Chloride Waters, 696
Ellis, Dr. D. A. : A New Universal Buffer System, 1099
Ellis, Rex, and others : Girard *T* Reagent for Carbonyls, 1391
Elmore, Dr. D. T. : Biochemistry of Steroids, *review*, 111
  A Laboratory Manual of Analytical Methods of Protein Chemistry, *review*, 320
Elton, Dr. G. A. H. : British Baking Industries Research Association—New Laboratory Wing, 233
Embassy (Canadian), in Washington : Appointment of Dr. E. O. Hughes as scientific attaché, 542
Embryo : Distribution of Water in the (A Morphogenetic Effect of Beta-Mercaptoethanol), (Dr. Peter Tuft), 1072
Embryo of *Pteridium aquilinum* : Failure of Nucleotides to Diffuse Freely into the (P. R. Bell), 91
Embryo (Chick) : Mechanism of Recovery from Viral Infection in the (Dr. Samuel Baron and Alick Isaacs), 97
Embryology : International Conference on (Editorial Board of the *Journal of Embryology and Experimental Morphology*), 24
Embryology and Experimental Morphology, Journal of (Editorial Board of the) : International Conference on Embryology, 24
Embryos of *Cuscuta reflexa* : Artificial Production of Buds from the (Prof. P. Maheshwari and B. Baldev), 197
Embryos (Chick) : Effects of *Grewia populifolia* Extracts on the Development of (S. K. Brahma and N. Kundu), 506
Embryos (Early) : Amino-Acid Activation in Tissues of (Dr. Elizabeth M. Deuchar), 1006
Embryos (Fern), in Sterile Culture : Growth of (Prof. Augustus E. DeMaggio and Prof. Ralph H. Wetmore), 94
Emeléus, Prof. H. J., and Anderson, Dr. J. S. : Modern Aspects of Inorganic Chemistry, third edition, *review* by Prof. J. R. Partington, 637
Emergence : Dating Man's (Dr. K. P. Oakley), 988
Emission (Galactic Radio) : Spectrum of (Dr. F. Graham Smith), 1381
Emission (New Afterglow), associated with Metastable Nitrogen Atoms (L. Herman and R. Herman), 346
Emission Spectra (Triplet→Singlet) : Polarization of (V. G. Krishna and Prof. Lionel Goodman), 800
Emission Spectroscopy (Molecular), from 2μ to 12μ by a Michelson Interferometer (H. A. Gebbie, G. Roland and L. Delbouille), 264
Emotional Behaviour : Changes in Visual Gnostic Functions and, following Unilateral Temporal Pole Damage in the 'Split-Brain' Monkey (Dr. J. L. deC. Downer), 50
Employment of Graduates—a Durham University Survey, 649
Emulsifying Capacity of Blood Sera (Prof. B. Breyer), 174
Emulsions : Quantitative Analysis of Milk and other, by Infra-Red Absorption (Dr. J. D. S. Goulden), 905
Encyclopedia of Chemical Technology (edited by Raymond E. Kirk and Donald F. Othmer), second Supplement Volume edited by Anthony Standen, *review* by R. H. Villet, 1131
Endings (Nerve), in the Mole's Snout (J. Armstrong and Dr. T. Andrew Quilliam), 1379
Endo-Parasites (Ecto- and), of South-East Asia, *review* by P. F. Mattingly, 948
Endogenous Rhythm in the Rate of Dark-Fixation of Carbon Dioxide in Leaves of *Bryophyllum fedtschenkoi* (Diana M. Warren and Malcolm B. Wilkins), 686
Endotoxin : Increase in Specific Bactericidal Antibodies after Administration of (J. Gabriel Michael, James L. Whitby and Maurice Landy), 296
Endowed Research Time (International Business Machines, United Kingdom, Ltd.), 442
Energies (Ionization), of Condensed Ring Aromatic Hydrocarbons : π-Electronic Excitation and (Dr. J. B. Birks and M. A. Slifkin), 761
Energy Pathways of Hepatoma No. 5123 (Dr. Alan C. Aisenberg and Harold P. Morris), 1314
Energy Transfer (Inter-Molecular), in Photo-sensitized Oxidation-Reduction : Paths of (N. Takeyama), 1359
Energy (High) Nuclear Physics (Institute of Physics and the Physical Society Symposium on), 1349
Energy (Solar) : Applications of, 228
Energy (Solar) Technology, 1954-1959 (T. Brimelow), 228
Energy Principles in Applied Statics (T. M. Charlton), *review* by Prof. R. C. Coates, 1134
Energy Theorem (Minimum), for Flow of Dry Granules through Apertures (R. L. Brown), 458
Engel, Dr. Milton B., and others : Distribution of Sodium and Potassium in certain Cells and Tissues, 1175
Engel, Dr. W. K. : Muscle Target Fibres, a Newly Recognized Sign of Denervation, 389
Engelsman, Dr. J. J., and Claassens, A. M. J. M. : Use of the Rotating Hanging Mercury Drop in Analysis—Anodic Stripping using a Rotating Mercury Drop, 240
Engineer : Art and the (Prof. Misha Black), 949
Engineering : Civil, *review* by T. M. Charlton, 1032
  A Social History of (Prof. W. H. G. Armytage), *review* by Prof. M. Postan, 946
  Timber (University of Southampton first International Conference on), 338
Engineering (Civil) Reference Book (edited by J. Comrie), *review* by T. M. Charlton, 1032
Engineering (Electrical), at Birmingham, 647
Engineering (Electrical), at Glasgow, 224
Engineering (Machine Tool), at Manchester, 19
Engineering (Systems) : Operations Research and (Charles D. Flagle, William H. Huggins and Robert H. Roy), *review* by Prof. L. S. Goddard, 105
Engineering (Textile), at Leeds, 1346
Engineers (Chemical), Institution of : Student's Prize awarded to J. P. Catchpole, 338
Engineers (Electrical), Institution of : Work to be conducted by three specialized Divisions, 544
Engineers (Mining, Metallurgical and Petroleum), American Institute of (Iron and Steel Institute and the Metallurgical Society of the) : Special Meeting in the United States and Canada, 651
Engineers (Radio), British Institution of : Grant of a Charter to the, 651
Engineers (Scientists and), engaged in research and development in Colleges and Universities in the United States for 1958 : Report on (United States National Science Foundation), 225
Engineers (Women), in the U.S.S.R., a Study of the Education, Employment and Prospects of Women Engineers in the U.S.S.R. (L. S. Souter and R. Winsdale), 30
England, S., and others : Taste Thresholds and Food Dislikes, 1328
England (Rural), Council for the Preservation of : Twenty-second National Conference (The Impact of Industrial Development on the Countryside), 959
England (South-East) : The Changing Flora of (J. E. Lousley), 133
  Invertebrate Life in (John Sankey), 132
England (South-West) : Age of the Orogeny and Granites in (T. R. Owen), 486 ; (N. E. Butcher), 486
England (Southern) : The Lower Tertiary Floras of (Marjorie Elizabeth Jane Chandler), 1, Palaeocene Floras, London Clay Flora (Supplement), *review* by Prof. John Walton, 209
  Tropical Floras in the Tertiary in, *review* by Prof. John Walton, 209
England and Wales, National Foundation for Educational Research in : *Technical Education Abstracts from British Sources*, Vol. 1, No. 1, September–December 1960, 21
English Electric Valve Co., Ltd. : Travelling Wave Tubes—their Characteristics and Operation, 1348
English Family : Thalassaemia in an, and in a German Family (Dr. F. Vella and S. A. Ibrahim), 822

English Place-Name Society : Vols. 30, 31 and 32, The Place-Names of the West Riding of Yorkshire (Prof. A. H. Smith), Part 1, Lower and Upper Strafforth and Staincross Wapentakes ; Part 2, Osgoldcross and Agbrigg Wapentakes ; Part 3, Morley Wapentake, *review* by Prof. H. C. Darby, 208
English Rural Life, Museum of : Annual Report for 1960 (University of Reading), 544
English–Russian Geological Dictionary (T. A. Sofiano), (edited by I. D. Borneman, et *al*.), *review* by Dr. S. I. Tomkeieff, 9
Engravings (Rock), of the Sydney–Hawkesbury District (F. D. McCarthy), 854
Engström, Prof. Arne : X-Ray Microscopy, *review*, 1332
Enhanced Plant-Growth with Two Systemic Insecticides (M. M. H. Wallace), 513
Enhancement by Chemical Agents : Induction of Tumours by Polyoma Virus—(K. E. K. Rowson, F. J. C. Roe, J. K. Ball and Dr. M. H. Salaman), 893
Enhancement of Inhibition of Intestinal Absorption by Cetrimide–Phloridzin Combination (J. A. Nissim), 37
Enlargement of Salivary Gland in Mice Treated with *Iso*propylnoradrenaline (Dr. K. Brown-Grant), 1076
Enomoto, E., and others : Toxicology of *Penicillium islandicum*, 864
Enquiries (Scientific), in Parliament : Recent, 857
Ensinck, John (Rich, Dr. Clayton, and) : Effect of Sodium Fluoride on Calcium Metabolism of Human Beings, 184
Entamoeba histolytica : Induced Increase in Resistance of, to Fumagillin (Dr. Mitsuru Nakamura), 413
Enteropathy (Exudative) : Calcium Metabolism in Man with Calcium-45—Malabsorption Syndrome and (Dr. G. Milhaud and Dr. P. Vesin), 872
Enterprise : The Human Side of (D. McGregor), 1332
Entomological Society (Royal) : Symposium on Insect Polymorphism, 1145
Environment on the Bed of the Sea : Life and (Prof. C. M. Yonge), 986
Environmental Conditions (Controlled) : Flower Initiation in Kent Wild White Clover (*Trifolium repens* L.), under (R. J. Haggar), 1120
Environmental Factors and Bryophytes (Kathryn Benson-Evans), 255
Enzyme (New), connected with Protein Synthesis: Evidence for a (Hans G. Boman and Ingvar Svensson), 674
Enzyme (Receptor-destroying), and Proteases (Influenza Viruses,) : Action of, on Blood Group Agglutinogen M^g (Prof. Georg F. Springer and Dr. Karlheinz Stalder), 187
Enzyme Catalysis : Dextransucrase *V* and the Role of Metal Ions in (W. Brock Neely and Julie Hallmark), 385
Enzyme Injections : Effect of, on Mitosis in Regenerating Liver (Dr. Gaston de Lamirande), 400
Enzyme Synthesis (Induced), in Aqueous Suspensions of Starved Stationary Phase *Aerobacter aerogenes* (R. E. Strange), 1272
Enzyme System (Rat Lens) : Catalysis of Incorporation of ^{14}C-Uridine into Rat Lens Ribonucleic Acid by (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
Enzyme or 'Heat Catalysed' Hydrolysis : Amino-Acid Liberation from Proteins by (S. M. Hardy), 1061
Enzymes of the Urea Cycle in Rat Liver : Effect of Adrenalectomy on the Activity of (Patricia McLean), 1302
Enzymic Activity of the Central Nervous System (Neurochemical Commission of the World Federation of Neurology International Symposium on), 1349
Enzymic Binding of Hydroxylamine by Fumaric Acid (Prof. Nathan Grossowicz and the late Yehudith Lichtenstein), 412
Enzymic Breakdown of Stigmatic Cuticula of Flowers (W. Heinen and H. F. Linskens), 1416
Enzymic Conversion of Tetrahydrofolic Acid to Folinic Acid by Plant Protein (E. H. Byers, J. Stewart and T. J. Bond), 179
Enzymic Degradation of Deoxyribonucleic Acid into Sub-Units : Kinetics of the (Dr. Giorgio Bernardi and Prof. Charles Sadron), 809
Enzymic (Non-) Hydroxylation of Polycyclic Aromatic Hydrocarbons (F. Dewhurst and G. Calcutt), 808
Eoliths and Prehistorical Tools, 23
Eosinophiles (Circulating), in Man : Effects of Corticotrophin, Hydrocortisone and Methopyrapone on the (Dr. N. J. Kothari and Dr. J. C. Saunders), 1105
Ephrussi, Prof. B. : Elected a foreign associate of the United States National Academy of Sciences, 18 ; work of, 18
Epidemiology : Stochastic Population Models in Ecology and (Prof. M. S. Bartlett), *review*, 843
Epidermoid Carcinoma Cells (Human), in Culture : Biochemical Aspects of Resistance to 6-Mercaptopurine in (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
Epinephrine Action : Potentiation of (Prof. R. Imaizumi, Y. Hashimoto and M. Oka), 186
Epitaxial Growth of Crystals on One-Degree Orientated Substrates (Dr. A. Goswami), 160
Epithelium (Intestinal) : Localization of the 'Sugar Pump' in the (Dr. T. Z. Csáky and G. W. Fernald), 709
Epps, F. J. : South-Eastern Union of Scientific Societies Annual Congress, 132
Epstein, H. T., and others : Some Properties of the Deoxyribonucleic Acid of Phage Alpha, 1097
Epstein, Dr. William L., and others : An Antigen in Lesions of Molluscum Contagiosum, 509
Equator : Height of Night-time *F* Layer Irregularities at the (Dr. G. S. Kent and Dr. J. R. Koster), 1083
Equatorial Undercurrent (Eastward), in the Atlantic : Evidence of an, from Measurements of Current Shear (Arthur D. Voorhis), 157
Equatorial (Trans-) Backscatter Observations of Magnetically Controlled Ionization (J. A. Thomas), 792
Equipment Exhibition (Instrument Symposium and Research) : Eleventh Annual (Washington Sections of the American Association of Clinical Chemists, the American Chemical Society, the Instrument Society of America, the Society of American Bacteriologists, the Society of Applied Spectroscopy and the Society for Experimental Biology and Medicine), 959
Eradication (Malaria) : Effect of Population Movements on (R. Mansell Prothero), 863
Eradication (Simultaneous), of Three Ectoparasitic Species from a Colony of Laboratory Mice (Dr. Nigel Bateman), 721
Ergonomics Research Society and the British Occupational Hygiene Society : Discussion on the Design and Use of Respirators, 655
Ergun, Sabri, and others : Electron Microscopic Observations of Structure in Ultra-Thin Sections of Vitrinite in Coal, 1361
Ernsting, J., and Gabb, J. E. : Design and Use of Respirators (Communication between Persons wearing Breathing Equipment), 655
Erythematosis (Disseminated Lupus) : Antileucoyte Cytoplasm, Anti-Leucocyte Nuclei and Anti-Platelets in (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Erythrocyte (Human) : Sialic Acids and the Electrokinetic Charge of the (G. M. W. Cook, Dr. D. H. Heard and Dr. G. V. F. Seaman), 44
Erythrocyte Ghosts of Mediated Sugar Transport : Persistence in (Paul G. LeFevre), 970
Erythrocyte Membrane : Dimer Formation and the Transfer of Glycerol across the (Dr. W. D. Stein), 352
Erythrocytes : A Positive Feedback Mechanism of Adenosine Triphosphate Synthesis in (Makoto Nakao, Takashi Motegi, Toshiko Nakao, Saburo Yamazoe and Haruhisa Yoshikawa), 283
Erythrocytes among Armenians in Iran : Virtual Absence of Glutathione Instability of the (Dr. J. E. Bowman and Dr. D. G. Walker), 221
Erythrocytes (Rabbit) : Recovery and *in vivo* Survival of (Dr. G. F. Doebbler, R. G. Buchheit and A. P. Rinfret), 1405
Erythrocytes (Sheep) : Antibody Response in Rabbits following Injection of, into Lateral Ventricle of Brain (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
Erythropoiesis : Effect of Bilateral Section of the Splanchnic Nerve on (Fumimaro Takaku, Kunitake Hirashima and Prof. Shigeo Okinaka), 500
Erythropoietin : Bio-Assay of, in Mice made Polycythaemic by Exposure to Air at a Reduced Pressure (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Escherichia coli : Influence of Salts on the Uptake of Streptomycin by (Paul H. Plotz, Donald T. Dubin and Bernard D. Davis), 1324
  Radiation Sensitivity of, to β-Rays in Dry and Wet Condition (S. B. Bhattacharjee and N. N. Das Gupta), 1015
Eschscholzia californica Cham., *Argemone mexicana* L. and *A. ochroleuca* Sweet : Intra-ovarian Pollination in (Prof. P. Maheshwari and Kusum Kanta), 304
Escobar del Rey, Dr. F., and others : Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat, 1171
Essential Oil from Fresh *Cannabis sativa* and its Use in Identification (L. Martin, Dr. D. Morison Smith and C. G. Farmilo), 774
Esserman, N. A. : Retirement as director of the National Standards Laboratory of the Australian Commonwealth Scientific and Industrial Research Organization, 542 ; work of, 542
Esters (Amino-Acid) : Effect of, on the Growth of Fibroblast Cultures (Dr. I. Fehér, A. Döklen and V. Selmeci), 494
Esters (Fatty Acid), of Riboflavin : Hydrolysis of, by Pancreatic Lipase (Prof. Kunio Yagi, Yoshiko Yamamoto and Jun Okuda), 174
Esters (Some New), of Chromone-2-Carboxylic Acid (Juan X. De Vries and Kempis Vidal-Beretervide), 171
Esters (Sterol) : Isolation of, from Human Faeces (Francis Aylward and Pamela Wills), 1397
Estimating Ionospheric Absorption Heights from Recovery Times : A Method of (Syed Ziauddin), 1084
Estimation of Protein in Cellular Material (Prof. David Racusen and D. B. Johnstone), 492
Estimation of Specific Proteins in Serum and other Mixtures (Dr. D. A. Darcy), 1163
Estimation of Time of Generation of Living Cells (R. J. M. Fry, S. Lesher and H. I. Kohn), 290
Estimation (Quantitative), of Peak Areas in Gas–Liquid Chromatography (Dr. K. K. Carroll), 377
Estimation (Quantitative), of Phosphatases (Phosphatases in *Schistosoma mansoni*), (Dr. D. L. H. Robinson), 473
Estuary (Tropical West African) : Seasonal Fluctuations and Distribution of Nitrite in a (J. C. D. Watts), 929
Estudios Ecologicos para el Aprovechamiento de la Tierra en Nicaragua (Dr. B. W. Taylor), 1259
Ethane : Reaction of, with a Clean Rhodium Film (Dr. Richard W. Roberts), 170
Ethanol (Carbon Dioxide and), as Factors controlling the Growth of Etiolated Oat Seedlings (Dr. C. L. Mer), 260
Ether (Ethylene Glycol Monomethyl), a New Fixative for Histological Work (Prof. Walter B. Shelley and Ralph Florence), 719
Ether (Trimethylsilyl) Derivatives of Alcohols : Peak-Shift Technique in Gas–Liquid Chromatography— (Stanley H. Langer and Peter Pantages), 141
3-O-Ethers of D-Glucosamine : A Convenient Synthesis of Muramic Acid and other (Dr. Roy Gigg and Patricia M. Carroll), 495
Ethers (Glycol Monoalkyl) : Compressibility and Specific Evaporation Resistance of the Monolayers of Long-Chain Alcohols and (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Ethological Method for Investigating the Properties of Nervous Systems : Response to Series of Subliminal Stimuli—an (A. J. Pontin), 512
Ethoxide (Polymeric Titanium), and Titanium Oxide Ethoxides : Structures of (Prof. D. C. Bradley and A. H. Westlake), 273 ; (R. L. Martin and G. Winter), 274
Ethoxides (Titanium Oxide) : Structures of Polymeric Titantium Ethoxide and (Prof. D. C. Bradley, and A. H. Westlake), 273 ; (R. L. Martin and G. Winter), 274
Ethylene Evolution and Sub-Cellular Particles (Prof. Stanley P. Burg and Ellen A. Burg), 967
Ethylene Glycol Monomethyl Ether, a New Fixative for Histological Work (Prof. Walter B. Shelley and Ralph Florence), 719
Ethylene Oxide : Effect of, on the Tapping of *Hevea brasiliensis* (D. H. Taysum), 1319
Ethylenes (*cis* and *trans* Dichloro- and Dibromo-) : Ionization Potentials of (Dr. J. Momigny), 1089
Etiolated Oat Seedlings : Carbon Dioxide and Ethanol as Factors controlling the Growth of (Dr. C. L. Mer), 260
Etiolated Pea Plants : Correlative Inhibition of Formation of Chlorophyll in the Leaves of (Jiří Úlehla), 613
Eto, Morifusa, and others : Biological Activity of a Tri-*o*-Cresyl Phosphate Metabolite, 1396

Ettlinger, Dr. G. : Learning in Two Sense-Modalities, 308
Ettlinger, Dr. G., and others : Cross-modal Transfer in Man, 1225
Eucollagen (Dr. A. Courts), 1097
Europe (Central) : Some Bacterial Plant Diseases of, *review* by Dr. W. J. Dowson, 4
Europe (Unified) : The Non-Ferrous Metals Industry in a (Baron Snoy et d'Oppuers), 546
Europe (Western and Central) : Introduction of the Potato into (V. S. Lekhnovitch), 518
European Birds for Caging : Trade in, 124
European Conference on Broadcasting (International Telecommunication Union), 449
European Economic Co-operation, Organization for : Report on the School Curriculum in Mathematics (edited by Howard Fehr), 335
European Economic Co-operation, Organization for (European Nuclear Energy Agency) : New Trends in Atomic Research and their International Significance (Dr. L. Kowarski), 853
European Malacological Congress : First (Conchological Society of Great, Britain and Ireland and the Malacological Society of London), 126
European Nematologists, Society of : Sixth International Symposium on Nematology, 1048
European Nuclear Energy Agency of the Organization for European Economic Co-operation : New Trends in Atomic Research and their International Significance (Dr. L. Kowarski), 853
European Organic Geochemistry Group : Proposal to form a, 336
European Organization for Nuclear Research and the Max Planck Institute, Heidelberg : Conference on Fission and Spallation Phenomena and their Application to Cosmic Rays, 24
European Parasites of Man, *review* by Dr. G. Lapage, 107
European Standards for Drinking Water (United Nations, World Health Organization), 1261
European Symposium on Food Technology, 959
European Symposium on Vitamin B_{12} and Intrinsic Factor, 1154
Eutrichocheles modestus (Herbst) in the Near-shore Waters of Porto Novo, South India : Occurrence of (K. Balasubrahmanyan and Dr. J. Jacob), 830
Eutrophic Lakes (Fresh-water), of India : Hydrogen Ion Concentration, Plankton and Fish in (Dr. S. M. Das), 511
Evaluation of Quantal Neutralization Tests (Prof. S. Fazekas de St. Groth), 891
Evans, E., and others : Significance of the Anti-Sporulation Effect of Copper Fungicides in the Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach, 476
Evans, Dr. J. H. : A Phytoplankton Multi-Sampler and its Use in Lake Victoria, 53
Evaporated Carbon Films of Large Area for Adsorption Studies by Electron Bombardment (A. E. Bell, J. Pritchard and Prof. K. W. Sykes), 487
Evaporation Resistance (Specific) : Compressibility and, of the Monolayers of Long-Chain Alcohols and Glycol Monoalkyl Ethers (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Evaporative Loss of Water from the Skin of the Ox : Increase of, in response to Local Heating of the Hypothalamus (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Evelyn, John : Fumifugium, or the Smoake of London Dissipated, reprint (National Society for Clean Air), 752
Evernden, Dr. J. F., and others : Age of Bed I, Olduvai Gorge, Tanganyika, 478
Evidence that the L-Asparaginase Activity of Guinea Pig Serum is responsible for its Antilymphoma Effects (J. D. Broome), 1114
Evidence for a Cholinergic Mechanism in Sympathetic Transmission : Lack of (Dr. J. E. Gardiner and Dr. J. W. Thompson), 86
Evidence of an Eastward Equatorial Undercurrent in the Atlantic from Measurements of Current Shear (Arthur D. Voorhis), 157
Evidence of a 'Hunger Motivational' System in the Lateral Hypothalamus of the Rat (Dr. P. J. Morgane), 672
Evidence for a New Enzyme connected with Protein Synthesis (Hans G. Boman and Ingvar Svensson), 674
Evidence of Thyroid Protease Action : Thyroglobulin— (Dr. A. D. Litonjua), 357
Evidence (Experimental), for the Mechanism of Photosynthesis (Dr. H. T. Witt, A. Müller and B. Rumberg), 194
Evidence (Infra-Red Spectroscopic), of Four-fold Co-ordination of Titanium in Barium Orthotitanate (P. Tarte), 1002
Evolution : Issues in, *review* by Dr. P. G. Fothergill, 425
Evolution after Darwin (edited by Sol Tax and Charles Callender), Vol. 3, Issues in Evolution, *review* by Dr. P. G. Fothergill, 425
Evolution of the Sweet Potato (*Ipomoea batatas* (L.) Lam.), (Dr. D. E. Yen), 93
Evolution (Ethylene), and Sub-Cellular Particles (Prof. Stanley P. Burg and Ellen A. Burg), 967
l'Évolution des Vertébrés : Théories de (Erik Jarvik), traduction du Prof. J. P. Lehman, *review* by Dr. E. Trewavas, 945
Ewe : Removal of Milk Constituents from the Mammary Gland of the (A. K. Lascelles), 1404
Ewer, Dr. Rosalie F. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 126
Ewing, Maurice, and others : The Floors of the Oceans, I, The North Atlantic—Text to accompany the Physiographic Diagram of the North Atlantic (Geological Society of America, Special Paper 65), *review* by Dr. G. E. R. Deacon, 531
Exacting Strains (Nutritionally), of *Staphylococcus pyogenes* : Metabolic and Genetic Investigations of (Janice B. Edgar and Dr. B. A. D. Stocker), 1121
Examination by Light Microscopy : A Method of Replicating Dry or Moist Surfaces for (Joan Sampson), 932
Examination (Immunoelectrophoretic), of Agammaglobulinaemia (Fred Rosen, Charles A. Janeway and Prof. David Gitlin), 1109
Examination (Polarographic), of Sialic Acids (Barbara Robert, Max E. Rafelson and Ladislas Robert), 596
Examination (Water Treatment and), Society for : Autumn Meeting, 856
Examining the Rate, and Primary Products, of Reactive Bimolecular Collisions : A Molecular Beam Reactor for (C. W. Nutt and A. J. Biddlestone), 798
Example of Mechanical Co-ordination of Cilia (Dr. M. A. Sleigh), 931
Excess of Charge : An Unsteady Universe with (Ll. G. Chambers), 1082
Excess (Charge) : The Steady Universe with (Ll. G. Chambers), 262
Excess Supply of Heavy Metals to Barley during Germination : Effect of, with special reference to Catalase and Peroxidase (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Exchangers (Modified Cellulose Ion), and their Use in Ribonucleic Acid Fractionation (Dr. L. Bosch, G. van der Wende and Dr. H. Bloemendal), 349
Exchanges of Sodium Ions in the Central Nervous System of an Insect (*Periplaneta americana* L.), (J. E. Treherne), 1223
Excitable Tissues : Outflux of Inorganic and Organic Phosphate during Membrane Depolarization of (Dr. L. G. Abood, Prof. K. Koketsu and I. Koyama), 395
Excitation (π-Electronic), and Ionization Energies of Condensed Ring Aromatic Hydrocarbons (Dr. J. B. Birks and M. A. Slifkin), 761
Exclusion (Ion) : Separation Methods based on Molecular Sieving and (J. Porath and E. B. Lindner), 69
Exclusive Iodination of the *A* Chain : An Unreactive Tyrosine Residue in Insulin and the (Dr. P. H. Springell), 1372
Excreta (Internal Organs, Fluids and), of Rabbits : Effect of Polyvinyl Alcohol on the Distribution of Iodine-131 in the (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Excretion of Inulin by Malpighian Tubules (Dr. J. A. Ramsay and Dr. J. A. Riegel), 1115
Excretion (Aldosterone), and Potassium Retention in Subjects living at High Altitude (P. J. Ayres, Rona C. Hurter, Dr. E. S. Williams and J. Rundo), 78
Excretion (Decreased Urinary), of 2-Aminoethanol by Irradiated Human Beings (Dr. Ralph R. Cavalieri, M. T. Van Metre and W. I. Sivertsen), 1303
Excretion (Hydroxyproline) : Influence of Scurvy and Lathyrism (Odoratism) on (Dr. G. R. Martin, S. E. Mergenhagen and D. J. Prockop), 1008
Excretion (Urinary), of Histamine : Relationship between the Decrease in, and the Initiation of the Labour Process (Dr. Halina Wiskont-Buczkowska), 290
Excretory Ducts in the Genus *Notopterus* (Lacepede), (Madhu Sudan Sharma), 1118
Exhaled Air of Diabetic Patients : Rapid Infra-Red Determination of Acetone in the Blood and the (Dr. Richard D. Stewart, Edward A. Boettner and Bruce P. Stubbs), 1008
Exhibition : International Instruments and Measurement, 1352
Exhibition (Research Equipment) : Eleventh Annual Instrument Symposium and (Washington Sections of the American Association of Clinical Chemists, the American Chemical Society, the Instrument Society of America, the Society of American Bacteriologists, the Society of Applied Spectroscopy and the Society for Experimental Biology and Medicine), 959
Exhibitions : Code of Practice for the Display of Sources of Ionizing Radiations at, 1249
Existence (Atomic) : A Concept of (Prof. W. H. Watson), 658
Exosphere (Terrestrial), at Heights of 1,000–1,700 km. (Max Römer), 238
Exothermic Compositions : Solid Propellant and (Dr. James Taylor), *review* by Dr. W. B. Littler, 3
Expansion Coefficient (Specific Heat and), of Liquid Helium-3 under Pressure below 0·1° K. (Dr. D. F. Brewer and J. R. G. Keyston), 1261
Expansion Cracks in Mortar : The Widening of, by Salt Solutions (J. A. Roberts and H. E. Vivian), 125, *erratum*, 1145
Expected Rate of Senescence and Age-dependent Mortality in Fish (Dr. Alex Comfort), 822
Expedition : North Borneo, 1961 (Royal Society of London in co-operation with the Government of North Borneo), 26
Expenditure (Capital), of Colleges and Universities in the United States for research and development in the Natural and Social Sciences in 1958 (United States National Science Foundation), 545
Expermental Agriculture and Animal Husbandry (*Australian Journal of*), No. 1, (Australian Institute of Agricultural Science), 544
Experimental Animals : Demonstration of Anti-Depressant or Stimulant Properties of Imipramine in (Dr. D. R. Maxwell and Helen T. Palmer), 84
Experimental Apparatus for Contact Microradiography at 200-500 V. (Dr. A. Recourt and G. H. F. de Vries), 1185
Experimental Biology and Medicine, Society for (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Experimental Evidence for the Mechanism of Photosynthesis (Dr. H. T. Witt, A. Müller and B. Rumberg), 194
Experimental Hepatitis in Mice : Blockage of Transformation of Tryptophan to Nicotinic Acid by (M. Piazza, F. Tancredi and Prof. E. Quagliariello), 601
Experimental Medical Research : Feldberg Foundation for German–English Scientific Exchange for, 1143
Experimental Method in Biology from the Time of Antonio Vallisneri to the Present (University of Padua Symposium on), 546
Experimental Morphology, Journal of Embryology and (Editorial Board of the) : International Conference on Embryology, 24
Experimental Silicosis : Immunological Observations in (J. H. Jones and Prof. A. G. Heppleston), 1212
Experimental Transmission of *Borrelia anserina* (Sakharoff 1891) by *Aedes aegypti* (J. A. Roberts), 1225
Experimental Tumor Research : Progress in (edited by F. Homburger), Vol. I, *review* by Prof. F. Bergel, 1231
Experimental Uraemia (Acute) : Elimination of Bovine Serum Albumin in (Dr. G. Gowland, F. G. Smiddy, Dr. R. G. Burwell and F. M. Parsons), 1210
Experimentally Induced Extrahepatic Cholestasis : Immunological Study of (Dr. Roy G. Shorter and R. G. Lack), 610
Experiments on the Compression of Plasma in Cusp Geometry (Dr. T. K. Allen and Dr. R. J. Bickerton), 794
Experiments (Animal), in the Control of Animal Diseases (Research Defence Society Pamphlet on), 226
Experiments (Free-choice) : Comparison between Water and Alcohol Consumption in Six Animal Species in (Dr. Alpo Arvola and Dr. Olof Forsander), 819
Experiments (Voltage-Clamp), with *Nitella* (G. P. Findlay), 812
Exploded Wires : Electrically (Thermal Radiation Laboratory of the Geophysics Research Directorate of the United States Air Force Cambridge Research Laboratories Conference on), 1250
Exploding Wire Plasma : Magnetic Mirror Confinement of (E. J. Seykora), 995
Exploration and Introduction : Plant (Food and Agriculture Organization of the United Nations Technical Meeting on), 1240

Explosions (Nuclear) : Carbon-14 from, as a Short-term Dating System—Use to determine the Origin of Heartwood (Dr. A. T. Wilson), 714
Explosive Crystals : Slow Decomposition of, and their Damage by Fission Fragments (Dr. F. P. Bowden and H. M. Montagu-Pollock), 556
Explosives Technology, *review* by Dr. W. B. Littler, 3
Export : Public Investment and (Sir Walter Benton Jones), 334
Exposure to Air at a Reduced Pressure : Bio-Assay of Erythropoietin in Mice made Polycythaemic by (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Exposure to Cold : Changes in Blood Serotonin during (Dr. Paul Gordon), 183
Exposure (Chronic), to Radiostrontium : Assessment of, by Urinary Assay (Dr. C. L. Comar and Jay Georgi), 390
Expression (Theoretical), for Solubility Product (Prof. B. N. Bhar), 1004 ; (Prof. K. Krishnamurti), 1004
Extensive Air Showers in the Atmosphere : Photography of Cerenkov Light from (D. A. Hill and N. A. Porter), 690
External Conditions : Effect of, on the Phase of Radio Signals (D. E. Watt-Carter and R. L. Corke), 1286
External Sources : Long-Term Effects of Ionizing Radiations from—Report of the Subcommittee on, of the Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 849), 556
Extinction Coefficient (Average), for Re-absorption of Fluorescence Radiation through Uranin Solution (Dr. K. K. Rohatgi and G. S. Singhal), 799
Extracellular Diphtheria Proteins from Culture Filtrates of Different Iron Concentrations : Electrophoretic and Immuno-electrophoretic Patterns of (Bertold J. Radola), 382
Extraction of Heat-Labile Alkaloids from Plants (Dr. A. R. Mattocks), 1281
Extraction of Lipids from the Precursor of the Stylet-Sheath Material of a Pentatomid (P. W. Miles), 911
Extraction (Southern Italian) : Haemoglobin *P* in a Family of (Prof. E. Silvestroni, I. Bianco and C. Brancati), 292
Extractives : Wood (Plant Phenolics Group Meeting on), 229
Extracts (*Grewia populifolia*) : Effects of, on the Development of Chick Embryos (S. K. Brahma and N. Kundu), 506
Extragalactic Radio Sources : Distribution of Brightness in (A. T. Moffet and P. Maltby), 453
Extrahepatic Cholestasis : Immunological Study of Experimentally Induced (Dr. Roy G. Shorter and R. G. Lack), 610
Extra-Mural Libraries (University) in Great Britain : Aims, Organization and Methods of (E. P. Pritchard), 649
Exudative Enteropathy : Calcium Metabolism in Man with Calcium-45—Malabsorption Syndrome and (Dr. G. Milhaud and Dr. P. Vesin), 872
Eye of the Opossum, *Didelphis virginiana* : Cholesterol in the Tapetum Lucidum of the (Antoinette Pirie), 708
Eye (Bee's) : Analysis of Polarized Light by the (Prof. Donald Kennedy and Dr. Edward R. Baylor), 34
Eye Vergence : Barbiturates and (Gerald Westheimer and Cyril Rashbass), 833
Eyes of the Greenland Shark : Copepod *Ommatokoita elongata* (Grant) in the—a Possible Cause of Mutual Dependence (Bjørn Berland), 829
Eyles, Dr. D. E., and others : Isolation of *Plasmodium knowlesi* from Philippine Macaques, 1117
Eyles, J. M. : The Major Achievements of Science, *review*, 110
Eyles, Dr. V. A. : The Life and Scientific Work of Sir James Hall (Bruce-Preller Lecture of the Royal Society of Edinburgh), 345
Eyquem, Dr. A. : Blood Groups in Infra-human Species (Blood Group Investigations—Chimpanzees, Horses, Mules, Donkeys, Sheep, Pigs and Cattle), 655
Eyquem, Dr. A., and others : Serum Factor *Gm*^{a} among the Iranians, 717
Ezra-Cohn, H. E., and Cook, Prof. S. F. : Blood-Typing Compact Human Bone Tissue, 1267

F LAYER Irregularities (Night-time), at the Equator : Height of (Dr. G. S. Kent and Dr. J. R. Koster), 1083
F Region of the Ionosphere : Group and Phase Velocities of a Travelling Disturbance in the (Dr. L. H. Heisler and Dr. J. D. Whitehead), 157
Fabric of the Heavens (Dr. Stephen Toulmin and June Goodfield), *review* by Dr. M. A. Hoskin, 840
Face-centred Cubic Molybdenum Monocarbide : A New Phase formed by High-Pressure Treatment— (E. V. Clougherty, K. H. Lothrop and J. A. Kafalas), 1194
Fact Sheets on U.S. Nuclear Power Projects, third edition, 958
Factor (Intrinsic) : Vitamin B$_{12}$ and (European Symposium on), 1154
Factor (Rigidity), of Gelatin Gels (Dr. Audrey Todd), 567
Factories : Colouring in (Factory Buildings Studies No. 8, Department of Scientific and Industrial Research), 336
Factories : Colouring in (Factory Buildings Studies No. 8, Department of Scientific and Industrial Research), 336
Factors influencing the Composition of the Cellulose-decomposing Microflora on Soil Crumb Plates (A. Keynan, Y. Henis and P. Keller), 307
Factors controlling the Growth of Etiolated Oat Seedlings : Carbon Dioxide and Ethanol as (Dr. C. L. Mer), 260
Factors (Environmental), and Bryophytes (Kathryn Benson-Evans), 255
Factors (Serum) : Influence of, on the Species-specificity of Tissue Thromboplastin (Christine Hawkey and J. L. Stafford), 920
Factory (Chemical) : Quality Measurement in the (A. J. Clark and C. W. Munday), (Department of Scientific and Industrial Research), 752
Factory Buildings Studies No. 8 : Colouring in Factories (Department of Scientific and Industrial Research), 336
Facts and Figures about Viewing and Listening (British Broadcasting Corporation), 1051
Facts and Theories of Shape Discrimination (Dr. P. C. Dodwell), 578 ; (Dr. N. S. Sutherland), 581
Faeces (Human) : Isolation of Sterol Esters from (Francis Aylward and Pamela Wills), 1397
Fahmy, Dr. Myrtle J. (Fahmy, Dr. O. G., and) : Induction of Mutations by Deoxyribonucleic Acid in *Drosophila melanogaster*, 776
Fahmy, Dr. O. G., and Fahmy, Dr. Myrtle J. : Induction of Mutations by Deoxyribonucleic Acid in *Drosophila melanogaster*, 776
Failure of a Dog to Discriminate between Strontium-90 and Calcium given Orally (Dr. Betsy J. Stover, M. Goldman and A. C. Andersen), 713
Failure of Nucleotides to Diffuse Freely into the Embryo of *Pteridium aquilinum* (P. R. Bell), 91
Falconer, Dr. D. S., and Bloom, Dr. Joyce L. : Inheritance of Susceptibility to Induced Pulmonary Tumours in Mice, 1070
Falls (Meteorite), throughout the Ages : The Frequency of (Prof. Herbert Dingle), 482 ; (Prof. Hans Pettersson), 482
Family of Southern Italian Extraction : Haemoglobin *P* in a (Prof. E. Silvestroni, I. Bianco and C. Brancati), 292
Family (English Family and in a German) : Thalassaemia in an (Dr. F. Vella and S. A. Ibrahim), 822
Family (A New), of Potent Carcinogens—Benzopyridocarbazoles (Prof. A. Lacassagne, Prof. N. P. Buu-Hoï, F. Zajdela, F. Périn and P. Jacquignon), 1005
Family (Puerto Rican) : The Diego Factor in a—a case of Anti-Diego in Monozygotic Twins (Dr. Hubert J. Van Peenen, Dr. John Scudder, James A. Jack and Erika Awer), 188
Family (Sardinian) : Association of Haemoglobin *N* and Microcythaemia in a (Prof. E. Silvestroni and I. Bianco), 1208
Far Infra-Red : A Proposal for a Tunable Source of Radiation for the, using Beats between Optical Masers (Dr. D. C. Lainé), 795
Far-Red Irradiation (Red and) : Effect of, on the Germination Process in Seeds of *Pinus sylvestris* L. (Bengt Nyman), 1219
Far Ultra-Violet : Irradiated Lithium Fluoride as an Optical Filter in the (J. L. Weeks, S. Gordon and G. M. A. C. Meaburn), 1186
Faraday Society : Informal Discussion on Graphite, 27
  General Discussion on the Structure and Properties of Ionic Melts, 338, 443
Farm Buildings : Bibliography of Research Publications on, Section 5, Buildings for the Drying and Storage of Grain (Agricultural Research Council), 440
Farm Buildings in Britain : Survey of (Agricultural Research Council), 440
Farmer, J. B., and Petch, B. : Electrolyte Retention produced by the Anti-aldosterone *SC* 5233, 1308
Farmilo, C. G., and others : Essential Oil from Fresh *Cannabis sativa* and its Use in Identification, 774
5,10,15 ^{14}C-Farnesol Pyrophosphate : Incorporation of, into *Phycomyces carotenoids* (H. Yamamoto, H. Yokoyama, K. Simpson, T. O. M. Nakayama and C. O. Chichester), 1299
Farradane, J. : The National Reference Library of Science and Invention, 734
Fast-Neutron Spectroscopy (B. V. Rybakov and V. A. Sidorov), (edited by N. A. Vlasov), translated from the Russian, *review* by Dr. P. A. Egelstaff, 8
Farrington, Prof. B. : Science and the Classics, 1337
Fat : Metabolic Production of Sucrose from (Prof. H. Beevers), 433
  Role of the Lung in Metabolism of, during Ontogeny of the Rat (Dr. Z. Vacek, P. Hahn and O. Koldovsky), 85
Fatigue in a Fluid-filled Pulsating Elastic Tube (Group-Capt. John Erskine Malcolm), 1012
Fatty Acid Esters of Riboflavin : Hydrolysis of, by Pancreatic Lipase (Prof. Kunio Yagi, Yoshiko Yamamoto and Jun Okuda), 174
Fatty Acids (Free) : Stimulation of Lipogenesis in Thyroid Tissue *in vitro* by (Prof. Norbert Freinkel, Dr. Augusto D. Litonjua and Edward C. Saef), 804
Fatty Acids (Polyenoic) : Biosynthesis of, in Human Whole Blood (Dr. F. Leupold and G. Kremer), 805
Fault (Great Glen) : Continuation of the, beyond the Moray Firth (Dr. Derek Flinn), 589 ; (Dr. Robert M. Appleby), 1190
Fauna ('Lusitanian') : Origin of the British Insular Races of Small Mammals and of the (G. B. Corbet), 1037
Favelukes, Dr. G., and others : Control of Specificity in Haemoglobin Synthesis, 1365
Fazekas de St. Groth, Prof. S. : Evaluation of Quantal Neutralization Tests, 891
Fearnhead, R. W. : Title of reader in dental anatomy in the University of London (at the London Hospital Medical College) conferred on, 229
Feasible Directions : Methods of—a Study in Linear and Non-Linear Programming (Dr. G. Zoutendijk), *review* by Dr. M. V. Wilkes, 9.
Feather Keratin : Structure of (the late Prof. W. T. Astbury and E. Beighton), 171
Featherstone, M. S., and Cunningham, Catherine (Alistair Heron and Sheila M. Chown, assisted by) : Ageing and the Semi-Skilled—a Survey in Manufacturing Industry on Merseyside (Medical Research Council, Memorandum No. 40), 1249
Fecundity and Ageing (Blood-Feeding,), in *Aedes aegypti* var. *Queenslandensis* (Dr. M. M. J. Lavoipierre), 575
Federal Technical College, Zurich : Appointment of Dr. W. F. Berg as professor of the Photographic Institute, 1043
Federation of Malaya Institute for Medical Research : Studies from the, No. 29, Malaysian Parasites, 35-49 (edited by W. W. Macdonald), *review* by P. F. Mattingly, 948
Feedback Inhibition controlling the Biosynthesis of Isoleucine : Release from the (Masaya Hayashibe and Teijiro Uemura), 1417
Feedback Mechanism (A Positive), of Adenosine Triphosphate Synthesis in Erythrocytes (Makoto Nakao, Takashi Motegi, Toshiko Nakao, Saburo Yamazoe and Haruhisa Yoshikawa), 283
Feeding (Blood-), Fecundity and Ageing in *Aedes aegypti* var. *Queenslandensis* (Dr. M. M. J. Lavoipierre), 575
Feeding (Thyroid) : Augmentation of Toxicity of Monoamine Oxidase Inhibitor by (Richard N. Carrier and Dr. Paul V. Buday), 1107
Feeding Conditions (Normal) : Soluble Material in the Gastro-intestinal Tract of Rats under (Dr. Anne S. Cole), 502
Fehér, Dr. I., and others : Effect of Amino-Acid Esters on the Growth of Fibroblast Cultures, 494
Fehr, Howard (edited by) : Report on the School Curriculum in Mathematics (Organization for European Economic Co-operation), 335
Feibelman, Walter A. : The Alpha Virginis (Spica) Nebula, 1083
Feinberg, Dr. H. : Relationship between Velocity of Cardiac Contraction and Size of the Heart—a Hypothesis, 1373
Feinberg, Dr. J. G. : Pinnal Anaphylaxis, an Additional Anaphylactic Site, 712
Feinendegen, Dr. L. E., and others : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture, 1398
Feldberg Foundation for German–English Scientific Exchange for Experimental Medical Research, 1143

Fellowship : The Selby, 24
Fellowships : IBM Research (International Business Machines, United Kingdom, Ltd.), 442
  Industrial Research (J. Langham Thompson, Ltd.), 545
  Science Study (Unesco), 1250
  Wellcome Research (Animal Health Trust Awards), 1250
Fellowships in Chemistry (Ramsay Memorial Trust Awards for 1961-62), 337
Fellowships for Plankton Research (Lamont Geological Observatory), 754
Fellowships (Harkness) for 1962 of the Commonwealth Fund, New York, 1045
Fellowships (Eleanor Roosevelt), for Research on Cancer (International Union against Cancer), 125
Fellowships (Post-Doctoral), in Protein Chemistry (Division of Protein Chemistry of the Australian Commonwealth Scientific and Industrial Research Organization), 336
Fellowships (Research) : Carlsberg–Wellcome (Awards for 1960-61), 754
Fellowships and Grants in the field of Radiology and Nuclear Medicine for 1962-63 (James Picker Foundation), 228
Female Rat Flea, *Xenopsylla cheopis* Roths. : An Abnormal Form of (M. I. D. Sharma and G. C. Joshi), 727
Female Rats (Suckled and Unsuckled) : Induction of Cancer in (Prof. Giuliano Briziarelli), 921
Feng, Dr. P. C., and others : High Concentration of (–)-Noradrenaline in *Portulaca oleracea* L., 1108
Fermentation of a Synthetic Medium lacking Amino-acids : Formation of Phenethyl Alcohol and Tyrosol during (R. Stevens), 913
Fern Embryos in Sterile Culture : Growth of (Prof. Augustus E. DeMaggio and Prof. Ralph H. Wetmore), 94
Fernald, G. W. (Csáky, Dr. T. Z., and) : Localization of the 'Sugar Pump' in the Intestinal Epithelium, 709
Fernando, S. T. : Parasite Biology (Developmental Stages of *Mecistocirrus digitatus*), 135
Ferns : Antimicrobial Substances from (Prof. Jasper C. Maruzzella), 518
Ferri, A., and Ling, T. : Space-Flight and Re-entry Trajectories (Dynamics of Terminal Re-entry—Effect of Varying Lift on Re-entry Trajectories), 960
Ferric Dimethyldithiocarbamate : Effect of, on the Rooting of Cuttings of *Hevea brasiliensis* (G. H. Tinley), 1217
Ferrites (Manganese and Nickel) : Magnetic Relaxation in Magnetite and in its Solid Solutions with (A. Bragiński and Th. Merceron), 898
Ferro-Alloy Industry in India (National Metallurgical Laboratory, Jamshedpur, Symposium on), 1144
Ferrobacillus ferrooxidans : Morphological Variation in, related to the Rate of Iron Oxidation (M. P. Silverman and M. H. Rogoff), 1221
Ferrous Solutions : Radiolytic Oxidation of, with Standardized Internal Sources of Polonium-210 (J. Steyn and D. van As), 903
Fertility in the Domestic Fowl : Effect of Varying Doses of Undiluted Semen on (G. C. Taneja and R. S. Gowe), 828
Feulgen-Stained Somatic Cell Nucleus as a Homogeneously Absorbing Object (Dr. Simon Iversen), 150
Fever (Rheumatic) : Amino-acid Composition of Serum Mucoprotein in (Prof. D. O'Brien, C. H. M. Walker and D. Walker), 922
Few : The Chosen—an Examination of some Aspects of University Selection in Britain (W. D. Furneaux), *review* by Dr. W. H. King, 947
Fibre (Active Muscle) : Ionic Currents in Membrane of (Dr. H. Jenerick), 1074
Fibre Optics : A Hypodermic Probe using (David D. Capellaro, Narinder S. Kapany and Dr. Charles Long), 927
Fibres (Insect Muscle) : Spontaneous Miniature Potentials from (P. N. R. Usherwood), 814
Fibres (Muscle Target), a Newly Recognized Sign of Denervation (Dr. W. K. Engel), 389
Fibres (Taste), in the Carp : Function of (Jihei Konishi and Prof. Yngve Zotterman), 286
Fibrin : Conversion of, to Desmofibrin (K. Buluk, T. Januszko and J. Olbromski), 1093
Fibrinolysins : Demonstration by Paper Electrophoresis of an Auto-Immunological Precipitin possibly due to (Marion I. Cooper and J. R. Sykes), 1212
Fibrinolysis (Spontaneous Plasma) : Determination of, by a Practical Procedure (Dr. H. Yatzidis), 604
Fibroblast Cultures : Effect of Amino-Acid Esters on the Growth of (Dr. I. Fehér, A. Döklen and V. Selmeci), 494
Fibrous Silica (Dr. Wolfgang Haller), 662
Field Museum of Natural History, Chicago : Botanical Series, Vol. 13, Part 5, No. 1, Flora of Peru (J. Francis Macbride), *review* by N. Y. Sandwith, 214
Fielder, Dr. Gilbert : Structure of the Moon's Surface, *review* by D. H. P. Jones, 424
Figgis, B. N., and others : Inorganic Polymers (Dialkyl Tin Oxides), 1047
Figures (Facts and), about Viewing and Listening (British Broadcasting Corporation), 1051
Filamentous Saprophyte from Wookey Hole Caves : Further Observations on a (Dr. A. J. Willis), 724
Film (Clean Rhodium): Reaction of Ethane with a (Dr. Richard W. Roberts), 170
Films (Evaporated Carbon), of Large Area for Adsorption Studies by Electron Bombardment (A. E. Bell, J. Pritchard and Prof. K. W. Sykes), 487
Films (Nickel-Iron) : Variation of Anisotropy Axis Dispersion with Thickness of (H. Clow), 996
Filter (Optical), in the Far Ultra-Violet : Irradiated Lithium Fluoride as an (J. L. Weeks, S. Gordon and G. M. A. C. Meaburn), 1186
Filter Pads (Asbestos), for Virus Filtration : A Method of treating (N. St. G. Hyslop), 305
Filter Paper Chromatograms : A Spray Method for the Simultaneous Detection of Iodide and Iodinated Amino-Acids on (Dr. A. Van Zyl and M. Bhaga), 275
Filter Theory : Perceptual Defence and (Neville Moray), 940
Filtrate (Culture), of *Helminthosporium sativum* : Production of Symptoms of Barley Leaf-Spot Disease by (S. K. Gayed), 725
Filtrates (Culture), of Different Iron Concentrations : Electrophoretic and Immuno-electrophoretic Patterns of Extracellular Diphtheria Proteins from (Bertold J. Radola), 382
Filtration' ('Gel), of Organic Compounds (B. Cortis-Jones), 272
Filtration (Gel), of Sea-Water—Separation of Free and Bound Forms of Vitamin B_{12} (Dr. K. W. Daisley), 868
Filtration (Virus) : A Method of Treating Asbestos Filter Pads for (N. St. G. Hyslop), 305
Financing Government Research in Great Britain, 205
Finches (Weaver-), *Quelea quelea* : Melanism in Captive (Dr. B. Lofts), 993
Findlay, G. P. : Voltage-Clamp Experiments with *Nitella*, 812
Fine, B. C. : Pattern of Pyrethrin-resistance in Houseflies, 884
Fine, Dr. J. M., and others : Electrophoresis in a Thin Layer of Starch-Gel followed by a Plastifying Treatment, 72
Fine Measuring Instruments (Fourteenth International Instructional Course by Carl Zeiss, Jena, at the Imperial College of Science and Technology, London), 1045
Fine Structure (Genetic), of the *ad*$_7$ Locus of *Schizosaccharomyces pombe* : Distribution of X-Ray- and Nitrous Acid-induced Mutations in the (Dr. Herbert Gutz), 1127
Finger, G. C., and Starr, L. D. : 2,6-Difluoropyridine, 595
Finlay, Ian R. : Appointed director of the Royal Scottish Museum, Edinburgh, 648 ; work of, 648
Finlayson, Dr. L. H. : A New Approach to Biology Teaching, 554
Firsoff, V. A. : Surface of the Moon, *review* by D. H. P. Jones, 424
Firsov, G. G., and others : A Soviet View of British Libraries (translated by A. Thompson), (Library Association, Pamphlet No. 22), 752
First Anthocyanins appearing during the Ripening of Blueberries (Dr. Heikki Suomalainen and A. J. A. Keränen), 498
First Motion of a Refracted *P*-Wave : Possible Method for Increasing the Signal-Noise Ratio in the Detection of the (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382
First Pamphlet on Clear Air, 752
First Science Museum : Africa's (Murray Schoonraad), 848
Fischer, Dr. R., and others : Taste Thresholds and Food Dislikes, 1328
Fish : Expected Rate of Senescence and Age-dependent Mortality in (Dr. Alex Comfort), 822
Fish in Nutrition (Food and Agriculture Organization of the United Nations International Conference on), 1045
Fish (Hydrogen Ion Concentration, Plankton and), in Fresh-water Eutrophic Lakes of India (Dr. S. M. Das), 511
Fish (Marine Teleost), *Pollachius virens* : Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Fish Muscle : Cholinergic Transmission in (K. Krnjević), 1403
Fisher, Sir Ronald A. : Elected a Member of the Biology Section of the Leopoldina German Academy of Sciences, 122
Fisheries (Salmon and Freshwater), Committee on : Report of the, 962
Fishes (Air-breathing) : A Hydrostatic Function of the Accessory Respiratory Organs in (Dr. S. Z. Qasim and R. Hasan), 396
Fishing in Madagascar (Dr. Rudolph Kreuzer), 238
Fishing (Salmon and Freshwater), in Great Britain (Dr. J. W. Jones), 962
Fishing Research Vessel (Food and Agriculture Organization of the United Nations Forum on the), 229
Fission Fragments : Damage in Stainless Steel due to (P. R. B. Higgins and A. C. Roberts), 1158
  Slow Decomposition of Explosive Crystals and their Damage by (Dr. F. P. Bowden and H. M. Montagu-Pollock), 556
Fission and Spallation Phenomena and their Application to Cosmic Rays (European Organization for Nuclear Research and the Max Planck Institute, Heidelberg, Conference on), 24
Fitt, E., and others : Isolation and Properties of Deoxyribonucleic Acid from Mammalian Sperm, 1375
Fitzwilliam Museum, Cambridge : Annual Report for 1960, 1249
Fixation of Yeast Protoplasts for Electron Microscopy (Dr. P. F. Elbers), 1022
Fixation (Dark-) of Carbon Dioxide in Leaves of *Bryophyllum fedtschenkoi* : An Endogenous Rhythm in the Rate of (Diana M. Warren and Malcolm B. Wilkins), 686
Fixation (Symbiotic Nitrogen) : Root Temperature and (A. H. Gibson), 1080
Fixative (New), for Histological Work : Ethylene Glycol Monomethyl Ether, a (Prof. Walter B. Shelley and Ralph Florence), 719
Fixatives (Formalin) : Use of Veronal Buffers in (Dr. S. J. Holt and Dr. R. Marian Hicks), 832
Flagellum (Flimmer-) of the Sponge (Björn A. Afzelius), 1318
Flagle, Charles D., and others : Operations Research and Systems Engineering, *review* by Prof. L. S. Goddard, 105
Flames (Diborane–Hydrazine) : Formation of Boron Nitride in (W. G. Berg and W. E. Wilson), 380
Flash-Lamp : Photo-Polarography with a (Dr. H. Berg and H. Schweiss), 1270
Flavonoid Content of Resistant and Susceptible Strains of Cotton : Leaf Curl Virus and the (Dr. Esam M. Moustafa), 415
Flea (Female Rat), *Xenopsylla cheopis* Roths. : An Abnormal Form of (M. I. D. Sharma and G. C. Joshi), 727
Fleas (Siphonaptera) : Double and Single Spermathecae in (Hon. Miriam Rothschild), 1322
Fleming, Dr. Launcelot : The Humanity of Man, 1229
Fleming Memorial Fund for Medical Research : Grants from the, 959
Fleš, D., and others : Inhibition of Chemi-Luminescence of Luminol by means of Oximes, 177
Flies (Dragon-) : Spiracle Control in (Dr. P. L. Miller), 621
Flies (House-) : Pattern of Pyrethrin-resistance in (B. C. Fine), 884
Flight (Space-) and Re-entry Trajectories (International Academy of Astronautics Symposium on), 960
Flimmer-flagellum of the Sponge (Björn A. Afzelius), 1318
Flinn, Dr. Derek : Continuation of the Great Glen Fault beyond the Moray Firth, 589
Floor : The Ocean, *review* by Dr. G. E. R. Deacon, 531
Floors of the Oceans, I, The North Atlantic—Text to accompany the Physiographic Diagram of the North Atlantic (Bruce C. Heezen, Marie Tharp and Maurice Ewing), (Geological Society of America, Special Paper 65), *review* by Dr. G. E. R. Deacon, 531
Flora (The Changing), of South-East England (J. E. Lousley), 133
Flora of Peru (J. Francis Macbride), *review* by N. Y. Sandwith, 214
Flora Europaea : Second Symposium on (Dr. V. H. Heywood), 446
Floral Initiation in Cocksfoot (*Dactylis glomerata* L.) : Effect of Spacing and Nitrogen-level on (D. M. Calder and J. P. Cooper), 195

Floras (Lower Tertiary), of Southern England (Marjorie Elizabeth Jane Chandler), I, Palaeocene Floras, London Clay Flora (Supplement), *review* by Prof. John Walton, 209
Floras (Tropical), in the Tertiary in Southern England, *review* by Prof. John Walton, 209
Florence, Ralph (Shelley, Prof. Walter B., and) : Ethylene Glycol Monomethyl Ether, a New Fixative for Histological Work, 719
Florey, Sir Howard : Elected an Honorary Fellow of the Royal College of Surgeons of England, 126
Florkin, Prof. Marcel : Elected a Member of the Biochemistry Section of the Leopoldina German Academy of Sciences, 122
Flotation : Power Requirements and Scale-up in (Prof. Nathaniel Arbiter and Prof. Colin C. Harris), 268
Flow of Dry Granules through Apertures : Minimum Energy Theorem for (R. L. Brown), 458
Flow (Rheopectic) : A Clear Instance of (J. B. Yannas and R. N. Gonzalez), 1384
Flow Calorimeter (Continuous) : Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of High Surface Area using a (G. H. Bell and A. J. Groszek), 1184
Flower Initiation in the Carnation in Response to Photoperiod (Dr. G. P. Harris and Juliet E. Griffin), 614
Flower Initiation in Kent Wild White Clover (*Trifolium repens* L.), under Controlled Environmental Conditions (R. J. Haggar), 1120
Flowering and Internode-Length in *Pisum sativum* : Effects of Gibberellic Acid and Allogibberic Acid on (I. C. Murfet and H. N. Barber), 514
Flowers : Enzymic Breakdown of Stigmatic Cuticula of (W. Heinen and H. F. Linskens), 1416
Fluctuations (Seasonal), and Distribution of Nitrite in a Tropical West African Estuary (J. C. D. Watts), 929
Fluid Mechanics at Glasgow, 853
Fluid–Fluid Interfaces in Steady Motion (Prof. Walter Rose), 242
Fluid-filled Pulsating Elastic Tube : Fatigue in a (Group-Capt. John Erskine Malcolm), 1012
Fluids and Excreta (Internal Organs,), of Rabbits : Effect of Polyvinyl Alcohol on the Distribution of Iodine-131 in the (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Fluorescein-labelled Conjugates : Simplified Procedure for Removing Nonspecific Staining Components from (G. D. Johnson), 70
Fluorescence Radiation : Average Extinction Coefficient for Re-absorption of, through Uranin Solution (Dr. K. K. Rohatgi and G. S. Singhal), 799
Fluorescence and Ultra-violet Absorption Spectra of 3,4-Benzopyrene : Effect of Ozone on the (Z. Morlin and K. M. Sáringer), 907
Fluorescent Material : Use of a Different Type of, as an Optical Maser (Jordan J. Markham and Dickron Mergerian), 586
Fluoride : Differential Inhibition of Human Serum Cholinesterase with—Recognition of Two New Phenotypes (Prof. H. Harris and Mary Whittaker), 496
Fluoride-compensated Substitution of Bivalent Cations in the Magnetoplumbite Structure (Prof. E. Banks and M. Robbins), 1387
Fluoride (Irradiated Lithium), as an Optical Filter in the Far Ultra-Violet (J. L. Weeks, S. Gordon and G. M. A. C. Meaburn), 1186
Fluoride (Sodium) : Effect of, on Calcium Metabolism of Human Beings (Dr. Clayton Rich and John Ensinck), 184
Fluorine Chemistry, *review* by Dr. Richard Dresdner, 319
  Advances in (edited by Prof. M. Stacey, Prof. J. C. Tatlow and Dr. A. G. Sharp), Vol. I, *review* by Dr. Richard Dresdner, 319
p-Fluorophenylalanine : Effect of, on the Multiplication of Foot-and-Mouth Disease Virus (F. Brown, D. N. Planterose and Doreen L. Stewart), 414
  Influence of, on the Production of Viral Ribonucleic Acid and on the Utilizability of Viral Protein during Multiplication of Fowl Plague Virus (Dr. Christoph Scholtissek and Rudolf Rott), 1023
5-Fluorouracil : Effect of, on Hepatic Induced Increase of Tryptophan-Pyrrolase (Sancia Gaetani and M. Antonietta Spadoni), 1296
Fluorverbindungen (Organischen) : Chemie der (Milos Hudlicky), *review* by Dr. Richard Dresdner, 319
'Flux' : Neutron (K. L. Stretch), 60 ; (Dr. W. R. Harper), 695
Fly (Blow-), *Phormia regina* Meigen : Response of the Labellar Hairs of the, to Protein (D. I. Wallis), 917
Fly (Damsel-) Pigments : Isolation and Fractionation of some (C. B. Coulson and P. Mary Lord), 1300
Fodor, Prof. G., and others : Chemical Character of the Pigments of a New Nitrogen-fixing Micro-organism, 1413
Foetal Haemoglobins : Abnormal (Prof. E. Silvestroni and I. Bianco), 397
Foetal and Neonatal Physiology (*British Medical Bulletin*, Vol. 17, No. 2), (British Council), 344
Fogh, J. E. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Radiation affects Cell Division much more than Cell Growth), 340
Foldes, L. P. : Appointed to the University of London readership in economics at the London School of Economics and Political Science, 651
Folinic Acid : Enzymic Conversion of Tetrahydrofolic Acid to, by Plant Protein (E. H. Byers, J. Stewart and T. J. Bond), 179
Folk-life Study, Society for : Formation of a, 544
Folkers, C. S. (Soltys, M. A., and) : Immunity to Protozoa (Immunity in Trypanosomiasis), 552
Folkes, B. F., and others : An Introduction to the Biology of Micro-organisms, *review* by Prof. B. C. J. G. Knight, 1032
Follicle (Skin) Population : Composition of the, in Seven Rajasthan Sheep Breeds (Sunanda Narayan), 1115
Follicles (Testis), in Miridae : The Number of (Dennis Leston), 93
Fomes annosus : Inoculation of Pine Stumps against Infection by (Dr. J. Rishbeth), 826
Fonds National de la Recherche Scientifique : Trente-troisième Rapport Annuel, 441
Food Dislikes : Taste Thresholds and (Dr. R. Fischer, F. Griffin, S. England and S. M. Garn), 1328
Food Science (Australian Commonwealth Scientific and Industrial Research Organization Conference on), 337, 546
Food Technology : European Symposium on, 959
Food and Agriculture Organization (United Nations) : Forum in Tokyo on the Fishing Research Vessel, 229
  Meetings on Nutrition in Latin America, 959
  Appointment of Dr. Fabian Recalde as a nutrition officer, 1045
  International Conference on Fish in Nutrition, 1045
  Technical Meeting on Plant Exploration and Introduction, 1240
Food and Agriculture Organization (United Nations), and others : Conference on the Use of Radioisotopes in Animal Biology and the Medical Sciences, 959
Food and Drug Directorate : Research in the (Dr. Ross A. Chapman), 335
Foods (Honeybee Larval) : Chromatographic Investigation of the Methly Alcohol/Chloroform-soluble Constituents of (N. G. Patel, M. H. Haydak and R. Lovell), 362
Foodstuffs : Freeze-drying of (Borough Polytechnic, London, Symposium on), 651
Foot-and-Mouth Disease Virus : Effect of *p*-Fluorophenylalanine on the Multiplication of (F. Brown, D. N. Planterose and Doreen L. Stewart), 414
Forces (Interparticle) : Role of, in Development of Upper Plastic Limit of Clays (Dr. Raymond Yong and E. T. Selig), 938
Ford, the late L. T. : Collection of British Microlepidoptera belonging to, acquired by the British Museum (Natural History), 124
Foreign Languages (Science, Librarianship and) : Science Information Personnel—the New Profession of Information combining (Leonard Cohen and Kenneth Craven), 452
Forest Ecosystem : Proceedings of the Symposium on (Montreal, 1959), (International Society for Tropical Ecology), 755
Forest Insect Pests and Diseases in Canada (Prof. M. L. Anderson), 1260
Forest Products Research 1960—Report of the Products Research Steering Committee with the Report of the Director of Forest Products Research (Department of Scientific and Industrial Research), 760
Forestry, Canada Department of (Forest Entomology and Pathology Branch) : Annual Report of the Forest Insect and Disease Survey (1960), 1260
Forestry, Director of (New Zealand) : Report for 1959-60, 451
Forestry Commission : Forty-fifth Annual Report for 1959-60, 656
Forestry (State), in Great Britain : Four Decades of (Prof. M. L. Anderson), 656
Forestry (State), in New Zealand : Four Decades of, 451
Form (An Abnormal), of Female Rat Flea, *Xenopsylla cheopis* Roths. (M. I. D. Sharma and G. C. Joshi), 727
Formaldehyde : Mechanism of Mutagenesis induced by—the Essential Role of the 6-Amino-Group of Adenylic Acid (or Adenosine) in the Mediation of the Mutagenic Activity of Formaldehyde (Dr. Thomas Alderson), 251
Formalin Fixatives : Use of Veronal Buffers in (Dr. S. J. Holt and Dr. R. Marian Hicks), 832
Formation of Boron Nitride in Diborane–Hydrazine Flames (W. G. Berg and W. E. Wilson), 380
Formation of Calcium Chloraluminate by Interaction of Portland Cement with Sea-Water and Chloride Solutions (Dr. L. Heller and Dr. M. Ben-Yair), 488
Formation of Chalcopyrite by Reaction between Chalcocite and Pyrrhotite in Cold Solution (W. M. B. Roberts), 560
Formation of Chlorophyll in the Leaves of Etiolated Pea Plants : Correlative Inhibition of (Jiří Ulehla), 613
Formation of *G.P.* Zones (Clusters rich in Solute) : Resistivity Changes due to (H. Herman and Prof. J. B. Cohen), 63
Formation of 5-Hydroxytryptamine in an Aqueous Solution of 5-Hydroxytryptophan treated with X-Rays (M. Jović and Z. Supek), 383
Formation of Phenethyl Alcohol and Tyrosol during Fermentation of a Synthetic Medium lacking Amino-acids (R. Stevens), 913
Formation (Dimer), and Glucose Transfer across the Membrane of the Red Blood Cell (Dr. W. D. Stein), 1277
Formation (Dimer), and the Transfer of Glycerol across the Erythrocyte Membrane (Dr. W. D. Stein), 352
Formation (Lanthionine), in Keratin (Dr. C. Earland and D. J. Raven), 384
Formation (Radiation-induced), and Reactions of the Formyl Radical Ion (John Holian, Dr. George Scholes and Prof. Joseph J. Weiss), 1386
Formation (Supposed), of Hydrogen Peroxide during the Autoxidation of Haemoglobin : Reactions of Haemoproteins with Hydrogen Peroxide and the (Prof. D. Keilin), 769
Formation (Ternary Compound), in the System $CaO–Al_2O_3—MgO$ (J. H. Welch), 559
Formation and Structure of Paper (Technical Section of the British Paper and Board Makers' Association Conference on), 126
Formation and Utilization of Poly-β-Hydroxybutyric Acid by Knallgas Bacteria (*Hydrogenomonas*), (Prof. H. G. Schlegel, G. Gottschalk and R. von Bartha), 463
Forms (α- and β-), of Selected Sugars : Relative Sweetness of (Rose Marie Pangborn and Sandra C. Gee), 810
Forms (Culture), of *Trypanosoma rhodesiense* : Cyclical Infection of *Glossina mortisans* with (the late Prof. R. M. Gordon and J. K. Miller), 1317
Forms (Free and Bound), of Vitamin B_{12} : Gel Filtration of Sea-Water—Separation of (Dr. K. W. Daisley), 868
Formyl Radical Ion : Radiation-induced Formation and Reactions of the (John Holian, Dr. George Scholes and Prof. Joseph J. Weiss), 1386
Forsander, Dr. Olof (Arvola, Dr. Alpo, and) : Comparison between Water and Alcohol Consumption in Six Animal Species in Free-choice Experiments, 819
Forstwirtschaft (Land- und), Biologische Bundesanstalt für : Proceedings of the Fourth Conference on Potato Virus Diseases, Braunschweig, 1960 (edited by J. Brandes, R. Bartels, V. Völk and C. Wetter), 657
Forsyth, D. C. T. (Cooper, G. A., and) : *Pneumodermopsis paucidens* in the North Sea, 1412
Forthcoming International Scientific and Technical Conferences (Department of Scientific and Industrial Research, List No. 29), 959
Fossil Chlorins in a Triassic Sediment (Max Blumer and Gilbert Omenn), 161
Fothergill, Dr. P. G. : Issues in Evolution, *review*, 425
Foundations of Modern Analysis (Prof. J. Dieudonné), *review* by Prof. L. S. Goddard, 6
Four Decades of State Forestry in Great Britain (Prof. M. L. Anderson), 656
Four Decades of State Forestry in New Zealand, 451
Four-fold Co-ordination of Titanium in Barium Orthotitanate : Infra-Red Spectroscopic Evidence of (P. Tarte), 1002
Fowl (Domestic) : Effect of Varying Doses of Undiluted Semen on Fertility in the (G. C. Taneja and R. S. Gowe), 828
Fowl Plague Virus : Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the Utilizability of Viral Protein during Multiplication of (Dr. Christoph Scholtissek and Rudolf Rott), 1023

Fraction (Alkaloidal), from the Bark of the Jamaican Shade Tree *Pithecolobium samath* Benth. : Pharmacology of the (B. E. Leonard and Dr. H. S. A. Sherratt), 287
Fractionation of some Damselfly Pigments : Isolation and (C. B. Coulson and P. Mary Lord), 1300
Fractionation (Chromatographic), of Hog Thyroglobulin (Prof. Nobuo Ui, Osamu Tarutani, Yoichi Kondo and Hiroko Tamura), 1199
Fractionation (Ribonucleic Acid) : Modified Cellulose Ion Exchangers and their Use in (Dr. L. Bosch, G. van der Wende and Dr. H. Bloemendal), 349
Fractionation (Sub-) of Human Serum Leucine Aminopeptidase (Prof. Clyde A. Dubbs, Charlotte Vivonia and Jean M. Hilburn), 1203
Fractions (Cell), from Myocardial Slices : Effect of Adrenalectomy and Corticosteroids on Distribution of Radioactivity in Protein of (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Fractions (Collagen), in the Skin of New-born and Adult Rats (Nestor Gonzalez Cadavid, Berta Denduchis and Roberto E. Mancini), 1297
Fractions (Serum Protein), of the Newly Hatched Chick : Comparison of the, with those of Adult Birds using Starch-gel Electrophoresis (A. Amin), 708
Fractions (Sub-Cellular), of the Brain of the Rat during 'Metrazol' Convulsions : Changes in the Pentose-Nucleic Acid Content of (Prof. G. P. Talwar, B. Sadasivudu and V. S. Chitre), 1007
Fracture and Fusion of Coccid Chromosomes (Prof. W. Spencer Brown), 1419
Fraeijs de Veubeke, B. : Space-Flight and Re-entry Trajectories (Orbital Transfer and Rendezvous), 960
Fraenkel, Prof. Abraham : Abstract Set Theory, second edition, *review* by Dr. R. G. Cooke (June 17, 1047), *erratum*, 126
Fragaria (Strawberry) : Identity of L-Ascorbic Acid formed from D-Glucose by the (Dr. Frank A. Loewus and Stanley Kelly), 1059
Fragments (Fission) : Damage in Stainless Steel due to (P. R. B. Higgins and A. C. Roberts), 1158
  Slow Decomposition of Explosive Crystals and their Damage by (Dr. F. P. Bowden and H. M. Montagu-Pollock), 556
France : Megalithic Tombs of, *review* by Prof. C. F. C. Hawkes, 637.
  The Prehistoric Chamber Tombs of (Dr. Glyn Daniel), *review* by Prof. C. F. C. Hawkes, 637
Francis, Sir Frank : At the sixty-seventh Annual Conference of the Museums Association (The Problem of Display), 553
Francki, Dr. R. I. B., and Matthews, Dr. R. E. F. : Stimulation of Turnip Yellow Mosaic Virus Protein Production by 2-Thiouracil, 1078
Frank, Prof. F. C. : X-Ray Diffraction Spikes of Diamond, 1188
Frank, O., and others : Vitamin-Levels in Blood and Serum, 78
Franklin, Prof. Kenneth J. : William Harvey—Englishman, 1578-1657, *review*, 740
Franks, Dr. D. : Blood Groups in Infra-human Species (Horse Blood Groups), 654
Franks, F. (Eagland, D., and) : *p*H of Soap Solutions, 1003
Fraser, Dr. Donald : Awarded the second Borden Award of the Nutrition Society of Canada, 335
Fraser, I. D., and Raper, Dr. A. B. : Solubility of Denatured Haemoglobin Variants in Acid Buffers, 355
Frazer, Dr. J. F. D. : At the Annual Congress of the South-Eastern Union of Scientific Societies (Problems of Managing Nature Reserves), 133
Free Fatty Acids : Stimulation of Lipogenesis in Thyroid Tissue *in vitro* by (Prof. Norbert Freinkel, Dr. Augusto D. Litonjua and Edward C. Saef), 804
Free Radicals : Isoelectronic Principle, Thermochemistry and Reactivity of related (Dr. Peter Gray and J. C. J. Thynne), 1357
  Spatial Distribution of, as studied by Electron Spin Resonance (Robert C. Smith and S. J. Wyard), 897
Free-choice Experiments : Comparison between Water and Alcohol Consumption in Six Animal Species in (Dr. Alpo Arvola and Dr. Olof Forsander), 819
Free and Bound Forms of Vitamin B_{12} : Gel Filtration of Sea-Water—Separation of (Dr. K. W. Daisley), 868
Freeze-dried Anti-haemophilic Globulin : Stability of (F. Nour-Eldin), 503
Freeze-drying of Foodstuffs (Borough Polytechnic, London, Symposium on), 651
Freezing (Intracellular), and Frost Resistance in Egg-Cells of the Sea Urchin (E. Asahina)—Intracellular Freezing as a Cause of Frost-killing in relatively Rapidly Frozen Cell Suspensions, 1263 ; A Mechanism to Prevent the Seeding of Intracellular Ice in Freezing Living Cells, 1264
Freinkel, Prof. Norbert, and others : Stimulation of Lipogenesis in Thyroid Tissue *in vitro* by Free Fatty Acids, 804
Fremlin, Dr. J. H. : The Dust Cloud about the Earth, 31
Frenkel, Ayala, and Hirsch, Dr. Willy : Spontaneous Development of *L* Forms of Streptococci requiring Secretions of other Bacteria or Sulphydryl Compounds for Normal Growth, 728
Frequencies (N–H Stretching), of Primary Amides : A New Relation between the (Prof. P. G. Puranik and K. Venkata Ramiah), 796
Frequency : Damping without Influence on (A. Bloch), 1086
Frequency of the 'Alpha' Rhythm, Reaction Time and Age (Dr. Walter W. Surwillo), 823
Frequency of Meteorite Falls throughout the Ages (Prof. Herbert Dingle), 482 ; (Prof. Hans Pettersson), 482
Frequency (Discrete) Solar Noise Bursts : Very-Low-Frequency Modulation of (Dr. Jules Aarons, Santimay Basu, William Kidd and Richard Allen), 56
Frequency (Very-Low-) Modulation of Discrete Frequency Solar Noise Bursts (Dr. Jules Aarons, Santimay Basu, William Kidd and Richard Allen), 56
Fresh *Cannabis sativa* : Essential Oil from, and its Use in Identification (L. Martin, Dr. D. Morison Smith and C. G. Farmilo), 774
Freshwater Eutrophic Lakes of India : Hydrogen Ion Concentration, Plankton and Fish in (Dr. S. M. Das), 511
Freshwater Fisheries (Salmon and), Committee on : Report of the, 962
Freshwater Fishing (Salmon and), in Great Britain (Dr. J. W. Jones), 962
Friction : Effective Contact Stresses and (Dr. D. H. Trollope), 376
Friedell, G. H., and others : Effect of Alpha-Amylase on the Ehrlich Mouse Ascites Tumour, 1113
Friedrich, W. : Vitamin B_{12} and Intrinsic Factor (Specific Effects of Vitamin B_{12} Deficiency), 1155
Friend, J. (Redfearn, Dr. E. R., and) : Oxidation–Reduction Reactions of Plastoquinone in Isolated Chloroplasts, 806
Friend, M. T. (Birch, H. F., and) : Resistance of Humus to Decomposition, 731
Friends of the Lake District : Newsletter for June 1961, 855
Frings, Hubert, and Frings, Mable : Sound Production and Sound Reception by Insects, *review* by Prof. V. B. Wigglesworth, 428
Frings, Mable, and Frings, Hubert : Sound Production and Sound Reception by Insects, *review* by Prof. V. B. Wigglesworth, 428
Frith, Dr. Ronald : Terrestrial Accretion from the Solar Wind, 1182
Frog Muscles at Low Temperature : Inhibition by Potassium of the Mechanical Responses of (H. Lorković), 1011
Frontali, Dr. N. : Activity of Glutamic Acid Decarboxylase in Insect Nerve Tissue, 178
Frost Resistance : Intracellular Freezing and, in Egg-Cells of the Sea Urchin (E. Asahina)—Intracellular Freezing as a Cause of Frost-killing in relatively Rapidly Frozen Cell Suspensions, 1263 ; A Mechanism to Prevent the Seeding of Intracellular Ice in Freezing Living Cells, 1264
Fructose and Lactic Acid Metabolism in the Perfused Liver of Premature Lambs (W. H. H. Andrews, H. G. Britton and Dr. D. A. Nixon), 1307
Fruit (An Early Cretaceous (Hanterivian) Angiosperm), from California (M. E. J. Chandler and D. I. Axelrod), 442
Fruit (Larger), in the Raspberry : Mutation for (D. L. Jennings), 302
Fruits (Developing) : Stimulants of Cell Division in (D. S. Letham and E. G. Bollard), 1119
Fry, R. J. M., and others : Estimation of Time of Generation of Living Cells, 290
Fuchs, Prof. Walter : Elected a Member of the Agriculture Section of the Leopoldina German Academy of Sciences, 122
Fucus vesiculosus (Seaweed), (Gibberellin-like Substances in Plants), (Margaret Radley), 685
Fuel, Institute of : Election of Dr. James Burns as president, 23
  Election of Sir Harold Hartley to honorary membership, 23
Fujimoto, Kentaroh, and others : Isolation of Nigerose and Kojibiose from Dextrans, 278
Fujino, Dr. Masahiro, and others : Controlling Mechanism of the Mechanical Activity of Muscle and that of Blood Coagulation, 80
Fulton, J. D. : Immunity of Protozoa (Toxoplasmosis), 552
Fumagillin : Induced Increase in Resistance of *Entamoeba histolytica* to (Dr. Mitsuru Nakamura), 413
Fumaric Acid : Enzymic Binding of Hydroxylamine by (Prof. Nathan Grossowicz and the late Yehudith Lichtenstein), 412
Fumifugium, or the Smoake of London Dissipated (John Evelyn), reprint (National Society for Clean Air), 752
Funaki, Dr. S. : Spontaneous Spike-Discharges of Vascular Smooth Muscle, 1102
Function of Muscle : The Structure and (edited by Dr. G. H. Bourne), Vol. 2, Biochemistry and Physiology ; Vol. 3, Pharmacology and Disease, *review* by Dr. D. H. Sproull, 948
Function of Taste Fibres in the Carp (Jihei Konishi and Prof. Yngve Zotterman), 286
Function (A Hydrostatic), of the Accessory Respiratory Organs in Air-breathing Fishes (Dr. S. Z. Qasim and R. Hasan), 396
Function (Psychological) : Cerebral Dominance and its relation to (Prof. O. L. Zangwill), *review* by Sir Russell Brain, 840
Function (Thyroid), in Active, Sleeping and Torpid Hummingbirds (Prof. C. J. Shellabarger, R. C. Lasiewski and G. E. Hyncik), 1318
Function (Transfer), of a Biological Photoreceptor (Dr. Lawrence Stark and Dr. Howard T. Hermann), 1173
Functions of the Mammalian Carotid Rete Mirabile (Dr. C. H. Barnett and C. D. Marsden), 88
Functions (Visual Gnostic), and Emotional Behaviour : Changes in, following Unilateral Temporal Pole Damage in the 'Split-Brain' Monkey (Dr. J. L. deC. Downer), 50
Fungi : Dictionary of the (Ainsworth and Bisby's), fifth edition by Dr. G. C. Ainsworth, *review* by Prof. John Colhoun, 109
Fungi Pathogenic to Man : Use of Desertomycin Medium in Routine Selective Isolation of (J. Uri and Zs. Herpay), 1015
Fungi (Nematode-trapping), in the Soil : Agar Disk Method for the Direct Observation of (Roderic C. Cooke), 1411
Fungicides (Copper) : Significance of the Anti-Sporulation Effect of, in the Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Fungitoxic Compounds : Transformation in Plants of Sodium Dimethyldithiocarbamate into other (H. M. Dekhuijzen), 198
Furneaux, W. D. : The Chosen Few—an Examination of some Aspects of University Selection in Britain, *review* by Dr. W. H. King, 947
Further Education : New Routes to—Papers presented at the B.A.C.I.E. Spring Conference, London, 1961 (British Association for Commercial and Industrial Education), 739
Furunculosis in Lough Neagh Pollan *Coregonus pollan*, Thompson (K. U. Vickers and R. McClean), 930
Fusion of Coccid Chromosomes : Fracture and (Prof. W. Spencer Brown), 1419
Future of Britain : Science and the (Labour Party), 837
Future of Nuclear Physics in Australia (Prof. E. W. Titterton), 639
Füzi, Dr. M., and Csóka, R. : Leptospirosis of White Laboratory Rats, 1123
Fyfe, Prof. W. S. (Clark, R. H., and) : Ultrabasic Liquids, 158

GABB, J. E. (Ernsting, J., and) : Design and Use of Respirators (Communication between Persons wearing Breathing Equipment), 655
Gabbe, E. E. : Vitamin B_{12} and Intrinsic Factor (Freedom of B_{12} Coenzyme from Cyanide), 1154
Gabor, Prof. D. : The Electron Microscope, *review*, 316
Gaddis, A. M., and others : Girard *T* Reagent for Carbonyls, 1391
Gaddum, Dr. J. H. : Remington's Practice of Pharmacy, *review*, 8
Gadea, E. : Nematology (Free-living Nematodes of Freshwater and Moss Biotopes in Spain), 1048
Gaetani, Sancia, and Spodani, M. Antonietta : Effect of 5-Fluorouracil on Hepatic Induced Increase of Tryptophan-Pyrrolase, 1296
Gaillard, Blanche D. E. : Separation of Linear from Branched Polysaccharides by Precipitation as Iodine Complexes, 1295
Gair, R., *et al.* : Nematology (Differences between Varieties of Spring Barley in their effect on Rate of Increase of *Heterodera avenae*), 1048
Galactic Radio Emission : Spectrum of (Dr. F. Graham Smith), 1381

Galactolipids : Lipids of the Common Pea (*Pisum sativum* L.) with special reference to the Occurrence of (S. Adhikari, Dr. F. B. Shorland and R. O. Weenink), 1301
L-Galactono-γ-lactone : Conversion of, into L-Ascorbic Acid by Plants (Dr. G. A. D. Jackson, R. B. Wood and M. V. Prosser), 282
Galileo Galilei, and others : The Controversy on the Comets of 1618 (translated by Stillman Drake and Dr. C. D. O'Malley), *review* by Colin A. Ronan, 314
Gallagher, C. H., and others : Electron Transport System and Phosphoproteins of Mitochondria, 1309
Galleries : Museums and (Dr. F. S. Wallis), 862
Galleries (Museums and), Standing Committee on : Sixth Report (1959-60), 862
Gallium : Thermoelectric Power of Single Crystals of (P. Horner), 58
Galloway, Dr. Ian A. : *Obituary* of Prof. Camille Guérin, 851
Galpin, Dr. J. V., and others : Bacteria of the Intestine (Studies on the Bacterial Flora in the Intestinal Tract of Pigs, 2, Streptococci : Selective Enumeration and Differentiation of the Dominant Groups), 1152
Galton : From, to Crowther (Prof. George Seth), 989
γ-Amino-*n*-butyric Acids (Glutamic and) : Analogues of, having Potent Actions on Mammalian Neurones (Dr. J. C. Watkins and Dr. D. R. Curtis), 1010
γ-Globulin (Mouse) : An Iso-Antigen (*γBA*) of, present in Inbred Strains (A. Kelus and J. K. Moor-Jankowski), 1405
γ-Glutamyl Transpeptidase : Histochemical Demonstration of (Prof. Z. Albert, Dr. Marian Orlowski and Dr. A. Szewczuk), 767
γ-Irradiated Lead Silicate Glass : Absorption Spectra of (R. S. Barker, T. K. Harrison, D. A. Richardson and R. Rimmer), 374
γ-Ray Counting Method : Measurement of the Thorium Content of Natural Materials by a (Prof. J. H. J. Poole and F. N. Byrne), 62
Ganglia (Cockroach) : An Acid Mucopolysaccharide in (Doreen E. Ashhurst), 1224
Gangolly, S. R., and Pandalai, K. M. : Possibilities of Vegetative Propagation in the Coconut (*Cocos nucifera* L.), 1218
Garattini, Prof. S., and others : Effect of Serotonin on Absorption and Distribution of Calcium-45 in the Rat, 185
Garay, A. S. (Sági, F., and) : Effect of Gibberellic Acid on Growth and Indoleacetic Acid Oxidase Activity of *Lupinus albus* L. exposed to Different Photoperiods, 824
García, Esperanza, and others : New *Rh* Phenotype, *Dcce*^{t}*elf*, found in a Chibcha Indian Tribe, 503
García García, M. D., and others : Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat, 1171
Gardiner, Dr. J. E., and Thompson, Dr. J. W. : Lack of Evidence for a Cholinergic Mechanism in Sympathetic Transmission, 86
Gardner, Prof. Eldon J. : Principles of Genetics, *review* by Dr. Kenneth S. Dodds, 636
Gargoylism : Inclusions of Mucopolysaccharide in the Lymphocytes of Patients with (Ursula Mittwoch), 1315
Garn, S. M., and others : Taste Thresholds and Food Dislikes, 1328
Garnham, Prof. P. C. C. : Immunity to Protozoa, 551
  Techniques in Tropical Pathology, *review*, 1236
Garratt, —. : Hazards of the Animal House (Hazards associated with the Use of Radioactive Substances in Animal Experiments), 339
Garrett, W. G. (Walker, G. F., and) : Complexes of Vermiculite with Amino-Acids, 1389
Garrison, Dr. W. M. : Effects of Ionizing Radiation on Organic and Biological Solids (Chemical Changes on Irradiation), 1151
Garrod, D. J. (Elder, H. Y., and) : A Natural Hybrid of *Tilapia nigra* and *Tilapia leucosticta* from Lake Naivasha, Kenya Colony, 722
Garrod, Prof. L. P. : Title of professor emeritus of bacteriology (at St. Bartholomew's Hospital Medical College) conferred on, 546
Garvan, Antony N. B., and Welsh, Peter C.: The Victorian American—Lithographs from the Harry T. Peters 'American on Stone' Collection (Smithsonian Institution, Publication 4466), 226
Garvey, Dr. Justine S. : Separation and *in vitro* Culture of Cells from Liver Tissue, 972
Gas : Ignition of, by Sparks produced by Breaking Wires at High Speed (Dr. R. L. Gordon, Dr. H. Lord and D. W. Widgington), 1085
Gas from Coal in Britain : Production of, 225
Gas (Nitrogen) : Distribution of Isotopic Nitrogen in, during Denitrification (R. D. Hauck and D. R. Bouldin), 871
Gas Chromatography : Detection by Ionization of Atmospheric Gases during Analysis by (Dr. Arthur Karmen, Laura Giuffrida and Robert L. Bowman), 906
  Determination of Hydrogen in Gaseous Mixtures by (P. J. Kipping), 270
  Integration with Ionization Detectors in (P. M. E. M. van der Grinten and Dr. A. Dijkstra), 1195
  Role of Pressure Gradients in obtaining Minimum Time in (Prof. J. Calvin Giggings), 1291
Gas Chromatography Abstracts, 1958 (edited by C. E. H. Knapman, assisted by C. G. Scott), *review* by A. Goldup, 1135
Gas Chromatography Abstracts, 1959 (edited by C. E. H. Knapman, assisted by C. G. Scott), *review* by A. Goldup, 1135
Gas Discharge Devices : Physics of (Electronics Group of the Institute of Physics and the Physical Society Conference on), 546
Gas-cooled Reactor at the Windscale Factory of the United Kingdom Atomic Energy Authority : Progress on the Advanced, 853
Gas–Liquid Chromatography : Peak-Shift Technique in—Trimethylsilyl Ether Derivatives of Alcohols (Stanley H. Langer and Peter Pantages), 141
  Quantitative Estimation of Peak Areas in (Dr. K. K. Carroll), 377
Gas–Liquid Chromatography (Pyrolysis and), on the Microgram Scale (C. E. Roland Jones and A. F. Moyles), 663
Gas-Phase Reactions of the Halogens and their Compounds (Dr. J. H. Thomas and Dr. E. Whittle), 129
Gaseous Mixtures : Determination of Hydrogen in, by Gas-Chromatography (P. J. Kipping), 270
Gaseous Oxygen : Permeation of, through Vitreous Silica (Dr. Francis J. Norton), 701
Gases : Kirkendall Effect in (Prof. E. A. Mason, L. Miller and P. C. Carman), 375
Gases (Atmospheric) : Detection by Ionization of, during Analysis by Gas Chromatography (Dr. Arthur Karmen, Laura Giuffrida and Robert L. Bowman), 906
Gasparic, Ing. : Paper Chromatography, 760
Gasparski, Dr. J. : Blood Groups in Infra-human Species (Red Cell Antigens of the European Bison identified by Cattle Blood Typing Reagents), 655
Gass, Dr. I. G. : Appointed lecturer in the Department of Geology in the University of Leeds, 650
Gass, Saul I. : Linear Programming, *review* by Dr. M. V. Wilkes, 9
Gasterosteus aculeatus L. (Stickleback) : Significance of the Regeneration of Lateral Plates of the (Tadéusz Penczak), 621
Gastro-intestinal Tract of Rats under Normal Feeding Conditions : Soluble Material in the (Dr. Anne S. Cole), 502
Gates, Dr. David M. : Appointed editor of Section D, Radio Propagation, of the *Journal of Research* of the United States National Bureau of Standards, 857
Gates, G. E. : Taxonomy of the Earthworm in India, 227
Gayed, S. K. : Production of Symptoms of Barley Leaf-Spot Disease by Culture Filtrate of *Helminthosporium sativum*, 725
Gazey, B. K. : Appointed Research Fellow in the Department of Electrical Engineering, University of Birmingham, 337
Gazzard, D., and others : Action of Carbon Dioxide on 6-Aminopenicillanic Acid, 910
Gear, J. R., and Spenser, Prof. I. D. : Biosynthesis of Hydrastine, 1393
Gebbie, H. A., and others : Molecular Emission Spectroscopy from 2μ to 12μ by a Michelson Interferometer, 264
Gee, Prof. G. : Inorganic Polymers, 1046
Gee, Sandra C. (Pangborn, Rose Marie, and) : Relative Sweetness of α- and β-Forms of Selected Sugars, 810
Geill, Torben, and others : Serum Lipids in relation to the Intake of Alcohol and Sodium Chloride, 1095
'Gel Filtration' of Organic Compounds (B. Cortis-Jones), 272
Gel Filtration of Sea-Water—Separation of Free and Bound Forms of Vitamin B_{12} (Dr. K. W. Daisley), 868
Gel (Starch-) : Electrophoresis in a Thin Layer of, followed by a Plastifying Treatment (J. Groulade, Dr. J. M. Fine and C. Ollivier), 72
Gel (Starch-) Electrophoresis : Comparison of the Serum Protein Fractions of the Newly Hatched Chick with those of Adult Birds using (A. Amin), 708
Gelatin Gels : Rigidity Factor of (Dr. Audrey Todd), 567
Gelatine and Glue Research Association (British) : Twenty-first Meeting of the Research Panel (Dr. D. A. Sutton), 857
Gelfand, Dr. M., and Carr. W. R. : Diabetes Mellitus in Africans in Rhodesia, 227
Gels (Co-precipitated) : Tetragonal Mullite-like Phase from (J. Ossaka), 1000
Gels (Gelatin) : Rigidity Factor of (Dr. Audrey Todd), 567
Genera of Polypodiaceae in Eastern India : Cytology of some (G. Panigrahi and S. N. Patnaik), 1207
General Medical Sciences : Highlights of Research Progress in, 1960 (United States Department of Health, Education and Welfare, Public Health Service Publication No. 815), 658
General Register Office (Ministry of Health and) : Report on Hospital In-Patient Enquiry for the Year 1959, Part I, Preliminary Tables, 345
General Relativity : A New Approach to, *review* by Dr. G. J. Whitrow, 424
Generating Liver : Influence of Plasma Proteins in the Control of Mitosis-rates in (Dr. J. T. Hemingway), 706
Generation of Living Cells : Estimation of Time of (R. J. M. Fry, S. Lesher and H. I. Kohn), 290
Generation of Radicals in Pairs and the Kinetics of Radical Chain Reactions in Solution (Dr. P. E. M. Allen and C. R. Patrick), 1194
Genetic Control of Protein Structure : Haemoglobin F and the (Prof. V. M. Ingram), 608 ; (Dr. Wolf W. Zuelzer and Abner R. Robinson), 609
Genetic Fine Structure of the *ad*$_{7}$ Locus of *Schizosaccharomyces pombe* : Distribution of X-Ray- and Nitrous Acid-induced Mutations in the (Dr. Herbert Gutz), 1127
Genetic Investigations (Metabolic and), of Nutritionally Exacting Strains of *Staphylococcus pyogenes* (Janice B. Edgar and Dr. B. A. D. Stocker), 1121
Genetic Research (Prof. Arne Müntzing), *review* by Dr. Kenneth S. Dodds, 636
Genetica (Prof. Enrique Sanchez-Monge y Parellada), *review* by Prof. S. C. Harland, 213
Genetics : Chemical, *review* by Dr. Charlotte Auerbach, 841
  Principles of (Prof. Eldon J. Gardner), *review* by Dr. Kenneth S. Dodds, 636
  Reviews of, *review* by Dr. Kenneth S. Dodds, 636
Genetics of a Difference in the Male Genitalia of East and West African Stocks of *Papilio dardanus* (Lep.), (J. R. G. Turner, C. A. Clarke and P. M. Sheppard), 935
Genetics (Bacterial) : Papers on (selected by Edward A. Adelberg), *review* by L. B. Quesnel, 320
Genetics (Biometrical) : Discriminant Analysis in (Dr. S. K. Jain), 1420
Genetics (Chemical) : An Outline of (Prof. Bernard S. Strauss), *review* by Dr. Charlotte Auerbach, 841
Genetics (Human) : Principles of (Curt Stern), second edition, *review* by Dr. G. Ainsworth Harrison, 110
Genitalia (Male), of East and West African Stocks of *Papilio dardanus* (Lep.) : Genetics of a Difference in the (J. R. G. Turner, C. A. Clarke and P. M. Sheppard), 935
Geochemical Society : Proposal to form a European Section of the Organic Geochemistry Group of the, 336
Geographical Society (Royal) : Grant of £200 for three years from the Gulbenkian Foundation, in aid of the expeditions, 754
Geography : Technology and (Prof. S. H. Beaver), 986
Geological Dictionary : English–Russian (T. A. Sofiano), (edited by I. D. Borneman, *et al*.), *review* by Dr. S. I. Tomkeieff, 9
  Russian–English (T. A. Sofiano), (edited by A. P. Lebedev and V. E. Khain), *review* by Dr. S. I. Tomkeieff, 9
Geological Observatory (Lamont) : Fellowships for Plankton Research, 754
Geological Society of America : Special Paper 65, The Floors of the Oceans, I, The North Atlantic—Text to accompany the Physiographic Diagram of the North Atlantic (Bruce C. Heezen, Marie Tharp and Maurice Ewing), *review* by Dr. G. E. R. Deacon, 531
Geological Society of India : *Journal* of the, Vol. I, 1348
Geological Studies, Centre for (Lisbon) : Grant from the Gulbenkian Foundation, 754

Geological Survey of Great Britain—England and Wales : Memoir on the Geology of the Country around Monmouth and Chepstow (Dr. F. B. A. Welch and Dr. F. M. Trotter), 227
Geology of the Country around Monmouth and Chepstow (Memoirs of the Geological Survey of Great Britain—England and Wales), (Dr. F. B. A. Welch and Dr. F. M. Trotter), 227
Geomagnetic Disturbances in the Auroral Zone : Electric Currents associated with (Dr. F. J. Scrase), 963
Geometrical Illusions : Centrally Produced (S. Papert), 733
Geometrical Models for Complementation Mapping of Allelic Series : Limitations of (Prof. Elof Axel Carlson), 788
Geometry (Cusp) : Experiments on the Compression of Plasma in (Dr. T. K. Allen and Dr. R. J. Bickerton), 794
Geometry (Molecular), of a 1:1 Crystalline Complex between 1,3,7,9-Tetramethyluric Acid and Pyrene (F. De Santis, E. Giglio, Dr. A. M. Liquori and A. Ripamonti), 900
Georgi, Jay (Comar, Dr. C. L., and) : Assessment of Chronic Exposure to Radio-strontium by Urinary Assay, 390
Geotropism in Plant Roots : Dependence on Light of (J. V. Lake and G. Slack), 300
Gerald, P. S., and others : Haptoglobin Patterns in Cord Blood Serums, 717
Germ Cells (Immature), of *Drosophila* : Chromosome Rearrangements induced by X-Rays in (Seymour Abrahamson), 523
German Family : Thalassaemia in an English Family and in a (Dr. F. Vella and S. A. Ibrahim), 822
Germination : Effect of Excess Supply of Heavy Metals to Barley during, with special reference to Catalase and Peroxidase (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Germination Process in Seeds of *Pinus sylvestris* L. : Effect of Red and Far-red Irradiation on the (Bengt Nyman), 1219
Gerrard, W. : Inorganic Polymers (BN Polymers), 1047
Gerritsen, F. (Brunn, P., and) : Stability of Coastal Inlets, *review* by W. J. Reid, 426
Gey, G. O. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (A Technique for Studying Population Dynamics of Lymphoblasts in Culture), 341
Gharpurey, M. K., and others : Compressibility and Specific Evaporation Resistance of the Monolayers of Long-Chain Alcohols and Glycol Monoalkyl Ethers, 378
Ghosts (Erythrocyte), of Mediated Sugar Transport : Persistence in (Paul G. LeFevre), 970
Giant Cell Axons in *Aplysia depilans* : The Path of the (Dr. G. M. Hughes and L. Tauc), 404
Giant Cells (Periodic Acid–Schiff Positive), in the Mouse Thymus Cortex (D. Metcalf and M. Ishidate), 305
Giant Nerve Cell under Abnormal Conditions : Electrical Activity of a (Dr. Yutaka Oomura, Sachio Ozaki and Takashi Maéno), 1265
Gibberellic Acid : Effect of, on Growth and Indoleacetic Acid Oxidase Activity of *Lupinus albus* L. exposed to Different Photoperiods (F. Sági and A. S. Garay), 824
  Effect of Spraying with, on Yield and Composition (Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid), (R. Stevens, J. B. Roberts and I. H. Williams), 360
  Treatment of Hops (*Humulus lupulus* L.) with—Effect of Spraying with Gibberellic Acid on Yield and Composition (R. Stevens, J. B. Roberts and I. H. Williams), 360 ; Effect on Growth and Development (I. H. Williams), 361
Gibberellic Acid and Allogibberic Acid : Effects of, on Flowering and Internode-Length in *Pisum sativum* (I. C. Murfet and H. N. Barber), 514
Gibberellin-like Substances in Plants (Margaret Radley)—Leguminous Root Nodules, 684 ; Seaweed (*Fucus vesiculosus*), 685
Gibson, A. H. : Root Temperature and Symbiotic Nitrogen Fixation, 1080
Giddings, Prof. J. Calvin : Role of Pressure Gradients in obtaining Minimum Time in Gas Chromatography, 1291
Giebisch, Dr. Gerhard (Windhager, Dr. Erich E., and) : Comparison of Short-Circuit Current and Net Water Movement in Single Perfused Proximal Tubules of Rat Kidneys, 1205
Gigg, Dr. Roy, and Carroll, Patricia M. : A Convenient Synthesis of Muramic Acid and other 3-O-Ethers of D-Glucosamine, 495
Giglio, E., and others : Molecular Geometry of a 1:1 Crystalline Complex between 1,3,7,9-Tetramethyluric Acid and Pyrene, 900
Gilchrist, R. C. J. H. (Wight, W., and) : The Concept of Kind of Tea, 14
Gill, Prof. W. D. : Appointed to the chair of oil technology at the Imperial College of Science and Technology, London, 651
Gillman, J. (Dijkstra, J., and) : Chromatographic Separation of Biologically Active Components from Commercial Trypan Blue, 803
Gilmour, Dr. D. G. : Blood Groups of Animals other than Man, 653
  Blood Groups in Infra-human Species (Blood Groups of Chickens), 654
Ginsburg, Michael, and others : Incorporation of Histamine into Liver Protein *in vivo*, 1204
Girard *T* Reagent for Carbonyls (A. M. Gaddis, Rex Ellis and G. T. Currie), 1391
Gitlin, Prof. David, and others : Immuno-electrophoretic Examination of Agammaglobulinaemia, 1109
Giuffrida, Laura, and others : Detection by Ionization of Atmospheric Gases during Analysis by Gas Chromatography, 906
Giustina, G., and others : Intermediate Pool between Amino-Acids and Globin in Duck Blood *in vitro*, 40
Glacial Acetic Acid : Use of, for Killing Parasitic Nematodes for Collection Purposes (Bjørn Berland), 1320
Gland (Mammary), of the Cow and Rat : Leucine Aminopeptidase in the (Prof. S. Talanti and Prof. Väinö K. Hopsu), 86
Gland (Mammary), of the Ewe : Removal of Milk Constituents from the (A. K. Lascelles), 1404
Gland (Salivary), of Mice Treated with *Iso*propylnoradrenaline : Enlargement of (Dr. K. Brown-Grant), 1076
Glands (Rectal), in Woodlice (Dr. Minati Gupta), 406
Glass, G. B. J. : Vitamin B$_{12}$ and Intrinsic Factor (Hydroxocobalamin in Body Tissues), 1155
Glass in the Electronics Industry, 1143
Glass (γ-Irradiated Lead Silicate) : Absorption Spectra of (R. S. Barker, T. K. Harrison, D. A. Richardson and R. Rimmer), 374
Glasshouse Crops Research Institute : Appointment of Dr. F. T. Last as head of the Department of Mycology and Bacteriology, 1250
Globin in Duck Blood *in vitro* : Intermediate Pool between Amino-Acids and (L. Bianco, G. Giustina and E. Lazzarini), 40
Globulin (Anti-haemophilic) : Stability of Freeze-dried (F. Nour-Eldin), 503
Globulin (Coating), causing a Positive Antiglobulin Consumption Test : Nature of the (D. Nelken), 1110
γ-Globulin (Mouse) : An Iso-Antigen (*γBA*) of, present in Inbred Strains (A. Kelus and J. K. Moor-Jankowski), 1405
Globulins (Myeloma) : Comparison of Reduced Alkylated Derivatives of some, and Bence-Jones Proteins (Dr. M. D. Poulik and Dr. G. M. Edelman), 1274
Glossary of Petroleum Terms (edited by George Sell), third edition (Institute of Petroleum), 22
Glossina mortisans : Cyclical Infection of, with Culture Forms of *Trypanosoma rhodesiense* (the late Prof. R. M. Gordon and J. K. Miller), 1317
Glover, J. (Gwynne, M. D., and) : Light Rainfall and Plant Survival—Measurement of Stem Flow Run-off, 1321
Glow Lamp (Neon), 1911-61 : The Development of the (Prof. H. E. Watson), 1040
Gluckman, Prof. M. : African Jurisprudence (Presidential Address to Section N (Sociology) of the British Association for the Advancement of Science), 991
D-Glucosaccharo-1,4-Lactone : Inhibition of β-Glucuronidase by Oral Administration of (S. Akamatsu, Dr. A. Kiyomoto, S. Harigaya and S. Ohshima), 1298
D-Glucosamine : A Convenient Synthesis of Muramic Acid and other 3-O-Ethers of (Dr. Roy Gigg and Patricia M. Carroll), 495
D-Glucosamine Hydrochloride Isomers (Mannosyl)—*N*-Mannosyl D-Glucosamine Hydrochloride (Dr. S. A. Barker, Dr. K. Murray and Prof. M. Stacey), 142 ; 6-*O*-Mannosyl D-Glucosamine Hydrochloride (Dr. S. A. Barker, Dr. K. Murray, Prof. M. Stacey and D. B. E. Stroud), 143
Glucose : Effect of Thyroxine and 2,4-Dinitrophenol on the Rate of Utilization of (Dr. L. Macho), 604
D-Glucose : Identity of L-Ascorbic Acid formed from, by the Strawberry (*Fragaria*), (Dr. Frank A. Loewus and Stanley Kelly), 1059
Glucose in Serum : Simultaneous Determination of Dextran and (A. Rédei and S. Nagy), 173
Glucose Transfer across the Membrane of the Red Blood Cell : Dimer Formation and (Dr. W. D. Stein), 1277
Glucose (Blood), and Liver Glycogen in Rabbits : Effect of Bee Venom on Concentration of (Prof. A. H. Mohamed and K. Zaki), 605
Glucose (1-(Indole-3-acetyl)-β-D), a New Compound in the Metabolism of Indole-3-acetic Acid in Plants (Dr. M. H. Zenk), 493
Glucose-6-phosphatase Activity in Liver and Kidney at Birth : Changes in (M. J. R. Dawkins), 72
β-Glucuronidase : Inhibition of, by Oral Administration of D-Glucosaccharo-1,4-Lactone (S. Akamatsu, Dr. A. Kiyomoto, S. Harigaya and S. Ohshima), 1298
Glueckauf, Dr. E., and Watts, R. E. : Non-Uniformity of Cross-linking in Ion-Exchange Polymers, 904
Glutamic Acid Decarboxylase in Insect Nerve Tissue : Activity of (Dr. N. Frontali), 178
Glutamic and γ-Amino-*n*-butyric Acids having Potent Actions on Mammalian Neurones : Analogues of (Dr. J. C. Watkins and Dr. D. R. Curtis), 1010
Glutamic-Oxalacetic Transaminase (Rat Liver) : Intracellular Distribution Pattern of (Dr. Herbert J. Eichel and Josef Bukovsky), 243
γ-Glutamyl Transpeptidase : Histochemical Demonstration of (Prof. Z. Albert, Dr. Marian Orlowski and Dr. A. Szewczuk), 767
Glutathione Instability of the Erythrocytes among Armenians in Iran : Virtual Absence of (Dr. J. E. Bowman and Dr. D. G. Walker), 221
Glyceraldehyde Phosphate Dehydrogenase (Triphosphopyridine Nucleotide-linked), in a Non-Photosynthetic Plant Tissue (C. R. Benedict and Dr. H. Beevers), 71
Glycerol : Dimer Formation and the Transfer of, across the Erythrocyte Membrane (Dr. W. D. Stein), 352
α-Glycerophosphate Dehydrogenase (Mitochondrial), in the Nervous System : Histochemical and Homogenization Studies of (R. Hess and Dr. A. G. E. Pearse), 718
α-Glycerophosphate Dehydrogenase Activity (Mitochondrial), in Skeletal Muscle : Direct Relationship of Phosphorylase and (Dr. A. G. E. Pearse), 504
[2-^{14}C]-Glycine : Breakdown of, during Paper Chromatography (A. K. Huggins and V. Moses), 668
Glycogen (Liver) : Effect of Bee Venom on Concentration of Blood Glucose and, in Rabbits (Prof. A. H. Mohamed and K. Zaki), 605
Glycol Monoalkyl Ethers : Compressibility and Specific Evaporation Resistance of the Monolayers of Long-Chain Alcohols and (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Glycol Monomethyl Ether (Ethylene), a New Fixative for Histological Work (Prof. Walter B. Shelley and Ralph Florence), 719
Glycolysis and Respiration of Tumours (Dr. Alan C. Aisenberg), *review* by Prof. F. Dickens, 1335
Glycosidases (Intracellular), of Dextran-producing Bacteria (Dr. R. W. Bailey and Prof. E. J. Bourne), 277
Gm^{a} (Serum Factor), among the Iranians (Luba Podliachouk, Dr. A. Eyquem, R. Choaripour and M. Eftekhari), 717
Gnostic Functions (Visual), and Emotional Behaviour : Changes in, following Unilateral Temporal Pole Damage in the 'Split-Brain' Monkey (Dr. J. L. deC. Downer), 50
Goals for Science in the United States, 312
Goddard, Prof. L. S. : Modern Style in Mathematical Analysis, *review*, 6
  Operations Research and Systems Engineering, *review*, 105
  Mathematics and Queueing, *review*, 211
  Combinatorial Analysis, *review*, 321
Goffart, H. : Nematology (Effect of *Ditylenchus dipsaci* in Sugar Beet), 1048
Gogte, V. N., and others : Anticancer Properties of Thio-diglycollic Acid, 388
Gold, Eleanor, and others : Effect of Administration of Lysergic Acid Diethylamide on Serotonin-Levels in the Body, 499
Gold Medal and Prize of the Beilby Memorial Fund awarded to Dr. Constantin Edeleanu and to Prof. Jack Nutting, 224
Goldberg, Prof. Edward D., and others: Iron-55 from Nuclear Detonations, 162
Goldfeder, A. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Electron Microscopic and Biochemical Studies of Tumour Mitochondria), 341
Goldie, L., and Green, J. M. : Spike and Wave Discharges and Alterations of Conscious Awareness, 200

Goldman, M., and others : Failure of a Dog to Discriminate between Strontium-90 and Calcium given Orally, 713
Goldsmith, P., and Brown, F. : World-Wide Circulation of Air within the Stratosphere, 1033
Goldstein, D. J. : Mechanism of Differential Staining of Nucleic Acids, 407
Goldup, A. : Gas Chromatography Abstracts, 1958, *review*, 1135
  Gas Chromatography Abstracts, 1959, *review*, 1135
Goma, L. K. H. : Maxillary Index in *Anopheles gambiae* Giles, 405
Gonzalez, R. N. (Yannas, J. B., and) : A Clear Instance of Rheopectic Flow, 1384
Gooberman, Dr. G. : Ultrasonic Absorption of Polymer Solutions, 693
Good, Dr. N. E. : Photophosphorylation and the Hill Reaction, 678
Goodfield, June (Toulmin, Dr. Stephen, and) : The Fabric of the Heavens, *review* by Dr. M. A. Hoskin, 840
Goodman, Dr. J. F. : Appointed head of the Basic Research Department of Thomas Hedley and Co., Newcastle-upon-Tyne, 229
Goodman, Dr. J. W.: Blood Groups in Infra-human Species (Experiments in which Blood or Bone Marrow, or both, were Injected into Irradiated Mice), 654
Goodman, Prof. Lionel (Krishna, V. G., and) : Polarization of Triplet→Singlet Emission Spectra, 800
Goodman, Prof. Morris, and Poulik, Emily : Serum Transferrins in the Genus *Macaca*—Species Distribution of Nineteen Phenotypes, 1407
Goodman, N. S., and others : Regulation of Pyrogallol Oxidations by Alcohols and Sugars, 180
Goodwin, Prof. T. W., and Horton, Dr. A. A. : Biosynthesis of Riboflavin in Cell-free Systems, 772
Goodwin, Prof. T. W., and Passorn, Dr. P. N. A. : Purine and Pyrimidine Metabolism in *Rhodospirillum rubrum*, 276
Gordon, Dr. G. : Assessment of Pain (Electrophysiological Approach to Central Mechanisms of Somatic Sensation), 1353
Gordon, Hugh McL. : Thiabendazole, a Highly Effective Anthelmintic for Sheep, 1409
Gordon, Dr. M. : Appointed to the University of London readership in physical chemistry at the Imperial College of Science and Technology, 337
Gordon, Dr. Paul: Changes in Blood Serotonin during Exposure to Cold, 183
Gordon, Dr. R. L., and others : Ignition of Gas by Sparks produced by Breaking Wires at High Speed, 1085
Gordon, Prof. R. M. : *Obituary* by Prof. T. H. Davey, 852
Gordon, the late Prof. R. M., and Miller, J. K. : Cyclical Infection of *Glossina morsitans* with Culture Forms of *Trypanosoma rhodesiense*, 1317
Gordon, S., and others : Irradiated Lithium Fluoride as an Optical Filter in the Far Ultra-Violet, 1186
Gorer, Dr. P. A. : *Obituary* by J. R. Batchelor, 18
Goswami, Dr. A. : Epitaxial Growth of Crystals on One-Degree Orientated Substrates, 160
Gottschalk, G., and others : Formation and Utilization of Poly-β-Hydroxybutyric Acid by Knallgas Bacteria (*Hydrogenomonas*), 463
Gough, John S. : Interviewing in Twenty-six Steps, 228
Gould, S. : Flora Europaea (Problems of Abstracting and Indexing European Taxonomic Literature), 448
Goulden, Dr. J. D. S. : Quantitative Analysis of Milk and other Emulsions by Infra-Red Absorption, 905
Gove, H. E., and others : Production of Neon in Stars, 1381
Government of India, and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
Government of Morocco, and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
Government of North Borneo (Royal Society of London in co-operation with the) : North Borneo Expedition 1961, 26
Government of Thailand, and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
Government of the United Arab Republic, and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
Government Research in Great Britain : Financing, 205
Government Responsibility in Scientific Research and Development, 837
Gowe, R. S. (Taneja, G. C., and) : Effect of Varying Doses of Undiluted Semen on Fertility in the Domestic Fowl, 828
Gowland, Dr. G., and others : Elimination of Bovine Serum Albumin in Acute Experimental Uraemia, 1210
G.P. Zones (Clusters rich in Solute) : Resistivity Changes due to Formation of (H. Herman and Prof. J. B. Cohen), 63
Graczyk, Dr. Cz. : At the Second International Measurement Conference (A New Method of Measuring Rate of Flow of Coal Dust), 1351
Graddon, Dr. D. P. : An Introduction to Co-ordination Chemistry, *review* by Prof. C. A. Coulson, 1233
Gradients (Pressure) : Role of, in obtaining Minimum Time in Gas Chromatography (Prof. J. Calvin Giddings), 1291
Graduates : Employment of—a Durham University Survey, 649
Grafted Skin (Orthotopically), : Regeneration of Elements of Donor Origin in, following the Homograft Response (Dr. J. K. Dineen and Dr. Aleksander Szenberg), 153
Graham, Prof. Kenneth : Air-Swallowing, a Mechanism in Photic Reversal of the Beetle *Trypodendron*, 519
Grain : Buildings for the Drying and Storage of (Bibliography of Research Publications on Farm Buildings, Section 5), (Agricultural Research Council), 440
Grainger, Dr. John : Land-Use Survey—Nicaragua, 1259
Grammar Schools : Biology for (Science Masters Association and the Association of Women Science Teachers), 555
  Chemistry for (Science Masters Association and the Association of Women Science Teachers), 555
  Physics for (Science Masters Association and the Association of Women Science Teachers), 555
Granites in South-West England : Age of the Orogeny and (T. R. Owen), 486 ; (N. E. Butcher), 486
Grant, C. H. B. (Mackworth-Praed, C. W., and) : Birds of Eastern and North-Eastern Africa, second edition, *review* by Sir Landsborough Thomson, 9
Grant, Dr. Julius : A Laboratory Handbook of Pulp and Paper Manufacture, second edition, *review* by Dr. F. Lyth Hudson, 320
  Pulp and Paper, *review*, 1135
Grants from the Fleming Memorial Fund for Medical Research, 959
Grants for Research in Chemistry (Chemical Society), 651
Grants for Research in Marine Biology or Oceanography (Challenger Society), 24
Grants and Awards for 1962 (Lalor Foundation), 1348
Grants (American), for Nuclear Equipment in Argentina, Brazil and Israel, 442
Grants (Fellowships and), in the field of Radiology and Nuclear Medicine for 1962-63 (James Picker Foundation), 228
Grants (Research), in Radiological Health (United States Public Health Service), 442
Granules in Neurones of the Brain of the Leech : Neurosecretion and (Irvine R. Hagadorn and Richard S. Nishioka), 1013
Granules (Dry), through Apertures : Minimum Energy Theorem for Flow of (R. L. Brown), 458
Granville, W. C. : At the Maxwell Colour Centenary Conference (Colour Appearance), 11
Graphite (Faraday Society Informal Discussion on), 27
  Atomic Structure of, and Graphitization (Dr. G. E. Bacon), 27
Graphitization : Atomic Structure of Graphite and (Dr. G. E. Bacon), 27
Gräsbeck, R. : Vitamin B_{12} and Intrinsic Factor (Efforts to Purify and Isolate Intrinsic Factor), 1155 ; (Radioactive Vitamin B_{12}), 1156
Grass (Rye)-dominant Pasture grazed by Cows : Growth of, and Properties of New Zealand Butterfat (F. H. McDowall, W. A. McGillivray and J. C. Hawke), 303
Grassi, Horatio, and others : The Controversy on the Comets of 1618 (translated by Stillman Drake and Dr. C. D. O'Malley), *review* by Colin A. Ronan, 314
Gravity Survey on the Aira Caldera, Kyusyu, Japan (Izumi Yokoyama), 966
Gray, Prof. J. A. B. : Assessment of Pain (Peripheral Pain Mechanisms), 1353
Gray, Dr. L. H. : Effects of Ionizing Radiation on Organic and Biological Solids, 1151
Gray, Dr. Peter, and Thynne, J. C. J. : Isoelectronic Principle, Thermochemistry and Reactivity of related Free Radicals, 1357
Great Age for Science : A (Dr. Warren Weaver), 312
Great Britain : Aims, Organization and Methods of University Extra-Mural Libraries in (E. P. Pritchard), 649
  Conservation of Water in, 421
  Financing Government Research in, 205
  Four Decades of State Forestry in (Prof. M. L. Anderson), 656
  Salmon and Freshwater Fishing in (Dr. J. W. Jones), 962
  See also under Britain
Great Glen Fault : Continuation of the, beyond the Moray Firth (Dr. Derek Flinn), 589 ; (Dr. Robert M. Appleby), 1190
Green, A. F., and others : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine, 1312
Green (A.T.) Book : The—Dedicated to Arnold Trevor Green by his colleagues of the British Ceramic Research Association, *review* by Prof. R. W. Douglas, 207
Green, D. H. (Miller, J. A., and) : Preliminary Age-Determinations in the Lizard Area, 159
Green, Prof. H. N., and others : A Relation between the Reactivity of Human Red Cells to Antiglobulin Tests and their Surface Structure, 923

Green, R. : Appearance of the *T*-Phase, 997
Greenaway, Frank : Dalton's Irish Rival, *review*, 533
Greenbaum, Dr. A. L., and Leal, R. S. : Effect of Pituitary Growth Hormone on Cholesterogenesis, 600
Greenblatt, Dr. Robert B. (Mahesh, Dr. Virendra B., and) : Physiology and Pathogenesis of the Stein–Leventhal Syndrome—Urinary Androsterone, Etiocholanalone, Pregnanetriol and Δ^5-Pregnenetriol on Ovarian Origin in a Patient with Stein–Leventhal Syndrome, 888 ; Role of FSH in the Pathogenesis of the Stein–Leventhal Syndrome, 889
Greenland, Dr. D. J., and others : Role of Polysaccharides in Stabilization of Natural Soil Aggregates, 1283
Greenland Shark : Copepod *Ommatokoita elongata* (Grant) in the Eye of the—a Possible Cause of Mutual Dependence (Bjørn Berland), 829
Greenshields, R. N. (Cooper, R. A., and) : Sucrases in *Phaseolus vulgaris*, 601
Greenstadt, Eugene W. : Magnetic Storms in Interplanetary Space as observed by *Pioneer V*, 329
Greenstein, Dr. Jesse P., and Winitz, Dr. Milton : Chemistry of the Amino Acids, *review* by Sir Hans Krebs, 1132
Gregory, Prof. K. F., and Shyu, Wei-jen : Apparent Cytoplasmic Inheritance of Tyrosinase Competence in *Streptomyces scabies*, 465
Gregory, R. L., and others : Measuring Visual Constancy for Stationary or Moving Objects, 416
Greig, Prof. J. : The British Electrical and Allied Industries Research Association, 450
Gresham, D. C. : At the Maxwell Colour Centenary Conference (Colour Printing), 11
Grewia populifolia Extracts : Effects of, on the Development of Chick Embryos (S. K. Brahma and N. Kundu), 506
Grey Speck Syndrome of Oats : Manganese and Magnesium in the (P. B. Vose and Dr. D. J. Griffiths), 299
Griffenhagen, George B. : Drug Supplies during the American Revolution (United States National Museum, Bulletin No. 225), 761
Griffin, F., and others : Taste Thresholds and Food Dislikes, 1328
Griffin, Juliet E. (Harris, Dr. G. P., and) : Flower Initiation in the Carnation in Response to Photoperiod, 614
Griffith, Dr. G. W. : Awarded a grant from the Lady Tata Memorial Trust, for research on leukaemia and allied diseases, 228
Griffith, Prof. J. S. : The Theory of Transition-Metal Ions, *review* by Prof. C. A. Coulson, 1233
Griffith, Dr. R. L., and others : Electron Spin Resonance Absorptions induced by Light in Adsorbed Layers of Cyanine Dyes on Silver Bromide Microcrystals, 902
Griffiths, Dr. D. J. (Vose, P. B., and) : Manganese and Magnesium in the Grey Speck Syndrome of Oats, 299
Grigor, B. A. : Awarded a New Zealand fellowship in chemistry for 1961-62 by the Ramsay Memorial Trust, 337
Grime, J. Philip : Measurement of Leaf Colour, 614

Griswold, Dr. Ernest, and others : Inorganic Chemistry, *review* by Dr. M. F. Lappert, 1133
Grivsky, E. M., and others : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine, 1312
Groen, Prof. J. J. : At the Third International Congress of Dietetics (Influence of Nutrition and Ways of Life on Blood Cholesterol and the Prevalence of Atherosclerosis and Coronary Heart Disease among Trappist and Benedictine Monks), 1343
Groote Eylandt Aborigines : Classification of Kin, Age Structure and Marriage amongst the (Dr. Frederick G. G. Rose), *review* by Dr. R. Needham, 6
Grosberg, Dr. P. : Appointed to the research chair of textile engineering in the Department of Textile Industries in the University of Leeds, 650, 1346 ; work of, 1346
Gross β-Activity in the Thames River (Conn.), (D. M. Skauen, T. Hatfield, D. Hanlon and J. S. Rankin, jun.), 1017
Grossi, E., and others : Effect of Serotonin on Absorption and Distribution of Calcium-45 in the Rat, 185
Grossowicz, Prof. Nathan, and Lichtenstein, the late Yehudith : Enzymic Binding of Hydroxylamine by Fumaric Acid, 412
Groszek, A. J. (Bell, G. H., and) : Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of High Surface Area using a Continuous Flow Calorimeter, 1184
Groulade, J., and others : Electrophoresis in a Thin Layer of Starch-Gel followed by a Plastifying Treatment, 72
Ground-Level : Seasonal Variations of Caesium-137 in Air at (K. G. Vohra, V. S. Bhatnagar and C. Rangarajan), 747
Ground-Level Air : Comparison of Beryllium-7 and Caesium-137 Radioactivity in (Dr. P. F. Gustafson, M. A. Kerrigan and S. S. Brar), 454
Group Velocity : Wave Propagation and (Dr. Léon Brillouin), *review* by Prof. M. H. L. Pryce, 104
Group and Phase Velocities of a Travelling Disturbance in the *F* Region of the Ionosphere (Dr. L. H. Heisler and Dr. J. D. Whitehead), 157
Grove, Jean M. : *Obituary* of W. V. Lewis, 332
Grover, Prof. Elliot B., and Hamby, Prof. D. S. : Handbook of Textile Testing and Quality Control, *review* by W. J. Onions, 106
Growing Old in a Mechanized World (F. Le Gros Clark), *review* by Prof. L. S. Hearnshaw, 532
Growth : Histidine Decarboxylase and (D. Mackay, Joan D. Reid and Dr. D. M. Shepherd), 1311
    Increase in Elastin Content of the Human Aorta during (Dr. V. Scarselli), 710
Growth of Etiolated Oat Seedlings : Carbon Dioxide and Ethanol as Factors controlling the (Dr. C. L. Mer), 260
Growth of Fern Embryos in Sterile Culture (Prof. Augustus E. DeMaggio and Prof. Ralph H. Wetmore), 94
Growth of Fibroblast Cultures : Effect of Amino-Acid Esters on the (Dr. I. Fehér, A. Döklen and V. Selmeci), 494
Growth of Mouse Carcinoma : Effect of Irradiated Normal Tissues on the (Dr. Arthur Compton and Prof. Charles A. Pannett), 1101
Growth of Ryegrass-dominant Pasture grazed by Cows, and Properties of New Zealand Butterfat (F. H. McDowall, W. A. McGillivray and J. C. Hawke), 303
Growth (Enhanced Plant-), with Two Systemic Insecticides (M. M. H. Wallace), 513
Growth (Epitaxial), of Crystals on One-Degree Orientated Substrates (Dr. A. Goswami), 160
Growth (Normal) : Spontaneous Development of *L* Forms of Streptococci requiring Secretions of other Bacteria or Sulphydryl Compounds for (Ayala Frenkel and Dr. Willy Hirsch), 728
Growth (Plant), in Irradiated Soil (G. D. Bowen and A. D. Rovira), 936
Growth and Development : Effect on (Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid), (I. H. Williams), 361
Growth and Indoleacetic Acid Oxidase Activity of *Lupinus albus* L. exposed to Different Photoperiods : Effect of Gibberellic Acid on (F. Sági and A. S. Garay), 824
Growth and Photosynthesis in Submerged Plants : Inhibition of, with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
Growth Hormone (Pituitary) : Effect of, on Cholesterogenesis (Dr. A. L. Greenbaum and R. S. Leal), 600
Growth-Rate of the Suckling of various Species and the Percentage of Total Calories from Protein in the Milk : Correlation between (Dr. F. W. Bernhart), 358
Growth Stimulation by High Indole-3-Acetic Acid Concentrations (T. A. Truelsen), 1410
Gruenberg, Dr. K. W. : Title of reader in pure mathematics (at Queen Mary College, London) conferred on, 546, 651
Grune, Dr. : Paper Chromatography (Value of New Types of Paper which have Alumina or Silica Gel incorporated into the Cellulose Matrix at the Manufacturing Stage), 759
Guanethidine : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and (A. L. A. Boura, F. C. Copp, A. F. Green, H. F. Hodson, G. K. Ruffell, M. F. Sim, E. Walton and E. M. Grivsky), 1312
Guérin, Prof. Camille : *Obituary* by Dr. Ian A. Galloway, 851
Guest, J. R. : Vitamin B_{12} and Intrinsic Factor (Relationships between Vitamin B_{12} and Folic Acid), 1156
Guggenheim (Daniel and Florence) International Astronautics Award of the International Academy of Astronautics awarded to Sir Bernard Lovell, 856
Guide (Retrieval), to Thermophysical Properties Research Literature, Vol. I (edited by Y. S. Touloukian), Book 1, Part A, Guide to Substance Classification and Numerical Codes ; Book 1, Part B, Dictionary of Synonyms and Trade Names ; Book 1, Part C, Dictionary of Substances ; Book 2, Classified Search Index ; Book 3, Master Bibliography, Author Index, *review* by Prof. A. R. Ubbelohde, 109
Guiducci, Mario, and others : The Controversy on the Comets of 1618 (translated by Stillman Drake and Dr. C. D. O'Malley), *review* by Colin A. Ronan, 314
Guinea Pig Lymphocytes : Chemistry of a Mucopolysaccharide produced by (Helen Muir and A. H. E. Marshall), 706
Guinea Pig Serum : Evidence that the L-Asparaginase Activity of, is responsible for its Antilymphoma Effects (J. D. Broome), 1114
Guinea Pigs : Passive Transfer of Contact Sensitivity to Picryl Chloride in, with Subcellular Material (Dr. J. L. Turk), 915
Guinness Son and Co., Ltd. (Arthur) : Guinness Awards for Science Teachers in Training, 338
Gulbenkian Foundation : Conference at the University of Birmingham on the Biology Syllabus for Sixth Forms, 554
    Grants made during the first half of 1961, 754
    Report for 1955-1959, 855
Gupta, Dr. Minati : Rectal Glands in Woodlice, 406
Gustafson, Dr. P. F., and others : Comparison of Beryllium-7 and Caesium-137 Radioactivity in Ground-Level Air, 454
Gut (Isolated) : Dependence on Substrate of the Electrical Potential across the (Dr. T. W. Clarkson, A. C. Cross and S. Toole), 501
Guthrie Lecture of the Institute of Physics and the Physical Society (Dr. D. Shoenberg), 126
Gutmann, Dr. F., and Netschey, A. : Semiconductivity of Chlorpromazine, 1390
Gutz, Dr. Herbert : Distribution of X-Ray- and Nitrous Acid-induced Mutations in the Genetic Fine Structure of the ad_7 Locus of *Schizosaccharomyces pombe*, 1125
Gwynne, M. D., and Glover, J. : Light Rainfall and Plant Survival—Measurement of Stem Flow Run-off, 1321
Gysels, H. : Nematology (Post-embryonic Growth in *Panagrellus silusiae*), 1048

HAAS, A. : At the Second International Measurement Congress (Calibration of Contact Type Surface Thermometers), 1351
Haber, Dr. C. P. : Inorganic Polymers (Phosphonitrilic Compounds), 1047
Hacking, K. : Some Aspects of Optical Lens Performance, Part I, Secondary Flare in Lenses (B.B.C. Engineering Monograph No. 36), 1355
Haddon, E. E. : Appointed director of the Chemical Defence Experimental Establishment, Porton, 751 ; work of, 751
Haddow, Prof. A. : The Chester Beatty Research Institute (of the Institute of Cancer Research, Royal Cancer Hospital), 430
Hador, Dr. S. Ben : Biorheology and Microcirculation (Effect of Adrenaline on the Small Blood Vessels of the Conjunctiva and Nailfold), 758 ; (Observations and Experiments on Vasomotion in Human Capillaries), 758
Haemagglutinins from *Clerodendrum viscosum* Vent (Lieut.-Gen. G. W. G. Bird), 292
Haematites (Natural and Artificial) : Hydrogen Reduction Characteristics of (John Henderson), 268
Haematology : Lectures on (edited by F. G. J. Hayhoe), *review* by Dr. M. E. Nutt, 7
    Some Aspects of, *review* by Dr. M. E. Nutt, 7
Haematopoietic System (Human) : Effects of Ionizing Radiation on the—Report of the Subcommittee on Haematologic Effects, Committee on Pathologic Effects of Atomic Radiation (United States Academy of Sciences—National Research Council, Publication No. 875), 556
Haemoglobin : Reactions of Haemoproteins with Hydrogen Peroxide and the Supposed Formation of Hydrogen Peroxide during the Autoxidation of (Prof. D. Keilin), 769
Haemoglobin 'Barts' and the Sickling Phenomenon (Dr. Lie-Injo Luan Eng), 1314
Haemoglobin *F* and the Genetic Control of Protein Structure (Prof. V. M. Ingram), 608 ; (Dr. Wolf W. Zuelzer and Abner R. Robinson), 609
Haemoglobin *N* and Microcythaemia in a Sardinian Family : Association of (Prof. E. Silvestroni and I. Bianco), 1208
Haemoglobin *P* in a Family of Southern Italian Extraction (Prof. E. Silvestroni, I. Bianco and C. Brancati), 292
Haemoglobin Synthesis : Control of Specificity in (Dr. J. Bishop, Dr. G. Favelukes, Prof. R. Schweet and Dr. E. Russell), 1365
Haemoglobin Variants (Denatured), in Acid Buffers : Solubility of (I. D. Fraser and Dr. A. B. Raper), 355
Haemoglobins : Abnormal Foetal (Prof. E. Silvestroni and I. Bianco), 397
Haemoglobins (Abnormal Human) : Thalassaemia and the (Dr. Harvey A. Itano and Prof. Linus Pauling), 398
Haemophilic (Anti-) Globulin : Stability of Freeze-dried (F. Nour-Eldin), 503
Haemoproteins : Reactions of, with Hydrogen Peroxide and the Supposed Formation of Hydrogen Peroxide during the Autoxidation of Haemoglobin (Prof. D. Keilin), 769
Haemorrhage (Thrombocytopaenic) : Treatment of, with Œstriol Succinate (Dr. Hubert Poliwoda), 400
Haenel, Dr. H. : Bacteria of the Intestine (Micro-ecological Rules in the Composition of the Intestinal Flora of Man), 1152
Hafnium Oxides (Zirconium and) : Reduction of (F. K. McTaggart), 1192
Hagadorn, Irvine R., and Nishioka, Richard S. : Neurosecretion and Granules in Neurones of the Brain of the Leech, 1013
Haggar, R. J. : Flower Initiation in Kent Wild White Clover (*Trifolium repens* L.), under Controlled Environmental Conditions, 1120
Hague, Prof. Bernard : *Obituary* by Dr. J. Lamb, 750
Hague, John L. : Appointed chief of the Standard Reference Materials Section of the United States National Bureau of Standards, 334 ; work of, 334
Hague, N. G. M. (Call, F., and) : Nematology (Diffusion of Ethylene Dibromide through Soil), 1049
Hahn, P., and others : Role of the Lung in Metabolism of Fat during Ontogeny of the Rat, 85
Hail Samples : Radar Reflectivities of (R. H. Douglas), 266
Haine, M. E. : The Electron Microscope, *review* by Prof. D. Gabor, 316
Hair in Yellow *A^{vy}/a* Mice : 5-Methyltryptophan and Darkening of the (Dr. Vivianne T. Nachmias), 934
Hairs (Labellar), of the Blowfly, *Phormia regina* Meigen : Response of the, to Protein (D. I. Wallis), 917
Hais, Dr. I. M. : Paper Chromatography, 760
Hajnal, J. : Title of reader in demography in the University of London (at the London School of Economics and Political Science) conferred on, 337
Hall, D. M., and Jones, R. L. : Physiological Significance of Surface Wax on Leaves, 95
Hall, Dr. E. T. : Grant of £1,500 from the Paul Instrument Fund, for the design and manufacture of a recording instrument to give a direct reading of wave-length, 225

Hall, Sir James : The Life and Scientific Work of (Dr. V. A. Eyles), 345
Hall, J. M. : Stress Effects on Thermoremanent Magnetization, 586
Hall, Jr., Marshall (edited by Richard Bellman and) : Combinatorial Analysis—Proceedings of the American Mathematical Society Symposia in Applied Mathematics, Vol. 10), *review* by Prof. L. S. Goddard, 321
Hall, V. C. : At the Maxwell Colour Centenary Conference (Colour Printing—Automatic or Semi-automatic Colour Correction), 11
Haller, Dr. Wolfgang : Fibrous Silica, 662
Halliday, Dr. June W. (Inglis, Dr. James A., and) : Thromboplastic Activity of Red Cells, 821
Hallmark, Julie (Neely, W. Brock, and) : Dextransucrase *V* and the Role of Metal Ions in Enzyme Catalysis, 385
Halmos, M. (Beck, Dr. M. T., and) : Stability Constant of Copper (II) Complexes of Reduction Products of 2,2'-Dipyridyl, 1090
Halogens and their Compounds : Gas-Phase Reactions of the (Dr. J. H. Thomas and Dr. E. Whittle), 129
Halsbury, Earl of : Elected president of the Machine Tool Industry Research Association, 546
Halsey, G. (Burkin, A. R., and) : Chemisorption at Solid–Liquid Interfaces, 348
Hambler, Dr. D. J. : A Poikilohydrous, Poikilochlorophyllous Angiosperm from Africa, 1415
Hamby, Prof. D. S. (Grover, Prof. Elliot B., and) : Handbook of Textile Testing and Quality Control, *review* by W. J. Onions, 106
Hamilton, William C. (Rouayheb, George M., and) : Deterioration of Solid-coated Capillary Columns on Standing, 801
Hamilton, W. J. : Ovum Humanum, *review*, 110
Hanaki, Akira (Ishidate, Prof. Morizo, and) : Oxidative Demethylation and Carcinogenicity of 4-N-Dimethylaminoazobenzene Derivatives, 1198
Hancock Medal of the Institution of the Rubber Industry awarded to M. M. Heywood, 755
Handbook : Biochemists' (edited by Dr. Cyril Long), *review* by Dr. D. Recaldin, 635
Handbook (A Laboratory), of Pulp and Paper Manufacture (Dr. Julius Grant), second edition, *review* by Dr. F. Lyth Hudson, 320
Handbooks (New), for Lunar Studies, *review* by D. H. P. Jones, 424
Handedness and Cerebral Dominance : Speech, *review* by Sir Russell Brain, 840
Handling (Safe), of Radioactive Substances, 1257
Hanging Mercury Drop (Rotating) : Use of the, in Analysis—Anodic Stripping using a Rotating Mercury Drop (Dr. J. J. Engelsman and A. M. J. M. Claassens), 240 ; Trace Analysis with a Rotating Hanging Mercury Drop (Dr. M. van Swaay and R. S. Deelder), 241
Hankinson, Dr. J. : Assessment of Pain (Relief of Pain by destruction of Intracerebral Structures under the guidance of Stereoscopic Radiography), 1353
Hanlon, D., and others : Gross Beta-Activity in the Thames River (Conn.), 1017
Hanstrom, Bertil, and others (edited by) : South African Animal Life—Results of the Lund University Expedition in 1950-1951, Vol. 7, *review* by Prof. O. Lowenstein, 1135
Happold, Prof. F. C. : The Training of Biochemists, 956
Haptoglobin : Action of Neuraminidase on (Prof. Max E. Rafelson, jun., Lise Cloarec, Jean Moretti and Max F. Jayle), 279
Haptoglobin Patterns in Cord Blood Serums (A. R. Rausen, P. S. Gerald and Dr. L. K. Diamond), 717
Haptoglobinuria in Nephrotic Syndromes (A. Marnay), 74
Harbison, Prof. F., and Myers, Prof. C. A. : Management in the Industrial World, 1332
Harbottle, Dr. Garman (Veljković, Slobodanka, and) : Recoil-Atom Reactions at Low Temperature, 1287
Harden, Dr. D. B. : Presidential Address to the Museums Association, 553
Hardening of the Cuticle in the Silkworm, *Bombyx mori* : Role of Lipid in the (Shigemi Kawase), 279
Harders, Dr. H. : Biorheology and Microcirculation (Technical Difficulties involved in Direct Microscopic Observations of Microcirculation *in vivo*), 757
Harding, D. : Limnological Trends in Lake Kariba, 119
Hardisty, Dr. M. W. : Sex Composition of Lamprey Populations, 1116
  Oocyte Numbers as a Diagnostic Character for the Identification of Ammocoete Species, 1215
Hardy, Dr. J. D. : Assessment of Pain (Pain Threshold in relation to Measurement of the Intensity of Human Pain and the Effects of Analgesics), 1354
Hardy, S. M. : Amino-Acid Liberation from Proteins by Enzyme or 'Heat Catalysed' Hydrolysis, 1061
Harigaya, S., and others : Inhibition of β-Glucuronidase by Oral Administration of D-Glucosaccharo-1,4-Lactone, 1298
Harkness Fellowships for 1962 of the Commonwealth Fund, New York, 1045
Harland, Prof. S. C. : Genetica, *review*, 213
Harper, Dr. W. R. : Neutron Terminology, 60
  Neutron 'Flux', 695
Harrington, H. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Effects of Radiation on Cell Division), 341
Harris, Prof. Colin C. (Arbiter, Prof. Nathaniel, and) : Power Requirements and Scale-up in Flotation, 268
Harris, Dr. G. P., and Griffin, Juliet E. : Flower Initiation in the Carnation in Response to Photoperiod, 614
Harris, Prof. G. W. : At the Scientific Publications Council Meeting on the Publication of Scientific Books (Contractual Relationships), 132
  Appointed to the chair of anatomy in the University of Oxford, 957 ; work of, 957
Harris, Prof. H., and Whittaker, Mary : Differential Inhibition of Human Serum Cholinesterase with Fluoride— Recognition of Two New Phenotypes, 496
Harris, J. M., and West, Dr. G. B. : Anaphylactoid Reaction in Rats, 399
Harris, M., and Morrison, Dr. G. A. : Multiple Inhibitions of Cell Metabolism by a Single Substance, 1276
Harrison, Dr. B. D. : Plant Viruses, *review*, 111
Harrison, Dr. E. R. : Terrestrial Accretion from the Solar Wind, 1182
Harrison, Dr. G. Ainsworth : Principles of Human Genetics, *review*, 110
Harrison, M. B. (Mai, W. F., and) : Nematology (*Heterodera rostochiensis* is held in check on Long Island by Nematicidal Treatment, Cultural Methods and Legal Regulation), 1049
Harrison, Prof. R. J. : Elected to the Fullerian professorship of physiology at the Royal Institution, 122 ; work of, 122
Harrison, T. K., and others : Absorption Spectra of γ-Irradiated Lead Silicate Glass, 374
Hart, B. L. J. : Appointed principal of the Computer Application Training Centre of International Computers and Tabulators, Ltd., 24
Hartley, Sir Harold : Elected to honorary membership of the Institute of Fuel, 23
Hartley, William : Plant Exploration and Introduction (Phytogeographical Basis of Pasture Plant Introduction), 1240
Harvey, Dr. A. : Welsh College of Advanced Technology, 127
Harvey, J. J. (Salaman, Dr. M. H., and) : Leukaemia in the Progeny of Mice inoculated with a Leukaemogenic Virus, 509
Harvey, William—Englishman, 1578-1657 (Prof. Kenneth J. Franklin), *review*, 740
Harwell : Visit of Russian Scientists to, 957
Hasan, R. (Qasim, Dr. S. Z., and) : A Hydrostatic Function of the Accessory Respiratory Organs in Air-breathing Fishes, 396
Hashimoto, Y., and others : Potentiation of Epinephrine Action, 186
Haslett (Caroline) Memorial Trust : Women Engineers in the U.S.S.R., a Study of the Education, Employment and Prospects of Women Engineers in the U.S.S.R. (L. S. Souter and R. Winsdale), 30
Hatfield, T., and others : Gross Beta-Activity in the Thames River (Conn.), 1017
Hauck, R. D., and Bouldin, D. R. : Distribution of Isotopic Nitrogen in Nitrogen Gas during Denitrification, 871
Hawke, J. C., and others : Growth of Ryegrass-dominant Pasture grazed by Cows, and Properties of New Zealand Butterfat, 303
Hawker, Lilian E., and others : An Introduction to the Biology of Micro-organisms, *review* by Prof. B. C. J. G. Knight, 1032
Hawkes, Prof. C. F. C. : Megalithic Tombs of France, *review*, 637
Hawkes, Dr. I. : Appointed lecturer in the Postgraduate School of Mining, University of Sheffield, 337
Hawkes, Prof. J. G. : Plant Exploration and Introduction (Greater International Collaboration in Collecting Expeditions and the Subsequent Distribution of the Material), 1240
Hawkesbury District (Sydney–) : Rock Engravings of the (F. D. McCarthy), 854
Hawkey, Christine, and Stafford, J. L. : Influence of Serum Factors on the Species-specificity of Tissue Thromboplastin, 920
Hawkins, T. H. : Scientific Attitude to Management, *review*, 209
Hay, J. B., and others : Teichoic Acids and the Structure of Bacterial Walls, 570
Hayashibe, Masaya, and Uemura, Teijiro : Release from the Feedback Inhibition controlling the Biosynthesis of Isoleucine, 1417
Haydak, M. H., and others : Chromatographic Investigation of the Methyl Alcohol/Chloroform-soluble Constituents of Honeybee Larval Foods, 362
Hayes, T. J., and others : Determination of Uranium as Pyrophosphate, 1291
Hayhoe, F. G. J. (edited by) : Lectures on Haematology, *review* by Dr. M. E. Nutt, 7
Hayman, R. W. : Mammals of Northern Rhodesia, *review*, 8
Haynes, Prof. L. J., and others : High Concentration of (–)-Noradrenaline in *Portulaca oleracea* L., 1108
Hayward, Dr. A. F. : Awarded a Carlsberg–Wellcome Research Fellowship, 754
Hazard, Dr. C. : Lunar Occultation of a Radio Source, 58
Hazard, Dr. Elia Ch. and others : Biochemical Changes in Lethal Staphylococcal Infections in Mice, 783
Hazards of the Animal House (Laboratory Animals Centre Discussion on), 339
Hazards (Health), from Radioactive Materials : Introductory Manual on the Control of (Medical Research Council, Memorandum No. 39), new edition, 1257
Head, Richard B. : Steroids as Ice Nucleators, 1058
Heading Time in a Bulk-Hybrid Population of Barley : Stabilizing Selection for (Dr. S. K. Jain), 1123
Heald, Dr. P. J. : Phosphorus Metabolism of Brain, *review* by Dr. R. V. Coxon, 318
Health, Ministry of : Abstracts of Efficiency in the Hospital Service, 441
Health, Ministry of, and General Register Office : Report on Hospital In-Patient Enquiry for the Year 1959, Part I, Preliminary Tables, 345
Health, United States National Institutes of, and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
Health in Yugoslavia (United Nations, World Health Organization, *WHO Chronicle*, Vol. 15, No. 7), 1260
Health, Education and Welfare, United States Department of : Public Health Service Publication No. 815, Highlights of Research Progress in General Medical Sciences (1960), 658
  Public Health Service Publication No. 854, Research Highlights in Ageing, 1145
Health (Mental) : Teaching of Psychiatry and (United Nations, World Health Organization, Public Health Papers No. 9), 1248
Health (Mental), World Federation for : Grant from the Gulbenkian Foundation, 754
Health (Mental) Statistics, 855
Health (Radiological) : Research Grants in (United States Public Health Service), 442
Health Education : Teacher Preparation for (United Nations, World Health Organization, Technical Report Series No. 193—Report of a joint WHO/Unesco Expert Committee), 441
Health Hazards from Radioactive Materials : Introductory Manual on the Control of (Medical Research Council, Memorandum No. 39), new edition, 1257
Health Service (Public), United States : Research Grants in Radiological Health, 442
Health Services (Public) : The Planning of (United Nations, World Health Organization, Technical Report Series No. 215—Fourth Report of the Expert Committee on Public Health Administration), 441
Healy, M. J. R. : Rapid Statistical Calculations, *review*, 1236
Heard, Dr. D. H., and others : Sialic Acids and the Electrokinetic Charge of the Human Erythrocyte, 44
Hearnshaw, Prof. L. S. : The Problem of Retirement, *review*, 532
Heart : Relationship between Velocity of Cardiac Contraction and Size of the—a Hypothesis (Dr. H. Feinberg), 1373

Heart of the Spinal Dog : Stimulation of the, by Phenoxybenzamine (B. G. Benfey and D. R. Varma), 919
Heart of the Turtle : Cycochrome c in the (Prof. Gunnar Biörck and Dr. Sven Paléus), 712
Heartwood : Carbon-14 from Nuclear Explosions as a Short-term Dating System—Use to determine the Origin of (Dr. A. T. Wilson), 714
Heat (Specific) and Expansion Coefficient of Liquid Helium-3 under Pressure below 0·1° K. (Dr. D. F. Brewer and J. R. G. Keyston), 1261
Heat Capacity and Resistivity Anomalies in Palladium Hydride (Paul Mitacek, jun., and Prof. J. G. Aston), 271
'Heat Catalysed' Hydrolysis : Amino-Acid Liberation from Proteins by Enzyme or (S. M. Hardy), 1061
Heat-Labile Alkaloids from Plants : Extraction of (Dr. A. R. Mattocks), 1281
Heat Shocks (Radiant) : Mutagenic Effect of, on Phanerogamous Plants (Dr. Bror Pettersson), 1167
Heath, Dr. I. D. : Staining of Sulphated Mucopolysaccharides, 1370
Heath, Prof. O. V. S. (Mansfield, Dr. T. A., and) : Photoperiodic Effects on Stomatal Behaviour in *Xanthium pennsylvanicum*, 974
Heating (Local), of the Hypothalamus : Increase of Evaporative Loss of Water from the Skin of the Ox in response to (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Heats of Adsorption of Organic Vapours on Adsorbents of High Surface Area using a Continuous Flow Calorimeter : Measurements of (G. H. Bell and A. J. Groszek), 1184
Heavens : The Fabric of the (Dr. Stephen Toulmin and June Goodfield), *review* by Dr. M. A. Hoskin, 840
Heavy Metals : Effect of Excess Supply of, to Barley during Germination, with special reference to Catalase and Peroxidase (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Heavy Water : Effects of, on Poliovirus Multiplication—Results and Speculations on Mechanism (Dr. David Kritchevsky, Dr. Richard I. Carp and Dr. Hilary Koprowski), 250
Hebrew University : Seminar at the Medical School on Biorheology and Microcirculation, 757
Hedley, A. B. : Appointed to the Central Electricity Authority research fellowship in fuel technology in the University of Sheffield, 229
Hedley and Co., Thomas (Newcastle-upon-Tyne) : Appointment of Dr. J. F. Goodman as head of the Basic Research Department, 229
Heezen, Bruce C., and others : The Floors of the Oceans, I, The North Atlantic—Text to accompany the Physiographic Diagram of the North Atlantic (Geological Society of America, Special Paper 65), *review* by Dr. G. E. R. Deacon, 531
Heftmann, Erich, and Mosettig, Erich : Biochemistry of Steroids, *review* by Dr. D. T. Elmore, 111
Height of Night-time *F* Layer Irregularities at the Equator (Dr. G. S. Kent and Dr. J. R. Koster), 1083
Heights of 1,000–1,700 km. : Terrestrial Exosphere at (Max Römer), 238
Heights (Ionospheric Absorption) : A Method of Estimating, from Recovery Times (Syed Ziauddin), 1084
Heinen, W., and Linskens, H. F. : Enzymic Breakdown of Stigmatic Cuticula of Flowers, 1416
Heinrich, H. C. : Vitamin B_{12} and Intrinsic Factor (Freedom of B_{12} Coenzyme from Cyanide), 1154 ; (Specific Effects of Vitamin B_{12} Deficiency), 1155
Heisenberg, Prof. W. K. : Elected a foreign associate of the United States National Academy of Sciences, 18 ; work of, 19
Heisler, Dr. L. H., and Whitehead, Dr. J. D. : Group and Phase Velocities of a Travelling Disturbance in the *F* Region of the Ionosphere, 157
Heitzmann, R. J. : Appointed Research Fellow in the Department of Chemistry, University of Birmingham, 337
Hela, Prof. Ilmo : Appointed chief scientist in charge of the programme of research on the effects of radioactivity in the sea, to be conducted at Monaco, 122 ; work of, 122
Helback, Hans : Ecological Aspects of Irrigation in Ancient Mesopotamia, 227
Helgason, Dr. Bjarni : Soil Temperatures in Iceland, 939
Helium (Solid) : Bond-Lengths in (Dr. A. F. Schuch), 591
Helium-3 (Liquid), under Pressure below 0·1° K. : Specific Heat and Expansion Coefficient of (Dr. D. F. Brewer and J. R. G. Keyston), 1261
Heller, Prof. H., and others : Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a Marine Teleost Fish (*Pollachius virens*), 670
Heller, Dr. L., and Ben-Yair, Dr. M. : Formation of Calcium Chloraluminate by Interaction of Portland Cement with Sea-Water and Chloride Solutions, 488
Helminthology, Journal of : Supplement in honour of R. T. Leiper on the occasion of his 80th Birthday, 1961, *review* by Dr. G. Lapage, 843
Helminthosporium sativum : Production of Symptoms of Barley Leaf-Spot Disease by Culture Filtrate of (S. K. Gayed), 725
Helminths (Soil-transmitted) : Control of (Prof. Paul C. Beaver), 1249
Helson, Prof. H. : At the Maxwell Colour Centenary Conference (Colour Appearance), 11
Hemihydrate (Calcium Sulphate) : Reactivity of (M. J. Ridge, H. Surkevicius and Angela A. Milne), 704
Hemileia vastatrix B. et Br. (Coffee Rust) : Spore Liberation and Dispersal of (R. W. Rayner), 725
Hemingway, Dr. J. T. : Influence of Plasma Proteins in the Control of Mitosis-rates in Generating Liver, 706
Henderson, Dr. B. : Appointed Research Fellow in the Department of Physical Metallurgy, University of Birmingham, 337
Henderson, John : Hydrogen Reduction Characteristics of Natural and Artificial Haematites, 268
Henderson Trust Lectures : No. 19, Cerebral Dominance and its relation to Psychological Function (Prof. O. L. Zangwill), *review* by Sir Russell Brain, 840
Henis, Y., and others : Factors influencing the Composition of the Cellulose-decomposing Microflora on Soil Crumb Plates, 307
Henle (Loop of) : Stimulation by Aldosterone of Sodium Transport in the (Dr. J. Crabbé), 817
Henn, T. R. : Science and Poetry, 534
Henry, S. Mark (Block, Richard J., and) : Metabolism of the Sulphur Amino-Acids and of Sulphate in *Blattella germanica*, 392
Hensel, Prof. Herbert : Awarded a Prize by the Feldberg Foundation for German–English Scientific Exchange for Experimental Medical Research, 1143
  The Electrophysiology of Thermoreceptors, 1143
  Assessment of Pain (Film of Afferent Impulses in Human Single Cutaneous Nerve Fibres), 1353
Heparin : Release of, from the Mast Cells of the Rat (G. T. Archer), 90
  Stimulation by, of Parenchymal Liver Cell Proliferation by Normal Adult Rats (Dr. M. Zimmerman and Evemarie Celozzi), 1014
Heparin-neutralizing Properties (Oncogenic and) : Surfen, a Quinoline with (DeWitt T. Hunter, jun., and Joseph M. Hill), 1378
Hepatic Cells (Normal Rat) : Nucleolar Localization of Succinic Dehydrogenase in (P. De, R. Chatterjee and Dr. S. Mitra), 925
Hepatic Induced Increase of Tryptophan-Pyrrolase : Effect of 5-Fluorouracil on (Sancia Gaetani and M. Antonietta Spadoni), 1296
Hepatitis (Experimental), in Mice : Blockage of Transformation of Tryptophan to Nicotinic Acid by (M. Piazza, F. Tancredi and Prof. E. Quagliariello), 601
Hepatoma No. 5123 : Energy Pathways of (Dr. Alan C. Aisenberg and Harold P. Morris), 1314
Hepatoma (Ascitic) : Comparison of Pyridine Nucleotides in the Liver and in an (M. Wintzerith, N. Klein, L. Mandel and Prof. P. Mandel), 467
Heppleston, Prof. A. G. (Jones, J. H., and) : Immunological Observations in Experimental Silicosis, 1212
Herbert, J. D., and others : A New 'Wedge' Type Instability observed in a 'Theta' Pinch, 1054
Herbert, W. J. : Awarded a Research Training Scholarship by the Animal Health Trust, 1250
Herdan, Dr. Gustav : Type-Token Mathematics, a Textbook of Mathematical Linguistics, *review* by Dr. G. H. Toulmin, 211
Herman, H., and Cohen, Prof. J. B. : Resistivity Changes due to Formation of G.P. Zones (Clusters rich in Solute), 63
Herman, L., and Herman, R. : New Afterglow Emission associated with Metastable Nitrogen Atoms, 346
Herman, R. (Herman, L., and) : New Afterglow Emission associated with Metastable Nitrogen Atoms, 346
Hermann, Dr. Howard T. (Stark, Dr. Lawrence, and) : Transfer Function of a Biological Photoreceptor, 1173
Hermiston, S. T. : Design and Use of Respirators (Apparatus for Protecting People who handled Radioactive Substances), 656
Heron, Alistair, and Chown, Sheila M., assisted by M. S. Featherstone and Catherine Cunningham : Ageing and the Semi-skilled—a Survey in Manufacturing Industry on Merseyside (Medical Research Council, Memorandum No. 40), 1249
Herpay, Zs. (Uri, J., and) : Use of Desertomycin Medium in Routine Selective Isolation of Fungi Pathogenic to Man, 1015
Herzberg, F. : The Motivation of Work, 1332
Hess, R., and Pearse, Dr. A. G. E. : Histochemical and Homogenization Studies of Mitochondrial α-Glycerophosphate Dehydrogenase in the Nervous System, 718
Hess, Prof. Seymour L. : Introduction to Theoretical Meteorology, *review* by Dr. Robert P. Pearce, 314
Heterocyclic Chemistry, *review* by Dr. G. L. Buchanan, 425
Heterocyclic Compounds (edited by Dr. E. H. Rodd), (Chemistry of Carbon Compounds, Vol. 4, Part C), *review* by Dr. James D. Loudon, 214
  An Introduction to the Chemistry of (R. M. Acheson), *review*, 320
Heterocyclic Systems with Bridgehead Nitrogen Atoms (William L. Mosby), Part 1, *review* by Dr. G. L. Buchanan, 425
Heterodera rostochiensis Woll. : Assessing the Damage caused by (E. B. Brown), 937
Heterogeneous Lactic Dehydrogenases in Malignant Effusions : Diagnostic Significance of (R. Richterich, K. Zuppinger and E. Rossi), 507
Hevea brasiliensis : Effect of Ethylene Oxide on the Tapping of (D. H. Taysum), 1319
  Effect of Ferric Dimethyldithiocarbamate on the Rooting of Cuttings of (G. H. Tinley), 1217
Hewish, Dr. A. : Elected to a Fellowship in Churchill College, Cambridge, on appointment as College lecturer in physics, 856
Hewitt, Dr. H. B. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Response of Mouse Leukaemic Cells—using an *in vivo* Bio-Assay—to Radiation and its Variation with Different Degrees of Oxygenation), 341
  Transplantation of Murine Leukaemia by Unconventional Routes, 1213
Hewitt, Dr. H. B., and Wilson, Dr. C. W. : Awarded the David Anderson Berry Prize for 1961 of the Royal Society of Edinburgh, 229
Hexachlorobenzene Intoxication : Nervous and Biochemical Disturbances following (Dr. F. De Matteis, B. E. Prior and Prof. C. Rimington), 363
Hexosamine : Partial Acid-Hydrolysis of a Mucopolysaccharide without Appreciable *N*-Deacetylation of (Dr. T. J. Painter and Prof. W. T. J. Morgan), 39
Hexosamine and Sialic Acid Contents in Cells (Atsushi Kimura, Yasushi Nagai, Dr. Koh-Iti Turumi, Yoshiko Kawashima and Haruo Sato), 596
Heyneman, Dr. Donald : A Natural Population of Anomalous Branched Tapeworms, *Hymenolepis nana* (Cestoda : Hymenolepididae), in a Colony of *DBA/1* Mice, 297
Heywood, J. : Research by Sixth-Form Schoolboys, 860
Heywood, M. M. : Awarded the Hancock Medal of the Institution of the Rubber Industry, 755
Heywood, Dr. V. H. : Flora Europaea, 446
Hickman, B. S., and others : Scattering of Long Wave-length Neutrons by Irradiated Beryllium Oxide, 1385
Hicks, Dr. R. Marian (Holt, Dr. S. J., and) : Use of Veronal Buffers in Formalin Fixatives, 832
Higgins, P. R. B., and Roberts, A. C. : Damage in Stainless Steel due to Fission Fragments, 1158
Higgins, William : The Life and Work of, Chemist (1763-1825), (Prof. T. S. Wheeler and Prof. J. R. Partington), *review* by Frank Greenaway, 533
Higgs, J. W. Y. : At the sixth-seventh Annual Conference of the Museums Association (Display of Folk Material), 553
High Altitude : Aldosterone Excretion and Potassium Retention in Subjects living at (P. J. Ayres, Rona C. Hurter, Dr. E. S. Williams and J. Rundo), 78
High Concentration of (–)-Noradrenaline in *Portulaca oleracea* L. (Dr. P. C. Feng, Prof. L. J. Haynes and Dr. K. E. Magnus), 1108
High Energy Nuclear Physics (Institute of Physics and the Physical Society Symposium on), 1349
High Indole-3-Acetic Acid Concentrations : Growth Stimulation by (T. A. Truelsen), 1410

High Polymers : Elimination of the Absorption Correction in the Viscometry of Dilute Solutions of (H. van Oene and Prof. L. H. Cragg), 1160
  Viscosity–Temperature Relationships for Dilute Solutions of (Dr. W. R. Moore), 1292
High Polymers (Semiconducting) : Photochemical Production of (Prof. Gerald Oster, Dr. Gisela K. Oster and Dr. Marian Kryszewski), 164
High-Pressure Treatment : A New Phase formed by—Face-centred Cubic Molybdenum Monocarbide (E. V. Clougherty, K. H. Lothrop and J. A. Kafalas), 1194
High Pressures : Melting and Polymorphism of Indium Antimonide at (A. Jayaraman, R. C. Newton and Dr. G. C. Kennedy), 1288
High-purity Zinc : Determination of Indium in (Naïm Košaric and the late G. Leliaert), 703
High Speed : Ignition of Gas by Sparks produced by Breaking Wires at (Dr. R. L. Gordon, Dr. H. Lord and D. W. Widginton), 1085
High Surface Area : Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of, using a Continuous Flow Calorimeter (G. H. Bell and A. J. Groszek), 1184
High Temperature Compounds : Sintered (Powder Metallurgy Joint Group of the Iron and Steel Institute and the Institute of Metals Symposium on), 1250
Higher Plants : Some Characteristics of Mitochondria Extracted from (Dr. Walter D. Bonner, jun., and Dinor O. Voss), 682
Highlights of Research Progress in General Medical Sciences, 1960 (United States Department of Health, Education and Welfare, Public Health Service Publication No. 815), 658
Highlights (Research), in Ageing (United States Department of Health, Education and Welfare, Public Health Service Publication No. 854), 1145
Highly Effective Anthelmintic for Sheep : Thiabendazole, a (Hugh McL. Gordon), 1409
Highnam, Dr. K. C. : Induced Changes in the Amounts of Material in the Neurosecretory System of the Desert Locust, 199
Hilburn, Jean M., and others : Sub-fractionation of Human Serum Leucine Aminopeptidase, 1203
Hildemann, Dr. W. H. : Blood Groups in Infra-human Species (Genetic Specificities of Amphibians and Reptiles), 654
Hill, Sir Austin Bradford : Title of professor emeritus of medical statistics (at the London School of Hygiene and Tropical Medicine) conferred on, 546
Hill, D. A., and Porter, N. A. : Photography of Cerenkov Light from Extensive Air Showers in the Atmosphere, 690
Hill, Prof. D. : Assessment of Pain (Central Mechanisms of Pain), 1353
Hill, Joseph M. (Hunter, jun., DeWitt T., and) : Surfen, a Quinoline with Oncogenic and Heparin-neutralizing Properties, 1378
Hill, Dr. June : Foetal and Neonatal Physiology (Reaction of the New-born Animal to Environmental Temperatures), 345
Hill Reaction : Photophosphorylation and the (Mary Stiller and Prof. Birgit Vennesland), 677 ; (Dr. N. E. Good), 678 ; (Dr. André T. Jagendorf), 679
Hiller, H. : Space-Flight and Re-entry Trajectories (A Generalized Study of Two-dimensional Trajectories in the Region of the Earth and Moon), 960
Hilton, W. F. : Space-Flight and Re-entry Trajectories (Dynamics of Terminal Re-entry—Re-entry Paths which avoid the Zones of Radiation), 960
Himalaya : Science in the (Dr. L. G. C. E. Pugh), 429
Hirashima, Kunitake, and others : Effect of Bilateral Section of the Splanchnic Nerve on Erythropoiesis, 500
Hirsch, Dr. P. B. : Grant of £3,900 from the Paul Instrument Fund, for the construction of an electron optical instrument, 225
Hirsch, Dr. Willy (Frenkel, Ayala, and) : Spontaneous Development of *L* Forms of Streptococci requiring Secretions of other Bacteria or Sulphydryl Compounds for Normal Growth, 728
Histamine : Incorporation of, into Liver Protein *in vivo* (Isabel Wajda, Michael Ginsburg and Prof. Heinrich Waelsch), 1204
  Relationship between the Decrease in Urinary Excretion of, and the Initiation of the Labour Process (Dr. Halina Wiskont-Buczkowska), 290
Histamine Metabolism : Anabolic Agents and (Dr. K. S. Kim), 1368
Histidine Decarboxylase and Growth (D. Mackay, Joan D. Reid and Dr. D. M. Shepherd), 1311
Histochemical Demonstration of Gamma-Glutamyl Transpeptidase (Prof. Z. Albert, Dr. Marian Orlowski and Dr. A. Szewczuk), 767
Histochemical and Homogenization Studies of Mitochondrial α-Glycerophosphate Dehydrogenase in the Nervous System (R. Hess and Dr. A. G. E. Pearse), 718
Histological Work : Ethylene Glycol Monomethyl Ether, a New Fixative for (Prof. Walter B. Shelley and Ralph Florence), 719
Histone (Calf Thymus) : Effect of, on Rats bearing Transplantable Acute Myeloid Leukaemia (Dr. Lubomir Hnilica and Dr. Viktor Holoubek), 922
Histones isolated from Different Tissues : Influence of Polyvalent Ions on (I. P. S. Agrell and E. G. Christensson), 284
History of the American Philosophical Society (E. G. Conklin), 335
History of Medicine and Pharmacy : Second Annual Report and List of Members (1960-61) of the Faculty of the (Worshipful Society of Apothecaries of London), 21
History of the Sheffield Smelting Company, Ltd., 1760-1960 : Two Hundred Precious Metal Years—a (Ronald E. Wilson), *review* by Prof. R. W. K. Honeycombe, 108
History (Quaternary) : Two Unexplored Records of (A. H. Stride and R. Bowers), 1000
History (A Social), of Engineering (Prof. W. H. G. Armytage), *review* by Prof. M. Postan, 946
Hnilica, Dr. Lubomir, and Holoubek, Dr. Viktor : Effect of Calf Thymus Histone on Rats bearing Transplantable Acute Myeloid Leukaemia, 922
Hobbs, Dr. Betty : Bacteria of the Intestine (The Public Health Significance of *Salmonella* Carriers in Livestock and Birds), 1153
Hobbs, Dr. Betty, and others : Bacteria of the Intestine (Studies on the Growth, Sporulation and Carriage of *Clostridium welchii* with special reference to Food Poisoning Strains), 1153
Hodges, H. W. M.: At the sixty-seventh Annual Conference of the Museums Association (Problems of Conservation), 554
Hodgkin, Dr. Dorothy, and Lenhert, Dr. P. G. : Vitamin B_{12} and Intrinsic Factor (Vitamin B_{12} Coenzyme), 1154
Hodgman, —.: Hazards of the Animal House (Hazards encountered in dealing with Dogs and Cats), 339
Hodgson, G. W., and Peake, Eric : Metal Chlorin Complexes in Recent Sediments as Initial Precursors to Petroleum Porphyrin Pigments, 766
Hodson, H. F., and others : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine, 1312
Hog Thyroglobulin : Chromatographic Fractionation of (Prof. Nobuo Ui, Osamu Tarutani, Yoichi Kondo and Hiroko Tamura), 1199
Högbom, Dr. J. A. (Christiansen, Prof. W. N., and) : Cross-Antenna of the Proposed Benelux Radio Telescope, 215
Holeysovsky, Dr. V., and others : Paper Chromatography (Film showing the Technique of Paper Chromatography of Amino-Acids), 759
Holian, John, and others : Radiation-induced Formation and Reactions of the Formyl Radical Ion, 1386
Holistic Approach to Selenology (Brian Warner), 586
Hollingsworth, D. F. : Tradition, Science and Practice in Dietetics, 1343
Holmes, Dr. J. L. : Appointed a lecturer in chemistry at the University o Edinburgh, 443
Holoubek, Dr. Viktor (Hnilica, Dr. Lubomir, and) : Effect of Calf Thymus Histone on Rats bearing Transplantable Acute Myeloid Leukaemia, 922
Holt, Dr. S. J., and Hicks, Dr. R. Marian : Use of Veronal Buffers in Formalin Fixatives, 832
Holttum, Dr. R. E. : Plant Taxonomy as a Scientific Discipline (Presidential Address to Section K (Botany) of the British Association for the Advancement of Science), 990
Homburger, F. (edited by) : Progress in Experimental Tumor Research, Vol. I, *review* by Prof. F. Bergel, 1231
Homogeneously Absorbing Object : The Feulgen-Stained Somatic Cell Nucleus as a (Dr. Simon Iversen), 150
Homogenization Studies (Histochemical and), of Mitochondrial α-Glycerophosphate Dehydrogenase in the Nervous System (R. Hess and Dr. A. G. E. Pearse), 718
Homograft Response : Regeneration of Elements of Donor Origin in Orthotopically Grafted Skin following the (Dr. J. K. Dineen and Dr. Aleksander Szenberg), 153
Homotypic Long Bones : Number and Arrangement of Osteons in Corresponding Regions of (Dr. G. Marotti), 1400
Honeybee Larval Foods : Chromatographic Investigation of the Methyl Alcohol/Chloroform-soluble Constituents of (N. G. Patel, M. H. Haydak and R. Lovell), 362
Honeycombe, Prof. R. W. K. : From Buttons to Bullion, *review*, 108
Hönl, Prof. Helmut : Elected a Member of the Physics Section of the Leopoldina German Academy of Sciences, 122
Hope, A. B. : The Action Potential in Cells of *Chara*, 811
Hope (New), for African Wildlife, 958
Hopes of To-morrow, 1030
Hopkins, Dr. C. A., and Williams, M. O. : Parasite Biology (Application of New Laboratory Techniques), 135
Hopkins, Sir Frederick Gowland : Memoir to mark the Centenary of the birth of (Prof. Ernest Baldwin), (Van den Berghs, Ltd.), 439, *erratum*, 546
Hops (*Humulus lupulus* L.) : Treatment of, with Gibberellic Acid—Effect of Spraying with Gibberellic Acid on Yield and Composition (R. Stevens, J. B. Roberts and I. H. Williams), 360 ; Effect on Growth and Development (I. H. Williams), 361
Hopsu, Prof. Väinö K. (Talanti, Prof. S., and) : Leucine Aminopeptidase in the Mammary Gland of the Cow and Rat, 86
Hormone : An Immunological Study of a Human Pituitary Interstitial Cell-stimulating (N. R. Moudgal and Prof. Choh Hao Li), 192
Hormone (Brain), of the Silkworm, *Bombyx mori* (Mamori Ichikawa and Hironori Ishizaki), 933
Hormone (Pituitary Growth) : Effect of on Cholesterogenesis (Dr. A. L. Greenbaum and R. S. Leal), 600
Horn af Rantzien, Dr. H. : *Obituary* by Dr. C. Edelstam, 121
Hornby Libraries : Brown, Picton and (Liverpool Libraries, Museums and Arts Committee), 21
Horner, P. : Thermoelectric Power of Single Crystals of Gallium, 58
Horner, R. G. : At the Maxwell Colour Centenary Conference (Problems of Colour Reproduction), 11
Horticultural Society (Royal) : Bowles Memorial Travel Scholarship, 1349
Horticultural Society (Royal), and others : Third World Orchid Conference, London, 1960—Proceedings of the, *review* by V. S. Summerhayes, 213
Horticulture (Agriculture and), in Northern Ireland : Aids to, 959
Horton, Dr. A. A. (Goodwin, Prof. T. W., and) : Biosynthesis of Riboflavin in Cell-free Systems, 772
Horton-Smith, C. : Immunity to Protozoa (Local Immunity in Coccidiosis), 553
Hoskin, Dr. M. A. : Background to Astronomy, *review*, 840
Hospital In-Patient Enquiry : Report on, for the Year 1959, Part I, Preliminary Tables (Ministry of Health and General Register Office), 345
Hospital Physicists' Association : Douglas Lea Memorial Lecture (Dr. E. L. Powers), 1045
Hospital Service : Abstracts of Efficiency in the (Ministry of Health), 441
Hospitals : Sterilizing Materials for (Brian Watkin), 1044
Hot Spring Areas with Acid–Sulphate–Chloride Waters (Dr. A. J. Ellis and S. H. Wilson), 696
Hotz, Dr. G. : Effects of Ionizing Radiation on Organic and Biological Solids (Role of Oxygen in Radiation Damage), 1150
Houbolt, J. C. : Space-Flight and Re-entry Trajectories (Techniques of Orbital Rendezous), 960
Houde, Dr. R. W. : Assessment of Pain (Pathological and Experimental Pain in terms of the 'Ridit' Unit), 1354
Houghton-Evans, Dr. W. : Appointed lecturer in architectural engineering at the University of Leeds, 650
Hounam, R. F. : Design and Use of Respirators (Apparatus for Protecting People who handled Radioactive Substances), 656
House of Commons : Debate on Shipping and Shipbuilding, 543
  Debate on Apprenticeship and Training, 737
  Debate on Science, 837
  Adjournment Debate on the Research Work of the Nature Conservancy, 962
  Debate on the Social Sciences, 1354

House of Lords : Committee stage of the Rating and Valuation Bill, 123
Houseflies : Pattern of Pyrethrin-resistance in (B. C. Fine), 884
House-Mouse : Pulmonary Tumours and Group VII in the (Dr. Joyce L. Bloom), 1124 ; (Dr. J. A. H. Tatchell), 1125
Housing and Local Government, Ministry of : Pollution of Water by Tipped Refuse—Report of the Technical Committee on the Experimental Disposal of House Refuse in Wet and Dry Pits, 864
How, M. J. : Awarded a general fellowship in chemistry for 1961-62 by the Ramsay Memorial Trust, 337
How Old are the Angiosperms? : (D. I. Axelrod), 442 ; (—. Scott, —. Barghoorn, and —. Leopold,), 442
Howard, F. T. (edited by) : Sector-Focused Cyclotrons—Proceedings of an Informal Conference, Sea Island, Georgia, 1959 (United States National Academy of Sciences—National Research Council, Nuclear Science Series, Report No. 26, Publication No. 656), *review* by M. Snowden, 532
Howard, Dr. J. G. : Resistance to Infection with *Salmonella paratyphi C* in Mice parasitized with a relatively Avirulent Strain of *Salmonella typhymurium*, 87
Hsu, K. C., and others : Antibodies to Trophoblasts during the Post-Partum Period, 510
Hubbard, Dr. J. I., and Schmidt, Robert F. : Stimulation of Motor Nerve Terminals, 1103
Hudlicky, Milos : Chemie der Organischen Fluorverbindungen, *review* by Dr. Richard Dresdner, 319
Hudson, Dr. F. Lyth : A Laboratory Handbook of Pulp and Paper Manufacture, *review*, 320
Hudson, Dr. P. S. : Plant Exploration and Introduction (Report of the British Commonwealth Potato Collection), 1240 ; (Gene Resources of the World), 1241
Huggins, A. K., and Moses, V. : Breakdown of [2^{14}-C]-Glycine during Paper Chromatography, 668
Huggins, William H., and others : Operations Research and Systems Engineering, *review* by Prof. L. S. Goddard, 105
Hughes, Dr. Agnes M. : Title of reader in biology in the University of London (at the Royal Free Hospital School of Medicine) conferred on, 229
Hughes, Dr. E. O. : Appointed scientific attaché to the Canadian Embassy in Washington, 542 ; work of, 542
Hughes, Dr. G. M., and Tauc, L. : The Path of the Giant Cell Axons in *Aplysia depilans*, 404
Hughes, W. L. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Effects of Radiation on Cell Division), 341
Huis in't Veld, L. G., and others : Neutral 17-Ketosteroids in Porcine Urine, 175
Hulka, J. F., and others : Antibodies to Trophoblasts during the Post-Partum Period, 510
Hulme, Dr. A. C. (Jones, Dr. J. D., and) : Preparation of Mitochondria from the Peel of Apples, 370
Human Anatomy : Atlas of (edited by Prof. Ferenc Kiss and Prof. János Szentagothai), Vol. 1, Osteology, Syndesmology, Myology ; Vol. 2, Splanchnology, Endocrine Glands, Heart ; Vol. 3, Nervous System, Vascular System, Lymphatic System, Sense Organs, *review* by Prof. J. M. Yoffey, 1232
  Illustrations of, *review* by Prof. J. M. Yoffey, 1232
Human Aorta during Growth : Increase in Elastin Content of the (Dr. V. Scarselli), 710
Human Aortic Tissue : Degree of Polymerization of Haluronic Acid isolated from (Dr. Sv. Bertelsen and K. Marcker), 386
Human Beings : Effect of Sodium Fluoride on Calcium Metabolism of (Dr. Clayton Rich and John Ensinck), 184
Human Beings (Irradiated) : Decreased Urinary Excretion of 2-Aminoethanol by (Dr. Ralph R. Cavalieri, M. T. Van Metre and W. I. Sivertsen), 1303
Human Blood-Group A Substance : Two Serologically Active Trisaccharides isolated from (I. A. F. Lister Cheese and Prof. W. T. J. Morgan), 149
Human Body : Determination of Caesium-137/Potassium Ratios in Diet and in the, by Urine Analysis (A. Morgan and Gloria M. Arkell), 1100
Human Bone Tissue : Blood-Typing Compact (H. E. Ezra-Cohn and Prof. S. F. Cook), 1267
Human Cancer Cells (HeLa) in Culture : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Human Chromosome Counts in relation to Age : Distribution of (Patricia A. Jacobs, W. M. Court Brown and Dr. Richard Doll), 1178
Human Epidermoid Carcinoma Cells in Culture : Biochemical Aspects of Resistance to 6-Mercaptopurine in (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
Human Erythrocyte : Sialic Acids and the Electrokinetic Charge of the (G. M. W. Cook, Dr. D. H. Heard and Dr. G. V. F. Seaman), 44
Human Faeces : Isolation of Sterol Esters from (Francis Aylward and Pamela Wills), 1397
Human Genetics : Principles of (Curt Stern), second edition, *review* by Dr. G. Ainsworth Harrison, 110
Human Haematopoietic System : Effects of Ionizing Radiation on the—Report of the Subcommittee on Haematologic Effects, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 875), 556
Human Haemoglobins (Abnormal) : Thalassaemia and the (Dr. Harvey A. Itano and Prof. Linus Pauling), 398
Human Pituitary Interstitial Cell-stimulating Hormone : An Immunological Study of a (N. R. Moudgal and Prof. Choh Hao Li), 192
Human Red Cells : Common Carrier System for Sugar Transport in (Dr. L. Lacko and Dr. M. Burger), 881
  A Relation between the Reactivity of, to Antiglobulin Tests and their Surface Structure (Judith E. Davis, Prof. H. N. Green and Pamela W. Tymms), 923
Human Serum Cholinesterase with Fluoride : Differential Inhibition of—Recognition of Two New Phenotypes (Prof. H. Harris and Mary Whittaker), 496
Human Serum Leucine Aminopeptidase : Sub-fractionation of (Prof. Clyde A. Dubbs, Charlotte Vivonia and Jean M. Hilburn), 1203
Human Side of Enterprise (D. McGregor), 1332
Human Urine (Normal) : Quantitative Determination of Metadrenaline and Normetadrenaline in (Dr. Kaoru Yoshinaga, Dr. Chuichi Itoh, Dr. Nozomu Ishida, Dr. Tatsuo Sato and Dr. Yasuo Wada), 599
Human Vision : Limits of (Dr. R. A. Weale), 471
Human Whole Blood : Biosynthesis of Polyenoic Fatty Acids in (Dr. F. Leupold and G. Kremer), 805
Human and Mouse Tumour Cells : Selective Uptake of Specifically Bound Cobalt-58 Vitamin B_{12} by (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Humanity of Man (Sir Wilfrid Le Gros Clark), 977 ; (Dr. Launcelot Fleming), 1229
Humanum : Ovum (Prof. Landrum B. Shettles), *review* by W. J. Hamilton, 110
Hume, Capt. C. W. : Assessment of Pain, 1354
Hummingbirds (Active, Sleeping and Torpid) : Thyroid Function in (Prof. C. J. Shellabarger, R. C. Lasiewski and G. E. Hyncik), 1318
Humphreys, O. W. : *Obituary* of J. Walter Ryde, 17
Humulus lupulus L. (Hops) : Treatment of, with Gibberellic Acid—Effect of Spraying with Gibberellic Acid on Yield and Composition (R. Stevens, J. B. Roberts and I. H. Williams), 360 ; Effect on Growth and Development (I. H. Williams), 361
Humus : Isolation of Anthraquinone from (Kyoichi Kumada, Akio Suzuki and Kazuyuki Aizawa), 415
  Resistance of, to Decomposition (H. F. Birch and M. T. Friend), 731
Hunger : A Strategy for the War on (Sir Joseph Hutchinson and Prof. A. H. Bunting), 539
'Hunger Motivational' System : Evidence of a, in the Lateral Hypothalamus of the Rat (Dr. P. J. Morgane), 672
Hunt, Dr. J. N. : Appointed reader in physical oceanography at the Imperial College of Science and Technology, London, 443, 1349
Hunt, Dr. R. W. G. : At the Maxwell Colour Centenary Conference (Problems of Colour Reproduction), 11
Hunter, jun., Dewitt T., and Hill, Joseph M. : Surfen, a Quinoline with Oncogenic and Heparin-neutralizing Properties, 1378
Hunter, G. : Studies in Management, 1332
Hurter, Rona C., and others : Aldosterone Excretion and Potassium Retention in Subjects living at High Altitude, 78
Hutchinson, Sir Joseph, and Bunting, Prof. A. H. : A Strategy for the War on Hunger, 539
Hutner, S. H., and others : Vitamin-Levels in Blood and Serum, 78
Hutson, Dr. V. C. L. : Appointed lecturer in applied mathematics at the University of Sheffield, 377
Hyaluronic Acid isolated from Human Aortic Tissue : Degree of Polymerization of (Dr. Sv. Bertelsen and K. Marcker), 386
Hyaluronidase : Urinary Inhibitors of (P. J. Knudsen and J. Koefoed), 1306
Hyashi, Dr. K. : Effects of Ionizing Radiation on Organic and Biological Solids (Reactions in the Solid State), 1150
Hybrid (Bulk-) Population of Barley : Stabilizing Selection for Heading Time in a (Dr. S. K. Jain), 1123
Hybrid (A Natural), of *Tilapia nigra* and *Tilapia leucosticta* from Lake Naivasha, Kenya Colony (H. Y. Elder and D. J. Garrod), 722
Hybridization : Effect of, on the Primary Polydipsic Trait of an Inbred Strain of Mice (Dr. Emanuel Silverstein), 523
Hyderabad Regional Research Laboratory : Annual Report (1959-60), 757
Hydra : Sexual Differentiation in, in relation to Population Density (Helen D. Park, Christyna Mecca and Anne Ortmeyer), 92
Hydrastine : Biosynthesis of (J. R. Gear and Prof. I. D. Spenser), 1393
Hydrated Salts (Molten) : Molar Sound Velocity in (P. R. K. L. Padmini and Prof. B. Ramachandra Rao), 694
Hydrazine (Diborane–) Flames : Formation of Boron Nitride in (W. G. Berg and W. E. Wilson), 380
Hydrazoic Acid (Nitric Acid–) : A New Inorganic Reaction— (Dr. J. Mašek), 166
Hydrazones (α-Keto-Acid) : Application of the Nickel Reaction and Thermal Isomerization of, for their Chromatographic Analysis (A. M. Tokushige and Dean E. S. Cook), 797
Hydride (Palladium) : Heat Capacity and Resistivity Anomalies in (Paul Mitacek, jun., and Prof. J. G. Aston), 271
Hydrocarbons (Condensed Ring Aromatic) : π-Electronic Excitation and Ionization Energies of (Dr. J. B. Birks and M. A. Slifkin), 761
Hydrocarbons (Polycyclic Aromatic) : Non-Enzymic Hydroxylation of (F. Dewhurst and G. Calcutt), 808
Hydrochloride Isomers : Mannosyl D-Glucosamine—*N*-Mannosyl D-Glucosamine Hydrochloride (Dr. S. A. Barker, Dr. K. Murray and Prof. M. Stacey), 142 ; 6-*O*-Mannosyl D-Glucosamine Hydrochloride (Dr. S. A. Barker, Dr. K. Murray, Prof. M. Stacey and D. B. E. Stroud), 143
Hydrocortisone and Methopyrapone (Corticotrophin) : Effects of, on the Circulating Eosinophiles in Man (Dr. N. J. Kothari and Dr. J. C. Saunders), 1105
Hydrocortisone, the Sulphydryl Group, and the Catechol Amines : Interaction of (Dr. Sidney Roston), 490
Hydrogen : Selectivity of Palladium Catalysts for the Oxidation of Carbon Monoxide in the Presence of (P. Mars and Th. van de Mond), 1003
Hydrogen in Gaseous Mixtures : Determination of, by Gas-Chromatography (P. J. Kipping), 270
Hydrogen Cyanide : Mechanism of Synthesis of Adenine from, under Possible Primitive Earth Conditions (Prof. J. Oró), 1193
Hydrogen Ion Concentration, Plankton and Fish in Fresh-water Eutrophic Lakes of India (Dr. S. M. Das), 511
Hydrogen Peroxide : Cell Transplants of Avian Lymphomatosis treated with (Dr. V. L. Sanger), 1406
  Reactions of Haemoproteins with, and the Supposed Formation of Hydrogen Peroxide during the Autoxidation of Haemoglobin (Prof. D. Keilin), 769
Hydrogen Reduction Characteristics of Natural and Artificial Haematites (John Henderson), 268
Hydrogen Transfer (Electron and) : Coupling of Phosphorylation to, by a Chemi-Osmotic Type of Mechanism (Dr. Peter Mitchell), 144
Hydrogenolysis of 2,4-Dinitrophenylhydrazones of Aromatic Keto-Acids : Side-Reactions during (Dr. John H. Menkes), 285
Hydrogenomonas (Knallgas Bacteria) : Formation and Utilization of Poly-β-Hydroxybutyric Acid by (Prof. H. G. Schlegel, G. Gottschalk and R. von Bartha), 463
Hydrolysates (Protein) : A Simplified Method for Separating Amino-Acid Mixtures from, on One Ion-Exchange Column during Preparation (J. Liebster, K. Kopoldová and M. Dobiášová), 1198

Hydrolysis of Fatty Acid Esters of Riboflavin by Pancreatic Lipase (Prof. Kunio Yagi, Yoshiko Yamamoto and Jun Okuda), 174
Hydrolysis (Alkaline), of *M*- and *N*-Blood Group Substances : Products of Mild Acid and (Dr. Elzbieta Romanowska), 1408
Hydrolysis ('Heat Catalysed') : Amino-Acid Liberation from Proteins by Enzyme or (S. M. Hardy), 1061
Hydrolysis (Partial Acid-), of a Mucopolysaccharide without Appreciable *N*-Deacetylation of Hexosamine (Dr. T. J. Painter and Prof. W. T. J. Morgan), 39
Hydromechanics Research Association (British) : Open Days (S. T. Bonnington), 652
Hydrostatic Function of the Accessory Respiratory Organs in Air-breathing Fishes (Dr. S. Z. Qasim and R. Hasan), 396
Hydrostatic Pressure : Mechanism of Sensitivity to, in the Prawn, *Palaemonetes varians* Leach (Peter S. B. Digby), 366
Hydroxylamine : Enzymic Binding of, by Fumaric Acid (Prof. Nathan Grossowicz and the late Yehudith Lichtenstein), 412
Hydroxylation (Non-Enzymic), of Polycyclic Aromatic Hydrocarbons (F. Dewhurst and G. Calcutt), 808
Hydroxyproline Excretion : Influence of Scurvy and Lathyrism (Odoratism) on (Dr. G. R. Martin, S. E. Mergenhagen and D. J. Prockop), 1008
5-Hydroxytryptamine : Formation of, in an Aqueous Solution of 5-Hydroxytryptophan treated with X-Rays (M. Jović and Z. Supek), 383
5-Hydroxytryptophan treated with X-Rays : Formation of 5-Hydroxytryptamine in an Aqueous Solution of (M, Jović and Z. Supek), 383
Hylander, Dr. N. : Flora Europaea (Report of the Nomenclature Subcommittee), 449
Hymenolepis nana (Cestoda : Hymenolepididae) : A Natural Population of Anomalous Branched Tapeworms, in a Colony of *DBA*/1 Mice (Dr. Donald Heyneman), 297
Hyncik, G. E., and others : Thyroid Function in Active, Sleeping and Torpid Hummingbirds, 1318
Hypodermic Probe using Fibre Optics (David F. Capellaro, Narinder S. Kapany and Dr. Charles Long), 927
Hypomagnesaemia in Lactating Cows given Artificial Rations Low in Magnesium : Rapid Development of (J. A. F. Rook), 1019
Hypoprothrombinaemia (Coumarin-induced) : Lack of Effect of Coenzyme Q_{10} on (Prof. Murray Weiner, Dr. Theodore Chenkin and Dr. Peter G. Dayton), 711
Hypothalamus : Action of the (John Erskine Malcolm), 606
  Increase of Evaporative Loss of Water from the Skin of the Ox in response to Local Heating of the (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Hypothalamus (Lateral), of the Rat : Evidence of a 'Hunger Motivational' System in the (Dr. P. J. Morgane), 672
Hypothesis (Chelation), of Auxin Action : Improbability of the (Dr. D. D. Perrin), 253
Hyslop, N. St. G. : A Method of Treating Asbestos Filter Pads for Virus Filtration, 305

IBALL, Dr. J. (Cole, Dr. A. J., and) : Digital Computers, their Use and Control, 554
IBM Co. : New Data-processing Centre, 23
IBM Research Fellowships (International Business Machines, United Kingdom, Ltd.), 442
Ibrahim, S. A. (Vella, Dr. F., and) : Thalassaemia in an English and in a German Family, 822
Ice Nucleators : Steroids as (Richard B. Head), 1058
Iceland : Soil Temperatures in (Dr. Bjarni Helgason), 939
Ichikawa, Mamori, and Ishizaki, Hironori : Brain Hormone of the Silkworm, *Bombyx mori*, 933
ICSU Review, Vol. 3, No. 1, 865
Identical Amino-Acid Sequences : Immunochemical Distinction between Insulins with (Dr. Solomon A. Berson and Dr. Rosalyn S. Yalow), 1392
Identification : Essential Oil from Fresh *Cannabis sativa* and its Use in (L. Martin, D. Morison Smith and C. G. Farmilo), 774
Identification of Ammocoete Species : Oocyte Numbers as a Diagnostic Character for the (Dr. M. W. Hardisty), 1215
Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum* (A. Ballio, Prof. E. B. Chain, F. Dentice di Accadia, M. Mauri, K. Rauer, M. J. Schlesinger and Sondra Schlesinger), 909
Identity of L-Ascorbic Acid formed from D-Glucose by the Strawberry (*Fragaria*), (Dr. Frank A. Loewus and Stanley Kelly), 1059
Identity (Microstructural and Chemical), of the Bear Creek and Narraburra Iron Meteorites (Dr. H. J. Axon), 1287
Iggo, Dr. A. : Assessment of Pain (Conduction in Single *C* Fibres of Impulses initiated by Noxious Stimuli in the Viscera, Muscles and Skin), 1353
Ignition of Gas by Sparks produced by Breaking Wires at High Speed (Dr. R. L. Gordon, Dr. H. Lord and D. W. Widginton), 1085
Illingworth, J. R. : The National Physical Laboratory—Open Days, 112
Illinois Institute of Technology, Chicago : International Symposium on Photoelasticity, 755
Illusions (Geometrical) : Centrally Produced (S. Papert), 733
Illustrations of Human Anatomy, *review* by Prof. J. M. Yoffey, 1232
Imaizumi, Prof. R., and others : Potentiation of Epinephrine Action, 186
Imidazole : Electronic Properties of (S. Aftergut and G. P. Brown), 379
Imipramine : Demonstration of Anti-Depressant or Stimulant Properties of, in Experimental Animals (Dr. D. R. Maxwell and Helen T. Palmer), 84
Immature Germ Cells of *Drosophila* : Chromosome Rearrangements induced by X-Rays in (Seymour Abrahamson), 523
Immunity to Protozoa (British Society for Immunology Symposium on), 551
Immunity (Non-Specific), in Pneumococcal Infection of Mice (Dr. G. N. Cooper and Dr. A. E. Stuart), 295
Immunochemical Distinction between Insulins with Identical Amino-Acid Sequences (Dr. Solomon A. Berson and Dr. Rosalyn S. Yalow), 1392
Immunoelectrophoretic Examination of Agammaglobulinaemia (Fred Rosen, Charles A. Janeway and Prof. David Gitlin), 1109
Immuno-electrophoretic Patterns (Electrophoretic and), of Extracellular Diphtheria Proteins from Culture Filtrates of Different Iron Concentrations (Bertold J. Radola), 382
Immunofluorescence of Pleuropneumonia-like Organisms isolated from Tissue Cell Cultures (Major W. F. Malizia, M. F. Barile and D. B. Riggs), 190
Immunological Observations in Experimental Silicosis (J. H. Jones and Prof. A. G. Heppleston), 1212
Immunological Study of Experimentally Induced Extrahepatic Cholestasis (Dr. Roy G. Shorter and R. G. Lack), 610
Immunological Study of a Human Pituitary Interstitial Cell-stimulating Hormone (N. R. Moudgal and Prof. Choh Hao Li), 192
Immunological (Auto-) Precipitin possibly due to Fibrinolysins : Demonstration by Paper Electrophoresis of an (Marion I. Cooper and J. R. Sykes), 1212
Immunology, British Society for : Symposium on Immunity to Protozoa, 551
Impact of Industrial Development on the Countryside (Council for the Preservation of Rural England Conference on), 959
Imperial Chemical Industries, Ltd. : New Research Laboratories for the Paints Division of (J. W. Dorling), 25
Imperial College of Science and Technology, London : Appointment of Dr. J. S. Webb to the University of London chair of applied geochemistry, 229
  Advanced Study Institute on Underwater Acoustics, 229
  Appointment of Dr. M. Gordon to the University of London readership in physical chemistry, 337
  Appointment of Dr. C. B. Alcock as reader in chemical metallurgy, 443, 1349
  Appointment of Dr. J. N. Hunt as reader in physical oceanography, 443, 1349
  Appointment of Dr. J. A. Kitchener as reader in the science of mineral processing, 443, 1349
  Title of professor emeritus of chemical engineering conferred on Prof. D. M. Newitt, 546
  Appointment of Prof. W. D. Gill to the chair of oil technology, 651
  Fourteenth International Instruction Course by Carl Zeiss, Jena, on Fine Measuring Instruments, 1045
  Title of professor of electrical engineering in the University of London conferred on Dr. J. H. Westcott, 1349
  Appointment of Dr. J. R. Butler as reader in pure geochemistry, 1349
Implant (Sarcoma), and Staphylococcus Infection : Development in Mice of Prolonged Non-specific Resistance to, following Repository Injection of Lipopolysaccharide (Samuel J. Prigal), 1111
Implant Material in the Rat : Biological Incorporation of (James Calnan), 1017
Implants (Zinc), in Rat Bladders : Incorporation of Phosphorus-32 into Urinary Concretions forming on (Dr. Richard F. Keeler and Dr. Stuart A. Lovelace), 715
Importance of Magnesium in the Control of Plasma Calcium in the Calf (Dr. R. H. Smith), 181
Importance of Nitrogen in Crop Production (Prof. N. R. Dhar), 544
Impregnated (Cathodically), and Cooled Austenite : Transformation of (E. G. Ramachandran and C. Dasarathy), 998
Improbability of the Chelation Hypothesis of Auxin Action (Dr. D. D. Perrin), 253
Improving Biological Communications in the United States, 23
In-Patient Enquiry (Hospital) : Report on, for the Year 1959, Part I, Preliminary Tables (Ministry of Health and General Register Office), 345
Inactivating Efficiency of Radiation : Comparative Analysis of, on Different Organisms (Dr. M. Terzi), 461
Inactivation and Reactivation of Chymotrypsin (T. Therattil Antony), 178
Inbred Mouse Strains : Social Dominance in (Prof. G. Lindzey, H. Winston and M. Manosevitz), 474
Inbred Strain of Mice : Effect of Hybridization on the Primary Polydipsic Trait of an (Dr. Emanuel Silverstein), 523
Inbred Strains : An Iso-Antigen ($\gamma B A$) of Mouse γ-Globulin present in (A. Kelus and J. K. Moor-Jankowski), 1405
Inclusion of Parental Somatic Cells in Sponge Larvae (Frederick E. Warburton), 1317
Inclusions of Mucopolysaccharide in the Lymphocytes of Patients with Gargoylism (Ursula Mittwoch), 1315
Incompressible Aerodynamics (edited by Bryan Thwaites), *review* by Prof. Leon Trilling, 315
Incorporation of 5,10,15 ^{14}C-Farnesol Pyrophosphate into *Phycomyces carotenoids* (H. Yamamoto, H. Yokoyama, K. Simpson, T. O. M. Nakayama and C. O. Chichester), 1299
Incorporation of ^{14}C-Uridine into Rat Lens Ribonucleic Acid by Rat Lens Enzyme Systems : Catalysis of (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
Incorporation of Deoxyribonucleic Acid by Mammalian Cells *in vitro* (Prof. E. R. M. Kay), 387
Incorporation of Histamine into Liver Protein *in vivo* (Isabel Wajda, Michael Ginsburg and Prof. Heinrich Waelsch), 1204
Incorporation of Phosphorus-32 into Urinary Concretions forming on Zinc Implants in Rat Bladders (Dr. Richard F. Keeler and Dr. Stuart A. Lovelace), 715
Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture : Effect of Ribonuclease and Deoxyribonuclease on (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Incorporation (Biological), of Implant Material in the Rat (James Calnan), 1017
Increase in Elastin Content of the Human Aorta during Growth (Dr. V. Scarselli), 710
Increase of Evaporative Loss of Water from the Skin of the Ox in response to Local Heating of the Hypothalamus (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Increase of Oxygen Consumption induced by Potassium in Muscle : Inhibition by Physostigmine of the (Dr. Ivan Novotny and František Vyskočil), 916
Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat (Dr. E. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Increase in Specific Bactericidal Antibodies after Administration of Endotoxin (J. Gabriel Michael, James L. Whitby and Maurice Landy), 296
Increase (Hepatic Induced), of Tryptophan-Pyrrolase : Effect of 5-Fluorouracil on (Sancia Gaetani and M. Antonietta Spadoni), 1296

Increase (Induced), in Resistance of *Entamoeba histolytica* to Fumagillin (Dr. Mitsuru Nakamura), 413
Increasing the Signal-Noise Ratio in the Detection of the First Motion of a Refracted *P*-Wave : Possible Method for (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382
Index (Maxillary), in *Anopheles gambiae* Giles (L. K. H. Goma), 405
Index Biologicus : Publication of (Biological and Medical Abstracts, Ltd.), 544
India : Ferro-Alloy Industry in (National Metallurgical Laboratory, Jamshedpur, Symposium on), 1144
  Hydrogen Ion Concentration, Plankton and Fish in Fresh-water Eutrophic Lakes of (Dr. S. M. Das), 511
  Occurrence of *Salmonellae* in Domestic Animals and Poultry in (V. K. Sharma and Prof. C. M. Singh), 622
  Taxonomy of the Earthworm in (G. E. Gates), 227
India, Geological Society of : *Journal* of the, Vol. 1, 1348
India, Government of, and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
India (Eastern) : Cytology of some Genera of Polypodiaceae in (G. Panigrahi and S. N. Patnaik), 1207
India (South) : Occurrence of *Eutrichocheles modestus* (Herbst) in the Near-shore Waters of Porto Novo (K. Balasubrahmanyan and Dr. J. Jacob), 830
Indian Central Oilseeds Committee : Castorseed and its Products, 753
Indian Science Congress : Presidential Address, Importance of Nitrogen in Crop Production (Prof. N. R. Dhar), 544
Indian Society of Theoretical and Applied Mechanics, and Unesco : Symposium on Non-Linear Physical Problems, 855
Indian Tribe (Chibcha) : New *Rh* Phenotype, *Dccefetf*, found in a (Dr. Miguel Layrisse, Zulay Layrisse, Esperanza García, Dr. Johannes Wilbert and Joaquín Parra R.), 503
Indies (West) : Research on Volcanoes in the, 225
Indigotin Content of Woad (C. Berkeley), 1414
Indium in High-purity Zinc : Determination of (Naïm Koŝaric and the late G. Leliaert), 703
Indium Antimonide at High Pressures : Melting and Polymorphism of (A. Jayaraman, R. C. Newton and Dr. G. C. Kennedy), 1288
Individual (Inter-) Variability in Pigmentation (André Leguebe), 1326
Indole-acetic Acid Oxidase Activity of *Lupinis albus* L. exposed to Different Photoperiods : Effect of Gibberellic Acid on Growth and (F. Sági and A. S. Garay), 824
Indole-3-acetic Acid : Effects of Kinetin and, on Multiplication Rates of *Paramecium* (Mary Annunciata McManus and Kathleen Sullivan), 619
Indole-3-acetic Acid in Plants : 1-(Indole-3-acetyl)-β-D-Glucose, a New Compound in the Metabolism of (Dr. M. H. Zenk), 493
Indole-3-acetic Concentrations : Growth Stimulation by High (T. A. Truelsen), 1410
1-(Indole-3-acetyl)-β-D-Glucose, a New Compound in the Metabolism of Indole-3-acetic Acid in Plants (Dr. M. H. Zenk), 493
Indole–Iodine : Spin Resonance and Electrical Conductivity of (B. Smaller, Dr. I. Isenberg and S. L. Baird, jun.), 168
Induced Changes in the Amounts of Material in the Neurosecretory System of the Desert Locust (Dr. K. C. Highnam), 199
Induced Enzyme Synthesis in Aqueous Suspensions of Starved Stationary Phase *Aerobacter aerogenes* (R. E. Strange), 1272
Induced Increase in Resistance of *Entamoeba histolytica* to Fumagillin (Dr. Mitsuru Nakamura), 413
Induced Increase (Hepatic), of Tryptophan-Pyrrolase : Effect of 5-Fluorouracil on (Sancia Gaetani and M. Antonietta Spadoni), 1296
Induced Pulmonary Tumours in Mice : Inheritance of Susceptibility to (Dr. D. S. Falconer and Dr. Joyce L. Bloom), 1070
Induction of Cancer in Suckled and Unsuckled Female Rats (Prof. Giuliano Briziarelli), 921
Induction of Mutations by Deoxyribonucleic Acid in *Drosophila melanogaster* (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 776
Induction of Tumours by Polyoma Virus—Enhancement by Chemical Agents (K. E. K. Rowson, F. J. C. Roe, J. K. Ball and Dr. M. H. Salaman), 893
Industrial Development : The Impact of, on the Countryside (Council for the Preservation of Rural England Conference on), 959
Industrial Education (Commercial and), British Association for : Interviewing in Twenty-six Steps (John S. Gough), 228
  New Routes to Further Education—Papers presented at the B.A.C.I.E. Spring Conference, London (1961), 739
Industrial Relations in the Welfare State, 1129
Industrial Research in Britain, 1252
Industrial Research Associations in the Government Scheme : Research for Industry 1960—a Report on Work done by (Department of Scientific and Industrial Research), 1252
Industrial Research Fellowships (J. Langham Thompson, Ltd.), 545
Industrial World : Management in the (Prof. F. Harbison and Prof. C. A. Myers), 1332
l'Industrie Minérale, Société de : Sixth International Mineral Processing Congress, 545
Industry : Radioactive Tracers in Chemistry and (Pascaline Daudel), translated by Dr. Ulli Eisner, *review* by Prof. J. R. Partington, 637
Industry 1960 : Research for—a Report on Work done by Industrial Research Associations in the Government Scheme (Department of Scientific and Industrial Research), 1252
Industry in Britain : The Structure of (Prof. G. C. Allen), 1332
Industry (Chemical), Society of : Formation of the Industrial Water and Effluents Group, 853
Industry (Chemical), Society of (Food Group) : Symposium on Recent Advances in Processing Cereals, 755
Industry (Electrical) : Magnetic Materials in the (P. R. Bardell), second edition, *review* by A. C. Lynch, 428
Industry (Electrical Power) : Corrosion Problems in the (Battersea College of Technology Summer School on), 651
Industry (Electronics) : Glass in the, 1143
Industry (Ferro-Alloy), in India (National Metallurgical Laboratory, Jamshedpur, Symposium on), 1144
Industry (Manufacturing), on Merseyside : Ageing and the Semi-Skilled—a Survey in (Alistair Heron and Sheila M. Chown, assisted by M. S. Featherstone and Catherine Cunningham), 1249
Industry (Non-Ferrous Metals), in a Unified Europe (Baron Snoy et d'Oppuers), 546
Industry (Nuclear Energy) : Corrosion in the (Société de Chimie Industrielle Symposium on), 651
Industry (Rubber), Institution of the : Colwyn Medal awarded to Dr. L. R. G. Treloar, 755
  Hancock Medal awarded to M. M. Heywood, 755
Infection by *Fomes annosus* : Inoculation of Pine Stumps against (Dr. J. Rishbeth), 826
Infection with *Salmonella paratyphi C* : Resistance to, in Mice parasitized with a relatively Avirulent Strain of *Salmonella typhimurium* (Dr. J. G. Howard), 87
Infection (Cyclical), of *Glossina mortisans* with Culture Forms of *Trypanosoma rhodesiense* (the late Prof. R. M. Gordon and J. K. Miller), 1317
Infection (Non-Lethal Pathological), of Roots (F. J. Newhook), 615
Infection (Pneumococcal), of Mice : Non-Specific Immunity in (Dr. G. N. Cooper and Dr. A. E. Stuart), 295
Infection (Staphylococcus) : Development in Mice of Prolonged Non-specific Resistance to Sarcoma Implant and, following Repository Injection of Lipopolysaccharide (Samuel J. Prigal), 1111
Infection (Viral), in the Chick Embryo : Mechanism of Recovery from (Dr. Samuel Baron and Alick Isaacs), 97
Infections (Lethal Staphylococcal), in Mice : Biochemical Changes in (George W. Counts, Dr. Ian M. Smith, Dr. Joseph I. Routh, Dr. Elia Ch. Hazard and J. F. McTavish), 783
Infectious Ribonucleic Acid from Poliovirus : Chromatographic Analysis of (C. Cocito, A. Prinzie and P. De Somer), 573
Infectious Ribonucleic Acids derived from Mouse Brains infected with Two Kinds of Arbor Virus Group *B* (Prof. Masahiro Nakamura), 624
Infeld, L.: Theory of the Red Shift and the Nature of Planck's Constant, 1184
Infinitely Many Variates : An Introduction to (Prof. Enders A. Robinson), *review* by Prof. D. V. Lindley, 214
Influence of Electrical Field on Pupation and Oviposition in *Nepytia phantasmaria* Stkr. (Lepidoptera : Geometridae), (Dr. D. K. Edwards), 976
Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the Utilizability of Viral Protein during Multiplication of Fowl Plague Virus (Dr. Christoph Scholtissek and Rudolf Rott), 1023
Influence on Frequency : Damping without (A. Bloch), 1086
Influence of Moisture Changes on Deformation of Wood under Stress (L. D. Armstrong and G. N. Christensen), 869
Influence of Plasma Proteins in the Control of Mitosis-rates in Generating Liver (Dr. J. T. Hemingway), 706
Influence of Polyvalent Ions on Histones isolated from Different Tissues (I. P. S. Agrell and E. G. Christensson), 284
Influence of Salts on the Uptake of Streptomycin by *Escherichia coli* (Paul H. Plotz, Donald T. Dubin and Bernard D. Davis), 1324
Influence of Scurvy and Lathyrism (Odoratism) on Hydroxyproline Excretion (Dr. G. R. Martin, S. E. Mergenhagen and D. J. Prockop), 1008
Influence of Serum Factors on the Species-specificity of Tissue Thromboplastin (Christine Hawkey and J. L. Stafford), 920
Influence (Thymus), in Leukaemogenesis : Analysis of the (Dr. J. F. A. P. Miller), 248
Influenza Viruses, Receptor-destroying Enzyme and Proteases : Action of, on Blood Group Agglutinogen M^g (Prof. Georg F. Springer and Dr. Karlheinz Stalder), 187
Information combining Science, Librarianship and Foreign Languages : Science Information Personnel—the New Profession of (Leonard Cohen and Kenneth Craven), 452
Information (Biological) : Storage and Retrieval of (Dr. G. C. Ainsworth), 12
Information (Published) : The Retrieval of, *review* by Prof. A. R. Ubbelohde, 109
Information (Scientific), Institute for (Philadelphia) : Services, Publications and Techniques, 1045
Infra-Human Species : Blood Groups in (New York Academy of Sciences Conference on), 653
Infra-Red (Far) : A Proposal for a Tunable Source of Radiation for the, using Beats between Optical Masers (Dr. D. C. Lainé), 795
Infra-Red Absorption : Quantitative Analysis of Milk and other Emulsions by (Dr. J. D. S. Goulden), 905
Infra-Red Arts, *review* by Dr. E. S. Waight, 315
Infra-Red Determination (Rapid), of Acetone in the Blood and the Exhaled Air of Diabetic Patients (Dr. Richard D. Stewart, Edward A. Boettner and Bruce T. Stubbs), 1008
Infra-Red Methods (G. K. T. Conn and D. G. Avery), *review* by Dr. E. S. Waight, 315
Infra-Red Spectra of Water-soluble Carbonates (Herman A. Szymanski and Richard Povinelli), 64
Infra-Red Spectroscopic Evidence of Four-fold Co-ordination of Titanium in Barium Orthotitanate (P. Tarte), 1002
Ingle, Ltd., W. L. : Grant of £1,000 during two years to the Procter Department of Food and Leather Science in the University of Leeds, 650
Inglis, Helene S., and others : Biosynthesis of the Pyrethrins, 281
Inglis, Dr. James A., and Halliday, Dr. June W. : Thromboplastic Activity of Red Cells, 821
Ingold, Sir Christopher : Title of professor emeritus of chemistry (at University College, London) conferred on, 546
Ingram, Dr. D. G. (Saison, Dr. R., and) : Blood Groups in Infra-human Species (Blood Groups of Pigs), 654
Ingram, Prof. D. J. E. : From Radar to Spectroscopy—New Regions of the Spectrum, 1146
  Effects of Ionizing Radiation on Organic and Biological Solids (Use of Electron-Spin Resonance in the Study of Proteins), 1151
Ingram, Dr. D. L., and others : Increase of Evaporative Loss of Water from the Skin of the Ox in response to Local Heating of the Hypothalamus, 81
Ingram, Prof. V. M. : Haemoglobin *F* and the Genetic Control of Protein Structure, 608
Inhaled Radioactive Particles : Effects of—Report of the Subcommittee on Inhalation Hazards, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 848), 556
Inheritance of Susceptibility to Induced Pulmonary Tumours in Mice (Dr. D. S. Falconer and Dr. Joyce L. Bloom), 1070
Inheritance (Apparent Cytoplasmic), of Tyrosinase Competence in *Streptomyces scabies* (Prof. K. F. Gregory and Wei-jen Shyu), 465
Inhibition of Chemi-Luminescence of Luminol by means of Oximes (Prof. K. Weber, J. Matković and D. Fleš), 177
Inhibition of β-Glucuronidase by Oral Administration of D-Glucosaccharo-1,4-Lactone (S. Akamatsu, Dr. A. Kiyomoto, S. Harigaya and S. Ohshima), 1298

Inhibition of Growth and Photosynthesis in Submerged Plants with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
Inhibition of Intestinal Absorption by Cetrimide–Phloridzin Combination : Enhancement of (J. A. Nissim), 37
Inhibition by Oxygen of Biosynthesis and Activity of Nitrate-Reductase in *Aerobacter aerogenes* (Francis Pichinoty and Liliana D'Ornano), 879
Inhibition of Phosphorylation by Atractyloside (Dr. A. Bruni and A. R. Contessa), 818
Inhibition of Photosynthesis : Inhibition of Growth and Photosynthesis in Submerged Plants with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and Reversal of this (P. E. Björn Lindahl),51
Inhibition by Physostigmine of the Increase of Oxygen Consumption induced by Potassium in Muscle (Dr. Ivan Novotny and František Vyskočil), 916
Inhibition by Potassium of the Mechanical Responses of Frog Muscles at Low Temperature (H. Lorković), 1011
Inhibition of Ultrasonic Decolorization of Rhodamine B in Presence of Organic Substances (Prof. Satya Prakash and Sheo Prakash), 1292
Inhibition (Correlative), of Formation of Chlorophyll in the Leaves of Etiolated Pea Plants (Jiří Úlehla), 613
Inhibition (Differential), of Human Serum Cholinesterase with Fluoride—Recognition of Two New Phenotypes (Prof H. Harris and Mary Whittaker), 496
Inhibition (Feedback), controlling the Biosynthesis of Isoleucine : Release from the (Masaya Hayashibe and Teijiro Uemura), 1417
Inhibition (Oxygen), of Respiration in *Azotobacter* (M. J. Dilworth and C. A. Parker), 520
Inhibition (Specific), of Anti-D Antibody by Colominic Acid (Prof. William C. Boyd and Egli Reeves), 511
Inhibitions (Multiple), of Cell Metabolism by a Single Substance (M. Harris and Dr. G. A. Morrison), 1276
Inhibitor of Liver Alcohol Dehydrogenase in Preparations of Reduced Diphosphopyridine Nucleotide (Dr. Keith Dalziel), 1098
Inhibitor (Monoamine Oxidase) : Augmentation of Toxicity of, by Thyroid Feeding (Richard N. Carrier and Dr. Paul V. Buday), 1107
Inhibitors (Urinary), of Hyaluronidase (P. J. Knudsen and J. Koefoed), 1306
Initial Precursors to Petroleum Porphyrin Pigments : Metal Chlorin Complexes in Recent Sediments as (G. W. Hodgson and Eric Peake), 766
Initial Vibrations of a Supported Beam (Dr. R. V. Sharman and D. White), 692
Initiation of the Labour Process : Relationship between the Decrease in Urinary Excretion of Histamine and the (Dr. Halina Wiskont-Buczkowska), 290
Initiation (Floral), in Cocksfoot (*Dactylis glomerata* L.) : Effect of Spacing and Nitrogen-level on (D. M. Calder and J. P. Cooper), 195
Initiation (Flower), in the Carnation in Response to Photoperiod (Dr. G. P. Harris and Juliet E. Griffin), 614
Initiation (Flower), in Kent Wild White Clover (*Trifolium repens* L.), under Controlled Environmental Conditions (R. J. Haggar),1120
Injection of Sheep Erythrocytes into Lateral Ventricle of Brain : Antibody Response in Rabbits following (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
Injection (Repository), of Lipopolysaccharide : Development in Mice of Prolonged Non-specific Resistance to Sarcoma Implant and Staphylococcus Infection following (Samuel L. Prigal), 1111
Injections of some Intermediary Metabolites : Effects of, on the 'Insulin Response' of Normal Rabbits (Dr. H. D. Brahmachari and G. Raghupathy Sarma), 491, *erratum*, 755
Injections (Enzyme) : Effect of, on Mitosis in Regenerating Liver (Dr. Gaston de Lamirande), 400
Injector (*Nimrod*) : Successful Operation of the (National Institute for Research in Nuclear Science, Harwell), 1043
Inlets : Coastal, *review* by W. J. Reid, 426
Inlets (Coastal) : Stability of (P. Brunn and F. Gerritsen), *review* by W. J. Reid, 426
Inoculation of Pine Stumps against Infection by *Fomes annosus* (Dr. J. Rishbeth), 826
Inorganic Analysis : The Use of Organic Reagents in (A. I. Busev and N. G. Polianskii), translated from the Russian by J. T. Greaves, *review* by Dr. D. T. Lewis, 1336
Inorganic Chemistry (Dr. Jacob Kleinberg, Dr. William J. Argersinger, Jr., and Dr. Ernest Griswold), *review* by Dr. M. F. Lappert, 1133
  Modern Aspects of (Prof. H. J. Emeléus and Dr. J. S. Anderson), third edition, *review* by Prof. J. R. Partington, 637
Inorganic Compounds : Co-ordination of the Thiocyanate Group in (A. Turco and C. Pecile), 66
Inorganic Polymers : International Symposium on, at the University of Nottingham, 1046
Inorganic Reaction : A New—Nitric Acid–Hydrazoic Acid (Dr. J. Mašek), 166
Inorganic and Organic Phosphate : Outflux of, during Membrane Depolarization of Excitable Tissues (Dr. L. G. Abood, Prof. K. Koketsu and I. Koyama), 395
Insect (*Periplaneta americana* L.) : Exchanges of Sodium Ions in the Central Nervous System of an (J. E. Treherne), 1223
Insect Muscle Fibres : Spontaneous Miniature Potentials from (P. N. R. Usherwood), 814
Insect Nerve Tissue : Activity of Glutamic Acid Decarboxylase in (Dr. N. Frontali), 178
Insect Pests and Diseases (Forest), in Canada (Prof. M. L. Anderson), 1260
Insect Polymorphism (Royal Entomological Society Symposium on), 1145
Insecticides : Effects of, on Birds, 440
Insecticides (Systemic) : Enhanced Plant-Growth with Two (M. M. H. Wallace), 513
Insects : Sound Production and Sound reception by (Mable Frings and Hubert Frings), *review* by Prof. V. B. Wigglesworth, 428
Instability (Glutathione), of the Erythrocytes among Armenians in Iran : Virtual Absence of (Dr. J. E. Bowman and Dr. D. G. Walker), 211
Instability (A New 'Wedge' Type), observed in a 'Theta' Pinch (J. K. Wright, R. D. Medford, J. D. Herbert and R. C. Pottinger), 1054
Instance (A Clear), of Rheopectic Flow (J. B. Yannas and R. N. Gonzalez), 1384
Instituto de Fomento Nacional y Organizacion de las Naciones Unidas para la Agricultura y Alimentacion : Estudios Ecologicos, Vol. 1, Estudios Ecologicos para el Aprovechamiento de la Tierra en Nicaragua (Dr. B. W. Taylor), 1259
Instrument for Measuring Television Signal-to-Noise Ratio (S. M. Edwardson), 1355
Instrument Society of America (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Instrument Symposium and Research Equipment Exhibition : Eleventh Annual (Washington Sections of the American Association of Clinical Chemists, the American Chemical Society, the Instrument Society of America, the Society of American Bacteriologists, the Society of Applied Spectroscopy and the Society for Experimental Biology and Medicine), 959
Instruments : Fine Measuring (Fourteenth International Instructional Course by Carl Zeiss, Jena, at the Imperial College of Science and Technology, London), 1045
Instruments and Measurement Exhibition : International, 1352
Insular Races (British), of Small Mammals : Origin of the, and of the 'Lusitanian' Fauna (G. B. Corbet), 1037
Insulin : An Unreactive Tyrosine Residue in, and the Exclusive Iodination of the *A* Chain (Dr. P. H. Springell), 1372
'Insulin Response' of Normal Rabbits: Effects of Injections of some Intermediary Metabolites on the (Dr. H. D. Brahmachari and G. Raghupathy Sarma), 491, *erratum*, 755
Insulins with Identical Amino-Acid Sequences : Immunochemical Distinction between (Dr. Solomon A. Berson and Dr. Rosalyn S. Yalow), 1392
Insulins (Cod and Bovine): A Comparison of (Dr. S. Wilson and Dr. G. H. Dixon), 876
Intake of Alcohol and Sodium Chloride : Serum Lipids in relation to the (Erling Lund, Torben Geill, Prof. Henrik Dam and Gunhild Kristensen), 1095
Integrated (Time-) Measurements of Submarine Irradiance (Ronald Currie and Laurence Draper), 661
Integration with Ionization Detectors in Gas Chromatography (P. M. E. M. van der Grinten and Dr. A. Dijkstra), 1195
Integration and Behaviour : Sense Organs, (edited by Talbot H. Waterman), (The Physiology of Crustacea, Vol. 2), *review* by Dr. J. Green, 428
Intensity (Light) : Effects of, on Reproduction in S.48 Timothy (*Phleum pratense* L.), (Dr. G. J. A. Ryle), 196
Inter-Individual Variability in Pigmentation (André Leguebe), 1326
Inter-Molecular Energy Transfer in Photosensitized Oxidation-Reduction : Paths of (N. Takeyama), 1359
Inter-Society Color Council (U.S.A.), (Colour Group (Great Britain)), and the : Maxwell Colour Centenary Conference, 10
Interaction of Hydrocortisone, the Sulphydryl Group, and the Catechol Amines (Dr. Sidney Roston), 490
Interaction of Lipids and Trypsin in Dimethyl Sulphoxide–Water Systems (Prof. A. Lukton, H. Donohue and Prof. F. A. Bettelheim), 565
Interaction of 14-MeV. Neutrons with a Silicon Semiconductor Nuclear Particle Detector (Dr. W. M. Deuchars and G. P. Lawrence), 995
Interaction of Portland Cement with Sea-Water and Chloride Solutions : Formation of Calcium Chloraluminate by (Dr. L. Heller and Dr. M. Ben-Yair), 488
Interfaces (Cell) : Characteristics of (American Society for Cell Biology Symposium on), 1045
Interfaces (Fluid–Fluid), in Steady Motion (Prof. Walter Rose), 242
Interfaces (Solid–Liquid) : Chemisorption at (A. R. Burkin and G. Halsey), 348
Interferometer (Michelson) : Molecular Emission Spectroscopy from 2μ to 12μ by a (H. A. Gebbie, G. Roland and L. Delbouille), 264
Interferon (Dr. A. Isaacs), 755
Interior of the Earth (Dr. R. Stoneley), 983
Intermediary Metabolites : Effects of Injections of some, on the 'Insulin Response' of Normal Rabbits (Dr. H. D. Brahmachari and G. Raghupathy Sarma), 491, *erratum*, 755
Intermediate Pool between Amino-Acids and Globin in Duck Blood *in vitro* (L. Bianco, G. Giustina and E. Lazzarini), 40
Internal Organs Fluids and Excreta of Rabbits : Effect of Polyvinyl Alcohol on the Distribution of Iodine-131 in the (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Internal Sources (Standardized), of Polonium-210 : Radiolytic Oxidation of Ferrous Solutions with (J. Steyn and D. van As), 903
Internally Deposited Radionuclides : Removal of, by Triethylenetetraaminehexaacetic Acid (Prof. A. Catsch and D. Schindewolf-Jordan),715
International Academy of Astronautics : Daniel and Florence Guggenheim International Astronautics Award to be given to Sir Bernard Lovell, 856
  Symposium on Space-Flight and Re-entry Trajectories, 960
International Atomic Energy Agency : Appointment of Dr. Arno Sigvard Eklund as director-general, 338
  Grants from the United States for Nuclear Equipment in Argentina, Brazil and Israel, 442
  International Conference on Plasma Physics and Controlled Nuclear Fission Research, 443
  Purpose, Origin, Structure, Growth and Achievements, 1143
  Courses on Practical Applications of Nuclear Energy, 1143
International Atomic Energy Agency, and others : Conference on the Use of Radioisotopes in Animal Biology and the Medical Sciences, 959
International Botanical Congress : Symposium on Forest Ecosystem (Montreal, 1959)—Proceedings of the, 755
International Business Machines, United Kingdom, Ltd. : IBM Research Fellowships, 442
  Endowed Research Time, 442
International Centre for the Study of the Preservation and the Restoration of Cultural Property, Rome : Works and Publications, 3, Climatology and Conservation in Museums, 1050
International Civil Aviation Organization, and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
International Commission on Radiological Units and Measurements : Report of the (United States National Bureau of Standards, Handbook No. 78), 28
International Committee of Dietitians (British Dietetic Association and an) : Third International Congress of Dietetics, 1343
International Computers and Tabulators, Ltd. : Appointment of B. L. J. Hart as principal of the Computer Application Training Centre, 24

INDEX

I

International Conference on Elementary Particles (CERN), 126
International Conference on Embryology (Editorial Board of the *Journal of Embryology and Experimental Morphology*), 24
International Conference on Magnetism and Crystallography (Science Council, the Physical Society and the Crystallographic Society of Japan), 24
International Conference on Neurosecretion : Third (University of Bristol), 856
International Conference on Pigment Cell Biology (New York Academy of Sciences), 1045
International Conference on Plasma Physics and Controlled Nuclear Fission Research (International Atomic Energy Agency), 443
International Conference on Timber Engineering (University of Southampton), 338
International Congress of Aviation and Cosmonautical Medicine (C.E.R.M.A.), 338
International Congress of Dietetics : Third (British Dietetic Association and an International Committee of Dietitians), 1343
International Convention on Starch (Dr. E. Dux), 236
International Co-operation : The Urgency of, 943
International Council for Bird Preservation : Seventh Conference of the European Continental Section (Phyllis Barclay-Smith), 550
International Council for Bird Preservation (British Section) : Annual Report for 1960, 124
International Council of Scientific Unions : Year Book for 1961, 123
  Ninth General Assembly, 752
  ICSU Review, Vol. 3, No. 1, 865
International Instructional Course (Fourteenth), by Carl Zeiss, Jena, at the Imperial College of Science and Technology, London, on Fine Measuring Instruments, 1045
International Instruments and Measurement Exhibition, 1352
International Measurement Conference : Second (J. A. Place), 1350
International Meeting of the Institute of Management Sciences : Proceedings of the Sixth (Paris, 1959)—Management Sciences, Models and Techniques (edited by Prof. C. West and Prof. Michel Verhulst), *review* by T. H. Hawkins, 209
International Meeting on Psychophysiology, Neuropharmcology and Biochemistry of Audiogenic Seizure (Centre National de la Recherche Scientifique), 959
International Mineral Processing Congress : Sixth (Société de l'Industrie Minérale), 545
International Nematology Symposium : Sixth (Society of European Nematologists), 24, 1048
International Scientific and Technical Conferences : Forthcoming (Department of Scientific and Industrial Research, List No. 29), 959
International Significance : New Trends in Atomic Research and their (Dr. L. Kowarski), 853
International Society for Tropical Ecology : Proceedings of the Symposium on Forest Ecosystem (Montreal, 1959), 755
International Symposium on Enzymic Activity of the Central Nervous System (Neurochemical Commission of the World Federation of Neurology), 1349
International Symposium on Inorganic Polymers at the University of Nottingham, 1046
International Symposium on Photoelasticity (Illinois Institute of Technology, Chicago), 755
International Symposium on Tissue Transplantation (University of Chile, and Societies of Santiago and Valparaiso), 24
International Telecommunication Union : European Conference on Broadcasting, 449
International Union against Cancer : Eleanor Roosevelt Fellowships for Research on Cancer, 125
  Grant from the Gulbenkian Foundation, 754
International Union for the Conservation of Nature and the Commission for Technical Co-operation in Africa : Conference on the Conservation of Nature and Natural Resources in Modern African States, 958
International Youth Federation for the Study and Conservation of Nature : Course in Conservation, by the Verein Naturpark in the Lüneburger Heide, Germany, 1045
Internode-Length in *Pisum sativum* : Effects of Gibberellic Acid and Allogibberic Acid on Flowering and (I. C. Murfet and H. N. Barber), 514
Interparticle Forces : Role of, in Development of Upper Plastic Limit of Clays (Dr. Raymond Yong and E. T. Selig), 938
Interplanetary Space : Magnetic Storms in, as observed by *Pioneer V* (Eugene W. Greenstadt), 329
Interpretation of Cosmic Noise Measurements at 3·8 Mc./s from Satellite 1960 η1 (J. H. Chapman and A. R. Molozzi), 480
Interstitial Cell-stimulating Hormone (Human Pituitary) : An Immunological Study of a (N. R. Moudgal and Prof. Choh Hao Li), 192
Interstitial Species (Littoral), from Anglesey representing Three Families New to Britain (P. J. S. Boaden), 512
Interviewing in Twenty-six Steps (John S. Gough), 228
Intestinal Absorption : Enhancement of Inhibition of, by Cetrimide–Phloridzin Combination (J. A. Nissim), 37
Intestinal Epithelium : Localization of the 'Sugar Pump' in the (Dr. T. Z. Csáky and G. W. Fernald), 709
Intestine : Bacteria of the (Society for Applied Bacteriology Symposium on), 1151
Intoxication (Hexachlorobenzene) : Nervous and Biochemical Disturbances following (Dr. F. De Matteis, B. E. Prior and Prof. C. Rimington), 363
Intracellular Distribution Pattern of Rat Liver Glutamic-Oxalacetic Transaminase (Dr. Herbert J. Eichel and Josef Bukovsky), 243
Intracellular Freezing and Frost Resistance in Egg-Cells of the Sea Urchin (E. Asahina)— Intracellular Freezing as a Cause of Frost-killing in relatively Rapidly Frozen Cell Suspensions, 1263 ; A Mechanism to Prevent the Seeding of Intracellular Ice in Freezing Living Cells, 1264
Intracellular Glycosidases of Dextran-producing Bacteria (Dr. R. W. Bailey and Prof. E. J. Bourne), 277
Intra-ovarian Pollination in *Eschscholzia californica* Cham., *Argemone mexicana* L. and *A. ochroleuca* Sweet (Prof. P. Maheshwari and Kusum Kanta), 304
Intrinsic Factor : Vitamin B_{12} and (European Symposium on), 1154
Introduction : Plant Exploration and (Food and Agriculture Organization of the United Nations Technical Meeting on), 1240
Introduction to the Biology of Micro-organisms (Lilian E. Hawker, A. H. Linton, B. F. Folkes and M. J. Carlile), *review* by Prof. B. C. J. G. Knight, 1032
Introduction to the Chemistry of Heterocyclic Compounds (R. M. Acheson), *review*, 320
Introduction to Co-ordination Chemistry (Dr. D. P. Graddon), *review* by Prof. C. A. Coulson, 1233
Introduction to Infinitely Many Variates (Prof. Enders A. Robinson), *review* by Prof. D. V. Lindley, 214
Introduction of the Potato into Western and Central Europe (V. S. Lekhnovitch), 518
Introduction to Theoretical Meteorology (Prof. Seymour L. Hess), *review* by Dr. Robert P. Pearce, 314
Introduction to Transition-Metal Chemistry—Ligand-Field Theory (Dr. Leslie E. Orgel), *review* by Prof. C. A. Coulson, 1233
Introductory Manual on the Control of Health Hazards from Radioactive Materials (Medical Research Council, Memorandum No. 39), new edition, 1257
Inulin : Excretion of, by Malpighian Tubules (Dr. J. A. Ramsay and Dr. J. A. Riegel), 1115
Invariant Casein Substrate for Rennet Standardization, derivable from Diverse Sources of Cows' Milk (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Invention (Science and) National Reference Library of, 1 ; (Leslie Wilson), 733 ; (J. Farradane), 734
  Aslib Report of the Discussion Meeting on, 649
Inversion of a Laplace Transform arising from a Problem in Applied Chemical Kinetics (T. Wood), 589
Invertebrate Life in South-East England (John Sankey), 132
Investigating the Properties of Nervous Systems : Response to Series of Subliminal Stimuli—an Ethological Method for (A. J. Pontin), 512
Investigation (Chromatographic), of the Methyl Alcohol/Chloroform-soluble Constituents of Honeybee Larval Foods (N. G. Patel, M. H. Haydak and R. Lovell), 362
Investigations (Metabolic and Genetic), of Nutritionally Exacting Strains of *Staphylococcus pyogenes* (Janice B. Edgar and Dr. B. A. D. Stocker), 1121
Investment (Public), and Export (Sir Walter Benton Jones), 334
Iodide and Iodinated Amino-Acids : A Spray Method for the Simultaneous Detection of, on Filter Paper Chromatograms (Dr. A. Van Zyl and M. Bhaga), 275
Iodinated Amino-Acids : A Spray Method for the Simultaneous Detection of Iodide and, on Filter Paper Chromatograms (Dr. A. Van Zyl and M. Bhaga), 275
Iodinated Wools : Supercontraction of (O. A. Swanepoel), 908
Iodination (Exclusive), of the *A* Chain: An Unreactive Tyrosine Residue in Insulin and the (Dr. P. H. Springell), 1372
Iodine-131 in the Internal Organs, Fluids and Excreta of Rabbits : Effect of Polyvinyl Alcohol on the Distribution of (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Iodine-131 (Thyroidal) : Increase of the Rate of Release of, and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Iodine (Indole–) : Spin Resonance and Electrical Conductivity of (B. Smaller, Dr. I. Isenberg and S. L. Baird, jun.), 168
Iodine Complexes : Separation of Linear from Branched Polysaccharides by Precipitation as (Blanche D. E. Gaillard), 1295
Ion (Formyl Radical) : Radiation-induced Formation and Reactions of the (John Holian, Dr. George Scholes and Prof. Joseph J. Weiss), 1386
Ion-Exchange Column (One), during Preparation : A Simplified Method for Separating Amino-Acid Mixtures from Protein Hydrolysates on (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Ion-Exchange Polymers : Non-Uniformity of Cross-linking in (Dr. E. Glueckauf and R. E. Watts), 904
Ion Exchangers (Modified Cellulose), and their Use in Ribonucleic Acid Fractionation (Dr. L. Bosch, G. van der Wende and Dr. H. Bloemendal), 349
Ion Exclusion : Separation Methods based on Molecular Sieving and (J. Porath and E. B. Lindner), 69
Ion Pump : Electrical Properties of Orientated Lipid on a Biological Membrane—an Electrostatic Diffusion Barrier and (Dr. J. W. L. Beament), 217
Ionic Charge ('Effective'), in Crystals (Dr. W. Cochran), 60
Ionic Currents in Membrane of Active Muscle Fibre (Dr. H. Jenerick), 1074
Ionic Melts : The Structure and Properties of (Faraday Society General Discussion on), 338, 443
Ionization of Atmospheric Gases : Detection by, during Analysis by Gas Chromatography (Dr. Arthur Karmen, Laura Giuffrida and Robert L. Bowman), 906
Ionization (Magnetically Controlled) : Trans-Equatorial Backscatter Observations of (J. A. Thomas), 792
Ionization Detectors in Gas Chromatography : Integration with (P. M. E. M. van der Grinten and Dr. A. Dijkstra), 1195
Ionization Energies of Condensed Ring Aromatic Hydrocarbons : π-Electronic Excitation and (Dr. J. B. Birks and M. A. Slifkin), 761
Ionization Potentials of *cis* and *trans* Dichloro- and Dibromo-ethylenes (Dr. J. Momigny), 1089
Ionizing Radiation : Effects of, on the Human Haematopoietic System—Report of the Subcommittee on Haematologic Effects, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 875), 556
  Effects of, on Organic and Biological Solids (Société de Chimie Physique and the British Biophysical Society Discussion on), 1150
Ionizing Radiations at Exhibitions : Code of Practice for the Display of Sources of, 1249
Ionizing Radiations from External Sources : Long-Term Effects of—Report of the Subcommittee on, of the Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 849), 556
Ionosphere : Connexion between Micropulsations and the (C. M. Lock and P. J. Stevens), 584
  Group and Phase Velocities of a Travelling Disturbance in the *F* Region of the (Dr. L. H. Heisler and Dr. J. D. Whitehead), 157
Ionospheric Absorption Heights : A Method of Estimating, from Recovery Times (Syed Ziauddin), 1084
Ionospheric Irregularities : Scintillations and the Latitude Distribution of (D. G. Singleton), 482

Ions (Divalent Metal), in the Binding of Tetracycline to Macromolecules: Mediation of (Dr. Kurt W. Kohn), 1156
Ions (Metal), in Enzyme Catalysis: Dextransucrase *V* and the Role of (W. Brock Neely and Julie Hallmark), 385
Ions (Polyvalent): Influence of, on Histones isolated from Different Tissues (I. P. S. Agrell and E. G. Christiensson), 284
Ions (Sodium): Exchanges of, in the Central Nervous System of an Insect (*Periplaneta americana* L.), (J. E. Treherne), 1223
Ions (Transition-Metal): The Theory of (Prof. J. S. Griffith), *review* by Prof. C. A. Coulson, 1233
Ipomoea batatas (L.) Lam. (Sweet Potato): Evolution of the (Dr. D. E. Yen), 93
Iran: Virtual Absence of Glutathione Instability of the Erythrocytes among Armenians in (Dr. J. E. Bowman and Dr. D. G. Walker), 221
Iranians: Serum Factor Gm^a among the (Luba Podliachouk, Dr. A. Eyquem, R. Choaripour and M. Eftekhari), 717
Ireland (Northern): Aids to Agriculture and Horticulture in, 959
Irish Rival: Dalton's, *review* by Frank Greenaway, 533
Iron-55 from Nuclear Detonations (Rama, Minoru Koide and Prof. Edward D. Goldberg), 162
Iron Concentrations (Different): Electrophoretic and Immuno-electrophoretic Patterns of Extracellular Diphtheria Proteins from Culture Filtrates of (Bertold J. Radola), 382
Iron Meteorites (Bear Creek and Narraburra): Microstructural and Chemical Identity of the (Dr. H. J. Axon), 1287
Iron Oxidation: Morphological Variation in *Ferrobacillus ferrooxidans* related to the Rate of (M. P. Silverman and M. H. Rogoff), 1221
Iron (Nickel-) Films: Variation of Anisotropy Axis Dispersion with Thickness of (H. Clow), 996
Iron and Steel Institute and the Institute of Metals (Powder Metallurgy Joint Group): Winter Meeting—Symposium on Sintered High Temperature Compounds, 1250
Iron and Steel Institute and the Metallurgical Society of the American Institute of Mining, Metallurgical and Petroleum Engineers: Special Meeting in the United States and Canada, 651
Iron and Steel Research Association (British): Open Days at the Sheffield Station, 548
  Computer Applications Section of the Operational Research Department renamed the Systems Evaluation Section, 1249
Irradiance (Submarine): Time-integrated Measurements of (Ronald Currie and Laurance Draper), 661
Irradiated Beryllium Oxide: Scattering of Long Wave-length Neutrons by (T. M. Sabine, A. W. Pryor and B. S. Hickman), 1385
Irradiated Human Beings: Decreased Urinary Excretion of 2-Aminoethanol by (Dr. Ralph R. Cavalieri, M. T. Van Metre and W. I. Sivertsen), 1303
Irradiated Lithium Fluoride as an Optical Filter in the Far Ultra-Violet (J. L. Weeks, S. Gordon and G. M. A. C. Meaburn), 1186
Irradiated Normal Tissues: Effect of, on the Growth of Mouse Carcinoma (Dr. Arthur Compton and Prof. Charles A. Pannett), 1101
Irradiated Soil: Plant Growth in (G. D. Bowen and A. D. Rovira), 936
γ-Irradiated Lead Silicate Glass: Absorption Spectra of (R. S. Barker, T. K. Harrison, D. A. Richardson and R. Rimmer), 374
Irradiation (Circumscribing), of Surface Structures of Cylindrical Animal and Plant Cells with Polonium-210 α-Particles (R. M. Bergström, R. F. Blåfield anf M. W. Brenner), 1165
Irradiation (Red and Far-Red): Effect of, on the Germination Process in Seeds of *Pinus sylvestris* L. (Bengt Nyman), 1219
Irradiation (Ultra-Violet): Effect of, on the Electrical Conductivity of Cathodes coated with Barium Oxide (Dr. C. H. B. Mee), 1383
Irradiation Decomposition of Carbon Dioxide (T. B. Copestake and N. S. Corney), 1192
Irregularities (Ionospheric): Scintillations and the Latitude Distribution of (D. G. Singleton), 482
Irregularities (Night-time *F* Layer), at the Equator: Height of (Dr. G. S. Kent and Dr. J. R. Koster), 1083
Irrigation in Ancient Mesopotamia: Ecological Aspects of (Hans Helback), 227
Irwin, Dr. J. W.: Biorheology and Microcirculation (Film showing the Pulmonary Microcirculation in the Living Rabbit), 758; (Microcirculation of the Inner Ear), 758
Irwin, Dr. M. R.: Blood Groups in Infra-human Species (Role of Individual Red Cell Antigens in Speciation), 654
Isaacs, Dr. A.: Interferon, 755
Isaacs, Alick (Baron, Dr. Samuel, and): Mechanism of Recovery from Viral Infection in the Chick Embryo, 97
Isaković, Dr. K., and others: Antibody Response in Rabbits following Injection of Sheep Erythrocytes into Lateral Ventricle of Brain, 288
Isenberg, Dr. I., and others: Spin Resonance and Electrical Conductivity of Indole–Iodine, 168
Ishibashi, Takaaki, and others: Synaptic Transmission in Neurosecretory Cells, 183
Ishida, Dr. Nozomu, and others: Quantitative Determination of Metadrenaline and Normetadrenaline in Normal Human Urine, 599
Ishidate, M. (Metcalf, D., and): Periodic Acid–Schiff Positive Giant Cells in the Mouse Thymus Cortex, 305
Ishidate, Prof. Morizo, and Hanaki, Akira: Oxidative Demethylation and Carcinogenicity of 4-N-Dimethylaminoazobenzene Derivatives, 1198
Ishizaki, Hironori (Ichikawa, Mamori, and): Brain Hormone of the Silkworm, *Bombyx mori*, 933
Iso-Antigen (γB^A) of Mouse γ-Globulin present in Inbred Strains (A. Kelus and J. K. Moor-Jankowski), 1405
Isoelectronic Principle, Thermochemistry and Reactivity of related Free Radicals (Dr. Peter Gray and J. C. J. Thynne), 1357
Isolated Chloroplasts: Oxidation-Reduction Reactions of Plastoquinone in (Dr. E. R. Redfearn and J. Friend), 806
Isolated Gut: Dependence on Substrate of the Electrical Potential across the (Dr. T. W. Clarkson, A. C. Cross and S. Toole), 501
Isolated Plant Protoplasts: Properties of (E. C. Cocking), 780
Isolated or Overlapping Normal Probability Curves: Calculation of the Areas of (Dr. D. Morison Smith and John C. Bartlet), 688
Isolating Bacteria capable of Producing 6-Aminopenicillanic Acid from Benzylpenicillin: A Method for (Prof. Yukio Kameda, Yukio Kimura, Etsuko Toyoura and Tomoo Omori), 1122
Isolation of Anthraquinone from Humus (Kyoichi Kumada, Akio Suzuki and Kazuyuki Aizawa), 415
Isolation of a New Antioxidant from Oats (Dr. D. G. H. Daniels and H. F. Martin), 1302
Isolation of Nigerose and Kojibiose from Dextrans (Kazuo Matsuda, Hiroshi Watanabe, Kentaroh Fujimoto and Prof. Kiyoshi Aso), 278
Isolation of *Plasmodium knowlesi* from Philippine Macaques (F. L. Lambrecht, Dr. F. L. Dunn and Dr. D. E. Eyles), 1117
Isolation of Proteins: The Separation and (edited by Dr. P. Alexander and R. J. Block), (A Laboratory Manual of Analytical Methods of Protein Chemistry, including Polypeptides, Vol. 1), *review* by Dr. D. T. Elmore, 320
Isolation of Sterol Esters from Human Faeces (Francis Aylward and Pamela Wills), 1397
Isolation (Routine Selective), of Fungi Pathogenic to Man: Use of Desertomycin Medium in (J. Uri and Zs. Herpay), 1015
Isolation and Fractionation of some Damselfly Pigments (C. B. Coulson and P. Mary Lord), 1300
Isolation and Properties of Deoxyribonucleic Acid from Mammalian Sperm (Dr. E. Borenfreund, E. Fitt and Dr. A. Bendich), 1375
Isoleucine: Release from the Feedback Inhibition controlling the Biosynthesis of (Masaya Hayashibe and Teijiro Uemura), 1417
Isomerization (Thermal), of Alpha-Keto-Acid Hydrazones: Application of the Nickel Reaction and, for their Chromatographic Analysis (A. M. Tokushige and Dean E. S. Cook), 797
Isomers: Mannosyl D-Glucosamine Hydrochloride—*N*-Mannosyl D-Glucosamine Hydrochloride (Dr. S. A. Barker, Dr. K. Murray and Prof. M. Stacey), 142; 6-*O*-Mannosyl D-Glucosamine Hydrochloride (Dr. S. A. Barker, Dr. K. Murray, Prof. M. Stacey and D. B. E. Stroud), 143
Isopods: Copper in (Dr. W. Wieser), 1020
*Iso*propylnoradrenaline: Enlargement of Salivary Gland in Mice Treated with (Dr. K. Brown-Grant), 1076
Isotactic Polypropylene: Crystallization of, using a Light Depolarization Technique (J. H. Magill), 1092
Isotopic Nitrogen: Distribution of, in Nitrogen Gas during Denitrification (R. D. Hauck and D. R. Bouldin), 871
Isotopic Norepinephrine: Effects of Drugs on Uptake of, by Cat Tissues (Hans J. Dengler, Herbert E. Spiegel and Elwood O. Titus), 816
Israel: Specimens of very early Pleistocene Age from certain Beds in (Dr. Desmond Clark), 23
Israel (Argentina, Brazil and): Grants from the United States to the International Atomic Energy Agency for Nuclear Equipment in, 442
Issaly, A., and others: Role of the Pentose Phosphate Pathway in *Pasteurella multocida*, 727
Issues in Evolution, *review* by Dr. P. G. Fothergill, 425
Italian (Southern) Extraction: Haemoglobin *P* in a Family of (Prof. E. Silvestroni, I. Bianco and C. Brancati), 292
Itano, Dr. Harvey A., and Pauling, Prof. Linus: Thalassaemia and the Abnormal Human Haemoglobins, 398
Ito, Dr. M., and others: Potential Changes produced by Application of Current Steps in Motonueurones, 1104
Ito, Dr. Toshio: Sterol Requirements of the Silkworm, *Bombyx mori*, 882
Itoh, Dr. Chuichi, and others: Quantitative Determination of Metadrenaline and Normetadrenaline in Normal Human Urine, 599
Iversen, Dr. Simon: The Feulgen-Stained Somatic Cell Nucleus as a Homogeneously Absorbing Object, 150
Ivri, Dr. M.: Biorheology and Microcirculation (Effect of Adrenaline on the Small Blood Vessels of the Conjunctiva and Nailfold), 758; (Observations and Experiments on Vasomotion in Human Capillaries), 758

Jack, James A., and others: The Diego Factor in a Puerto Rican Family—a Case of Anti-Diego in Monozygotic Twins, 188
Jackson, Dr. G. A. D., and others: Conversion of L-Galactono-γ-lactone into L-Ascorbic Acid by Plants, 282
Jacob, Dr. J.: Assessment of Pain (Testing of Analgesic Drugs on Animals), 1354

Land-Use Survey—Nicaragua (Dr. John Grainger), 1259
Landau, Dr. J. : Biorheology and Microcirculation (Effect of Adrenaline on the Small Blood Vessels of the Conjunctiva and Nailfold), 758 ; (Observations and Experiments on Vasomotion in Human Capillaries), 758
Landsberg, Prof. P. T. : Thermodynamics with Quantum Statistical Illustrations, *review* by Dr. W. E. Parry, 1236
Landy, Maurice, and others : Increase in Specific Bacterial Antibodies after Administration of Endotoxin, 296
Láng, L., and others : Chemical Character of the Pigments of a New Nitrogen-fixing Micro-organism, 1413
Langer, Stanley H., and Pantages, Peter : Peak-Shift Technique in Gas-Liquid Chromatography—Trimethylsilyl Ether Derivatives of Alcohols, 141
Langford, W. J. : Mathematical Delight, *review*, 638
Langham, W. L., and others : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Methods for Growing HeLa Cells Suspensions in the Presence of Tritiated Thymidine and Tritium Water), 341
Language : Mathematics and, *review* by Dr. G. H. Toulmin, 211
Language of Mathematics (Dr. Frank Land), *review* by W. J. Langford, 638
Language (Modern) Association of America : Science Information Personnel —the New Profession of Information combining Science, Librarianship and Foreign Languages (Leonard Cohen and Kenneth Craven), 452
Languages (Science, Librarianship and Foreign) : Science Information Personnel—the New Profession of Information combining (Leonard Cohen and Kenneth Craven), 452
Lanthionine Formation in Keratin (Dr. C. Earland and D. J. Raven), 384
Lanyon, Dr. W. E., and Tavolga, Dr. W. N. (edited by) : Animal Sounds and Communication, *review* by Dr. W. H. Thorpe, 741
Lapage, Dr. G. : European Parasites of Man, *review*, 107
Journal of Helminthology, Supplement in honour of R. T. Leiper on the occasion of his 80th Birthday, *review*, 843
Laplace Transform : Inversion of a, arising from a Problem in Applied Chemical Kinetics (T. Wood), 589
Lappert, Dr. M. F. : Inorganic Chemistry, *review*, 1133
Large Lymphocytes and the Simonsen Phenomenon (Dr. Aleksander Szenberg and N. L. Warner), 920
Larger Fruit in the Raspberry : Mutation for (D. L. Jennings), 302
Larvae (Sponge) : Inclusion of Parental Somatic Cells in (Frederick E. Warburton), 1317
Larval Foods (Honeybee) : Chromatographic Investigation of the Methyl Alcohol/Chloroform-soluble Constituents of (N. G. Patel, M. H. Haydak and R. Lovell), 362
Lascelles, A. K. : Removal of Milk Constituents from the Mammary Gland of the Ewe, 1404
Lasiewski, R. C., and others : Thyroid Function in Active, Sleeping and Torpid Hummingbirds, 1318
Lasnitzki, Dr. Ilse : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology, 340 ; (Irradiation can change the Pattern of Differentiation in Organized Tissues grown *in vitro*), 342
Lasnitzki, Dr. Ilse, and others : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Action of Radiation on Freshly Explanted Cultures of Organized Tissues), 341
Last, Dr. F. T. : Appointed head of the Department of Mycology and Bacteriology at the Glasshouse Crops Research Institute, 1250
Laszlo, Imre : Appointed to an I.C.I. Research Fellowship in the University of Edinburgh, 545
Lateral Hypothalamus of the Rat : Evidence of a 'Hunger Motivational' System in the (Dr. P. J. Morgane), 672
Lateral Plates of the Stickleback (*Gasterosteus aculeatus* L.) : Significance of the Regeneration of (Tadeusz Penczak), 621
Lateral Ventricle of Brain : Antibody Response in Rabbits following Injection of Sheep Erythrocytes into (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
Lathyrism (Odoratism) : Influence of Scurvy and, on Hydroxyproline Excretion (Dr. G. R. Martin, S. E. Mergenhagen and D. J. Prockop), 1008
Latin America : Nutrition in (Food and Agriculture Organization of the United Nations Meetings on), 959
Latitude Distribution of Ionospheric Irregularities : Scintillations and the (D. G. Singleton), 482
Latrodectus geometricus C. Koch (Spider) : Cycle and Rhythm in the Ovulation of the (A. Bouillon and R. Lekie), 620
Lattice Silicates (Layer) : Surface Symmetry and Cell Dimensions of (E. W. Radoslovich), 67
Laubengayer, Prof. A. W. : Inorganic Polymers (BN Polymers), 1047
Lavallee, W. H., and Rhode, R. A. : Nematology (Movements of Larvae of *Pratylenchus penetrans*), 1048
Lavenne, F., and Leyh, P. : Design and Use of Respirators (Performance of Two Closed-circuit Breathing Sets), 656
Lavoipierre, Dr. M. M. J. : Blood-Feeding, Fecundity and Ageing in *Aedes aegypti* var. *Queenslandensis*, 575
Law, C. N. : Recombination in the X-Chromosome of *Drosophila melanogaster*, 1180
Law (Medicine, Science and the) : Vol. I, No. 4, 753
Lawden, D. F. : Space-Flight and Re-entry Trajectories (Orbital Transfer and Rendezvous), 960
Lawrence, Dr. B. E. : Education in Uganda (Presidential Address to Section L (Education) of the British Association for the Advancement of Science), 990
Lawrence, G. P. (Deuchars, Dr. W. M., and) : Interaction of 14-MeV. Neutrons with a Silicon Semiconductor Nuclear Particle Detector, 995
Lawrence, M., and Vivian, H. E. : The Action of Calcium Chloride on Mortar and Concrete, 125, *erratum*, 1145
Laws, Dr. R. M. : Appointed senior investigator in the Nuffield Unit of Tropical Animal Ecology, Mweya, Uganda, 651
Layer (Thin), of Starch-Gel : Electrophoresis in a, followed by a Plastifying Treatment (J. Groulade, Dr. J. M. Fine and C. Ollivier), 72
Layer Lattice Silicates : Surface Symmetry and Cell Dimensions of (E. W. Radoslovich), 67
Layers (Adsorbed), of Cyanine Dyes on Silver Bromide Microcrystals : Electron Spin Resonance Absorptions induced by Light in (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Layrisee, Dr. Miguel, and others : New *Rh* Phenotype, $Dcce^{t}e^{t}f$, found in a Chibcha Indian Tribe, 503
Layrisee, Zulay, and others : New *Rh* Phenotype, $Dcce^{t}e^{t}f$, found in a Chibcha Indian Tribe, 503
Lazarus, Dr. S., and others : Biorheology and Microcirculation (Capillary Strength Tests in Scurvy and their Reactions to Vitamins C and P Therapy), 758
Lazenby, Dr. Alec : Weeds in Britain, *review*, 842

Lazzarini, E., and others : Intermediate Pool between Amino-Acids and Globin in Duck Blood *in vitro*, 40
LeFevre, Paul G. : Persistence in Erythrocyte Ghosts of Mediated Sugar Transport, 970
LeGalley, Donald P. (edited by) : Ballistic Missile and Space Technology—Proceedings of the Fifth Symposium held at Los Angeles, 1960, Vol. 1, Bioastronautics and Electronics, with Invited Addresses ; Vol. 2, Propulsion and Auxiliary Power Systems ; Vol. 3, Guidance, Navigation, Tracking and Space Physics ; Vol. 4, Re-entry and Vehicle Design, *review* by W. H. Stephens, 1131
Le Grand, Prof. Yves : At the Maxwell Colour Centenary Conference (Complexities of the Visual Process), 10
Le Play Society : Presidential Address to the concluding Conference (Sir John Russell), 1144
Lea (Douglas) Memorial Lecture of the Hospital Physicists' Association (Dr. E. L. Powers), 1045
Leach, Gerald Adrian : Appointed to the editorship of *Discovery*, 1043 ; work of, 1043
Leach, Dr. S. : Effects of Ionizing Radiation on Organic and Biological Solids (Reactions in the Solid State), 1150
Lead in Urine : Determination of, by Atomic Absorption Spectroscopy (J. B. Willis), 381
Lead Monoxide : Rotational Analysis of Absorption Bands of (Dr. R. F. Barrow, J. L. Deutsch and D. N. Travis), 374
Lead Silicate Glass (γ-Irradiated) : Absorption Spectra of (R. S. Barker, T. K. Harrison, D. A. Richardson and R. Rimmer), 374
Leaf Blight : Susceptibility to, caused by *Cochliobolus heterostrophus*, in Nigerian Varieties of Maize (C. L. M. van Eijnatten), 515
Leaf Colour : Measurement of (J. Philip Grime), 614
Leaf Curl Virus and the Flavonoid Content of Resistant and Susceptible Strains of Cotton (Dr. Esam M. Moustafa), 415
Leaf-Spot Disease (Barley) : Production of Symptoms of, by Culture Filtrate of *Helminthosporium sativum* (S. K. Gayed), 725
Leakey, Dr. L. S. B. : The Juvenile Mandible from Olduvai, 417
Leakey, Dr. L. S. B., and others : Age of Bed I, Olduvai Gorge, Tanganyika, 478
Leal, R. S. (Greenbaum, Dr. A. L., and) : Effect of Pituitary Growth Hormone on Cholesterogenesis, 600
Learning in Two Sense-Modalities (Dr. G. Ettlinger), 308
Learning (Paired-Associate), of Nonsense Syllables : Stimulus-Response Compatibility in the (A. D. Baddeley), 1327
Leaves : Physiological Significance of Surface Wax on (D. M. Hall and R. L. Jones), 95
Leaves of *Bryophyllum fedtschenkoi* : An Endogenous Rhythm in the Rate of Dark-Fixation of Carbon Dioxide in the (Diana M. Warren and Malcolm B. Wilkins), 686
Leaves of Etiolated Pea Plants : Correlative Inhibition of Formation of Chlorophyll in the (Jiří Úlehla), 613
Lebedev, A. P., and Khain, V. E. (edited by) : Russian–English Geological Dictionary (T. A. Sofiano), *review* by Dr. S. I. Tomkeieff, 9
Lectures on Haematology (edited by F. G. J. Hayhoe), *review* by Dr. M. E. Nutt, 7
Lederer, Prof. Edgar : Elected a Member of the Biochemistry Section of the Leopoldina German Academy of Sciences, 122
Lederer, G. : Appointed a lecturer in pure mathematics at the University of Sheffield, 229
Lederer, Dr. M. : Paper Chromatography (Separation of particular families of Compounds—Results of Australian Workers in the Inorganic Field), 759
Lee, D. L. : Parasite Biology (Application of New Laboratory Techniques), 135
Lee, J. A. (Marples, J. A. C., and) : Structure of δ-Plutonium, 1391
Lee, W. H. (Allam, D. S., and) : Ultrasonic Velocity in Aqueous Silver Nitrate Solution, 1388
Leech : Neurosecretion and Granules in Neurones of the Brain of the (Irvine R. Hagadorn and Richard S. Nishioka), 1013
Lees, J., and others : Synthesis and X-Ray Analysis of Diamond, 865
Lefebvre, Prof. A. H. : Appointed to the chair of aircraft propulsion at the College of Aeronautics, Cranfield, 1042 ; work of, 1042
Leguebe, André : Inter-Individual Variability in Pigmentation, 1326
Leguminous Root Nodules (Gibberellin-like Substances in Plants), (Margaret Radley), 684
Leiper, R. T. : *Journal of Helminthology*, Supplement in honour of, on the occasion of his 80th Birthday, 1961, *review* by Dr. G. Lapage, 843
Lekhnovitch, V. S. : Introduction of the Potato into Western and Central Europe, 518
Lekie, R. (Bouillon, A., and) : Cycle and Rhythm in the Ovulation of the Spider *Latrodectus geometricus* C. Koch, 620
Leliaert, the late G. (Košaric, Naîm, and) : Determination of Indium in High-purity Zinc, 703
Length (Internode-), in *Pisum sativum* : Effects of Gibberellic Acid and Allogibberic Acid on Flowering and (I. C. Murfet and H. N. Barber), 514
Lengths (Bond-), in Solid Helium (Dr. A. F. Schuch), 591
Lenhert, Dr. P. G. (Hodgkin, Dr. Dorothy, and) : Vitamin B$_{12}$ and Intrinsic Factor (Vitamin B$_{12}$ Coenzyme), 1154
Lens (Optical) Performance : Some Aspects of, Part 1, Secondary Flare in Lenses (K. Hacking) ; Part 2, The Design of Lens Hoods (W. N. Sproson), 1355
Lens (Rat) Enzyme System : Catalysis of Incorporation of ^{14}C-Uridine into Rat Ribonucleic Acid by (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
Lens (Rat) Ribonucleic Acid : Catalysis of Incorporation of ^{14}C-Uridine into, by Rat Lens Enzyme System (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
Leonard, B. E., and Sherratt, Dr. H. S. A. : Pharmacology of the Alkaloidal Fraction from the Bark of the Jamaican Shade Tree *Pithecolobium samath* Benth., 287
Leopold, —., and others : How Old are the Angiosperms?, 442
Leopoldina German Academy of Sciences : Election of new Members, 122
Leprosy : Rehabilitation in—Report of the Scientific Meeting on (United Nations, World Health Organization, Technical Report Series No. 221), 1248
Leptospirosis of White Laboratory Rats (Dr. M. Füzi and R. Csóka), 1123
Lesher, S., and others : Estimation of Time of Generation of Living Cells, 290
Lesion Number and Concentration (Tobacco Mosaic Virus (TMV)) : Relationship of, to the Rate of Lesion Production on Pinto Bean (John Piacitelli and Prof. Vincent Santilli), 624
Lesion Production on Pinto Bean : Relationship of Tobacco Mosaic Virus (TMV) Lesion Number and Concentration to the (John Piacitelli and Prof. Vincent Santilli), 624
Lesions of Molluscum Contagiosum : An Antigen in (Dr. William L. Epstein, Irene P. Senecal and Dr. Alan M. Massing), 509
Leston, Dennis : The Number of Testis Follicles in Miridae, 93
Lethal Staphylococcal Infections in Mice : Biochemical Changes in (George W. Counts, Dr. Ian M. Smith, Dr. Joseph I. Routh, Dr. Elia Ch. Hazard and J. F. McTavish), 783
Lethal (Non-) Pathological Infection of Roots (F. J. Newhook), 615
Letham, D. S., and Bollard, E. G. : Stimulants of Cell Division in Developing Fruits, 1119
Letterer, Prof. Ernst : Elected a Member of the Pathology Section of the Leopoldina German Academy of Sciences, 122
Letts, H. J. R. : Design and Use of Respirators (Industrial Gas and Dust Masks), 656
Leuallen, E. Emerson, and others (edited by) : Remington's Practice of Pharmacy, twelfth edition, *review* by Dr. J. H. Gaddum, 8
Leucine Aminopeptidase in the Mammary Gland of the Cow and Rat (Prof. S. Talanti and Prof. Väinö K. Hopsu), 86
Leucine Aminopeptidase (Human Serum) : Sub-fractionation of (Prof. Clyde A. Dubbs, Charlotte Vivonia and Jean M. Hilburn), 1203
Leucobases (Thiazine) : Photo-Sensitivity of (D. W. Menzies), 505
Leucocyte (Anti-) Cytoplasm, Anti-Leucocyte Nuclei and Anti-Platelets in Disseminated Lupus Erythematosis (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Leucocyte (Anti-) Nuclei and Anti-Platelets (Anti-Leucocyte Cytoplasm,), in Disseminated Lupus Erythematosis (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Leukaemia in the *AkR* Mouse after X-Irradiation *in utero* (Donald Porteous), 291
Leukaemia in the Progeny of Mice inoculated with a Leukaemogenic Virus (Dr. M. H. Salaman and J. J. Harvey), 509
Leukaemia (Murine) : Transplantation of, by Unconventional Routes (Dr. Harold B. Hewitt), 1213
Leukaemia (Transplantable Acute Myeloid) : Effect of Calf Thymus Histone on Rats bearing (Dr. Lubomir Hnilica and Dr. Viktor Holoubek), 922
Leukaemia and Allied Diseases : Research on (Lady Tata Memorial Trust Awards for 1960-61), 228
Leukaemogenesis : Analysis of the Thymus Influence in (Dr. J. F. A. P. Miller), 248
Leukaemogenic Virus : Leukaemia in the Progeny of Mice inoculated with a (Dr. M. H. Salaman and J. J. Harvey), 509
Leupold, Dr. F., and Kremer, G. : Biosynthesis of Polyenoic Fatty Acids in Human Whole Blood, 805
Lev, Dr. M. : Bacteria of the Intestine (Germ-free Animals and their Use in Elucidating the Action of the Gut Flora on the Host), (read by Dr. Cuthbert), 1152
Level of Properdin : Action of Tetracycline on the (Vl. Kubelka and M. Rybák), 820
Levels of Succinic Dehydrogenase during Chemical Carcinogenesis : Tissue Dilution Artefact—a Re-interpretation of Variations in (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Levels (Atomic Energy), in Crystals (J. L. Prather), 1348
Levels (Vitamin-), in Blood and Serum (H. Baker, O. Frank, I. Pasher, Dr. H. Sobotka and S. H. Hutner), 78
Leversen, A. I. : Palaeogeologic Maps, *review* by Dr. C. Downie, 842
Levi, P. : Appointed Bernard Hickson Fellow in the Department of Botany in the University of Leeds, 650
Levine, Dr. S., and others : Discreteness-of-Charge Effect and the Stability Theory of Colloids, 699
Lewis, Dr. D. (edited by) : Digestive Physiology and Nutrition of the Ruminant—Proceedings of the University of Nottingham Seventh Easter School in Agricultural Science, *review* by Dr. I. W. McDonald, 1334
Lewis, Dr. D. T. : Analysis of Organic Compounds, *review*, 741
    The Use of Organic Reagents in Inorganic Analysis, *review*, 1336
Lewis, W. V. : *Obituary* by Jean M. Grove, 332
Lewison, G. R. G. : Elected to a Research Studentship in engineering at Churchill College, Cambridge, 856
Leyh, P. (Lavenne, F., and) : Design and Use of Respirators (Performance of Two Closed-circuit Breathing Sets), 656
Li, Prof. Choh Hao (Moudgal, N. R., and) : An Immunological Study of a Human Pituitary Interstitial Cell-stimulating Hormone, 192
Liberation (Amino-Acid), from Proteins by Enzyme or 'Heat Catalysed' Hydrolysis (S. M. Hardy), 1061
Liberation and Dispersal (Spore), of Coffee Rust *Hemileia vastatrix* B. et Br. (R. W. Rayner), 725
Librarianship and Foreign Languages (Science,) : Science Information Personnel—the New Profession of Information combining (Leonard Cohen and Kenneth Craven), 452
Libraries : Brown, Picton and Hornby (Liverpool Libraries, Museums and Arts Committee), 21
Libraries (British) : A Soviet View of (V. I. Shunkov, G. G. Firsov and N. I. Tyulina), translated by A. Thompson (Library Association, Pamphlet No. 22), 752
Libraries (University Extra-Mural), in Great Britain : Aims, Organization and Methods of (E. P. Pritchard), 649
Library of the United States Naval Observatory : Resources and Treasures of the (Marjorie S. Clopine), 22
Library (National Lending), for Science and Technology : *N.L.L. News*, No. 1, 1347
Library (National Reference), of Science and Invention : 1 ; (Leslie Wilson), 733 ; (J. Farradane), 734
    Aslib Report of the Discussion Meeting on the, 649
Library (South African Public) : Grey Bibliographies No. 7, A Bibliography of African Bibliographies, covering the Territories South of the Sahara, fourth edition, 959
Library Association : Annual Report of the Council for 1960, 21
    Special Subject List No. 34, Solar Energy Technology, 1954-1959 (T. Brimelow), 228
    Pamphlet No. 21, Aims, Organization and Methods of University Extra-Mural Libraries in Great Britain (E. P. Pritchard), 649
    Pamphlet No. 22, A Soviet View of British Libraries (V. I. Shunkov, G. G. Firsov and N. I. Tyulina), translated by A. Thompson, 752

Library Association (School) : Grant of £3,900 for three years from the Gulbenkian Foundation, 754
Lichtenstein, the late Yehudith (Grossowicz, Prof. Nathan, and) : Enzymic Binding of Hydroxylamine by Fumaric Acid, 412
Lidén, Kurt, and others : Radiocaesium and Potassium in Norwegians, 436
Lie-Injo, Dr. Luan Eng : Haemoglobin 'Barts' and the Sickling Phenomenon, 1314
Liebeck, H. : Appointed to a lectureship in mathematics at the University College of North Staffordshire, 229
Liebster, J., and others : A Simplified Method for Separating Amino-Acid Mixtures from Protein Hydrolysates on One Ion-Exchange Column during Preparation, 1198
Lienau, C. C. (edited by Quincy Wright and) : Statistics of Deadly Quarrels (Dr. Lewis F. Richardson), *review* by Sir Cyril Burt, 427
Liese, Prof. Walter : Elected a Member of the Hygiene Section of the Leopoldina German Academy of Sciences, 122
Life (Animal) : South African—Results of the Lund University Expedition in 1950-1951, Vol. 7 (edited by Bertil Hanstrom, Per Brinck and Gustaf Rudebeck), *review* by Prof. O. Lowenstein, 1135
Life (English Rural), Museum of : Annual Report for 1960 (University of Reading), 544
Life (Folk-) Study, Society for : Formation of a, 544
Life (Invertebrate), in South-East England (John Sankey), 132
Life (Wild-) : New Hope for African, 958
Life and Environment on the Bed of the Sea (Prof. C. M. Yonge), 986
Life and Scientific Work of Sir James Hall (Dr. V. A. Eyles), 345
Life and Work of William Higgins, Chemist (1763-1825), (Prof. T. S. Wheeler and Prof. J. R. Partington), *review* by Frank Greenaway, 533
Light : Dependence on, of Geotropism in Plant Roots (J. V. Lake and G. Slack), 300
Light in Adsorbed Layers of Cyanine Dyes on Silver Bromide Microcrystals : Electron Spin Resonance Absorptions induced by (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Light (Cerenkov), from Extensive Air Showers in the Atmosphere: Photography of (D. A. Hill and N. A. Porter), 690
Light (Polarized) : Analysis of, by the Bee's Eye (Prof. Donald Kennedy and Dr Edward R. Baylor), 34
Light Depolarization Technique : Crystallization of Isotactic Polypropylene using a (J. H. Magill), 1092
Light Intensity : Effects of, on Reproduction in S.48 Timothy (*Phleum pratense* L.), (Dr. G. J. A. Ryle), 196
Light Microscopy : A Method of Replicating Dry or Moist Surfaces for Examination by (Joan Sampson), 932
Light Rainfall and Plant Survival—Measurement of Stem Flow Run-off (M. D. Gwynne and J. Glover), 1321
Light Scattering (Low-Angle), and the Molecular Weight of Deoxyribonucleic Acid (Dr. Sidney Katz), 280
Limit (Upper Plastic), of Clays : Role of Interparticle Forces in Development of (Dr. Raymond Yong and E. T. Selig), 938
Limitations of Geometrical Models for Complementation Mapping of Allelic Series (Prof. Elof. Axel Carlson), 788
Limits of Human Vision (Dr. R. A. Weale), 471
Limnological Trends in Lake Kariba (D. Harding), 119
Lindahl, P. E. Björn : Inhibition of Growth and Photosynthesis in Submerged Plants with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and Reversal of this Inhibition of Photosynthesis, 51
Lindley, Prof. D. V. : An Introduction to Infinitely Many Varieties, *review*, 214
Lindner, E. B. (Porath, J., and) : Separation Methods based on Molecular Sieving and Ion Exclusion, 69
Lindstrom, G. R., and others : Role of Polysaccharides in Stabilization of Natural Soil Aggregates, 1283
Lindzey, Prof. G., and others : Social Dominance in Inbred Mouse Strains, 474
Linear Accelerators (Electron) : Pulse-shortening in (Dr. M. C. Crowley-Milling, T. R. Jarvis, C. W. Miller and G. Saxon), 483
Linear Neutron Kinetics : Topology of (L. G. Kemeny), 263
Linear Programming (Saul I. Gass), *review* by Dr. M. V. Wilkes, 9
Linear from Branched Polysaccharides : Separation of, by Precipitation as Iodine Complexes (Blanche D. E. Gaillard), 1295
Linear and Non-Linear Programming : Methods of Feasible Directions—a Study in (Dr. G. Zoutendijk), *review* by Dr. M. V. Wilkes, 9
Linear (Non-) Physical Problems (Indian Society of Theoretical and Applied Mechanics and Unesco Symposium on), 855
Ling, T. (Ferri, A., and) : Space-Flight and Re-entry Trajectories (Dynamics of Terminal Re-entry—Effect of Varying Lift on Re-entry Trajectories), 960
Linguistics (Mathematical) : Type-Token Mathematics, a Textbook of (Dr. Gustav Herdan), *review* by Dr. G. H. Toulmin, 211
Linnell, Prof. W. H. : Title of professor emeritus of pharmaceutical chemistry (at the University of London School of Pharmacy) conferred on, 546
Linskens, H. F. (Heinen, W., and) : Enzymic Breakdown of Stigmatic Cuticula of Flowers, 1416
Linton, A. H., and others : An Introduction to the Biology of Micro-organisms, *review* by Prof. B. C. J. G. Knight, 1032
Lipase (Pancreatic) : Hydrolysis of Fatty Acid Esters of Riboflavin by (Prof. Kunio Yagi, Yoshiko Yamamoto and Jun Okuda), 174
Lipid : Role of, in the Hardening of the Cuticle in the Silkworm, *Bombyx mori* (Shigemi Kawase), 279
Lipid (Orientated), on a Biological Membrane : Electrical Properties of—an Electrostatic Diffusion Barrier and Ion Pump (Dr. J. W. L. Beament), 217
Lipid and Lipidophilic Substances as Adjuvants : Effectiveness of (D. W. Dresser), 1169
Lipidophilic Substances (Lipid and), as Adjuvants : Effectiveness of (D. W. Dresser), 1169
Lipids of the Common Pea (*Pisum sativum* L.) with special reference to the Occurrence of Galactolipids (S. Adhikari, Dr. F. B. Shorland and R. O. Weenink), 1301
Lipids from the Precursor of the Stylet-Sheath Material of a Pentatomid : Extraction of (P. W. Miles), 911
Lipids and Trypsin : Interaction of, in Dimethyl Sulphoxide–Water Systems (Prof. A. Lukton, H. Donohue and Prof. F. A. Bettelheim), 565
Lipids (Serum), in relation to the Intake of Alcohol and Sodium Chloride (Erling Lund, Torben Geill, Prof. Henrik Dam and Gunhild Kristensen), 1095
Lipids (Serum), and Atherosclerosis in Rabbits : Effects of Carrageenin on (Dr. Katsumi Murata), 189
Lipogenesis in Thyroid Tissue *in vitro* : Stimulation of, by Free Fatty Acids (Prof. Norbert Freinkel, Dr. Augusto D. Litonjua and Edward C. Saef), 804
Lipopolysaccharide : Development in Mice of Prolonged Non-specific Resistance to Sarcoma Implant and Staphylococcus Infection following Repository Injection of (Samuel J. Prigal), 1111
Lipopolysaccharide (Bacterial) : Sensitivity of Mice to, following Alteration of Activity of the Reticulo-Endothelial System (Dr. G. N. Cooper and Dr. A. E. Stuart), 294
Liquid Helium-3 under Pressure below 0·1° K. : Specific Heat and Expansion Coefficient of (Dr. D. F. Brewer and J. R. G. Keyston), 1261
Liquid (Gas–) Chromatography : Peak-Shift Technique in—Trimethylsilyl Ether Derivatives of Alcohols (Stanley H. Langer and Peter Pantages), 141
Liquid (Gas–) Chromatography (Pyrolysis and), on the Microgram Scale (C. E. Roland Jones and A. F. Moyles), 663
Liquid/Liquid Coalescence : The Marangoni Effect and (G. D. M. MacKay and S. G. Mason), 488
Liquid (Rumen), of Cattle : Keto-Acids and Amines in (Dr. C. J. G. van der Horst), 73
Liquids : Ultrabasic (R. H. Clark and Prof. W. S. Fyfe), 158
Liquori, Dr. A. M., and others : Molecular Geometry of a 1:1 Crystalline Complex between 1,3,7,9-Tetramethyluric Acid and Pyrene. 900
Listening (Viewing and) : Facts and Figures about (British Broadcasting Corporation), 1051
Lister Institute of Preventive Medicine, London : Report of the Governing Body (1961), 1356
Liston, Prof. J. (Colwell, R. R., and) : Taxonomy of *Xanthomonas* and *Pseudomonas*, 617
Literature (Chemical) : Report on Computer Systems for Searching (E. C. Medam and H. R. Koller), (United States National Bureau of Standards Research Information Centre and Advisory Service on Information Processing), 23
Literature (Scientific) : The Use of (B. C. Vickery), 1347
Literature (Thermophysical Properties Research) : Retrieval Guide to, Vol. 1 (edited by Y. S. Touloukian), Book 1, Part A, Guide to Substance Classification and Numerical Codes ; Book 1, Part B, Dictionary of Synonyms and Trade Names ; Book 1, Part C, Dictionary of Substances ; Book 2, Classified Search Index ; Book 3, Master Bibliography, Author Index, *review* by Prof. A. R. Ubbelohde, 109
Litherland, A. E., and others : Production of Neon in Stars, 1381
Lithium Fluoride (Irradiated), as an Optical Filter in the Far Ultra-Violet (J. L. Weeks, S. Gordon and G. M. A. C. Meaburn), 1186
Litonjua, Dr. Augusto D. : Thyroglobulin—Effect of Acid, 356 ; Evidence of Thyroid Protease Action, 357
Litonjua, Dr. Augusto D., and others : Stimulation of Lipogenesis in Thyroid Tissue *in vitro* by Free Fatty Acids, 804
Little (Arthur D.) Research Institute : Annual Report for 1960 (June 17, 1068), *erratum*, 126
Little, Dr. K. : At the Twenty-first Meeting of the Research Panel of the British Gelatine and Glue Research Association (Structural Re-orientation of Gelatine), 860
Littler, Dr. W. B. : Explosives Technology, *review*, 3
Littoral Interstitial Species from Anglesey representing Three Families New to Britain (P. J. S. Boaden), 512
Liver : Comparison of Pyridine Nucleotides in the, and in an Ascitic Hepatoma (M. Wintzerith N. Klein, L. Mandel and Prof. P. Mandel), 467
Liver (Generating) : Influence of Plasma Proteins in the Control of Mitosis rates in (Dr. J. T. Hemingway), 706
Liver (Perfused), of Premature Lambs : Fructose and Lactic Acid Metabolism in the (W. H. H. Andrews, H. G. Britton and Dr. D. A. Nixon), 1307
Liver (Rat) : Effect of Adrenalectomy on the Activity of Enzymes of the Urea Cycle in (Patricia McLean), 1302
Liver (Rat) Glutamic-Oxalacetic Transaminase : Intracellular Distribution Pattern of (Dr. Herbert J. Eichel and Josef Bukovsky), 243
Liver (Regenerating) : Effect of Enzyme Injections on Mitosis in (Dr. Gaston de Lamirande), 400
Liver Alcohol Dehydrogenase : An Inhibitor of, in Preparations of Reduced Diphosphopyridine Nucleotide (Dr. Keith Dalziel), 1098
Liver Cell Proliferation (Parenchymal), in Normal Adult Rats : Stimulation by Heparin of (Dr. M. Zimmerman and Evemarie Celozzi), 1014
Liver Glycogen (Blood Glucose and), in Rabbits : Effect of Bee Venom on Concentration of (Prof. A. H. Mohamed and K. Zaki), 605
Liver Protein *in vivo* : Incorporation of Histamine into (Isabel Wajda, Michael Ginsburg and Prof. Heinrich Waelsch), 1204
Liver Tissue : Separation and *in vitro* Culture of Cells from (Dr. Justine S. Garvey), 972
Liver and Kidney : Changes in Glucose-6-phosphatase Activity in, at Birth (M. J. R. Dawkins), 72
Liverpool College of Technology : Postgraduate Courses in Nuclear Studies, 338
Liverpool Libraries, Museums and Arts Committee : Brown, Picton and Hornby Libraries, 21
Living Cells : Estimation of Time of Generation of (R. J. M. Fry, S. Lesher and H. I. Kohn), 290
Living Organisms : Atomic Radiations and (R. H. Mole), 556
Living Rat Brain : Urea Synthesis in the (R. K. Davies, A. J. Defalco, D. Shander, A. Kopelman and Prof. J. Kiyasu), 288
Livingstone, I. : Appointed lecturer in economic statistics at the University of Sheffield, 337
Lizard Area : Preliminary Age-Determinations in the (J. A. Miller and D. H. Green), 159
Ljunggren, Dr. Hans : Transfer of Virulence in *Rhizobium trifolii*, 623
Local Heating of the Hypothalamus : Increase of Evaporative Loss of Water from the Skin of the Ox in response to (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Localization of the 'Sugar Pump' in the Intestinal Epithelium (Dr. T. Z. Csáky and G. W. Fernald), 709
Localization in Tissues : Paper Electrophoresis of Proteins while Preserving the Pattern of their (Dr. Zh. A. Medvedev), 1021

Localization (Nucleolar), of Succinic Dehydrogenase in Normal Rat Hepatic Cells (P. De, R. Chatterjee and Dr. S. Mitra), 925
Location of Polygenes (Prof. J. M. Thoday), 368
Lock, C. M., and Stevens, P. J. : Connexion between Micropulsations and the Ionosphere, 584
Locus (*ad₇*) of *Schizosaccharomyces pombe* : Distribution of X-Ray- and Nitrous Acid-induced Mutations in the Genetic Fine Structure of the (Dr. Herbert Gutz), 1127
Locust (Desert) : Induced Changes in the Amounts of Material in the Neurosecretory System of the (Dr. K. C. Highnam), 199
Lodge, R., and others : Investigation into Blood Groups in a Paternity Case, 753
Loewus, Dr. Frank A., and Kelly, Stanley : Identity of L-Ascorbic Acid formed from D-Glucose by the Strawberry (*Fragaria*), 1059
Lofts, Dr. B. : Melanism in Captive Weaver-Finches (*Quelea quelea*), 993
London Hospital Medical College : Appointment of H. D. Ritchie to the University of London readership in surgery, 229
  Title of reader in dental anatomy in the University of London conferred on R. W. Fearnhead, 229
London School of Economics and Political Science : Title of reader in demography in the University of London conferred on J. Hajnal, 337
  Title of professor emeritus of geography conferred on Prof. R. O. Buchanan, 546
  Appointment of Dr. Brian Abel-Smith to the University of London readership in social administration, 651
  Appointment of L. P. Foldes to the University of London readership in economics, 651
  Appointment of Harry Townsend to the University of London readership in economics, 651
  Title of reader in economics conferred on J. Wiseman, 651
  Appointment of James Durbin to the University of London chair of statistics, 1247
London School of Hygiene and Tropical Medicine : Title of professor emeritus of medical statistics conferred on Sir Austin Bradford Hill, 546
London Transport : Retirement of A. T. Wilford as director of research, 751
  Appointment of H. E. Styles as director of research, 751
Long, Dr. Charles, and others : A Hypodermic Probe using Fibre Optics, 927
Long, Dr. Cyril (edited by) : Biochemists' Handbook, *review* by Dr. D. Recaldin, 635
Long, P. L. : Immunity to Protozoa (Local Immunity in Coccidiosis), 553
Long, P. L. (Rose, M. E., and) : Parasite Biology (Application of New Laboratory Techniques), 135
Long Ashton Research Station, Bristol (R. W. Marsh), 547
Long Bones (Homotypic) : Number of Arrangement of Osteons in Corresponding Regions of (Dr. G. Marotti), 1400
Long-Chain Alcohols and Glycol Monoalkyl Ethers : Compressibility and Specific Evaporation Resistance of the Monolayers of (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Long-Range Radio Communication by Satellite Microwave Dipoles—the West Ford Project, 1237
Long-Term Effects of Ionizing Radiations from External Sources—Report of the Subcommittee on, of the Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 849), 556
Long Wave-length Neutrons : Scattering of, by Irradiated Beryllium Oxide (T. M. Sabine, A. W. Pryor and B. S. Hickman), 1385
Lonsdale, Dame Kathleen : *Obituary* of Prof. W. T. Astbury, 332
Looney, W. B. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Some Limitations of Labelled Compounds in Radiobiological Studies), 341
Loop of Henle : Stimulation by Aldosterone of Sodium Transport in the (Dr. J. Crabbé), 817
Lord, Dr. H., and others : Ignition of Gas by Sparks produced by Breaking Wires at High Speed, 1085
Lord, P. Mary (Coulson, C. B., and) : Isolation and Fractionation of some Damselfly Pigments, 1300
Lords, House of : Committee stage of the Rating and Valuation Bill, 123
Lorković, H. : Inhibition by Potassium of the Mechanical Responses of Frog Muscles at Low Temperature, 1011
Loss (Evaporative) of Water from the Skin of the Ox : Increase of, in response to Local Heating of the Hypothalamus (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Lothrop, K. H., and others : A New Phase formed by High-Pressure Treatment—Face-centred Cubic Molybdenum Monocarbide, 1194
Loudon, Dr. James D. : Chemistry of Carbon Compounds, *review*, 214
Lough Neagh Pollan *Coregonus pollan*, Thompson : Furunculosis in (K. U. Vickers and R. McClean), 930
Loughman, Dr. B. C. : Effect of Boric Acid on the Phosphoglucomutase of Pea Seeds, 1399
Lousley, J. E. : At the Annual Congress of the South-Eastern Union of Scientific Societies (The Changing Flora of South-East England), 133
Louwerens, B., and others : Neutral 17-Ketosteroids in Porcine Urine, 175
Lovelace, Dr. Stuart A. (Keeler, Dr. Richard F., and) : Incorporation of Phosphorus-32 into Urinary Concretions forming on Zinc Implants in Rat Bladders, 715
Lovell, Sir Bernard : Appointed scientific director to the British Space Development Co., Ltd., 230
  Awarded the first Daniel and Florence Guggenheim International Astronautics Award, 856
Lovell, R., and others : Chromatographic Investigation of the Methyl Alcohol/Chloroform-soluble Constituents of Honeybee Larval Foods, 362
Low-Angle Light Scattering and the Molecular Weight of Deoxyribonucleic Acid (Dr. Sidney Katz), 280
Low Temperature : Inhibition by Potassium of the Mechanical Responses of Frog Muscles at (H. Lorković), 1011
  Recoil-Atom Reactions at (Slobodanka Veljković and Dr. Garman Harbottle), 1287
Lowenstein, Prof. O. : South African Animal Life, *review*, 1135
Lowenstein, Prof. O. E. : Biology Syllabus for Sixth Forms, 554
Lower Tertiary Floras of Southern England (Marjorie Elizabeth Jane Chandler), I, Palaeocene Floras, London Clay Flora (Supplement), *review* by Prof. John Walton, 209
Loynes, R. M. : Elected to a Junior Research Fellowship for research in mathematics at Churchill College, Cambridge, 856
Lucas, Ian A. McK. : Appointed to the chair of agriculture in University College of North Wales, Bangor, 439 ; work of, 439
Lüdi, Prof. W. : Flora Europaea, 447
Lukton, Prof. A., and others : Interaction of Lipids and Trypsin in Dimethyl Sulphoxide–Water Systems, 565
Luminescence (Chemi-) of Luminol : Inhibition of, by means of Oximes (Prof. K. Weber, J. Matković and D. Fleš), 177
Luminol : Inhibition of Chemi-Luminescence of, by means of Oximes (Prof. K. Weber, J. Matković and D. Fleš), 177
Lunar Occultation of a Radio Source (Dr. C. Hazard), 58
Lunar Studies : New Handbooks for, *review* by D. H. P. Jones, 424
Lund, Erling, and others : Serum Lipids in relation to the Intake of Alcohol and Sodium Chloride, 1095
Lung : Role of the, in Metabolism of Fat during Ontogeny of the Rat (Dr. Z. Vacek, P. Hahn and O. Koldovsky), 85
Lung-books in the Devonian Palaeocharinidae (Arachnida), (Dr. M. F. Claridge and A. G. Lyon), 1190
Lupinus albus L. exposed to Different Photoperiods : Effect of Gibberellic Acid on Growth and Indoleacetic Acid Oxidase Activity of (F. Sági and A. S. Garay), 824
Lupus Erythematosis (Disseminated) : Anti-Leucocyte Cytoplasm, Anti-Leucocyte Nuclei and Anti-Platelets in (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Lush, I. E. : Awarded a Wellcome Research Fellowship by the Animal Health Trust, 1250
'Lusitanian' Fauna : Origin of the British Insular Races of Small Mammals and of the (G. B. Corbet), 1037
Lymphocytes of Patients with Gargoylism : Inclusions of Mucopolysaccharide in the (Ursula Mittwoch), 1315
Lymphocytes (Guinea Pig) : Chemistry of a Mucopolysaccharide produced by (Helen Muir and A. H. E. Marshall), 706
Lymphocytes (Large), and the Simonsen Phenomenon (Dr. Aleksander Szenberg and N. L. Warner), 920
Lymphomatosis (Avian) : Cell Transplants of, treated with Hydrogen Peroxide (Dr. V. L. Sanger), 1406
Lynch, A. C. : Magnetic Materials in the Electrical Industry, *review*, 428
Lyon, A. G. (Claridge, Dr. M. F., and) : Lung-books in the Devonian Palaeocharinidae (Arachnida), 1190
Lysergic Acid Diethylamide : Effect of Administration of, on Serotonin-Levels in the Body (Dr. D. V. Siva Sankar, D. Barbara Sankar, Edward Phipps and Eleanor Gold), 499
Lysogeny : Absence of, in *Pasteurella pestis* (Dr. D. A. Smith), 522

MACACA (Genus) : Serum Transferrins in the—Species Distribution of Nineteen Phenotypes (Prof. Morris Goodman and Emily Poulik), 1407
Macaques (Philippine) : Isolation of *Plasmodium knowlesi* from (F. L. Lambrecht, Dr. F. L. Dunn and Dr. D. E. Eyles), 117
MacArthur, Dr. I. : *Obituary* of Prof. W. T. Astbury, 331
Macbride, J. Francis : Flora of Peru, *review* by N. Y. Sandwith, 214
Maccabaean Prize and Medal for 1962 (Worshipful Society of Apothecaries of London), 650
McCall, Richard C., and others : Radiocaesium and Potassium in Norwegians, 436
McCallien, Prof. W. J. (Bailey, Sir Edward, and) : Structure of the Northern Apennines, 1136
McCann, Dr. W. P. : Appointed Leverhulme research officer in the University College of North Staffordshire, 229
McCarthy, F. D. : Cave Art of the Conjola District, New South Wales, 854
  Rock Engravings of the Sydney–Hawkesbury District, 854
McCartney, J. T., and others : Electron Microscopic Observations of Structure in Ultra-Thin Sections of Vitrinite in Coal, 1361
McClean, R. (Vickers, K. U., and) : Furunculosis in Lough Neagh Pollan *Coregonus pollan*, Thompson, 930
McCoy, Dr. J. H. : Bacteria of the Intestine, 1153
McCrea, Prof. W. H. : Cosmology, *review*, 1336
McCulloch, N. G. : Appointed an honorary life governor of the Cotton, Silk and Man-made Fibres Research Association, 443
Macdonald, D. F. : The State and the Trade Unions, 1129
Macdonald, Gordon J. F. (Munk, Walter H., and) : The Rotation of the Earth, *review* by Prof. S. K. Runcorn, 313
McDonald, Dr. I. W. : Ruminant Digestion and Nutrition, *review*, 133
Macdonald, W. W. (edited by) : Malaysian Parasites, 35-49 (Studies from the Institute for Medical Research, Federation of Malaya, No. 29), *review* by P. F. Mattingly, 948
McDowall, F. H., and others : Growth of Ryegrass-dominant Pasture grazed by Cows, and Properties of New Zealand Butterfat, 303
Mace, Prof. C. A. : Title of professor emeritus of psychology (at Birkbeck College, London) conferred on, 546
Macek, Dr. K. : Paper Chromatography, 760
Macfarlane, Dr. G. G. : Appointed director of the Royal Radar Establishment, Malvern, 1145
McGillivray, W. A., and others : Growth of Ryegrass-dominant Pasture grazed by Cows, and Properties of New Zealand Butterfat, 303
McGivering, T., and others : Management in Britain, 1332
McGovern, V. J. : Mast Cells in Photosensitivity Reactions, 90
McGowan, Rt. Hon. the Lord : *Obituary* by R. Brightman, 1041
McGreavy, C. : Appointed I.C.I. Research Fellow in the University of Edinburgh, 337
McGregor, D. : The Human Side of Enterprise, 1332
McGregor, I. A. : Immunity to Protozoa (Use of Gamma-Globulin in the Cure of Malaria), 553
Machine Tool Engineering at Manchester, 19
Machine Tool Industry Research Association : Election of the Earl of Halsbury as president, 546
Macho, Dr. L. : Effect of Thyroxine and 2,4-Dinitrophenol on the Rate of Utilization of Glucose, 604
McIndoe Memorial Research Unit, Queen Victoria Hospital, East Grinstead : Appointment of Dr. Morten Simonsen as director of research, 337
McIntosh, J. F., and others : Biochemical Changes in Lethal Staphylococcal Infections in Mice, 783
Mackay, D., and others : Histidine Decarboxylase and Growth, 1311
MacKay, D. B. : Appointed chief officer of the Official Seed Testing Station of the National Institute of Agricultural Botany, 856

MacKay, G. D. M., and Mason, S. G. : The Marangoni Effect and Liquid/Liquid Coalescence, 488
McKeen, C. D. (Mountain, W. B., and) : Nematology (An Interaction between *Verticillium albo-atrum* and *Pratylenchus penetrans*), 1048
McKenzie, A. E. E. : The Major Achievements of Science, *review* by J. M. Eyles, 110
Mackworth-Praed, C. W., and Grant, C. H. B. : Birds of Eastern and North-Eastern Africa, second edition, *review* by Sir Landsborough Thomson, 9
McLean, J. A., and others : Increase of Evaporative Loss of Water from the Skin of the Ox in response to Local Heating of the Hypothalamus, 81
McLean, Patricia : Effect of Adrenalectomy on the Activity of Enzymes of the Urea Cycle in Rat Liver, 1302
McLean, Stuart : An Autoradiographic Effect, 690
Macleod, Dr. John : Arthropod Transmission of Micro-organisms, 885
McLoughlin, J. V. : Splitting of Serum Albumin during Electrophoresis on Paper, 1305
McManus, Mary Annunciata, and Sullivan, Kathleen : Effects of Kinetin and Indole-3-acetic Acid on Multiplication Rates of *Paramecium*, 619
McMichael, Dr. D. F. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 126
Macnae, Dr. W. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 126
McNaughton, G. S., and Woodward, R. N. : Barium-140 in New Zealand Rainwater, 1344
McNeil, —.: Hazards of the Animal House (Hazards associated with Farm Animals), 339
Macromolecules : Mediation of Divalent Metal Ions in the Binding of Tetracycline to (Dr. Kurt W. Kohn), 1156
McTaggart, F. K. : Reduction of Zirconium and Hafnium Oxides, 1192
Madagascar : Fishing in (Dr. Rudolph Kreuzer), 238
Maddocks, Dr. W. R. : *Obituary* of Prof. J. H. Andrew, 121
Madshus, Kjell, and others : Radiocaesium and Potassium in Norwegians, 436
Maegraith, Prof. B. G. : Immunity to Protozoa (Non-invasive Strains of Parasites), 552
Maegraith, Prof. B. G., and others : Techniques in Tropical Pathology, *review* by Prof. P. C. C. Garnham, 1236
Maéno, Takashi, and others : Electrical Activity of a Giant Nerve Cell under Abnormal Conditions, 1265
Maetz, J., and others : Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a Marine Teleost Fish (*Pollachius virens*), 670
Magat, Prof. M. : Effects of Ionizing Radiation on Organic and Biological Solids (Reactions in the Solid State), 1150
Magdalene College, Cambridge : Grant of £5,500 to the Pepys Library, for preparation and publication of a catalogue, 855
Maggs, F. A. P. : Design and Use of Respirators (Removal of Gases by Activated Charcoal), 655
Magill, J. H. : Crystallization of Isotactic Polypropylene using a Light Depolarization Technique, 1092
Magnesium : Importance of, in the Control of Plasma Calcium in the Calf (Dr. R. H. Smith), 181
  Rapid Development of Hypomagnesaemia in Lactating Cows given Artificial Rations Low in (J. A. F. Rook), 1019
Magnesium (Manganese and), in the Grey Speck Syndrome of Oats (P. B. Vose and Dr. D. J. Griffiths), 299
Magnesium Alloy : Effect of Chloride Concentration on the Aqueous Corrosion of a (D. de G. Jones and H. G. Masterson), 165
Magnetic Fields : Proposed Use of, in Electron Microscopic Radioautography (Lucien G. Caro), 1188
Magnetic Materials in the Electrical Industry (P. R. Bardell), second edition, *review* by A. C. Lynch, 428
Magnetic Mirror Confinement of Exploding Wire Plasma (E. J. Seykora), 995
Magnetic Quantities : Dimensions of Electrical and (Dr. A. E. Martin), 588
Magnetic Relaxation in Magnetite and in its Solid Solutions with Manganese and Nickel Ferrites (A. Bragiński and Th. Merceron), 898
Magnetic Storms in Interplanetary Space as observed by *Pioneer V* (Eugene W. Greenstadt), 329
Magnetically Controlled Ionization : Trans-Equatorial Backscatter Observations of (J. A. Thomas), 792
Magnetism and Crystallography (Science Council, the Physical Society and the Crystallographic Society of Japan International Conference on), 24
Magnetite : Magnetic Relaxation in, and in its Solid Solutions with Magganese and Nickel Ferrites (A. Bragiński and Th. Merceron), 898
Magnetization (Thermoremanent) : Stress Effects on (Dr. P. M. Stott and Dr. F. D. Stacey), 585 ; (J. M. Hall), 586
Magnetoplumbite Structure : Fluoride-compensated Substitution of Bivalent Cations in the (Porf. E. Banks and M. Robbins), 1387
Magnus, Dr. K. E., and others : High Concentration of (–)-Noradrenaline in *Portulaca oleracea* L., 1108
Mahesh, Dr. Virendra B., and Greenblatt, Dr. Robert B. : Physiology and Pathogenesis of the Stein–Leventhal Syndrome—Urinary Androsterone, Etiocholanolone, Pregnanetriol and Δ^5-Pregnenetriol of Ovarian Origin in a Patient with Stein–Leventhal Syndrome, 888 ; Role of FSH in the Pathogenesis of the Stein–Leventhal Syndrome, 889
Maheshwari, Prof. P., and Baldev, B. : Artificial Production of Buds from the Embryos of *Cuscuta reflexa*, 197
Maheshwari, Prof. P., and Kanta, Kusum : Intra-ovarian Pollination in *Eschscholzia californica* Cham., *Argemone mexicana* L. and *A. ochroleuca* Sweet, 304
Mahoney, M. Colette, and others : Chromosomal Elimination induced by 6-Aza-Uracil, 627
Mai, W. F., and Harrison, M. B. : Nematology (*Heterodera rostochiensis* is held in check on Long Island by Nematicidal Treatment, Cultural Methods and Legal Regulation), 1049
Maitland, B. J. G. : Mammals of the British Isles, *review*, 110
Maize : Susceptibility to Leaf Blight, caused by *Cochliobolus heterostrophus*, in Nigerian Varieties of (C. L. M. van Eijnatten), 515
Major Achievements of Science (A. E. E. McKenzie), *review* by J. M. Eyles, 110
Making : Astronomy in the, *review* by Colin A. Ronan, 314
Malabsorption Syndrome and Exudative Enteropathy : Calcium Metabolism in Man with Calcium-45— (Dr. G. Milhaud and Dr. P. Vesin), 872
Malacological Congress : First European (Conchological Society of Great Britain and Ireland and the Malacological Society of London), 126
Malacological Society of London (Conchological Society of Great Britain and Ireland and the) : First European Malacological Congress, 126
Malaria Eradication : Effect of Population Movements on (R. Mansell Prothero), 863
Malaya (Federation of) Institute for Medical Research : Studies from the, No. 29, Malaysian Parasites, 35-49 (edited by W. W. Macdonald), *review* by P. F. Mattingly, 948
Malaysian Parasites (edited by W. W. Macdonald), 35-49 (Studies from the Institute for Medical Research, Federation of Malaya, No. 29), *review* by P. F. Mattingly, 948
Malcolm, Group-Captain John Erskine : Action of the Hypothalamus, 606
  Fatigue in a Fluid-filled Pulsating Elastic Tube, 1012
Male Genitalia of East and West African Stocks of *Papilio dardanus* (Lep.) : Genetics of a Difference in the (J. R. G. Turner, C. A. Clarke and P. M. Sheppard), 935
Malignant Effusions : Diagnostic Significance of Heterogeneous Lactic Dehydrogenases in (R. Richterich, K. Zuppinger and E. Rossi), 507
Malizia, Major W. F., and others : Immunofluorescence of Pleuropneumonia-like Organisms isolated from Tissue Cell Cultures, 190
Malpighian Tubules : Excretion of Inulin by (Dr. J. A. Ramsay and Dr. J. A. Riegel), 1115
Maltby, P. : Central Component of the Radio Source Centaurus *A*, 793
Maltby, P. (Moffet, A. T., and) : Distribution of Brightness in Extragalactic Radio Sources, 453
Malyjev, A. : At the International Starch Conference (Use of the Dextrose–Sodium Chloride Double Salt to facilitate the Crystallization of Dextrose in Factories in the U.S.S.R.), 237
Mammal Society (Australian) : Election of Officers for 1961-62, 755
Mammalian Carotid Rete Mirabile : Functions of the (Dr. C. H. Barnett and C. D. Marsden), 88
Mammalian Cells *in vitro* : Incorporation of Deoxyribonucleic Acid by (Prof. E. R. M. Kay), 387
Mammalian Neurones : Analogues of Glutamic and γ-Amino-*n*-butyric Acids having Potent Actions on (Dr. J. C. Watkins and Dr. D. R. Curtis), 1010
Mammalian Sperm : Isolation and Properties of Deoxyribonucleic Acid from (Dr. E. Borenfreund, E. Fitt and Dr. A. Bendich), 1375
Mammalian Tissue Cell Surfaces : Sialic Acid as a Structural Component of some (Dr. Leonard Weiss), 1108
Mammals of the British Isles (Philip Street), *review* by B. J. G. Maitland, 110
Mammals of Northern Rhodesia (W. F. H. Ansell), *review* by R. W. Hayman, 8
Mammals (Small) : Origin of the British Insular Races of, and of the 'Lusitanian' Fauna (G. B. Corbet), 1037
Mammary Gland of the Cow and Rat : Leucine Aminopeptidase in the (Prof. S. Talanti and Prof. Väinö K. Hopsu), 86
Mammary Gland of the Ewe : Removal of Milk Constituents from the (A. K. Lascelles), 1404
Man : Blood Groups of Animals other than (Dr. D. G. Gilmour), 653
  Cross-modal Transfer in (M. Cole, S. L. Chorover and Dr. G. Ettlinger), 1225
  Effects of Corticotrophin, Hydrocortisone and Methopyrapone on the Circulating Eosinophiles in (Dr. N. J. Kothari and Dr. J. C. Saunders), 1105
  European Parasites of, *review* by Dr. G. Lapage, 107
  The Humanity of (Sir Wilfrid Le Gros Clark), 977 ; (Dr. Launcelot Fleming), 1229
  Use of Desertomycin Medium in Routine Selective Isolation of Fungi Pathogenic to (J. Uri and Zs. Herpay), 1015
Man with Calcium-45 : Calcium Metabolism in—Malabsorption Syndrome and Exudative Enteropathy (Dr. G. Milhaud and Dr. P. Vesin), 872
Man's Emergence : Dating (Dr. K. P. Oakley), 988
Man and Animals : Assessment of Pain in, 1353
Man (Land and), in the Western Weald (Prof. S. W. Wooldridge), 132
Management : Scientific Attitude to, *review* by T. H. Hawkins, 209
  Studies in (G. Hunter), 1332
Management in Britain (T. McGivering, D. Matthews and W. H. Scott), 1332
  Training for, 1331
Management in the Industrial World (Prof. F. Harbison and Prof. C. A. Myers), 1332
Management of Pine Stands for Pulpwood (J. J. Kotzé), 855
Management (Personnel), Institute of : Job Analysis (H. E. Roff and T. E. Watson), 336
Management Education, Foundation for : Grant of £16,000 a year for seven years to the University of Leeds, 228
Management Sciences, Institute of : Proceedings of the Sixth International Meeting (Paris, 1959)—Management Sciences, Models and Techniques (edited by Prof. C. West and Prof. Michel Verhulst), *review* by T. H. Hawkins, 209
Management Sciences, Models and Techniques—Proceedings of the Sixth International Meeting of the Institute of Management Sciences, Paris, 1959 (edited by Prof. C. West and Prof. Michel Verhulst), *review* by T. H. Hawkins, 209
Management Studies in Britain, 1251
Manager : The (L. F. Urwick), 1332
Managing Nature Reserves : Problems of (Dr. J. F. D. Frazer), 133
Manchester College of Science and Technology : Appointment of Ronald Beresford Dew as visiting professor of Industrial Administration, 651
Mancini, Roberto E., and others : Collagen Fractions in the Skin of New-born and Adult Rats, 1297
Mandel, L., and others : Comparison of Pyridine Nucleotides in the Liver and in an Ascitic Hepatoma, 467
Mandel, Prof. P., and others : Comparison of Pyridine Nucleotides in the Liver and in an Ascitic Hepatoma, 467
Mandible (The Juvenile), from Olduvai (Dr. L. S. B. Leakey), 417
Manganese and Magnesium in the Grey Speck Syndrome of Oats (P. B. Vose and Dr. D. J. Griffiths), 299
Manganese and Nickel Ferrites : Magnetic Relaxation in Magnetite and in its Solid Solutions with (A. Bragiński and Th. Merceron), 898
Mankiewicz, Dr. E. : Mycobacteriophages isolated from Persons with Tuberculous and Non-tuberculous Conditions, 1416
Mann, Dr. F. G. : Russian Work in Organo-Phosphorus Chemistry, *review*, 1232
Mann, Dr. H. H. : Classification of the Tea Plant, 409

Mann, Dr. K. J. : Biorheology and Microcirculation, 757
Mannosyl D-Glucosamine Hydrochloride Isomers—*N*-Mannosyl D-Glucosamine Hydrochloride (Dr. S. A. Barker, Dr. K. Murray and Prof. M. Stacey), 142 ; 6-*O*-Mannosyl D-Glucosamine Hydrochloride (Dr. S. A. Barker, Dr. K. Murray, Prof. M. Stacey and D. B. E. Stroud), 143
Manoach, Dr. M. (Weinman, Dr. J., and): Biorheology and Microcirculation (Photoelectric Techniques for Studying the Peripheral Circulation in Man), 758
Manosevitz, M., and others : Social Dominance in Inbred Mouse Strains, 474
Mansfield, Dr. T. A., and Heath, Prof. O. V. S. : Photoperiodic Effects on Stomatal Behaviour in *Xanthium pennsylvanicum*, 974
Manson, L. A. : Vitamin B_{12} and Intrinsic Factor (Biological Function of Vitamin B_{12}), 1155
Manson Bahr, P. E. C. : Immunity to Protozoa (Immunization of a Population in Kenya exposed to Epidemic Kala-azar with an Avirulent Ground Squirrel Strain of the Organism), 553
Manual of Bacteria and Actinomyces, *review* by Dr. K. Zinnemann, 1333
Manual (Introductory), on the Control of Health Hazards from Radioactive Materials (Medical Research Council, Memorandum No. 39), new edition, 1257
Manual (A Laboratory), of Analytical Methods of Protein Chemistry, including Polypeptides (edited by Dr. P. Alexander and R. J. Block), Vol. 1, The Separation and Isolation of Proteins, *review* by Dr. D. T. Elmore, 320
Manufacture (Pulp and Paper) : A Laboratory Handbook of (Dr. Julius Grant), second edition, *review* by Dr. F. Lyth Hudson, 320
Manufacturing Industry on Merseyside : Ageing and the Semi-Skilled—a Survey in (Alistair Heron and Sheila M. Chown, assisted by M. S. Featherstone and Catherine Cunningham), 1249
Map Publications by the Ordnance Survey of Great Britain : Recent, 958
Mapping (Complementation), of Allelic Series : Limitations of Geometrical Models for (Prof. Elof Axel Carlson), 788
Maps : Palaeogeologic (A. I. Leversen), *review* by Dr. C. Downie, 842
Marangoni Effect and Liquid/Liquid Coalescence (G. D. M. MacKay and S. G. Mason), 488
March, Dr. N. H. : Appointed to the newly created second chair of physics in the University of Sheffield, 337, 543 ; work of, 543
Marcker, K. (Bertelsen, Dr. Sv., and) : Degree of Polymerization of Hyaluronic Acid isolated from Human Aortic Tissue, 386
Marine Algae of the Eastern Tropical and Subtropical Coasts of the Americas (Prof. William Randolph Taylor), *review* by Prof. Lily Newton, 1234
Marine Biology or Oceanography : Research in (Challenger Society Grants for), 24
Marine Laboratory (Sandy Hook) : Fellowships for Plankton Research, 754
Marine Teleost Fish (*Pollachius virens*) : Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Marini-Bettolo, Prof. : Paper Chromatography, 760
Markham, Jordan J., and Mergerian, Dickron : Use of a Different Type of Fluorescent Material as an Optical Maser, 586
Markham, Dr. Roy : Still More Nucleic Acids, *review*, 742
Markov Processes : Theory of (E. B. Dynkin), translated from the Russian by D. E. Brown ; edited by T. Köváry, *review* by D. G. Kendall, 321
Marley, Dr. E., and others : Tryptamine Receptors in the Central Nervous System, 1068
Marmur, Prof. J., and others : Some Properties of the Deoxyribonucleic Acid of Phage Alpha, 1097
Marnay, A. : Haptoglobinuria in Nephrotic Syndromes, 74
Marotti, Dr. G. : Number and Arrangement of Osteons in Corresponding Regions of Homotypic Long Bones, 1400
Marples, J. A. C., and Lee, J. A. : Structure of δ-Plutonium, 1391
Marriage amongst the Groote Eylandt Aborigines : Classification of Kin, Age Structure and (Dr. Frederick G. G. Rose), *review* by Dr. R. Needham, 6
Mars, P., and van de Mond, Th. : Selectivity of Palladium Catalysts for the Oxidation of Carbon Monoxide in the Presence of Hydrogen, 1003
Marsden, C. D. (Barnett, Dr. C. H., and) : Functions of the Mammalian Carotid Rete Mirabile, 88
Marsh, R. W. : Long Ashton Research Station, Bristol, 547
Marshall, A. H. E. (Muir, Helen, and) : Chemistry of a Mucopolysaccharide produced by Guinea Pig Lymphocytes, 706
Martelli, G. : Appointed a lecturer in the Department of Physics, University of Birmingham, 337
Martin, Dr. A. E. : Dimensions of Electrical and Magnetic Quantities, 588
Martin, Eric W., and others (edited by) : Remington's Practice of Pharmacy, twelfth edition, *review* by Dr. J. H. Gaddum, 8
Martin, Dr. G. R., and others : Influence of Scurvy and Lathyrism (Odoratism) on Hydroxyproline Excretion, 1008
Martin, H. F. (Daniels, Dr. D. G. H., and) : Isolation of a New Antioxidant from Oats, 1302
Martin. L., and others : Essential Oil from Fresh *Cannabis sativa* and its Use in Identification, 774
Martin, R. L., and Winter, G. : Structures of Polymeric Titanium Ethoxide and Titanium Oxide Ethoxides, 274
Maruzzella. Prof. Jasper C. : Antimicrobial Substances from Ferns, 518
Marx, Dr. R. : Effects of Ionizing Radiation on Organic and Biological Solids (Use of Electron-Spin Resonance to Identify and Measure the Free Radicals produced by Irradiation), 1150
Mašek, Dr. J. : A New Inorganic Reaction—Nutric Acid–Hydrazoic Acid, 166
Maser (Optical) : Use of a Different Type of Fluorescent Material as an (Jordan J. Markham and Dickron Mergerian), 586
Masers (Optical) : A Proposal for a Tunable Source of Radiation for the Far Infra-Red using Beats between (Dr. D. C. Lainé), 795
Mason, Prof. E. A., and others : Kirkendall Effect in Gases, 375
Mason, R. : Dispersal of Tropical Seeds by Ocean Currents, 408
Mason, Dr. R. : Effects of Ionizing Radiation on Organic and Biological Solids (Post-irradiation Thermo-luminescence), 1150
Mason, S. G. (MacKay, G. D. M., and) : The Marangoni Effect and Liquid/Liquid Coalescence, 488
Mass Spectrometry (Mass Spectrometry Group of the Institute of Petroleum and Committee *E*-14 of the American Society for Testing Materials Conference on), 24
Mass Spectrometry : Determination by, of the Structure of Proline Derivatives from Apples (Dr. K. Biemann, G. G. J. Deffner and Prof. F. C. Steward), 380
Massey, A. G., and Orgel, Dr. L. E. : A Reversible Photochromic Polymer, 1387
Massey, Prof. Sir Harrie : The New Age in Physics, *review* by Prof. W. E. Burcham, 423
Massing, Dr. Alan M., and others : An Antigen in Lesions of Molluscum Contagiosum, 509
Mast Cells : Mechanism of Action of Antigen–Antibody Complexes—their Effect on (Dr. Ivan Mota), 572
Mast Cells in Photosensitivity Reactions (V. J. McGovern), 90
Mast Cells of the Rat : Release of Heparin from the (G. T. Archer), 90
Masterson, H. G. (Jones, D. de G., and) : Effect of Chloride Concentration on the Aqueous Corrosion of a Magnesium Alloy, 165
Material in the Neurosecretory System of the Desert Locust : Induced Changes in the Amounts of (Dr. K. C. Highnam), 199
Material (Cellular) : Estimation of Protein in (Prof. David Racusen and D. B. Johnstone), 492
Material (Fluorescent) : Use of a Different Type of, as an Optical Maser (Jordan J. Markham and Dickron Mergerian), 586
Material (Implant), in the Rat : Biological Incorporation of (James Calnan), 1017
Material (Soluble), in the Gastro-intestinal Tract of Rats under Normal Feeding Conditions (Dr. Anne S. Cole), 502
Material (Stylet-Sheath), of a Pentatomid : Extraction of Lipids from the Precursor of the (P. W. Miles), 911
Material (Subcellular) : Passive Transfer of Contact Sensitivity to Picryl Chloride in Guinea Pigs, with (Dr. J. L. Turk), 915
Materials (Agricultural) : Strontium-90 in Milk and, in the United Kingdom, 1959-1960 (Agricultural Research Council, Report No. 4), 20
Materials (Magnetic), in the Electrical Industry (P. R. Bardell), second edition, *review* by A. C. Lynch, 428
Materials (Natural) : Measurement of the Thorium Content of, by a γ-Ray Counting Method (Prof. J. H. J. Poole and F. N. Byrne), 62
Materials (Radioactive) : Introductory Manual on the Control of Health Hazards from (Medical Research Council, Memorandum No. 39), new edition, 1257
Materials (Sterilizing), for Hospitals (Brian Watkin), 1044
Mathematical Analysis : Modern Style in, *review* by Prof. L. S. Goddard, 6
Mathematical Delight, *review* by W. J. Langford, 638
Mathematical Education in Britain : Crisis in, 103
Mathematical Linguistics : Type-Token Mathematics, a Textbook of (Dr. Gustav Herdan), *review* by Dr. G. H. Toulmin, 211
Mathematical Methods in the Theory of Queueing (A. Y. Khintchine), translated by D. M. Andrews and M. H. Quenouille, *review* by Prof. L. S. Goddard, 211
Mathematical Society (American) : Proceedings of Symposia in Applied Mathematics, Vol. 10, Combinatorial Analysis (edited by Richard Bellman and Marshall Hall, Jr.), *review* by Prof. L. S. Goddard, 321
Mathematical Society (Australian) : Second Summer Research Institute, 1145
Mathematical Studies in the Psychology of War, *review* by Sir Cyril Burt, 427
Mathematical Study of the Causes and Origins of War : Arms and Security, a (Dr. Lewis F. Richardson), edited by Nicolas Rashevsky and Ernesto Trucco, *review* by Sir Cyril Burt, 427
Mathematicians : The Atomic Problem—a Challenge to Physicists and (Lancelot Law Whyte), *review* by Prof. R. Eisenschitz, 214
Mathematics at Leeds, 122
Mathematics: The Language of (Dr. Frank Land), *review* by W. J. Langford, 638
    School Curriculum in (edited by Howard Fehr), (Organization for European Economic Co-operation Report on), 335
    Teaching of (Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom Conference of professors of mathematics from the Universities of Great Britain to consider the), 1145
    Type-Token—a Textbook of Mathematical Linguistics (Dr. Gustav Herdan), *review* by Dr. G. H. Toulmin, 211
Mathematics Teachers : Shortage of, in Britain, 127
Mathematics (Applied), at Belfast, 19
Mathematics (Applied), at Manchester, 647
Mathematics (Pure), at Aberystwyth, 333
Mathematics (School) : New Thinking in, 335
Mathematics and Language, *review* by Dr. G. H. Toulmin, 211
Mathematics and Queueing, *review* by Prof. L. S. Goddard, 211
Matheson, Prof. A. A. : Digital Computers, their Use and Control, 554
Matković, J., and others : Inhibition of Chemi-Luminescence of Luminol by means of Oximes, 177
Matrix (Cartilage), *in vivo* : Action of Plasmin on (Dr. C. H. Lock, A. J. Anderson and S. Y. Ali), 1402
Matson, B. A. : Awarded a Wellcome Research Fellowship by the Animal Health Trust, 1250
Matsuda, Kazuo, and others : Isolation of Nigerose and Kojibiose from Dextrans, 278
Matsuno, Takao, and Yamanouchi, Toshihiko : A New Triterpenoid Sapogenin of Animal Origin (Sea Cucumber), 75
Matsushima, Tatsuaki, and others : Controlling Mechanism of the Mechanical Activity of Muscle and that of Blood Coagulation, 80
Matthew, Sir Bryan : The Senses and the Sciences (Presidential Address to Section I (Physiology and Biochemistry) of the British Association for the Advancement of Science), 989
Matthews, D., and others : Management in Britain, 1332
Matthews, Dr. R. E. F. (Francki, Dr. R. I. B., and) : Stimulation of Turnip Yellow Mosaic Virus Protein Production by 2-Thiouracil, 1078
Matthews, Prof. W. H., and others : A Lake in British Columbia containing Old Sea-Water, 830
Matthias, Fernan Alonso : Awarded a Spanish fellowship in chemistry for 1961-62 by the Ramsay Memorial Trust, 337
Mattingly, P. F. : Ecto- and Endo-Parasites of South-East Asia, *review*, 948
Mattocks, Dr. A. R. : Extraction of Heat-Labile Alkaloids from Plants, 1281
Maturity (Sexual), of Mice : The Effect of various Diets upon (J. Szepsenwol), 1112
Mauri, M., and others : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum*, 909
Maxillary Index in *Anopheles gambiae* Giles (L. K. H. Goma), 405
Maxwell, Dr. D. R., and Palmer, Helen T. : Demonstration of Anti-Depressant or Stimulant Properties of Imipramine in Experimental Animals, 84

Maxwell Colour Centenary (Prof. W. D. Wright), 10
Meaburn, G. M. A. C., and others : Irradiated Lithium Fluoride as an Optical Filter in the Far Ultra-Violet, 1186
Measurement Conference : Second International (J. A. Place), 1350
Measurement of Leaf Colour (J. Philip Grime), 614
Measurement of Stem Flow Run-off : Light Rainfall and Plant Survival—(M. D. Gwynne and J. Glover), 1321
Measurement of the Thorium Content of Natural Materials by a γ-Ray Counting Method (Prof. J. H. J. Poole and F. N. Byrne), 62
Measurement of Tissue Slice Respiration : Oxygen Electrode for (E. H. Strickland, F. D. Ziegler and Prof. A. Anthony), 969
Measurement (Quality), in the Chemical Factory (A. J. Clark and C. W. Munday), (Department of Scientific and Industrial Research), 752
Measurements of Current Shear : Evidence of an Eastward Equatorial Undercurrent in the Atlantic from (Arthur D. Voorhis), 157
Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of High Surface Area using a Continuous Flow Calorimeter (G. H. Bell and A. J. Groszek), 1184
Measurements (Age), on Antarctic Rocks (Queen Maud Land), (Sarah Deutsch, Prof. E. E. Picciotto and M. Reinharz), 1286
Measurements (Cosmic Noise), at 3·8 Mc./s. from Satellite 1960 $\eta 1$: Interpretation of (J. H. Chapman and A. R. Molozzi), 480
Measurements (Radiological Units and) : Report of the International Commission on (United States National Bureau of Standards, Handbook No. 78), 28
Measurements (Time-integrated), of Submarine Irradiance (Ronald Currie and Laurence Draper), 661
Measuring Instruments : Fine (Fourteenth International Instructional Course by Carl Zeiss, Jena, at the Imperial College of Science and Technology, London), 1045
Measuring Television Signal-to-Noise Ratio : An Instrument for (S. M. Edwardson), 1355
Measuring Visual Constancy for Stationary or Moving Objects (S. M. Anstis, C. D. Shopland and R. L. Gregory), 416
Mecca, Christyna, and others : Sexual Differentiation in *Hydra* in relation to Population Density, 92
Mechanical Activity of Muscle and that of Blood Coagulation : Controlling Mechanism of the (Dr. Mashiro Fujino, Saburo Yamaguchi, Masa Takauji, Kohki Uchida, Masahide Yasuda and Tatsuaki Matsushima), 80
Mechanical Co-ordination of Cilia : An Example of (Dr. M. A. Sleigh), 931
Mechanical Responses of Frog Muscles at Low Temperature : Inhibition by Potassium of the (H. Lorković), 1011
Mechanics (Fluid), at Glasgow, 853
Mechanics (Soil) : K. Terzaghi, Founder of the Science of, *review* by Kevin Nash, 210
    From Theory to Practice in—Selections from the Writings of Karl Terzaghi, *review* by Kevin Nash, 210
Mechanics (Theoretical and Applied) : Proceedings of the Fifth Congress on (Indian Society of Theoretical and Applied Mechanics), 855
Mechanics (Theoretical and Applied), Indian Society of, and Unesco : Symposium on Non-Linear Physical Problems, 855
Mechanism : Coupling of Phosphorylation to Electron and Hydrogen Transfer by a Chemi-Osmotic Type of (Dr. Peter Mitchell), 144
Mechanism of Action of Antigen–Antibody Complexes—their Effect on Mast Cells (Dr. Ivan Mota), 572
Mechanism of Differential Staining of Nucleic Acids (D. J. Goldstein), 407
Mechanism of Mutagenesis induced by Formaldehyde—the Essential Role of the 6-Amino Group of Adenylic Acid (or Adenosine) in the Mediation of the Mutagenic Activity of Formaldehyde (Dr. Thomas Alderson), 251
Mechanism in Photic Reversal of the Beetle *Trypodendron* : Air-Swallowing, a (Prof. Kenneth Graham), 519
Mechanism of Photosynthesis : Experimental Evidence for the (Dr. H. T. Witt, A. Müller and B. Rumberg), 194
Mechanism of Recovery from Viral Infection in the Chick Embryo (Dr. Samuel Baron and Alick Isaacs), 97
Mechanism of Sensitivity to Hydrostatic Pressure in the Prawn, *Palaemonetes varians* Leach (Peter S. B. Digby), 366
Mechanism of Synthesis of Adenine from Hydrogen Cyanide under Possible Primitive Earth Conditions (Prof. J. Oró), 1193
Mechanism (Cholinergic), in Sympathetic Transmission : Lack of Evidence for a (Dr. J. E. Gardiner and Dr. J. W. Thompson), 86
Mechanism (Controlling), of the Mechanical Activity of Muscle and that of Blood Coagulation (Dr. Masahiro Fujino, Saburo Yamaguchi, Masa Takauji, Kohki Uchida, Masahide Yasuda and Tatsuaki Matsushima), 80
Mechanism (A Positive Feedback), of Adenosine Triphosphate Synthesis in Erythrocytes (Makoto Nakao, Takashi Motegi, Toshiko Nakao, Saburo Yamazoe and Haruhisa Yoshikawa), 283
Mechanized World : Growing Old in a (F. Le Gros Clark), *review* by Prof. L. S. Hearnshaw, 532
Medam, E. C., and Koller, H. R. : Report on Computer Systems for Searching Chemical Literature (United States National Bureau of Standards Research Information Centre and Advisory Service on Information Processing), 23
Medford, R. D., and others : A New 'Wedge' Type Instability observed in a 'Theta' Pinch, 1054
Media (Anisotropic Elastic) : Surface Waves in (V. T. Buchwald and A. Davis), 899
Media (Culture), of *Penicillium chrysogenum* : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from (A. Ballio, Prof. E. B. Chain, F. Dentice di Accadia, M. Mauri, K. Rauer, M. J. Schlesinger and Sondra Schlesinger), 909
Media (Multi-carbohydrate) : A Micro-method for Performing the Phenylalanine Test on Cultures from (D. J. Stewart), 521
Mediated Sugar Transport : Persistence in Erythrocyte Ghosts of (Paul G. LeFevre), 970
Mediation of Divalent Metal Ions in the Binding of Tetracycline to Macromolecules (Dr. Kurt W. Kohn), 1156
Medical Abstracts (Biological and), Ltd. : Publication of *Index Biologicus*, 544
Medical Bulletin (British) : Vol. 17, No. 2, Foetal and Neonatal Physiology (British Council), 344
Medical Research in East Africa, 226
Medical Research, East African Council for : Report for 1959-60, 226
Medical Research, Fleming Memorial Fund for : Grants from the, 959
Medical Research, Institute for (Federation of Malaya) : Studies from the, No. 29, Malaysian Parasites, 35-49 (edited by W. W. Macdonald), *review* by P. F. Mattingly, 948
Medical Research (Experimental) : Feldberg Foundation for German–English Scientific Exchange for, 1143
Medical Research Council : Appointment of Lord Shawcross as a member, 546
    Appointment of Prof. M. L. Rosenheim and Prof. Wilson Smith as members, 1142
    Establishment at the University of Durham of a Research Group on Demyelinating Diseases, 1143
    Feldberg Foundation for Experimental Medical Research, 1143
    Change of Address, 1143
    Memorandum No. 40, Ageing and the Semi-skilled—a Survey in Manufacturing Industry on Merseyside (Alistair Heron and Sheila M. Chown, assisted by M. S. Featherstone and Catherine Cunningham), 1249
    Memorandum No. 39, Introductory Manual on the Control of Health Hazards from Radioactive Materials, new edition, 1257
Medical Research Council (Statistical Research Unit) : Title of professor emeritus of medical statistics conferred on Sir Austin Bradford Hill, 546
Medical Sciences : The Use of Radioisotopes in Animal Biology and the (International Atomic Energy Agency, the Food and Agriculture Organization and the World Health Organization of the United Nations, Conference on), 959
Medical Sciences (General) : Highlights of Research Progress in, 1960 (United States Department of Health, Education and Welfare, Public Health Service Publication No. 815), 658
Medical Statistics at Belfast, 20
Medication : Skin (British Pharmaceutical Conference Symposium on), 755
Medicine : Aviation and Cosmonautical (C.E.R.M.A. International Congress on), 338
Medicine (Experimental Biology and), Society for (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Medicine (Nuclear) : Fellowships and Grants in the field of Radiology and, 1962-63 (James Picker Foundation), 228
Medicine (Preventive), Lister Institute of : Report of the Governing Body (1961), 1356
Medicine and Pharmacy : Second Annual Report and List of Members (1960-61) of the Faculty of the History of (Worshipful Society of Apothecaries of London), 21
Medicine, Science and the Law : Vol. 1, No. 4, 753
Medium (Desertomycin) : Use of, in Routine Selective Isolation of Fungi Pathogenic to Man (J. Uri and Zs. Herpay), 1015
Medium (Synthetic), lacking Amino-acids : Formation of Phenethyl Alcohol and Tyrosol during Fermentation of a (R. Stevens), 913
Medvedev, Dr. Zh. A. : Paper Electrophoresis of Proteins while Preserving the Pattern of their Localization in Tissues, 1021
Mee, Dr. C. H. B. : Effect of Ultra-Violet Irradiation on the Electrical Conductivity of Cathodes coated with Barium Oxide, 1383
Megalithic Tombs of France, *review* by Prof. C. F. C. Hawkes, 637
Meiosis in the Oogonium and Antheridium of *Pythium debaryanum* Hesse (Dr. Eva Sansome), 827
Meiotic Behaviour (Diploid-like), of Polyploid Cotton : Basis of the (G. Kimber), 98
Melander, Stig E. J. : Oxytocinase Activity of Plasma of Pregnant Women, 176
Melanism in Captive Weaver-Finches (*Quelea quelea*), (Dr. B. Lofts), 993
Melbourne Symposium on Antarctic Meteorology, *review* by H. H. Lamb, 210
Meleka, A. H., and Barr, W. : An Autoradiographic Effect, 692
Mellon Institute : Appointment of Dr. P. C. Cross as president and chief executive officer, 439
    Annual Pittsburgh Diffraction Conference, 755
Melting and Polymorphism of Indium Antimonide at High Pressures (A. Jayaraman, R. C. Newton and Dr. G. C. Kennedy), 1288
Melts (Ionic) : The Structure and Properties of (Faraday Society General Discussion on), 338, 443
Membrane : Changes in the, during Recurrent Disinhibition of Spinal Motoneurones (Dr. Victor J. Wilson and Paul R. Burgess), 918
Membrane of Active Muscle Fibre : Ionic Currents in (Dr. H. Jenerick), 1074
Membrane of the Red Blood Cell : Dimer Formation and Glucose Transfer across the (Dr. W. D. Stein), 1277
Membrane (Biological) : Electrical Properties of Orientated Lipid on a—an Electrostatic Diffusion Barrier and Ion Pump (Dr. J. W. L. Beament), 217
Membrane (Erythrocyte) : Dimer Formation and the Transfer of Glycerol across the (Dr. W. D. Stein), 352
Membrane (Pit), of Wood Cells : Staining Reaction of the (R. K. Bamber), 409
Membrane Depolarization of Excitable Tissues : Outflux of Inorganic and Organic Phosphate during (Dr. L. G. Abood, Prof. K. Koketsu and I. Koyama), 395
Membranes (Biological) : Transfer of Calcium and Strontium across (United States Atomic Energy Commission, United States National Institutes of Health, United States National Science Foundation and the New York State Veterinary College Conference on), 1250
Membranes (Cellulose Acetate) : Use of, for Detecting Penicillinase-producing Organisms (Prof. R. Knox and J. T. Smith), 926
Membranes (Permselective) : Poisoning and Sign Reversal of (Dr. Francis de Körösy), 1363
Menkes, Dr. John H. : Side-Reactions during Hydrogenolysis of 2,4-Dinitrophenyl-hydrazones of Aromatic Keto-Acids, 285
Mental Health : Teaching of Psychiatry and (United Nations, World Health Organization, Public Health Papers No. 9), 1248
Mental Health, World Federation for : Grant from the Gulbenkian Foundation, 754
Mental Health Statistics, 855
Menzies, D. W. : Photo-Sensitivity of Thiazine Leucobases, 505
Mer, Dr. C. L. : Carbon Dioxide and Ethanol as Factors controlling the Growth of Etiolated Oat Seedlings, 260
β-Mercaptoethanol : A Morphogenetic Effect of—Distribution of Water in the Embryo (Dr. Peter Tuft), 1072 : Distribution of Water in the Chick Blastoderm (A. Jurand and Dr. Peter Tuft), 1073

6-Mercaptopurine : Biochemical Aspects of Resistance to, in Human Epidermoid Carcinoma Cells in Culture (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
Merceron, Th. (Bragiński, A., and) : Magnetic Relaxation in Magnetite and in its Solid Solutions with Manganese and Nickel Ferrites, 898
Mercury Drop (Rotating Hanging) : Use of the, in Analysis—Anodic Stripping using a Rotating Mercury Drop (Dr. J. J. Engelsman and A. M. J. M. Claassens), 240 ; Trace Analysis with a Rotating Hanging Mercury Drop (Dr. M. van Swaay and R. S. Deelder), 241
Mergenhagen, S. E., and others : Influence of Scurvy and Lathyrism (Odoratism) on Hydroxyproline Excretion, 1008
Mergerian, Dickron (Markham, Jordan J., and) : Use of a Different Type of Fluorescent Material as an Optical Maser, 586
Mering, Prof. J. : Graphite (Defaults Cristallins dans le Graphite), 27
Merriam, Sir Laurence : Elected president for 1961-62 of the Plastics Institute, 959
Merrick, M. J. : At the Twenty-first Meeting of the Research Panel of the British Gelatine and Glue Research Association (Glueing in the Furniture Industry), 860
Merseyside : Ageing and the Semi-Skilled—a Survey in Manufacturing Industry on (Alistair Heron and Sheila M. Chown, assisted by M. S. Featherstone and Catherine Cunningham), 1249
Mesopotamia (Ancient) : Ecological Aspects of Irrigation in (Hans Helback), 227
Metabolic Defects : Nutrition and (Nutrition Society Symposium on), 125
Metabolic Production of Sucrose from Fat (Prof. H. Beevers), 433
Metabolic Stability of Body Constituents (Dr. A. N. Davison and Dr. J. Dobbing), 844
Metabolic and Genetic Investigations of Nutritionally Exacting Strains of *Staphylococcus pyogenes* (Janice B. Edgar and Dr. B. A. D. Stocker), 1121
Metabolism : Tumour, *review* by Prof. F. Dickens, 1335
Metabolism of Fat during Ontogeny of the Rat : Role of the Lung in (Dr. Z. Vacek, P. Hahn and O. Koldovsky), 85
Metabolism of Indole-3-acetic Acid in Plants : 1-(Indole-3-acetyl)-β-D-Glucose, a New Compound in the (Dr. M. H. Zenk), 493
Metabolism of the Sulphur Amino-Acids and of Sulphate in *Blattella germanica* (Richard J. Block and S. Mark Henry), 392
Metabolism (Calcium), of Human Beings : Effect of Sodium Fluoride on (Dr. Clayton Rich and John Ensinck), 184
Metabolism (Calcium), in Man with Calcium-45—Malabsorption Syndrome and Exudative Enteropathy (Dr. G. Milhaud and Dr. P. Vesin), 872
Metabolism (Cell) : Multiple Inhibitions of, by a Single Substance (M. Harris and Dr. G. A. Morrison), 1276
Metabolism (Fructose and Lactic Acid), in the Perfused Liver of Premature Lambs (W. H. H. Andrews, H. G. Britton and Dr. D. A. Nixon), 1307
Metabolism (Histamine) : Anabolic Agents and (Dr. K. S. Kim), 1368
Metabolism (Phosphorus), of Brain (Dr. P. J. Heald), *review* by Dr. R. V. Coxon, 318
Metabolism (Purine and Pyrimidine), in *Rhodospirillum rubrum* (Prof. T. W. Goodwin and Dr. P. N. A. Passorn), 276
Metabolism (Respiratory), in Plants (Prof. Harry Beevers), *review* by Prof. W. O. James, 1031
Metabolite (Tri-*o*-Cresyl Phosphate) : Biological Activity of a (Prof. John E. Casida, Morifusa Eto and Ronald L. Baron), 1396
Metabolites of Vitamin B_{12} in Bile after Parenteral Administration of the Vitamin (Dr. John B. Stokes), 807
Metabolites (Intermediary) : Effects of Injections of some, on the 'Insulin Response' of Normal Rabbits (Dr. H. D. Brahmachari and G. Raghupathy Sarma), 491, *erratum*, 755
Metabolites (Urinary), of ^{14}C-Tetrachloroethylene in Mice (Dr. Sven Yllner), 820
Metadrenaline and Normetadrenaline in Normal Human Urine : Quantitative Determination of (Dr. Kaoru Yoshinaga, Dr. Chuichi Itoh, Dr. Nozomu Ishida, Dr. Tatsuo Sato and Dr. Yasuo Wada), 599
Metal Chlorin Complexes in Recent Sediments as Initial Precursors to Petroleum Porphyrin Pigments (G. W. Hodgson and Eric Peake), 766
Metal Ions in Enzyme Catalysis : Dextransucrase V and the Role of (W. Brock Neely and Julie Hallmark), 385
Metal Ions (Divalent), in the Binding of Tetracycline to Macromolecules : Mediation of (Dr. Kurt W. Kohn), 1156
Metal (Precious) Years : Two Hundred—a History of the Sheffield Smelting Company, Ltd., 1760-1960 (Ronald E. Wilson), *review* by Prof. R. W. K. Honeycombe, 108
Metallurgical Laboratory (National), Jamshedpur : Symposium on the Ferro-Alloy Industry in India, 1144
Metallurgical Society of the American Institute of Mining, Metallurgical and Petroleum Engineers (Iron and Steel Institute and the) : Special Meeting in the United States and Canada, 651
Metallurgical and Petroleum Engineers (Mining,) American Institute of (Iron and Steel Institute and the Metallurgical Society of the) : Special Meeting in the United States and Canada, 651
Metals : The de Haas-van Alphen Effect and the Electronic Structure of (Dr. D. Shoenberg), 126
Metals, Institute of : Autumn Meeting, 546
  Autumn Lecture, The Non-Ferrous Metals Industry in a Unified Europe (Baron Snoy et d'Oppuers), 546
Metals, Institute of (Iron and Steel Institute and the) (Powder Metallurgy Joint Group) : Winter Meeting—Symposium on Sintered High Temperature Compounds, 1250
Metals (Heavy) : Effect of Excess Supply of, to Barley during Germination, with special reference to Catalase and Peroxidase (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Metals (Non-Ferrous) Industry in a Unified Europe (Baron Snoy et d'Oppuers), 546
Metastable Nitrogen Atoms : New Afterglow Emission associated with (L. Herman and R. Herman), 346
Metcalf, D., and Ishidate, M. : Periodic Acid–Schiff Positive Giant Cells in the Mouse Thymus Cortex, 305
Meteorite Falls throughout the Ages : The Frequency of (Prof. Herbert Dingle), 482 ; (Prof. Hans Pettersson), 482
Meteorites : Organic Constituents of (Michael H. Briggs), 1137
Meteorites (Iron) : Microstructural and Chemical Identity of the Bear Creek and Narraburra (Dr. H. J. Axon), 1287
Meteorological Society (Royal) : Election of Officers for 1961-62, 443
Meteorology : Antarctic—Proceedings of the Symposium held in Melbourne, 1959 (Commonwealth of Australia, Bureau of Meteorology), *review* by H. H. Lamb, 210
  Theoretical, *review* by Dr. Robert P. Pearce, 314
Meteorology, Commonwealth of Australia Bureau of : Antarctic Meteorology—Proceedings of the Symposium held in Melbourne, 1959, *review* by H. H. Lamb, 210
Meteorology (Antarctic) : Melbourne Symposium on, *review* by H. H. Lamb, 210
Meteorology (Theoretical) : Introduction to (Prof. Seymour L. Hess), *review* by Dr. Robert P. Pearce, 314
Methaemoglobin in Chronic Copper Poisoning of Sheep (J. R. Todd and R. H. Thompson), 89
Method of Estimating Ionospheric Absorption Heights from Recovery Times (Syed Ziauddin), 1084
Method for Isolating Bacteria capable of Producing 6-Aminopenicillanic Acid from Benzylpenicillin (Prof. Yukio Kameda, Yukio Kimura, Etsuko Toyoura and Tomoo Omori), 1122
Method of Replicating Dry or Moist Surfaces for Examination by Light Microscopy (Joan Sampson), 932
Method of Treating Asbestos Filter Pads for Virus Filtration (N. St. G. Hyslop), 305
Method (Agar Disk), for the Direct Observation of Nematode-trapping Fungi in the Soil (Roderic C. Cooke), 1411
Method (Ethological), for Investigating the Properties of Nervous Systems : Response to Series of Subliminal Stimuli—an (A. J. Pontin), 512
Method (Experimental), in Biology from the Time of Antonio Vallisneri to the Present (University of Padua Symposium on), 546
Method (γ-Ray Counting) : Measurement of the Thorium Content of Natural Materials by a (Prof. J. H. J. Poole and F. N. Byrne), 62
Method (A Micro-), for Performing the Phenylalanine Test on Cultures from Multi-carbohydrate Media (D. J. Stewart), 521
Method (A New Two-Stage), for Cross-linking Proteins (Dr. Felix Borek), 1293
Method (Possible), for Increasing the Signal-Noise Ratio in the Detection of the First Motion of a Refracted *P*-Wave (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Scott), 1382
Method (A Simplified), for Separating Amino-Acid Mixtures from Protein Hydrolysates on One Ion-Exchange Column during Preparation (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Method (A Spray), for the Simultaneous Detection of Iodide and Iodinated Amino-Acids on Filter Paper Chromatograms (Dr. A. Van Zyl and M. Bhaga), 275
Methods : Infrared (G. K. T. Conn and D. G. Avery), *review* by Dr. E. S. Waight, 315
Methods of Feasible Directions, a Study in Linear and Non-Linear Programming (Dr. G. Zoutendijk), *review* by Dr. M. V. Wilkes, 9
Methods (Aims, Organization and), of University Extra-Mural Libraries in Great Britain (E. P. Pritchard), 649
Methods (Analytical), of Protein Chemistry (including Polypeptides) : A Laboratory Manual of (edited by Dr. P. Alexander and R. J. Block), Vol. 1, The Separation and Isolation of Proteins, *review* by Dr. D. T. Elmore, 320
Methods (Mathematical), in the Theory of Queueing (A. Y. Khintchine), translated by D. M. Andrews and M. H. Quenouille, *review* by Prof. L. S. Goddard, 211
Methods (Modern), of Traffic Control (Exhibition at the Science Museum, London, by the Westinghouse Brake and Signal Co., Ltd.), 1044
Methods (Physical), of Organic Chemistry (edited by Arnold Weissberger), third edition, Parts 3 and 4, *review* by Dr. W. A. Waters, 317
Methods (Separation), based on Molecular Sieving and Ion Exclusion (J. Porath and E. B. Lindner), 69
Methods (Simple, Quick), for Detection of 6-Amino-penicillanic Acid (J. Uri and F. Sztaricskai), 1223
Methopyrapone (Corticotrophin, Hydrocortisone and) : Effects of, on the Circulating Eosinophiles in Man (Dr. N. J. Kothari and Dr. J. C. Saunders), 1105
Methyl Alcohol/Chloroform-soluble Constituents of Honeybee Larval Foods : Chromatographic Investigation of the (N. G. Patel, M. H. Haydak and R. Lovell), 362
5-Methyltryptophan and Darkening of the Hair in Yellow A^{y}/a Mice (Dr. Vivianne T. Nachmias), 934
'Metrazol' Convulsions : Changes in the Pentose–Nucleic Acid Content of Sub-Cellular Fractions of the Brain of the Rat during (Prof. G. P. Talwar, B. Sadasivudu and V. S. Chitre), 1007
Meusel, Prof. H. : Flora Europaea (Problems of Abstracting and Indexing European Taxonomic Literature), 448
Mevalonic Acid in Carrots : Occurrence of (Prof. V. V. Modi and D. K. Patwa), 1202
Mice : Biochemical Changes in Lethal Staphylococcal Infections in (George W. Counts, Dr. Ian M. Smith, Dr. Joseph I. Routh, Dr. Elia Ch. Hazard and J. F. McTavish), 783
  Blockage of Transformation of Tryptophan to Nicotinic Acid by Experimental Hepatitis in (M. Piazza, F. Tancredi and Prof. E. Quagliariello), 601
  Development in, of Prolonged Non-specific Resistance to Sarcoma Implant and Staphylococcus Infection following Repository Injection of Lipopolysaccharide (Samuel J. Prigal), 1111
  The Effect of various Diets upon Sexual Maturity of (J. Szepsenwol), 1112
  Effect of Added Vitamins on the Phagocytic Activity of the Reticulo-Endothelial System of (J. Cordingley and Prof. T. Nicol), 82
  Effect of Hybridization on the Primary Polydipsic Trait of an Inbred Strain of (Dr. Emanuel Silverstein), 523
  Inheritance of Susceptibility to Induced Pulmonary Tumours in (Dr. D. S. Falconer and Dr. Joyce L. Bloom), 1070
  Non-Specific Immunity in Pneumococcal Infection of (Dr. G. N. Cooper and Dr. A. E. Stuart), 295
  Sensitivity of, to Bacterial Lipopolysaccharide following Alteration of Activity of the Reticulo-Endothelial System (Dr. G. N. Cooper and Dr. A. E. Stuart), 294
  Sex-Ratio in (Margaret J. Cook and Augustin Vlček), 89
  Urinary Metabolites of ^{14}C-Tetrachloroethylene in (Dr. Sven Yllner), 820
Mice (*DBA/1*) : A Natural Population of Anomalous Branched Tapeworms, *Hymenolepis nana* (Cestoda : Hymenolepididae), in a Colony of (Dr. Donald Heyneman), 297

Mice (Laboratory) : Simultaneous Eradication of Three Ectoparasitic Species from a Colony of (Dr. Nigel Bateman), 721
Mice (Yellow *A^vy^a*) : 5-Methyltryptophan and Darkening of the Hair in (Dr. Vivianne T. Nachmias), 934
Mice Inoculated with a Leukaemogenic Virus : Leukaemia in the Progeny of (Dr. M. H. Salaman and J. J. Harvey), 509
Mice Parasitized with a relatively Avirulent Strain of *Salmonella typhimurium* : Resistance to Infection with *Salmonella paratyphi* C in (Dr. J. G. Howard), 87
Mice made Polycythaemic by Exposure to Air at a Reduced Pressure : Bio-Assay of Erythropoietin in (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Mice Treated with *Iso*propylnoradrenaline : Enlargement of Salivary Gland in (Dr. K. Brown-Grant), 1076
Michael, J. Gabriel, and others : Increase in Specific Bactericidal Antibodies after Administration of Endotoxin, 296
Michalec, Dr. C. : Paper Chromatography (Paper Chromatography of Solvents, Reagents and Techniques useful in this field), 759
Michelson Interferometer : Molecular Emission Spectroscopy from 2μ to 12μ by a (H. A. Gebbie, G. Roland and L. Delbouille), 264
Microbial (Anti-) Agents and Chemotherapy (American Society for Microbiology Interscience Conference on), 651, 1250
Microbial (Anti-) Substances from Ferns (Prof. Jasper C. Maruzzella), 518
Microbiological Research Institute (Colonial), Trinidad : Closing of the, 20
Microbiology, American Society for : Interscience Conference on Antimicrobial Agents and Chemotherapy, 651, 1250
Microcirculation : Biorheology and (Medical School of the Hebrew University Seminar on), 757
Microcrystals (Silver Bromide) : Electron Spin Resonance Absorptions induced by Light in Adsorbed Layers of Cyanine Dyes on (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Microcythaemia in a Sardinian Family : Association of Haemoglobin *N* and (Prof. E. Silvestroni and I. Bianco), 1208
Microfibrils (Cellulose) : Constitution of (D. T. Dennis and Prof. R. D. Preston), 667
Microflora (Cellulose-decomposing), on Soil Crumb Plates : Factors influencing the Composition of the (A. Keynan, Y. Henis and P. Keller), 307
Microgram Scale : Pyrolysis and Gas–Liquid Chromatography on the (C. E. Roland Jones and A. F. Moyles), 663
Microlepidoptera (British), (Collection of), belonging to the late L. T. Ford acquired by the British Museum (Natural History), 124
Micro-method for Performing the Phenylalanine Test on Cultures from Multicarbohydrate Media (D. J. Stewart), 521
Micro-organism (New Nitrogen-fixing) : Chemical Character of the Pigments of a (Gy. Németh, F. Uresch, Prof. G. Fodor and L. Láng), 1413
Micro-organisms : Arthropod Transmission of (Dr. John Macleod), 885
  The Biology of, *review* by Prof. B. C. J. G. Knight, 1032
  An Introduction to the Biology of (Lilian E. Hawker, A. H. Linton, B. F. Folkes and M. J. Carlile), *review* by Prof. B. C. J. G. Knight, 1032
Micro-organisms which produce Antibiotics : Activation of Amino-Acids in (Dr. O. Ciferri, Dr. M. Di Girolamo and Dr. A. Bendicenti Di Girolamo), 411
Micropulsations and the Ionosphere : Connexion between (C. M. Lock and P. J. Stevens), 584
Microradiography (Contact), at 200-500 V. : An Experimental Apparatus for (Dr. A. Recourt and G. H. F. de Vries), 1185
Microscope : The Electron (M. E. Haine), *review* by Prof. D. Gabor, 316
Microscopic Observations (Electronic), of Structure in Ultra-Thin Sections of Vitrinite in Coal (J. T. McCartney, Sabri Ergun and R. E. Walline), 1361
Microscopic (Electron) Radioautography : Proposed Use of Magnetic Fields in (Lucien G. Caro), 1188
Microscopy : X-Ray (Dr. V. E. Cosslett and Dr. W. C. Nixon), *review* by Prof. Arne Engström, 1332
Microscopy (Electron) : Fixation of Yeast Protoplasts for (Dr. P. F. Elbers), 1022
Microscope (Electron) Observations of the Receptors in the Sensory Vesicle of the Ascidian Tadpole (Noël Dilly), 786
Microscopy (Light) : A Method of Replicating Dry or Moist Surfaces for Examination by (Joan Sampson), 932
Microstructural and Chemical Identity of the Bear Creek and Narraburra Iron Meteorites (Dr. H. J. Axon), 1287
Microwave Dipoles (Satellite) : Long-Range Radio Communication by—the West Ford Project, 1237
Migirdycian, Dr. E. : Effects of Ionizing Radiation on Organic and Biological Solids (Reactions in the Solid State), 1150
Mild Acid and Alkaline Hydrolysis of *M*- and *N*-Blood Group Substances : Products of (Dr. Elzbieta Romanowska), 1408
Miles, Dr. Charles P. : Peripheral Position of Sex Chromatin, 626
Miles, P. W. : Extraction of Lipids from the Precursor of the Stylet-Sheath Material of a Pentatomid, 911
Milhaud, Dr. G., and Vesin, Dr. P. : Calcium Metabolism in Man with Calcium-45—Malabsorption Syndrome and Exudative Enteropathy, 872
Milk : Correlation between Growth-Rate of the Suckling of various Species and the Percentage of Total Calories from Protein in the (Dr. F. W. Bernhart), 358
Milk (Cows') : An Invariant Casein Substrate for Rennet Standardization, derivable from Diverse Sources of (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Milk Constituents : Removal of, from the Mammary Gland of the Ewe (A. K. Lascelles), 1404
Milk and Agricultural Materials : Strontium-90 in, in the United Kingdom, 1959-1960 (Agricultural Research Council, Report No. 4), 20
Milk and other Emulsions : Quantitative Analysis of, by Infra-Red Absorption (Dr. J. D. S. Goulden), 905
Miller, C. W., and others : Pulse-shortening in Electron Linear Accelerators, 483
Miller, J. A. : Elected to a Junior Research Fellowship for research in geophysics at Churchill College, Cambridge, 856
Miller, J. A., and Green, D. H. : Preliminary Age-Determinations in the Lizard Area, 159
Miller, Dr. J. F. A. P. : Analysis of the Thymus Influence in Leukaemogenesis, 248
Miller, J. K. (Gordon, the late Prof. R. M., and) : Cyclical Infection of *Glossina morsitans* with Culture Forms of *Trypanosoma rhodesiense*, 1317
Miller, L., and others : Kirkendall Effect in Gases, 375
Miller, Dr. P. L. : Spiracle Control in Dragonflies, 621
Mills, Lord : New Laboratory of the British Welding Research Association opened by, 1147
Milne, Angela A., and others : Reactivity of Calcium Sulphate Hemihydrate, 704
Milton, Dr. A. S. : Appointed I.C.I. Research Fellow in the University of Edinburgh, 337
Mineral Processing Congress : Sixth International (Société de l'Industrie Minérale), 545
Mineralogy (Clay) : Basic Dyestuffs in (Dr. V. S. Ramachandran, K. P. Kacker and N. K. Patwardhan), 696
Miniature Potentials (Spontaneous), from Insect Muscle Fibres (P. N. R. Usherwood), 814
Minimum Energy Theorem for Flow of Dry Granules through Apertures (R. L. Brown), 458
Minimum Time in Gas Chromatography : Role of Pressure Gradients in obtaining (Prof. J. Calvin Giddings), 1291
Mining, Metallurgical and Petroleum Engineers, American Institute of (Iron and Steel Institute and the Metallurgical Society of the) : Special Meeting in the United States and Canada, 651
Minolta Planetarium Projectors (Chiyoda Kogaku Seiko K.K.), 753
Miridae : The Number of Testis Follicles in (Dennis Leston), 93
Mirror (Magnetic) Confinement of Exploding Wire Plasma (E. J. Seykora), 995
Mirsky, Dr. L. : Appointed to a readership in pure mathematics at the University of Sheffield, 229
Mish, Dr. L. B., and others : A Sealing Compound for Use in Biological Work, 410
Missle (Ballistic), and Space Technology—Proceedings of the Fifth Symposium held at Los Angeles, 1960 (edited by Donald P. LeGalley), Vol. 1, Bioastronautics and Electronics, with Invited Addresses ; Vol. 2, Propulsion and Auxiliary Power Systems ; Vol. 3, Guidance, Navigation, Tracking and Space Physics ; Vol. 4, Re-entry and Vehicle Design, *review* by W. H. Stephens, 1131
Mitacek, jun., Paul, and Aston, Prof. J. G. : Heat Capacity and Resistivity Anomalies in Palladium Hydride, 271
Mitchell, Benjamin : Appointed to a lectureship in veterinary surgery at the University of Edinburgh, 545
Mitchell, Jr., John, and others (edited by) : Organic Analysis, Vol. 4, *review* by Dr. D. T. Lewis, 741
Mitchell, Dr. Peter : Coupling of Phosphorylation to Electron and Hydrogen Transfer by a Chemi-Osmotic Type of Mechanism, 144
Mitchison, Dr. N. A. : Appointed reader in zoology at the University of Edinburgh, 443
Mitochondria : Electron Transport System and Phosphoproteins of (K. Ahmed, J. D. Judah and C. H. Gallagher), 1309
Mitochondria from the Peel of Apples : Preparation of (Dr. J. D. Jones and Dr. A. C. Hulme), 370
Mitochondria Extracted from Higher Plants : Some Characteristics of (Dr. Walter D. Bonner, jun., and Dinor O. Voss), 682
Mitochondrial α-Glycerophosphate Dehydrogenase in the Nervous System : Histochemical and Homogenization Studies of (R. Hess and Dr. A. G. E. Pearse), 718
Mitochondrial α-Glycerophosphate Dehydrogenese Activity in Skeletal Muscle : Direct Relationship of Phosphorylase and (Dr. A. G. E. Pearse), 504
Mitosis in Regenerating Liver : Effect of Enzyme Injections on (Dr. Gaston de Lamirande), 400
Mitosis-rates in Generating Liver : Influence of Plasma Proteins in the Control of (Dr. J. T. Hemingway), 706
Mitra, Dr. S., and others : Nucleolar Localization of Succinic Dehydrogenase in Normal Rat Hepatic Cells, 925
Mittwoch, Ursula : Inclusions of Mucopolysaccharide in the Lymphocytes of Patients with Gargoylism, 1315
Mixtures : Estimation of Specific Proteins in Serum and other (Dr. D. A. Darcy), 1163
Mixtures (Amino-Acid), from Protein Hydrolysates : A Simplified Method for Separating, on One Ion-Exchange Column during Preparation (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Mixtures (Gaseous) : Determination of Hydrogen in, by Gas-Chromatography (P. J. Kipping), 270
Miyake, M., and others : Toxicology of *Penicillium islandicum*, 864
Mobile Laboratory for U.H.V. and V.H.F. Television Surveys (E. W. Taylor and L. C. Munn), 1355
Mocquot, Dr. G. (Dickinson, Dr. Anne, and) : Bacteria of the Intestine (Studies on the Bacterial Flora in the Alimentary Tract of Pigs, 1, Enterobacteriaceae and other Gram-negative Bacteria), 1152
Mocquot, Dr. G., and others : Bacteria of the Intestine (Studies on the Bacterial Flora in the Alimentary Tract of Pigs, 2, Streptococci : Selective Enumeration and Differentiation of the Dominant Groups), 1152
Modalities (Two Sense-) : Learning in (Dr. G. Ettlinger), 308
Models (Geometrical), for Complementation Mapping of Allelic Series : Limitations of (Prof. Elof Axel Carlson), 788
Models (Stochastic Population), in Ecology and Epidemiology (Prof. M. S. Bartlett), *review*, 843
Models and Techniques (Sciences,) : Management—Proceedings of the Sixth International Meeting of the Institute of Management Sciences, Paris, 1959 (edited by Prof. C. West and Prof. Michel Verhulst), *review* by T. H. Hawkins, 209
Modern African States : Conservation of Nature and Natural Resources in (International Union for the Conservation of Nature and the Commission for Technical Co-operation in Africa Conference on), 958
Modern Analysis : Foundations of (Prof. J. Dieudonné), *review* by Prof. L. S. Goddard, 6
Modern Aspects of Inorganic Chemistry (Prof. H. J. Emeléus and Dr. J. S. Anderson), third edition, *review* by Prof. J. R. Partington, 637
Modern Language Association of America : Science Information Personnel—the New Profession of Information combining Science, Librarianship and Foreign Languages (Leonard Cohen and Kenneth Craven), 452

Modern Methods of Traffic Control (Exhibition at the Science Museum, London, by the Westinghouse Brake and Signal Co., Ltd.), 1044
Modern Style in Mathematical Analysis, *review* by Prof. L. S. Goddard, 6
Modi, Prof. V. V., and Patwa, D. K.: Occurrence of Mevalonic Acid in Carrots, 1202
Modified Cellulose Ion Exchangers and their Use in Ribonucleic Acid Fractionation (Dr. L. Bosch, G. van der Wende and Dr. H. Bloemendal), 349
Modulation (Very-Low-Frequency), of Discrete Frequency Solar Noise Bursts (Dr. Jules Aarons, Santimay Basu, William Kidd and Richard Allen), 56
Moeckel, W. E.: Space-Flight and Re-entry Trajectories (Interplanetary Trajectories for Electrically Propelled Space Vehicles), 960
Moelwyn-Hughes, Dr. E. A.: At the Scientific Publications Council Meeting on the Publication of Scientific Books (Ownership of Copyright), 131; (Contractual Relationships), 132
Moffet, A. T., and Maltby, P.: Distribution of Brightness in Extragalactic Radio Sources, 453
Moggi, Dr. G.: Flora Europaea (Floristic Investigation in the Southern half of Italy and in Sicily), 447
Mohamed, Prof. A. H., and Zaki, K.: Effect of Bee Venom on Concentration of Blood Glucose and Liver Glycogen in Rabbits, 605
Moist Surfaces (Dry or): A Method of replicating, for Examination by Light Microscopy (Joan Sampson), 932
Moisture Changes: Influence of, on Deformation of Wood under Stress (L. D. Armstrong and G. N. Christensen), 869
Molar Sound Velocity in Molten Hydrated Salts (P. R. K. L. Padmini and Prof. B. Ramachandra Rao), 694
Mole, R. H.: Atomic Radiations and Living Organisms, 556
Mole's Snout: Nerve Endings in the (J. Armstrong and Dr. T. Andrew Quilliam), 1379
Molecular Beam Reactor for Examining the Rate, and Primary Products, of Reactive Bimolecular Collisions (C. W. Nutt and A. J. Biddlestone), 798
Molecular Emission Spectroscopy from 2μ to 12μ by a Michelson Interferometer (H. A. Gebbie, G. Roland and L. Delbouille), 264
Molecular Geometry of a 1:1 Crystalline Complex between 1,3,7,9-Tetramethyluric Acid and Pyrene (F. De Santis, E. Giglio, Dr. A. M. Liquori and A. Ripamonti), 900
Molecular Sieving and Ion Exclusion: Separation Methods based on (J. Porath and E. B. Lindner), 69
Molecular Structure (Crystal and), of Diphenyl (Dr. G. B. Robertson), 593
Molecular Weight of Deoxyribonucleic Acid: Low-Angle Light Scattering and the (Dr. Sidney Katz), 280
Molecular (Inter-) Energy Transfer in Photo-sensitized Oxidation-Reduction: Paths of (N. Takeyama), 1359
Molecule (Acceptor): Electron Affinity of the, in Charge-Transfer Complexes (Dr. M. E. Peover), 702
Mollin, D. L.: Vitamin B_{12} and Intrinsic Factor (Relationships between Vitamin B_{12} and Folid Acid), 1156
Molluscum Contagiosum: An Antigen in Lesions of (Dr. William L. Epstein, Irene P. Senecal and Dr. Alan M. Massing), 509
Molozzi, A. R. (Chapman, J. H., and): Interpretation of Cosmic Noise Measurements at 3·8 Mc./s. from Satellite 1960 $\eta 1$, 480
Molten Hydrated Salts: Molar Sound Velocity in (P. R. K. L. Padmini and Prof. B. Ramachandra Rao), 694
Molybdenum Monocarbide: A New Phase formed by High-Pressure Treatment—Face-centred Cubic (E. V. Clougherty, K. H. Lothrop and J. A. Kafalas), 1194
Momigny, Dr. J.: Ionization Potentials of *cis* and *trans* Dichloro- and Dibromo-ethylenes, 1089
Monkey ('Split-Brain'): Changes in Visual Gnostic Functions and Emotional Behaviour following Unilateral Temporal Pole Damage in the (Dr. J. L. deC. Downer), 50
Monmouth and Chepstow: Geology of the Country around (Memoirs of the Geological Survey of Great Britain—England and Wales), (Dr. F. B. A. Welch and Dr. F. M. Trotter), 227
Monoalkyl Ethers (Glycol): Compressibility and Specific Evaporation Resistance of the Monolayers of Long-Chain Alcohols and (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Monoamine Oxidase Inhibitor: Augmentation of Toxicity of, by Thyroid Feeding (Richard N. Carrier and Dr. Paul V. Buday), 1107
Monocarbide (Molybdenum): A New Phase formed by High-Pressure Treatment—Face-centred Cubic (E. V. Clougherty, K. H. Lothrop and J. A. Kafalas), 1194
Monograph Prizes (American Academy of Arts and Sciences), 442
Monolayers of Long-Chain Alcohols and Glycol Monoalkyl Ethers: Compressibility and Specific Evaporation Resistance of the (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Monomethyl Ether (Ethylene Glycol), a New Fixative for Histological Work (Prof. Walter B. Shelley and Ralph Florence), 719
Monoxide (Carbon): Selectivity of Palladium Catalysts for the Oxidation of, in the Presence of Hydrogen (P. Mars and Th. van de Mond), 1003
Monoxide (Lead): Rotational Analysis of Absorption Bands of (Dr. R. F. Barrow, J. L. Deutsch and D. N. Travis), 374
Monozygotic Twins: The Diego Factor in a Puerto Rican Family—a Case of Anti-Diego in (Dr. Hubert J. Van Peenen, Dr. John Scudder, James A. Jack and Erika Awer), 188
Montagu-Pollock, H. M. (Bowden, Dr. F. P., and): Slow Decomposition of Explosive Crystals and their Damage by Fission Fragments, 556
Montefinale, Dr. Alberto (Papée, Dr. Henry M., and): Chemical Composition of Precipitable Water Vapour over the United States, 136
Months (Winter): Warm-water Species in the Plankton off Newfoundland during (V. Bainbridge), 1216
Moon: Surface of the (V. A. Firsoff), *review* by D. H. P. Jones, 424
  Orthographic Atlas of the (compiled by D. W. G. Arthur and E. A. Whitaker), edited by Gerard P. Kniper, Edition 'A' showing the Standard Orthographic Coordinate Grid, Part 1, Central Area, *review* by D. H. P. Jones, 424
Moon's Surface: Structure of the (Dr. Gilbert Fielder), *review* by D. H. P. Jones, 424
Mooney, E. F.: Inorganic Polymers (BN Polymers), 1047
Moor-Jankowski, J. K. (Kelus, A., and): An Iso-Antigen ($\gamma B4$) of Mouse γ-Globulin present in Inbred Strains, 1405
Moore, Dr. W. R.: Viscosity–Temperature Relationships for Dilute Solutions of High Polymers, 1292
Moray, Neville: Perceptual Defence and Filter Theory, 940
Moray Firth: Continuation of the Great Glen Fault beyond the (Dr. Derek Flinn), 589; (Dr. Robert M. Appleby), 1190
Morel, F., and others: Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a Marine Teleost Fish (*Pollachius virens*), 670
Moretti, Jean, and others: Action of Neuraminidase on Haptoglobin, 279
Morgan, A., and Arkell, Gloria M.: Determination of Caesium-137/Potassium Ratios in Diet and in the Human Body by Urine Analysis, 1100
Morgan, Prof. W. T. J. (Cheese, I. A. F. Lister, and): Two Serologically Active Trisaccharides isolated from Human Blood-Group *A* Substance, 149
Morgan, Prof. W. T. J. (Painter, Dr. T. J., and): Partial Acid-Hydrolysis of a Mucopolysaccharide without Appreciable *N*-Deacetylation of Hexosamine, 39
Morgane, Dr. P. J.: Evidence of a 'Hunger Motivational' System in the Lateral Hypothalamus of the Rat, 672
Morita, Hiromichi, and others: Synaptic Transmission in Neurosecretory Cells, 183
Morlin, Z., and Sáringer, K. M.: Effect of Ozone on the Fluorescence and Ultra-violet Absorption Spectra of 3,4-Benzopyrene, 907
Morocco, Government of, and others: To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
Morphine-like Drugs: Effects of, in Chicks (C. Schneider), 607
Morphogenetic Effect of Beta-Mercaptoethanol—Distribution of Water in the Embryo (Dr. Peter Tuft), 1072; Distribution of Water in the Chick Blastoderm (A. Jurand and Dr. Peter Tuft), 1073
Morphological Variation in *Ferrobacillus ferrooxidans* related to the Rate of Iron Oxidation (M. P. Silverman and M. H. Rogoff), 1221
Morphology (Experimental), Journal of Embryology and (Editorial Board of the): International Conference on Embryology, 24
Morreale de Escobar, G., and others: Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat, 1171
Morris, Harold P. (Aisenberg, Dr. Alan C., and): Energy Pathways of Hepatoma No. 5123, 1314
Morris, Prof. J. N.: At the Third International Congress of Dietetics (Large-Scale Individual Dietary Surveys on Middle-aged Men), 1343
Morrison, Dr. G. A.: Appointed lecturer in the Department of Organic Chemistry in the University of Leeds, 650
Morrison, Dr. G. A. (Harris, M., and): Multiple Inhibitions of Cell Metabolism by a Single Substance, 1276
Mortality (Age-dependent), in Fish: Expected Rate of Senescence and (Dr. Alex Comfort), 822
Mortar: The Widening of Expansion Cracks in, by Salt Solutions (J. A. Roberts and H. E. Vivian), 125, *erratum*, 1145
Mortar and Concrete: The Action of Calcium Chloride on (M. Lawrence and H. E. Vivian), 125, *erratum*, 1145
Morton, Prof. R. A.: The Training of Biochemists (Educational Aspects of a University Course should not be neglected in favour of 'Training'), 955
Morton, Prof. V. C.: Retirement from the chair of pure mathematics in the University College of Wales, Aberystwyth, 333; work of, 333
Mosaic Virus (Tobacco) (TMV): Chromatography of, on Chitin Columns (P. M. Townsley), 626
Mosaic Virus (Tobacco) (TMV) Lesion Number and Concentration: Relationship of, to the Rate of Lesion Production on Pinto Bean (John Piacitelli and Prof. Vincent Santilli), 624
Mosaic Virus (Turnip Yellow) Protein Production: Stimulation of, by 2-Thiouracil (Dr. R. I. B. Francki and Dr. R. E. F. Matthews), 1078
Mosaic Virus (Wild Cucumber): Unusual Base Composition of the Ribonucleic Acid of (H. Yamazaki and Prof. Paul Kaesberg), 96
Mosby, William L.: Heterocyclic Systems with Bridgehead Nitrogen Atoms, Part 1, *review* by Dr. G. L. Buchanan, 425
Moses (Robert) Niagara Power Project, 22
Moses, V. (Huggins, A. K., and): Breakdown of [2-^{14}C]-Glycine during Paper Chromatography, 668
Mosettig, Erich (Heftmann, Erich, and): Biochemistry of Steroids, *review* by Dr. D. T. Elmore, 111
Mossel, Dr. D. A. Q. (Buttiaux, Dr. R., and): Bacteria of the Intestine (The Significance of Organisms of Supposed Faecal Origin in Food and Water), 1153
Mota, Dr. Ivan: Mechanism of Action of Antigen–Antibody Complexes—their Effect on Mast Cells, 572
Motegi, Takashi, and others: A Positive Feedback Mechanism of Adenosine Triphosphate Synthesis in Erythrocytes, 283
Motion (First), of a Refracted *P*-Wave: Possible Method for Increasing the Signal-Noise Ratio in the Detection of the (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382
Motion (Steady): Fluid–Fluid Interfaces in (Prof. Walter Rose), 242
Motivation of Work (F. Herzberg), 1332
Motoneurones: Potential Changes produced by Application of Current Steps in (T. Araki, Dr. M. Ito and T. Oshima), 1104
Motoneurones (Spinal): Changes in the Membrane during Recurrent Disinhibition of (Dr. Victor J. Wilson and Paul R. Burgess), 918
Motor Nerve Terminals: Stimulation of (Dr. J. I. Hubbard and Robert F. Schmidt), 1103
Mott, Dr. Joan: Foetal and Neonatal Physiology (Ability of Young Mammals to withstand a Total Lack of Oxygen), 344
Motz, Dr. H.: Grant of £3,000 (in supplement of a previous grant) from the Paul Instrument Fund, for the construction of a linear accelerator working at 1·6 cm. (*J*-band), 225
Moudgal, N. R., and Li, Prof. Choh Hao: An Immunological Study of a Human Pituitary Interstitial Cell-stimulating Hormone, 192
Mountain, W. B., and McKeen, C. D.: Nematology (An Interaction between *Verticillium albo-atrum* and *Pratylenchus penetrans*), 1048
Mouriz García, J., and others: Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat, 1171
Mouse (*AkR*): Leukaemia in the, after X-Irradiation *in utero* (Donald Porteous), 291
Mouse (House-): Pulmonary Tumours and Group VII in the (Dr. Joyce L. Bloom), 1124; (Dr. J. A. H. Tatchell), 1125
Mouse Ascites Tumour (Ehrlich): Effect of Alpha-Amylase on the (Dr. F. Steckerl, A. Ofodile, R. R. Campbell and G. H. Friedell), 1113

Mouse Brains infected with Two Kinds of Arbor Virus Group *B* : Infectious Ribonucleic Acids derived from (Prof. Masahiro Nakamura), 624
Mouse Carcinoma : Effect of Irradiated Normal Tissues on the Growth of (Dr. Arthur Compton and Prof. Charles A. Pannett), 1101
Mouse γ-Globulin : An Iso-Antigen ($\gamma B A$) of, present in Inbred Strains (A. Kelus and J. K. Moor-Jankowski), 1405
Mouse Strains (Inbred) : Social Dominance in (Prof. G. Lindzey, H. Winston and M. Manosevitz), 474
Mouse Thymus Cortex : Periodic Acid–Schiff Positive Giant Cells in the (D. Metcalf and M. Ishidate), 305
Mouse Tumour Cells (Human and) : Selective Uptake of Specifically Bound Cobalt-58 Vitamin B_{12} by (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Moustafa, Dr. Esam M. : Leaf Curl Virus and the Flavonoid Content of Resistant and Susceptible Strains of Cotton, 415
Movement : The Phenomenological (Dr. Herbert Spiegelberg), *review* by F. I. G. Rawlins, 5
Movement (Net Water) : Comparison of Short-Circuit Current and, in Single Perfused Proximal Tubules of Rat Kidneys (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Movements (Population) : Effect of, on Malaria Eradication (R. Mansell Prothero), 863
Moving Objects (Stationary or) : Measuring Visual Constancy for (S. M. Anstis, C. D. Shopland and R. L. Gregory), 416
Moyles, A. F. (Jones, C. E. Roland, and) : Pyrolysis and Gas–Liquid Chromatography on the Microgram Scale, 663
Much-studied Protozoon : A, *review* by Dr. J. A. Kitching, 1133
Mucopolysaccharide : Inclusions of, in the Lymphocytes of Patients with Gargoylism (Ursula Mittwoch), 1315
  Partial Acid-Hydrolysis of a, without Appreciable *N*-Deacetylation of Hexosamine (Dr. T. J. Painter and Prof. W. T. J. Morgan), 39
Mucopolysaccharide produced by Guinea Pig Lymphocytes : Chemistry of a (Helen Muir and A. H. E. Marshall), 706
Mucopolysaccharide (An Acid), in Cockroach Ganglia (Doreen E. Ashhurst), 1224
Mucopolysaccharides (Sulphated) : Staining of (Dr. I. D. Heath), 1370
Mucoprotein (Serum), in Rheumatic Fever : Amino-acid Composition of (Prof. D. O'Brien, C. H. M. Walker and D. Walker), 922
Mud-Thinners : Sub-bituminous Coals as Oil-well Drilling, 1144
Muggleton, Dr. L. M. : Appointed to a lectureship in electrical engineering at the University of Edinburgh, 545
Muir, Helen, and Marshall, A. H. E. : Chemistry of a Mucopolysaccharide produced by Guinea Pig Lymphocytes, 706
Mukerji, S. K., and others : Diurnal Variation in Transaminase Activity in the Cactus Plant, 516
Müller, Dr. A. : Effects of Ionizing Radiation on Organic and Biological Solids (Role of Oxygen in Radiation Damage), 1150
Müller, Dr. A., and others : Experimental Evidence for the Mechanism of Photosynthesis, 194
Muller, Dr. H. H. : The Problem of whether Stains consist of Human or Animal Blood—Testing for Haemoglobin in the Stain, 753
Mullite-like Phase (Tetragonal), from Co-precipitated Gels (J. Ossaka), 1000
Multi-carbohydrate Media : A Micro-method for Performing the Phenylalanine Test on Cultures from (D. J. Stewart), 521
Multi-Sampler (A Phytoplankton), and its Use in Lake Victoria (Dr. J. H. Evans), 53
Multiple Inhibitions of Cell Metabolism by a Single Substance (M. Harris and Dr. G. A. Morrison), 1276
Multiplication of Foot-and-Mouth Disease Virus : Effect of *p*-Fluorophenylalanine on the (F. Brown, D. N. Planterose and Doreen L. Stewart), 414
Multiplication of Fowl Plague Virus : Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the Utilizability of Viral Protein during (Dr. Christoph Scholtissek and Rudolf Rott), 1023
Multiplication Rates of *Paramecium* : Effects of Kinetin and Indole-3-acetic Acid on (Mary Annunciata McManus and Kathleen Sullivan), 619
Multiplication (Poliovirus) : Effects of Heavy Water on—Results and Speculations on Mechanism (Dr. David Kritchevsky, Dr. Richard I. Carp and Dr. Hilary Koprowski), 250
Munday, C. W. (Clark, A. J., and) : Quality Measurement in the Chemical Factory (Department of Scientific and Industrial Research), 752
Munk, Walter H., and Macdonald, Gordon J. F. : The Rotation of the Earth, *review* by Prof. S. K. Runcorn, 313
Munn, L. C. (Taylor, E. W., and) : A Mobile Laboratory for U.H.V. and V.H.F. Television Surveys (B.B.C. Engineering Monographs No. 34), 1355
Munro, Dr. H. N., and others : Biorheology and Microcirculation (Capillary Strength Tests in Scurvy and their Reactions to Vitamins C and P Therapy), 758
Munro, T. R. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (A Technique which allows Selected Parts of Single Cells to be Irradiated with α-Particles), 341
Müntzing, Prof. Arne : Genetic Research, *review* by Dr. Kenneth S. Dodds, 636
Muramic Acid and other 3-O-Ethers of D-Glucosamine : A Convenient Synthesis of (Dr. Roy Gigg and Patricia M. Carroll), 495
Murata, Dr. Katsumi : Effects of Carrageenin on Serum Lipids and Atherosclerosis in Rabbits, 189
Murfet, I. C., and Barber, H. N. : Effects of Gibberellic Acid and Allogibberic Acid on Flowering and Internode-Length in *Pisum sativum*, 514
Murine Leukaemia : Transplantation of, by Unconventional Routes (Dr. Harold B. Hewitt), 1213
Murray, Dr. K., and others : Mannosyl D-Glucosamine Hydrochloride Isomers—*N*-Mannosyl D-Glucosamine Hydrochloride, 142
  Mannosyl D-Glucosamine Hydrochloride Isomers—6-*O*-Mannosyl D-Glucosamine Hydrochloride, 143
Murray, Dr. W. L. : Theory of Detonation, *review*, 1236
Muscle : Controlling Mechanism of the Mechanical Activity of, and that of Blood Coagulation (Dr. Masahuri Fujino, Saburo Yamaguchi, Masa Takauji. Kohki Uchida, Masahide Yasuda and Tatsuaki Matsushima), 80
  Inhibition by Physostigmine of the Increase of Oxygen Consumption induced by Potassium in (Dr. Ivan Novotny and František Vyskočil), 916
  The Physiology, Pharmacology and Pathology of, *review* by Dr. D. H. Sproull, 948
  The Structure and Function of (edited by Dr. G. H. Bourne), Vol. 2, Biochemistry and Physiology ; Vol. 3, Pharmacology and Disease, *review* by Dr. D. H. Sproull, 948
Muscle (Fish) : Cholinergic Transmission in (K. Krnjević), 1403
Muscle (Skeletal) : Direct Relationship of Phosphorylase and Mitochondrial α-Glycerophosphate Dehydrogenase Activity in (Dr. A. G. E. Pearse), 504
Muscle (Vascular Smooth) : Spontaneous Spike-Discharges of (Dr. S. Funaki), 1102
Muscle Fibre (Active) : Ionic Currents in Membrane of (Dr. H. Jenerick), 1074
Muscle Fibres (Insect) : Spontaneous Miniature Potentials from (P. N. R. Usherwood), 814
Muscle Target Fibres, a Newly Recognized Sign of Denervation (Dr. W. K. Engel), 389
Muscles (Frog), at Low Temperature: Inhibition by Potassium of the Mechanical Responses of (H. Lorković), 1011
Muscles ('Quick' and 'Catch' Adductor), in Brachiopods (Dr. M. J. S. Rudwick), 1021
Museum of Applied Science of Victoria, Melbourne : Report for 1959-60, 124
Museum of English Rural Life : Annual Report for 1960 (University of Reading), 544
Museum (Coryndon Memorial), Nairobi : Annual Report for 1959, 335
Museum (Fitzwilliam), Cambridge : Annual Report for 1960, 1249
Museum (Royal Ontario), Toronto : Appointment of Dr. W. E. Swinton as head of the Division of Life Sciences, 24
Museum (Royal Scottish), Edinburgh : Retirement of Dr. Douglas A. Allan from the directorship, 648
  Appointment of Ian R. Finlay as director, 648
  Appointment of Cyril Aldred as keeper of the Department of Art and Ethnography, 648
  Annual Report for 1960, 958
Museum (Science) : Africa's First (Murray Schoonraad), 848
Museum (South African) : Annual Report for 1959-60, 1044
Museum (United States National) : Bulletin No. 225, Drug Supplies during the American Revolution (George B. Griffenhagen), 761
Museum (Western Australian) : Annual Report for 1959-60, 335
Museums : Climatology and Conservation in (International Centre for the Study of the Preservation and the Restoration of Cultural Property: Works and Publications, 3), 1050
Museums and Galleries (Dr. F. S. Wallis), 862
Museums and Galleries, Standing Committee on : Sixth Report (1959-60), 862
Museums (National), of Southern Rhodesia : Annual Report for 1960, 650
Museums Association : Annual Report for 1960-61, 226
  Journal of the, No. 1, 226
  Sixty-seventh Annual Conference (Dr. F. S. Wallis), 553
  Election of Dr. Mary Woodall as president, 554
Mutagenesis induced by Formaldehyde : Mechanism of—the Essential Role of the 6-Amino Group of Adenylic Acid (or Adenosine) in the Mediation of the Mutagenic Activity of Formaldehyde (Dr. Thomas Alderson), 251
Mutagenic Action of the Alkylating Agents : Specificity of the (Prof. Bernard S. Strauss), 730
Mutagenic Effect of Radiant Heat Shocks on Phanerogamous Plants (Dr. Bror Pettersson), 1167
Mutation for Larger Fruit in the Raspberry (D. L. Jennings), 302
Mutations : Induction of, by Deoxyribonucleic Acid in *Drosophila melanogaster* (Dr. O. G. Fahmy and Dr. Myrtle J. Fahmy), 776
Mutations of *Tribolium confusum* Duv. : Sterile Crosses between (Prof. John Stanley), 934
Mutations (X-Ray- and Nitrous Acid-induced), in the Genetic Fine Structure of the ad_7 Locus of *Schizosaccharomyces pombe* : Distribution of (Dr. Herbert Gutz), 1127
Mutual Dependence : Copepod *Ommatokoita elongata* (Grant) in the Eyes of the Greenland Shark—a Possible Cause of (Bjørn Berland), 829
Mycobacteriophages isolated from Persons with Tuberculous and Non-tuberculous Conditions (Dr. E. Mankiewicz), 1416
Mycosphaerella musicola Leach : Significance of the Anti-Sporulation Effect of Copper Fungicides in the Control of Sigatoka Disease of Bananas caused by (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Myeloid Leukaemia (Transplantable Acute) : Effect of Calf Thymus Histone on Rats bearing (Dr. Lubomir Hnilica and Dr. Viktor Holoubek), 922
Myeloma Globulins : Comparison of Reduced Alkylated Derivatives of some, and Bence-Jones Proteins (Dr. M. D. Poulik and Dr. G. M. Edelman), 1274
Myers, Prof. C. A. (Harbison, Prof. F., and) : Management in the Industrial World, 1332
Myocardial Slices : Effect of Adrenalectomy and Corticosteroids on Distribution of Radioactivity in Protein of Cell Fractions from (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Myopathy affecting the Rottnest Quokka (*Setonix brachyurus*) reversed by α-Tocopherol (B. A. Kakulas), 402

NABATOFF, Robert A. (Kato, Yutaka, and) : Treatment of Varicose Veins, 335
Nachmias, Dr. Vivianne T. : 5-Methyltryptophan and Darkening of the Hair in Yellow A^{v}/a Mice, 934
Nagai, Yasushi, and others : Hexosamine and Sialic Acid Contents in Cells, 596
Nagy, S. (Rédei, A., and) : Simultaneous Determination of Dextran and Glucose in Serum, 173
Naivasha (Lake), Kenya Colony : A Natural Hybrid of *Tilapia nigra* and *Tilapia leucosticta* from (H. Y. Elder and D. J. Garrod), 722
Nakamura, Prof. Masahiro : Infectious Ribonucleic Acids derived from Mouse Brains infected with Two Kinds of Arbor Virus Group *B*, 624
Nakamura, Dr. Mitsuru : Induced Increase in Resistance of *Entamoeba histolytica* to Fumagillin, 413
Nakao, Makoto, and others : A Positive Feedback Mechanism of Adenosine Triphosphate Synthesis in Erythrocytes, 283
Nakao, Toshiko, and others : A Positive Feedback Mechanism of Adenosine Triphosphate Synthesis in Erythroyctes, 283

Nakayama, T. O. M., and others : Incorporation of 5,10,15 ^{14}C-Farnesol Pyrophosphate into *Phycomyces carotenoids*, 1299
Names (The Place-) of the West Riding of Yorkshire (Prof. A. H. Smith), Part 1, Lower and Upper Strafforth and Staincross Wapentakes ; Part 2, Osgoldcross and Agbrigg Wapentakes ; Part 3, Morley Wapentake, *review* by Prof. H. C. Darby, 208
Nanaimo, British Columbia : Swarming of the Polychaete *Odontosyllis phosphorea* Moore, var. *Nanaimoensis* Berkeley, near (E. Berkeley), 1321
Narayan, Sunanda : Composition of the Skin Follicle Population in Seven Rajasthan Sheep Breeds, 1115
Nardi, Dr. V. : Crystallization Kinetics in Polyvinylchloride and Thermoelastic Relaxation induced by Ultrasonics, 563
Narraburra Iron Meteorites (Bear Creek and) : Microstructural and Chemical Identity of the (Dr. H. J. Axon), 1287
Narurkar, M. V., and others : Anticancer Properties of Thio-diglycollic Acid, 388
Nash, J. K. T. L. : Title of professor of civil engineering (at King's College, London) conferred on, 651
Nash, Kevin : K. Terzaghi, Founder of the Science of Soil Mechanics, *review*, 210
Nathan, Dr. P. W. : Assessment of Pain (Traces of Pain remaining in the Nervous System, as in the case of Phantom Limbs), 1353
National Academy of Sciences (United States) : Election of foreign associates, 18
National Academy of Sciences (United States)—National Research Council : Grant of 56,000 dollars from the National Science Foundation, for a one-year study of Chemical Notation Systems, 23
  Report on Science in Space, 124
  Sector-Focused Cyclotrons—Proceedings of an Informal Conference, Sea Island, Georgia, 1959 (edited by F. T. Howard), (Nuclear Science Series, Report No. 26, Publication No. 656), *review* by M. Snowden, 532
  Publication No. 848, Effects of Inhaled Radioactive Particles, 556
  Publication No. 849, Long-Term Effects of Ionizing Radiations from External Sources, 556
  Publication No. 875, Effects of Ionizing Radiation on the Human Haematopoietic System, 556
National Bureau of Standards (United States) : Handbook No. 78, Report of the International Commission on Radiological Units and Measurements, 28
  Appointment of Martin T. Decker as chief of the Tropospheric Measurements Section, 334
  Appointment of John L. Hague as chief of the Standard Reference Materials Section, 334
  Appointment of Dr. John K. Taylor as chief of the Applied Analytical Research Section of the Analytical and Inorganic Chemistry Division, 334
  Appointment of Dr. David M. Gates as editor of Section D, Radio Propagation, of the *Journal of Research*, 856
  Appointment of Dr. Harry C. Allen, jun., as chief of the Analytical and Inorganic Chemistry Division, 1346
  Monograph No. 19, Atomic Energy Levels in Crystals (J. L. Prather), 1348
National Bureau of Standards, United States (Informations System Branch of the Office of Naval Research Information Centre) : Symposium on Optical Character Recognition, 1145
National Bureau of Standards (United States), (Research Information Centre and Advisory Service on Information Processing) : Report on Computer Systems for Searching Chemical Literature (E. C. Medam and H. R. Koller), 23
National Cancer Institute (United States), and others (sponsored by the) : Proceedings of a Conference on Biological Activities of Steroids in relation to Cancer (edited by Gregory Pincus and Erwin P. Vollmer), *review* by E. Reid, 1235
National Chemical Laboratory : Report for 1960 ; Report of the Steering Committee and Report of the Director of the National Chemical Laboratory for 1960 (Department of Scientific and Industrial Research), 342
National Council for Technological Awards : Report for 1960-61, 754
National Foundation for Educational Research in England and Wales : *Technical Education Abstracts from British Sources*, Vol. 1, No. 1. September–December 1960, 21
National Foundation for Scientific Research, Belgium : Thirty-third Annual Report, 441
National Institute of Agricultural Botany : Appointment of D. B. MacKay as chief officer of the Official Seed Testing Station, 856
National Institute for Research in Dairying : Annual Report for 1960, 237
National Institute for Research in Nuclear Science, Harwell : Successful Operation of the *Nimrod* Injector, 1043
National Institutes of Health (United States), and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
National Lending Library for Science and Technology : *N.L.L. News*, No. 1, 1347
National Reference Library of Science and Invention, 1 ; (Leslie Wilson), 733 ; (J. Farradane), 734
  Aslib Report of the Discussion Meeting on the, 649
National Metallurgical Laboratory, Jamshedpur : Symposium on the Ferro-Alloy Industry in India, 1144
National Museum (United States) : Bulletin No. 225, Drug Supplies during the American Revolution (George B. Griffenhagen), 761
National Museums of Southern Rhodesia : Annual Report for 1960, 650
National Organization of Scientific Research, 632
National Parks Commission : Appointment of Colonel J. F. Williams-Wynne as a member, 546
National Physical Laboratory : Open Days (J. R. Illingworth), 112
National Research Council of Canada : Problems of the North (Translation of *Problemy Severa*), No. 1, 1958 (translated December 1960), *review* by Dr. Terence Armstrong, 841
National Research Council (United States), (National Academy of Sciences) : Grant of 56,000 dollars from the National Science Foundation, for a one-year study of Chemical Notation Systems, 23
  Report on Science in Space, 124
  Sector-Focused Cyclotrons—Proceedings of an Informal Conference, Sea Island, Georgia, 1959 (edited by F. T. Howard), (Nuclear Science Series, Report No. 26, Publication No. 656), *review* by M. Snowden, 532
  Publication No. 848, Effects of Inhaled Radioactive Particles, 556
  Publication No. 849, Long-Term Effects of Ionizing Radiations from External Sources, 556
  Publication No. 875, Effects of Ionizing Radiation on the Human Haematopoietic System, 556
National Research Development Corporation : Report for 1960, 343
National Science Foundation (United States) : Grant of 56,000 dollars to the National Academy of Sciences—National Research Council, for a one-year study of Chemical Notation Systems, 23
  Establishment of an Office of Antarctic Programs, 125
  Appointment of Dr. Thomas O. Jones as head of the Office of Antarctic Programs, 125
  Reviews of Data on Research and Development, No. 27, Report on Scientists and Engineers engaged in research and development in Colleges and Universities in the United States for 1958, 225
  Reviews of Data on Research and Development, No. 28, Capital Expenditure of Colleges and Universities in the United States for research and development in the Natural and Social Sciences in 1958, 545
  Science Information Personnel—the New Profession of Information combining Science, Librarianship and Foreign Languages (Leonard Cohen and Kenneth Craven), 452
National Science Foundation (United States), and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
National Society for Clean Air : Fumifugium, or the Smoake of London Dissipated (John Evelyn), reprint, 752
  Twenty-eighth Conference, 1250
National Spectra Index—Plans and Problems (P. S. Davison), 1250
National University (Australian), Canberra : Hon. D.Sc. degree awarded to Sir Rudolph Peters and to Dr. J. L. Pawsey, 443
National University of Ireland : Appointment of Dr. Eva M. Philbin to the chair of organic chemistry in University College, Dublin, 439
NATO : Advanced Study Institute Programme (1962), 442
Natural History, Field Museum of (Chicago) : Botanical Series, Vol. 13, Part 5, No. 1, Flora of Peru (J. Francis Macbride), *review* by N. Y. Sandwith, 214
Natural Hydrid of *Tilapia nigra* and *Tilapia leucosticta* from Lake Naivasha, Kenya Colony (H. Y. Elder and D. J. Garrod), 722
Natural Materials : Measurement of the Thorium Content of, by a γ-Ray Counting Method (Prof. J. H. J. Poole and F. N. Byrne), 62
Natural Phenolic Compounds : Stereochemistry of (Plant Phenolics Group Symposium on), 234
Natural Population of Anomalous Branched Tapeworms, *Hymenolepis nana* (Cestoda : Hymenolepididae), in a Colony of *DBA*/1 Mice (Dr. Donald Heyneman), 297
Natural Radioactivity in Tobacco and Tobacco Smoke (Dr. V. C. Runeckles), 322
Natural Resources (Nature and), in Modern African States : Conservation of (International Union for the Conservation of Nature and the Commission for Technical Co-operation in Africa Conference on), 958
Natural Rubber Producers' Research Association : Annual Report, 854
Natural Soil Aggregates : Role of Polysaccharides in Stabilization of (Dr. D. J. Greenland, G. R. Lindstrom and Dr. J. P. Quirk), 1283
Natural and Artificial Haematites : Hydrogen Reduction Characteristics of (John Henderson), 268
Nature, International Union for the Conservation of, and the Commission for Technical Co-operation in Africa : Conference on the Conservation of Nature and Natural Resources in Modern African States, 958
Nature, International Youth Federation for the Study and Conservation of : Course in Conservation, by the Verein Naturpark in the Lüneburger Heide, Germany, 1045
Nature Conservancy : Research Work of the (House of Commons Adjournment Debate on), 962
  Shapwick Heath Nature Reserve, 1248
  Wye and Crundale Downs Nature Reserve, 1248
Nature Reserve : Shapwick Heath (Nature Conservancy), 1248
  Wye and Crundale Downs (Nature Conservancy), 1248
Nature Reserves : Problems of Managing (Dr. J. F. D. Frazer), 133
Nature of the Coating Globulin causing a Positive Antiglobulin Consumption Test (D. Nelken), 1110
Nature of Planck's Constant: Theory of the Red Shift and the (L. Infeld), 1184
Nature of Radio Stars : Apparent Recession of Nebulae and the (Dr. N. S. Japolsky), 480
Nature and Natural Resources in Modern African States : Conservation of (International Union for the Conservation of Nature and the Commission for Technical Co-operation in Africa Conference on), 958
Naval Observatory (United States) : Reprint No. 19, Resources and Treasures of the Library (Marjorie S. Clopine), 22
Naval Research, United States Office of (Information Systems Branch) : Symposium on Redundancy Techniques for Computing Systems, 1349
Nayler, J. H. C., and others : Action of Carbon Dioxide on 6-Aminopenicillanic Acid, 910
  Some Novel Acid-Stable Penicillins, 1091
Neagh (Lough) Pollan *Coregonus pollan*, Thompson : Furunculosis in (K. U. Vickers and R. McClean), 930
Neal, Dr. P. B. N. : Appointed senior Research Fellow in mechanical engineering at the University of Sheffield, 229
Neale, D. M. : At the Scientific Publications Council Meeting on the Publication of Scientific Books (Ownership of Copyright), 131
Near-shore Waters of Porto Novo, South India : Occurrence of *Eutrichocheles modestus* (Herbst) in the (K. Balasubrahmanyan and Dr. J. Jacob), 830
Nebula : The Alpha Virginis (Spica), (Walter A. Feibelman), 1083
Nebulae : Apparent Recession of, and the Nature of Radio Stars (Dr. N. S. Japolsky), 480
Needham, Dr. A. E. : Adaptive Value of Regenerative Ability, 720
Needham, Dr. R. : Age and Kinship in Australia, *review*, 6
Needler, Dr. W. C., and others : Electron Spin Resonance Absorptions induced by Light in Adsorbed Layers of Cyanine Dyes on Silver Bromide Microcrystals, 902
Neely, W. Brock, and Hallmark, Julie : Dextransucrase *V* and the Role of Metal Ions in Enzyme Catalysis, 385
Nelken, D. : Nature of the Coating Globulin causing a Positive Antiglobulin Consumption Test, 1110

Nematode-trapping Fungi in the Soil : Agar Disk Method for the Direct Observation of (Roderic C. Cooke), 1411
Nematodes (Parasitic), for Collection Purposes : Use of Glacial Acetic Acid for killing (Bjørn Berland), 1320
Nematologists (European), Society of : Sixth International Symposium on Nematology, 24, 1048
Nematology (Society of European Nematologists Sixth International Symposium on), 24, 1048
Németh, Gy., and others : Chemical Character of the Pigments in a New Nitrogen-fixing Micro-organism, 1413
Nemin Assay Procedure (E. J. Winkler, Shimpei Kuyama and Prof. David Pramer), 155
Neon in Stars : Production of (H. E. Gove, A. E. Litherland and M. A. Clark), 1381
Neon Glow Lamp (1911-51) : The Development of the (Prof. H. E. Watson), 1040
Neonatal Physiology : Foetal and (*British Medical Bulletin*, Vol. 17, No. 2), (British Council), 344
Nephrotic Syndromes : Haptoglobinuria in (A. Marnay), 74
Nepytia phantasmaria Stkr. (Lepidoptera : Geometridae) : Influence of Electrical Field on Pupation and Oviposition in (Dr. D. K. Edwards), 976
Nerve (Splanchnic) : Effect of Bilateral Section of the, on Erythropoiesis (Fumimaro Takaku, Kunitake Hirashima and Prof. Shigeo Okinaka), 500
Nerve Cell (Giant), under Abnormal Conditions : Electrical Activity of a (Dr. Yutaka Oomura, Sachio Ozaki and Takashi Maéno), 1265
Nerve Endings in the Mole's Snout (J. Armstrong and Dr. T. Andrew Quilliam), 1379
Nerve Terminals (Motor) : Stimulation of (Dr. J. I. Hubbard and Robert F. Schmidt), 1103
Nerve Tissue (Insect) : Activity of Glutamic Acid Decarboxylase in (Dr. N. Frontali), 178
Nervous System : Chemistry and the, *review* by Dr. R. V. Coxon, 318
  Histochemical and Homogenization Studies of Mitochondrial α-Glycerophosphate Dehydrogenase in the (R. Hess and Dr. A. G. E. Pearse), 718
Nervous System (Central) : Enzymic Activity of the (Neurochemical Commission of the World Federation of Neurology International Symposium on), 1349
  Pharmacologically Active Substances present in the (Dr. Paul V. Buday), 245
  Tryptamine Receptors in the (Dr. J. R. Vane, Dr. H. O. J. Collier and Dr. S. J. Corne, and Dr. E. Marley and Dr. P. B. Bradley), 1068
Nervous System (Central), of an Insect (*Periplaneta americana* L.) : Exchanges of Sodium Ions in the (J. E. Treherne), 1223
Nervous Systems : Response to Series of Subliminal Stimuli—an Ethological Method for Investigating the Properties of (A. J. Pontin), 512
Nervous and Biochemical Disturbances following Hexachlorobenzene Intoxication (Dr. F. De Matteis, B. E. Prior and Prof. C. Rimington), 363
Net Water Movement : Comparison of Short-Circuit Current and, in Single Perfused Proximal Tubules of Rat Kidneys (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Netschey, A. (Gutmann, Dr. F., and) : Semi-conductivity of Chlorpromazine, 1390
Neuraminidase : Action of, on Haptoglobin (Prof. Max E. Rafelson, jun., Lise Cloarec, Jean Moretti and Max F. Jayle), 279
Neurochemistry of Nucleotides and Amino Acids—a Symposium of the Section on Neurochemistry, American Academy of Neurology (edited by Roscoe O. Brady and Donald B. Tower), *review* by Dr. R. V. Coxon, 318
Neurology, American Academy of (Section on Neurochemistry) : Symposium on the Neurochemistry of Nucleotides and Amino Acids (edited by Roscoe O. Brady and Donald B. Tower), *review* by Dr. R. V. Coxon, 318
Neurology, World Federation of (Neurochemical Commission) : International Symposium on Enzymic Activity of the Central Nervous System, 1349
Neurone : The Adrenergic (Sir Lindor Brown), 1143
Neurone-blocking Agents (Adrenergic), related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine (A. L. A. Boura, F. C. Copp, A. F. Green, H. F. Hodson, G. K. Ruffell, M. F. Sim, E. Walton and E. M. Grivsky), 1312
Neurones of the Brain of the Leech : Neurosecretion and Granules in (Irvine R. Hagadorn and Richard S. Nishioka), 1013
Neurones (Mammalian) : Analogues of Glutamic and γ-Amino-*n*-butyric Acids having Potent Actions on (Dr. J. C. Watkins and Dr. D. R. Curtis), 1010
Neurones (Spinal), of some Teleosts : Pigment Bodies of the (Prof. A. Stolk), 924
Neuropharmacology and Biochemistry (Psychophysiology,), of Audiogenic Seizure (Centre National de la Recherche Scientifique International Meeting on), 959
Neurosecretion (University of Bristol International Conference on), 856
Neurosecretion and Granules in Neurones of the Brain of the Leech (Irvine R. Hagadorn and Richard S. Nishioka), 1013
Neurosecretory Cells : Synaptic Transmission in (Hiromichi Morita, Takaaki Ishibashi and Satoru Yamashita), 183
Neurosecretory System of the Desert Locust : Induced Changes in the Amounts of Material in the (Dr. K. C. Highnam), 199
Neurospora : Chromosomes of, 658
Neutral 17-Ketosteroids in Porcine Urine (L. G. Huis in't Veld, B. Louwerens and W. Reilingh), 175
Neutralization Tests (Quantal) : Evaluation of (Prof. S. Fazekas de St. Groth), 891
Neutron Activation : Rapid Determination of Ytterbium in Aqueous Solutions and in Thulium Oxide by (Minoru Okada), 1090
Neutron Capture Therapy, 1258
Neutron 'Flux' (K. L. Stretch), 60 ; (Dr. W. R. Harper), 695
Neutron Kinetics (Linear) : Topology of (L. G. Kemeny), 263
Neutron Terminology (Dr. W. R. Harper), 60
Neutron (Fast-) Spectroscopy (B. V. Rybakov and V. A. Sidorov), (edited by N. A. Vlasov), translated from the Russian, *review* by Dr. P. A. Egelstaff, 8
Neutrons (Long Wave-length) : Scattering of, by Irradiated Beryllium Oxide (T. M. Sabine, A. W. Pryor and B. S. Hickman), 1385
Neutrons (14-MeV.) : Interaction of, with a Silicon Semiconductor Nuclear Particle Detector (Dr. W. M. Deuchars and G. P. Lawrence), 995
Neville, Prof. E. H. : *Obituary* by Prof. R. Rado, 1345
New to Britain : Littoral Interstitial Species from Anglesey representing Three Families (P. J. S. Boaden), 512
New Afterglow Emission associated with Metastable Nitrogen Atoms (L. Herman and R. Herman), 346
New Age in Physics (Prof. Sir Harrie Massey), *review* by Prof. W. E. Burcham, 423
New American Electricity Plant, 22
New Antioxidant from Oats : Isolation of a (Dr. D. G. H. Daniels and H. F. Martin), 1302
New Approach to Biology Teaching (Dr. L. H. Finlayson), 554
New Approach to General Relativity, *review* by Dr. G. J. Whitrow, 424
New Compound in the Metabolism of Indole-3-acetic Acid in Plants : 1-(Indole-3-acetyl)-β-D-Glucose, a (Dr. M. H. Zenk), 493
New Computing Centre (IBM Co.), 23
New Considerations on Survival Curves and Target Theory (Dr. E. L. Powers), 1045
New Data-processing Centre (IBM Co.), 23
New Delhi Council of Scientific and Industrial Research : Annual Technical Report (1959-60), 1254
New Enzyme connected with Protein Synthesis : Evidence for a (Hans G. Boman and Ingvar Svensson), 674
New Esters of Chromone-2-Carboxylic Acid : Some (Juan X. de Vries and Kempis Vidal-Beretervide), 171
New Family of Potent Carcinogens—Benzopyridocarbazoles (Prof. A. Lacassagne, Prof. N. P. Buu-Hoï, F. Zajdela, F. Périn and P. Jacquignon), 1005
New Fixative for Histological Work : Ethylene Glycol Monomethyl Ether, a (Prof. Walter B. Shelley and Ralph Florence), 719
New Handbooks for Lunar Studies, *review* by D. H. P. Jones, 424
New Hope for African Wildlife, 958
New Inorganic Reaction—Nitric Acid–Hydrazoic Acid (Dr. J. Mašek), 166
New Laboratory for Research on Creep, 1049
New National Nature Reserves, 1248
New Nitrogen-fixing Micro-organism : Chemical Character of the Pigments of a (Gy. Németh, F. Uresch, Prof. G. Fodor and L. Láng), 1413
New Phase formed by High-Pressure Treatment—Face-centred Cubic Molybdenum Monocarbide (E. V. Clougherty, K. H. Lothrop and J. A. Kafalas), 1194
New Phenotypes (Two) : Differential Inhibition of Human Serum Cholinesterase with Fluoride—Recognition of (Prof. H. Harris and Mary Whittaker), 496
New Photometric Technique using a Variable Shutter Device (Dr. O. C Jones and Dr. F. J. J. Clarke), 1290
New Profession of Information combining Science, Librarianship and Foreign Languages : Science Information Personnel—the (Leonard Cohen and Kenneth Craven), 452
New Regions of the Spectrum : From Radar to Spectroscopy— (Prof. D. J. E. Ingram), 1146
New Relation between the N–H Stretching Frequencies of Primary Amides (Prof. P. G. Puranik and K. Venkata Ramiah), 795
New *Rh* Phenotype, $Dcce^{l}e^{i}f$, found in a Chibcha Indian Tribe (Dr. Miguel Layrisse, Zulay Layrisse, Esperanza García, Dr. Johannes Wilbert and Joaquin Parra R.), 503
New Routes to Further Education—Papers presented at the B.A.C.I.E. Spring Conference, London, 1961 (British Association for Commercial and Industrial Education), 739
New Series of Anti-tumour Agents : N,N'-Alkylene-*bis* (Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a (A. S. Tomcufcik, S. D. Willson, A. W. Vogel and A. Sloboda), 611
New South Wales : Cave Art of the Conjola District (F. D. McCarthy), 854
New Technique for the Production of Synthetic Corundum (E. A. D. White), 901
New Test for Detecting Anaphylactic Sensitivity—the Basophil Reaction (Prof. Walter B. Shelley and Lennart Juhlin), 1056
New Thinking in School Mathematics, 335
New Trends in Atomic Research and their International Significance (Dr. L. Kowarski), 853
New Triterpenoid Sapogenin of Animal Origin (Sea Cucumber), (Takao Matsuno and Toshihiko Yamanouchi), 75
New Two-Stage Method for Cross-linking Proteins (Dr. Felix Borek), 1293
New Universal Buffer System (Dr. D. A. Ellis), 1099
New 'Wedge' Type Instability observed in a 'Theta' Pinch (J. K. Wright, R. D. Medford, J. D. Herbert and R. C. Pottinger), 1054
New York Academy of Sciences : Symposium on the Use of Animal Cell, Tissue and Organ Cultures in Radiobiology, 340
  Conference on Blood Groups in Infra-human Species, 653
  Fifth International Conference on Pigment Cell Biology, 1045
New York State Veterinary College, and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
New Zealand : Four Decades of State Forestry in, 451
  Report of the Director of Forestry for 1959-60, 451
New Zealand Butterfat : Growth of Ryegrass-dominant Pasture grazed by Cows, and Properties of (F. H. McDowall, W. A. McGillivray and J. C. Hawke), 303
New Zealand Phytochemical Survey, 545
New Zealand Rainwater : Barium-140 in (G. S. McNaughton and R. N. Woodward), 1344
New-born and Adult Rats : Collagen Fractions in the Skin of (Nestor Gonzalez Cadavid, Berta Denduchis and Roberto E. Mancini), 1297
Newfoundland : Warm-water Species in the Plankton off, during Winter Months (V. Bainbridge), 1216
Newham, Dr. J. : Appointed I.C.I. Research Fellow in the University of Edinburgh, 337
Newhook, F. J. : Non-Lethal Pathological Infection of Roots, 615
Newitt, Prof. D. M. : Title of professor emeritus of chemical engineering (at the Imperial College of Science and Technology, London), conferred on, 546
Newly Hatched Chick : Comparison of the Serum Protein Fractions of the, with those of Adult Birds using Starch-gel Electrophoresis (A. Amin), 708
Newly Recognized Sign of Denervation : Muscle Target Fibres, a (Dr. W. K. Engel), 389

- Newman, R. P. : British Welding Research Association—New Laboratory, 1147
- Newnham, I. E. : Appointed chief of the Division of Mineral Chemistry of the Australian Commonwealth Scientific and Industrial Research Organization, 543 ; work of, 543
- Newton, Prof. Lily : Alcological Study on the Eastern Coasts of the Americas, *review*, 1234
- Newton, R. C., and others : Melting and Polymorphism of Indium Antimonide at High Pressures, 1288
- Niagara Power Plant : The Robert Moses, 22
- Nicaragua: Estudios Ecologicos para el Aprovechamiento de la Tierra en (Dr. B. W. Taylor), 1259
- Nickel Complexes (Chromium, Uranium, Tungsten and), of Thioglycolic Acid (V. M. Bhuchar), 489
- Nickel Ferrites (Manganese and) : Magnetic Relaxation in Magnetite and in its Solid Solutions with (A. Bragiński and Th. Merceron), 898
- Nickel-Iron Films : Variation of Anisotropy Axis Dispersion with Thickness of (H. Clow), 996
- Nickel Oxide : Porous (I. S. Solet), 64
- Nickel Reaction and Thermal Isomerization of Alpha-Keto-Acid Hydrazones : Application of the, for their Chromatographic Analysis (A. M. Tokushige and Dean E. S. Cook), 797
- Nickerson, Dorothy : At the Maxwell Colour Centenary Conference (Colour Appearance), 11
- Nicol, Prof. T. (Cordingley, J., and) : Effect of Added Vitamins on the Phagocytic Activity of the Reticulo-Endothelial System of Mice, 82
- Nicotinic Acid : Blockage of Transformation of Tryptophan to, by Experimental Hepatitis in Mice (M. Piazza, F. Tancredi and Prof. E. Quagliariello), 601
- Nigerian Varieties of Maize : Susceptibility to Leaf Blight, caused by *Cochliobolus heterostrophus*, in (C. L. M. van Eijnatten), 515
- Nigerose and Kojibiose : Isolation of, from Dextrans (Kazuo Matsuda, Hiroshi Watanabe, Kentaroh Fujimoto and Prof. Kiyoshi Aso), 278
- Night Sky in August, 338 ; in September, 755 ; in October, 1145
- Night-time F Layer Irregularities at the Equator : Height of (Dr. G. S. Kent and Dr. J. R. Koster), 1083
- *Nimrod* Injector : Successful Operation of the (National Institute for Research in Nuclear Science, Harwell), 1043
- Nishioka, Richard S. (Hagadorn, Irvine R., and) : Neurosecretion and Granules in Neurones of the Brain of the Leech, 1013
- Nissim, J. A. : Enhancement of Inhibition of Intestinal Absorption by Cetrimide–Phloridzin Combination, 37
- *Nitella* : Relative Volumes of Cytoplasm and Vacuole in (Dr. Paul Saltman and Dr. Tyge Christensen), 825
  - Voltage-Clamp Experiments with (G. P. Findlay), 812
- Nitrate-Reductase in *Aerobacter aerogenes* : Inhibition by Oxygen of Biosynthesis and Activity of (Francis Pichinoty and Liliane D'Ornano), 879
- Nitric Acid–Hydrazoic Acid : A New Inorganic Reaction— (Dr. J. Mašek), 166
- Nitride (Boron) : Formation of, in Diborane–Hydrazine Flames (W. G. Berg and W. E. Wilson), 380
- Nitrite in a Tropical West African Estuary : Seasonal Fluctuations and Distribution of (J. C. D. Watts), 929
- Nitrogen in Crop Production : Importance of (Prof. N. R. Dhar), 544
- Nitrogen (Isotopic) : Distribution of, in Nitrogen Gas during Denitrification (R. D. Hauck and D. R. Bouldin), 871
- Nitrogen (Urine), in Kwashiorkor : Partition of (Dr. J. C. Edozien and E. J. Phillips), 47
- Nitrogen Atoms (Bridgehead) : Heterocyclic Systems with (William L. Mosby), Part I, *review* by Dr. G. L. Buchanan, 425
- Nitrogen Atoms (Metastable) : New Afterglow Emission associated with (L. Herman and R. Herman), 346
- Nitrogen Fixation (Symbiotic) : Root Temperature and (A. H. Gibson), 1080
- Nitrogen Gas : Distribution of Isotopic Nitrogen in, during Denitrification (R. D. Hauck and D. R. Bouldin), 871
- Nitrogen Level : Effect of Spacing and, on Floral Initiation in Cocksfoot (*Dactylis glomerata* L.), (D. M. Calder and J. P. Cooper), 195
- Nitrogen Problem : The, 544
- Nitrogen-fixing Micro-organism (New) : Chemical Character of the Pigments of a (Gy. Németh, F. Uresch, Prof. G. Fodor and L. Láng), 1413
- Nitrous Acid-induced Mutations (X-Ray- and), in the Genetic Fine Structure of the ad_7 Locus of *Schizosaccharomyces pombe* : Distribution of (Dr. Herbert Gutz), 1127
- Nixon, Dr. D. A. (Alexander, Pauline, and) : Foetal and Neonatal Physiology (The Foetal Kidney), 344
- Nixon, Dr. D. A., and others : Fructose and Lactic Acid Metabolism in the Perfused Liver of Premature Lambs, 1307
- Nixon, Dr. W. C. (Cosslett, Dr. V. E., and) : X-Ray Microscopy, *review* by Prof. Arne Engström, 1332
- Nodal Analysis of Associated Populations (Prof. W. T. Williams and J. M. Lambert), 202
- Nodules : Leguminous Root (Gibberellin-like Substances in Plants), (Margaret Radley), 684
- Noise Bursts (Solar) : Very-Low-Frequency Modulation of Discrete Frequency (Dr. Jules Aarons, Santimay Basu, William Kidd and Richard Allen), 56
- Nolte, H. W. : Nematology (Temporary Benefit from 'Vapam' against *Pratylenchus* in Pine Nurseries), 1049
- Nomenclature of Silica (I. Bergman), 270
- Nomograms : A Collection of Tables and, for the Processing of Observations made on Artificial Earth Satellites (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
- Non-Aquatic Reptiles : Swimming Ability of (R. R. Tercafs), 125
- Non-Enzymic Hydroxylation of Polycyclic Aromatic Hydrocarbons (F. Dewhurst and G. Calcutt), 808
- Non-Ferrous Metals Industry in a Unified Europe (Baron Snoy et d'Oppuers), 546
- Non-Lethal Pathological Infection of Roots (F. J. Newhook), 615
- Non-Linear Physical Problems (Indian Society of Theoretical and Applied Mechanics and Unesco Symposium on), 855
- Non-Linear Programming (Linear and) : Methods of Feasible Directions—a Study in (Dr. G. Zoutendijk), *review* by Dr. M. V. Wilkes, 9
- Non-Photosynthetic Plant Tissue : Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate Dehydrogenase in a (C. R. Benedict and Dr. H. Beevers), 71
- Non-Random Occurrence of Amino-Acid Replacements (C. R. Woese), 1196
- Non-Randomness in Amino-Acid 'Alleles' (Richard V. Eck), 1284
- Non-Specific Immunity in Pneumococcal Infection of Mice (Dr. G. N. Cooper and Dr. A. E. Stuart), 295
- Non-Specific Resistance (Prolonged), to Sarcoma Implant and Staphylococcus Infection following Repository Injection of Lipopolysaccharide: Development in Mice of (Samuel J. Prigal), 1111
- Non-Specific Staining Components from Fluorescein-labelled Conjugates : Simplified Procedure for removing (G. D. Johnson), 70
- Non-Tuberculous Conditions (Tuberculous and) : Mycobacteriophages isolated from Persons with (Dr. E. Mankiewicz), 1416
- Non-Uniformity of Cross-linking in Ion-Exchange Polymers (Dr. E. Glueckauf and R. E. Watts), 904
- Nonsense Syllables : Stimulus-Response Compatibility in the Paired-Associate Learning of (A. D. Baddeley), 1327
- Nonweiler, Dr. T. R. F. : Appointed to the Mechan chair of aeronautics and fluid mechanics in the University of Glasgow, 853 ; work of, 853
  - Space-Flight and Re-entry Trajectories (Dynamics of Terminal Re-entry —Errors in Re-entry Guidance), 960
- (–)-Noradrenaline : High Concentration of, in *Portulaca oleracea* L. (Dr. P. C. Feng, Prof. L. J. Haynes and Dr. K. E. Magnus), 1108
- Nordhagen, Prof. R. : Flora Europaea, 447
- Norepinephrine (Isotopic) : Effects of Drugs on Uptake of, by Cat Tissues (Hans J. Dengler, Herbert E. Spiegel and Elwood O. Titus), 816
- Norfolk Broads : Status of the, 751
- Normal Adult Rats : Stimulation by Heparin of Parenchymal Liver Cell Proliferation in (Dr. M. Zimmerman and Evemarie Celozzi), 1014
- Normal Feeding Conditions : Soluble Material in the Gastro-intestinal Tract of Rats under (Dr. Anne S. Cole), 502
- Normal Growth : Spontaneous Development of *L* Forms of Streptococci requiring Secretions of other Bacteria or Sulphydryl Compounds for (Ayala Frenkel and Dr. Willy Hirsch), 728
- Normal Human Urine : Quantitative Determination of Metadrenaline and Normetadrenaline in (Dr. Kaoru Yoshinaga, Dr. Chuichi Itoh, Dr. Nozomu Ishida, Dr. Tatsuo Sato and Dr. Yasuo Wada), 599
- Normal Probability Curves (Isolated or Overlapping) : Calculation of the Areas of (Dr. D. Morison Smith and John C. Bartlet), 688
- Normal Rabbits : Effects of Injections of some Intermediary Metabolites on the 'Insulin Response' of (Dr. H. D. Brahmachari and G. Raghupathy Sarma), 491, *erratum*, 755
- Normal Rat Hepatic Cells : Nucleolar Localization of Succinic Dehydrogenase in (P. De, R. Chatterjee and Dr. S. Mitra), 925
- Normal Tissues (Irradiated) : Effect of, on the Growth of Mouse Carcinoma (Dr. Arthur Compton and Prof. Charles A. Pannett), 1101
- Norman, A. G. (edited by) : Advances in Agronomy, Vol. 12, *review* by G. V. Dyke, 213
- Normetadrenaline in Normal Human Urine : Quantitative Determination of Metadreanaline and (Dr. Kaoru Yoshinaga, Dr. Chuichi Itoh, Dr. Nozomu Ishida, Dr. Tatsuo Sato and Dr. Yasuo Wada), 599
- Norreys, J. J. (Brown, Allan, and) : Uranium Disilicide, 61
- Norrish, Prof. R. G. W. : Chemistry and the Spectroscope (Presidential Address to Section B (Chemistry) of the British Association for the Advancement of Science), 984
- North, Dr. A. C. T., and Rich, Prof. Alexander : X-Ray Diffraction Studies of Bacterial Viruses, 1242
- North : Problems of the (Translation of *Problemy Severa*), No. 1, 1958 (translated December 1960), *review* by Dr. Terence Armstrong, 841
- North Atlantic : The (The Floors of the Oceans, I, Text to accompany the Physiographic Diagram of the North Atlantic), (Bruce C. Heezen, Marie Tharp and Maurice Ewing), (Geological Society of America, Special Paper 65), *review* by Dr. G. E. R. Deacon, 531
- North Borneo, Government of (Royal Society of London in co-operation with the) : North Borneo Expedition 1961, 26
- North Borneo Expedition 1961 (Royal Society of London in co-operation with the Government of North Borneo), 26
- North Sea : *Pneumodermopsis paucidens* in the (G. A. Cooper and D. C. T. Forsyth), 1412
- North-Eastern Africa (Eastern and) : Birds of (C. W. Mackworth-Praed and C. H. B. Grant), second edition, *review* by Sir Landsborough Thomson, 9
- Northern Apennines : Structure of the (Sir Edward Bailey and Prof. W. J. McCallien), 1136
- Northern Ireland : Aids to Agriculture and Horticulture in, 959
- Northern Rhodesia : Blindness in Africans in (Dr. C. M. Phillips), 753
  - Mammals of (W. F. H. Ansell), *review* by R. W. Hayman, 8
- Norton, Dr. Francis J. : Permeation of Gaseous Oxygen through Vitreous Silica, 701
- Norwegians : Radiocaesium and Potassium in (Johan Baarli, Kjell Madshus, Kurt Lidén and Richard C. McCall), 436
- Norwich Meeting of the British Association for the Advancement of Science (D. D. Aldridge), 16
- Norwich and its Region (British Association for the Advancement of Science), 956
- *Notopterus* (Lacepede) : Excretory Ducts in the Genus (Madhu Sudan Sharma), 1118
- Nour-Eldin, F. : Stability of Freeze-dried Anti-haemophilic Globulin, 503
- Novel Acid-stable Penicillins : Some (F. P. Doyle, J. H. C. Nayler, H. Smith and E. R. Stove), 1091
- Novotny, Dr. Ivan, and Vyskočil, František : Inhibition by Physostigmine of the Increase of Oxygen Consumption induced by Potassium in Muscle, 916
- Nowak, H. F., and Kucharski, J. : Effect of Polyvinyl Alcohol on the Distribution of Iodine-131 in the Internal Organs, Fluids and Excreta of Rabbits, 665, *erratum*, 1045
- Nuclear Detonations : Iron-55 from (Rama, Minoru Koide and Prof. Edward D. Goldberg), 162
- Nuclear Energy : Practical Applications of (International Atomic Energy Agency Courses on), 1143
  - United Kingdom Courses in, 125
- Nuclear Energy Agency (European), of the Organization for European Economic Co-operation : New Trends in Atomic Research and their International Significance (Dr. L. Kowarski), 853

Nuclear Energy Industry : Corrosion in the (Société de Chimie Industrielle Symposium on), 651
Nuclear Energy Study Commission (Laboratory of Mass Spectrometry), Lisbon : Grant from the Gulbenkian Foundation, 754
Nuclear Equipment in Argentina, Brazil and Israel : Grants from the United States to the International Atomic Energy Agency for, 442
Nuclear Explosions : Carbon-14 from, as a Short-term Dating System—Use to determine the Origin of Heartwood (Dr. A. T. Wilson), 714
Nuclear Fission Research (Controlled) : Plasma Physics and (International Atomic Energy Agency International Conference on), 443
Nuclear Medicine : Fellowships and Grants in the field of Radiology and, 1962-63 (James Picker Foundation), 228
Nuclear Particle Detector (Silicon Semiconductor) : Interaction of 14-MeV. Neutrons with a (Dr. W. M. Deuchars and G. P. Lawrence), 995
Nuclear Physics : Atomic and (Prof. Robert S. Shankland), second edition, *review* by Dr. E. B. Paul, 8
  High Energy (Institute of Physics and the Physical Society Symposium on), 1349
Nuclear Physics in Australia : Future of (Prof. E. W. Titterton), 639
Nuclear Power Projects (United States) : Fact Sheets on, third edition, 958
Nuclear Reactor Calculations : Digital Computers and (Ward C. Sangren), *review* by Dr. M. V. Wilkes, 9
Nuclear Reactor Chemistry (Oak Ridge National Laboratory Second Conference on), 651
Nuclear Reactor Technology : Analytical Chemistry in (Oak Ridge National Laboratory Fifth Conference on), 651
Nuclear Research, European Organization for, and the Max Planck Institute, Heidelberg : Conference on Fission and Spallation Phenomena and their Application to Cosmic Rays, 24
Nuclear Science, National Institute for Research in (Harwell) : Successful Operation of the *Nimrod* Injector, 1043
Nuclear Studies (British Council), 125
Nuclear Studies (Liverpool College of Technology Postgraduate Courses in), 338
Nucleators (Ice) : Steroids as (Richard B. Head), 1058
Nuclei dividing Amitotically : Deoxyribonucleic Acid Content of (Prof. K. W. Cleland), 504
Nuclei (Anti-Leucoyte), and Anti-Platelets (Anti-Leucocyte Cytoplasm,), in Disseminated Lupus Erythematosis (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Nucleic Acid (Pentose–) Content of Sub-Cellular Fractions of the Brain of the Rat during 'Metrazol' Convulsions : Changes in the (Prof. G. P. Talwar, B. Sadasividu and V. S. Chitre), 1007
Nucleic Acids : The (edited by Erwin Chargaff and J. N. Davidson), Vol. 3, *review* by Dr. Roy Markham, 742
  Mechanism of Differential Staining of (D. J. Goldstein), 407
  Still More, *review* by Dr. Roy Markham, 742
Nucleolar Localization of Succinic Dehydrogenase in Normal Rat Hepatic Cells (P. De, R. Chatterjee and Dr. S. Mitra), 925
Nucleolus : Deoxyribonucleic Acid Structures in the (Dr. Elsa H. J. O'Donnell), 1325
Nucleosides (Tritiated Pyrimidine-) : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of, into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Nucleotide (Reduced Diphosphopyridine) : An Inhibitor of Liver Alcohol Dehydrogenase in Preparations of (Dr. Keith Dalziel), 1098
Nucleotide-linked (Triphosphopyridine) Glyceraldehyde Phosphate Dehydrogenase in a Non-Photosynthetic Plant Tissue (C. R. Benedict and Dr. H. Beevers), 71
Nucleotides : Failure of, to Diffuse Freely into the Embryo of *Pteridium aquilinum* (P. R. Bell), 91
Nucleotides (Pyridine), in the Liver and in an Ascitic Hepatoma : Comparison of (M. Wintzerith N. Klein, L. Mandel and Prof. P. Mandel), 467
Nucleotides and Amino Acids : The Neurochemistry of—a Symposium of the Section on Neurochemistry, American Academy of Neurology (edited by Roscoe O. Brady and Donald B. Tower), *review* by Dr. R. V. Coxon, 318
Nucleus (The Feulgen-Stained Somatic Cell), as a Homogeneously Absorbing Object (Dr. Simon Iversen), 150
Nuffield Foundation : Sixteenth Annual Report (1960-61), 1148
Nuffield Foundation (Royal Society and): Commonwealth Bursaries Scheme, Awards, 126
Nuffield Unit of Tropical Animal Ecology : Appointment of Dr. R. M. Laws as senior investigator, 651
Number of Testis Follicles in Miridae (Dennis Leston), 93
Number and Arrangement of Osteons in Corresponding Regions of Homotypic Long Bones (Dr. G. Marotti), 1400
Number and Concentration (Lesion) : Relationship of Tobacco Mosaic Virus (TMV), to the Rate of Lesion Production on Pinto Bean (John Piacitelli and Prof. Vincent Santilli), 624
Numbers (Oocyte), as a Diagnostic Character for the Identification of Ammocoete Species (Dr. M. W. Hardisty), 1215
Numbers and Types of Bacteria from the Rhizosphere of Pasture Plants—Possible Occurrence of *L*-Forms (G. Jagnow), 1220
Nutrition : Current Problems in (Nutrition Society of Canada Symposium on), 335
  Fish in (Food and Agriculture Organization of the United Nations International Conference on), 1045
  Ruminant Digestion and, *review* by Dr. I. W. McDonald, 1334
Nutrition in Latin America (Food and Agriculture Organization of the United Nations Meetings on), 959
Nutrition of the Ruminant : Digestive Physiology and—Proceedings of the University of Nottingham Seventh Easter School in Agricultural Science, 1960 (edited by Dr. D. Lewis), *review* by Dr. I. W. McDonald, 1334
Nutrition Society : Symposium on Nutrition and Metabolic Defects, 125
  Symposium on Agricultural Problems in Developing Countries, 1250
Nutrition Society (Scottish Group) : Symposium on Nutrition and Poultry, 856
Nutrition Society of Canada : Election of Officers, 335
  Borden Award awarded to Dr. Donald Fraser, 335
  Symposium on Current Problems in Nutrition, 335
Nutrition and Metabolic Defects (Nutrition Society Symposium on), 125
Nutrition and Poultry (Scottish Branch of the Nutrition Society Symposium on), 856
Nutritionally Exacting Strains of *Staphylococcus pyogenes* : Metabolic and Genetic Investigations of (Janice B. Edgar and Dr. B. A. D. Stocker) 1121
Nutt, C. W., and Biddlestone, A. J. : A Molecular Beam Reactor for Examining the Rate, and Primary Products, of Reactive Bimolecular Collisions, 798
Nutt, Dr. M. E. : Some Aspects of Haematology, *review*, 7
Nutting, Prof. Jack : Awarded a Gold Medal and Prize from the Beilby Memorial Fund, 224 ; work of, 224
Nyman, Bengt : Effect of Red and Far-red Irradiation on the Germination Process in Seeds of *Pinus sylvestris* L., 1219

OAK Ridge National Laboratory : Second Conference on Nuclear Reactor Chemistry, 651
  Fifth Conference on Analytical Chemistry in Nuclear Reactor Technology, 651
Oakley, Dr. K. P. : Dating Man's Emergence (Presidential Address to Section H (Anthropology) of the British Association for the Advancement of Science), 988
Oat Seedlings (Etiolated) : Carbon Dioxide and Ethanol as Factors controlling the Growth of (Dr. C. L. Mer), 260
Oats : Isolation of a New Antioxidant from (Dr. D. G. H. Daniels and H. F. Martin), 1302
  Manganese and Magnesium in the Grey Speck Syndrome of (P. B. Vose and Dr. D. J. Griffiths), 299
Objects (Stationary or Moving) : Measuring Visual Constancy for (S. M. Anstis, C. D. Shopland and R. L. Gregory), 416
O'Brien, Prof. D., and others : Amino-acid Composition of Serum Mucoprotein in Rheumatic Fever, 922
Observation (Direct), of Nematode-trapping Fungi in the Soil : Agar Disk Method for the (Roderic C. Cooke), 1411
Observations made on Artificial Earth Satellites : A Collection of Tables and Nomograms for the Processing of (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
Observations (Electron Microscope), of the Receptors in the Sensory Vesicle of the Ascidian Tadpole (Noël Dilly), 786
Observations (Electronic Microscopic), of Structure in Ultra-Thin Sections of Vitrinite in Coal (J. T. McCartney, Sabri Ergun and R. E. Walline), 1361
Observations (Further), on a Filamentous Saprophyte from Wookey Hole Caves (Dr. A. J. Willis), 724
Observations (Immunological), in Experimental Silicosis (J. H. Jones and Prof. A. G. Heppleston), 1212
Observations (Trans-Equatorial Backscatter), of Magnetically Controlled Ionization (J. A. Thomas), 792
Observatory (Lamont Geological) : Fellowships for Plankton Research, 754
Observatory (Naval), United States : Reprint No. 19, Resources and Treasures of the Library (Marjorie S. Clopine), 22
Obtaining Minimum Time in Gas Chromatography : Role of Pressure Gradients in (Prof. J. Calvin Giddings), 1291
Occultation (Lunar), of a Radio Source (Dr. C. Hazard), 58
Occupational Hygiene Society, British (Ergonomics Research Society and the) : Discussion on the Design and Use of Respirators, 655
Occurrence of Ascarylose : Dideoxysugars of *Pasteurella pseudotuberculosis*-specific Polysaccharides, and the (Dr. D. A. L. Davies), 43
Occurrence of *Eutrichocheles modestus* (Herbst) in the Near-shore Waters of Porto Novo, South India (K. Balasubrahmanyan and Dr. J. Jacob), 830
Occurrence of Galactolipids : Lipids of the Common Pea (*Pisum sativum* L.) with special reference to the (S. Adhikari, Dr. F. B. Shorland and R. O. Weenink), 1301
Occurrence of Mevalonic Acid in Carrots (Prof. V. V. Modi and D. K. Patwa), 1202
Occurrence of an *Rh*-like Antigen in Red Cells of the Sheep (B. Urbaschek and Prof. K. Trautwein), 193
Occurrence of *Salmonellae* in Domestic Animals and Poultry in India (V. K. Sharma and Prof. C. M. Singh), 622
Occurrence (Non-Random), of Amino-Acid Replacements (C. R. Woese), 1196
Occurrence (Possible), of *L*-Forms : Numbers and Types of Bacteria from the Rhizosphere of Pasture Plants— (G. Jagnow), 1220
Ocean Currents : Dispersal of Tropical Seeds by (R. Mason), 408
Ocean Floor : The, *review* by Dr. G. E. R. Deacon, 531
Oceanography : Research in Marine Biology or (Challenger Society Grants for), 24
Oceans : The Floors of the, 1, The North Atlantic—Text to accompany the Physiographic Diagram of the North Atlantic (Bruce C. Heezen, Marie Tharp and Maurice Ewing), (Geological Society of America, Special Paper 65), *review* by Dr. G. E. R. Deacon, 531
O'Connor, Cecilia M. (edited by G. E. W. Wolstenholme and) : Ciba Foundation Symposium on Quinones in Electron Transport, *review* by A. I. Scott, 321
O'Donnell, Dr. Elsa H. J. : Deoxyribonucleic Acid Structures in the Nucleolus, 1325
Odontosyllis phosphorea Moore (Polychaete), var. *Nanaimoensis* Berkeley : Swarming of the, near Nanaimo, B.C. (E. Berkeley), 1321
Odoratism (Lathyrism) : Influence of Scurvy and, on Hydroxyproline Excretion (Dr. G. R. Martin, S. E. Mergenhagen and D. J. Prockop), 1008
Odour Receptors (M. H. Briggs and R. B. Duncan), 1310
Odqvist, Prof. F. K. G. : Engineering Theories of Creep (Presidential Address at the Symposium at the University of Roorkee on Non-Linear Physical Problems), 855
Œstriol Succinate : Treatment of Thrombocytopaenic Haemorrhage with (Dr. Hubert Poliwoda), 400
Ofodile, A., and others : Effect of Alpha-Amylase on the Ehrlich Mouse Ascites Tumour, 1113
Ogram, G. R. : Appointed a Research Fellow in the Department of Industrial Metallurgy, University of Birmingham, 337
Ohshima, S., and others : Inhibition of β-Glucoronidase by Oral Administration of D-Glucosaccharo-1,4-Lactone, 1298

Oil (Essential), from Fresh *Cannabis sativa* and its Use in Identification (L. Martin, Dr. D. Morison Smith and C. G. Farmilo), 774
Oil Consumption in the United Kingdom during 1960, 123
Oil and Sulphide Ore : Black Shale, (Prof. K. C. Dunham), 985
Oilseeds Committee (Indian Central) : Castorseed and its Products, 753
Oil-well Drilling Mud-Thinners : Sub-bituminous Coals as, 1144
Oka, M., and others : Potentiation of Epinephrine Action, 186
Okada, Minoru : Rapid Determination of Ytterbium in Aqueous Solutions and in Thulium Oxide by Neutron Activation, 1090
Okamura, Dr. S. : Effects of Ionizing Radiation on Organic and Biological Solids (Reactions in the Solid State), 1150
Okinaka, Prof. Shigeo, and others : Effect of Bilateral Section of the Splanchnic Nerve on Erythropoiesis, 500
Okuda, Jun, and others : Hydrolysis of Fatty Acid Esters on Riboflavin by Pancreatic Lipase, 174
Olbromski, J., and others : Conversion of Fibrin to Desmofibrin, 1093
Olcott, H. S., and others : Selenomethionine as an Antioxidant, 1201
Old (Growing), in a Mechanized World (F. Le Gros Clark), *review* by Prof. L. S. Hearnshaw, 532
Old Sea-Water : A Lake in British Columbia containing (Dr. P. M. Williams, Prof. W. H. Matthews and Prof. G. L. Pickard), 830
Old Smyrna : Archaeology of, *review* by Dr. Hugh Plommer, 212
Oldfield, Prof. R. C. : *Obituary* of Prof. A. W. P. Wolters, 646
Olduvai : The Juvenile Mandible from (Dr. L. S. B. Leakey), 417
Olduvai Gorge, Tanganyika : Age of Bed I (Dr. L. S. B. Leakey, Dr. J. F. Evernden and Dr. G. H. Curtis), 478
Oliver Memorial Fund : Award for Blood Transfusion work, 336
Ollerenshaw, C. B. : Parasite Biology (Importance of Temperature and Moisture-Levels on Different Stages in the Life-Cycle of *Fasciola hepatica*), 134
Ollis, Dr. W. D. : Stereochemistry of Natural Phenolic Compounds (Relative Configuration of the Rotenoids), 236
Ollivier, C., and others : Electrophoresis in a Thin Layer of Starch-Gel followed by a Plastifying Treatment, 72
Omenn, Gilbert (Blumer, Max, and) : Fossil Chlorins in a Triassic Sediment, 161
Ommatokoita elongata Grant (Copepod), in the Eyes of the Greenland Shark—a Possible Cause of Mutual Dependence (Bjørn Berland), 829
Omori, Tomoo, and others : A Method for Isolating Bacteria capable of Producing 6-Aminopenicillanic Acid from Benzylpenicillin, 1122
Oncogenic and Heparin-neutralizing Properties : Surfen, a Quinoline with (DeWitt, T. Hunter, jun., and Joseph M. Hill), 1378
Oncorhynchus keta (Chum Salmon) : Effect of Thyroxine plus Thiourea on the Early Development of the (Prof. M. A. Ali), 1214
One-Degree Orientated Substrates : Epitaxial Growth of Crystals on (Dr. A. Goswami), 160
One Ion-Exchange Column during Preparation : A Simplified Method for Separating Amino-Acid Mixtures from Protein Hydrolysates on (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Onions, W. J. : Testing Textiles, *review*, 106
Ontario Museum (Royal), Toronto : Appointment of Dr. W. E. Swinton as head of the Division of Life Sciences, 24
Ontario Research Foundation : Annual Report for 1960, 1254
Ontogeny of the Rat : Role of the Lung in Metabolism of Fat during (Dr. Z. Vacek, P. Hahn and O. Koldovsky), 85
Onuki, Y. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Effect of Radiation on the Chromosomes of Leucocytes cultured from the Human Buffy Coat), 340
Oocyte Numbers as a Diagnostic Character for the Identification of Ammocoete Species (Dr. M. W. Hardisty), 1215
Oogonium and Antheridium of *Pythium debaryanum* Hesse : Meiosis in the (Dr. Eva Sansome), 827
Oomura, Dr. Yutaka, and others : Electrical Activity of a Giant Nerve Cell under Abnormal Conditions, 1265
Oostenbrink, M. : Nematology (Nematode Populations in Meadows and Arable Land in the Netherlands), 1048
Oosthuizen, J. C. (Blair, Dr. G. W. Scott, and) : An Invariant Casein Substrate for Rennet Standardization, derivable from Diverse Sources of Cows' Milk, 697
Oota, Yukito, and others : Sub-Unit of Ribosomal Ribonucleic Acid from Yeast, 598
Operations Research and Systems Engineering (Charles D. Flagle, William H. Huggins and Robert H. Roy), *review* by Prof. L. S. Goddard, 105
Opossum, *Didelphis virginiana* : Cholesterol in the Tapetum Lucidum of the Eye of the (Antoinette Pirie), 708
Oppenheimer, Prof. H. R. : Plant Exploration and Introduction (The Origin of Cultivated Wheat), 1240
Optical Character Recognition (Information Systems Branch of the Office of Naval Research Information Centre of the United States National Bureau of Standards Symposium on), 1145
Optical Filter in the Far Ultra-Violet : Irradiated Lithium Fluoride as an (J. L. Weeks, S. Gordon and G. M. A. C. Meaburn), 1186
Optical Lens Performance : Some Aspects of, Part 1, Secondary Flare in Lenses (K. Hacking) ; Part 2, The Design of Lens Hoods (W. N. Sproson), 1355
Optical Maser : Use of a Different Type of Fluorescent Material as an (Jordan J. Markham and Dickron Mergerian), 586
Optical Masers : A Proposal for a Tunable Source of Radiation for the Far Infra-Red using Beats between (Dr. D. C. Lainé), 795
Optics (Fibre) : A Hypodermic Probe using (David F. Capellaro, Narinder S. Kapany and Dr. Charles Long), 927
Oral Administration of D-Glucosaccharo-1,4-Lactone : Inhibition of β-Glucuronidase by (S. Akamatsu, Dr. A. Kiyomoto, S. Harigaya and S. Ohshima), 1298
Orally : Failure of a Dog to Discriminate between Strontium-90 and Calcium given (Dr. Betsy J. Stover, M. Goldman and A. C. Andersen), 713
Orbits : Satellite and Space, *review* by D. G. King-Hele, 1334
Orbits (Satellite) : Density of the Upper Atmosphere determined by, and its Variation during 1957-61 (D. G. King-Hele and D. M. C. Walker), 114
Orchid Conference (sponsored by the American Orchid Society, the British Orchid Growers' Association and the Royal Horticultural Society, London, 1960) : Proceedings of the Third World, *review* by V. S. Summerhayes, 213
Orchid Growers' Association (British), and others : Third World Orchid Conference, London, 1960—Proceedings of the, *review* by V. S. Summerhayes, 213
Orchid Society (American), and others : Third World Orchid Conference, London, 1960—Proceedings of the, *review* by V. S. Summerhayes, 213
Ord-Smith, Dr. R. J. : Digital Computers, their Use and Control (Computer Applications), 554
Ordnance Survey of Great Britain : Recent Map Publications by the, 958
Ore (Sulphide) : Black Shale, Oil and (Prof. K. C. Dunham), 985
Organ Cultures (Animal Cell, Tissue and), in Radiobiology : Use of (New York Academy of Sciences Symposium on), 340
Organic Analysis (edited by John Mitchell, Jr., I. M. Kolthoff, E. S. Proskauer and A. Weissberger), Vol. 4, *review* by Dr. D. T. Lewis, 741
Organic Chemistry : Physical Methods of (edited by Arnold Weissberger), third edition, Parts 3 and 4, *review* by Dr. W. A. Waters, 317
Organic Compounds : Analysis of, *review* by Dr. D. T. Lewis, 741
  'Gel Filtration' of (B. Cortis-Jones), 272
  Radiation Chemistry of (Dr. A. J. Swallow), *review* by Dr. S. J. Thomson, 317
Organic Constituents of Meteorites (Michael H. Briggs), 1137
Organic Electronic Spectral Data : Vol. 1, 1946-1952 (edited by Mortimer J. Kamlet) ; Vol. 2, 1953-1955 (edited by Herbert E. Ungnade), *review* by Dr. E. G. Kellett, 107
Organic Geochemistry Group (European) : Proposal to form a, 336
Organic Phosphate (Inorganic and) : Outflux of, during Membrane Depolarization of Excitable Tissues (Dr. L. G. Abood, Prof. K. Koketsu and I. Koyama), 395
Organic Reagents in Inorganic Analysis : The Use of (A. I. Busev and N. G. Polianskii), translated from the Russian by J. T. Greaves, *review* by Dr. D. T. Lewis, 1336
Organic Substances : Inhibition of Ultrasonic Decolorization of Rhodamine *B* in Presence of (Prof. Satya Prakash and Sheo Prakash), 1292
Organic Vapours : Measurements of Heats of Adsorption of, on Adsorbents of High Surface Area using a Continuous Flow Calorimeter (G. H. Bell and A. J. Groszek), 1184
Organic and Biological Solids : Effects of Ionizing Radiation on (Société de Chimie Physique and the British Biophysical Society Discussion on), 1150
Organischen Fluorverbindungen : Chemie der (Milos Hudlicky), *review* by Dr. Richard Dresdner, 319
Organisms (Different) : Comparative Analysis of Inactivating Efficiency of Radiation on (Dr. M. Terzi), 461
Organisms (Living) : Atomic Radiations and (R. H. Mole), 556
Organisms (Penicillinase-producing) : Use of Cellulose Acetate Membranes for detecting (Prof. R. Knox and J. T. Smith), 926
Organisms (Pleuropneumonia-like), isolated from Tissue Cell Cultures : Immunofluorescence of (Major W. F. Malizia, N. F. Barile and D. B. Riggs), 190
Organization for European Economic Co-operation : Report on the School Curriculum in Mathematics (edited by Howard Fehr), 335
Organization for European Economic Co-operation (European Nuclear Energy Agency) : New Trends in Atomic Research and their International Significance (Dr. L. Kowarski), 853
Organization (National), of Scientific Research, 632
Organization and Methods (Aims,), of University Extra-Mural Libraries in Great Britain (E. P. Pritchard), 649
Organo-Metal Compounds, *review* by Dr. D. S. Payne, 316
Organo-Metallic Compounds (Prof. G. E. Coates), second edition, *review* by Dr. D. S. Payne, 316
Organo-Phosphorus Chemistry : Russian Work in, *review* by Dr. F. G. Mann, 1232
Organo-Phosphorus Compounds : Soviet Research on, 1949-1956 (in English translation), *review* by Dr. F. G. Mann, 1232
Organs (Accessory Respiratory), in Air-breathing Fishes : A Hydrostatic Function of the (Dr. S. Z. Qasim and R. Hasan), 396
Organs (Internal), Fluids and Excreta of Rabbits : Effect of Polyvinyl Alcohol on the Distribution of Iodine-131 in the (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Organs (Sense), Integration and Behaviour (edited by Talbot H. Waterman), (The Physiology of Crustacea, Vol. 2), *review* by Dr. J. Green, 428
Orgel, Dr. L. E. : An Introduction to Transition-Metal Chemistry—Ligand-Field Theory, *review* by Prof. C. A. Coulson, 1233
Orgel, Dr. L. E. (Massey, A. G., and) : A Reversible Photochromic Polymer, 1387
Oriental and African Studies, School of : Grant of £15,000 from the Gulbenkian Foundation, 754
Orientated Lipid on a Biological Membrane : Electrical Properties of—an Electrostatic Diffusion Barrier and Ion Pump (Dr. J. W. L. Beament), 217
Orientated Substrates (One-Degree) : Epitaxial Growth of Crystals on (Dr. A. Goswami), 160
Origin of the British Insular Races of Small Mammals and of the 'Lusitanian' Fauna (G. B. Corbet), 1037
Origin of Heartwood : Carbon-14 from Nuclear Explosions as a Short-term, Dating System—Use to determine the (Dr. A. T. Wilson), 714
Origin (Animal), Sea Cucumber : A New Triterpenoid Sapogenin of (Takao Matsuno and Toshihiko Yamanouchi), 75
Origins of Petroleum (Sir Robert Robinson), 346
Origins of War : Arms and Security, a Mathematical Study of the Causes and (Dr. Lewis F. Richardson), edited by Nicolas Rashevsky and Ernesto Trucco, *review* by Sir Cyril Burt), 427
Orlowski, Dr. Marian, and others : Histochemical Demonstration of Gamma-Glutamyl Transpeptidase, 767
Ormerod, M. G. : Effects of Ionizing Radiation on Organic and Biological Solids (Sulphur Compounds as Protective Agents), 1151
Ormerod, W. E. : Immunity to Protozoa (Development of Immunity in *Trypanosoma lewisi* Infections), 551
Oró, Prof. J. : Mechanism of Synthesis of Adenine from Hydrogen Cyanide under Possible Primitive Earth Conditions, 1193
Orogeny and Granites in South-West England : Age of the (T. R. Owen), 486 ; (N. E. Butcher), 486
Orthographic Atlas of the Moon (compiled by D. W. G. Arthur and E. A. Whitaker), edited by Gerard P. Kniper, Edition 'A' showing the Standard Orthographic Coordinate Grid, Part 1, Central Area, *review* by D. H. P. Jones, 424

Orthotitanate (Barium) : Infra-Red Spectroscopic Evidence of Four-fold Co-ordination of Titanium in (P. Tarte), 1002
Orthotopically Grafted Skin : Regeneration of Elements of Donor Origin in, following the Homograft Response (Dr. J. K. Dineen and Dr. Aleksander Szenberg), 153
Ortmeyer, Anne, and others : Sexual Differentiation in *Hydra* in relation to Population Density, 92
Osawa, Syozo, and others : Sub-Unit of Ribosomal Ribonucleic Acid from Yeast, 598
Oscillations (Sustained), in a Catalytic Chemical System (R. A. Spangler and F. M. Snell), 457
Osgood, F. E. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Effect of Radiation on Normal and Malignant Human Haemic Cells *in vivo* and *in vitro*), 340
Oshima, T., and others : Potential Changes produced by Application of Current Steps in Motoneurones, 1104
Osmoregulation : Thermodynamics and (Prof. Leonard B. Kirschner), 815
Osmotic (Chemi-) Type of Mechanism : Coupling of Phosphorylation to Electron and Hydrogen Transfer by a (Dr. Peter Mitchell), 144
Osol, Arthur, and others (edited by) : Remington's Practice of Pharmacy, twelfth edition, *review* by Dr. J. H. Gaddum, 8
Ossaka, J. : Tetragonal Mullite-like Phase from Co-precipitated Gels, 1000
Osteons : Number and Arrangement of, in Corresponding Regions of Homotypic Long Bones (Dr. G. Marotti), 1400
Oster, Prof. Gerald, and others : Photochemical Production of Semiconducting High Polymers, 164
Oster, Dr. Gisela K., and others : Photochemical Production of Semiconducting High Polymers, 164
Otaka, Eiko, and others : Sub-Unit of Ribosomal Ribonucleic Acid from Yeast, 598
Oteifa, A. B. : Nematology (The Chief Plant Nematodes of Crops in Egypt), 1048
Oteifa, B. A., and Elgindi, D. M. : Nematology (Radiotracer Techniques using Phosphorus-32 applied to a study of Galling in Tomatoes by *Meloidogyne javanica* and its Effect on Uptake of Nutrient), 1049
Othmer, Donald F. (edited by Raymond E. Kirk and) : Encyclopedia of Chemical Technology, second Supplement Volume edited by Anthony Standen, *review* by R. F. Villet, 1131
Outflux of Inorganic and Organic Phosphate during Membrane Depolarization of Excitable Tissues (Dr. L. G. Abood, Prof. K. Koketsu and I. Koyama), 395
Outline of Chemical Genetics (Prof. Bernard S. Strauss), *review* by Dr. Charlotte Auerbach, 841
Outward Bound Trust : Grant of £12,000 from the Gulbenkian Foundation, 855
Overlapping Normal Probability Curves (Isolated or) : Calculation of the Areas of (Dr. D. Morison Smith and John C. Bartlet), 688
Overseas Countries : Technical Assistance to (June 17, 1039), *errata*, 24
Oviposition in *Nepytia phantasmaria* Stkr. (Lepidoptera : Geometridae) : Influence of Electrical Field on Pupation and (Dr. D. K. Edwards), 976
Ovulation of the Spider *Latrodectus geometricus* C. Koch : Cycle and Rhythm in the (A. Bouillon and R. Lekie), 620
Ovum Humanum (Prof. Landrum B. Shettles), *review* by W. J. Hamilton, 110
Owen, David : Appointed head of the Department of Operational Research and Cybernetics of the United Steel Companies, Ltd., 443
Owen, Dr. R. D. : Blood Groups in Infra-human Species (Usefulness of Rats as Laboratory Animals), 653
Owen, Dr. R. D., and Anderson, Dr. D. R. : Blood Groups in Infra-human Species (A Study of Blood Groups in the Rhesus Monkey), 653
Owen, T. R. : Age of the Orogeny and Granites in South-West England, 486
Ox : Increase of Evaporative Loss of Water from the Skin of the, in response to Local Heating of the Hypothalamus (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Oxfordshire : Coal in (Dr. C. J. Stubblefield and Dr. F. M. Trotter), 953
Oxidase Activity (Indoleacetic Acid), of *Lupinus albus* L. exposed to Different Photoperiods : Effect of Gibberellic Acid on Growth and (F. Sági and A. S. Garay), 824
Oxidase (Monoamine) Inhibitor : Augmentation of Toxicity of, by Thyroid Feeding (Richard N. Carrier and Dr. Paul V. Buday), 1107
Oxidation of Carbon Monoxide in the Presence of Hydrogen: Selectivity of Palladium Catalysts for the (P. Mars and Th. van de Mond), 1003
Oxidation (Aniline), initiated by Ultra-sonic Waves (Dr. Wiktor Wawrzyczek), 701
Oxidation (Iron) : Morphological Variation in *Ferrobacillus ferrooxidans* related to the Rate of (M. P. Silverman and M. H. Rogoff), 1221
Oxidation (Radiolytic), of Ferrous Solutions with Standardized Internal Sources of Polonium-210 (J. Steyn and D. van As), 903
Oxidation-Reduction (Photo-sensitized) : Paths of Inter-Molecular Energy Transfer in (N. Takeyama), 1359
Oxidation-Reduction Reactions of Plastoquinone in Isolated Chloroplasts (Dr. E. R. Redfearn and J. Friend), 806
Oxidations (Pyrogallol) : Regulation of, by Alcohols and Sugars (B. Z. Siegel, S. M. Siegel and N. S. Goodman), 180
Oxidative Demethylation and Carcinogenicity of 4-N-Dimethylaminoazobenzene Derivatives (Prof. Marizo Ishidate and Akira Hanaki), 1198
Oxide (Barium) : Effect of Ultra-Violet Irradiation on the Electrical Conductivity of Cathodes coated with (Dr. C. H. B. Mee), 1383
Oxide (Beryllium) : Scattering of Long Wave-length Neutrons by Irradiated (T. M. Sabine, A. W. Pryor and B. S. Hickman), 1395
Oxide (Deuterium): Ultra-violet Absorption Spectra of Proteins in (Dr. G. H. Beaven and Elizabeth Bailey), 914
Oxide (Ethylene): Effect of, on the Tapping of *Hevea brasiliensis* (D. H. Taysum), 1319
Oxide (Nickel) : Porous (I. S. Solet), 64
Oxide (Thulium) : Rapid Determination of Ytterbium in Aqueous Solutions and in, by Neutron Activation (Minoru Okada), 1090
Oxide (Titanium) Ethoxides : Structures of Polymeric Titanium Ethoxide and (Prof. D. C. Bradley and A. H. Westlake), 273 ; (R. L. Martin and G. Winter), 274
Oxide Spinels : Dependence on Temperature of the Distribution of Cations in (Ranajit K. Datta and Prof. Rustum Roy), 169
Oxides (Zirconium and Hafnium) : Reduction of (F. K. McTaggart), 1192
Oximes : Inhibition of Chemi-Luminescence of Luminol by means of (Prof. K. Weber, J. Matković and D. Fleš), 177
Oxygen : Inhibition by, of Biosynthesis and Activity of Nitrate-Reductase in *Aerobacter aerogenes* (Francis Pichinoty and Liliane D'Ornano), 879
Oxygen (Gaseous) : Permeation of, through Vitreous Silica (Dr. Francis J. Norton), 701
Oxygen Consumption induced by Potassium in Muscle : Inhibition by Physostigmine of the Increase of (Dr. Ivan Novotny and František Vyskočil), 916
Oxygen Electrode for Measurement of Tissue Slice Respiration (E. H. Strickland, F. D. Ziegler and Prof. A. Anthony), 969
Oxygen Inhibition of Respiration in *Azotobacter* (M. J. Dilworth and C. A. Parker), 520
Oxytocic Peptides in the Pituitary of a Marine Teleost Fish (*Pollachius virens*): Pharmacological Characterization of the (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Oxytocinase Activity of Plasma of Pregnant Women (Stig E. J. Melander), 176
Ozaki, Sachio, and others : Electrical Activity of a Giant Nerve Cell under Abnormal Conditions, 1265
Ozone : Effect of, on the Fluorescence and Ultra-violet Absorption Spectra of 3,4-Benzopyrene (Z. Morlin and K. M. Sáringer), 907

PACE-MAKER of Respiration : Active Cation Transport as a (Dr. R. Whittam), 603
Paddock, N. L. : Inorganic Polymers (Phosphonitrilic Compounds), 1047
Padmini, P. R. K. L., and Rao, Prof. B. Ramachandra : Molar Sound Velocity in Molten Hydrated Salts, 694
Pain : The Assessment of (Universities Federation for Animal Welfare Symposium on), 1353
Painter, R. B. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Effects of Radiation on Cell Division), 341
Painter, Dr. T. J., and Morgan, Prof. W. T. J. : Partial Acid-Hydrolysis of a Mucopolysaccharide with Appreciable *N*-Deacetylation of Hexosamine, 39
Paired-Associate Learning of Nonsense Syllables : Stimulus-Response Compatibility in the (A. D. Baddelley), 1327
Pairs : Generation of Radicals in, and the Kinetics of Radical Chain Reactions in Solution (Dr. P. E. M. Allen and C. R. Patrick), 1194
Palaemonetes varians Leach (Prawn) : Mechanism of Sensitivity to Hydrostatic Pressure in the (Peter S. B. Digby), 366
Palaeocharinidae (Devonian) (Arachnida) : Lung-books in the (Dr. M. F. Claridge and A. G. Lyon), 1190
Palaeogeologic Maps (A. I. Leversen), *review* by Dr. C. Downie, 842
Paléus, Dr. Sven (Biörck, Prof. Gunnar, and) : Cytochrome *c* in the Heart of the Turtle, 712
Palladium Catalysts for the Oxidation of Carbon Monoxide in the Presence of Hydrogen : Selectivity of (P. Mars and Th. van de Mond), 1003
Palladium Hydride : Heat Capacity and Resistivity Anomalies in (Paul Mitacek, jun., and Prof. J. G. Aston), 271
Palm, Dr. J. : Blood Groups in Infra-human Species (Blood Groups and Histocompatibility Factors of Rats), 654
Palmer, Helen T. (Maxwell, Dr. D. R., and) : Demonstration of Anti-Depressant or Stimulant Properties of Imipramine in Experimental Animals, 84
Pancreatic Lipase : Hydrolysis of Fatty Acid Esters of Riboflavin by (Prof. Kunio Yagi, Yoshiko Yamamoto and Jun Okuda), 174
Pandalai, K. M. (Gangolly, S. R., and) : Possibilities of Vegetative Propagation in the Coconut (*Cocos nucifera* L.), 1218
Pangborn, Rose Marie, and Gee, Sandra C. : Relative Sweetness of α- and β-Forms of Selected Sugars, 810
Panigrahi, G., and Patnaik, S. N. : Cytology of some Genera of Polypodiaceae in Eastern India, 1207
Pannett, Prof. Charles A. (Compton, Dr. Arthur, and) : Effect of Irradiated Normal Tissues on the Growth of Mouse Carcinoma, 1101
Pantages, Peter (Langer, Stanley H., and) : Peak-Shift Technique in Gas–Liquid Chromatography—Trimethylsilyl Ether Derivatives of Alcohols, 141
Pantek, Henry R. : Brain Waves and 'Blood Waves', 577
Paoletti, P., and others : Effect of Serotonin on Absorption and Distribution of Calcium-45 in the Rat, 185
Paoletti, R., and others : Effect of Serotonin on Absorption and Distribution of Calcium-45 in the Rat, 185
Papée, Dr. Henry M., and Montefinale, Dr. Alberto : Chemical Composition of Precipitable Water Vapour over the United States, 136
Paper : Colorimetric Detection of Penicillins and Cephalosporins on (Robert Thomas), 1161
  The Formation and Structure of (Technical Section of the British Paper and Board Makers' Association Conference on), 126
  Pulp and—Chemistry and Chemical Technology (James P. Casey), Vol. 2, Papermaking, second edition, *review* by Dr. Julius Grant, 1135
  Splitting of Serum Albumin during Electrophoresis on (J. V. McLoughlin), 1305
Paper (Diethyl-amino-ethyl (DEAE) Cellulose) : Chromatography of Proteins on (C. C. Curtain), 1269
Paper Chromatograms (Filter) : A Spray Method for the Simultaneous Detection of Iodide and Iodinated Amino-Acids on (Dr. A. Van Zyl and M. Bhaga), 275
Paper Chromatography (Czech Chemical Society Conference on), 759
  Breakdown of [2-^{14}C]-Glycine during (A. K. Huggins and V. Moses), 668
  RM and Solvent Composition in (Dr. Edward Soczewiński), 68
Paper Electrophoresis : Demonstration by, of an Auto-Immunological Precipitin possibly due to Fibrinolysins (Marion I. Cooper and J. R. Sykes), 1212
Paper Electrophoresis of Proteins while Preserving the Pattern of their Localization in Tissues (Dr. Zh. A. Medvedev), 1021
Paper Manufacture (Pulp and) : A Laboratory Handbook of (Dr. Julius Grant), second edition, *review* by Dr. F. Lyth Hudson, 320
Paper and Board Makers' Association, British (Technical Section) : Conference on the Formation and Structure of Paper, 126
Papert, S. : Centrally Produced Geometrical Illusions, 733
Papilio dardanus (Lep.) : Genetics of a Difference in the Male Genitalia of East and West African Stocks of (J. R. G. Turner, C. A. Clarke and P. M. Sheppard), 935
Paramecium : Effects of Kinetin and Indole-3-acetic Acid on Multiplication Rates of (Mary Annunciata McManus and Kathleen Sullivan), 619

Paranchych, Dr. William (Cooper, Dr. Bernard A., and) : Selective Uptake of Specifically Bound Cobalt-58 Vitamin B_{12} by Human and Mouse Tumour Cells, 393
Parasite Biology (Parasitology Group of the Institute of Biology Meeting on), 134
Parasites : Malaysian (edited by W. W. Macdonald), 35-49 (Studies from the Institute for Medical Research, Federation of Malaya, No. 29), *review* by P. F. Mattingly, 948
Parasites (Ecto- and Endo), of South-East Asia, *review* by P. F. Mattingly, 948
Parasites (European), of Man, *review* by Dr. G. Lapage, 107
Parasitic Nematodes for Collection Purposes : Use of Glacial Acetic Acid for killing (Bjørn Berland), 1320
Parasitologie für Ärzte (Prof. Otto Jírovec), *review* by Dr. G. Lapage, 107
Parenchymal Liver Cell Proliferation in Normal Adult Rats : Stimulation by Heparin of (Dr. M. Zimmerman and Evemarie Celozzi), 1014
Parental Somatic Cells : Inclusion of, in Sponge Larvae (Frederick E. Warburton), 1317
Parenteral Administration of the Vitamin : Metabolites of Vitamin B_{12} in Bile after (Dr. John B. Stokes), 807
Park, Helen D., and others : Sexual Differentiation in *Hydra* in relation to Population Density, 92
Parker, C. A. (Dilworth, M. J., and) : Oxygen Inhibition of Respiration in *Azotobacter*, 520
Parkes, Dr. A. S. : Biological Control of Conception (Oliver Bird Lecture), 1256
Parks (National) Commission : Appointment of Colonel J. F. Williams-Wynne as a member, 546
Parkyn, Prof. D. G. : Analysis of Satellite Data, 896
Parliament : Recent Scientific Enquiries in, 857
Parr, Geoffrey : *Obituary* by T. H. Bridgewater, 332
Parra R., Joaquín, and others : New *Rh* Phenotype, *Dcce^{l}e^{i}f*, found in a Chibcha Indian Tribe, 503
Parry, Dr. W. E. : Thermodynamics with Quantum Statistical Illustrations, *review*, 1236
Parsons, F. M., and others : Elimination of Bovine Serum Albumin in Acute Experimental Uraemia, 1210
Parthenogenesis (Pathological), in a Viviparous Toothcarp (Prof. A. Stolk), 507
Partial Acid-Hydrolysis of a Mucopolysaccharide without Appreciable *N*-Deacetylation of Hexosamine (Dr. T. J. Painter and Prof. W. T. J. Morgan), 39
Particles : Elementary (CERN International Conference on), 126
  Wettability and the Capture, Carriage and Deposition of, by Raindrops (R. R. Davies), 616
Particles (Inhaled Radioactive) : Effects of—Report of the Subcommittee on Inhalation Hazards, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 848), 556
Particles (Sub-Cellular) : Ethylene Evolution and (Prof. Stanley P. Burg and Ellen A. Burg), 967
α-Particles (Polonium-210) : Circumscribing Irradiation of Surface Structures of Cylindrical Animal and Plant Cells with (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
Partington, Prof. J. R. : Progress in Chemistry, *review*, 637
Partington, Prof. J. R. (Wheeler, Prof. T. S., and) : The Life and Work of William Higgins, Chemist (1763-1825), *review* by Frank Greenaway, 533
Partition of Urine Nitrogen in Kwashiorkor (Dr. J. C. Edozien and E. J. Phillips), 47
Pasher, I., and others : Vitamin-Levels in Blood and Serum, 78
Pasirouk, K. : At the International Starch Conference (New Potato Washing Machine in use in Russian Starch Factories), 237
Passive Transfer of Contact Sensitivity to Picryl Chloride in Guinea Pigs, with Subcellular Material (Dr. J. L. Turk), 915
Passorn, Dr. P. N. A. (Goodwin, Prof. T. W., and) : Purine and Pyrimidine Metabolism in *Rhodospirillum rubrum*, 276
Pasteurella multocida : Role of the Pentose Phosphate Pathway in (Inda M. de Issaly, A. Issaly and Prof. A. O. M. Stoppani), 727
Pasteurella pestis : Absence of Lysogeny in (Dr. D. A. Smith), 522
Pasteurella pseudotuberculosis-specific Polysaccharides : Dideoxysugars of, and the Occurrence of Ascarylose (Dr. D. A. L. Davies), 43
Pasture (Ryegrass-dominant), grazed by Cows : Growth of, and Properties of New Zealand Butterfat (F. H. McDowall, W. A. McGillivray and J. C. Hawke), 303
Pasture Plants : Numbers and Types of Bacteria from the Rhizosphere of—Possible Occurrence of *L*-Forms (G. Jagnow), 1220
Patel, N. G., and others : Chromatographic Investigation of the Methyl Alcohol/Chloroform-soluble Constituents of Honeybee Larval Foods, 362
Path of the Giant Cell Axons in *Aplysia depilans* (Dr. G. M. Hughes and L. Tauc), 404
Pathogenesis (Physiology and), of the Stein–Leventhal Syndrome (Dr. Virendra B. Mahesh and Dr. Robert B. Greenblatt)—Urinary Androsterone, Etiocholanolone, Pregnanetriol and Δ^5-Pregnenetriol of Ovarian Origin in a Patient with Stein–Leventhal Syndrome, 888 ; Role of FSH in the Pathogenesis of the Stein–Leventhal Syndrome, 889
Pathogenic to Man : Use of Desertomycin Medium in Routine Selective Isolation of Fungi (J. Uri and Zs. Herpay), 1015
Pathogens: Bacterial Plant (C. Stapp), translated by A. Schoenfeld, *review* by Dr. W. J. Dowson, 4
Pathological Infection (Non-Lethal), of Roots (F. J. Newhook), 615
Pathological Parthenogenesis in a Viviparous Toothcarp (Prof. A. Stolk), 507
Pathology of Muscle : The Physiology, Pharmacology and, *review* by Dr. D. H. Sproull, 948
Pathology (Tropical) : Techniques in (Prof. B. G. Maegraith, Prof. W. E. Kershaw and D. Dagnall), *review* by Prof. P. C. C. Garnham, 1236
Paths of Inter-Molecular Energy Transfer in Photo-sensitized Oxidation-Reduction (N. Takeyama), 1359
Pathway (Pentose Phosphate) : Role of the, in *Pasteurella multocida* (Inda M. de Issaly, A. Issaly and Prof. A. O. M. Stoppani), 727
Pathways (Energy), of Hepatoma No. 5123 (Dr. Alan C. Aisenberg and Harold P. Morris), 1314
Patients with Gargoylism : Inclusions of Mucopolysaccharide in the Lymphocytes of (Ursula Mittwoch), 1315
Patients (Diabetic) : Rapid Infra-Red Determination of Acetone in the Blood and the Exhaled Air of (Dr. Richard D. Stewart, Edward A. Boettner and Bruce T. Stubbs), 1008
Patnaik, S. N. (Panigrahi, G., and) : Cytology of some Genera of Polypodiaceae in Eastern India, 1207
Patrick, C. R. (Allen, Dr. P. E. M., and) : Generation of Radicals in Pairs and the Kinetics of Radical Chain Reactions in Solution, 1194
Pattern of their Localization in Tissues : Paper Electrophoresis of Proteins while Preserving the (Dr. Zh. A. Medvedev), 1021
Pattern of Pyrethrin-resistance in Houseflies (B. C. Fine), 884
Pattern (Intracellular Distribution), of Rat Liver Glutamic-Oxalacetic Transaminase (Dr. Herbert J. Eichel and Josef Bukovsky), 243
Patterns (Electrophoretic and Immunoelectrophoretic), of Extracellular Diphtheria Proteins from Culture Filtrates of Different Iron Concentrations (Bertold J. Radola), 382
Patterns (Haptoglobin), in Cord Blood Serums (A. R. Rausen, P. S. Gerald and Dr. L. K. Diamond), 717
Patwa, D. K. (Modi, Prof. V. V., and) : Occurrence of Mevalonic Acid in Carrots, 1202
Patwardhan, N. K., and others : Basic Dyestuffs in Clay Mineralogy, 696
Paul, Dr. E. B. : Atomic and Nuclear Physics, *review*, 8
Paul Instrument Fund : Grant of £1,550 to Dr. E. T. Hall, for the design and manufacture of a recording instrument to give a direct reading of wave-length, 225
  Grant of £3,900 to Dr. P. B. Hirsch, for the construction of an electron optical instrument, 225
  Grant of £3,000 (in supplement of a previous grant) to Dr. H. Motz, for the construction of a linear accelerator working at 1·6 cm. (*J*-band), 225
  Grant of £2,284 to B. M. Turner, for the further development of micro-scale chromatography and electrophoresis techniques, 225
Pauling, Prof. Linus (Itano, Dr. Harvey A., and) : Thalassaemia and the Abnormal Human Haemoglobins, 398
Pawsey, Dr. J. L. : Awarded the degree of Hon.D.Sc. of the Australian National University, Canberra, 443
Payne, Dr. D. S. : Organo-Metal Compounds, *review*, 316
Pea (Common), *Pisum sativum* L. : Lipids of the, with special reference to the Occurrence of Galactolipids (S. Adhikari, Dr. F. B. Shorland and R. O. Weenink), 1301
Pea Plants (Etiolated) : Correlative Inhibition of Formation of Chlorophyll in the Leaves of (Jiří Úlehla), 613
Pea Seeds : Effect of Boric Acid on the Phosphoglucomutase of (Dr. B. C. Loughman), 1399
Peacock, A. C. : Design and Use of Respirators (Manufacture and Testing of Respirators), 656
Peacock, J. D.: Uranium in British Surface and Underground Waters, 1189
Peacock, W. J. : Sub-Chromatid Structure and Chromosome Duplication in *Vicia faba*, 832
Peak Areas in Gas–Liquid Chromatography : Quantitative Estimation of (Dr. K. K. Carroll), 377
Peak-Shift Technique in Gas–Liquid Chromatography—Trimethylsilyl Ether Derivatives of Alcohols (Stanley H. Langer and Peter Pantages), 141
Peake, Eric (Hodgson, G. W., and) : Metal Chlorin Complexes in Recent Sediments as Initial Precursors to Petroleum Porphyrin Pigments, 766
Pearce, Dr. Robert P. : Theoretical Meteorology, *review*, 314
Pearse, Dr. A. G. E. : Direct Relationship of Phosphorylase and Mitochondrial α-Glycerophosphate Dehydrogenase Activity in Skeletal Muscle, 504
Pearse, Dr. A. G. E. (Hess, R., and) : Histochemical and Homogenization Studies of Mitochondrial α-Glycerophosphate Dehydrogenase in the Nervous System, 718
Pecile, C. (Turco, A., and) : Co-ordination of the Thiocyanate Group in Inorganic Compounds, 66
Pedler, Dr. A. E. : Appointed a senior Research Fellow in the Department of Chemistry, University of Birmingham, 337
Peel of Apples : Preparation of Mitochondria from the (Dr. J. D. Jones and Dr. A. C. Hulme), 370
Pelser, Johannes : Appointment as technical managing director of the Reactor Centrum Nederland, 1042 ; work of, 1042
Penczak, Tadeusz : Significance of the Regeneration of Lateral Plates of the Stickleback (*Gasterosteus aculeatus* L.), 621
Penicillinase-producing Organisms : Use of Cellulose Acetate Membranes for detecting (Prof. R. Knox and J. T. Smith), 926
Penicillins (Acid-stable) : Some Novel (F. P. Doyle, J. H. C. Nayler, H. Smith and E. R. Stove), 1091
Penicillins and Cephalosporins : Colorimetric Detection of, on Paper (Robert Thomas), 1161
Penicillium chrysogenum : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of (A. Ballio, Prof. E. B. Chain, F. Dentice di Accadia, M. Mauri, K. Rauer, M. J. Schlesinger and Sondra Schlesinger), 909
Penicillium islandicum : Toxicology of (K. Uraguchi, T. Tatsuno, M. Tsukioka, Y. Sakai, F. Sakai, Y. Kobayahi, M. Saito, M. Enomoto and M. Miyake), 864
Penman, Dr. H. L. : Elected president for 1961-62 of the Royal Meteorological Society, 443
Pennington, Dr. W. B. : Appointed to the chair of pure mathematics in the University College of Wales, Aberystwyth, 333 ; work of, 333
Pentatomid : Extraction of Lipids from the Precursor of the Stylet-Sheath Material of a (P. W. Miles), 911
Pentose–Nucleic Acid Content of Sub-Cellular Fractions of the Brain of the Rat during 'Metrazol' Convulsions : Changes in the (Prof. G. P. Talwar, B. Sadasivudu and V. S. Chitre), 1007
Pentose Phosphate Pathway : Role of the, in *Pasteurella multocida* (Inda M. de Issaly, A. Issaly and Prof. A. O. M. Stoppani), 727
Peover, Dr. M. E. : Electron Affinity of the Acceptor Molecule in Charge-Transfer Complexes, 702
Pepper, Dr. D. C. : Appointed to the newly established chair of physical chemistry in Trinity College, Dublin, 333 ; work of, 333
Peptides (Oxytocic), in the Pituitary of a Marine Teleost Fish (*Pollachius virens*) : Pharmacological Characterization of the (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Peptides (Small) : Chemical Aspects of the Structure of (Dr. Dorothy Wrinch), *review* by Prof. H. N. Rydon, 105
Percentage of Total Calories from Protein in the Milk : Correlation between Growth-Rate of the Suckling of various Species and the (Dr. F. W. Bernhart), 358
Perceptual Defence and Filter Theory (Neville Moray), 940

Performing the Phenylalanine Test on Cultures from Multi-carbohydrate Media : A Micro-method for (D. J. Stewart), 521
Perfused Liver of Premature Lambs : Fructose and Lactic Acid Metabolism in the (W. H. H. Andrews, H. G. Britton and Dr. D. A. Nixon), 1307
Perfused Proximal Tubules (Single), of Rat Kidneys : Comparison of Short-Circuit Current and Net Water Movement in (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Periconia circinata : A Selective Toxin produced by (R. P. Scheffer and R. B. Pringle), 912
Périn, F., and others : A New Family of Potent Carcinogens—Benzopyridocarbazoles, 1005
Periodic Acid–Schiff Positive Giant Cells in the Mouse Thymus Cortex (D. Metcalf and M. Ishidate), 305
Peripheral Position of Sex Chromatin (Dr. Charles P. Miles), 626
Peripheral Vision : Effect of Attention in (Arthur Thomson), 732 ; (B. Babington Smith), 732
Periplaneta americana L. (Insect) : Exchanges of Sodium Ions in the Central Nervous System of an (J. E. Treherne), 1223
Perlman, D. : Vitamin B$_{12}$ and Intrinsic Factor (B$_{12}$ Coenzymes), 1154
Perls, T. A. : At the Second International Measurement Conference (Use of Pyroelectric Transducers for Heat-transfer Measurements), 1351
Permeability of Yeast : Changes of, with Sodium Deoxycholate (Dr. L. Kováč), 698
Permeation of Gaseous Oxygen through Vitreous Silica (Dr. Francis J. Norton), 701
Permselective Membranes : Poisoning and Sign Reversal of (Dr. Francis de Körösy), 1363
Peroxidase (Catalase and) : Effect of Excess Supply of Heavy Metals to Barley during Germination, with special reference to (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Peroxide (Hydrogen) : Cell Transplants of Avian Lymphomatosis treated with (Dr. V. L. Sanger), 1406
    Reactions of Haemoproteins with, and the Supposed Formation of Hydrogen Peroxide during the Autoxidation of Haemoglobin (Prof. D. Keilin), 769
Perren, Dr. E. A. : Design and Use of Respirators, 655
    Retirement as director of the Chemical Defence Experimental Establishment, Porton, 750 ; work of, 750
Perrin, Dr. D. D. : Improbability of the Chelation Hypothesis of Auxin Action, 253
Perrin, Dawn R., and Bottomley, W. : Pisatin, an Antifungal Substance from *Pisum sativum* L., 76
Perrin de Brichambaut, G. : Plant Exploration and Introduction (Comparative Study of Agro-Climates in the Winter-Rainfall Regions), 1240
Perry, Jerome J. : Prodigiosin in an Actinomycete, 77
Perry, Prof. S. V. : The Training of Biochemists (Growth and Development of Biochemistry in Britain), 955
Persistence of Erythrocyte Ghosts of Mediated Sugar Transport (Paul G. LeFevre), 970
Personnel (Science Information)—the New Profession of Information combining Science, Librarianship and Foreign Languages (Leonard Cohen and Kenneth Craven), 452
Personnel Management, Institute of : Job Analysis (H. E. Roff and T. E. Watson), 336
Persons with Tuberculous and Non-tuberculous Conditions : Mycobacteriophages isolated from (Dr. E. Mankiewicz), 1416
'Perspex' : Polarization induced by Radiation in (Dr. V. J. Vanhuyse, G. J. Vanpraet and J. F. Van Landùyt), 595
Peru : Flora of (J. Francis Macbride), *review* by N. Y. Sandwith, 214
Pests and Diseases (Forest Insect), in Canada (Prof. M. L. Anderson), 1260
Petch, B. (Farmer, J. B., and) : Electrolyte Retention produced by the Antialdosterone *SC* 5233, 1308
Peters, Prof. B. G. : Society of European Nematologists, 1048
Peters (Harry T.) 'American on Stone' Collection : The Victorian American —Lithographs from the (Antony N. B. Garvan and Peter C. Welsh), 226
Peters, Sir Rudolph : Awarded the degree of Hon.D.Sc. of the Australian National University, Canberra, 443
Petersen, D. F., and others : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Methods for Growing HeLa Cell Suspensions in the Presence of Tritiated Thymidine and Tritium Water), 341
Petroleum : Origins of (Sir Robert Robinson), 346
Petroleum, Institute of : Glossary of Petroleum Terms (edited by George Sell), third edition, 22
Petroleum, Institute of (Mass Spectrometry Panel), and the American Society for Testing Materials (Committee *E*-14) : Conference on Mass Spectrometry, 24
Petroleum Engineers (Mining, Metallurgical and), American Institute of (Iron and Steel Institute and the Metallurgical Society of the) : Special Meeting in the United States and Canada, 651
Petroleum Information Bureau : U.K. Petroleum Industry Statistics relating to Consumption and Refinery Production 1959 and 1960, 123
Petroleum Porphyrin Pigments : Metal Chlorin Complexes in Recent Sediments as Initial Precursors to (G. W. Hodgson and Eric Peake), 766
Petroleum Terms : Glossary of (edited by George Sell), third edition (Institute of Petroleum), 22
Pettersson, Dr. Bror : Mutagenic Effect of Radiant Heat Shocks on Phanerogamous Plants, 1167
Pettersson, Prof. Hans : The Frequency of Meteorite Falls throughout the Ages, 482
Pfau, A. : Vitamin B$_{12}$ and Intrinsic Factor (Broad Bean (*Vicia faba*) Plants can take up Vitamin B$_{12}$ from Nutrient Solutions), 1155
Pfizer Group : Laboratories for Research into Virus Diseases, 20
*p*H of Soap Solutions (D. Eagland and F. Franks), 1003
Phage Alpha : Some Properties of the Deoxyribonucleic Acid of (S. Cordes, H. T. Epstein and Prof. J. Marmur), 1097
Phagocytic Activity of the Reticulo-Endothelial System of Mice : Effect of Added Vitamins on the (J. Cordingley and Prof. T. Nicol), 82
Phanerogamous Plants : Mutagenic Effect of Radiant Heat Shocks on (Dr. Bror Pettersson), 1167
Pharmaceutical Conference (British) : Symposium on Skin Medication, 755
Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a Marine Teleost Fish (*Pollachius virens*), (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Pharmacologically Active Substances present in the Central Nervous System (Dr. Paul V. Buday), 245
Pharmacology of the Alkaloidal Fraction from the Bark of the Jamaican Shade Tree *Pithecolobium samath* Benth. (B. E. Leonard and Dr. H. S. A. Sherratt), 287
Pharmacology and Pathology of Muscle : The Physiology, *review* by Dr. D. H. Sproull, 948
Pharmacy : Remington's Practice of (edited by Eric W. Martin, E. Fullerton Cook, E. Emerson Leuallen, Arthur Osol, Linwood F. Tice and Clarance T. Van Meter), twelfth edition, *review* by Dr. J. H. Gaddum, 8
Pharmacy (Medicine and) : Second Annual Report and List of Members (1960-61) of the Faculty of the History of (Worshipful Society of Apothecaries of London), 21
Phase of Radio Signals : Effect of External Conditions on the (D. E. Watt-Carter and R. L. Corke), 1286
Phase (Juvenile), of Apple Seedlings : Shortening the (A. I. Campbell), 517
Phase (A New), formed by High-Pressure Treatment—Face-centred Cubic Molybdenum Monocarbide (E. V. Clougherty, K. H. Lothrop and J. A. Kafalas), 1194
Phase (Stationary) *Aerobacter aerogenes* : Induced Enzyme Synthesis in Aqueous Suspensions of Starved (R. E. Strange), 1272
Phase (*T*-) : Appearance of the (R. Green), 997
Phase (Tetragonal Mullite-like), from Co-precipitated Gels (J. Ossaka), 1000
Phase Velocities (Group and), of a Travelling Disturbance in the *F* Region of the Ionosphere (Dr. L. H. Heisler and Dr. J. D. Whitehead), 157
Phaseolus vulgaris : Sucrases in (R. A. Cooper and R. N. Greenshields), 601
Phenethyl Alcohol and Tyrosol : Formation of, during Fermentation of a Synthetic Medium lacking Amino-acids (R. Stevens), 913
Phenolic Compounds (Natural) : Stereochemistry of (Plant Phenolics Group Symposium on), 234
Phenomena (Spallation) : Fission and, and their Application to Cosmic Rays (European Organization for Nuclear Research and the Max Planck Institute, Heidelberg, Conference on), 24
Phenomena (Thermo-electric), in Electrodialysis Systems (Dr. Lloyd H. Shaffer), 591
Phenomenological Movement : The (Dr. Herbert Spiegelberg), *review* by F. I. G. Rawlins, 5
Phenomenology : An Appraisal of, *review* by F. I. G. Rawlins, 5
Phenomenon (Sickling) : Haemoglobin 'Barts' and the (Dr. Lie-Injo Luan Eng), 1314
Phenomenon (Simonsen) : Large Lymphocytes and the (Dr. Aleksander Szenberg and N. L. Warner), 920
Phenotype (New *Rh*), $Dcce^{f}e^{f}$, found in a Chibcha Indian Tribe (Dr. Miguel Layrisse, Zulay Layrisse, Esperanza García, Dr. Johannes Wilbert and Joaquín Parra R.), 503
Phenotypes : Differential Inhibition of Human Serum Cholinesterase with Fluoride—Recognition of Two New (Prof. H. Harris and Mary Whittaker), 496
    Serum Transferrins in the Genus *Macaca*—Species Distribution of Nineteen (Prof. Morris Goodman and Emily Poulik), 1407
Phenoxybenzamine : Stimulation of the Heart of the Spinal Dog by (B. G. Benfey and D. R. Varma), 919
Phenylalanine Test on Cultures from Multi-carbohydrate Media : A Micro-method for Performing the (D. J. Stewart), 521
Philbin, Dr. Eva M. : Appointed to the chair of organic chemistry in University College, Dublin, 439 ; work of, 439
Philippine Macaques : Isolation of *Plasmodium knowlesi* from (F. L. Lambrecht, Dr. F. L. Dunn and Dr. D. E. Eyles), 1117
Philips Technical Review, Vol. 22, Nos. 9 and 10, devoted to the material Glass, 1143
Phillips, A. P., and Burrows, R. B. : Pyridine Derivatives with Anthelmintic Activity, 707
Phillips, Dr. C. M. : Blindness in Africans in Northern Rhodesia, 753
Phillips, Dr. D. C. : Effects of Ionizing Radiation on Organic and Biological Solids (Chemical Changes on Irradiation), 1151
Phillips, E. J. (Edozien, Dr. J. C., and) : Partition of Urine Nitrogen in Kwashiorkor, 47
Phillips, Dr. J. N. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 126
Phillips, Prof. J. N. : Appointed reader in morbid anatomy at the Postgraduate Medical School of London, 1349
Philosophical Society (American) : Year Book 1960, 335
    History of the American Philosophical Society (E. G. Conklin), 335
Philosophical Society (Yorkshire) : Report for 1960, 442
Philosophy of Science, British Society for the : Sixth Annual Conference, 338
Phipps, Edward, and others : Effect of Administration of Lysergic Acid Diethylamide on Serotonin-Levels in the Body, 499
Phleum pratense L. (S.48 Timothy) : Effects of Light Intensity on Reproduction in (Dr. G. J. A. Ryle), 196
Phloridzin (Cetrimide–) Combination : Enhancement of Inhibition of Intestinal Absorption by (J. A. Nissim), 37
Phormia regina Meigen (Blowfly) : Response of the Labellar Hairs of the, to Protein (D. I. Wallis), 917
Phosphatase (Alkaline) : Distribution of (Phosphatases in *Schistosoma mansoni*), (Dr. D. L. H. Robinson), 473
Phosphatases : Quantitative Estimation of (Phosphatases in *Schistosoma mansoni*), (Dr. D. L. H. Robinson), 473
Phosphatases in *Schistosoma mansoni* (Dr. D. L. H. Robinson)—Distribution of Alkaline Phosphatase, 473 ; Quantitative Estimation of Phosphatases, 473
Phosphate (Inorganic and Organic) : Outflux of, during Membrane Depolarization of Excitable Tissues (Dr. L. G. Abood, Prof. K. Koketsu and I. Koyama), 395
Phosphate (Pentose) Pathway : Role of the, in *Pasteurella multocida* (Inda M. de Issaly, A. Issaly and Prof. A. O. M. Stoppani), 727
Phosphate Metabolite (Tri-*o*-Cresyl) : Biological Activity of a (Prof. John E. Casida, Morifusa Eto and Ronald L. Baron), 1396
Phosphate-dependent Degradation of Urea (R. C. Valentine and Prof. R. S. Wolfe), 925
Phosphoglucomutase of Pea Seeds : Effect of Boric Acid on the (Dr. B. C. Loughman), 1399
Phosphoproteins of Mitochondria : Electron Transport System and (K. Ahmed, J. D. Judah and C. H. Gallagher), 1309
Phosphorus-32 : Incorporation of, into Urinary Concretions forming on Zinc Implants in Rat Bladders (Dr. Richard F. Keeler and Dr. Stuart A. Lovelace), 715

Phosphorus Metabolism of Brain (Dr. P. J. Heald), *review* by Dr. R. V. Coxon, 318
Phosphorylase and Mitochondrial α-Glycerophosphate Dehydrogenase Activity in Skeletal Muscle : Direct Relationship of (Dr. A. G. E. Pearse), 504
Phosphorylation : Coupling of, to Electron and Hydrogen Transfer by a Chemi-Osmotic Type of Mechanism (Dr. Peter Mitchell), 144
  Inhibition of, by Atractyloside (Dr. A. Bruni and A. R. Contessa), 818
Photic Reversal of the Beetle *Trypodendron* : Air-Swallowing, a Mechanism in (Prof. Kenneth Graham), 519
Photochemical Production of Semiconducting High Polymers (Prof. Gerald Oster, Dr. Gisela K. Oster and Dr. Marian Kryszewski), 164
Photochromic Polymer : A Reversible (A. G. Massey and Dr. L. E. Orgel), 1387
Photoelasticity (Illinois Institute of Technology, Chicago, International Symposium on), 755
Photography at the Federal Technical College, Zurich, 1043
Photography of Cerenkov Light from Extensive Air Showers in the Atmosphere (D. A. Hill and N. A. Porter), 690
Photometric Technique (A New), using a Variable Shutter Device (Dr. O. C. Jones and Dr. F. J. J. Clarke), 1290
Photoperiod : Flower Initiation in the Carnation in Response to (Dr. G. P. Harris and Juliet E. Griffin), 614
Photoperiodic Effects on Stomatal Behaviour in *Xanthium pennsylvanicum* (Dr. T. A. Mansfield and Prof. O. V. S. Heath), 974
Photoperiods (Different) : Effect of Gibberellic Acid on Growth and Indoleacetic Acid Oxidase Activity of *Lupinus albus* L. exposed to (F. Sági and A. S. Garay), 824
Photophosphorylation and the Hill Reaction (Mary Stiller and Prof. Birgit Vennesland), 677 ; (Dr. N. E. Good), 678 ; (Dr. André T. Jagendorf), 679
Photo-Polarography with a Flash-Lamp (Dr. H. Berg and H. Schweiss), 1270
Photoreceptor (Biological) : Transfer Function of a (Dr. Lawrence Stark and Dr. Howard T. Hermann), 1173
Photo-Sensicivity of Thiazine Leucobases (D. W. Menzies), 505
Photosensitivity Reactions : Mast Cells in (V. J. McGovern), 90
Photo-Sensitized Oxidation-Reduction : Paths of Inter-Molecular Energy Transfer in (N. Takeyama), 1359
Photosynthesis : Experimental Evidence for the Mechanism of (Dr. H. T. Witt, A. Müller and B. Rumberg), 194
  Inhibition of Growth and Photosynthesis in Submerged Plants with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and Reversal of this Inhibition of (P. E. Björn Lindahl), 51
Photosynthesis in Submerged Plants : Inhibition of Growth and, with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
Photosynthetic (Non-) Plant Tissue : Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate Dehydrogenase in a (C. R. Benedict and Dr. H. Beevers), 71
Phycomycetes isolated from Subcutaneous Phycomycosis in Uganda : Two (Dr. A. M. M. Wilson), 612
Phycomyces carotenoids : Incorporation of 5,10,15 ^{14}C-Farnesol Pyrophosphate into (H. Yamamoto, H. Yokoyama, K. Simpson, T. O. M. Nakayama and C. O. Chichester), 1299
Phycomycosis (Subcutaneous), in Uganda : Two Phycomycetes isolated from (Dr. A. M. M. Wilson), 612
Phylogeny : Vertebrate, *review* by Dr. E. Trewavas, 945
Physical Chemistry in Trinity College, Dublin, 333
Physical Methods of Organic Chemistry (edited by Arnold Weissberger), third edition, Parts 3 and 4, *review* by Dr. W. A. Waters, 317
Physical Problems : Non-Linear (Indian Society of Theoretical and Applied Mechanics and Unesco Symposium on), 855
Physical Society (Institute of Physics and the) : Guthrie Lecture (Dr. D. Shoenberg, The de Haas-van Alphen Effect and the Electronic Structure of Metals), 126
  Election of Officers, 228
  Residential Symposium on Some Aspects of the Physics of Space Research, 229
  Symposium on High Energy Nuclear Physics, 1349
Physical Society (Electronics Group of the Institute of Physics and the) : Conference on the Physics of Gas Discharge Devices, 546
Physical Society (Institute of Physics and the), and the British Radio Spectroscopy Group : Joint Conference on Radio Spectroscopy of Solids, 126
Physical Society (Non-Destructive Testing Group of the Institute of Physics and the), (British Society of Rheology and the) : Joint Conference on Rheological Techniques, 24
Physical Society, and others : International Conference on Magnetism and Crystallography, 24
Physicists' (Hospital) Association : Douglas Lea Memorial Lecture (Dr. E. L. Powers), 1045
Physicists and Mathematicians : The Atomic Problem—a Challenge to (Lancelot Law Whyte), *review* by Prof. R. Eisenschitz, 214
Physics at Sheffield, 543
Physics : Achievements in, *review* by Prof. W. E. Burcham, 423
  Atomic and Nuclear (Prof. Robert S. Shankland), second edition, *review* by Dr. E. B. Paul, 8
  The New Age in (Prof. Sir Harrie Massey), *review* by Prof. W. E. Burcham, 423
Physics of Gas Discharge Devices (Electronics Group of the Institute of Physics and the Physical Society Conference on), 546
Physics for Grammar Schools (Science Masters' Association and the Association of Women Science Teachers), 555
Physics of Space Research : Some Aspects of the (Institute of Physics and the Physical Society Residential Symposium on), 229
Physics, Institute of, and the Physical Society : Guthrie Lecture (Dr. D. Shoenberg, The de Haas-van Alphen Effect and the Electronic Structure of Metals), 126
  Election of Officers, 228
  Residential Symposium on Some Aspects of the Physics of Space Research, 229
  Symposium on High Energy Nuclear Physics, 1349
Physics, Institute of, and the Physical Society (Electronics Group) : Conference on the Physics of Gas Discharge Devices, 546
Physics, Institute of, and the Physical Society and the British Radio Spectroscopy Group : Joint Conference on Radio Spectroscopy of Solids, 126
Physics, Institute of, and the Physical Society (Non-Destructive Testing Group), (British Society of Rheology and the) : Joint Conference on Rheological Techniques, 24
Physics (Nuclear) : High Energy (Institute of Physics and the Physical Society Symposium on), 1349
Physics (Nuclear), in Australia : Future of (Prof. E. W. Titterton), 639
Physics (Plasma), and Controlled Nuclear Fission Research (International Atomic Energy Agency International Conference on), 443
Physiological Significance of Surface Wax on Leaves (D. M. Hall and R. L. Jones), 95
Physiology : Foetal and Neonatal (*British Medical Bulletin*, Vol. 17, No. 2), (British Council), 344
Physiology of Crustacea (edited by Talbot H. Waterman), Vol. 2, Sense Organs, Integration and Behaviour, *review* by Dr. J. Green, 428
Physiology (Digestive), and Nutrition of the Ruminant—Proceedings of the University of Nottingham Seventh Easter School in Agricultural Science, 1960 (edited by Dr. D. Lewis), *review* by Dr. I. W. McDonald, 1334
Physiology and Pathogenesis of the Stein–Leventhal Syndrome (Dr. Virendra A. Mahesh and Dr. Robert B. Greenblatt)—Urinary Androsterone, Etiocholanolone, Pregnanetriol and Δ^5-Pregnenetriol of Ovarian Origin in a Patient with Stein–Leventhal Syndrome, 888 ; Role of FSH in the Pathogenesis of the Stein–Leventhal Syndrome, 889
Physiology, Pharmacology and Pathology of Muscle, *review* by Dr. D. H. Sproull, 948
Physostigmine : Inhibition by, of the Increase of Oxygen Consumption induced by Potassium in Muscle (Dr. Ivan Novotny and František Vyskočil), 916
Phytochemical Survey : New Zealand, 545
Phytoplankton Multi-Sampler and its Use in Lake Victoria (Dr. J. H. Evans), 53
π-Electronic Excitation and Ionization Energies of Condensed Ring Aromatic Hydrocarbons (Dr. J. B. Birks and M. A. Slifkin), 761
Piacitelli, John, and Santilli, Prof. Vincent : Relationship of Tobacco Mosaic Virus (TMV) Lesion Number and Concentration to the Rate of Lesion Production on Pinto Bean, 624
Piazza, A., and others : Blockage of Transformation of Tryptophan to Nicotinic Acid by Experimental Hepatitis in Mice, 601
Picciotto, Prof. E. E., and others : Age Measurements on Antarctic Rocks (Queen Maud Land), 1286
Pichi-Sermolli, Prof. R. E. G. : Flora Europaea (Regional Check-lists for *Flora Europaea*), 448
Pichinoty, Francis, and D'Ornano, Liliane : Inhibition by Oxygen of Biosynthesis and Activity of Nitrate-Reductase in *Aerobacter aerogenes*, 879
Pickard, Prof. G. L., and others : A Lake in British Columbia containing Old Sea-Water, 830
Picker (James) Foundation : Fellowships and Grants in the field of radiology and nuclear medicine for 1962-63, 228
Pickering, B. T., and others : Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a Marine Teleost Fish (*Pollachius virens*), 670
Pickering, Sir George : What is Basic Science ?, *review*, 530
Pickles, Dr. V. R. : Appointed to a readership in physiology in the University of Sheffield, 229
Picryl Chloride in Guinea Pigs : Passive Transfer of Contact Sensitivity to, with Subcellular Material (Dr. J. L. Turk), 915
Picton and Hornby Libraries : Brown, (Liverpool Libraries, Museums and Arts Committee), 21
Pierce, A. E. : Immunity to Protozoa (Local Immunity in Coccidiosis), 553
Pigment Bodies of the Spinal Neurones of some Teleosts (Prof. A. Stolk), 924
Pigment Cell Biology (New York Academy of Sciences fifth International Conference on), 1045
Pigmentation : Inter-Individual Variability in (André Leguebe), 1326
Pigments of a New Nitrogen-fixing Micro-organism : Chemical Character of the (Gy. Németh, F. Uresch, Prof. G. Fodor and L. Láng), 1413
Pigments (Damselfly) : Isolation and Fractionation of some (C. B. Coulson and P. Mary Lord), 1300
Pigments (Petroleum Porphyrin) : Metal Chlorin Complexes in Recent Sediments as Initial Precursors to (G. W. Hodgson and Eric Peake), 766
Pignatti, Dr. S. : Flora Europaea (Taxonomy and Relationship of the Genus *Limonium* in Italy and Spain), 447
Pillow, W. A. E. : Digital Computers, their Use and Control (Description of a Transportation Problem and its Solution), 554
Pinch ('Theta') : A New 'Wedge' Type Instability observed in a (J. K. Wright, R. D. Medford, J. D. Herbert and R. C. Pottinger), 1054
Pincus, Gregory, and Vollmer, Erwin P. (edited by) : Biological Activities of Steroids in relation to Cancer—Proceedings of a Conference sponsored by the Cancer Chemotherapy National Service Center, National Cancer Institute, National Institutes of Health, United States Department of Health, Education and Welfare, *review* by E. Reid, 1235
Pinder, Dr. A. R. : The Chemistry of the Terpenes, *review* by Prof. B. C. L. Weedon, 1234
Pine Stands for Pulpwood : Management of (J. J. Kotzé), 855
Pine Stumps : Inoculation of, against Infection by *Fomes annosus* (Dr. J. Rishbeth), 826
Pinnal Anaphylaxis, an Additional Anaphylactic Site (Dr. J. G. Feinberg), 712
Pinto Bean : Relationship of Tobacco Mosaic Virus (TMV) Lesion Number and Concentration to the Rate of Lesion Production on (John Piacitelli and Prof. Vincent Santilli), 624
Pinus sylvestris L. : Effect of Red and Far-red Irradiation on the Germination Process in Seeds of (Bengt Nyman), 1219
Pioneer V : Magnetic Storms in Interplanetary Space as observed by (Eugene W. Greenstadt), 329
Piperidine in the Brain : Distribution of, and its Possible Significance in Behaviour (Dr. L. G. Abood, F. Rinaldi and Virginia Eagleton), 201
Pirie, Antoinette : Cholesterol in the Tapetum Lucidum of the Eye of the Opossum, *Didelphis virginiana*, 708
Pisatin, an Antifungal Substance from *Pisum sativum* L. (Dawn R. Perrin and W. Bottomley), 76

Pisum sativum : Effects of Gibberellic Acid and Allogibberic Acid on Flowering and Internode-Length in (I. C. Murfet and H. N. Barber), 514
Pisum sativum L. : Pisatin, an Antifungal Substance from (Dawn R. Perrin and W. Bottomley), 76
Pisum sativum L. (Common Pea) : Lipids of the, with special reference to the Occurrence of Galactolipids (S. Adhikari, Dr. F. B. Shorland and R. O. Weenink), 1301
Pit Membrane of Wood Cells : Staining Reaction of the (R. K. Bamber), 409
Pitcher, R. S. : Nematology (Importance of Nematodes as Vectors of Virus Pathogens), 1048
Pithecolobium samath Benth. (Jamaican Shade Tree) : Pharmacology of the Alkaloidal Fraction from the Bark of the (B. E. Leonard and Dr. H. S. A. Sherratt), 287
Pittsburgh Diffraction Conference : Annual (Mellon Institute, Pittsburgh), 755
Pituitary of a Marine Teleost Fish (*Pollachius virens*) : Pharmacological Characterization of the Oxytocic Peptides in the (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Pituitary Growth Hormone : Effect of, on Cholesterogenesis (Dr. A. L. Greenbaum and R. S. Leal), 600
Pituitary Interstitial Cell-stimulating Hormone (Human) : An Immunological Study of a (N. R. Moudgal and Prof. Choh Hao Li), 192
Place, J. A. : The International Measurement Conference, 1350
Place-Name Society (English) : Vols. 30, 31 and 32, The Place-Names of the West Riding of Yorkshire (Prof. A. H. Smith), Part 1, Lower and Upper Strafforth and Staincross Wapentakes ; Part 2, Osgoldcross and Agbrigg Wapentakes ; Part 3, Morley Wapentake, *review* by Prof. H. C. Darby, 208
Place-Names of the West Riding of Yorkshire (Prof. A. H. Smith), Part 1, Lower and Upper Strafforth and Staincross Wapentakes ; Part 2, Osgoldcross and Agbrigg Wapentakes ; Part 3, Morley Wapentake, *review* by Prof. H. C. Darby, 208
Planck (Max) Institute, Heidelberg (European Organization for Nuclear Research and the) : Conference on Fission and Spallation Phenomena and their Application to Cosmic Rays, 24
Planck's Constant : Theory of the Red Shift and the Nature of (L. Infeld), 1184
Planetarium Equipment : Japanese, 753
Planetarium Projectors : Minolta (Chiyoda Kogaku Seiko K. K.), 753
Plankton off Newfoundland during Winter Months : Warm-water Species in the (V. Bainbridge), 1216
Plankton Research : Fellowships for (Lamont Geological Observatory), 754
Plankton and Fish (Hydrogen Ion Concentration,), in Fresh-water Eutrophic Lakes of India (Dr. S. M. Das), 511
Planning of Public Health Services (United Nations, World Health Organization, Technical Report Series No. 215—Fourth Report of the Expert Committee on Public Health Administration), 441
Plant (Cactus) : Diurnal Variation in Transaminase Activity in the (S. K. Mukerji, G. G. Sanwal and Prof. P. S. Krishnan), 516
Plant (Tea) : Classification of the (Dr. H. H. Mann), 409
Plant Breeding : Principles of (Prof. R. W. Allard), *review* by Dr. Kenneth S. Dodds, 636
Plant Cells (Cylindrical Animal and) : Circumscribing Irradiation of Surface Structures of, with Polonium-210 α-Particles (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
Plant Diseases (Bacterial), of Central Europe : Some, *review* by Dr. W. J. Dowson, 4
Plant Exploration and Introduction (Food and Agriculture Organization of the United Nations Technical Meeting on), 1240
Plant Growth in Irradiated Soil (G. D. Bowen and A. D. Rovira), 936
Plant-Growth (Enhanced), with Two Systemic Insecticides (M. M. H. Wallace), 513
Plant Pathogens : Bacterial (C. Stapp), translated by A. Schoenfeld, *review* by Dr. W. J. Dowson, 4
Plant Phenolics Group : Meeting on Wood Extractives, 229
  Symposium on the Stereochemistry of Natural Phenolic Compounds, 234
Plant Protein : Enzymic Conversion of Tetrahydrogolic Acid to Folinic Acid by (E. H. Byers, J. Stewart and T. J. Bond), 179
Plant Protoplasts : Properties of Isolated (C. G. Cocking), 780
Plant Roots : Dependence on Light of Geotropism in (J. V. Lake and G. Slack), 300
Plant Survival : Light Rainfall and—Measurement of Stem Flow Run-off (M. D. Gwynne and J. Glover), 1321
Plant Taxonomy as a Scientific Discipline (Dr. R. E. Holttum), 990
Plant Tissue (Non-Photosynthetic) : Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate Dehydrogenase in a (C. R. Benedict and Dr. H. Beevers), 71
Plant Viruses (Dr. Kenneth M. Smith), third edition, *review* by Dr. B. D, Harrison, 111
Planterose, D. N., and others : Effect of *p*-Fluorophenylalanine on the Multiplication of Foot-and-Mouth Disease Virus, 414
Plants : Conversion of L-Galactono-γ-lactone into L-Ascorbic Acid by (Dr. G. A. D. Jackson, R. B. Wood and M. V. Prosser), 282
  Extraction of Heat-Labile Alkaloids from (Dr. A. R. Mattocks), 1281
  Gibberellin-like Substances in (Margaret Radley)—Leguminous Root Nodules, 684 ; Seaweed (*Fucus vesiculosus*), 685
  1-(Indole-3-acetyl)-β-D-Glucose, a New Compound in the Metabolism of Indole-3-acetic Acid in (Dr. M. H. Zenk), 493
  Respiratory Metabolism in (Prof. Harry Beevers), *review* by Prof. W. O. James, 1031
  Transformation in, of Sodium Dimethyldithiocarbamate into other Fungitoxic Compounds (H. M. Dekhuijzen), 198
Plants (Etiolated Pea) : Correlative Inhibition of Formation of Chlorophyll in the Leaves of (Jiří Úlehla), 613
Plants (Higher) : Some Characteristics of Mitochondria Extracted from (Dr. Walter D. Bonner, jun., and Dinor O. Voss), 682
Plants (Pasture) : Numbers and Types of Bacteria from the Rhizosphere of —Possible Occurrence of *L*-Forms (G. Jagnow), 1220
Plants (Phanerogamous) : Mutagenic Effect of Radiant Heat Shocks on (Dr. Bror Pettersson), 1167
Plants (Submerged) : Inhibition of Growth and Photosynthesis in, with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
Plasma in Cusp Geometry : Experiments on the Compression of (Dr. T. K. Allen and Dr. R. J. Bickerton), 794
Plasma of Pregnant Women : Oxytocinase Activity of (Stig E. J. Melander), 176
Plasma (Exploding Wire) : Magnetic Mirror Confinement of (E. J. Seykora), 995
Plasma Calcium in the Calf : Importance of Magnesium in the Control of (Dr. R. H. Smith), 181
Plasma Fibrinolysis (Spontaneous) : Determination of, by a Practical Procedure (Dr. H. Yatzidis), 604
Plasma Physics and Controlled Nuclear Fission Research (International Atomic Energy Agency International Conference on), 443
Plasma Proteins : Influence of, in the Control of Mitosis-rates in Generating Liver (Dr. J. T. Hemingway), 706
Plasmin : Action of, on Cartilage Matrix *in vivo* (Dr. C. H. Lack, A. J. Anderson and S. Y. Ali), 1402
Plasmodium knowlesi : Isolation of, from Philippine Macaques (F. L. Lambrecht, Dr. F. L. Dunn and Dr. D. E. Eyles), 1117
Plastic Limit (Upper), of Clays : Role of Interparticle Forces in Development of (Dr. Raymond Yong and E. T. Selig), 938
Plastics (Plastics Institute Lectures on), 650
Plastics Institute : Election of Officers for 1961-62, 959
  Lectures on Plastics, 650
  Appointment of L. M. Read as chairman of the Council, 1145
  Appointment of members of the Building Committee, 1145
Plastifying Treatment : Electrophoresis in a Thin Layer of Starch-Gel followed by a (J. Groulade, Dr. J. M. Fine and C. Ollivier), 72
Plastoquinone in Isolated Chloroplasts : Oxidation-Reduction Reactions of (Dr. E. R. Redfearn and J. Friend), 806
Platelets (Anti-), (Anti-Leucocyte Cytoplasm, Anti-Leucocyte Nuclei, and), in Disseminated Lupus Erythematosis (Prof. J. Dausset, J. Colombani and M. Colombani), 1209
Plates (Lateral), of the Stickleback (*Gasterosteus aculeatus* L. : Significance of the Regeneration of (Tadeusz Penczak), 621
Platinum (Zero-valent) : Complex Compounds of (Dr. J. Chatt and G. A. Rowe), 1191
Platt, Prof. B. S. : At the Third International Congress of Dietetics (Nutrition of the Mother and her Child), 1344
Platzman, Prof. R. L. : Effects of Ionizing Radiation on Organic and Biological Solids (Present State of the Theory of Primary Processes), 1150
Pleistocene Age : Specimens of very early, from certain beds in Israel (Dr. Desmond Clark), 23
Pleuropneumonia-like Organisms isolated from Tissue Cell Cultures : Immunofluorescence of (Major W. F. Malizia, M. F. Barile and D. B. Riggs), 190
Plommer, Dr. Hugh : Archaeology of Old Smyrna, *review*, 212
Plotz, Paul H., and others : Influence of Salts on the Uptake of Streptomycin by *Escherichia coli*, 1324
δ-Plutonium : Structure of (J. A. C. Marples and J. A. Lee), 1391
Pneumococcal Infection of Mice : Non-Specific Immunity in (Dr. G. N. Cooper and Dr. A. E. Stuart), 295
Pneumodermopsis paucidens in the North Sea (G. A. Cooper and D. C. T. Forsyth), 1412
Podliachouk, Luba, and others : Serum Factor *Gma* among the Iranians, 717
Poetry : Science and (T. R. Henn), 534
Poggi, M., and others : Effect of Serotonin on Absorption and Distribution of Calcium-45 in the Rat, 185
Poikilohydrous, Poikilochlorophyllous Angiosperm from Africa (Dr. D. J. Hambler), 1415
Point of View : Science and Education—the Teachers', 555
Poisoning (Chronic Copper), of Sheep : Methaemoglobin in (J. R. Todd and R. H. Thompson), 89
Poisoning and Sign Reversal of Permselective Membranes (Dr. Francis de Körösy), 1363
Polar Research : Soviet, *review* by Dr. Terence Armstrong, 841
Polarization induced by Radiation in 'Perspex' (Dr. V. J. Vanhuyse, G. J. Vanpraet and J. F. Van Landuyt), 595
Polarization of Triplet→Singlet Emission Spectra (V. G. Krishna and Prof. Lionel Goodman), 800
Polarized Light : Analysis of, by the Bee's Eye (Prof. Donald Kennedy and Dr. Edward R. Baylor), 34
Polarographic Examination of Sialic Acids (Barbara Robert, Max E. Rafelson and Ladislas Robert), 596
Polarography (Photo-), with a Flash-Lamp (Dr. H. Berg and H. Schweiss), 1270
Polianskii, N. G. (Busev, A. I., and) : The Use of Organic Reagents in Inorganic Analysis (translated from the Russian by J. T. Greaves), *review* by Dr. D. T. Lewis, 1336
Poliovirus : Chromatographic Analysis of Infectious Ribonucleic Acid from (C. Cocito, A. Prinzie and P. De Somer), 573
Poliovirus Multiplication : Effects of Heavy Water on—Results and Speculations on Mechanism (Dr. David Kritchevsky, Dr. Richard I. Carp and Dr. Hilary Koprowski), 250
Polish Textile Research, 1045
Politechnika Lodzka : *Zeszyty Naukowe Politechniki Lodzkiej* (Journal of the), Textile Section, Vols. 6 and 7, 1045
Politics and Social Service : Science, (Earl of Cranbrook), 992
Poliwoda, Dr. Hubert : Treatment of Thrombocytopaenic Haemorrhage with Œstriol Succinate, 400
Pollachius virens (Marine Teleost Fish) : Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Pollan (Lough Neagh), *Coregonus pollan*, Thompson : Furunculosis in (K. U. Vickers and R. McClean), 930
Pollard, Dr. F. H. : Paper Chromatography (Separation of particular families of Compounds—Present Work and Advances in the Inorganic Field), 759
Pollination (Intra-ovarian), in *Eschscholzia californica* Cham., *Argemone mexicana* L. and *A. ochroleuca* Sweet (Prof. P. Maheshwari and Kusum Kanta), 304
Pollution from Refuse Tips (Nora H. Johnson), 864
Pollution of Water by Tipped Refuse—Report of the Technical Committee on the Experimental Disposal of House Refuse in Wet and Dry Pits (Ministry of Housing and Local Government), 864
Polonium-210 : Radiolytic Oxidation of Ferrous Solutions with Standardized Internal Sources of (J. Steyn and D. van As), 903

Polonium-210 α-Particles : Circumscribing Irradiation of Surface Structures of Cylindrical Animal and Plant Cells with (R. M. Bergström, F. R. Blåfield and M. W. Brenner), 1165
Poly-β-Hydroxybutyric Acid : Formation and Utilization of, by Knallgas Bacteria (*Hydrogenomonas*), (Prof. H. G. Schlegel, G. Gottschalk and R. von Bartha), 463
Polyamino Carboxylic Acids : Effect of, on Catalase (Dr. Joan Bond and J. G. Cooper), 385
Polychaete *Odontosyllis phosphorea* Moore, var. *Nanaimoensis* Berkeley : Swarming of the, near Nanaimo, B.C. (E. Berkeley), 1321
Polycrystalline Boron : Electrical Effects observed in (C. H. Carmichael and M. Dore), 485
Polycyclic Aromatic Hydrocarbons : Non-Enzymic Hydroxylation of (F. Dewhurst and G. Calcutt), 808
Polycythaemic : Bio-Assay of Erythropoietin in Mice made, by Exposure to Air at a Reduced Pressure (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Polydipsic Trait (Primary), of an Inbred Strain of Mice : Effect of Hybridization on the (Dr. Emanuel Silverstein), 523
Polyelectrolytes (Rod-like) : Displacement Potentials and Bending of (Prof. J. A. Christiansen, the late Dr. C. E. Jensen and Dr. Th. Vilstrup), 484
Polyenoic Fatty Acids : Biosynthesis of, in Human Whole Blood (Dr. F. Leupold and G. Kremer), 805
Polygenes : Location of (Prof. J. M. Thoday), 368
Polymer: A Reversible Photochromic (A. G. Massey and Dr. L. E. Orgel), 1387
Polymer Solutions : Ultrasonic Absorption of (Dr. G. Gooberman), 693
Polymeric Titanium Ethoxide and Titanium Oxide Ethoxides : Structures of (Prof. D. C. Bradley and A. H. Westlake), 273 ; (R. L. Martin and G. Winter), 274
Polymerization of Hyaluronic Acid isolated from Human Aortic Tissue : Degree of (Dr. Sv. Bertelsen and K. Marcker), 386
Polymers : Differential Thermogravimetry versus Differential Thermometry in Studying the Pyrolysis of (Hugh C. Anderson), 1088
    Recent Developments in the Chemistry and Technology of (Bradford Institute of Technology Course on), 1349
Polymers (High) : Elimination of the Absorption Correction in the Viscometry of Dilute Solutions of (H. van Oene and Prof. L. H. Cragg), 1160
    Viscosity–Temperature Relationships for Dilute Solutions of (Dr. W. R. Moore), 1292
Polymers (Inorganic) : International Symposium on, at the University of Nottingham, 1046
Polymers (Ion-Exchange) : Non-Uniformity of Cross-linking in (Dr. E. Glueckauf and R. E. Watts), 904
Polymers (Semiconducting High) : Photochemical Production of (Prof. Gerald Oster, Dr. Gisela K. Oster and Dr. Marian Kryszewski), 164
Polymorphism : Insect (Royal Entomological Society Symposium on), 1145
Polymorphism (Melting and), of Indium Antimonide at High Pressures (A. Jayaraman, R. C. Newton and Dr. G. C. Kennedy), 1288
Polyoma Virus : Induction of Tumours by—Enhancement by Chemical Agents (K. E. K. Rowson, F. J. C. Roe, J. K. Ball and Dr. M. H. Salaman), 893
Polypeptides : A Laboratory Manual of Analytical Methods of Protein Chemistry, including (edited by Dr. P. Alexander and R. J. Block), Vol. 1, The Separation and Isolation of Proteins, *review* by Dr. D. T. Elmore, 320
Polyploid Cotton : Basis of the Diploid-like Meiotic Behaviour of (G. Kimber), 98
Polypodiaceae in Eastern India : Cytology of some Genera of (G. Panigrahi and S. N. Patnaik), 1207
Polypropylene (Isotactic) : Crystallization of, using a Light Depolarization Technique (J. H. Magill), 1092
Polysaccharides : Role of, in Stabilization of Natural Soil Aggregates (Dr. D. J. Greenland, G. R. Lindstrom and Dr. J. P. Quirk), 1283
Polysaccharides (Linear from Branched) : Separation of, by Precipitation as Iodine Complexes (Blanche D. E. Gaillard), 1295
Polysaccharides (*Pasteurellapseudotuberlosis*-specific) : Dideoxysugars of, and the Occurrence of Ascarylose (Dr. D. A. L. Davies), 43
Polyvalent Ions : Influence of, on Histones isolated from Different Tissues (I. P. S. Agrell and E. G. Christensson), 284
Polyvinyl Alcohol : Effect of, on the Distribution of Iodine-131 in the Internal Organs, Fluids and Excreta of Rabbits (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
Polyvinylchloride : Crystallization Kinetics in, and Thermoelastic Relaxation induced by Ultrasonics (Dr. V. Nardi), 563
Pomerat, C. M. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Effect of Radiation on the Chromosomes of Leucocytes cultured from the Human Buffy Coat), 340
Pontin, A. J. : Response to Series of Subliminal Stimuli—an Ethological Method for Investigating the Properties of Nervous Systems, 512
Pool (Intermediate), between Amino-Acids and Globin in Duck Blood *in vitro* (L. Bianco, G. Giustina and E. Lazzarini), 40
Poole, Prof. J. H. J., and Byrne, F. N. : Measurement of the Thorium Content of Natural Materials by a γ-Ray Counting Method, 62
Population (Bulk-Hybrid), of Barley : Stabilizing Selection for Heading Time in a (Dr. S. K. Jain), 1123
Population (A Natural), of Anomalous Branched Tapeworms, *Hymenolepis nana* (Cestoda : Hymenolepididae), in a Colony of *DBA*/1 Mice (Dr. Donald Heyneman), 297
Population (Skin Follicle) : Composition of the, in Seven Rajasthan Sheep Breeds (Sunanda Narayan), 1115
Population Density : Sexual Differentiation in *Hydra* in relation to (Helen D. Park, Christyna Mecca and Anne Ortmeyer), 92
Population Models (Stochastic), in Ecology and Epidemiology (Prof. M. S. Bartlett), *review*, 843
Population Movements : Effect of, on Malaria Eradication (R. Mansell Prothero), 863
Population Statistics in the United Kingdom, 1347
Population Trends : World, 1346
Populations (Associated) : Nodal Analysis of (Prof. W. T. Williams and J. M. Lambert), 202
Populations (Lamprey) : Sex Composition of (Dr. M. W. Hardisty), 1116
Porath, J., and Lindner, E. B. : Separation Methods based on Molecular Sieving and Ion Exclusion, 69
Porcine Urine : Neutral 17-Kerosteroids in (L. G. Huis in't Veld, B. Louwerens and W. Reilingh), 175
Porous Nickel Oxide (I. S. Solet), 64
Porphyrin Pigments (Petroleum) : Metal Chlorin Complexes in Recent Sediments as Initial Precursors to (G. W. Hodgson and Eric Peake), 766
Porteous, Donald : Leukaemia in the *AkR* Mouse after X-Irradiation *in utero*, 291
Porter, —.: Hazards of the Animal House (Traumatic Hazards not only from the Animals themselves but also from Damaged or Incorrectly Designed Equipment), 339
Porter, N. A. (Hill, D. A., and) : Photography of Cerenkov Light from Extensive Air Showers in the Atmosphere, 690
Portland Cement (Interaction of), with Sea-Water and Chloride Solutions : Formation of Calcium Chloraluminate by (Dr. L. Heller and Dr. M. Ben-Yair), 488
Porto Novo, South India : Occurrence of *Eutrichocheles modestus* (Herbst) in the Near-shore Waters of (K. Balasubrahmanyan and Dr. J. Jacob), 830
Portulaca oleracea L. : High Concentration of (–)-Noradrenaline in (Dr. P. C. Feng, Prof. L. J. Haynes and Dr. K. E. Magnus), 1108
Position (Peripheral), of Sex Chromatin (Dr. Charles P. Miles), 626
Positive Antiglobulin Consumption Test : Nature of the Coating Globulin causing a (D. Nelken), 1110
Positive Feedback Mechanism of Adenosine Triphosphate Synthesis in Erythrocytes (Makoto Nakao, Takashi Motegi, Toshiko Nakao, Saburo Yamazoe and Haruhisa Yoshikawa), 283
Possibilities of Vegetative Propagation in the Coconut (*Cocos nucifera* L.), (S. R. Gangolly and K. M. Pandalai), 1218
Possible Cause of Mutual Dependence : Copepod *Ommatokoita elongata* (Grant) in the Eyes of the Greenland Shark—a (Bjørn Berland), 829
Possible Method for Increasing the Signal-Noise Ratio in the Detection of the First Motion of a Refracted *P*-Wave (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382
Possible Occurrence of *L*-Forms : Numbers and Types of Bacteria from the Rhizosphere of Pasture Plants— (G. Jagnow), 1220
Possible Primitive Earth Conditions : Mechanism of Synthesis of Adenine from Hydrogen Cyanide under (Prof. J. Oró), 1193
Possible Significance in Behaviour : Distribution of Piperidine in the Brain and its (Dr. L. G. Abood, F. Rinaldi and Virginia Eagleton), 201
Post-Doctoral Fellowships in Protein Chemistry (Division of Protein Chemistry of the Australian Commonwealth Scientific and Industrial Research Organization), 336
Postgraduate Courses in Nuclear Studies (Liverpool College of Technology), 338
Postgraduate Medical School of London : Appointment of Prof. J. N. P. Davies to the University of London readership in morbid anatomy, 229
    Appointment of Prof. J. N. Phillips as reader in morbid anatomy, 1349
Post-Partum Period : Antibodies to Trophoblasts during the (J. F. Hulka, K. C. Hsu and S. M. Beiser), 510
Postan, Prof. M. : Social History of Engineering, *review*, 946
Potassium: Inhibition by, of the Mechanical Responses of Frog Muscles at Low Temperature (H. Lorković), 1011
    Radiocaesium and, in Norwegians (Johan Baarli, Kjell Madshus, Kurt Lidén and Richard C. McCall), 436
Potassium in Muscle : Inhibition by Physostigmine of the Increase of Oxygen Consumption induced by (Dr. Ivan Novotny and František Vyskočil), 916
Potassium Retention : Aldosterone Excretion and, in Subjects living at High Altitude (P. J. Ayres, Rona C. Hurter, Dr. E. S. Williams and J. Rundo), 78
Potassium (Sodium and), in certain Cells and Tissues : Distribution of (Dr. Norman R. Joseph, Dr. Milton B. Engel and Dr. Hubert R. Catchpole), 1175
Potato : Introduction of the, into Western and Central Europe (V. S. Lekhnovitch), 518
Potato (Sweet), *Ipomoea batatas* (L.) Lam. : Evolution of the (Dr. D. E Yen), 93
Potato Crop : Tuber Bulking in the (R. W. Radley, M. A. Taha and P. M Bremner), 782
Potato Virus Diseases : Proceedings of the Fourth Conference on (Braunschweig, 1960), edited by J. Brandes, R. Bartels, V. Völk and C. Wetter (Biologische Bundesanstalt für Land- und Forstwirtschaft, Braunschweig), 657
Potent Actions on Mammalian Neurones : Analogues of Glutamic and γ-Amino-*n*-butyric Acids having (Dr. J. C. Watkins and Dr. D. R. Curtis), 1010
Potent Carcinogens : A New Family of—Benzopyridocarbazoles (Prof. A. Lacassagne, Prof. N. P. Buu-Hoï, F. Zajdela, F. Périn and P. Jacquignon), 1005
Potential (The Action), in Cells of *Chara* (A. B. Hope), 811
Potential (Electrical), across the Isolated Gut : Dependence on Substrate of the (Dr. T. W. Clarkson, A. C. Cross and S. Toole), 501
Potential Changes produced by Application of Current Steps in Motoneurones (T. Araki, Dr. M. Ito and T. Oshima), 1104
Potentials (Displacement), and Bending of Rod-like Polyelectrolytes (Prof. J. A. Christiansen, the late Dr. C. E. Jensen and Dr. Th. Vilstrup), 484
Potentials (Ionization), of *cis* and *trans* Dichloro- and Dibromo-ethylenes (Dr. J. Momigny), 1089
Potentials (Spontaneous Miniature), from Insect Muscle Fibres (P. N. R. Usherwood), 814
Potentiation of Epinephrine Action (Prof. R. Imaizumi, Y. Hashimoto and M. Oka), 186
Pottinger, R. C., and others : A New 'Wedge' Type Instability observed in a 'Theta' Pinch, 1054
Poulik, Emily (Goodman, Prof. Morris, and) : Serum Transferrins in the Genus *Macaca*—Species Distribution of Nineteen Phenotypes, 1407
Poulik, Dr. M. D., and Edelman, Dr. G. M. : Comparison of Reduced Alkylated Derivatives of some Myeloma Globulins and Bence-Jones Proteins, 1274
Poulsen, Dr. E. : Awarded a Carlsberg–Wellcome Research Fellowship, 754
Poultry : Nutrition and (Scottish Group of the Nutrition Society Symposium on), 856
Poultry (Domestic Animals and), in India : Occurrence of *Salmonellae* in (V. K. Sharma and Prof. C. M. Singh), 622

Povinelli, Richard (Szymanski, Herman A., and) : Infra-Red Spectra of Water-soluble Carbonates, 64
Power (Thermoelectric), of Single Crystals of Gallium (P. Horner), 58
Power Plant : The Robert Moses Niagara, 22
Power Requirements and Scale-up in Flotation (Prof. Nathaniel Arbiter and Prof. Colin C. Harris), 268
Powers, Dr. E. L. : New Considerations on Survival Curves and Target Theory (Douglas Lea Memorial Lecture of the Hospital Physicists' Association), 1045
  Effects of Ionizing Radiation on Organic and Biological Solids (Role of Oxygen in Radiation Damage), 1150
Practical Applications of Nuclear Energy (International Atomic Energy Agency Courses on), 1143
Practical Procedure : Determination of Spontaneous Plasma Fibrinolysis by a (Dr. H. Yatzidis), 604
Practice : Code of, for the Display of Sources of Ionizing Radiations at Exhibitions, 1249
  From Theory to, in Soil Mechanics—Selections from the Writings of Karl Terzaghi, *review* by Kevin Nash, 210
Practice (Tradition, Science and), in Dietetics (D. F. Hollingsworth), 1343
Practice of Pharmacy (Remington's), (edited by Eric W. Martin, E. Fullerton Cook, E. Emerson Leuallen, Arthur Osol, Linwood F. Tice and Clarance T. Van Meter), twelfth edition, *review* by Dr. J. H. Gaddum, 8
Prakash, Prof. Satya, and Prakash, Sheo: Inhibition of Ultrasonic Decolorization of Rhodamine *B* in Presence of Organic Substances, 1292
Prakash, Sheo (Prakash, Prof. Satya, and) : Inhibition of Ultrasonic Decolorization of Rhodamine *B* in Presence of Organic Substances, 1292
Pramer, Prof. David, and others : A Nemin Assay Procedure, 155
Prather, J. L. : Atomic Energy Levels in Crystals (United States National Bureau of Standards, Monograph No. 19), 1348
Prawn, *Palaemonetes varians* Leach : Mechanism of Sensitivity to Hydrostatic Pressure in the (Peter S. B. Digby), 366
Precious Metal Years : Two Hundred—a History of the Sheffield Smelting Company, Ltd., 1760-1960 (Ronald E. Wilson), *review* by Prof. R. W. K. Honeycombe, 108
Precipitable Water Vapour over the United States : Chemical Composition of (Dr. Henry M. Papée and Dr. Alberto Montefinale), 136
Precipitation of Electrolytes : Electrical Effects during Dissolution and (R. P. Rastogi, B. P. Batra and R. K. Dass), 764
Precipitation as Iodine Complexes : Separation of Linear from Branched Polysaccharides by (Blanche D. E. Gaillard), 1295
Precipitin (Auto-Immunological), possibly due to Fibrinolysins : Demonstration by Paper Electrophoresis of an (Marion I. Cooper and J. R. Sykes), 1212
Precorticotrophin in Blood (Dr. P. R. Dasgupta), 1106
Precursor of the Stylet-Sheath Material of a Pentatomid : Extraction of Lipids from the (P. W. Miles), 911
Precursors (Initial), to Petroleum Porphyrin Pigments : Metal Chlorin Complexes in Recent Sediments as (G. W. Hodgson and Eric Peake), 766
Pregnant Women : Oxytocinase Activity of Plasma of (Stig E. J. Melander), 176
Prehistoric Chamber Tombs of France (Dr. Glyn Daniel), *review* by Prof. C. F. C. Hawkes, 637
Prehistorical Tools : Eoliths and, 23
Preliminary Age-Determinations in the Lizard Area (J. A. Miller and D. H. Green), 159
Prelog, Prof. V. : Elected a foreign associate of the United States National Academy of Sciences, 18 ; work of, 19
Premature Lambs : Fructose and Lactic Acid Metabolism in the Perfused Liver of (W. H. H. Andrews, H. G. Britton and Dr. D. A. Nixon), 1307
Preparation : A Simplified Method for Separating Amino-Acid Mixtures from Protein Hydrolysates on One Ion-Exchange Column during (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Preparation of Mitochondria from the Peel of Apples (Dr. J. D. Jones and Dr. A. C. Hulme), 370
Preparation (Teacher), for Health Education (United Nations, World Health Organization, Technical Report Series No. 193—Report of a joint WHO/Unesco Expert Committee), 441
Preparations of Reduced Diphosphopyridine Nucleotide : An Inhibitor of Liver Alcohol Dehydrogenase in (Dr. Keith Dalziel), 1098
Preparations (Cell-free Spleen), Incubated *in vitro* : Rise of Antibody Titre in (Dr. Dieter H. Sussdorf), 770
Presence of Hydrogen : Selectivity of Palladium Catalysts for the Oxidation of Carbon Monoxide in the (P. Mars and Th. van de Mond), 1003
Present : Experimental Method in Biology from the Time of Antonio Vallisneri to the (University of Padua Symposium on), 546
Preservation of Rural England, Council for the : Twenty-second National Conference (The Impact of Industrial Development on the Countryside), 959
Preservation and the Restoration of Cultural Property, International Centre for the Study of the (Rome) : Works and Publications, 3, Climatology and Conservation in Museums, 1050
Preservation (Bird), International Council for (British Section) : Annual Report for 1960, 124
Preserving the Pattern of their Localization in Tissues : Paper Electrophoresis of Proteins while (Dr. Zh. A. Medvedev), 1021
Pressure below 0·1° K. : Specific Heat and Expansion Coefficient of Liquid Helium-3 under (Dr. D. F. Brewer and J. R. G. Keyston), 1261
Pressure (High-) Treatment : A New Phase formed by—Face-centred Cubic Molybdenum Monocarbide (E. V. Clougherty, K. H. Lothrop and J. A. Kafalas), 1194
Pressure (Hydrostatic) : Mechanism of Sensitivity to, in the Prawn, *Palaemonetes varians* Leach (Peter S. B. Digby), 366
Pressure (Reduced) : Bio-Assay of Erythropoietin in Mice made Polycythaemic by Exposure to Air at a (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Pressure Differences in a Direct-Current Capillary Discharge (D. S. Smith), 265
Pressure Gradients : Role of, in obtaining Minimum Time in Gas Chromatography (Prof. J. Calvin Giddings), 1291
Pressures (High) : Melting and Polymorphism of Indium Antimonide at (A. Jayaraman, R. C. Newton and Dr. G. C. Kennedy), 1288
Preston, Prof. R. D. (Dennis, D. T., and) : Constitution of Cellulose Microfibrils, 667
Prevention of Ammonia Toxicity by Amino-acids concerned in the Biosynthesis of Urea (Dr. Francesco Salvatore and Dr. Vincenzo Bocchini), 705
Preventive Medicine, Lister Institute of (London): Report of the Governing Body (1961), 1356
Prigal, Samuel J. : Development in Mice of Prolonged Non-specific Resistance to Sarcoma Implant and Staphylococcus Infection following Repository Injection of Lipopolysaccharide, 1111
Primary Amides : A New Relation between the N–H Stretching Frequencies of (Prof. P. G. Puranik and K. Venkata Ramiah), 796
Primary Polydipsic Trait of an Inbred Strain of Mice : Effect of Hybridization on the (Dr. Emanuel Silverstein), 523
Primary Products, of Reactive Bimolecular Collisions : A Molecular Beam Reactor for Examining the Rate, and (C. W. Nutt and A. J. Biddlestone), 798
Primitive Earth Conditions : Mechanism of Synthesis of Adenine from Hydrogen Cyanide under Possible (Prof. J. Oró), 1193
Principals of the Universities of the United Kingdom, Committee of Vice-Chancellors and : Conference of professors of mathematics from the Universities of Great Britain, to consider the Teaching of Mathematics, 1145
Principle (Isoelectronic), Thermochemistry and Reactivity of related Free Radicals (Dr. Peter Gray and J. C. J. Thynne), 1357
Principles of Genetics (Prof. Eldon J. Gardner), *review* by Dr. Kenneth S. Dodds, 636
Principles of Human Genetics (Curt Stern), second edition, *review* by Dr. G. Ainsworth Harrison, 110
Principles of Plant Breeding (Prof. R. W. Allard), *review* by Dr. Kenneth S. Dodds, 636
Principles of Radiation Protection (Harwell Reactor School of the Atomic Energy Research Establishment Course on), 856
Principles (Energy), in Applied Statics (T. M. Charlton), *review* by Prof. R. C. Coates, 1134
Pringle, R. B. (Scheffer, R. P., and) : A Selective Toxin produced by *Periconia circinata*, 912
Prinzie, A., and others : Chromatographic Analysis of Infectious Ribonucleic Acid from Poliovirus, 573
Prior, B. E., and others : Nervous and Biochemical Disturbances following Hexachlorobenzene Intoxication, 363
Pritchard, E. B., and others : Space-Flight and Re-entry Trajectories (Dynamics of Terminal Re-entry—Methods of Control for Re-entry from Escape Speeds), 960
Pritchard, E. P. : Aims, Organization and Methods of University Extra-Mural Libraries in Great Britain (Library Association, Pamphlet No. 21), 649
Pritchard, J., and others : Evaporated Carbon Films of Large Area for Adsorption Studies by Electron Bombardment, 487
Prizes : Monograph (American Academy of Arts and Sciences), 442
Probability Curves (Isolated or Overlapping Normal) : Calculation of the Areas of (Dr. D. Morison Smith and John C. Bartlet), 688
Probe (A Hypodermic), using Fibre Optics (David F. Capellaro, Narinder S. Kapany and Dr. Charles Long), 927
Problem : The Atomic—a Challenge to Physicists and Mathematicians (Lancelot Law Whyte), *review* by Prof. R. Eisenschitz, 214
  A Combinatorial Assignment (Prof. C. Radhakrishna Rao), 100
  The Nitrogen, 544
Problem in Applied Chemical Kinetics : Inversion of a Laplace Transform arising from a (T. Wood), 589
Problem of Retirement, *review* by Prof. L. S. Hearnshaw, 532
Problem (Cancer) : A Clinical Prospect of the (Prof. D. W. Smithers), *review*, 1336
Problem (World) : Public Health as a, 441
Problems : Non-Linear Physical (Indian Society of Theoretical and Applied Mechanics and Unesco Symposium on), 855
Problems of Ageing : Research into, 1145
Problems of Managing Nature Reserves (Dr. J. F. D. Frazer), 133
Problems of the North (Translation of *Problemy Severa*), No. 1, 1958 (translated December 1960), *review* by Dr. Terence Armstrong, 841
Problems of Psychology, Nos. 1 and 2 (translation from the Russian *Voprosy Psikhologii*), 958
Problems (Agricultural), in Developing Countries (Nutrition Society Symposium on), 1250
Problems (Corrosion), in the Electrical Power Industry (Battersea College of Technology Summer School on Corrosion), 651
Problems (Current), in Nutrition (Nutrition Society of Canada Symposium on), 335
Procedure : A Nemin Assay (E. J. Winkler, Shimpei Kuyama and Prof. David Pramer), 155
Procedure (Practical) : Determination of Spontaneous Plasma Fibrinolysis by a (Dr. H. Yatzidis), 604
Procedure (Simplified), for Removing Non-specific Staining Components from Fluorescein-labelled Conjugates (G. D. Johnson), 70
Process (Germination), in Seeds of *Pinus sylvestris* L. : Effect of Red and Far-red Irradiation on the (Bengt Nyman), 1219
Process (Labour) : Relationship between the Decrease in Urinary Excretion of Histamine and the Initiation of the (Dr. Halina Wiskont-Buczkowska), 290
Processes (Markov) : Theory of (E. B. Dynkin), translated from the Russian by D. E. Brown, edited by T. Köváry, *review* by D. G. Kendall, 321
Processing Cereals : Recent Advances in (Food Group of the Society of Chemical Industry Symposium on), 755
Processing of Observations made on Artificial Earth Satellites : A Collection of Tables and Nomograms for the (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
Processing (Chemical) : Technology of, *review* by R. H. Villet, 1131
Prochazka, Ing. : Paper Chromatography, 760
Prockop, D. J., and others : Influence of Scurvy and Lathyrism (Odoratism) on Hydroxyproline Excretion, 1008
Prodigiosin in an Actinomycete (Jerome J. Perry), 77
Produced (Centrally) Geometrical Illusions (S. Papert), 733
Producing 6-Aminopenicillanic Acid from Benzylpenicillin : A Method for Isolating Bacteria capable of (Prof. Yukio Kameda, Yukio Kimura, Etsuko Toyoura and Tomoo Omori), 1122
Product (Solubility) : Theoretical Expression for (Prof. B. N. Bhar), 1004; (Prof. K. Krishnamurti), 1004
Production of Gas from Coal in Britain, 225

Production of Neon in Stars (H. E. Gove, A. E. Litherland and M. A. Clark), 1381
Production of Symptoms of Barley Leaf-Spot Disease by Culture Filtrate of *Helminthosporium sativum* (S. K. Gayed), 725
Production of Synthetic Corundum : A New Technique for the (E. Q. D. White), 901
Production of Viral Ribonucleic Acid : Influence of *p*-Fluorophenylalanine on the, and on the Utilizability of Viral Protein during Multiplication of Fowl Plague Virus (Dr. Christoph Scholtissek and Rudolf Rott), 1023
Production (Artificial), of Buds from the Embryos of *Cuscuta reflexa* (Prof. P. Maheshwari and B. Baldev), 197
Production (Auxin), by Species of *Arthrobacter* (Dr. H. Katznelson and Dr. J. C. Sirois), 1323
Production (Crop) : Importance of Nitrogen in (Prof. N. R. Dhar), 544
Production (Lesion), on Pinto Bean : Relationship of Tobacco Mosaic Virus (TMV) Lesion Number and Concentration to the Rate of (John Piacitelli and Prof. Vincent Santilli), 624
Production (Metabolic), of Sucrose from Fat (Prof. H. Beevers), 433
Production (Photochemical), of Semiconducting High Polymers (Prof. Gerald Oster, Dr. Gisela K. Oster and Dr. Marian Kryszewski), 164
Production (Sound), and Sound Reception by Insects (Mable Frings and Hubert Frings), *review* by Prof. V. B. Wigglesworth, 428
Production (Turnip Yellow Mosaic Virus Protein) : Stimulation of, by 2-Thiouracil (Dr. R. I. B. Francki and Dr. R. E. F. Matthews), 1078
Products : Castorseed and its (Council for Scientific and Industrial Research, India, Seminar on), 753
Products of Mild Acid and Alkaline Hydrolysis of *M*- and *N*-Blood Group Substances (Dr. Elzbieta Romanowska), 1408
Products (Primary), of Reactive Bimolecular Collisions : A Molecular Beam Reactor for Examining the Rate, and (C. W. Nutt and A. J. Biddlestone), 798
Products (Reduction), of 2,2'-Dipyridyl : Stability Constant of Copper (II) Complexes of (Dr. M. T. Beck and M. Halmos), 1090
Profession (New), of Information combining Science, Librarianship and Foreign Languages : Science Information Personnel—the (Leonard Cohen and Kenneth Craven), 452
Progeny of Mice inoculated with a Leukaemogenic Virus : Leukaenia in the (Dr. M. H. Salaman and J. J. Harvey), 509
Programming : Linear (Saul I. Gass), *review* by Dr. M. V. Wilkes, 9
Programming (Linear and Non-Linear) : Methods of Feasible Directions—a Study in (Dr. G. Zoutendijk), *review* by Dr. M. V. Wilkes, 9
Progress on the Advanced Gas-cooled Reactor at the Windscale Factory of the United Kingdom Atomic Energy Authority, 853
Progress in Chemistry, *review* by Prof. J. R. Partington, 637
Progress of Chemistry : Annual Reports on the, for 1959 (edited by Dr. R. S. Cahn), Vol. 61, *review* by Prof. J. R. Partington, 637
Progress in Experimental Tumor Research (edited by F. Homburger), Vol. I, *review* by Prof. F. Bergel, 1231
Progress Reports and Tumour Research, *review* by Prof. F. Bergel, 1231
Progress (Research), in General Medical Sciences, 1960 : Highlights of (United States Department of Health, Education and Welfare, Public Health Service Publication No. 815), 658
Proliferation (Parenchymal Liver Cell), in Normal Adult Rats : Stimulation by Heparin of (Dr. M. Zimmerman and Evemarie Celozzi), 1014
Proline Derivatives from Apples : Determination by Mass Spectrometry of the Structure of (Dr. K. Biemann, G. G. J. Deffner and Prof. F. C. Steward), 380
Prolonged Non-specific Resistance to Sarcoma Implant and Staphylococcus Infection following Repository Injection of Lipopolysaccharide : Development in Mice of (Samuel J. Prigal), 1111
Promotion of Science in Australian Schools, 543
Propagation (Vegetative), in the Coconut (*Cocos nucifera* L.) : Possibilities of (S. R. Gangolly and K. M. Pandalai), 1218
Propagation (Wave), and Group Velocity (Dr. Léon Brillouin), *review* by Prof. M. H. L. Pryce, 104
Propellant (Solid), and Exothermic Compositions (Dr. James Taylor), *review* by Dr. W. B. Littler, 3
Properdin : Action of Tetracycline on the Level of (Vl. Kubelka and M. Rybák), 820
Properties of Deoxyribonucleic Acid from Mammalian Sperm : Isolation and (Dr. E. Borenfruend, E. Fitt and Dr. A. Bendich), 1375
Properties of the Deoxyribonucleic Acid of Phage Alpha : Some (S. Cordes, H. T. Epstein and Prof. J. Marmur), 1097
Properties of Ionic Melts : The Structure and (Faraday Society General Discussion on), 338, 443
Properties of Isolated Plant Protoplasts (E. C. Cocking), 780
Properties of Nervous Systems : Response to Series of Subliminal Stimuli—an Ethological Method for Investigating the (A. J. Pontin), 512
Properties of New Zealand Butterfat : Growth of Ryegrass-dominant Pasture grazed by Cows, and (F. H. McDowall, W. A. McGillivray and J. C. Hawke), 303
Properties (Acaricidal), of Di-(*p*-chlorophenyl)-trifluoromethylcarbinol (K. R. S. Ascher and R. Cwilich), 1322
Properties (Anticancer), of Thio-diglycollic Acid (M. B. Sahasrabudhe, M. V. Narurkar, L. B. Kotnis, B. D. Tilak, L. C. Shah and V. N. Gogte), 388
Properties (Anti-Depressant or Stimulant), of Imipramine : Demonstration of, in Experimental Animals (Dr. D. R. Maxwell and Helen T. Palmer), 84
Properties (Electrical), or Orientated Lipid on a Biological Membrane—an Electrostatic Diffusion Barrier and Ion Pump (Dr. J. W. L. Beament), 217
Properties (Electronic), of Imidazole (S. Aftergut and G. P. Brown), 379
Properties (Oncogenic and Heparin-neutralizing) : Surfen, a Quinoline with (DeWitt T. Hunter, jun., and Joseph M. Hill), 1378
Properties (Thermophysical) Research Literature : Retrieval Guide to, Vol. I (edited by Y. S. Touloukian), Book 1, Part A, Guide to Substance Classification and Numerical Codes ; Book 1, Part B, Dictionary of Synonyms and Trade Names ; Book 1, Part C, Dictionary of Substances ; Book 2, Classified Search Index ; Book 3, Master Bibliography, Author Index, *review* by Prof. A. R. Ubbelohde, 109
Property (Cultural), International Centre for the Study of the Preservation and the Restoration of (Rome) : Works and Publications, 3, Climatology and Conservation in Museums, 1050
Proposal for a Tunable Source of Radiation for the Far Infra-Red using Beats between Optical Masers (Dr. D. C. Lainé), 795
Proposed Use of Magnetic Fields in Electron Microscopic Radioautography (Lucian G. Caro), 1188
Propulsion (Aircraft), at the College of Aeronautics, Cranfield, 1042
Propylthiouracil Treatment in the Rat : Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Proskauer, E. S., and others (edited by) : Organic Analysis, Vol. 4, *review* by Dr. D. T. Lewis, 741
Prospect (A Clinical), of the Cancer Problem (Prof. D. W. Smithers), *review*, 1336
Prosser, M. V., and others : Conversion of L-Galactono-γ-lactone into L-Ascorbic Acid by Plants, 282
Protease Action (Thyroid) : Thyroglobulin—Evidence of (Dr. A. D. Litonjua), 357
Proteases (Influenza Viruses, Receptor-destroying Enzyme and) : Action of, on Blood Group Agglutinogen M^g (Prof. Georg F. Springer and Dr. Karlheinz Stalder), 187
Protection (Radiation) : Principles of (Harwell Reactor School of the Atomic Energy Research Establishment Course on), 856
Protein : Response of the Labellar Hairs of the Blowfly, *Phormia regina* Meigen, to (D. I. Wallis), 917
Protein of Cell Fractions from Myocardial Slices : Effect of Adrenalectomy and Corticosteroids on Distribution of Radioactivity in (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Protein in Cellular Material : Estimation of (Prof. David Racusen and D. B. Johnstone), 492
Protein in the Milk : Correlation between Growth-Rate of the Suckling of various Species and the Percentage of Total Calories from (Dr. F. W. Bernhart), 358
Protein Chemistry : Post-Doctoral Fellowships in (Division of Protein Chemistry of the Australian Commonwealth Scientific and Industrial Research Organization), 336
Protein Chemistry (including Polypeptides) : A Laboratory Manual of Analytical Methods of (edited by Dr. P. Alexander and R. J. Block), Vol. I, The Separation and Isolation of Proteins, *review* by Dr. D. T. Elmore, 320
Protein Composition (Soybean) : Ultracentrifugal Differences in (W. J. Wolf, G. E. Babcock and A. K. Smith), 1395
Protein Hydrolysates : A Simplified Method for Separating Amino-Acid Mixtures from, on One Ion-Exchange Column during Preparation (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Protein Production (Turnip Yellow Mosaic Virus) : Stimulation of, by 2-Thiouracil (Dr. R. I. B. Francki and Dr. R. E. F. Matthews), 1078
Protein Structure : Haemoglobin *F* and the Genetic Control of (Prof. V. M. Ingram), 608 ; (Dr. Wolf W. Zuelzer and Abner R. Robinson), 609
Protein Synthesis : Evidence for a New Enzyme connected with (Hans G. Boman and Ingvar Svensson), 674
Protein (Liver), *in vivo* : Incorporation of Histamine into (Isabel Wajda, Michael Ginsburg and Prof. Heinrich Waelsch), 1204
Protein (Plant) : Enzymic Conversion of Tetrahydrofolic Acid to Folinic Acid by (E. H. Byers, J. Stewart and T. J. Bond), 179
Protein (Serum) Fractions of the Newly Hatched Chick : Comparison of the, with those of Adult Birds using Starch-gel Electrophoresis (A. Amin), 708
Protein (Viral), during Multiplication of Fowl Plague Virus : Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the Utilizability of (Dr. Christoph Scholtissek and Rudolf Rott), 1023
Proteins : Amino-Acid Liberation from, by Enzyme or 'Heat Catalysed' Hydrolysis (S. M. Hardy), 1061
  Chromatography of, on Diethyl-amino-ethyl (DEAE) Cellulose Paper (C. C. Curtain), 1269
  A New Two-Stage Method for Cross-linking (Dr. Felix Borek), 1293
  Paper Electrophoresis of, while Preserving the Pattern of their Localization in Tissues (Dr. Zh. A. Medvedev), 1021
  Radiation Damage to (U. S. Kumta and A. L. Tappel), 1304
  The Separation and Isolation of (edited by Dr. P. Alexander and R. J. Block), (A Laboratory Manual of Analytical Methods of Protein Chemistry, including Polypeptides, Vol. I), *review* by Dr. D. T. Elmore, 320
Proteins in Deuterium Oxide : Ultra-violet Absorption Spectra of (Dr. G. H. Beaven and Elizabeth Bailey), 914
Proteins (Bence-Jones) : Comparison of Reduced Alkylated Derivatives of some Myeloma Globulins and (Dr. M. D. Poulik and Dr. G. M. Edelman), 1274
Proteins (Extracellular Diphtheria), from Culture Filtrates of Different Iron Concentrations : Electrophoretic and Immuno-electrophoretic Patterns of (Bertold J. Radola), 382
Proteins (Phospho-) of Mitochondria : Electron Transport System and (K. Ahmed, J. D. Judah and C. H. Gallagher), 1309
Proteins (Plasma) : Influence of, in the Control of Mitosis-rates in Generating Liver (Dr. J. T. Hemingway), 706
Proteins (Specific), in Serum and others Mixtures : Estimation of (Dr. D. A. Darcy), 1163
Prothero, R. Mansell : Effect of Population Movements on Malaria Eradication, 863
Protoplasts (Plant) : Properties of Isolated (C. G. Cocking), 780
Protoplasts (Yeast) : Fixation of, for Electron Microscopy (Dr. P. F. Elbers), 1022
Protozoa : Immunity to (British Society for Immunology Symposium on), 551
Protozoon : A Much-studied, *review* by Dr. J. A. Kitching, 1133
Proximal Tubules (Single Perfused), of Rat Kidneys : Comparison of Short-Circuit Current and Net Water Movement in (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Pryce, Prof. M. H. L. : Wave Propagation and Group Velocity, *review*, 104
Pryor, A. W., and others : Scattering of Long Wave-Length Neutrons by Irradiated Beryllium Oxide, 1385
Pseudomonas (*Xanthomonas* and) : Taxonomy of (R. R. Colwell and Prof. J. Liston), 617
Psyche : The Structure and Dynamics of the (C. G. Jung), translated by R. F. C. Hull, *review* by Dr. C. Allen, 1235

Psychiatry and Mental Health : Teaching of (United Nations, World Health Organization, Public Health Papers No. 9), 1248
Psychological Function : Cerebral Dominance and its relation to (Prof. O. L. Zangwill), *review* by Sir Russell Brain, 840
Psychology : Jungian, *review* by Dr. C. Allen, 1235
Psychology : Problems of, Nos. 1 and 2, (translations from the Russian *Voprosy Psikhologii*), 958
Psychology of War: Mathematical Studies in the, *review* by Sir Cyril Burt, 427
Psychophysiology, Neuropharmacology and Biochemistry of Audiogenic Seizure (Centre National de la Recherche Scientifique International Meeting on), 959
Pteridium aquilinum : Failure of Nucleotides to Diffuse Freely into the Embryo of (P. R. Bell), 91
Public Exhibitions : Sources of Ionizing Radiation at, 1249
Public Health Service (United States) : Research Grants in Radiological Health, 442
Public Health Services : The Planning of (United Nations, World Health Organization, Technical Report Series No. 215—Fourth Report of the Expert Committee on Public Health Administration), 441
Public Investment and Export (Sir Walter Benton Jones), 334
Public Library (South African) : Grey Bibliographies No. 7, A Bibliography of African Bibliographies, covering the Territories South of the Sahara, fourth edition, 959
Publication : Purpose in, 527 ; *erratum*, 1250
Publication of Scientific Books (Scientific Publications Council Meeting on), 131
Publications (Research), on Farm Buildings : Bibliography of, Section 5, Buildings for the Drying and Storage of Grain (Agricultural Research Council), 440
Published Information: The Retrieval of, *review* by Prof. A. R. Ubbelohde, 109
Publisher : Author and (Dr. D. Richter), 131
Puerto Rican Family : The Diego Factor in a—a Case of Anti-Diego in Monozygotic Twins (Dr. Hubert J. Van Peenen, Dr. John Scudder, James A. Jack and Erika Awer), 188
Pugh, H. Ll. D., and others : Synthesis and X-Ray Analysis of Diamond, 865
Pugh, Dr. L. G. C. E. : Science in the Himalaya, 429
Pulmonary Tumours (Induced), in Mice : Inheritance of Susceptibility to (Dr. D. S. Falconer and Dr. Joyce L. Bloom), 1070
Pulmonary Tumours and Group VII in the House-Mouse (Dr. Joyce L. Bloom), 1124 ; (Dr. J. A. H. Tatchell), 1125
Pulp and Paper—Chemistry and Chemical Technology (James P. Casey), Vol. 2, Papermaking, second edition, *review* by Dr. Julius Grant, 1135
Pulp and Paper Manufacture : A Laboratory Handbook of (Dr. Julius Grant), second edition, *review* by Dr. F. Lyth Hudson, 320
Pulpwood : Management of Pine Stands for (J. J. Kotzé), 855
Pulsating Elastic Tube : Fatigue in a Fluid-filled (Group-Capt. John Erskine Malcolm), 1012
Pulse-shortening in Electron Linear Accelerators (Dr. M. C. Crowley-Milling, T. R. Jarvis, C. W. Miller and G. Saxon), 483
Pump (Ion): Electrical Properties of Orientated Lipid on a Biological Membrane—an Electrostatic Diffusion Barrier and (Dr. J. W. L. Beament), 217
Pupation and Oviposition in *Nepytia phantasmaria* Stkr. (Lepidoptera : Geometridae): Influence of Electrical Field on (Dr. D. K. Edwards), 976
Puranik, Prof. P. G., and Ramiah, K. Venkata : A New Relation between the N–H Stretching Frequencies of Primary Amides, 796
Pure Mathematics at Aberystwyth, 333
Purine and Pyrimidine Metabolism in *Rhodospirillum rubrum* (Prof. T. W. Goodwin and Dr. P. N. A. Passorn), 276
Purpose in Publication, 527 ; *erratum*, 1250
Purposes (Collection) : Use of Glacial Acetic Acid for Killing Parasitic Nematodes for (Bjørn Berland), 1320
Purseglove, Prof. J. W. : Plant Exploration and Introduction (Not all Cultivated Plants have necessarily arisen in the Eight Independent Centres of Origin recognised by Vavilov), 1240
Pyrene : Molecular Geometry of a 1:1 Crystalline Complex between 1,3,7,9-Tetramethyluric Acid and (F. De Santis, E. Giglio, Dr. A. M. Liquori and A. Ripamonti), 900
Pyrene Dimers (Isadore B. Berlman), 594
Pyrethrin-resistance in Houseflies : Pattern of (B. C. Fine), 884
Pyrethrins : Biosynthesis of the (Dr. Mary P. Crowley, Helene S. Inglis, M. Snarey and Dr. E. M. Thain), 281
Pyridine and its Derivatives (edited by Erwin Klingsberg), *review* by Dr. G. L. Buchanan, 425
Pyridine Derivatives with Anthelmintic Activity (A. P. Phillips and R. B. Burrows), 707
Pyridine Nucleotides in the Liver and in an Ascitic Hepatoma : Comparison of (M. Wintzerith N. Klein, L. Mandel and Prof. P. Mandel), 467
Pyrimidine Metabolism (Purine and), in *Rhodospirillum rubrum* (Prof. T. W. Goodwin and Dr. P. N. A. Passorn), 276
Pyrimidine-Nucleosides (Tritiated) : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of, into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Pyrogallol Oxidations : Regulation of, by Alcohols and Sugars (B. Z. Sigel, S. M. Siegel and N. S. Goodman), 180
Pyrolysis of Polymers : Differential Thermogravimetry versus Differential Thermometry in Studying the (Hugh C. Anderson), 1088
Pyrolysis and Gas–Liquid Chromatography on the Microgram Scale (C. E. Roland Jones and A. F. Moyles), 663
Pyrophosphate : Determination of Uranium as (Dr. F. M. Brewer), 1290 ; (J. S. Wright, T. J. Hayes and J. A. Ryan), 1291
Pyrophosphate (5,10,15 ^{14}C-Farnesol) : Incorporation of, into *Phycomyces carotenoids* (H. Yamamoto, H. Yokoyama, K. Simpson, T. O. M. Nakayama and C. O. Chichester), 1299
Pyrrhotite : Formation of Chalcopyrite by Reaction between Chalcocite and, in Cold Solution (W. M. B. Roberts), 560
Pyrrolase (Tryptophan-) : Effect of 5-Fluorouracil on Hepatic Induced Increase of (Sancia Gaetani and M. Antonietta Spadoni), 1296
Pythium debaryanum Hesse : Meiosis in Oogonium and Antheridium of (Dr. Eva Sansome), 827

QASIM, Dr. S. Z., and Hasan, R. : A Hydrostatic Function of the Accessory Respiratory Organs in Air-breathing Fishes, 396
Quagliariello, Prof. E., and others : Blockage of Transformation of Tryptophan to Nicotinic Acid by Experimental Hepatitis in Mice, 601
Quality Control : Handbook of Textile Testing and (Prof. Elliot B. Grover and Prof. D. S. Hamby), *review* by W. J. Onions, 106
Quality Control (Statistical), and Acceptance Sampling (Birmingham College of Advanced Technology Course on), 337
Quality Measurement in the Chemical Factory (A. J. Clark and C. W. Munday), (Department of Scientific and Industrial Research), 752
Quantal Neutralization Tests : Evaluation of (Prof. S. Fazekas de St. Groth), 891
Quantitative Analysis of Milk and other Emulsions by Infra-Red Absorption (Dr. J. D. S. Goulden), 905
Quantitative Determination of Metadrenaline and Normetadrenaline in Normal Human Urine (Dr. Kaoru Yoshinaga, Dr. Chuichi Itoh, Dr. Nozomu Ishida, Dr. Tatsuo Sato and Dr. Yasuo Wada), 599
Quantitative Estimation of Peak Areas in Gas–Liquid Chromatography (Dr. K. K. Carroll), 377
Quantitative Estimation of Phosphatases (Phosphatases in *Schistosoma mansoni*), (Dr. D. L. H. Robinson), 473
Quantities (Electrical and Magnetic) : Dimensions of (Dr. A. E. Martin), 588
Quantum Statistical Illustrations : Thermodynamics with (Prof. P. T. Landsberg), *review* by Dr. W. E. Parry, 1236
Quarrels (Deadly) : Statistics of (Dr. Lewis F. Richardson), edited by Quincy Wright and C. C. Lienau, *review* by Sir Cyril Burt, 427
Quaternary History : Two Unexplored Records of (A. H. Stride and R. Bowers), 1000
Queen Mary College, London : Appointment of Dr. F. G. A. Stone to the University of London readership in inorganic chemistry, 229
    Title of reader in pure mathematics conferred on Dr. K. W. Gruenberg, 546, 651
Queen Victoria Hospital, East Grinstead : Appointment of Dr. Morten Simonsen as director of research at the McIndoe Memorial Research Unit, 338
Queen's College (Mathematics Department), St. Andrews, in collaboration with Standard Telephones and Cables, Ltd. : Symposium on Digital Computers, their Use and Control, 554
Queen's University, Belfast : Appointment of Dr. A. Dalgarno to a chair of quantum mechanics, 19
    Appointment of Dr. E. A. Cheeseman to a personal chair of medical statistics, 20
Quelea quelea (Weaver-Finches) : Melanism in Captive (Dr. B. Lofts), 993
Quenching of Cation Vacancies in Doped Crystals of Sodium Chloride (the late Sir K. S. Krishnan and S. C. Jain), 162
Quenouille, M. H. : Rapid Statistical Calculations, *review* by M. J. R. Healy, 1236
Quesnel, L. B. : Papers on Bacterial Genetics, *review*, 320
    Papers on Bacterial Viruses, *review*, 320
Queueing : Mathematical Methods in the Theory of (A. Y. Khintchine), translated by D. M. Andrews and M. H. Quenouille, *review* by Prof. L. S. Goddard, 211
    Mathematics and, *review* by Prof. L. S. Goddard, 211
Quick Methods (Simple,), for Detection of 6-Amino-penicillanic Acid (J. Uri and F. Sztaricskai), 1223
'Quick' and 'Catch' Adductor Muscles in Brachiopods (Dr. M. J. S. Rudwick), 1021
Quilliam, J. P. : Appointed to the chair of pharmacology at St. Bartholomew's Hospital Medical College, London, 1349
Quilliam, Dr. T. Andrew (Armstrong, J., and) : Nerve Endings in the Mole's Snout, 1379
Quinoline with Oncogenic and Heparin-neutralizing Properties : Surfen, a (DeWitt, T. Hunter, jun., and Joseph M. Hill), 1378
Quinones in Electron Transport (Ciba Foundation Symposium on), (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by A. I. Scott, 321
Quirk, Dr. J. P., and others : Role of Polysaccharides in Stabilization of Natural Soil Aggregates, 1283
Quokka (Rottnest), *Setonix brachyurus* : Myopathy affecting the, reversed by α-Tocopherol (B. A. Kakulas), 402

RABBIT Erythrocytes : Recovery and *in vivo* Survival of (Dr. G. F. Doebbler, R. G. Buchheit and A. P. Rinfret), 1405
Rabbits : Antibody Response in, following Injection of Sheep Erythrocytes into Lateral Ventricle of Brain (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
    Effect of Bee Venom on Concentration of Blood Glucose and Liver Glycogen in (Prof. A. H. Mohamed and K. Zaki), 605
    Effect of Polyvinyl Alcohol on the Distribution of Iodine-131 in the Internal Organs, Fluids and Excreta of (H. F. Nowak and J. Kucharski), 665, *erratum*, 1045
    Effects of Carrageenin on Serum Lipids and Atherosclerosis in (Dr. Katsumi Murata), 189
Rabbits (Normal) : Effects of Injections of some Intermediary Metabolites on the 'Insulin Response' of (Dr. H. D. Brahmachari and G. Raghupathy Sarma), 491, *erratum*, 755
Rabinovitch, S. G. : At the Second International Measurement Conference (Electrical Measuring Instruments based on the Photo-compensating Amplifier), 1351
Races (British Insular), of Small Mammals : Origin of the, and of the 'Lusitanian' Fauna (G. B. Corbet), 1037
Racinskij, Prof. V. V. : Paper Chromatography (Chromatographic Separation in terms of the General Theory of Sorption Dynamics), 759
Racoveanu, Prof. N. : At the Second International Measurement Conference (A Novel Bi-parametric Displacement Transducer), 1351
Racusen, Prof. David, and Johnstone, D. B. : Estimation of Protein in Cellular Material, 492
Radar to Spectroscopy : From—New Regions of the Spectrum (Prof. D. J. E. Ingram), 1146
Radar Establishment (Royal), Malvern : Appointment of Dr. G. G. Macfarlane as director, 1145
Radar Reflectivities of Hail Samples (R. H. Douglas), 266
Radiant Heat Shocks : Mutagenic Effect of, on Phanerogamous Plants (Dr. Bror Pettersson), 1167
Radiation : Comparative Analysis of Inactivating Efficiency of, on Different Organisms (Dr. M. Terzi), 461
    Polarization induced by, in 'Perspex' (Dr. V. J. Vanhuyse, G. J. Vanpraet and J. F. Van Landuyt), 595

Radiation for the Far Infra-Red : A Proposal for a Tunable Source of, using Beats between Optical Masers (Dr. D. C. Lainé), 795
Radiation Incorporated, and others (sponsored by) : A Symposium on Space Trajectories (edited by the Technical Staff, Research Division, Radiation Incorporated), *review* by D. G. King-Hele, 1334
Radiation-induced Formation and Reactions of the Formyl Radical Ion (John Holian, Dr. George Scholes and Prof. Joseph J. Weiss), 1386
Radiation (Fluorescence) : Average Extinction Coefficient for Re-absorption of, through Uranin Solution (Dr. K. K. Rohatgi and G. S. Singhal), 799
Radiation (Ionizing) : Effects of, on the Human Haematopoietic System—Report of the Subcommittee on Haematologic Effects, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 875), 556
  Effects of, on Organic and Biological Solids (Société de Chimie Physique and the British Biophysical Society Discussion on), 1150
Radiation Chemistry of Organic Compounds (Dr. A. J. Swallow), *review* by Dr. S. J. Thomson, 317
Radiation Damage to Proteins (U. S. Kumta and A. L. Tappel), 1304
Radiation Protection : Principles of (Harwell Reactor School of the Atomic Energy Research Establishment Course on), 856
Radiation Sensitivity of *Escherichia coli* to β-Rays in Dry and Wet Condition (S. B. Bhattacharjee and N. N. Das Gupta), 1015
Radiations (Atomic), and Living Organisms (R. H. Mole), 556
Radiations (Ionizing), at Exhibitions : Code of Practice for the Display of Sources of, 1249
Radiations (Ionizing), from External Sources : Long-Term Effects of—Report of the Subcommittee on, of the Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 849), 556
Radical Chain Reactions in Solution : Generation of Radicals in Pairs and the Kinetics of (Dr. P. E. M. Allen and C. R. Patrick), 1194
Radical Ion (Formyl) : Radiation-induced Formation and Reactions of the (John Holian, Dr. George Scholes and Prof. Joseph J. Weiss), 1386
Radicals in Pairs : Generation of, and the Kinetics of Radical Chain Reactions in Solution (Dr. P. E. M. Allen and C. R. Patrick), 1194
Radicals (Free) : Isoelectronic Principle, Thermochemistry and Reactivity of related (Dr. Peter Gray and J. C. J. Thynne), 1357
  Spatial Distribution of, as studied by Electron Spin Resonance (Robert C. Smith and S. J. Wyard), 897
Radio Communication (Long-Range), by Satellite Microwave Dipoles—the West Ford Project, 1237
Radio Emission (Galactic) : Spectrum of (Dr. F. Graham Smith), 1381
Radio Engineers, British Institution of : Grant of a Charter to the, 651
Radio Research 1960—the Report of the Radio Research Board and the Report of the Director of Radio Research (Department of Scientific and Industrial Research), 1255
Radio Research Board : Radio Research 1960—the Report of the, and the Report of the Director of Radio Research (Department of Scientific and Industrial Research), 1255
Radio Research Station, Slough : Open Days, 231
Radio Signals : Effect of External Conditions on the Phase of (D. E. Watt-Carter and R. L. Corke), 1286
Radio Source : Lunar Occultation of a (Dr. C. Hazard), 58
Radio Source Centaurus *A* : Central Component of the (P. Maltby), 793
Radio Sources (Extragalactic) : Distribution of Brightness in (A. T. Moffet and P. Maltby), 453
Radio Spectroscopy of Solids (Institute of Physics and the Physical Society and the British Radio Spectroscopy Group Joint Conference on), 126
Radio Spectroscopy Group, British (Institutute of Physics and the Physical Society and the): Joint Conference on Radio Spectroscopy of Solids, 126
Radio Stars : Apparent Recession of Nebulae and the Nature of (Dr. N. S. Japolsky), 480
Radio Telescope (Benelux) : Cross-Antenna of the Proposed (Prof. W. N. Christiansen and Dr. J. A. Högbom), 215
Radioactive Materials : Introductory Manual on the Control of Health Hazards from (Medical Research Council, Memorandum No. 39), new edition, 1257
Radioactive Particles (Inhaled) : Effects of—Report of the Subcommittee on Inhalation Hazards, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 848), 556
Radioactive Substances : Safe Handling of, 1257
Radioactive Tracers in Chemistry and Industry (Pascaline Daudel), translated by Dr. Ulli Eisner, *review* by Prof. J. R. Partington, 637
Radioactivity in Protein of Cell Fractions from Myocardial Slices : Effect of Adrenalectomy and Corticosteroids on Distribution of (Dr. Edward I. Weinshelbaum and Dr. Ira G. Wool), 1401
Radioactivity in the Sea : Research on the Effects of, 122
Radioactivity (Beryllium-7 and Caesium-137), in Ground-Level Air : Comparison of (Dr. P. F. Gustafson, M. A. Kerrigan and S. S. Brar), 454
Radioactivity (Natural), in Tobacco and Tobacco Smoke (Dr. V. C. Runeckles), 322
Radioautography (Electron Microscopic) : Proposed Use of Magnetic Fields in (Lucien G. Caro), 1188
Radiobiology : Use of Animal Cell, Tissue and Organ Cultures in (New York Academy of Sciences Symposium on), 340
Radiocaesium and Potassium in Norwegians (Johan Baarli, Kjell Madshus, Kurt Lidén and Richard C. McCall), 436
Radioisotopes : The Use of, in Animal Biology and the Medical Sciences (International Atomic Energy Agency, the Food and Agriculture Organization and the World Health Organization of the United Nations, Conference on), 959
  Use of, in Biological Work in Burma (Dr. Maung Mya Thaung), 875
Radiological Health : Research Grants in (United States Public Health Service), 442
Radiological Units and Measurements : Report of the International Commission on (United States National Bureau of Standards, Handbook No. 78), 28
Radiology and Nuclear Medicine : Fellowships and Grants in the field of, 1962-63 (James Picker Foundation), 228
Radiolytic Oxidation of Ferrous Solutions with Standardized Internal Sources of Polonium-210 (J. Steyn and D. van As), 903
Radionuclides (Internally Deposited) : Removal of, by Triethylenetetramine-hexaacetic Acid (Prof. A. Catsch and D. Schindewolf-Jordan), 715
Radiostrontium : Assessment of Chronic Exposure to, by Urinary Assay (Dr. C. L. Comar and Jay Georgi), 390
Radley, Sir Gordon : World Communications (Presidential Address to Section G (Engineering) of the British Association for the Advancement of Science), 987
Radley, Margaret : Gibberellin-like Substances in Plants—Leguminous Root Nodules, 684 ; Seaweed (*Fucus vesiculosus*), 685
Radley, R. W., and others : Tuber Bulking in the Potato Crop, 782
Rado, Prof. R. : *Obituary* of Prof. E. H. Neville, 1345
Radola, Bertold J. : Electrophoretic and Immuno-electrophoretic Patterns of Extracellular Diphtheria Proteins from Culture Filtrates of Different Iron Concentrations, 382
Radoslovich, E. W. : Surface Symmetry and Cell Dimensions of Layer Lattice Silicates, 67
Radouco-Thomas, Dr. C. : Assessment of Pain (Testing of Analgesic Drugs on Animals), 1354
Rafelson, jun., Prof. Max E., and others: Action of Neuraminidase on Haptoglobin, 279
Rafelson, Max E., and others : Polarographic Examination of Sialic Acids, 596
Ragge, David R. : Cockroach Ecology, *review*, 106
Raibaud, Dr. P., and others : Bacteria of the Intestine (Studies on the Bacterial Flora in the Alimentary Tract of Pigs, 2, Streptococci : Selective Enumeration and Differentiation of the Dominant Groups), 1152
Railways in Rural Areas, 855
Raindrops : Wettability and the Capture, Carriage and Deposition of Particles by (R. R. Davies), 616
Rainfall (Light), and Plant Survival—Measurement of Stem Flow Run-off (M. D. Gwynne and J. Glover), 1321
Rainwater (New Zealand) : Barium-140 in (G. S. McNaughton and R. N. Woodward), 1344
Rajasthan Sheep Breeds : Composition of the Skin Follicle Population in seven (Sunanda Narayan), 1115
Rajewsky, Prof. B. : Effects of Ionizing Radiation on Organic and Biological Solids (Radicals produced on Irradiation of Keratin), 1151
Rama, and others : Iron-55 from Nuclear Detonations, 162
Ramachandran, E. G., and Dasarathy, C. : Transformation of Cathodically Impregnated and Cooled Austenite, 998
Ramachandran, Dr. V. S., and others : Basic Dyestuffs in Clay Mineralogy, 696
Ramiak, K. Venkata (Puranik, Prof. P. G., and): A New Relation between the N–H Stretching Frequencies of Primary Amides, 796
Ramsay, Dr. J. A., and Riegel, Dr. J. A. : Excretion of Inulin by Malpighian Tubules, 1115
Ramsay Memorial Trust : Awards of new Fellowships in Chemistry for 1961-62, 337
Randomness (Non-), in Amino-Acid 'Alleles' (Richard V. Eck), 1284
Rang, H. P. : Given the first award of the J. H. Burn fellowship (for 1961-62) in the Department of Pharmacology, University of Oxford, 229
Rangappa, Dr. K. S. : Cryoscopic Effect of Separation and Concentration of Solutes, 1087
Rangarajan, C., and others : Seasonal Variations of Caesium-137 in Air at Ground-Level, 747
Rankin, jun., J. S., and others : Gross Beta-Activity in the Thames River (Conn.), 1017
Rao, Prof. B. Ramachandra (Padmini, P. R. K. L., and): Molar Sound Velocity in Molten Hydrated Salts, 694
Rao, Prof. C. Radhakrishna : A Combinatorial Assignment Problem, 100
Rao, M. G. Seshagiri, and Rao, Prof. R. Ramachandra : Ultrasonic Velocity in Aqueous Solutions of some Electrolytes, 164
Rao, Prof. R. Ramachandra (Rao, M. G. Seshagiri, and) : Ultrasonic Velocity in Aqueous Solutions of some Electrolytes, 164
Raper, Dr. A. B. (Fraser, I. D., and) : Solubility of Denatured Haemoglobin Variants in Acid Buffers, 355
Rapid Determination of Ytterbium in Aqueous Solutions and in Thulium Oxide by Neutron Activation (Minoru Okada), 1090
Rapid Development of Hypomagnesaemia in Lactating Cows given Artificial Rations Low in Magnesium (J. A. F. Rook), 1019
Rapid Infra-Red Determination of Acetone in the Blood and the Exhaled Air of Diabetic Patients (Dr. Richard D. Stewart, Edward A. Boettner and Bruce T. Stubbs), 1008
Rapid Statistical Calculations (M. H. Quenouille), *review* by M. J. R. Healy, 1236
Raschke, K. : Nematology (Reduction of Hatching from *Heterodera* Cysts after Treatment with 'Trapex' due to Death of Larvae), 1049
Rashbass, Cyril (Westheimer, Gerald, and): Barbiturates and Eye Vergence, 833
Rashevsky, Nicolas, and Trucco, Ernesto (edited by) : Arms and Security, a Mathematical Study of the Causes and Origins of War (Dr. Lewis F. Richardson), *review* by Sir Cyril Burt, 427
Rasmusen, Dr. B. A. : Blood Groups in Infra-human Species (Blood Group Systems of Sheep), 655
Raspberry : Mutation for Larger Fruit in the (D. L. Jennings), 302
Rastogi, R. P., and others : Electrical Effects during Dissolution and Precipitation of Electrolytes, 764
Rat : Biological Incorporation of Implant Material in the (James Calnan), 1017
  Effect of Serotonin on Absorption and Distribution of Calcium-45 in the (Prof. S. Garattini, E. Grossi, P. Paoletti, R. Paoletti and M. Poggi), 185
  Evidence of a 'Hunger Motivational' System in the Lateral Hypothalamus of the (Dr. P. J. Morgane), 672
  Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
  Leucine Aminopeptidase in the Mammary Gland of the Cow and (Prof. S. Talanti and Prof. Väinö K. Hopsu), 86
  Release of Heparin from the Mast Cells of the (G. T. Archer), 90
  Role of the Lung in Metabolism of Fat during Ontogeny of the (Dr. Z. Vacek, P. Hahn and O. Koldovsky), 85
Rat during 'Metrazol' Convulsions : Changes in the Pentose-Nucleic Acid Content of Sub-Cellular Fractions of the Brain of the (Prof. G. P. Talwar, B. Sadasividu and V. S. Chitre), 1007
Rat Bladders : Incorporation of Phosphorus-32 into Urinary Concretions forming on Zinc Implants in (Dr. Richard F. Keeler and Dr. Stuart A. Lovelace), 715

Rat Brain (Living) : Urea Synthesis in the (R. K. Davies, A. J. Defalco, D. Shander, A. Kopelman and Prof. J. Kiyasu), 288

Rat Flea (Female), *Xenopsylla cheopis* Roths. : An Abnormal Form of (M. I. D. Sharma and G. C. Joshi), 727

Rat Hepatic Cells (Normal) : Nucleolar Localization of Succinic Dehydrogenase in (P. De, R. Chatterjee and Dr. S. Mitra), 925

Rat Kidneys : Comparison of Short-Circuit Current and Net Water Movement in Single Perfused Proximal Tubules of (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205

Rat Lens Enzyme System : Catalysis of Incorporation of ^{14}C-Uridine into Rat Lens Ribonucleic Acid by (Dr. Anima Devi and Dr. N. K. Sarkar), 1094

Rat Lens Ribonucleic Acid : Catalysis of Incorporation of ^{14}C-Uridine into, by Rat Lens Enzyme System (Dr. Anima Devi and Dr. N. K. Sarkar), 1094

Rat Liver : Effect of Adrenalectomy on the Activity of Enzymes of the Urea Cycle in (Patricia McLean), 1302

Rat Liver Glutamic-Oxalacetic Transaminase : Intracellular Distribution Pattern of (Dr. Herbert J. Eichel and Josef Bukovsky), 243

Rate of Dark-Fixation of Carbon Dioxide in Leaves of *Bryophyllum fedtschenkoi* : An Endogenous Rhythm in the (Diana M. Warren and Malcolm B. Wilkins), 686

Rate of Iron Oxidation : Morphological Variation in *Ferrobacillus ferrooxidans* related to the (M. P. Silverman and M. H. Rogoff), 1221

Rate of Lesion Production on Pinto Bean : Relationship of Tobacco Mosaic Virus (TMV) Lesion Number and Concentration to the (John Piacitelli and Prof. Vincent Santilli), 624

Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat : Increase of the (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171

Rate of Utilization of Glucose : Effect of Thyroxine and 2,4-Dinitrophenol on the (Dr. L. Macho), 604

Rate, and Primary Products, of Reactive Bimolecular Collisions : A Molecular Beam Reactor for Examining the (C. W. Nutt and A. J. Biddlestone), 798

Rate (Expected), of Senescence and Age-dependent Mortality in Fish (Dr. Alex Comfort), 822

Rating and Valuation Bill : Scientific Societies and the, 123

Ratio (Sex-), in Mice (Margaret J. Cook and Augustin Vlček), 89

Ratio (Signal-Noise) : Possible Method for Increasing the, in the Detection of the First Motion of a Refracted *P*-Wave (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382

Ratio (Television Signal-to-Noise) : An Instrument for measuring (S. M. Edwardson), 1355

Rations (Artificial), Low in Magnesium : Rapid Development of Hypomagnesaemia in Lactating Cows given (J. A. F. Rook), 1019

Ratios (Caesium-137/Potassium) : Determination of, in Diet and in the Human Body by Urine Analysis (A. Morgan and Gloria M. Arkell), 1100

Rats : Anaphylactoid Reaction in (J. M. Harris and Dr. G. B. West), 399

Rats under Normal Feeding Conditions : Soluble Material in the Gastro-intestinal Tract of (Dr. Anne S. Cole), 502

Rats bearing Transplantable Acute Myeloid Leukaemia : Effect of Calf Thymus Histone on (Dr. Lubomir Hnilica and Dr. Viktor Holoubek), 922

Rats (New-born and Adult) : Collagen Fractions in the Skin of (Nestor Gonzalez Cadavid, Berta Denduchis and Roberto E. Mancini), 1297

Rats (Normal Adult) : Stimulation by Heparin of Parenchymal Liver Cell Proliferation in (Dr. M. Zimmerman and Evemarie Celozzi), 1014

Rats (Suckled and Unsuckled Female) : Induction of Cancer in (Prof. Giuliano Briziarelli), 921

Rats (White Laboratory) : Leptospirosis of (Dr. M. Füzi and R. Csóka), 1123

Rauer, K., and others : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum*, 909

Rausen, A. R., and others : Haptoglobin Patterns in Cord Blood Serums, 717

Raven, D. J. (Earland, Dr. C., and) : Lanthionine Formation in Keratin, 384

Rawlins, F. I. G. : An Appraisal of Phenomenology, *review*, 5

γ-Ray Counting Method : Measurement of the Thorium Content of Natural Materials by a (Prof. J. H. J. Poole and F. N. Byrne), 62

Rayner, R. W. : Spore Liberation and Dispersal of Coffee Rust *Hemileia vastatrix* B. et Br., 725

β-Rays in Dry and Wet Condition : Radiation Sensitivity of *Escherichia coli* to (S. B. Bhattacharjee and N. N. Das Gupta), 1015

Rays (Cosmic) : Fission and Spallation Phenomena and their Application to (European Organization for Nuclear Research and the Max Planck Institute, Heidelberg, Conference on), 24

Re-absorption of Fluorescence Radiation through Uranin Solution : Average Extinction Coefficient for (Dr. K. K. Rohatgi and G. S. Singhal), 799

Re-entry Trajectories : Space-Flight and (International Academy of Astronautics Symposium on), 960

Re-interpretation of Variations in Levels of Succinic Dehydrogenase during Chemical Carcinogenesis : Tissue Dilution Artefact—a (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203

Reaction : A New Inorganic—Nitric Acid–Hydrazoic Acid (Dr. J. Mašek), 166

Reaction between Chalcocite and Pyrrhotite in Cold Solution : Formation of Chalcopyrite by (W. M. B. Roberts), 560

Reaction of Ethane with a Clean Rhodium Film (Dr. Richard W. Roberts), 170

Reaction (Anaphylactoid), in Rats (J. M. Harris and Dr. G. B. West), 399

Reaction (Basophil) : A New Test for Detecting Anaphylactic Sensitivity—the (Prof. Walter B. Shelley and Lennart Juhlin), 1056

Reaction (Hill) : Photophosphorylation and the (Mary Stiller and Prof. Birgit Vennesland), 677 ; (Dr. N. E. Good), 678 ; (Dr. André T. Jagendorf), 679

Reaction (Nickel), and Thermal Isomerization of Alpha-Keto-Acid Hydrazones : Application of the, for their Chromatographic Analysis (A. M. Tokushige and Dean E. S. Cook), 797

Reaction (Staining), of the Pit Membrane of Wood Cells (R. K. Bamber), 409

Reaction Time and Age ('Alpha' Rhythm) : Frequency of the (Dr. Walter W. Surwillo), 823

Reaction Times (Simple and Serial) : Relationship between (Prof. H. Kay and Dr. A. D. Weiss), 790

Reactions of the Formyl Radical Ion : Radiation-induced Formation and (John Holian, Dr. George Scholes and Prof. Joseph J. Weiss), 1386

Reactions of Haemoproteins with Hydrogen Peroxide and the Supposed Formation of Hydrogen Peroxide during the Autoxidation of Haemoglobin (Prof. D. Keilin), 769

Reactions of Salt Solutions and Calcium Chloride on Mortar and Concrete, 125, *erratum*, 1145

Reactions (Gas-Phase), of the Halogens and their Compounds (Dr. J. H. Thomas and Dr. E. Whittle), 129

Reactions (Oxidation-Reduction), of Plastoquinone in Isolated Chloroplasts (Dr. E. R. Redfearn and J. Friend), 806

Reactions (Photosensitivity) : Mast Cells in (V. J. McGovern), 90

Reactions (Radical Chain), in Solution : Generation of Radicals in Pairs and the Kinetics of (Dr. P. E. M. Allen and C. R. Patrick), 1194

Reactions (Recoil-Atom), at Low Temperature (Slobodanka Veljković and Dr. Garman Harbottle), 1287

Reactions (Side-), during Hydrogenolysis of 2,4-Dinitrophenylhydrazones of Aromatic Keto-Acids (Dr. John H. Menkes), 285

Reactivation of Chymotrypsin : Inactivation and (T. Therattil Antony), 178

Reactive Bimolecular Collisions : A Molecular Beam Reactor for Examining the Rate, and Primary Products, of (C. W. Nutt and A. J. Biddlestone), 798

Reactivity of Calcium Sulphate Hemihydrate (M. J. Ridge, H. Surkevicius and Angela A. Milne), 704

Reactivity of related Free Radicals : Isoelectronic Principle, Thermochemistry and (Dr. Peter Gray and J. C. J. Thynne), 1357

Reactivity of Human Red Cells to Antiglobulin Tests : A Relation between the, and their Surface Structure (Judith E. Davis, Prof. H. N. Green and Pamela W. Tymms), 923

Reactor Centrum Nederland : Appointment of Johannes Pelser as technical managing director, 1042

Reactor (Gas-cooled), at the Windscale Factory of the United Kingdom Atomic Energy Authority : Progress on the Advanced, 853

Reactor (A Molecular Beam), for Examining the Rate, and Primary Products, of Reactive Bimolecular Collisions (C. W. Nutt and A. J. Biddlestone), 798

Reactor (Nuclear) Calculations : Digital Computers and (Ward C. Sangren), *review* by Dr. M. V. Wilkes, 9

Reactor (Nuclear) Chemistry (Oak Ridge National Laboratory Second Conference on), 651

Reactor (Nuclear) Technology : Analytical Chemistry in (Oak Ridge National Laboratory Fifth Conference on), 651

Read, Prof. C. : Parasite Biology (The Host–Parasite Interface—Molecular Basis of Parasitism), 134

Read, L. M. : Appointed chairman of the Council of the Plastics Institute, 1145

Reagent (Girard *T*), for Carbonyls (A. M. Gaddis, Rex Ellis and G. T. Currie), 1391

Reagents (Organic), in Inorganic Analysis : The Use of (A. I. Busev and N. G. Polianskii), translated from the Russian by J. T. Greaves, *review* by Dr. D. T. Lewis, 1336

Rearrangements (Chromosome), induced by X-Rays in Immature Germ Cells of *Drosophila* (Seymour Abrahamson), 523

Recalde, Dr. Fabian : Appointed a nutrition officer on the staff of the Food and Agriculture Organization of the United Nations, 1045

Recaldin, Dr. D. : A Reference Book for Biochemists, *review*, 635

Reception (Sound), by Insects : Sound Production and (Mable Frings and Hubert Frings), *review* by Prof. V. B. Wigglesworth, 428

Receptor-destroying Enzyme and Proteases (Influenza Viruses,) : Action of, on Blood Group Agglutinogen M^g (Prof. Georg F. Springer and Dr. Karlheinz Stalder), 187

Receptors : Odour (M. H. Briggs and R. B. Duncan), 1310

Receptors in the Sensory Vesicle of the Ascidian Tadpole : Electron Microscope Observations of the (Noël Dilly), 786

Receptors (Tryptamine), in the Central Nervous System (Dr. J. R. Vane, Dr. H. O. J. Collier and Dr. S. J. Corne, and Dr. E. Marley and Dr. P. B. Bradley), 1068

Recession (Apparent), of Nebulae and the Nature of Radio Stars (Dr. N. S. Japolsky), 480

Recherche Scientifique, Centre National de la : International Meeting on Psychophysiology, Neuropharmacology and Biochemistry of Audiogenic Seizure, 959

Recherche Scientifique, Fonds National de la : Trente-troisième Rapport Annuel, 441

Reckel, Dr. R. P. (Scheinberg, Dr. S. L., and) : Blood Groups in Infra-human Species (Red Cell Agglutinogen of Chickens identified by certain Plant Seed Extracts), 654

Recognition : Optical Character (Information Systems Branch of the Office of Naval Research Information Centre of the United States National Bureau of Standards Symposium on), 1145

Recognized Sign (Newly), of Denervation : Muscle Target Fibres, a (Dr. W. K. Engel), 389

Recoil-Atom Reactions at Low Temperature (Slobodanka Veljković and Dr. Garman Harbottle), 1287

Recombination in the *X*-Chromosome of *Drosophila melanogaster* (C. N. Law), 1180

Records (Two Unexplored), of Quaternary History (A. H. Stride and R. Bowers), 1000

Recourt, Dr. A., and de Vries, G. H. F. : An Experimental Apparatus for Contact Microradiography at 200-500 V., 1185

Recovery from Viral Infection in the Chick Embryo : Mechanism of (Dr. Samuel Baron and Alick Isaacs), 97

Recovery and *in vivo* Survival of Rabbit Erythrocytes (Dr. G. F. Doebbler, R. G. Buchheit and A. P. Rinfret), 1405

Recovery Times : A Method of Estimating Ionospheric Absorption Heights from (Syed Ziauddin), 1084

Rectal Glands in Woodlice (Dr. Minati Gupta), 406

Recurrent Disinhibition of Spinal Motoneurones: Changes in the Membrane during (Dr. Victor J. Wilson and Paul R. Burgess), 918

Red Blood Cell : Dimer Formation and Glucose Transfer across the Membrane of the (Dr. W. D. Stein), 1277

Red Cells : Thromboplastic Activity of (Dr. James A. Inglis and Dr. June W. Halliday), 821

Red Cells of the Sheep : Occurrence of an *Rh*-like Antigen in (B. Urbaschek and Prof. K. Trautwein), 193

Red Cells (Human) : Common Carrier System for Sugar Transport in (Dr. L. Lacko and Dr. M. Burger), 881
  A Relation between the Reactivity of, to Antiglobulin Tests and their Surface Structure (Judith E. Davis, Prof. H. N. Green and Pamela W. Tymms), 923
Red Deer Commission : Report for 1959-1960, 29
Red Shift : Theory of the, and the Nature of Planck's Constant (L. Infeld), 1184
Red and Far-red Irradiation : Effect of, on the Germination Process in Seeds of *Pinus sylvestris* L. (Bengt Nyman), 1219
Rédei, A., and Nagy, S. : Simultaneous Determination of Dextran and Glucose in Serum, 173
Redfearn, Dr. E. R., and Friend, J. : Oxidation-Reduction Reactions of Plastoquinone in Isolated Chloroplasts, 806
Redhardt, Dr. A. : Effects of Ionizing Radiation on Organic and Biological Solids (Radicals produced on Irradiation of Keratin), 1151
Reduced Alkylated Derivatives of some Myeloma Globulins : Comparison of, and Bence-Jones Proteins (Dr. M. D. Poulik and Dr. G. M. Edelman), 1274
Reduced Diphosphopyridine Nucleotide : An Inhibitor of Liver Alcohol Dehydrogenase in Preparations of (Dr. Keith Dalziel), 1098
Reduced Pressure : Bio-Assay of Erythropoietin in Mice made Polycythaemic by Exposure to Air at a (Dr. P. Mary Cotes and Dr. D. R. Bangham), 1065
Reductase (Nitrate-) in *Aerobacter aerogenes* : Inhibition by Oxygen of Biosynthesis and Activity of (Francis Pichinoty and Liliane D'Ornano), 879
Reduction of Zirconium and Hafnium Oxides (F. K. McTaggart), 1192
Reduction (Oxidation-) : Paths of Inter-Molecular Energy Transfer in Photosensitized (N. Takeyama), 1359
Reduction (Oxidation-) Reactions of Plastoquinone in Isolated Chloroplasts (Dr. E. R. Redfearn and J. Friend), 806
Reduction Products of 2,2'-Dipyridyl : Stability Constant of Copper (II) Complexes of (Dr. M. T. Beck and M. Halmos), 1090
Redundancy Techniques for Computing Systems (Information Systems Branch of the United States Office of Naval Research Symposium on), 1349
Rees, Dr. : Hazards of the Animal House (Precautions against Tuberculous Infection in the Animal House and Laboratory), 339
Reeves, Egli (Boyd, Prof. William C., and) : Specific Inhibition of Anti-D Antibody by Colominic Acid, 511
Reference Book : Civil Engineering (edited by J. Comrie), *review* by T. M. Charlton, 1032
Reference Book for Biochemists, *review* by Dr. D. Recaldin, 635
Reflectivities (Radar), of Hail Samples (R. H. Douglas), 266
Refracted *P*-Wave : Possible Method for Increasing the Signal-Noise Ratio in the Detection of the First Motion of a (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382
Refuse (Tipped) : Pollution of Water by—Report of the Technical Committee on the Experimental Disposal of House Refuse in Wet and Dry Pits (Ministry of Housing and Local Government), 864
Refuse Tips : Pollution from (Nora H. Johnson), 864
Regenerating Liver : Effect of Enzyme Injections on Mitosis in (Dr. Gaston de Lamirande), 400
Regeneration of Elements of Donor Origin in Orthotopically Grafted Skin following the Homograft Response (Dr. J. K. Dineen and Dr. Aleksander Szenberg), 153
Regeneration of Lateral Plates of the Stickleback (*Gasterosteus aculeatus* L.) : Significance of the (Tadeusz Penczak), 621
Regenerative Ability : Adaptive Value of (Dr. A. E. Needham), 720
Regional Advisory Council for Technological Education, London and Home Counties : Regional Development Plan for Courses for the Diploma in Technology, 1044
Regional Development Plan for Courses for the Diploma in Technology (Regional Advisory Council for Technological Education, London and Home Counties), 1044
Regional Research Laboratory, Hyderabad : Annual Report (1959-60), 757
Regions (Corresponding), of Homotypic Long Bones : Number and Arrangement of Osteons in (Dr. G. Marotti), 1400
Regions (New), of the Spectrum : From Radar to Spectroscopy— (Prof. D. J. E. Ingram), 1146
Registrar General : Statistical Review on Mental Health for 1957 and 1958, Supplement, 855
  Statistical Return for the First Quarter of 1961, 1347
Regulation of Pyrogallol Oxidations by Alcohols and Sugars (B. Z. Siegel, S. M. Siegel and N. S. Goodman), 180
Rehabilitation in Leprosy—Report of the Scientific Meeting on (United Nations, World Health Organization, Technical Report Series No. 221), 1248
Reid, E. : Steroids and Cancer, *review*, 1235
Reid, Joan D., and others : Histidine Decarboxylase and Growth, 1311
Reid, W. J. : Coastal Inlets, *review*, 426
Reilingh, W., and others : Neutral 17-Ketosteroids in Porcine Urine, 175
Reiner, Prof. M. : Biorheology and Microcirculation (Function of Models in Biorheology), 758
Reinfelds, Juris : Appointed to an I.C.I. Research Fellowship in the University of Edinburgh, 545
Reinharz, M., and others : Age Measurements on Antarctic Rocks (Queen Maud Land), 1286
Relation between the Reactivity of Human Red Cells to Antiglobulin Tests and their Surface Structure (Judith E. Davis, Prof. H. N. Green and Pamela W. Tymms), 923
Relation (A New), between the N–H Stretching Frequencies of Primary Amides (Prof. P. G. Puranik and K. Venkata Ramiah), 796
Relations (Industrial), in the Welfare State, 1129
Relationship between the Decrease in Urinary Excretion of Histamine and the Initiation of the Labour Process (Dr. Halina Wiskont-Buczkowska), 290
Relationship between Simple and Serial Reaction Times (Prof. H. Kay and Dr. A. D. Weiss), 790
Relationship of Tobacco Mosaic Virus (TMV) Lesion Number and Concentration to the Rate of Lesion Production on Pinto Bean (John Piacitelli and Prof. Vincent Santilli), 624
Relationship between Velocity of Cardiac Contraction and Size of the Heart—a Hypothesis (Dr. H. Feinberg), 1373
Relationship (Direct), of Phosphorylase and Mitochondrial α-Glycerophosphate Dehydrogenase Activity in Skeletal Muscle (Dr. A. G. E. Pearse), 504
Relationships (Viscosity–Temperature), for Dilute Solutions of High Polymers (Dr. W. R. Moore), 1292
Relative Sweetness of α- and β-Forms of Selected Sugars (Rose Marie Pangborn and Sandra C. Gee), 810
Relative Volumes of Cytoplasm and Vacuole in *Nitella* (Dr. Paul Saltman and Dr. Tyge Christensen), 825
Relativity, the General Theory (J. L. Synge), *review* by Dr. G. J. Whitrow, 424
Relativity (General) : A New Approach to, *review* by Dr. G. J. Whitrow, 424
Relaxation (Magnetic), in Magnetite and in its Solid Solutions with Manganese and Nickel Ferrites (A. Bragiński and Th. Merceron), 898
Relaxation (Thermoelastic), induced by Ultrasonics : Crystallization Kinetics in Polyvinylchloride and (Dr. V. Nardi), 563
Release from the Feedback Inhibition controlling the Biosynthesis of Isoleucine (Masaya Hayashibe and Teijiro Uemura), 1417
Release of Heparin from the Mast Cells of the Rat (G. T. Archer), 90
Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat : Increase of the Rate of (Dr. F. Escobar del Rey, G. Morreale de García, M. D. García García and J. Mouriz García), 1171
Remington's Practice of Pharmacy (edited by Eric W. Martin, E. Fullerton Cook, E. Emerson Leuallen, Arthur Osol, Linwood F. Tice and Clarence T. Van Meter), twelfth edition, *review* by Dr. J. H. Gaddum, 8
Removal of Internally Deposited Radionuclides by Triethylenetetraaminehexaacetic Acid (Prof. A. Catsch and D. Schindewolf-Jordan), 715
Removal of Milk Constituents from the Mammary Gland of the Ewe (A. K. Lascelles), 1404
Removing Non-specific Staining Components from Fluorescein-labelled Conjugates : Simplified Procedure for (G. D. Johnson), 70
Rennet Standardization : An Invariant Casein Substrate for, derivable from Diverse Sources of Cows' Milk (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Replacements (Amino-Acid) : Non-Random Occurrence of (C. R. Woese), 1196
Replicating Dry or Moist Surfaces for Examination by Light Microscopy : A Method of (Joan Sampson), 932
Reports (Technical), of the United States Armed Forces, 1347
Repository Injection of Lipopolysaccharide : Development in Mice of Prolonged Non-specific Resistance to Sarcoma Implant and Staphylococcus Infection following (Samuel J. Prigal), 1111
Reproduction in *Rubus* : Biology of (Dr. G. J. Dowrick), 680
Reproduction in S.48 Timothy (*Phleum pratense* L.) : Effects of Light Intensity on (Dr. G. J. A. Ryle), 196
Reptiles (Non-aquatic) : Swimming Ability of (R. R. Tercafs), 125
Requirements (Power), and Scale-up in Flotation (Prof. Nathaniel Arbiter and Prof. Colin C. Harris), 268
Requirements (Sterol), of the Silkworm, *Bombyx mori* (Dr. Toshio Ito), 882
Research : Forest Products (1960)—Report of the Products Research Steering Committee with the Report of the Director of Forest Products Research (Department of Scientific and Industrial Research), 760
  Genetic (Prof. Arne Müntzing), *review* by Dr. Kenneth S. Dodds, 636
  Radio, 1960—the Report of the Radio Research Board and the Report of the Director of Radio Research (Department of Scientific and Industrial Research), 1255
Research by Sixth-Form Schoolboys (J. Heywood), 860
Research on Cancer : Eleanor Roosevelt Fellowships for (International Union against Cancer), 125
Research in Chemistry : Grants for (Chemical Society), 651
Research on Creep : A New Laboratory for, 1049
Research in Dairying, National Institute for : Annual Report for 1960, 237
Research on the Effects of Radioactivity in the Sea, 122
Research in the Food and Drug Directorate (Dr. Ross A. Chapman), 335
Research for Industry 1960—a Report on Work done by Industrial Research Associations in the Government Scheme (Department of Scientific and Industrial Research), 1252
Research on Leukaemia and Allied Diseases (Lady Tata Memorial Trust Awards for 1960-61), 228
Research in Marine Biology or Oceanography (Challenger Society Grants for), 24
Research in Nuclear Science, National Institute for (Harwell) : Successful Operation of the *Nimrod* Injector, 1043
Research into Problems of Ageing, 1145
Research into Virus Diseases (Pfizer Group Laboratories for), 20
Research on Volcanoes in the West Indies, 225
Research (Aeronautical), in Asia and Africa, 1043
Research (Atomic) : New Trends in, and their International Significance (Dr. L. Kowarski), 853
Research (Controlled Nuclear Fission) : Plasma Physics and (International Atomic Energy Agency International Conference on), 443
Research (Educational), in England and Wales, National Foundation for : *Technical Education Abstracts from British Sources*, Vol. 1, No. 1, September–December 1960, 21
Research (Experimental Medical) : Feldberg Foundation for German–English Scientific Exchange for, 1143
Research (Experimental Tumor) : Progress in (edited by F. Homburger), Vol. 1, *review* by Prof. F. Bergel, 1231
Research (Government), in Great Britain : Financing, 205
Research (Industrial), in Britain, 1252
Research (Medical), in East Africa, 226
Research (Medical), East African Council for : Report for 1959-60, 226
Research (Medical), Fleming Memorial Fund for : Grants from the, 959
Research (Medical), Institute for (Federation of Malaya) : Studies from the, No. 29, Malaysian Parasites, 35-49 (edited by W. W. Macdonald), *review* by P. F. Mattingly, 948
Research (Naval), United States Office of (Information Systems Branch) : Symposium on Redundancy Techniques for Computing Systems, 1349
Research (Nuclear), European Organization for, and the Max Planck Institute, Heidelberg : Conference on Fission and Spallation Phenomena and their Application to Cosmic Rays, 24
Research (Operations), and Systems Engineering (Charles D. Flagle, William H. Huggins and Robert H. Roy), *review* by Prof. L. S. Goddard, 105

Research (Plankton) : Fellowships for (Lamont Geological Observatory), 754
Research (Polar) : Soviet, *review* by Dr. Terence Armstrong, 841
Research (Scientific) : National Organization of, 632
Research (Scientific), in British Universities, 1960-61 (Department of Scientific and Industrial Research), 228
Research (Scientific), in the U.S.S.R., 123
Research (Scientific), National Foundation for (Belgium) : Thirty-third Annual Report, 441
Research (Shipbuilding), in Britain, 543
Research (Soviet), on Organo-Phosphorus Compounds, 1949-1956 (in English translation), *review* by Dr. F. G. Mann, 1232
Research (Space) : Some Aspects of the Physics of (Institute of Physics and the Physical Society Residential Symposium on), 229
  Further Advancements in, 631
Research (Textile) : Polish, 1045
Research (Tumour) : Progress Reports and, *review* by Prof. F. Bergel, 1231
Research (*Vision*), Vol. 1, Nos. 1-2, 650
Research Awards (Animal Health Trust), 1250
Research Council of Alberta : Information Series No. 23, Alberta Sub-bituminous Coals as Drilling Fluid Thinners (E. J. Jensen), 1144
Research Defence Society : Pamphlet on Animal Experiments in the Control of Animal Diseases, 226
Research Development Corporation (National) : Report for 1960, 343
Research Equipment Exhibition (Instrument Symposium and) : Eleventh Annual (Washington Sections of the American Association of Clinical Chemists, the American Chemical Society, the Instrument Society of America, the Society of American Bacteriologists, the Society of Applied Spectroscopy and the Society for Experimental Biology and Medicine), 959
Research Fellowships : Carlsberg–Wellcome (Awards for 1960-61), 754
  IBM (International Business Machines, United Kingdom, Ltd.), 442
  Industrial (J. Langham Thompson, Ltd.), 545
  Wellcome (Animal Health Trust Awards), 1250
Research Foundation (Ontario) : Annual Report for 1960, 1254
Research Grants in Radiological Health (United States Public Health Service), 442
Research Highlights in Ageing (United States Department of Health, Education and Welfare, Public Health Service Publication No. 854), 1145
Research Laboratory (Regional), Hyderabad : Annual Report (1959-60), 757
Research Literature (Thermophysical Properties) : Retrieval Guide to, Vol. 1 (edited by Y. S. Touloukian), Book 1, Part A, Guide to Substance Classification and Numerical Codes ; Book 1, Part B, Dictionary of Synonyms and Trade Names ; Book 1, Part C, Dictionary of Substances ; Book 2, Classified Search Index ; Book 3, Master Bibliography, Author Index, *review* by Prof. A. R. Ubbelohde, 109
Research Medal of the Royal Society of Victoria awarded to Dr. George Baker, 1247
Research Progress in General Medical Sciences, 1960 : Highlights of (United States Department of Health, Education and Welfare, Public Health Service Publication No. 815), 658
Research Publication on Farm Buildings : Bibliography of, Section 5, Buildings for the Drying and Storage of Grain (Agricultural Research Council), 440
Research Time : Endowed (International Business Machines, United Kingdom, Ltd.), 442
Research Training Scholarships (Animal Health Trust Awards), 1250
Research Vessel : The Fishing (Food and Agriculture Organization of the United Nations Forum on), 229
Research Work of the Nature Conservancy (House of Commons Adjournment Debate on), 962
Research and Development : Reviews of Data on, No. 27, Report on Scientists and Engineers engaged in research and development in Colleges and Universities in the United States for 1958 (United States National Science Foundation), 225
  Reviews of Data on, No. 28, Capital Expenditure of Colleges and Universities in the United States for research and development in the Natural and Social Sciences in 1958 (United States National Science Foundation), 545
Research and Development in Scotland, 440
Research and Development (Atomic Energy), in Britain, 857
Research and Development (Scientific) : Government Responsibility in, 837
Residue (An Unreactive Tyrosine), in Insulin and the Exclusive Iodination of the *A* Chain (Dr. P. H. Springell), 1372
Resistance of *Entamoeba histolytica* to Fumagillin : Induced Increase in (Dr. Mitsuru Nakamura), 413
Resistance of Humus to Decomposition (H. F. Birch and M. T. Friend), 731
Resistance to Infection with *Salmonella paratyphi C* in Mice parasitized with a relatively Avirulent Strain of *Salmonella typhimurium* (Dr. J. G. Howard), 87
Resistance to 6-Mercaptopurine in Human Epidermoid Carcinoma Cells in Culture : Biochemical Aspects of (R. W. Brockman, George G. Kelley, Patricia Stutts and Virginia Copeland), 469
Resistance (Frost) : Intracellular Freezing and, in Egg-Cells of the Sea Urchin (E. Asahina)—Intracellular Freezing as a Cause of Frost-killing in relatively Rapidly Frozen Cell Suspensions, 1263 ; A Mechanism to Prevent the Seeding of Intracellular Ice in Freezing Living Cells, 1264
Resistance (Prolonged Non-specific), to Sarcoma Implant and Staphylococcus Infection following Repository Injection of Lipopolysaccharide : Development in Mice of (Samuel J. Prigal), 1111
Resistance (Specific Evaporation) : Compressibility and, of the Monolayers of Long-Chain Alcohols and Glycol Monoalkyl Ethers (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Resistant and Susceptible Strains of Cotton : Leaf Curl Virus and the Flavonoid Content of (Dr. Esam M. Moustafa), 415
Resistivity Anomalies in Palladium Hydride : Heat Capacity and (Paul Mitacek, jun., and Prof. J. G. Aston), 271
Resistivity Changes due to Formation of *G.P.* Zones (Clusters rich in Solute), (H. Herman and Prof. J. B. Cohen), 63
Resonance : Electron Spin (Chemical Society Symposium on), 755
Resonance (Electron Spin) : Spatial Distribution of Free Radicals as studied by (Robert C. Smith and S. J. Wyard), 897
Resonance (Electron Spin), of Adenosine Triphosphate (D. B. Russell and S. J. Wyard), 65
Resonance (Spin), and Electrical Conductivity of Indole–Iodine (B. Smaller, Dr. I. Isenberg and S. L. Baird, jun.), 168
Resonance Absorptions (Electron Spin), induced by Light in Adsorbed Layers of Cyanine Dyes on Silver Bromide Microcrystals (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Resources (Water), of the United States (Prof. W. G. V. Balchin), 444
Resources (Water), of Wales : Report on the (Welsh Advisory Water Committee), 135
Respiration : Active Cation Transport as a Pace-maker of (Dr. R. Whittam), 603
Respiration in *Azotobacter* : Oxygen Inhibition of (M. J. Dilworth and C. A. Parker), 520
Respiration of Tumours : The Glycolysis and (Dr. Alan C. Aisenberg), *review* by Prof. F. Dickens, 1335
Respiration (Tissue Slice) : Oxygen Electrode for Measurement of (E. H. Strickland, F. D. Ziegler and Prof. A. Anthony), 969
Respirators : The Design and Use of (Ergonomics Research Society and the British Occupational Hygiene Society Discussion on), 655
Respiratory Metabolism in Plants (Prof. Harry Beevers), *review* by Prof. W. O. James, 1031
Respiratory Organs (Accessory), in Air-breathing Fishes : A Hydrostatic Function of the (Dr. S. Z. Qasim and R. Hasan), 396
Response of the Labellar Hairs of the Blowfly, *Phormia regina* Meigen, to Protein (D. I. Wallis), 917
Response to Photoperiod : Flower Initiation in the Carnation in (Dr. G. P. Harris and Juliet E. Griffin), 614
Response to Series of Subliminal Stimuli—an Ethological Method for Investigating the Properties of Nervous Systems (A. J. Pontin), 512
Response (Antibody), in Rabbits following Injection of Sheep Erythrocytes into Lateral Ventricle of Brain (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
Response (Homograft) : Regeneration of Elements of Donor Origin in Orthotopically Grafted Skin following the (Dr. J. K. Dineen and Dr. Aleksander Szenberg), 153
Response' ('Insulin), of Normal Rabbits : Effects of Injections of some Intermediary Metabolites on the (Dr. H. D. Brahmachari and G. Raghupathy Sarma), 491, *erratum*, 755
Response (Stimulus-) Compatibility in the Paired-Associate Learning of Nonsense Syllables (A. D. Baddeley), 1327
Responses (Mechanical), of Frog Muscles at Low Temperature : Inhibition by Potassium of the (H. Lorković), 1011
Responsibility (Government), in Scientific Research and Development, 837
Restoration of Cultural Property, International Centre for the Study of the Preservation and the (Rome) : Works and Publications, 3, Climatology and Conservation in Museums, 1050
Rete Mirabile (Mammalian Carotid) : Functions of the (Dr. C. H. Barnett and C. D. Marsden), 88
Retention (Electrolyte), produced by the Antialdosterone *SC* 5233 (J. B. Farmer and B. Petch), 1308
Retention (Potassium) : Aldosterone Excretion and, in Subjects living at High Altitude (P. J. Ayres, Rona C. Hurter, Dr. E. S. Williams and J. Rundo), 78
Reticulo-Endothelial System : Sensitivity of Mice to Bacterial Lipopolysaccharide following Alteration of Activity of the (Dr. G. N. Cooper and Dr. A. E. Stuart), 294
Reticulo-Endothelial System of Mice : Effect of Added Vitamins on the Phagocytic Activity of the (J. Cordingley and Prof. T. Nicol), 82
Retirement : The Problem of, *review* by Prof. L. S. Hearnshaw, 532
Retrieval of Biological Information : Storage and (Dr. G. C. Ainsworth), 12
Retrieval of Published Information, *review* by Prof. A. R. Ubbelohde, 109
Retrieval Guide to Thermophysical Properties Research Literature, Vol. 1 (edited by Y. S. Touloukian), Book 1, Part A, Guide to Substance Classification and Numerical Codes ; Book 1, Part B, Dictionary of Synonyms and Trade Names ; Book 1, Part C, Dictionary of Substances ; Book 2, Classified Search Index ; Book 3, Master Bibliography, Author Index, *review* by Prof. A. R. Ubbelohde, 109
Reversal of this Inhibition of Photosynthesis : Inhibition of Growth and Photosynthesis in Submerged Plants with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and (P. E. Björn Lindahl), 51
Reversal (Photic), of the Beetle *Trypodendron* : Air-Swallowing, a Mechanism in (Prof. Kenneth Graham), 519
Reversal (Sign), of Permselective Membranes : Poisoning and (Dr. Francis de Körösy), 1363
Reversible Photochromic Polymer (A. G. Massey and Dr. L. E. Orgel), 1387
Reviews of Data on Research and Development : No. 27, Report on Scientists and Engineers engaged in research and development in Colleges and Universities in the United States for 1958 (United States National Science Foundation), 225
  No. 28, Capital Expenditure of Colleges and Universities in the United States for research and development in the Natural and Social Sciences in 1958 (United States National Science Foundation), 545
Reviews of Genetics, *review* by Dr. Kenneth S. Dodds, 636
Revolution in Agriculture (Sir William Slater), 991
Revolution (American) : Drug Supplies during the (George B. Griffenhagen), 761
Rh Phenotype, *Dcceʹeʹf*, (New), found in a Chibcha Indian Tribe (Dr. Miguel Layrisse, Zulau Layrisse, Esperanza García, Dr. Johannes Wilbert and Joaquín Parra R.), 503
Rh-like Antigen in Red Cells of the Sheep : Occurrence of an (B. Urbaschek and Prof. K. Trautwein), 193
Rheological Techniques (British Society of Rheology and the Non-Destructive Testing Group of the Institute of Physics and the Physical Society Joint Conference on), 24
Rheology, British Society of, and the Non-Destructive Testing Group of the Institute of Physics and the Physical Society : Joint Conference on Rheological Techniques, 24
Rheopectic Flow : A Clear Instance of (J. B. Yannas and R. N. Gonzalez), 1384
Rheumatic Fever : Amino-acid Composition of Serum Mucoprotein in (Prof. D. O'Brien, C. H. M. Walker and D. Walker), 922
Rhizobium trifolii : Transfer of Virulence in (Dr. Hans Ljunggren), 623
Rhizosphere of Pasture Plants : Numbers and Types of Bacteria from the—Possible Occurrence of *L*-Forms (G. Jagnow), 1220
Rhodamine *B* : Inhibition of Ultrasonic Decolorization of, in Presence of Organic Substances (Prof. Satya Prakash and Sheo Prakash), 1292

Rhode, R. A. (Lavallee, W. H., and) : Nematology (Movements of Larvae of *Pratylenchus penetrans*), 1048
Rhodes, W. L. : At the Maxwell Colour Centenary Conference (Colour Printing), 11
Rhodesia : Diabetes Mellitus in Africans in (Dr. M. Gelfand and W. R. Carr), 227
Rhodesia (Northern) : Blindness in Africans in (Dr. C. M. Phillips), 753
  Mammals of (W. F. H. Ansell), *review* by R. W. Hayman, 8
Rhodesia (Southern), National Museums of : Annual Report for 1960, 650
Rhodium Film (Clean) : Reaction of Ethane with a (Dr. Richard W. Roberts), 170
Rhodospirillum rubrum : Purine and Pyrimidine Metabolism in (Prof. T. W. Goodwin and Dr. P. N. A. Passorn), 276
Rhythm ('Alpha'), Reaction Time and Age : Frequency of the (Dr. Walter W. Surwillo), 823
Rhythm (Cycle and), in the Ovulation of the Spider *Latrodectus geometricus* C. Koch (A. Bouillon and R. Lekie), 620
Rhythm (Diurnal), in Cave Crayfish (Prof. Frank A. Brown), 929
Rhythm (An Endogenous), in the Rate of Dark-Fixation of Carbon Dioxide in Leaves of *Bryophyllum fedtschenkoi* (Diana M. Warren and Malcolm B. Wilkins), 686
Riboflavin : Hydrolysis of Fatty Acid Esters of, by Pancreatic Lipase (Prof. Kunio Yagi Yoshiko Yamamoto and Jun Okuda), 174
Riboflavin in Cell-free Systems : Biosynthesis of (Prof. T. W. Goodwin and Dr. A. A. Horton), 772
Ribonuclease and Deoxyribonuclease : Effect of, on Incorporation of Tritiated Pyrimidine-Nucleosides into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Ribonucleic Acid of Wild Cucumber Mosaic Virus : Unusual Base Composition of the (H. Yamazaki and Prof. Paul Kaesberg), 96
Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of Tritiated Pyrimidine-Nucleosides into (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Ribonucleic Acid (Infectious), from Poliovirus : Chromatographic Analysis of (C. Cocito, A. Prinzie and P. De Somer), 573
Ribonucleic Acid (Rat Lens) : Catalysis of Incorporation of ^{14}C-Uridine into, by Rat Lens Enzyme System (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
Ribonucleic Acid (Ribosomal), from Yeast : Sub-Unit of (Eiko Otaka, Yukito Oota and Syozo Osawa), 598
Ribonucleic Acid (Viral) : Influence of *p*-Fluorophenylalanine on the Production of, and on the Utilizability of Viral Protein during Multiplication of Fowl Plague Virus (Dr. Christoph Scholtissek and Rudolf Rott), 1023
Ribonucleic Acid Fractionation : Modified Cellulose Ion Exchangers and their Use in (Dr. L. Bosch, G. van der Wende and Dr. H. Bloemendal), 349
Ribonucleic Acids (Infectious), derived from Mouse Brains infected with Two Kinds of Arbor Virus Group B (Prof. Masahiro Nakamura), 624
Ribosomal Ribonucleic Acid from Yeast : Sub-Unit of (Eiko Otaka, Yukito Oota and Syozo Osawa), 598
Rich, Prof. Alexander (North, Dr. A. C. T., and) : X-Ray Diffraction Studies of Bacterial Viruses, 1242
Rich, Dr. Clayton, and Ensinck, John : Effect of Sodium Fluoride on Calcium Metabolism of Human Beings, 184
Richards, Prof. E. J. : A Take-Over Bid in Acoustical Training, 748
Richardson, D. A., and others : Absorption Spectra of γ-Irradiated Lead Silicate Glass, 374
Richardson, Dr. Lewis F. : Arms and Security, a Mathematical Study of the Causes and Origins of War (edited by Nicolas Rashevsky and Ernesto Trucco), *review* by Sir Cyril Burt, 427
  Statistics of Deadly Quarrels (edited by Quincy Wright and C. C. Lienau), *review* by Sir Cyril Burt, 427
Richman, S. (Slobodkin, Prof. L. B., and): Calories/gm. in Species of Animals, 299
Richter, Dr. D. : Author and Publisher, 131
  At the Scientific Publications Council Meeting on the Publication of Scientific Books (Contractural Relationships), 132
Richterich, R., and others : Diagnostic Significance of Heterogeneous Lactic Dehydrogenases in Malignant Effusions, 507
Riddiford, Dr. L. : Appointed senior lecturer in the Department of Physics, University of Birmingham, 337
Ridge, M. J., and others : Reactivity of Calcium Sulphate Hemihydrate, 704
Ridges, A. P. : Immunity to Protozoa (Local Immunity to Occidiosis), 553
Ridgway, Dr. G. F. : Blood Groups in Infra-human Species (Extremely Difficult Work involved in Analysing Blood Groups of Salmon and Trout, primarily using Isoimmunizations), 654
Riding (West) of Yorkshire : The Place-Names of the (Prof. A. H. Smith), Part 1, Lower and Upper Strafforth and Staincross Wapentakes ; Part 2, Osgoldcross and Agbrigg Wapentakes ; Part 3, Morley Wapentake, *review* by Prof. H. C. Darby, 208
Riedel, P. : Vitamin B_{12} and Intrinsic Factor (Specific Effects of Vitamin B_{12} Deficiency), 1155
Riegel, Dr. J. A. (Ramsay, Dr. J. A., and) : Excretion of Inulin by Malpighian Tubules, 1115
Riek, R. : Immunity to Protozoa (Immunity in Piroplasmosis), 552
Riggs, D. B., and others : Immunofluorescence of Pleuropneumonia-like Organisms isolated from Tissue Cell Cultures, 190
Right Australopithecine Upper Arm Bone : An Australopithecine Scoop made from a (Prof. Raymond A. Dart), 372
Rigidity Factor of Gelatin Gels (Dr. Audrey Todd), 567
Rimington, Prof. C., and others : Nervous and Biochemical Disturbances following Hexachlorobenzene Intoxication, 363
Rimmer, D. : Appointed lecturer in the Department of Economics, University of Birmingham, 337
Rimmer, R., and others : Absorption Spectra of γ-Irradiated Lead Silicate Glass, 374
Rinaldi, F., and others : Distribution of Piperidine in the Brain and its Possible Significance in Behaviour, 201
Rinfret, A. P., and others : Recovery and *in vivo* Survival of Rabbit Erythrocytes, 1405
Ringold, Dr. Howard J., and others : A Biochemical Effect of Deuterium, 1294
Ripamonti, A., and others : Molecular Geometry of a 1:1 Crystalline Complex between 1,3,7,9-Tetramethyluric Acid and Pyrene, 900
Ripening of Blueberries : The First Anthocyanins appearing during the (Dr. Heikki Suomalainen and A. J. A. Keränen), 498
Rise of Antibody Titre in Cell-free Spleen Preparations Incubated *in vitro* (Dr. Dieter H. Sussdorf), 770
Rishbeth, Dr. J. : Inoculation of Pine Stumps against Infection by *Fomes annosus*, 826
Ritchie, H. D. : Appointed to the University of London readership in surgery at the London Hospital Medical School, 229
Ritter, M. : Nematology (Distribution of species of *Meloidogyne* in France), 1048
Rival : Dalton's Irish, *review* by Frank Greenaway, 533
River (Thames), Conn. : Gross β-Activity in the (D. M. Skauen, T. Hatfield, D. Hanlon and J. S. Rankin, jun.), 1017
Rixon, A. E. : At the sixty-seventh Annual Conference of the Museums Association (Problems of Conservation), 554
R_M and Solvent Composition in Paper Chromatography (Dr. Edward Soczewiński), 68
Road Research Laboratory : Open Days, 644
Robbins, M. (Banks, Prof. E., and) : Fluoride-compensated Substitution o Bivalent Cations in the Magnetoplumbite Structure, 1387
Robert, Barbara, and others : Polarographic Examination of Sialic Acids, 596
Robert, Ladislas, and others : Polarographic Examination of Sialic Acids, 596
Roberts, A. C. (Higgins, P. R. B., and) : Damage in Stainless Steel due to Fission Fragments, 1158
Roberts, Prof. E. J. : Retirement from the chair of agriculture in University College of North Wales, Bangor, 439 ; work of, 439
Roberts, J. A. : Experimental Transmission of *Borrelia anserina* (Sakharoff 1891) by *Aedes aegypti*, 1225
Roberts, J. A., and Vivian, H. E. : The Widening of Expansion Cracks in Mortar by Salt Solutions, 125, *erratum*, 1145
Roberts, J. B., and others : Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid—Effect of Spraying with Gibberellic Acid on Yield and Composition, 360
Roberts, Dr. Richard W. : Reaction of Ethane with a Clean Rhodium Film, 170
Roberts, W. M. B. : Formation of Chalcopyrite by Reaction between Chalcocite and Pyrrhotite in Cold Solution, 560
Robertson, Dr. G. B. : Crystal and Molecular Structure of Diphenyl, 593
Robertson, Muriel : Immunity to Protozoa (Parasites localized in the Skin or Mucous Membranes), 553
Robins, Dr. A. B. : Effects of Ionizing Radiation on Organic and Biological Solids, 1150
Robinson, Abner R. (Zuelzer, Dr. Wolf W., and) : Haemoglobin *F* and the Genetic Control of Protein Structure, 609
Robinson, Dr. D. L. H. : Phosphatases in *Schistosoma mansoni*—Distribution of Alkaline Phosphatase, 473 ; Quantitative Estimation of Phosphatases, 473
Robinson, Prof. Enders A. : An Introduction to Infinitely Many Variates, *review* by Prof. D. V. Lindley, 214
Robinson, Dr. F. A. : Appointed chairman of the board of directors of the Crookes Laboratories, 546
Robinson, Sir Robert : Origins of Petroleum, 346
Robson, Dr. J. S. : Appointed reader in therapeutics at the University of Edinburgh, 443
Rock Art : Australian, 854
Rock Engravings of the Sydney–Hawkesbury District (F. D. McCarthy), 854
Rocks (Antarctic) (Queen Maud Land) : Age Measurements on (Sarah Deutsch, Prof. E. E. Picciotto and M. Reinharz), 1286
Rod-like Polyelectrolytes : Displacement Potentials and Bending of (Prof. J. A. Christiansen, the late Dr. C. E. Jensen and Dr. Ty. Vilstrup), 484
Rodd, Dr. E. H. (edited by) : Chemistry of Carbon Compounds, Vol. 4, Part C, Heterocyclic Compounds, *review* by Dr. James D. Loudon, 214
Rodley, G. A. : New Zealand fellowship in chemistry renewed for 1961-62 by the Ramsay Memorial Trust, 337
Rodriguez, Dr. Maria Covadonga : Spanish fellowship in chemistry renewed for 1961-62 by the Ramsay Memorial Trust, 337
Roe, F. J. C., and others : Induction of Tumours by Polyoma Virus—Enhancement by Chemical Agents, 893
Roff, H. E., and Watson, T. E. : Job Analysis (Institute of Personnel Management), 336
Rogoff, M. H. (Silverman, M. P., and) : Morphological Variation in *Ferrobacillus ferrooxidans* related to the Rate of Iron Oxidation, 1221
Roguska-Wasilewska, L. : Nematology (*Heterodera schachtii* inhibited the Respiration of Rape far more than did *Eucephalobus elongatus*), 1048
Rohatgi, Dr. K. K., and Singhal, G. S. : Average Extinction Coefficient for Re-absorption of Fluorescence Radiation through Uranin Solution, 799
Roland, G., and others : Molecular Emission Spectroscopy from 2μ to 12μ by a Michelson Interferometer, 264
Role of Interparticle Forces in Development of Upper Plastic Limit of Clays (Dr. Raymond Yong and E. T. Selig), 938
Role of Lipid in the Hardening of the Cuticle in the Silkworm, *Bombyx mori* (Shigemi Kawase), 279
Role of the Lung in Metabolism of Fat during Ontogeny of the Rat (Dr. Z. Vacek, P. Hahn and O. Koldovsky), 85
Role of Metal Ions in Enzyme Catalysis : Dextransucrase *V* and the (W. Brock Neely and Julie Hallmark), 385
Role of the Pentose Phosphate Pathway in *Pasteurella multocida* (Inda M. de Issaly, A. Issaly and Prof. A. O. M. Stoppani), 727
Role of Polysaccharides in Stabilization of Natural Soil Aggregates (Dr. D. J. Greenland, G. R. Lindstrom and Dr. J. P. Quirk), 1283
Role of Pressure Gradients in obtaining Minimum Time in Gas Chromatography (Prof. J. Calvin Giddings), 1291
Romanowska, Dr. Elzbieta : Products of Mild Acid and Alkaline Hydrolysis of *M*- and *N*-Blood Group Substances, 1408
Römer, Max : Terrestrial Exosphere at Heights of 1,000–1,700 km., 238
Ronan, Colin A. : Astronomy in the Making, *review*, 314
Rook, J. A. F. : Rapid Development of Hypomagnesaemia in Lactating Cows given Artificial Rations Low in Magnesium, 1019
Roosevelt (Eleanor) Fellowships for Research on Cancer (International Union against Cancer), 125
Root Nodules : Leguminous (Gibberellin-like Substances in Plants), (Margaret Radley), 684

Root Temperature and Symbiotic Nitrogen Fixation (A. H. Gibson), 1080
Rooting of Cuttings of *Hevea brasiliensis* : Effect of Ferric Dimethyldithiocarbamate on the (G. H. Tinley), 1217
Roots : Non-Lethal Pathological Infection of (F. J. Newhook), 615
Roots (Plant) : Dependence on Light of Geotropism in (J. V. Lake and G. Slack), 300
Rose, Dr. Frederick G. G. : Classification of Kin, Age Structure and Marriage amongst the Groote Eylandt Aborigines, *review* by Dr. R. Needham, 6
Rose, Dr. H. E. : Title of professor of powder technology (at King's College, London), conferred on, 651
Rose, M. E. : Immunity to Protozoa (Local Immunity in Coccidiosis), 553
Rose, M. E., and Long, P. L.: Parasite Biology (Application of New Laboratory Techniques), 135
Rose, Prof. Walter : Fluid–Fluid Interfaces in Steady Motion, 242
Rosen, Fred, and others : Immunoelectrophoretic Examination of Agammaglobulinaemia, 1109
Rosenblum, Dr. : Vitamin B_{12} and Intrinsic Factor, 1156
Rosenheim, Prof. M. L. : Appointed a member of the Medical Research Council, 1142
Ross, Dr. H. : Plant Exploration and Introduction (The Potato Gene Centre and its Importance with respect to the Origin and Breeding of the Cultivated Potato), 1240
Ross, J. W. : Appointed junior Research Fellow in physics at the University of Sheffield, 337
Rossi, E., and others : Diagnostic Significance of Heterogeneous Lactic Dehydrogenases in Malignant Effusions, 507
Roston, Dr. Sidney : Interaction of Hydrocortisone, the Sulphydryl Group, and the Catechol Amines, 490
Rotating Hanging Mercury Drop : Use of the, in Analysis—Anodic Stripping using a Rotating Mercury Drop (Dr. J. J. Engelsman and A. M. J. M. Claassens), 240 ; Trace Analysis with a Rotating Hanging Mercury Drop (Dr. M. van Swaay and R. S. Deelder), 241
Rotation of the Earth (Walter H. Munk and Gordon J. F. Macdonald), *review* by Prof. S. K. Runcorn, 313
Rotational Analysis of Absorption Bands of Lead Monoxide (Dr. R. F. Barrow, J. L. Deutsch and D. N. Travis), 374
Roth, Dr. Louis M., and Willis, Dr. Edwin R. : The Biotic Associations of Cockroaches, *review* by David R. Ragge, 106
Rothschild, Hon. Miriam : Double and Single Spermathecae in Fleas (Siphonaptera), 1322
Rott, Rudolf (Scholtissek, Dr. Christoph, and) : Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the Utilizability of Viral Protein during Multiplication of Fowl Plague Virus, 1023
Rottnest Quokka (*Setonix brachyurus*) : Myopathy affecting the, reversed by α-Tocopherol (B. A. Kakulas), 402
Rouayheb, George M., and Hamilton, William C. : Deterioration of Solid-coated Capillary Columns on Standing, 801
Rounds, D. E. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Protective Effect of Yeast RNA), 341
Routes (New), to Further Education—Papers presented at the B.A.C.I.E. Spring Conference, London, 1961 (British Association for Commercial and Industrial Education), 739
Routes (Unconventional) : Transplantation of Murine Leukaemia by (Dr. Harold B. Hewitt), 1213
Routh, Dr. Joseph I., and others : Biochemical Changes in Lethal Staphylococcal Infections in Mice, 783
Routine Selective Isolation of Fungi Pathogenic to Man : Use of Desertomycin Medium in (J. Uri and Zs. Herpay), 1015
Rovira, A. D. (Bowen, G. D., and) : Plant Growth in Irradiated Soil, 936
Rowe, G. A. (Chatt, Dr. J., and) : Complex Compounds of Zero-valent Platinum, 1191
Rowlands, R. P. : Design and Use of Respirators (Apparatus for Protecting People who handled Radioactive Substances), 656
Rowles, Dr. S. L. : Awarded a Carlsberg–Wellcome Research Fellowship, 754
Rowson, K. E. K., and others : Induction of Tumours by Polyoma Virus—Enhancement by Chemical Agents, 893
Roy, Prof. Rustum (Datta, Ranajit K., and) : Dependence on Temperature of the Distribution of Cations in Oxide Spinels, 169
Roy, Robert H., and others : Operations Research and Systems Engineering, *review* by Prof. L. S. Goddard, 105
Royal Aircraft Establishment, Farnborough : Open Days (Peter Sanderson), 232
Royal Cancer Hospital : The Chester Beatty Research Institute of the Institute of Cancer Research (Prof. A. Haddow), 430
Royal College of Science and Technology, Glasgow : Appointment of Dr. David W. A. Sharp as senior lecturer in the Department of Chemistry, 443
  Appointment of Dr. Graham R. Knox as lecturer in the Department of Chemistry, 443
  Endowment of £800 made by Mrs. Hilda M. Beilby, to be known as the Kelvin Prizes, 1349
Royal College of Surgeons of England : Election of Sir Howard Florey and Dr. Owen H. Wangensteen as Honorary Fellows, 126
Royal Entomological Society : Symposium on Insect Polymorphism, 1145
Royal Free Hospital School of Medicine, London : Title of reader in biology in the University of London conferred on Dr. Agnes M. Hughes, 229
  Appointment of J. C. G. Coleridge as reader in physiology, 1349
Royal Geographical Society : Grant of £200 for three years from the Gulbenkian Foundation, in aid of the expeditions, 754
Royal Holloway College, London : Title of reader in organic chemistry in the University of London conferred on Dr. T. G. Bonner, 229
Royal Horticultural Society : Bowles Memorial Travel Scholarship, 1349
Royal Horticultural Society, and others : Third World Orchid Conference, London, 1960—Proceedings of the, *review* by V. S. Summerhayes, 213
Royal Institution : Election of Prof. R. J. Harrison to be Fullerian professor of physiology, 122
Royal Meteorological Society : Election of Officers for 1961-62, 443
Royal Ontario Museum, Toronto : Appointment of Dr. W. E. Swinton as head of the Division of Life Sciences, 24
Royal Radar Establishment, Malvern : Appointment of Dr. G. G. Macfarlane as director, 1145
Royal Scottish Museum, Edinburgh : Retirement of Dr. Douglas A. Allan from the directorship, 648
  Appointment of Ian R. Finlay as director, 648
  Appointment of Cyril Aldred as keeper of the Department of Art and Ethnography, 648
  Annual Report for 1960, 958
Royal Society of Edinburgh : David Anderson Berry Prize for 1961 awarded to (*a*) Dr. H. B. Hewitt and Dr. C. W. Wilson, and (*b*) to Dr. D. H. Sussdorf, 229
  Bruce-Preller Lecture (Dr. V. A. Eyles, The Life and Scientific Work of Sir James Hall), 345
Royal Society of London, in co-operation with the Government of North Borneo : North Borneo Expedition 1961, 26
Royal Society and Nuffield Foundation Commonwealth Bursaries Scheme : Awards, 126
Royal Society of South Australia : Verco Medal presented to Dr. R. L. Specht, 1247
Royal Society of Victoria : First award of the Research Medal made to Dr. George Baker, 1247
Royal Statistical Society : Election of Officers, 126
Rubber (Natural) Producers' Research Association : Annual Report, 854
Rubber Industry, Institution of the : Colwyn Medal awarded to Dr. L. R. G. Treloar, 755
  Hancock Medal awarded to M. M. Heywood, 755
Rubus : Biology of Reproduction in (Dr. G. J. Dowrick), 680
Rudebeck, Gustaf, and others (edited by) : South African Animal Life—Results of the Lund University Expedition in 1950-1951, Vol. 7, *review* by Prof. O. Lowenstein, 1135
Rudorf, Prof. W. : Plant Exploration and Introduction (Plant Exploration Stations), 1241
Rudwick, Dr. M. J. S. : 'Quick' and 'Catch' Adductor Muscles in Brachiopods, 1021
Ruffell, G. K., and others : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine, 1312
Rumberg, B., and others : Experimental Evidence for the Mechanism of Photosynthesis, 194
Rumen Liquid of Cattle : Keto-Acids and Amines in (Dr. C. J. G. van der Horst), 73
Ruminant : Digestive Physiology and Nutrition of the—Proceedings of the University of Nottingham Seventh Easter School in Agricultural Science, 1960 (edited by Dr. D. Lewis), *review* by Dr. I. W. McDonald, 1334
Ruminant Digestion and Nutrition, *review* by Dr. I. W. McDonald, 1334
Runcorn, Prof. S. K. : Rotation of the Earth, *review*, 313
Rundo, J., and others: Aldosterone Excretion and Potassium Retention in Subjects living at High Altitude, 78
Runeckles, Dr. V. C. : Natural Radioactivity in Tobacco and Tobacco Smoke, 322
Runge, H. : At the International Starch Conference (Automation in the Starch-producing Industry), 237
Rural Areas : Railways in, 855
Rural England, Council for the Preservation of : Twenty-second National Conference (The Impact of Industrial Development on the Countryside), 959
Rural Life (English), Museum of : Annual Report for 1960 (University of Reading), 544
Rushton, Dr. W. A. H. : At the Maxwell Colour Centenary Conference (Complexities of the Visual Process), 10
Russell, D. B., and Wyard, S. J. : Electron Spin Resonance of Adenosine Triphosphate, 65
Russell, Dr. E., and others : Control of Specificity in Haemoglobin Synthesis, 1365
Russell, Sir John : Presidential Address to the concluding Conference of the Le Play Society, 1144
Russian–English Geological Dictionary (T. A. Sofiano), (edited by A. P. Lebedev and V. E. Khain), *review* by Dr. S. I. Tomkeieff, 9
Russian Scientists : Visit of, to Harwell, 957
Russian Work in Organo-Phosphorus Chemistry, *review* by Dr. F. G. Mann, 1232
Rust (Coffee), *Hemileia vastatrix* B. et Br. : Spore Liberation and Dispersal of (R. W. Rayner), 725
Ryan, J. A., and others : Determination of Uranium as Pyrophosphate, 1291
Rybák, M. (Kubelka, Vl. and) : Action of Tetracycline on the Level of Properdin, 820
Rybakov, B. V., and Sidorov, V. A. : Fast-Neutron Spectroscopy (edited by N. A. Vlasov), translated from the Russian, *review* by Dr. P. A. Egelstaff, 8
Ryde, J. Walter : *Obituary* by O. W. Humphreys, 17
Rydon, Prof. H. N. : The Cyclol Revived, *review*, 105
Ryegrass-dominant Pasture grazed by Cows : Growth of, and Properties of New Zealand Butterfat (F. H. McDowall, W. A. McGillivray and J. C. Hawke), 303
Ryle, Dr. G. J. A. : Effects of Light Intensity on Reproduction in S.48 Timothy (*Phleum pratense* L.), 196

SAAMELI, Dr. K. (Berde, Dr. B., and) : Effect of Bradykinin on Uterine Activity, 83
Sabine, T. M., and others : Scattering of Long Wave-length Neutrons by Irradiated Beryllium Oxide, 1385
Sadasivudu, B., and others : Changes in the Pentose–Nucleic Acid Content of Sub-Cellular Fractions of the Brain of the Rat during 'Metrazol' Convulsions, 1007
Sadron, Prof. Charles (Bernardi, Dr. Giorgio, and) : Kinetics of the Enzymic Degradation of Deoxyribonucleic Acid into Sub-Units, 809
Saef, Edward C., and others : Stimulation of Lipogenesis in Thyroid Tissue *in vitro* by Free Fatty Acids, 804
Safe Handling of Radioactive Substances, 1257
Sági, F., and Garay, A. S. : Effect of Gibberellic Acid on Growth and Indoleacetic Acid Oxidase Activity of *Lupinus albus* L. exposed to Different Photoperiods, 824
Sahasrabudhe, M. B., and others : Anti-cancer Properties of Thio-diglycollic Acid, 388
Saison, Dr. R., and Ingram, Dr. D. G. : Blood Groups in Infra-human Species (Blood Groups of Pigs), 654
Saito, M., and others : Toxicology of *Penicillium islandicum*, 86

Sakai, F., and others : Toxicology of *Penicillium islandicum*, 864
Sakai, Y., and others : Toxicology of *Penicillium islandicum*, 864
Salaman, Dr. M. H., and Harvey, J. J. : Leukaemia in the Progeny of Mice inoculated with a Leukaemogenic Virus, 509
Salaman, Dr. M. H., and others : Induction of Tumours by Polyoma Virus—Enhancement by Chemical Agents, 893
Salisbury, Sir Edward : Weeds and Aliens, *review* by Dr. Alec Lazenby, 842
Salivary Gland in Mice Treated with *Iso*propylnoradrenaline : Enlargement of (Dr. K. Brown-Grant), 1076
Salmon, Dr. G. A. : Appointed J. W. Wootton Research Fellow in the Department of Chemistry in the University of Leeds, 650
Salmon (Chum), *Oncorhynchus keta* : Effect of Thyroxine plus Thiourea on the Early Development of the (Prof. M. A. Ali), 1214
Salmon and Freshwater Fisheries, Committee on : Report of the, 962
Salmon and Freshwater Fishing in Great Britain (Dr. J. W. Jones), 962
Salmonella paratyphi C : Resistance to Infection with, in Mice parasitized with a relatively Avirulent Strain of *Salmonella typhimurium* (Dr. J. G. Howard), 87
Salmonella typhimurium : Resistance to Infection with *Salmonella paratyphi C* in Mice parasitized with a relatively Avirulent Strain of (Dr. J. G. Howard), 87
Salmonellae : Occurrence of, in Domestic Animals and Poultry in India (V. K. Sharma and Prof. C. M. Singh), 622
Salt Solutions : The Widening of Expansion Cracks in Mortar by (J. A. Roberts and H. E. Vivian), 125, *erratum*, 1145
Saltman, Dr. Paul, and Christensen, Dr. Tyge : Relative Volumes of Cytoplasm and Vacuole in *Nitella*, 825
Salts : Influence of, on the Uptake of Streptomycin by *Escherichia coli* (Paul H. Plotz, Donald T. Dubin and Bernard D. Davis), 1324
Salts (Molten Hydrated) : Molar Sound Velocity in (P. R. K. L. Padmini and Prof. B. Ramachandra Rao), 694
Salvatore, Dr. Francesco, and Bocchini, Dr. Vincenzo : Prevention of Ammonia Toxicity by Amino-acids concerned in the Biosynthesis of Urea, 705
Sammons, the late Irene M., and Chessin, Prof. M. : Cactus Virus in the United States, 517
Sampler (A Phytoplankton Multi-), and its Use in Lake Victoria (Dr. J. H. Evans), 53
Samples (Hail) : Radar Reflectivities of (R. H. Douglas), 266
Sampling (Acceptance) : Statistical Quality Control and (Birmingham College of Advanced Technology Course on), 337
Sampson, Joan : A Method of Replicating Dry or Moist Surfaces for Examination by Light Microscopy, 932
Samuel, Dr. Eric : Appointed reader in pharmacology at the University of Edinburgh, 443
Sanchez-Monge y Parellada, Prof. Enrique : Genetica, *review* by Prof. S. C. Harland, 213
Sanders, P. F., and others : Use of Aninal Cell, Tissue and Organ Cultures in Radiobiology (Methods for Growing HeLa Cell Suspensions in the Presence of Tritiated Thymidine and Tritium Water), 341
Sanderson, Peter : The Royal Aircraft Establishment, Farnborough, 232
Sandstedt, R. M. (Schuster, M. L., and) : Nematology (Tissue-culture Experiments with *Meloidogyne*), 1048
Sandwith, N. Y. : Flora of Peru, *review*, 214
  Die Cactaceae, *review*, 1336
Sandy Hook Marine Laboratory : Fellowships for Plankton Research, 754
Sanger, Dr. V. L. : Cell Transplants of Avian Lymphomatosis treated with Hydrogen Peroxide, 1406
Sangren, Ward C. : Digital Computers and Nuclear Reactor Calculations, *review* by Dr. M. V. Wilkes, 9
Sankar, D. Barbara, and others : Effect of Administration of Lysergic Acid Diethylamide on Serotonin-Levels in the Body, 499
Sankey, John : At the Annual Congress of the South-Eastern Union of Scientific Societies (Invertebrate Life in South-East England), 132
Sansome, Dr. Eva : Meiosis in the Oogonium and Antheridium of *Pythium debaryanum* Hesse, 827
Santa Maria Hospital, Lisbon : Grant from the Gulbenkian Foundation, in aid of science and medicine, 754
Santilli, Prof. Vincent (Piacitelli, John, and) : Relationship of Tobacco Mosaic Virus (TMV) Lesion Number and Concentration to the Rate of Lesion Production on Pinto Bean, 624
Sanwal, G. G., and others : Diurnal Variation in Transaminase Activity in the Cactus Plant, 516
Sapogenin (A New Triterpenoid), of Animal Origin (Sea Cucumber), (Takao Matsuno and Toshihiko Yamanouchi), 75
Saprophyte (Filamentous), from Wookey Hole Caves : Further Observations on a (Dr. A. J. Willis), 724
Sarcoma Implant and Staphylococcus Infection : Development in Mice of Prolonged Non-specific Resistance to, following Repository Injection of Lipopolysaccharide (Samuel J. Prigal), 1111
Sardinian Family : Association of Haemoglobin *N* and Microcythaemia in a (Prof. E. Silvestroni and I. Bianco), 1208
Sáringer, K. M. (Morlin, Z., and) : Effect of Ozone on the Fluorescence and Ultra-violet Absorption Spectra of 3,4-Benzopyrene, 907
Sarkar, Dr. N. K. (Devi, Dr. Anima, and) : Catalysis of Incorporation of ^{14}C-Uridine into Rat Lens Ribonucleic Acid by Rat Lens Enzyme System, 1094
Sarma, G. Raghupathy (Brahmachari, Dr. H. D., and) : Effects of Injections of some Intermediary Metabolites on the 'Insulin Response' of Normal Rabbits, 491, *erratum*, 755
Satellite 1960 $\eta 1$: Interpretation of Cosmic Noise Measurements at 3·8 Mc./s. from (J. H. Chapman and A. R. Molozzi), 480
Satellite Data : Analysis of (Prof. D. G. Parkyn), 896
Satellite Microwave Dipoles : Long-Range Radio Communication by—the West Ford Project, 1237
Satellite Orbits : Density of the Upper Atmosphere determined by, and its Variation during 1957-61 (D. G. King-Hele and D. M. C. Walker), 114
Satellite and Space Orbits, *review* by D. G. King-Hele, 1334
Satellites (Artificial Earth) : A Collection of Tables and Nomograms for the Processing of Observations made on (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
Sato, Haruo, and others : Hexosamine and Sialic Acid Contents in Cells, 596
Sato, Dr. Tatsuo, and others : Quantitative Determination of Metadrenaline and Normetadrenaline in Normal Human Urine, 599
Saunders, Dr. J. C. (Kothari, Dr. N. J., and) : Effects of Corticotrophin, Hydrocortisone and Methopyrapone on the Circulating Eosinophiles in Man, 1105
Savary, A. : Nematology (*Ditylenchus dipsaci* increasingly causing Collar-rot of Beet in Switzerland), 1048
Saxon, G., and others : Pulse-shortening in Electron Linear Accelerators, 483
Scale (Microgram) : Pyrolysis and Gas–Liquid Chromatography on the (C. E. Roland Jones and A. F. Moyles), 663
Scale-up in Flotation : Power Requirements and (Prof. Nathaniel Arbiter and Prof. Colin C. Harris), 268
Scarselli, Dr. V. : Increase in Elastin Content of the Human Aorta during Growth, 710
Scattering of Long Wave-length Neutrons by Irradiated Beryllium Oxide (T. M. Sabine, A. W. Pryor and B. S. Hickman), 1385
Scattering (Low-Angle Light), and the Molecular Weight of Deoxyribonucleic Acid (Dr. Sidney Katz), 280
Scharf, Prof. Joachim Hermann : Elected a Member of the Anatomy Section of the Leopoldina German Academy of Sciences, 122
Scheffer, R. P., and Pringle, R. B. : A Selective Toxin produced by *Periconia circinata*, 912
Scheinberg, Dr. S. L., and Reckel, Dr. R. P. : Blood Groups in Infra-human Species (Red Cell Agglutinogen of Chickens identified by certain Plant Seed Extracts), 654
Schelling, Prof. Thomas C. : The Strategy of Conflict, *review* by Sir Cyril Burt, 427
Scherrer, Prof. J. : Assessment of Pain (Possible Mechanisms of Phantom Pain), 1353
Schilling, Dr. R. F. : Vitamin B$_{12}$ and Intrinsic Factor (Hydroxocobalamin in Body Tissues), 1155
Schindewolf-Jordan, D. (Catsch, Prof. A., and) : Removal of Internally Deposited Radionuclides by Triethylenetetraamine-hexaacetic Acid, 715
Schistosoma mansoni : Phosphatases in (Dr. D. L. H. Robinson)—Distribution of Alkaline Phosphatase, 473 ; Quantitative Estimation of Phosphatases, 473
Schizosaccharomyces pombe : Distribution of X-Ray- and Nitrous Acid-induced Mutations in the Genetic Fine Structure of the *ad*$_7$ Locus of (Dr. Herbert Gutz), 1127
Schlegel, Prof. H. G., and others : Formation and Utilization of Poly-β-Hydroxybutyric Acid by Knallgas Bacteria (*Hydrogenomonas*), 463
Schleich, A. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Radioprotective Properties of various Compounds), 341
Schlesinger, M. J., and others : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum*, 909
Schlesinger, Sondra, and others : Identification of a Compound related to 6-Aminopenicillanic Acid, isolated from Culture Media of *Penicillium chrysogenum*, 909
Schmidt, Robert F. (Hubbard, Dr. J. I., and) : Stimulation of Motor Nerve Terminals, 1103
Schmitz-Dumont, Prof. O. : Inorganic Polymers (Co-ordination Polymers), 1047
Schneider, C.: Effects of Morphone-like Drugs in Chicks, 607
Scholarship (Travel) : Bowles Memorial (Royal Horticultural Society), 1349
Scholarships : Research Training (Animal Health Trust Awards), 1250
Scholes, Dr. George, and others : Radiation-induced Formation and Reactions of the Formyl Radical Ion, 1386
Scholtissek, Dr. Christoph, and Rott, Rudolf : Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the Utilizability of Viral Protein during Multiplication of Fowl Plague Virus, 1023
School Curriculum in Mathematics (edited by Howard Fehr), (Organization for European Economic Co-operation Report on), 335
School Library Association : Grant of £3,900 for three years from the Gulbenkian Foundation, 754
School (Summer) on Corrosion—Corrosion Problems in the Electrical Power Industry (Battersea College of Technology), 651
School Mathematics : New Thinking in, 335
Schoolboys (Sixth-Form) : Research by (J. Heywood), 860
Schools (Australian) : Promotion of Science in, 543
Schools (Grammar) : Biology for (Science Masters' Association and the Association of Women Science Teachers), 555
  Chemistry for (Science Masters' Association and the Association of Women Science Teachers), 555
  Physics for (Science Masters' Association and the Association of Women Science Teachers), 555
Schoonraad, Murray : Africa's First Science Museum, 848
Schrek, R. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Immediate and Delayed Effects of Radiation on Human and Animal Lymphocytes), 340
Schubart, H. : At the sixty-seventh Annual Conference of the Museums Association (The Training of Picture Restorers), 553
Schuch, Dr. A. F. : Bond-Lengths in Solid Helium, 591
Schuster, M. L., and Sandstedt, R. M. : Nematology (Tissue-culture Experiments with *Meloidogyne*), 1048
Schütte, K. : Space-Flight and Re-entry Trajectories (Near Earth Satellites—Changes in the Orbit of *Echo* 1), 960
Schweet, Prof. R., and others : Control of Specificity in Haemoglobin Synthesis, 1365
Schweiss, H. (Berg, Dr. H., and) : Photo-Polarography with a Flash-Lamp, 1270
Science : Food (Australian Commonwealth Scientific and Industrial Research Organization Conference on), 337, 546
  A Great Age for (Dr. Warren Weaver), 312
  The Major Achievements of (A. E. E. McKenzie), *review* by J. M. Eyles, 110
Science in Australian Schools : Promotion of, 543
Science in the Himalaya (Dr. L. G. C. E. Pugh), 429
Science for Scientists and Technologists, 311
Science of Soil Mechanics : K. Terzaghi, Founder of the, *review* by Kevin Nash, 210
Science in Space (United States National Academy of Sciences—National Research Council), 124
Science in the United States : Goals for, 312

Science, British Society for the Philosophy of : Sixth Annual Conference, 338
Science Council, and others : International Conference on Magnetism and Crystallography, 24
Science Information Personnel—the New Profession of Information combining Science, Librarianship and Foreign Languages (Leonard Cohen and Kenneth Craven), 452
Science Masters' Association : Grant of £4,500 from the Gulbenkian Foundation, 754
Science Masters' Association and the Association of Women Science Teachers : Science and Education, a Policy Statement, 555
  Chemistry for Grammar Schools, 555
  Biology for Grammar Schools, 555
  Physics for Grammar Schools, 555
Science Museum : Africa's First (Murray Schoonraad), 848
Science Museum, London : Exhibition by the Westinghouse Brake and Signal Co., Ltd., of Modern Methods of Traffic Control, 1044
Science Museum Library, London : Books on the Chemical and Allied Industries, 22
Science Study Fellowships (Unesco), 1250
Science Teachers in Training (Arthur Guinness Son and Co., Ltd., Awards for), 338
Science Teachers (Women), Association of (Science Masters' Association and the) : Science and Education, a Policy Statement, 555
  Chemistry for Grammar Schools, 555
  Biology for Grammar Schools, 555
  Physics for Grammar Schools, 555
Science (Agricultural), Australian Institute of : *Australian Journal of Experimental Agriculture and Animal Husbandry*, No. 1, 544
Science (Agricultural), Easter School in : Proceedings of the University of Nottingham Seventh (1960)—Digestive Physiology and Nutrition of the Ruminant (edited by Dr. D. Lewis), *review* by Dr. I. W. McDonald, 1334
Science (Basic) : Disease and the Advancement of (edited by Dr. Henry K. Beecher), *review* by Sir George Pickering, 530
  What is ?, *review* by Sir George Pickering, 530
Science (Nuclear), National Institute for Research in (Harwell) : Successful Operation of the *Nimrod* Injector, 1043
Science and the Classics (Prof. B. Farrington), 1337
Science and Education, a Policy Statement (Science Masters' Association and the Association of Women Science Teachers), 555
Science and the Future of Britain (Labour Party), 837
Science and Invention : National Reference Library of, 1 ; (Leslie Wilson), 733 ; (J. Farradane), 734
  Aslib Report of the Discussion Meeting on, 649
Science and the Law (*Medicine*,) : Vol. 1, No. 4, 753
Science, Librarianship and Foreign Languages : Science Information Personnel—the New Profession of Information combining (Leonard Cohen and Kenneth Craven), 452
Science and Poetry (T. R. Henn), 534
Science, Politics and Social Service (Earl of Cranbrook), 992
Science and Practice (Tradition,), in Dietetics (D. F. Hollingsworth), 1343
Science and Technology, National Lending Library for : *N.L.L. News*, No. 1, 1347
Science and Technology, College of (Manchester) : Appointment of Ronald Beresford Dew as visiting professor of industrial administration, 651
Science and Technology, Royal College of (Glasgow) : Appointment of Dr. David W. A. Sharp as senior lecturer in the Department of Chemistry, 443
  Appointment of Dr. Graham R. Knox as lecturer in the Department of Chemistry, 443
  Endowment of £800 made by Mrs. Hilda M. Beilby, to be known as the Kelvin Prizes, 1349
Science and Television, 20
Sciences : The Senses and the (Sir Bryan Matthew), 989
  The Social (House of Commons Debate on), 1354
Sciences, New York Academy of : Symposium on the Use of Animal Cell, Tissue and Organ Cultures in Radiobiology, 340
  Conference on Blood Groups in Infra-human Species, 653
  Fifth International Conference on Pigment Cell Biology, 1045
Sciences, United States National Academy of: Election of foreign associates, 18
Sciences, U.S.S.R. Academy of : Mathematical Tables, Vol. 12, A Collection of Tables and Nomograms for the Processing of Observations made on Artificial Earth Satellites (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
Sciences (Arts and), American Academy of : Monograph Prizes, 442
Sciences (General Medical) : Highlights of Research Progress in, 1960 (United States Department of Health, Education and Welfare, Public Health Service Publication No. 815), 658
Sciences (Management), Institute of: Proceedings of the Sixth International Meeting (Paris, 1959)—Management Sciences, Models and Techniques (edited by Prof. C. West and Prof. Michel Verhulst), *review* by T. H. Hawkins, 209
Sciences (Management), Models and Techniques—Proceedings of the Sixth International Meeting of the Institute of Management Sciences, Paris 1959 (edited by Prof. C. West and Prof. Michel Verhulst), *review* by T. H. Hawkins, 209
Sciences (Medical), The Use of Radioisotopes in Animal Biology and the (International Atomic Energy Agency, the Food and Agriculture Organization and the World Health Organization of the United Nations, Conference on), 959
Scientific Attitude to Management, *review* by T. H. Hawkins, 209
Scientific Books : Publication of (Scientific Publications Council Meeting on), 131
Scientific Discipline : Plant Taxonomy as a (Dr. R. E. Holttum), 990
Scientific Enquiries in Parliament : Recent, 857
Scientific Information, Institute for (Philadelphia) : Services, Publications and Techniques, 1045
Scientific Instrument Manufacturers' Association of Great Britain : Election of Officers, 546
Scientific Literature : The Use of (B. C. Vickery), 1347
Scientific Publications Council : Meeting on the Publication of Scientific Books, 131
Scientific Research : National Organization of, 632
Scientific Research in British Universities, 1960-61 (Department of Scientific and Industrial Research), 228
Scientific Research in the U.S.S.R., 123
Scientific Research, National Foundation for (Belgium) : Thirty-third Annual Report, 441
Scientific Research and Development : Government Responsibility in, 837
Scientific Societies, South-Eastern Union of : Annual Congress (F. J. Epps), 132
Scientific Societies and the Rating and Valuation Bill, 123
Scientific Teachers : Shortage of, in the United Kingdom, 123
Scientific Unions, International Council of : Year Book for 1961, 123
  Ninth General Assembly, 752
  ICSU Review, Vol. 3, No. 1, 865
Scientific Work of Sir James Hall : The Life and (Dr. V. A. Eyles), 345
Scientific and Industrial Research, Council for (India) : Seminar at Hyderabad on Castorseed and its Products, 753
  Annual Technical Report (1959-60), 1254
Scientific and Industrial Research, Department of : The National Physical Laboratory—Open Days (J. R. Illingworth), 112
  Memoirs of the Geological Survey of Great Britain—England and Wales, Geology of the Country around Monmouth and Chepstow (Dr. F. B. A. Welch and Dr. F. M. Trotter), 227
  Scientific Research in British Universities (1960-61), 228
  Report of the Research Council for 1960, 230
  Radio Research Station, Slough—Open Days, 231
  Factory Buildings Studies No. 8, Colouring in Factories, 336
  Report of the National Chemical Laboratory 1960 ; Report of the Steering Committee and Report of the Director of the National Chemical Laboratory for 1960, 342
  Open Days at the Road Research Laboratory, 644
  Grant of £13,362 during two years to the Department of Geology in the University of Leeds, for an investigation into African rocks, 650
  Grant of £2,897 during two years, for a research project in the Department of Biochemistry in the University of Leeds, 650
  Quality Measurement in the Chemical Factory (A. J. Clark and C. W. Munday), 752
  Forest Products Research 1960—Report of the Products Research Steering Committee with the Report of the Director of Forest Products Research, 760
  List No. 29, Forthcoming International Scientific and Technical Conferences, 959
  Open Days at the Building Research Station, 1053
  Change of address, 1145
  Research for Industry 1960—a Report on Work done by Industrial Research Associations in the Government Scheme, 1252
  Radio Research 1960—the Report of the Radio Research Board and the Report of the Director of Radio Research, 1255
  N.L.L. News, No. 1, of the National Lending Library for Science and Technology, 1347
Scientific and Industrial Research Organization (Australian Commonwealth): Overall management of the Chemical Research Laboratories, 23
  Post-Doctoral Fellowships in Protein Chemistry, 336
  Conference on Food Science, 337
  Retirement of N. A. Esserman as director of the National Standards Laboratory, 542
  Appointment of I. E. Newnham as chief of the Division of Mineral Chemistry, 543
  New laboratories for the Division of Food Preservation, 546
  Division of Food Preservation Conference on Food Science, 546
Scientific and Technical Books : Recent, Supp. iv, July 28 ; Supp. iv, August 26 ; ccccxciii, September 30
Scientific and Technical Conferences : Forthcoming International (Department of Scientific and Industrial Research, List No. 29), 959
Scientifique (Recherche), Fonds National de la : Trente-troisième Rapport Annuel, 441
Scientists (Russian) : Visit of, to Harwell, 957
Scientists and Engineers engaged in research and development in Colleges and Universities in the United States for 1958 : Report on (United States National Science Foundation), 225
Scientists and Technologists : Science for, 311
Scintillations and the Latitude Distribution of Ionospheric Irregularities (D. G. Singleton), 482
Scoop (An Australopithecine), made from a Right Australopithecine Upper Arm Bone (Prof. Raymond A. Dart), 372
Scotland : Research and Development in, 440
Scott, A. I. : Ciba Foundation Symposium on Quinones in Electron Transport, *review*, 321
Scott, C. G. (edited by C. E. H. Knapman, assisted by) : Gas Chromatography Abstracts, 1958, *review* by A. Goldup, 1135
  Gas Chromatography Abstracts, 1959, *review* by A. Goldup, 1135
Scott, W. H., and others : Management in Britain, 1332
Scott, —. and others : How Old are the Angiosperms ?, 442
Scottish Museum (Royal), Edinburgh : Retirement of Dr. Douglas A. Allan from the directorship, 648
  Appointment of Ian R. Finlay as director, 648
  Appointment of Cyril Aldred as keeper of the Department of Art and Ethnography, 648
  Annual Report for 1960, 958
Scrase, Dr. F. J. : Electric Currents associated with Geomagnetic Disturbances in the Auroral Zone, 963
Scudder, Dr. John, and others : The Diego Factor in a Puerto Rican Family—a Case of Anti-Diego in Monozygotic Twins, 188
Scurvy and Lathyrism (Odoratism) : Influence of, on Hydroxyproline Excretion (Dr. G. R. Martin, S. E. Mergenhagen and D. J. Prockop), 1008
Sea : Life and Environment on the Bed of the (Prof. C. M. Yonge), 986
  Research on the Effects of Radioactivity in the, 122
  Speciation in the (Systematics Association and the Challenger Society Symposium on), 229
Sea (North) : *Pneumodermopsis paucidens* in the (G. A. Cooper and D. C. T. Forsyth), 1412
Sea Cucumber : A New Triterpenoid Sapogenin of Animal Origin (Takao Maysuno and Toshihiko Yamanouchi), 75
Sea Urchin : Intracellular Freezing and Frost Resistance in Egg-Cells of the (E. Asahina)—Intracellular Freezing as a Cause of Frost-killing in relatively Rapidly Frozen Cell Suspensions, 1263 ; A Mechanism to Prevent the Seeding of Intracellular Ice in Freezing Living Cells. 1264

Sea-Water : Gel Filtration of—Separation of Free and Bound Forms of Vitamin B_{12} (Dr. K. W. Daisley), 868
Sea-Water (Old) : A Lake in British Columbia containing (Dr. P. M. Williams, Prof. W. H. Matthews and Prof. G. L. Pickard), 830
Sea-Water and Chloride Solutions : Formation of Calcium Chloraluminate by Interaction of Portland Cement with (Dr. L. Heller and Dr. M. Ben-Yair), 488
Sea-weed (*Fucus vesiculosus*), (Gibberellin-like Substances in Plants), (Margaret Radley), 685
Sealing Compound for Use in Biological Work (G. Stotzky, W. Culbreth and Dr. L. B. Mish), 410
Seaman, Dr. G. V. F., and others : Sialic Acids and the Electrokinetic Charge of the Human Erythrocyte, 44
Searching *Chemical Literature* : Report on Computer Systems for (E. C. Medam and H. R. Koller), (United States National Bureau of Standards Research Information Centre and Advisory Service on Information Processing), 23
Seasonal Fluctuations and Distribution of Nitrite in a Tropical West African Estuary (J. C. D. Watts), 929
Seasonal Variations of *Caesium-137 in Air at Ground-Level* (K. G. Vohra, V. S. Bhatnagar and C. Rangarajan), 747
Secretions of other Bacteria or Sulphydryl Compounds for Normal Growth : Spontaneous Development of *L* Forms of Streptococci requiring (Ayala Frenkel and Dr. Willy Hirsch), 728
Section (Bilateral), of the Splanchnic Nerve : Effect of, on Erythropoiesis (Fumimaro Takaku, Kunitake Hirashima and Prof. Shigeo Okinaka), 500
Sections (Ultra-Thin), of Vitrinite in Coal : Electron Microscopic Observations of Structure in (J. T. McCartney, Sabri Ergun and R. E. Walline), 1361
Sector-Focused Cyclotrons—Proceedings of an Informal Conference, Sea Island, Georgia, 1959 (edited by F. T. Howard), (United States National Academy of Sciences—National Research Council, Nuclear Science Series, Report No. 26, Publication No. 656), *review* by M. Snowden, 532
Security : Arms and—a Mathematical Study of the Causes and Origins of War (*Dr. Lewis F. Richardson*), edited by Nicolas Rashevsky and Ernesto Trucco, *review* by Sir Cyril Burt, 427
Sediment (Triassic) : Fossil Chlorins in a (Max Blumer and Gilbert Omenn), 161
Sediments : Metal Chlorin Complexes in Recent, as Initial Precursors to Petroleum Porphyrin Pigments (G. W. Hodgson and Eric Peake), 766
Seed (Castor-) and its Products (*Council for Scientific and Industrial Research*, India, Seminar on), 753
Seedlings (Apple) : Shortening the Juvenile Phase of (A. I. Campbell), 517
Seedlings (Axenic), of *Drosera* (Richard M. Burger), 724
Seedlings (Etiolated Oat) : Carbon Dioxide and Ethanol as Factors controlling the Growth of (Dr. C. L. Mer), 260
Seeds of *Pinus sylvestris* L. : Effect of Red and Far-red Irradiation on the Germination Process in (Bengt Nyman), 1219
Seeds (Pea) : Effect of Boric Acid on the Phosphoglucomutase of (Dr. B. C. Loughman), 1399
Seeds (Tropical) : Dispersal of, by Ocean Currents (R. Mason), 408
Segré, Dr. G., and Silberberg, Dr. A. : Biorheology and Microcirculation (The Radial Distribution of Rigid Macroscopic Spheres in a Poiseuille Field of Flow), 758
Sehnal, L. : Space-Flight and Re-entry Trajectories (Near Earth Satellites—Luni-solar Perturbations on a 24-hr. Satellite), 960
Seizure (Audiogenic) : Psychophysiology, Neuropharmacology and Biochemistry of (*Centre National de la Recherche Scientifique International Meeting on*), 959
Selby Fellowship, 24
Selected Journalism from the English Reviews by Stendahl, with Translations of other Critical Writings (edited by G. Strickland), 1031
Selected Sugars : Relative Sweetness of α- and β-Forms of (Rose Marie Pangborn and Sandra C. Gee), 810
Selection : University, *review* by Dr. W. H. King, 947
Selection (Stabilizing), for Heading Time in a Bulk-Hybrid Population of Barley (Dr. S. K. Jain), 1123
Selective Isolation (Routine), of Fungi Pathogenic to Man : Use of Desertomycin Medium in (J. Uri and Zs. Herpay), 1015
Selective Toxin produced by *Periconia circinata* (R. P. Scheffer and R. B. Pringle), 912
Selective Uptake of Specifically Bound Cobalt-58 Vitamin B_{12} by Human and Mouse Tumour Cells (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Selectivity of Palladium Catalysts for the Oxidation of Carbon Monoxide in the Presence of Hydrogen (P. Mars and Th. van de Mond), 1003
Selenology : Holistic Approach to (Brian Warner), 586
Selenomethionine as an Antioxidant (H. S. Olcott, W. Duane Brown and J. Van der Veen), 1201
Seliber, B. A. : At the Second International Measurement Conference (*Electrical Measuring Instruments based on the Photo-compensating Amplifier*), 1351
Selig, E. T. (Yong, Dr. Raymond, and) : Role of Interparticle Forces in Development of Upper Plastic Limit of Clays, 938
Sell, George : Glossary of Petroleum Terms, third edition (Institute of Petroleum), 22
Selmeci, V., and others : Effect of Amino-Acid Esters on the Growth of Fibroblast Cultures, 494
Semen (Undiluated) : Effect of Varying Doses of, on Fertility in the Domestic Fowl (G. C. Taneja and R. S. Gowe), 828
Semiconducting High Polymers : Photochemical Production of (Prof. Gerald Oster, Dr. Gisela K. Oster and Dr. Marian Kryszewski), 164
Semiconductivity of Chlorpromazine (Dr. F. Gutmann and A. Netschey), 1390
Semiconductor Nuclear Particle Detector (Silicon) : Interaction of 14-MeV. Neutrons with a (Dr. W. M. Deuchars and G. P. Lawrence), 995
Semi-Skilled : Ageing and the—a Survey in Manufacturing Industry on Merseyside (Alistair Heron and Sheila M. Chown, assisted by M. S. Featherstone and Catherine Cunningham), 1249
Senecal, Irene P., and others : An Antigen in Lesions of Molluscum Contagiosum, 509
Senescence and Age-dependent Mortality in Fish : Expected Rate of (Dr. Alex Comfort), 822
Senneck, C. R. : Design and Use of Respirators (Application of Respiratory Devices in Mine Rescue), 656
Sense-Modalities (Two) : *Learning in* (Dr. G. Ettlinger), 308
Sense Organs, Integration and Behaviour (edited by Talbot H. Waterman), (The Physiology of Crustacea, Vol. 2), *review* by Dr. J. Green, 428
Senses and the Sciences (Sir Bryan Matthew), 989
Sensitivity to Hydrostatic Pressure in the Prawn, *Palaemonetes varians* Leach : Mechanism of (Peter S. B. Digby), 366
Sensitivity of Mice to Bacterial Lipopolysaccharide following Alteration of Activity of the Reticulo-Endothelial System (Dr. G. N. Cooper and Dr. A. E. Stuart), 294
Sensitivity (Anaphylactic) : A New Test for detecting—the Basophil Reaction (Prof. Walter B. Shelley and Lennart Juhlin), 1056
Sensitivity (Contact), to Picryl Chloride in Guinea Pigs : Passive Transfer of, with Subcellular Material (Dr. J. L. Turk), 915
Sensitivity (Radiation), of *Escherichia coli* to β-Rays in Dry and Wet Condition (S. B. Bhattacharjee and N. N. Das Gupta), 1015
Sensory Vesicle of the Ascidian Tadpole : Electron Microscope Observations of the Receptors in the (Noël Dilly), 786
Separating Amino-Acid Mixtures from Protein Hydrolysates on One Ion-Exchange Column during Preparation : A Simplified Method for (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Separation of Free and Bound Forms of Vitamin B_{12} : Gel Filtration of Sea-Water— (Dr. K. W. Daisley), 868
Separation of Linear from Branched Polysaccharides by Precipitation as Iodine Complexes (Blanche *D. E. Gaillard*), 1295
Separation Methods based on Molecular Sieving and Ion Exclusion (J. Porath and E. B. Lindner), 69
Separation (Chromatographic), of Biologically Active Components from Commercial Trypan Blue (J. Dijkstra and J. Gillman), 803
Separation and Concentration of Solutes : Cryoscopic Effect of (Dr. K. S. Rangappa), 1087
Separation and *in vitro* Culture of Cells from Liver Tissue (Dr. Justine S. Garvey), 972
Separation and Isolation of Proteins (edited by Dr. P. Alexander and R. J. Block), (A Laboratory Manual of Analytical Methods of Protein Chemistry, including Polypeptides, Vol. 1), *review* by Dr. D. T. Elmore, 320
Sequences (Amino-Acid) : Immunochemical Distinction between Insulins with Identical (Dr. Solomon A. Berson and Dr. Rosalyn S. Yalow), 1392
Sera (Blood) : Emulsifying Capacity of (Prof. B. Breyer), 174
Sergent, Edmond : Immunity to Protozoa (Premunition), 551
Serial Reaction Times (Simple and) : Relationship between (Prof. H. Kay and Dr. A. D. Weiss), 790
Series of Subliminal Stimuli : Response to—an Ethological Method for investigating the Properties of Nervous Systems (A. J. Pontin), 512
Series (New), of Anti-tumour Agents : N,N′-Alkylene-*bis*(Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a (A. S. Tomcufcik, S. D. Willson, A. W. Vogel and A. Sloboda), 611
Serologically Active Trisaccharides (Two), isolated from Human Blood-Group *A* Substance (I. A. F. Lister Cheese and Prof. W. T. J. Morgan), 149
Serotonin : Effect of, on Absorption and Distribution of Calcium-45 in the Rat (Prof. S. Garattini, E. Grossi, P. Paoletti, R. Paoletti and M. Poggi), 185
Serotonin (Blood) : Changes in, during Exposure to Cold (Dr. Paul Gordon), 183
Serotonin-Levels in the Body : Effect of Administration of Lysergic Acid Diethylamide on (Dr. D. V. Siva Sankar, D. Barbara Sankar, Edward Phipps and Eleanor Gold), 499
Serum : Simultaneous Determination of Dextran and Glucose in (A. Rédei and S. Nagy), 173
  Vitamin-Levels in Blood and (H. Baker, O. Frank, I. Pasher, Dr. H. Sobotka and S. H. Hutner), 78
Serum and other Mixtures : Estimation of Specific Proteins in (Dr. D. A. Darcy), 1163
Serum (Guinea Pig): Evidence that the L-Asparaginase Activity of, is responsible for its Antilymphoma Effects (J. D. Broome), 1114
Serum Albumin : Splitting of, during Electrophoresis on Paper (J. V. McLoughlin), 1305
Serum Albumin (Bovine) : Elimination of, in Acute Experimental Uraemia (Dr. G. Gowland, F. G. Smiddy, Dr. R. G. Burwell and F. M. Parsons), 1210
Serum Cholinesterase (Human), with Fluoride : Differential Inhibition of—Recognition of Two New Phenotypes (Prof. H. Harris and Mary Whittaker), 496
Serum Factor Gm^a among the Iranians (Luba Podliachouk, Dr. A. Eyquem, R. Choaripour and M. Eftekhari), 717
Serum Factors : Influence of, on the Species-specificity of Tissue Thromboplastin (Christine Hawkey and J. L. Stafford), 920
Serum Leucine Aminopeptidase (Human) : Sub-fractionation of (Prof. Clyde A. Dubbs, Charlotte Vivonia and Jean M. Hilburn), 1203
Serum Lipids in relation to the Intake of Alcohol and Sodium Chloride (Erling Lund, Torben Geill, Prof. Henrik Dam and Gunhild Kristensen), 1095
Serum Lipids and Atherosclerosis in Rabbits : Effects of Carrageenin on (Dr. Katsumi Murata), 189
Serum Mucoprotein in Rheumatic Fever : Amino-acid Composition of (Prof. D. O'Brien, C. H. M. Walker and D. Walker), 922
Serum Protein Fractions of the Newly Hatched Chick : Comparison of the, with those of Adult Birds using Starch-gel Electrophoresis (A. Amin), 708
Serum Transferrins in the Genus *Macaca*—Species Distribution of Nineteen Phenotypes (Prof. Morris Goodman and Emily Poulik), 1407
Serums (Cord Blood) : Haptoglobin Patterns in (A. R. Rausen, P. S. Gerald and Dr. L. K. Diamond), 717
Service : The World University (Hilda M. Browne), 1140
Service (Hospital): Abstracts of Efficiency in the (Ministry of Health), 441
Service (Social) : Science, Politics and (Earl of Cranbrook), 992
Services (Public Health) : The Planning of (United Nations, World Health Organization, Technical Report Series No. 215—Fourth Report of the Expert Committee on Public Health Administration), 441
Serville, Yvonne : At the Third International Congress of Dietetics (*The Means, indirect and direct, of Conveying the Finds of Research on the Science of Nutrition to the Consumer*), 1344

Seshadri, Prof. T. R. : Elected a Member of the Chemistry Section of the Leopoldina German Academy of Sciences, 122
Set Theory : Abstract (Prof. Abraham Fraenkel), second edition, *review* by Dr. R. G. Cooke (June 17, 1047), *erratum*, 126
Seth, Prof. George : From Galton to Crowther (Presidential Address to Section J (Psychology) of the British Association for the Advancement of Science), 989
Setinek, Dr. K., and others : Paper Chromatography (Film showing the Technique of Paper Chromatography of Amino-acids), 759
Setonix brachyurus (Rottnest Quokka) : Myopathy affecting the, reversed by α-Tocopherol (B. A. Kakulas), 402
Setser, Dr. D. W. : Awarded a United States fellowship in chemistry for 1961-62 by the Ramsay Memorial Trust, 337
Sex Chromatin : Peripheral Position of (Dr. Charles P. Miles), 626
Sex Composition of Lamprey Populations (Dr. M. W. Hardisty), 1116
Sex-Ratio in Mice (Margaret J. Cook and Augustin Vlček), 89
Sexual Differentiation in *Hydra* in relation to Population Density (Helen D. Park, Christyna Mecca and Anne Ortmeyer), 92
Sexual Maturity of Mice : The Effect of various Diets upon (J. Szepsenwol), 1112
Seykora, E. J. : Magnetic Mirror Confinement of Exploding Wire Plasma, 995
Shaffer, Dr. Lloyd H. : Thermo-electric Phenomena in Electrodialysis Systems, 591
Shah, L. C., and others : Anticancer Properties of Thio-diglycollic Acid, 388
Shale (Black), Oil and Sulphide Ore (Prof. K. C. Dunham), 985
Shander, D., and others : Urea Synthesis in the Living Rat Brain, 288
Shankland, Prof. Robert S. : Atomic and Nuclear Physics, second edition, *review* by Dr. E. B. Paul, 8
Shape Discrimination : Facts and Theories of (Dr. P. C. Dodwell), 578 ; (Dr. N. S. Sutherland), 581
Shapwick Heath Nature Reserve (Nature Conservancy), 1248
Shark (Greenland) : Copepod *Ommatokoita elongata* (Grant) in the Eyes of the—a Possible Cause of Mutual Dependence (Bjørn Berland), 829
Sharma, C. P., and others : Effect of Excess Supply of Heavy Metals to Barley during Germination, with special reference to Catalase and Peroxidase, 726
Sharma, M. I. D., and Joshi, G. C. : An Abnormal Form of Female Rat Flea, *Xenopsylla cheopis* Roths., 727
Sharma, Madhu Sudan : Excretory Ducts in the Genus *Notopterus* (Lacepede), 1118
Sharma, V. K., and Singh, Prof. C. M. : Occurrence of *Salmonellae* in Domestic Animals and Poultry in India, 622
Sharman, Dr. G. B. : Elected president for 1961-62 of the Australian Mammal Society, 755
Sharman, Dr. R. V., and White, D. : Initial Vibrations of a Supported Beam, 692
Sharp, Dr. A. G., and others (edited by) : Advances in Fluorine Chemistry, Vol. 1, *review* by Dr. Richard Dresdner, 319
Sharp, Dr. David W. A. : Appointed senior lecturer in the Department of Chemistry, Royal College of Science and Technology, Glasgow, 443
Shatsky, Dr. N. S. : *Obituary* by Prof. S. I. Tomkeieff, 542
Shaw, Dr. B. L. : Appointed lecturer in inorganic and structural chemistry at the University of Leeds, 228
Shaw, Dr. D. H. : Blood Groups in Infra-human Species (Role of Individual Red Cell Antigens in Speciation), 654
Shawcross, Lord : Appointed a member of the Medical Research Council, 546
Shear (Current) : Evidence of an Eastward Equatorial Undercurrent in the Atlantic from Measurements of (Arthur D. Voorhis), 157
Sheep : Methaemoglobin in Chronic Copper Poisoning of (J. R. Todd and R. H. Thompson), 89
  Occurrence of an *Rh*-like Antigen in Red Cells of the (B. Urbaschek and Prof. K. Trautwein), 193
  Thiabendazole, a Highly Effective Anthelmintic for (Hugh McL. Gordon), 1409
Sheep Breeds (Rajasthan) : Composition of the Skin Follicle Population in seven (Sunanda Narayan), 115
Sheep Erythrocytes : Antibody Response in Rabbits following Injection of, into Lateral Ventricle of Brain (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
Sheffield Smelting Company, Ltd., 1760-1960 : Two Hundred Precious Metal Years—a History of the (Ronald E. Wilson), *review* by Prof. R. W. K. Honeycombe, 108
Shellabarger, Prof. C. J., and others : Thyroid Function in Active, Sleeping and Torpid Hummingbirds, 1318
Shelley, Dr. Heather J. : Foetal and Neonatal Physiology (Reserves of Glycogen and their Changes at Birth and in Anoxia), 344
Shelley, Prof. Walter B., and Florence, Ralph : Ethylene Glycol Monomethyl Ether, a New Fixative for Histological Work, 719
Shelley, Prof. Walter B., and Juhlin, Lennart : A New Test for Detecting Anaphylactic Sensitivity—the Basophil Reaction, 1056
Shephard, R. J. : Design and Use of Respirators (Ergonomics of the Respirator), 655
Shepherd, A. M. : Nematology (*Heterodera gottingiana* Larvae), 1048
Shepherd, Dr. D. M., and others : Histidine Decarboxylase and Growth, 1311
Sheppard, P. M., and others : Genetics of a Difference in the Male Genitalia of East and West African Stocks of *Papilio dardanus* (Lep.), 935
Sherratt, Dr. H. S. A. (Leonard, B. E., and) : Pharmacology of the Alkaloidal Fraction from the Bark of the Jamaican Shade Tree *Pithecolobium samath* Benth., 287
Shettles, Prof. Landrum B. : Ovum Humanum, *review* by W. J. Hamilton, 110
Shipbuilding Research in Britain, 543
Shirling, F. C. S. : Design and Use of Respirators (Respirators in the Fire Service), 656
Shocks (Radiant Heat) : Mutagenic Effect of, on Phanerogamous Plants (Dr. Bror Pettersson), 1167
Shoenberg, Dr. D. : The de Haas-van Alphen Effect and the Electronic Structure of Metals (Guthrie Lecture of the Institute of Physics and the Physical Society), 126
  Obituary of Sir K. S. Krishnan, 541
Shoenberg, Isaac—Silver Jubilee of British Television, 751
Shopland, C. D., and others : Measuring Visual Constancy for Stationary or Moving Objects, 416
Shorland, Dr. F. B., and others : Lipids of the Common Pea (*Pisum sativum* L.) with special reference to the Occurrence of Galactolipids, 1301
Short-Circuit Current and Net Water Movement : Comparison of, in Single Perfused Proximal Tubules of Rat Kidneys (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Short-term Dating System : Carbon-14 from Nuclear Explosions as a—Use to determine the Origin of Heartwood (Dr. A. T. Wilson), 714
Shortage of Mathematics Teachers in Britain, 127
Shortage of Scientific Teachers in the United Kingdom, 123
Shortening the Juvenile Phase of Apple Seedlings (A. I. Campbell), 517
Shortening (Pulse-) in Electron Linear Accelerators (Dr. M. C. Crowley-Milling, T. R. Jarvis, C. W. Miller and G. Saxon), 483
Shorter, Dr. Roy G., and Lack, R. G. : Immunological Study of Experimentally Induced Extrahepatic Cholestasis, 610
Showers (Extensive Air), in the Atmosphere : Photography of Cerenkov Light from (D. A. Hill and N. A. Porter), 690
Shunkov, V. I., and others : A Soviet View of British Libraries (translated by A. Thompson), (Library Association, Pamphlet No. 22), 752
Shutter Device (Variable) : A New Photometric Technique using a (Dr. O. C. Jones and Dr. F. J. J. Clarke), 1290
Shyu, Wei-jen (Gregory, Prof. K. F., and) : Apparent Cytoplasmic Inheritance of Tyrosinase Competence in *Streptomyces scabies*, 465
Sialic Acid as a Structural Component of some Mammalian Tissue Cell Surfaces (Dr. Leonard Weiss), 1108
Sialic Acid Contents (Hexosamine and), in Cells (Atsushi Kimura, Yasishi Nagai, Dr. Koh-Iti Turumi, Yoshiko Kawashima and Haruo Sato), 596
Sialic Acids : Polarographic Examination of (Barbara Robert, Max E. Rafelson and Ladislas Robert), 596
Sialic Acids and the Electrokinetic Charge of the Human Erythrocyte (G. M. W. Cook, Dr. D. H. Heard and Dr. G. V. F. Seaman), 44
Sickling Phenomenon : Haemoglobin 'Barts' and the (Dr. Lie-Injo Luan Eng), 1314
Side-Reactions during Hydrogenolysis of 2,4-Dinitrophenylhydrazones of Aromatic Keto-Acids (Dr. John H. Menkes), 285
Sidorov, V. A. (Rybakov, B. V., and) : Fast-Neutron Spectroscopy (edited by N. A. Vlasov), translated from the Russian, *review* by Dr. P. A. Egelstaff, 8
Siegel, B. Z., and others : Regulation of Pyrogallol Oxidations by Alcohols and Sugars, 180
Siegel, S. M., and others : Regulation of Pyrogallol Oxidations by Alcohols and Sugars, 180
Sieving (Molecular), and Ion Exclusion : Separation Methods based on (J. Porath and E. B. Lindner), 69
Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach : Significance of the Anti-Sporulation Effect of Copper Fungicides in the Control of (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Sign (Newly Recognized), of Denervation : Muscle Target Fibres, a (Dr. W. K. Engel), 389
Sign Reversal of Permselective Membranes : Poisoning and (Dr. Francis de Körösy), 1363
Signal-Noise Ratio : Possible Method for Increasing the, in the Detection of the First Motion of a Refracted *P*-Wave (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382
Signal-to-Noise Ratio (Television) : An Instrument for measuring (S. M. Edwardson), 1355
Signals (Radio) : Effect of External Conditions on the Phase of (D. E. Watt-Carter and R. L. Corke), 1286
Significance of the Anti-Sporulation Effect of Copper Fungicides in the Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Significance of the Regeneration of Lateral Plates of the Stickleback (*Gasterosteus aculeatus* L.), (Tadeusz Penczak), 621
Significance (Diagnostic), of Heterogeneous Lactic Dehydrogenases in Malignant Effusions (R. Richterich, K. Zuppinger and E. Rossi), 507
Significance (International) : New Trends in Atomic Research and their (Dr. L. Kowarski), 853
Significance (Physiological), of Surface Wax on Leaves (D. M. Hall and R. L. Jones), 95
Significance (Possible), in Behaviour : Distribution of Piperidine in the Brain and its (Dr. L. G. Abood, F. Rinaldi and Virginia Eagleton), 201
Silberberg, Dr. A. (Segré, Dr. G., and) : Biorheology and Microcirculation (The Radial Distribution of Rigid Macroscopic Spheres in a Poiseuille Field of Flow), 758
Silica : Fibrous (Dr. Wolfgang Haller), 662
  Nomenclature of (I. Bergman), 270
Silica (Vitreous) : Permeation of Gaseous Oxygen through (Dr. Francis J. Norton), 701
Silicate (Lead) Glass : Absorption Spectra of γ-Irradiated (R. S. Barker, T. K. Harrison, D. A. Richardson and R. Rimmer), 374
Silicates (Layer Lattice) : Surface Symmetry and Cell Dimensions of (E. W. Radoslovich), 67
Silicon Semiconductor Nuclear Particle Detector : Interaction of 14-MeV. Neutrons with a (Dr. W. M. Deuchars and G. P. Lawrence), 995
Silicosis (Experimental) : Immunological Observations in (J. H. Jones and Prof. A. G. Heppleston), 1212
Silkworm, *Bombyx mori* : Brain Hormone of the (Mamori Ichikawa and Hironori Ishizaki), 933
  Role of Lipid in the Hardening of the Cuticle in the (Shigemi Kawase), 279
  Sterol Requirements of the (Dr. Toshio Ito), 882
Silver Bromide Microcrystals : Electron Spin Resonance Absorptions induced by Light in Adsorbed Layers of Cyanine Dyes on (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Silver Jubilee of British Television : Isaac Shoenberg—, 751
Silver Nitrate Solution (Aqueous) : Ultrasonic Velocity in (D. S. Allam and W. H. Lee), 1388
Silverman, M. P., and Rogoff, M. H. : Morphological Variation in *Ferrobacillus ferrooxidans* related to the Rate of Iron Oxidation, 1221
Silverstein, Dr. Emanuel : Effect of Hybridization on the Primary Polydipsic Trait of an Inbred Strain of Mice, 523
Silvestroni, Prof. E., and Bianco, I. : Abnormal Foetal Haemoglobins, 397
  Association of Haemoglobin *N* and Microcythaemia in a Sardinian Family, 1208
Silvestroni, Prof. E., and others : Haemoglobin *P* in a Family of Southern Italian Extraction, 292

Sim, M. F., and others : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine, 1312
Simonsen, Dr. Morten : Appointed director of research at the McIndoe Memorial Research Unit, Queen Victoria Hospital, East Grinstead, 337
Simonsen Phenomenon : Large Lymphocytes and the (Dr. Aleksander Szenberg and N. L. Warner), 920
Simple, Quick Methods for Detection of 6-Amino-penicillanic Acid (J. Uri and F. Sztaricskai), 1223
Simple and Serial Reaction Times : Relationship between (Prof. H. Kay and Dr. A. D. Weiss), 790
Simplified Method for Separating Amino-Acid Mixtures from Protein Hydrolysates on One Ion-Exchange Column during Preparation (J. Liebster, K. Kopoldová and M. Dobiášová), 1198
Simplified Procedure for Removing Non-specific Staining Components from Fluorescein-labelled Conjugates (G. D. Johnson), 70
Simpson, K., and others : Incorporation of 5,10,15 ^{14}C-Farnesol Pyrophosphate into *Phycomyces carotenoids*, 1299
Simultaneous Detection of Iodide and Iodinated Amino-Acids on Filter Paper Chromatograms : A Spray Method for the (Dr. A. Van Zyl and M. Bhaga), 275
Simultaneous Determination of Dextran and Glucose in Serum (A. Rédei and S. Nagy), 173
Simultaneous Eradication of Three Ectoparasitic Species from a Colony of Laboratory Mice (Dr. Nigel Bateman), 721
Singh, Prof. C. M. (Sharma, V. K., and) : Occurrence of *Salmonellae* in Domestic Animals and Poultry in India, 622
Singhal, G. S. (Rohatgi, Dr. K. K., and) : Average Extinction Coefficient for Re-absorption of Fluorescence Radiation through Uranin Solution, 799
Single Crystals of Gallium : Thermoelectric Power of (P. Horner), 58
Single Perfused Proximal Tubules of Rat Kidneys : Comparison of Short-Circuit Current and Net Water Movement in (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Single Spermathecae (Double and), in Fleas (Siphonaptera), (Hon. Miriam Rothschild), 1322
Single Substance : Multiple Inhibitions of Cell Metabolism by a (M. Harris and Dr. G. A. Morrison), 1276
Singleton, D. G. : Scintillations and the Latitude Distribution of Ionospheric Irregularities, 482
Sintered High Temperature Compounds (Powder Metallurgy Joint Group of the Iron and Steel Institute and the Institute of Metals Symposium on), 1250
Sirois, Dr. J. C. (Katznelson, Dr. H., and) : Auxin Production by Species of *Arthrobacter*, 1323
Siva Sankar, Dr. D. V., and others : Effect of Administration of Lysergic Acid Diethylamide on Serotonin-Levels in the Body, 499
Sivertsen, W. I., and others : Decreased Urinary Excretion of 2-Aminoethanol by Irradiated Human Beings, 1303
Six Animal Species in Free-choice Experiments : Comparison between Water and Alcohol Consumption in (Dr. Alpo Arvola and Dr. Olof Forsander), 819
Sixth-Form Schoolboys : Research by (J. Heywood), 860
Sixth Forms : Biology Syllabus for (Gulbenkian Foundation Conference on, at the University of Birmingham), 554
Size of the Heart : Relationship between Velocity of Cardiac Contraction and—a Hypothesis (Dr. H. Feinberg), 1373
Skauen, D. M., and others : Gross Beta-Activity in the Thames River (Conn.), 1017
Skeletal Muscle : Direct Relationship of Phosphorylase and Mitochondrial α-Glycerophosphate Dehydrogenase Activity in (Dr. A. G. E. Pearse), 504
Skertchly, Dr. Allan : Crystallization in Wool Keratin, 138
Skilled (Semi-) : Ageing and the—a Survey in Manufacturing Industry on Merseyside (Alistair Heron and Sheila M. Chown, assisted by M. S. Featherstone and Catherine Cunningham), 1249
Skin of New-born and Adult Rats : Collagen Fractions in the (Nestor Gonzalez Cadavid, Berta Denduchis and Roberto E. Mancini), 1297
Skin Follicle Population : Composition of the, in Seven Rajasthan Sheep Breeds (Sunanda Narayan), 1115
Skin Medication (British Pharmaceutical Conference Symposium on), 755
Skin of the Ox : Increase of Evaporative Loss of Water from the, in response to Local Heating of the Hypothalamus (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Skin (Orthotopically Grafted) : Regeneration of Elements of Donor Origin in, following the Homograft Response (Dr. J. K. Dineen and Dr. Aleksander Szenberg), 153
Skull : The Whaley (D. R. Brothwell), 854
Sky : The Night, in August, 338 ; in September, 755 ; in October, 1145
Slack, G. (Lake, J. V., and) : Dependence on Light of Geotropism in Plant Roots, 300
Slater, Sir William : The Revolution in Agriculture (Presidential Address to Section M (Agriculture) of the British Association for the Advancement of Science), 991
Sleeping and Torpid Hummingbirds (Active,) : Thyroid Function in (Prof. C. J. Shellabarger, R. C. Lasiewski and G. E. Hyncik), 1318
Sleigh, Dr. M. A. : An Example of Mechanical Co-ordination of Cilia, 931
Slifkin, M. A. (Birks, Dr. J. B., and) : π-Electronic Excitation and Ionization Energies of Condensed Ring Aromatic Hydrocarbons, 761
Sloan Foundation (Alfred P.), New York : A Great Age for Science (Dr. Warren Weaver), 312
Sloboda, A., and others : N,N'-Alkylene-*bis*(Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a New Series of Anti-tumour Agents, 611
Slobodkin, Prof. L. B., and Richman, S. : Calories/gm. in Species of Animals, 299
Slow Decomposition of Explosive Crystals and their Damage by Fission Fragments (Dr. F. P. Bowden and H. M. Montagu-Pollock), 556
Small Mammals : Origin of the British Insular Races of, and of the 'Lusitanian' Fauna (G. B. Corbet), 1037
Small Peptides : Chemical Aspects of the Structure of (Dr. Dorothy Wrinch), *review* by Prof. H. N. Rydon, 105
Smaller, Dr. B. : Effects of Ionizing Radiation on Organic and Biological Solids (Sulphur Compounds as Protective Agents), 1151
Smaller, Dr. B., and others : Spin Resonance and Electrical Conductivity of Indole–Iodine, 168
Smiddy, F. G., and others : Elimination of Bovine Serum Albumin in Acute Experimental Uraemia, 1210
Smith, A. D. M. : Vitamin B_{12} and Intrinsic Factor (B_{12} Deficiency characterized by Low Serum B_{12}), 1155
Smith, Prof. A. H. : The Place-Names of the West Riding of Yorkshire, Part 1, Lower and Upper Strafforth and Staincross Wapentakes ; Part 2, Osgoldcross and Agbrigg Wapentakes ; Part 3, Morley Wapentake, *review* by Prof. H. C. Darby, 208
Smith, A. K., and others : Ultracentrifugal Differences in Soybean Protein Composition, 1395
Smith, B. Babington : Effect of Attention in Peripheral Vision, 732
Smith, Dr. D. A. : Absence of Lysogeny in *Pasteurella pestis*, 522
Smith, Dr. D. Morison, and others : Essential Oil from Fresh *Cannabis sativa* and its Use in Identification, 774
Smith, Dr. D. Morison, and Bartlet, John C. : Calculation of the Areas of Isolated or Overlapping Normal Probability Curves, 688
Smith, D. S. : Pressure Differences in a Direct-Current Capillary Discharge, 265
Smith, Dr. E. Lester : Vitamin B_{12} and Intrinsic Factor (Specific Effects of Vitamin B_{12} Deficiency), 1155
Smith, Dr. F. Graham : Spectrum of Galactic Radio Emission, 1381
Smith, H., and others : Some Novel Acid-stable Penicillins, 1091
Smith, Dr. H. Williams : Bacteria of the Intestine (The Bacterial Flora of the Faeces of Animals with particular reference to its Development in the Young), 1151
Smith, Dr. I. (Jepson, Dr. J. B., and) : Paper Chromatography (Film showing the Principles of Chromatography), 759
Smith, Dr. I., and Weiss, J. B. : Paper Chromatography, 759
Smith, Dr. Ian M., and others : Biochemical Changes in Lethal Staphyloccal Infections in Mice, 783
Smith, Dr. J. A. B. : The National Institute for Research in Dairying, 237
Smith, J. T. (Knox, Prof. R., and) : Use of Cellulose Acetate Membranes for Detecting Penicillinase-producing Organisms, 926
Smith, Dr. K. F. : Appointed professor of experimental physics at the University of Sussex, 1349
Smith, Dr. Kenneth M. : Plant Viruses, third edition, *review* by Dr. B. D. Harrison, 111
Smith, M. J. A. : Appointed Mullard Research Fellow in physics in the University College of North Staffordshire, 229
Smith, Dr. Robert : Assessment of Pain (Quantitative Relation between Stimulus and Sensation), 1353
Smith, Robert C., and Wyard, S. J. : Spatial Distribution of Free Radicals as studied by Electron Spin Resonance, 897
Smith, Dr. R. H. : Importance of Magnesium in the Control of Plasma Calcium in the Calf, 181
Smith, Prof. Wilson : Appointed a member of the Medical Research Council, 1142
Smith-Rose, Dr. R. L. : *Obituary* of Dr. Lee de Forest, 749
Smithers, Prof. D. W. : A Clinical Prospect of the Cancer Problem, *review*, 1336
Smithers, S. R. : Parasite Biology (Application of New Laboratory Techniques), 135
Smithsonian Institution : Miscellaneous Collections, Vol. 141, The Biotic Associations of Cockroaches (Dr. Louis M. Roth and Dr. Edwin R. Willis), *review* by David R. Ragge, 106
  Publication 4466, The Victorian American—Lithographs from the Harry T. Peters 'American on Stone' Collection (Antony N. B. Garvan and Peter C. Welsh), 226
  Bulletin No. 225 of the United States National Museum, Drug Supplies during the American Revolution (George B. Griffenhagen), 761
Smoake of London Dissipated : Fumifugium, or the (John Evelyn), reprint (National Society for Clean Air), 752
Smoke (Cigarette) Condensate—Preparation and Routine Laboratory Estimation (H. R. Bentley and J. G. Burgan), second edition, 336
Smoke (Tobacco) : Natural Radioactivity in Tobacco and (Dr. V. C. Runeckles), 322
Smoking—its Influence on the Individual and its Role in Social Medicine (Dr. C. Van Proosdy), *review* by Dr. W. Carruthers, 108
Smoking : Effects of, *review* by Dr. W. Carruthers, 108
Smooth Muscle (Vascular) : Spontaneous Spike-Discharges of (Dr. S. Funaki), 1102
Smyrna (Old) : Archaeology of, *review* by Dr. Hugh Plommer, 212
Smyth, D. McCormack : Elected to a Research Studentship in education at Churchill College, Cambridge, 856
Snarey, M., and others : Biosynthesis of the Pyrethrins, 281
Snell, F. M. (Spangler, R. A., and) : Sustained Oscillations in a Catalytic Chemical System, 457
Snout (Mole's) : Nerve Endings in the (J. Armstrong and Dr. T. Andrew Quilliam), 1379
Snowden, M. : Sector-Focused Cyclotrons, *review*, 532
Snoy et d'Oppuers, Baron : The Non-Ferrous Metals Industry in a Unified Europe (Autumn Lecture of the Institute of Metals), 546
Soap Solutions : *p*H of (D. Eagland and F. Franks), 1003
Sobotka, Dr. H., and others : Vitamin-Levels in Blood and Serum, 78
Social Dominance in Inbred Mouse Strains (Prof. G. Lindzey, H. Winston and M. Manosevitz), 474
Social History of Engineering (Prof. W. H. G. Armytage), *review* by Prof. M. Postan, 946
Social Sciences (House of Commons Debate on), 1354
Social Service : Science, Politics and (Earl of Cranbrook), 992
Social Studies in Britain, 1354
Société de Chimie Industrielle : Symposium on Corrosion in the Nuclear Energy Industry, 651
Société de Chimie Physique and the British Biophysical Society : Discussion on the Effects of Ionizing Radiation on Organic and Biological Solids, 1150
Société de l'Industrie Minérale : Sixth International Mineral Processing Congress, 545
Société Royale de Zoologie d'Anvers : Bulletin No. 20, Swimming Ability of Non-aquatic Reptiles (R. R. Tercafs), 125
Societies (Scientific), and the Rating and Valuation Bill, 123
Socolovsky, Dr. V. : At the Third International Congress of Dietetics (Diet and Atherosclerosis), 1344

Soczewiński, Dr. Edward : R_M and Solvent Composition in Paper Chromatography, 68
Soddy (Frederick) Trust : Report, 854
Sodium Chloride : Quenching of Cation Vacancies in Doped Crystals of (the late Sir K. S. Krishnan and S. C. Jain), 162
  Serum Lipids in relation to the Intake of Alcohol and (Erling Lund, Torben Geill, Prof. Henrik Dam and Gunhild Kristensen), 1095
Sodium Deoxycholate : Changes of Permeability of Yeast with (Dr. L. Kováč), 698
Sodium Dimethyldithiocarbamate : Inhibition of Growth and Photosynthesis in Submerged Plants with Tetramethylthiuram Disulphide and, and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
  Transformation in Plants of, into other Fungitoxic Compounds (H. M. Dekhuijzen), 198
Sodium Fluoride : Effect of, on Calcium Metabolism of Human Beings (Dr. Clayton Rich and John Ensinck), 184
Sodium Ions : Exchanges of, in the Central Nervous System of an Insect (*Periplaneta americana* L.), (J. E. Treherne), 1223
Sodium Transport in the Loop of Henle : Stimulation by Aldosterone of (Dr. J. Crabbé), 817
Sodium and Potassium in certain Cells and Tissues : Distribution of (Dr. Norman R. Joseph, Dr. Milton B. Engel and Dr. Hubert R. Catchpole), 1175
Soehring, Dr. K. : Assessment of Pain (Testing of Analgesic Drugs on Animals), 1354
Sofiano, T. A. : English–Russian Geological Dictionary (edited by I. D. Borneman, *et al.*), *review* by Dr. S. I. Tomkeieff, 9
  Russian–English Geological Dictionary (edited by A. P. Lebedev and V. E. Khain), *review* by Dr. S. I. Tomkeieff, 9
Soil : Agar Disk Method for the Direct Observation of Nematode-trapping Fungi in the (Roderic C. Cooke), 1411
Soil (Irradiated) : Plant Growth in (G. D. Bowen and A. D. Rovira), 936
Soil Aggregates (Natural) : Role of Polysaccharides in Stabilization of (Dr. D. J. Greenland, G. R. Lindstrom and Dr. J. P. Quirk), 1283
Soil Crumb Plates : Factors influencing the Composition of the Cellulose-decomposing Microflora on (A. Keynan, Y. Henis and P. Keller), 307
Soil Mechanics : K. Terzaghi, Founder of the Science of, *review* by Kevin Nash, 210
  From Theory to Practice in—Selections from the Writings of Karl Terzaghi, *review* by Kevin Nash, 210
Soil Temperatures in Iceland (Dr. Bjarni Helgason), 939
Soil-transmitted Helminths : Control of (Prof. Paul C. Beaver), 1249
Sol, H. H. : Nematology (Importance of Nematodes as Vectors of Virus Pathogens), 1048
Solar Energy : Applications of, 228
Solar Energy Technology, 1954-1959 (T. Brimelow), 228
Solar Noise Bursts : Very-Low-Frequency Modulation of Discrete Frequency (Dr. Jules Aarons, Santimay Basu, William Kidd and Richard Allen), 56
Solar Wind : Terrestrial Accretion from the (Dr. Ronald Frith), 1182 ; (Dr. E. R. Harrison), 1182 ; (C. M. de Turville), 1183
Solet, I. S. : Porous Nickel Oxide, 64
Solid Helium : Bond-Lengths in (Dr. A. F. Schuch), 591
Solid Propellant and Exothermic Compositions (Dr. James Taylor), *review* by Dr. W. B. Littler, 3
Solid Solutions with Manganese and Nickel Ferrites : Magnetic Relaxation in Magnetite and in its (A. Bragiński and Th. Merceron), 898
Solid-coated Capillary Columns : Deterioration of, on Standing (George M. Rouayheb and William C. Hamilton), 801
Solid–Liquid Interfaces : Chemisorption at (A. R. Burkin and G. Halsey), 348
Solids : Radio Spectroscopy of (Institute of Physics and the Physical Society and the British Radio Spectroscopy Group Conference on), 126
Solids (Organic and Biological) : Effects of Ionizing Radiation on (Société de Chimie Physique and the British Biophysical Society Discussion on), 1150
Soltys, M. A., and Folkers, C. S. : Immunity to Protozoa (Immunity in Trypanosomiasis), 552
Solubility of Denatured Haemoglobin Variants in Acid Buffers (I. D. Fraser and Dr. A. B. Raper), 355
Solubility Product : Theoretical Expression for (Prof. B. N. Bhar), 1004 ; (Prof. K. Krishnamurti), 1004
Soluble Material in the Gastro-intestinal Tract of Rats under Normal Feeding Conditions (Dr. Anne S. Cole), 502
Solute : Resistivity Changes due to Formation of *G.P.* Zones (Clusters rich in) (H. Herman and Prof. J. B. Cohen), 63
Solutes : Cryoscopic Effect of Separation and Concentration of (Dr. K. S. Rangappa), 1087
Solution : Generation of Radicals in Pairs and the Kinetics of Radical Chain Reactions in (Dr. P. E. M. Allen and C. R. Patrick), 1194
Solution (Aqueous), of 5-Hydroxytryptophan treated with X-Rays : Formation of 5-Hydroxytryptamine in an (M. Jović and Z. Supek), 383
Solution (Aqueous Silver Nitrate) : Ultrasonic Velocity in (D. S. Allam and W. H. Lee), 1388
Solution (Cold) : Formation of Chalcopyrite by Reaction between Chalcocite and Pyrrhotite in (W. M. B. Roberts), 560
Solution (Uranin) : Average Extinction Coefficient for Re-absorption of Fluorescence Radiation through (Dr. K. K. Rohatgi and G. S. Singhal), 799
Solutions (Aqueous) : Ultrasonic Velocity in, of some Electrolytes (M. G. Seshagiri Rao and Prof. R. Ramachandra Rao), 164
Solutions (Aqueous), and in Thulium Oxide : Rapid Determination of Ytterbium in, by Neutron Activation (Minoru Okada), 1090
Solutions (Chloride) : Formation of Calcium Chloraluminate by Interaction of Portland Cement with Sea-Water and (Dr. L. Heller and Dr. M. Ben-Yair), 488
Solutions (Dilute), of High Polymers : Elimination of the Absorption Correction in the Viscometry of (H. van Oene and Prof. L. H. Cragg), 1160
  Viscosity–Temperature Relationships for (Dr. W. R. Moore), 1292
Solutions (Ferrous) : Radiolytic Oxidation of, with Standardized Internal Sources of Polonium-210 (J. Steyn and D. van As), 903
Solutions (Polymer) : Ultrasonic Absorption of (Dr. G. Gooberman), 693
Solutions (Salt) : The Widening of Expansion Cracks in Mortar by (J. A. Roberts and H. E. Vivian), 125, *erratum*, 1145
Solutions (Soap) : *p*H of (D. Eagland and F. Franks), 1003
Solutions (Solid), with Manganese and Nickel Ferrites : Magnetic Relaxation in Magnetite and in its (A. Bragiński and Th. Merceron), 898
Solvent Composition in Paper Chromatography : R_M and (Dr. Edward Soczewiński), 68
Somatic Cell Nucleus (The Feulgen-Stained), as a Homogeneously Absorbing Object (Dr. Simon Iversen), 150
Somatic Cells (Parental) : Inclusion of, in Sponge Larvae (Frederick E. Warburton), 1317
Sommerville, Dr. : Hazards of the Animal House (Natural Infections of Laboratory Rats and Mice which are Transmissible to Man), 339
Sound Production and Sound Reception by Insects (Mable Frings and Hubert Frings), *review* by Prof. V. B. Wigglesworth, 428
Sound Reception by Insects : Sound Production and (Mable Frings and Hubert Frings), *review* by Prof. V. B. Wigglesworth, 428
Sound Velocity (Molar), in Molten Hydrated Salts (P. R. K. L. Padmini and Prof. B. Ramachandra Rao), 694
Sounds used by Animals, *review* by Dr. W. H. Thorpe, 741
Sounds (Animal), and Communication (edited by Dr. W. E. Lanyon and Dr. W. N. Tavolga), *review* by Dr. W. H. Thorpe, 741
Source (Tunable), of Radiation for the Far Infra-Red using Beats between Optical Masers : A Proposal for a (Dr. D. C. Lainé), 795
Sources of Ionizing Radiations at Exhibitions : Code of Practice for the Display of, 1249
Sources (Diverse), of Cows' Milk : An Invariant Casein Substrate for Rennet Standardization, derivable from (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Sources (Standardized Internal), of Polonium-210 : Radiolytic Oxidation of Ferrous Solutions with (J. Steyn and D. van As), 903
Souter, L. S., and Winsdale, R. : Women Engineers in the U.S.S.R., a Study of the Education, Employment and Prospects of Women Engineers in the U.S.S.R. (Caroline Haslett Memorial Trust), 30
South African Animal Life—Results of the Lund University Expedition in 1950-1951, Vol. 7 (edited by Bertil Hanstrom, Per Brinck and Gustaf Rudebeck), *review* by Prof. O. Lowenstein, 1135
South African Museum : Annual Report for 1959-60, 1044
South African Public Library : Grey Bibliographies No. 7, A Bibliography of African Bibliographies, covering Territories South of the Sahara, fourth edition, 959
South Australia, Royal Society of : Verco Medal presented to Dr. R. L. Specht, 1247
South India : Occurrence of *Eutrichocheles modestus* (Herbst) in the Near-shore Waters of Porto Novo (K. Balasubrahmanyan and Dr. J. Jacob), 830
South-East Asia : Ecto- and Endo-Parasites of, *review* by P. F. Mattingly, 948
South-East England : The Changing Flora of (J. E. Lousley), 133
  Invertebrate Life in (John Sankey), 132
South-Eastern Union of Scientific Societies : Annual Congress (F. J. Epps), 132
South-West England : Age of the Orogeny and Granites in (T. R. Owen), 486 ; (N. E. Butcher), 486
Southern England : The Lower Tertiary Floras of (Marjorie Elizabeth Jane Chandler), 1, Palaeocene Floras, London Clay Flora (Supplement), *review* by Prof. John Walton, 209
  Tropical Floras in the Tertiary in, *review* by Prof. John Walton, 209
Southern Italian Extraction : Haemoglobin *P* in a Family of (Prof. E. Silvestroni, I. Bianco and C. Brancati), 292
Southern Rhodesia (National Museums of) : Annual Report for 1960, 650
Soviet Journal of Atomic Energy : Supplement No. 6, Fast-Neutron Spectroscopy (B. V. Rybakov and V. A. Sidorov), (edited by N. A. Vlasov), translated from the Russian, *review* by Dr. P. A. Egelstaff, 8
Soviet Polar Research, *review* by Dr. Terence Armstrong, 841
Soviet Research on Organo-Phosphorus Compounds, 1949-1956 (in English translation), *review* by Dr. F. G. Mann, 1232
Soviet View of British Libraries (V. I. Shunkov, G. G. Firsov and N. I. Tyulina), translated by A. Thompson (Library Association, Pamphlet No. 22), 752
Soybean Protein Composition : Ultracentrifugal Differences in (W. J. Wolf, G. E. Babcock and A. K. Smith), 1395
Space : Science in (United States National Academy of Sciences—National Research Council), 124
Space (Interplanetary) : Magnetic Storms in, as observed by *Pioneer V* (Eugene W. Greenstadt), 329
Space Development Co., Ltd. (British) : Aims of the, 230
  Appointment of Sir Bernard Lovell as scientific director, 230
Space-Flight and Re-entry Trajectories (International Academy of Astronautics Symposium on), 960
Space Orbits : Satellite and, *review* by D. G. King-Hele, 1334
Space Research : Some Aspects of the Physics of (Institute of Physics and the Physical Society Residential Symposium on), 229
  Further Advancements in, 631
Space Technology : Ballistic Missile and—Proceedings of the Fifth Symposium held at Los Angeles, 1960 (edited by Donald P. LeGalley), Vol. 1, Bioastronautics and Electronics, with Invited Addresses ; Vol. 2, Propulsion and Auxiliary Power Systems ; Vol. 3, Guidance, Navigation, Tracking and Space Physics ; Vol. 4, Re-entry and Vehicle Design, *review* by W. H. Stephens, 1131
Space Trajectories—a Symposium sponsored by the American Astronautical Society, the Advanced Research Projects Agency and Radiation Incorporated (edited by the Technical Staff, Research Division, Radiation Incorporated), *review* by D. G. King-Hele, 1334
Spacing and Nitrogen-level : Effect of, on Floral Initiation in Cocksfoot (*Dactylis glomerata* L.), (D. M. Calder and J. P. Cooper), 195
Spadoni, M. Antonietta (Gaetani, Sancia, and) : Effect of 5-Fluorouracil on Hepatic Induced Increase of Tryptophan-Pyrrolase, 1296
Spallation Phenomena : Fission and, and their Application to Cosmic Rays (European Organization for Nuclear Research and the Max Planck Institute, Heidelberg, Conference on), 24
Spangler, R. A., and Snell, F. M. : Sustained Oscillations in a Catalytic Chemical System, 457
Sparks produced by Breaking Wires at High Speed : Ignition of Gas by (Dr. R. L. Gordon, Dr. H. Lord and D. W. Widginton), 1085
Spatial Distribution of Free Radicals as studied by Electron Spin Resonance (Robert C. Smith and S. J. Wyard), 897
Specht, Dr. R. L. : Presented with the Verco Medal of the Royal Society of South Australia, 1247 ; work of, 1247

Speciation in the Sea (Systematics Association and the Challenger Society Symposium on), 229
Species : Correlation between Growth-Rate of the Suckling of various, and the Percentage of Total Calories from Protein in the Milk (Dr. F. W. Bernhart), 358
Species of Animals : Calories/gm. in (Prof. L. B. Slobodkin and S. Richman), 299
Species of *Arthrobacter* : Auxin Production by (Dr. H. Katznelson and Dr. J. C. Sirois), 1323
Species (Ammocoete) : Oocyte Numbers as a Diagnostic Character for the Identification of (Dr. M. W. Hardisty), 1215
Species (Infra-human) : Blood Groups in (New York Academy of Sciences Conference on), 653
Species (Littoral Interstitial), from Anglesey representing Three Families New to Britain (P. J. S. Boaden), 512
Species (Three Ectoparasitic) : Simultaneous Eradication of, from a Colony of Laboratory Mice (Dr. Nigel Bateman), 721
Species (Warm-water), in the Plankton off Newfoundland during Winter Months (V. Bainbridge), 1216
Species Distribution of Nineteen Phenotypes : Serum Transferrins in the Genus *Macaca*— (Prof. Morris Goodman and Emily Poulik), 1407
Species-Specificity of Tissue Thromboplastin : Influence of Serum Factors on the (Christine Hawkey and J. L. Stafford), 920
Specific Bactericidal Antibodies : Increase in, after Administration of Endotoxin (J. Gabriel Michael, James L. Whitby and Maurice Landy), 296
Specific Evaporation Resistance : Compressibility and, of the Monolayers of Long-Chain Alcohols and Glycol Monoalkyl Ethers (A. V. Deo, S. B. Kulkarni, M. K. Gharpurey and A. B. Biswas), 378
Specific Heat and Expansion Coefficient of Liquid Helium-3 under Pressure below 0·1° K. (Dr. D. F. Brewer and J. R. G. Keyston), 1261
Specific Inhibition of Anti-*D* Antibody by Colominic Acid (Prof. William C. Boyd and Egli Reeves), 511
Specific Proteins in Serum and other Mixtures : Estimation of (Dr. D. A. Darcy), 1163
Specific (Non-) Immunity in Pneumococcal Infection of Mice (Dr. G. N. Cooper and Dr. A. E. Stuart), 295
Specifically Bound Cobalt-58 Vitamin B_{12} : Selective Uptake of, by Human and Mouse Tumour Cells (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Specificity in Haemoglobin Synthesis : Control of (Dr. J. Bishop, Dr. G. Favelukes, Prof. R. Schweet and Dr. E. Russell), 1365
Specificity of the Mutagenic Action of the Alkylating Agents (Prof. Bernard S. Strauss), 730
Spectra Index : A National—Plans and Problems (P. S. Davison), 1250
Spectra (Absorption), of γ-Irradiated Lead Silicate Glass (R. S. Barker, T. K. Harrison, D. A. Richardson and R. Rimmer), 374
Spectra (Infra-Red), of Water-soluble Carbonates (Herman A. Szymanski and Richard Povinelli), 64
Spectra (Triplet→Singlet Emission) : Polarization of (V. G. Krishna and Prof. Lionel Goodman), 800
Spectra (Ultra-violet Absorption), of 3,4-Benzopyrene : Effect of Ozone on the Fluorescence and (Z. Morlin and K. M. Sáringer), 907
Spectra (Ultra-violet Absorption), of Proteins in Deuterium Oxide (Dr. G. H. Beaven and Elizabeth Bailey), 914
Spectral Data : Organic Electronic, Vol. 1, 1946-1952 (edited by Mortimer J. Kamlet) ; Vol. 2, 1953-1955 (edited by Herbert E. Ungnade), *review* by Dr. E. G. Kellett, 107
Spectrometry : Mass (Mass Spectrometry Group of the Institute of Petroleum and Committee *E*-14 of the American Society for Testing Materials Conference on), 24
Spectrometry (Mass) : Determination by, of the Structure of Proline Derivatives from Apples (Dr. K. Biemann, G. G. J. Deffner and Prof. F. C. Steward), 380
Spectroscope : Chemistry and the (Prof. R. G. W. Norrish), 984
Spectroscopic Evidence (Infra-Red), of Four-fold Co-ordination of Titanium in Barium Orthotitanate (P. Tarte), 1002
Spectroscopy : From Radar to—New Regions of the Spectrum (Prof. D. J. E. Ingram), 1146
  Fast-Neutron (B. V. Rybakov and V. A. Sidorov), (edited by N. A. Vlasov), translated from the Russian, *review* by Dr. P. A. Egelstaff, 8
Spectroscopy (Applied), Society of (Washington Section), and others : Eleventh Annual Instrument Symposium and Research Equipment Exhibition, 959
Spectroscopy (Atomic Absorption) : Determination of Lead in Urine by (J. B. Willis), 381
Spectroscopy (Molecular Emission), from 2μ to 12μ by a Michelson Interferometer (H. A. Gebbie, G. Roland and L. Delbouille), 264
Spectroscopy (Radio), of Solids (Institute of Physics and the Physical Society and the British Radio Spectroscopy Group Conference on), 126
Spectrum : From Radar to Spectroscopy—New Regions of the (Prof. D. J. E. Ingram), 1146
Spectrum of Galactic Radio Emission (Dr. F. Graham Smith), 1381
Speech, Handedness and Cerebral Dominance, *review* by Sir Russell Brain, 840
Speed (High) : Ignition of Gas by Sparks produced by Breaking Wires at (Dr. R. L. Gordon, Dr. H. Lord and D. W. Widginton), 1085
Spencer, Prof. B. : The Training of Biochemists (Biochemistry more fitted to be a Postgraduate subject), 955
Spencer, Dr. D. A. : At the Maxwell Colour Centenary Conference (A Hundred Years of Colour Photography), 10
Spenser, Prof. I. D. (Gear, J. R., and) : Biosynthesis of Hydrastine, 1393
Sperm (Mammalian) : Isolation and Properties of Deoxyribonucleic Acid from (Dr. E. Borenfreund, E. Fitt and Dr. A. Bendich), 1375
Spermathecae (Double and Single), in Fleas (Siphonaptera), (Hon. Miriam Rothschild), 1322
(Spica) Nebula : The Alpha Virginis (Walter A. Feibelman), 1083
Spider *Latrodectus geometricus* C. Koch : Cycle and Rhythm in the Ovulation of the (A. Bouillon and R. Lekie), 620
Spiegel, Herbert E., and others : Effects of Drugs on Uptake of Isotopic Norepinephrine by Cat Tissues, 816
Spiegelberg, Dr. Herbert : The Phenomenological Movement, *review* by F. I. G. Rawlins, 5
Spielmann, W., and others : Investigation into Blood Groups in a Paternity Case, 753
Spike-Discharges (Spontaneous), of Vascular Smooth Muscle (Dr. S. Funaki), 1102
Spike and Wave Discharges and Alterations of Conscious Awareness (L. Goldie and J. M. Green), 200
Spikes (X-Ray Diffraction), of Diamond (Y. Yoneda), 1187 ; (Prof. F. C. Frank), 1188
Spin Resonance : Electron (Chemical Society Symposium on), 755
Spin Resonance (Electron) : Spatial Distribution of Free Radicals as studied by (Robert C. Smith and S. J. Wyard), 897
Spin Resonance (Electron), of Adenosine Triphosphate (D. B. Russell and S. J. Wyard), 65
Spin Resonance Absorptions (Electron), induced by Light in Adsorbed Layers of Cyanine Dyes on Silver Bromide Microcrystals (Dr. W. C. Needler, Dr. R. L. Griffith and Dr. W. West), 902
Spin Resonance and Electrical Conductivity of Indole–Iodine (B. Smaller, Dr. I. Isenberg and S. L. Baird, jun.), 168
Spinal Dog : Stimulation of the Heart of the, by Phenoxybenzamine (B. G. Benfey and D. R. Varma), 919
Spinal Motoneurones : Changes in the Membrane during Recurrent Disinhibition of (Dr. Victor J. Wilson and Paul R. Burgess), 918
Spinal Neurones of some Teleosts : Pigment Bodies of the (Prof. A. Stolk), 924
Spinels (Oxide) : Dependence on Temperature of the Distribution of Cations in (Ranajit K. Datta and Prof. Rustum Roy), 169
Spiracle Control in Dragonflies (Dr. P. L. Miller), 621
Splanchnic Nerve : Effect of Bilateral Section of the, on Erythropoiesis (Fumimaro Takaku, Kunitake Hirashima and Prof. Shigeo Okinaka), 500
Spleen Preparations (Cell-free), Incubated *in vitro* : Rise of Antibody Titre in (Dr. Dieter H. Sussdorf), 770
'Split-Brain' Monkey : Changes in Visual Gnostic Functions and Emotional Behaviour following Unilateral Temporal Pole Damage in the (Dr. J. L. deC. Downer), 50
Splitting of Serum Albumin during Electrophoresis on Paper (J. V. McLoughlin), 1305
Sponge : Flimmer-flagellum of the (Björn A. Afzelius), 1318
Sponge Larvae : Inclusion of Parental Somatic Cells in (Frederick E. Warburton), 1317
Spontaneous Development of *L* Forms of Streptococci requiring Secretions of other Bacteria or Sulphydryl Compounds during Normal Growth (Ayala Frenkel and Dr. Willy Hirsch), 728
Spontaneous Miniature Potentials from Insect Muscle Fibres (P. N. R. Usherwood), 814
Spontaneous Plasma Fibrinolysis: Determination of, by a Practical Procedure (Dr. H. Yatzidis), 604
Spontaneous Spike-Discharges of Vascular Smooth Muscle (Dr. S. Funaki), 1102
Spore Dispersal in *Chaetomium globosum* (Kunze), (P. A. Dixon), 1418
Spore Liberation and Dispersal of Coffee Rust *Hemileia vastatrix* B. et Br. (R. W. Rayner), 725
Sporulation (Anti-) Effect of Copper Fungicides : Significance of the, in the Control of Sigatoka Disease of Bananas caused by *Mycosphaerella musicola* Leach (E. Evans, H. L. S. Bevington and E. P. Whitaker), 476
Sprau, F., and Suesz, A. : Nematology (Radio-tracer Techniques using Phosphorus-32 to indicate that *Longidorus maximus* feeds on the Roots of Beet and is thus a Parasite), 1049
Spray Method for the Simultaneous Detection of Iodide and Iodinated Amino-Acids on Filter Paper Chromatograms (Dr. A. Van Zyl and M. Bhaga), 275
Spraying with Gibberellic Acid : Effect of, on Yield and Composition (Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid), (R. Stevens, J. B. Roberts and I. H. Williams), 360
Spring Areas (Hot), with Acid–Sulphate–Chloride Waters (Dr. A. J. Ellis and S. H. Wilson), 696
Springell, Dr. P. H. : An Unreactive Tyrosine Residue in Insulin and the Exclusive Iodination of the *A* Chain, 1372
Springer, Prof. G. F. : Blood Groups in Infra-human Species (Immune Origin of so-called Natural Anti-human *B* Antibodies), 654
Springer, Prof. G. F., and Stalder, Dr. Karlheinz : Action of Influenza Viruses, Receptor-destroying Enzyme and Proteases on Blood Group Agglutinogen *M*, 187
Sproson, W. N. : Some Aspects of Optical Lens Performance, Part 2, The Design of Lens Hoods (B.B.C. Engineering Monograph No. 36), 1355
Sproull, Dr. D. H. : The Physiology, Pharmacology and Pathology of Muscle, *review*, 948
St. Bartholomew's Hospital Medical College, London : Title of professor emeritus of bacteriology conferred on Prof. K. P. Garrod, 546
  Appointment of J. P. Quilliam to the chair of pharmacology, 1349
Stability of Coastal Inlets (P. Brunn and F. Gerritsen), *review* by W. J. Reid, 426
Stability of Freeze-dried Anti-haemophilic Globulin (F. Nour-Eldin), 503
Stability Constant of Copper (II) Complexes of Reduction Products of 2,2'-Dipyridyl (Dr. M. T. Beck and M. Halmos), 1090
Stability Theory of Colloids : Discreteness-of-Charge Effect and the (Dr. S. Levine, D. Calvert and G. M. Bell), 699
Stability (Metabolic), of Body Constituents (Dr. A. N. Davison and Dr. J. Dobbing), 844
Stabilization of Natural Soil Aggregates : Role of Polysaccharides in (Dr. D. J. Greenland, G. R. Lindstrom and Dr. J. P. Quirk), 1283
Stabilizing Selection for Heading Time in a Bulk-Hybrid Population of Barley (Dr. S. K. Jain), 1123
Stacey, Dr. F. D. (Stott, Dr. P. M., and) : Stress Effects on Thermoremanent Magnetization, 585
Stacey, Prof. M. and others : Mannosyl D-Glucosamine Hydrochloride Isomers—*N*-Mannosyl D-Glucosamine Hydrochloride, 142
  Mannosyl D-Glucosamine Hydrochloride Isomers—6-*O*-Mannosyl D-Glucosamine Hydrochloride, 143
Stacey, Prof. M., and others (edited by) : Advances in Fluorine Chemistry, Vol. 1, *review* by Dr. Richard Dresdner, 319
Stafford, J. L. (Hawkey, Christine, and) : Influence of Serum Factors on the Species-specificity of Tissue Thromboplastin, 920
Stages (Early), of Propylthiouracil Treatment in the Rat : Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171

Stained (Feulgen-) Somatic Cell Nucleus as a Homogeneously Absorbing Object (Dr. Simon Iversen), 150
Staining of Sulphated Mucopolysaccharides (Dr. I. D. Heath), 1370
Staining (Differential), of Nucleic Acids : Mechanism of (D. J. Goldstein), 407
Staining Components (Non-Specific), from Fluorescein-labelled Conjugates : Simplified Procedure for removing (G. D. Johnson), 70
Staining Reaction of the Pit Membrane of Wood Cells (R. K. Bamber), 409
Stainless Steel : Damage in, due to Fission Fragments (P. R. B. Higgins and A. C. Roberts), 1158
Stalder, Dr. Karlheinz (Springer, Prof. Georg F., and) : Action of Influenza Viruses, Receptor-destroying Enzyme and Proteases on Blood Group Agglutinogen M^g, 187
Standard Telephones and Cables, Ltd. (Mathematics Department of Queen's College, St. Andrews, in collaboration with) : Symposium on Digital Computers, their Use and Control, 554
Standardization (Rennet) : An Invariant Casein Substrate for, derivable from Diverse Sources of Cows' Milk (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Standardized Internal Sources of Polonium-210 : Radiolytic Oxidation of Ferrous Solutions with (J. Steyn and D. van As), 903
Standards : Drinking-Water (Nora H. Johnson), 1261
Standards, United States National Bureau of : Handbook No. 78, Report of the International Commission on Radiological Units and Measurements, 28
  Appointment of Martin T. Decker as chief of the Tropospheric Measurements Section, 334
  Appointment of John L. Hague as chief of the Standard Reference Materials Section, 334
  Appointment of Dr. John K. Taylor as chief of the Applied Analytical Research Section of the Analytical and Inorganic Chemistry Division, 334
  Appointment of Dr. David M. Gates as editor of Section D, Radio Propagation, of the *Journal of Research*, 856
  Appointment of Dr. Harry C. Allen, jun., as chief of the Analytical and Inorganic Chemistry Division, 1346
  Monograph No. 19, Atomic Energy Levels in Crystals (J. L. Prather), 1348
Standards, United States National Bureau of (Informations System Branch of the Office of Naval Research Information Centre) : Symposium on Optical Character Recognition, 1145
Standards, United States National Bureau of (Research Information Centre and Advisory Service on Information Processing) : Report on Computer Systems for Searching Chemical Literature (E. C. Medam and H. R. Koller), 23
Standards (European), for Drinking Water (United Nations, World Health Organization), 1261
Standing : Deterioration of Solid-coated Capillary Columns on (George M. Rouayheb and William C. Hamilton), 801
Stanley, Prof. John : Sterile Crosses between Mutations of *Tribolium confusum* Duv., 934
Stanworth, Dr. J. E. : Appointed director of research of Associated Electrical Industries, Ltd., 1142 ; work of, 1142 ; *erratum*, 1349
Staphylococcal Infections (Lethal), in Mice : Biochemical Changes in (George W. Counts, Dr. Ian M. Smith, Dr. Joseph I. Routh, Dr. Elia Ch. Hazard and J. F. McTavish), 783
Staphylococcus pyogenes : Metabolic and Genetic Investigations of Nutritionally Exacting Strains of (Janice B. Edgar and Dr. B. A. D. Stocker), 1121
Staphylococcus Infection : Development in Mice of Prolonged Non-specific Resistance to Sarcoma Implant and, following Repository Injection of Lipopolysaccharide (Samuel J. Prigal), 1111
Stapp, C. : Bacterial Plant Pathogens (translated by A. Schoenfeld), *review* by Dr. W. J. Dowson, 4
Starch : International Convention on (Dr. E. Dux), 236
Starch-Gel : Electrophoresis in a Thin Layer of, followed by a Plastifying Treatment (J. Groulade, Dr. J. M. Fine and C. Ollivier), 72
Starch-Gel Electrophoresis : Comparison of the Serum Protein Fractions of the Newly Hatched Chick with those of Adult Birds using (A. Amin), 708
Stark, Dr. Lawrence, and Hermann, Dr. Howard T. : Transfer Function of a Biological Photoreceptor, 1173
Starr, L. D. (Finger, G. C., and) : 2,6-Difluoropyridine, 595
Stars : Production of Neon in (H. E. Gove, A. E. Litherland and M. A. Clark), 1381
Stars (Radio) : Apparent Recession of Nebulae and the Nature of (Dr. N. S. Japolsky), 480
Starved Stationary Phase *Aerobacter aerogenes* : Induced Enzyme Synthesis in Aqueous Suspensions of (R. E. Strange), 1272
State (Welfare) : Industrial Relations in the, 1129
State and the Trade Unions (D. F. Macdonald), 1129
State Forestry in Great Britain : Four Decades of (Prof. M. L. Anderson), 656
State Forestry in New Zealand : Four Decades of, 451
Statics (Applied) : Energy Principles in (T. M. Charlton), *review* by Prof. R. C. Coates, 1134
Stationary or Moving Objects : Measuring Visual Constancy for (S. M. Anstis, C. D. Shopland and R. L. Gregory), 416
Stationary Phase *Aerobacter aerogenes* : Induced Enzyme Synthesis in Aqueous Suspensions of Starved (R. E. Strange), 1272
Statistical Calculations : Rapid (M. H. Quenouille), *review* by M. J. R. Healy, 1236
Statistical Illustrations (Quantum) : Thermodynamics with (Prof. P. T. Landsberg), *review* by Dr. W. E. Parry, 1236
Statistical Quality Control and Acceptance Sampling (Birmingham College of Advanced Technology Course on), 337
Statistical Return for the First Quarter of 1961 (Registrar General), 1347
Statistical Society, Royal : Election of Officers, 126
Statistics in the University of London, 1247
Statistics : Mental Health, 855
Statistics of Deadly Quarrels (Dr. Lewis F. Richardson), edited by Quincy Wright and C. C. Leinau, *review* by Sir Cyril Burt, 427
Statistics (Medical), at Belfast, 20
Statistics (Population), in the United Kingdom, 1347
Statistics (U.K. Petroleum Industry), relating to Consumption and Refinery Production, 1959 and 1960 (Petroleum Information Bureau), 123
Status of the Norfolk Broads, 751
Steady Motion : Fluid–Fluid Interfaces in (Prof. Walter Rose), 242
Steady Universe with Charge Excess (Ll. G. Chambers), 262
Steckerl, Dr. F., and others : Effect of Alpha-Amylase on the Ehrlich Mouse Ascites Tumour, 1113
Steel (Stainless) : Damage in, due to Fission Fragments (P. R. B. Higgins and A. C. Roberts), 1158
Stein, Prof. G. : Effects of Ionizing Radiation on Organic and Biological Solids (Role of Oxygen in Radiation Damage), 1150
Stein, Dr. W. D. : Dimer Formation and the Transfer of Glycerol across the Erythrocyte Membrane, 352
  Dimer Formation and Glucose Transfer across the Membrane of the Red Blood Cell, 1277
Stein–Leventhal Syndrome : Physiology and Pathogenesis of the (Dr. Virendra B. Mahesh and Dr. Robert B. Greenblatt)—Urinary Androsterone, Etiocholanolone, Pregnanetriol and Δ^5-Pregnenetriol of Ovarian Origin in a Patient with Stein–Leventhal Syndrome, 888 ; Role of FSH in the Pathogenesis of the Stein–Leventhal Syndrome, 889
Stell, W. K. : Elected to a Research Studentship in physiology at Churchill College, Cambridge, 856
Stem Flow Run-off : Light Rainfall and Plant Survival—Measurement of (M. D. Gwynne and J. Glover), 1321
Stemerding, S. : Nematology (Changes in Nematode Populations—*Tylenchoryhnchus dubius* and *Rotykenchus robustus*), 1048
Stendahl : Selected Journalism from the English Reviews by, with Translations of other Critical Writings (edited by G. Strickland), 1031
Stent, Gunther S. (selected by) : Papers on Bacterial Viruses, *review* by L. B. Quesnel, 320
Stentor : The Biology of (Vance Tartar), *review* by Dr. J. A. Kitching, 1133
Stephens, W. H. : Ballistic Missile and Space Technology, *review*, 1131
Stereochemistry of Natural Phenolic Compounds (Plant Phenolics Group Symposium on), 234
Sterile Crosses between Mutations of *Tribolium confusum* Duv. (Prof. John Stanley), 934
Sterile Culture : Growth of Fern Embryos in (Prof. Augustus E. DeMaggio and Prof. Ralph H. Wetmore), 94
Sterilizing Materials for Hospitals (Brian Watkin), 1044
Stern, Kurt : Principles of Human Genetics, second edition, *review* by Dr. G. Ainsworth Harrison, 110
Sternlicht, B. : At the Second International Measurement Conference (Measuring Film Thickness on Bearings), 1351
Steroids : Biochemistry of (Erich Heftmann and Erich Mosettig), *review* by Dr. D. T. Elmore, 111
Steroids as Ice Nucleators (Richard B. Head), 1058
Steroids and Cancer, *review* by E. Reid, 1235
Steroids in relation to Cancer : Biological Activities of—Proceedings of a Conference sponsored by the Cancer Chemotherapy National Service Center, National Cancer Institute, National Institutes of Health, United States Department of Health, Education and Welfare (edited by Gregory Pincus and Erwin P. Vollmer), *review* by E. Reid, 1235
Sterol Esters : Isolation of, from Human Faeces (Francis Aylward and Pamela Wills), 1397
Sterol Requirements of the Silkworm, *Bombyx mori* (Dr. Toshio Ito), 882
Stetson, Dr. C. A. (Basch, Dr. R., and) : Blood Groups in Infra-human Species (Assay Method for those Antigens of Mice which elicit Cytotoxin and Haemagglutinin Production), 654
Stevens, P. J. (Lock, C. M., and) : Connexion between Micropulsations and the Ionosphere, 584
Stevens, R. : Formation of Phenethyl Alcohol and Tyrosol during Fermentation of a Synthetic Medium lacking Amino-acids, 913
Stevens, R., and others : Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid—Effect of Spraying with Gibberellic Acid on Yield and Composition, 360
Steward, Dr. E. G. : Graphite (Crystallographic Changes which occur during Graphitization), 28
Steward, Prof. F. C., and others : Determination by Mass Spectrometry of the Structure of Proline Derivatives from Apples, 380
Stewart, D. J. : A Micro-method for Performing the Phenylalanine Test on Cultures from Multi-carbohydrate Media, 521
Stewart, Doreen L., and others : Effect of *p*-Fluorophenylalanine on the Multiplication of Foot-and-Mouth Disease Virus, 414
Stewart, J., and others : Enzymic Conversion of Tetrahydrofolic Acid to Folinic Acid by Plant Protein, 179
Stewart, Dr. Richard D., and others : Rapid Infra-Red Determination of Acetone in the Blood and the Exhaled Air of Diabetic Patients, 1008
Steyn, J., and van As, D. : Radiolytic Oxidation of Ferrous Solutions with Standardized Internal Sources of Polonium-210, 903
Stickleback (*Gasterosteus aculeatus* L.) : Significance of the Regeneration of Lateral Plates of the (Tadeusz Penczak), 621
Stigmatic Cuticula of Flowers : Enzymic Breakdown of (W. Heinen and H. F. Linskens), 1416
Stiles, Dr. W. S., and Wyszecki, Dr. G. W. : At the Maxwell Colour Centenary Conference (The Spectrum divided into *M* Small Wavelength Intervals), 10
Still More Nucleic Acids, *review* by Dr. Roy Markham, 742
Stiller, Mary, and Vennesland, Prof. Birgit : Photophosphorylation and the Hill Reaction, 677
Stimulant Properties (Anti-Depressant or), of Impramine : Demonstration of, in Experimental Animals (Dr. D. R. Maxwell and Helen T. Palmer), 84
Stimulants of Cell Division in Developing Fruits (D. S. Letham and E. G. Bollard), 1119
Stimulation by Aldosterone of Sodium Transport in the Loop of Henle (Dr. J. Crabbé), 817
Stimulation of the Heart of the Spinal Dog by Phenoxybenzamine (B. G. Benfey and D. R. Varma), 919
Stimulation by Heparin of Parenchymal Liver Cell Proliferation in Normal Adult Rats (Dr. M. Zimmerman and Evemarie Celozzi), 1014
Stimulation of Lipogenesis in Thyroid Tissue *in vitro* by Free Fatty Acids (Prof. Norbert Freinkel, Dr. Augusto D. Litonjua and Edward C. Saef), 804
Stimulation of Motor Nerve Terminals (Dr. J. I. Hubbard and Robert F. Schmidt), 1103
Stimulation of Turnip Yellow Mosaic Virus Protein Production by 2-Thiouracil (Dr. R. I. B. Francki and Dr. R. E. F. Matthews), 1078

Stimulation (Growth), by High Indole-3-Acetic Acid Concentrations (T. A. Truelsen), 1410
Stimuli (Subliminal) : Response to Series of—an Ethological Method for Investigating the Properties of Nervous Systems (A. J. Pontin), 512
Stimulus-Response Compatibility in the Paired-Associate Learning of Nonsense Syllables (A. D. Baddeley), 1327
Stochastic Population Models in Ecology and Epidemiology (Prof. M. S. Bartlett), *review*, 843
Stocker, Dr. B. A. D. (Edgar, Janice B., and) : Metabolic and Genetic Investigations of Nutritionally Exacting Strains of *Staphylococcus pyogenes*, 1121
Stokes, Dr. John B. : Metabolites of Vitamin B_{12} in Bile after Parenteral Administration of the Vitamin, 807
Stolk, Prof. A. : Pathological Parthenogenesis in a Viviparous Toothcarp, 507
  Pigment Bodies of the Spinal Neurones of some Teleosts, 924
Stomatal Behaviour in *Xanthium pennsylvanicum* : Photoperiodic Effects on (Dr. T. A. Mansfield and Prof. O. V. S. Heath), 974
Stone, Dr. F. G. A. : Appointed to the University of London readership in inorganic chemistry at Queen Mary College, London, 229
Stone, Dr. W. H. : Blood Groups in Infra-human Species (Blood Groups in Cattle), 655
Stoneley, Dr. R. : The Interior of the Earth (Presidential Address to Section A (Mathematics and Physics) of the British Association for the Advancement of Science), 983
Stoppani, Prof. A. O. M., and others : Role of the Pentose Phosphate Pathway in *Pasteurella multocida*, 727
Storage of Grain : Buildings for the Drying and (Bibliography of Research Publications on Farm Buildings, Section 5), (Agricultural Research Council), 440
Storage and Retrieval of Biological Information (Dr. G. C. Ainsworth), 12
Stormont, Dr. C. : Blood Groups in Infra-human Species (Blood Groups in Cattle), 654
Storms (Magnetic), in Interplanetary Space as observed by *Pioneer V* (Eugene W. Greenstadt), 329
Stott, B. M. H., and others : Possible Method for Increasing the Signal-Noise Ratio in the Detection of the First Motion of a Refracted *P*-Wave, 1382
Stott, Dr. P. M., and Stacey, Dr. F. D. : Stress Effects on Thermoremanent Magnetization, 585
Stotz, J. K. : At the Second International Measurement Conference (Measuring Systems for Flight Testing of Aircraft), 1350
Stotzky, G., and others : A Sealing Compound for Use in Biological Work, 410
Stove, E. R., and others : Some Novel Acid-stable Penicillins, 1091
Stover, Dr. Betsy J., and others : Failure of a Dog to Discriminate between Strontium-90 and Calcium given Orally, 713
Strain (Avirulent), of *Salmonella typhimurium* : Resistance to Infection with *Salmonella paratyphi C* in Mice parasitized with a relatively (Dr. J. G. Howard), 87
Strain (Inbred), of Mice : Effect of Hybridization on the Primary Polydipsic Trait of an (Dr. Emanuel Silverstein), 523
Strains (Inbred) : An Iso-Antigen ($\gamma B A$) of Mouse γ-Globulin present in (A. Kelus and J. K. Moor-Jankowski), 1405
Strains (Inbred Mouse) : Social Dominance in (Prof. G. Lindzey, H. Winston and M. Manosevitz), 474
Strains (Nutritionally Exacting), of *Staphylococcus pyogenes* : Metabolic and Genetic Investigations of (Janice B. Edgar and Dr. B. A. D. Stocker), 1121
Strains (Resistant and Susceptible), of Cotton : Leaf Curl Virus and the Flavonoid Content of (Dr. Esam M. Moustafa), 415
Strange, R. E. : Induced Enzyme Synthesis in Aqueous Suspensions of Starved Stationary Phase *Aerobacter aerogenes*, 1272
Strategy of Conflict (Prof. Thomas C. Schelling), *review* by Sir Cyril Burt, 427
Strategy for the War on Hunger (Sir Joseph Hutchinson and Prof. A. H. Bunting), 539
Stratosphere : World-Wide Circulation of Air within the (P. Goldsmith and F. Brown), 1033
Strauss, Prof. Bernard S. : Specificity of the Mutagenic Action of the Alkylating Agents, 730
  An Outline of Chemical Genetics, *review* by Dr. Charlotte Auerbach, 841
Strawberry (*Fragaria*) : Identity of L-Ascorbic Acid formed from D-Glucose by the (Dr. Frank A. Loewus and Stanley Kelly), 1059
Street, Philip : Mammals of the British Isles, *review* by B. J. G. Maitland, 110
Streptococci requiring Secretions of other Bacteria or Sulphydryl Compounds for Normal Growth : Spontaneous Development of *L* Forms of (Ayala Frenkel and Dr. Willy Hirsch), 728
Streptomyces scabies : Apparent Cytoplasmic Inheritance of Tyrosinase Competence in (Prof. K. F. Gregory and Wei-jen Shyu), 465
Streptomycin : Influence of Salts on the Uptake of, by *Escherichia coli* (Paul H. Plotz, Donald T. Dubin and Bernard D. Davis), 1324
Stress : Influence of Moisture Changes on Deformation of Wood under (L. D. Armstrong and G. N. Christensen), 869
Stress Effects on Thermoremanent Magnetization (Dr. P. M. Stott and Dr. F. D. Stacey), 585 ; (J. M. Hall), 586
Stresses and Friction (Contact) : Effective (Dr. D. H. Trollope), 376
Stretch, K. L. : Neuton 'Flux', 60
N–H Stretching Frequencies of Primary Amides : A New Relation between the (Prof. P. G. Puranik and K. Venkata Ramiah), 796
Strickland, E. H., and others : Oxygen Electrode for Measurement of Tissue Slice Respiration, 969
Strickland, G. (edited by) : Selected Journalism from the English Reviews by Stendahl, with Translations of other Critical Writings, 1031
Stride, A. H., and Bowers, R. : Two Unexplored Records of Quaternary History, 1001
Striker, Prof. Gy. : At the Second International Measurement Conference (Possibilities of a Long-range Planning of Instrumentation in a Planned Economy), 1350
Stripping (Anodic), using a Rotating Mercury Drop (Use of the Rotating Hanging Mercury Drop in Analysis), (Dr. J. J. Engelsman and A. M. J. M. Claassens), 240
Strontium-90 in Milk and Agricultural Materials in the United Kingdom, 1959-1960 (Agricultural Research Council, Report No. 4), 20
Strontium (Calcium and) : Transfer of, across Biological Membranes (United States Atomic Energy Commission, United States National Institutes of Health, United States National Science Foundation and the New York State Veterinary College Conference on), 1250
Strontium-90 and Calcium given Orally : Failure of a Dog to Discriminate between (Dr. Betsy J. Stover, M. Goldman and A. Ç. Andersen), 713
Stroud, A. N., and Brues, A. M. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Differences in Synthesis of DNA Response in Two Strains of Pig- and Monkey-Kidney Cells), 341
Stroud, D. B. E., and others : Mannosyl D-Glucosamine Hydrochloride Isomers—6-*O*-Mannosyl D-Glucosamine Hydrochloride, 143
Structural Analysis : Basic Approaches to, *review* by Prof. R. C. Coates, 1134
Structural Component of some Mammalian Tissue Cell Surfaces : Sialic Acid as a (Dr. Leonard Weiss), 1108
Structure of Bacterial Walls : Teichoic Acids and the (Dr. A. R. Archibald, J. J. Armstrong, Prof. J. Baddiley and J. B. Hay), 570
Structure of Feather Keratin (the late Prof. W. T. Astbury and E. Beighton), 171
Structure of Industry in Britain (Prof. G. C. Allen), 1332
Structure of the Moon's Surface (Dr. Gilbert Fielder), *review* by D. H. P. Jones, 424
Structure of the Northern Apennines (Sir Edward Bailey and Prof. W. J. McCallien), 1136
Structure of Paper : The Formation and (Technical Section of the British Paper and Board Makers' Association Conference on), 126
Structure of δ-Plutonium (J. A. C. Marples and J. A. Lee), 1391
Structure of Proline Derivatives from Apples : Determination by Mass Spectrometry of the (Dr. K. Biemann, G. G. J. Deffner and Prof. F. C. Steward), 380
Structure of Small Peptides : Chemical Aspects of the (Dr. Dorothy Wrinch), *review* by Prof. H. N. Rydon, 105
Structure in Ultra-Thin Sections of Vitrinite in Coal : Electron Microscopic Observations of (J. T. McCartney, Sabri Ergun and R. E. Walline), 1361
Structure and Action of the Sucker of *Echeneis* (Prof. B. Bonnell), 403
Structure and Dynamics of the Psyche (C. G. Jung), translated by R. F. C. Hull, *review* by Dr. C. Allen, 1235
Structure and Function of Muscle (edited by Dr. G. H. Bourne), Vol. 2, Biochemistry and Physiology ; Vol. 3, Pharmacology and Disease, *review* by Dr. D. H. Sproull, 948
Structure and Properties of Ionic Melts (Faraday Society General Discussion on), 338, 443
Structure (Age), and Marriage amongst the Groote Eylandt Aborigines : Classification of Kin, (Dr. Frederick G. G. Rose), *review* by Dr. R. Needham, 6
Structure (Atomic), of Graphite and Graphitization (Dr. G. E. Bacon), 27
Structure (Crystal and Molecular), of Diphenyl (Dr. G. B. Robertson), 593
Structure (Electronic), of Metals : The de Haas-Van Alphen Effect and the (Dr. D. Shoenberg), 126
Structure (Genetic Fine), of the ad_7 Locus of *Schizosaccharomyces pombe* : Distribution of X-Ray- and Nitrous Acid-induced Mutations in the (Dr. Herbert Gutz), 1127
Structure (Magnetoplumbite) : Fluoride-compensated Substitution of Bivalent Cations in the (Prof. R. Banks and M. Robbins), 1387
Structure (Protein) : Haemoglobin *F* and the Genetic Control of (Prof. V. M. Ingram), 608 ; (Dr. Wolf W. Zuelzer and Abner R. Robinson), 609
Structure (Sub-Chromatid), and Chromosome Duplication in *Vicia faba* (W. J. Peacock), 832
Structure (Surface) : A Relation between the Reactivity of Human Red Cells to Antiglobulin Tests and their (Judith E. Davis, Prof. H. N. Green and Pamela W. Tymms), 923
Structures of Polymeric Titanium Ethoxide and Titanium Oxide Ethoxides (Prof. D. C. Bradley and A. H. Westlake), 273 ; (R. L. Martin and G. Winter), 274
Structures (Deoxyribonucleic Acid), in the Nucleolus (Dr. Elsa H. J. O'Donnell), 1325
Structures (Surface), of Cylindrical Animal and Plant Cells : Circumscribing Irradiation of, with Polonium-210 α-Particles (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
Stuart, Dr. A. E. (Cooper, Dr. G. N., and) : Sensitivity of Mice to Bacterial Lipopolysaccharide following Alteration of Activity of the Reticulo-Endothelial System, 294
  Non-specific Immunity in Pneumococcal Infection of Mice, 295
Stubblefield, Dr. C. J., and Trotter, Dr. F. M. : Coal in Oxfordshire, 953
Stubbs, Bruce T., and others : Rapid Infra-Red Determination of Acetone in the Blood and the Exhaled Air of Diabetic Patients, 1008
Student's Prize of the Institution of Chemical Engineers awarded to J. P. Catchpole, 338
Studied (A Much-) Protozoon, *review* by Dr. J. A. Kitching, 1133
Studies in Management (G. Hunter), 1332
Studies (Adsorption), by Electron Bombardment : Evaporated Carbon Films of Large Area for (A. E. Bell, J. Pritchard and Prof. K. W. Sykes), 487
Studies (Histochemical and Homogenization), of Mitochondrial α-Glycerophosphate Dehydrogenase in the Nervous System (R. Hess and Dr. A. G. E. Pearse), 718
Studies (Lunar) : New Handbooks for, *review* by D. H. P. Jones, 424
Studies (Management), in Britain, 1251
Studies (Mathematical), in the Psychology of War, *review* by Sir Cyril Burt, 427
Studies (Social), in Britain, 1354
Studies (X-Ray Diffraction), of Bacterial Viruses (Dr. A. C. T. North and Prof. Alexander Rich), 1242
Study in Linear and Non-Linear Programming : Methods of Feasible Directions—a (Dr. G. Zoutendijk), *review* by Dr. M. V. Wilkes, 9
Study of the Preservation and the Restoration of Cultural Property, International Centre for the (Rome) : Works and Publications, 3, Climatology and Conservation in Museums, 1050
Study and Conservation of Nature, International Youth Federation for the : Course in Conservation, by the Verein Naturpark in the Lüneburger Heide, Germany, 1045
Study (Algological), on the Eastern Coasts of the Americas, *review* by Prof. Lily Newton, 1234
Study (Folk-life), Society for : Formation of a, 544

Study (Immunological), of Experimentally Induced Extrahepatic Cholestasis (Dr. Roy G. Shorter and R. G. Lack), 610
Study (An Immunological), of a Human Pituitary Interstitial Cell-stimulating Hormone (N. R. Moudgal and Prof. Choh Hao Li), 192
Study (Mathematical), of the Causes and Origins of War : Arms and Security—a (Dr. Lewis F. Richardson), edited by Nicolas Rashevsky and Ernesto Trucco, *review* by Sir Cyril Burt, 427
Studying the Pyrolysis of Polymers : Differential Thermogravimetry versus Differential Thermometry in (Hugh C. Anderson), 1088
Stumps (Pine) : Inoculation of, against Infection by *Fomes annosus* (Dr. J. Rishbeth), 826
Stutts, Patricia, and others : Biochemical Aspects of Resistance to 6-Mercaptopurine in Human Epidermoid Carcinoma Cells in Culture, 469
Style (Modern), in Mathematical Analysis, *review* by Prof. L. S. Goddard, 6
Styles, H. E. : Appointed director of research, London Transport, 751 ; work of, 751
Stylet-Sheath Material of a Pentatomid : Extraction of Lipids from the Precursor of the (P. W. Miles), 911
Sub-Bituminous Coals (Alberta), as Drilling Fluid Thinners (E. J. Jensen), 1144
Sub-Cellular Fractions of the Brain of the Rat during 'Metrazol' Convulsions : Changes in the Pentose–Nucleic Acid Content of (Prof. G. P. Talwar, B. Sadasividu and V. S. Chitre), 1007
Sub-Cellular Material : Passive Transfer of Contact Sensitivity to Picryl Chloride in Guinea Pigs, with (Dr. J. L. Turk), 915
Sub-Cellular Particles : Ethylene Evolution and (Prof. Stanley P. Burg and Ellen A. Burg), 967
Sub-Chromatid Structure and Chromosome Duplication in *Vicia faba* (W. J. Peacock), 832
Sub-Fractionation of Human Serum Leucine Aminopeptidase (Prof. Clyde A. Dubbs, Charlotte Vivonia and Jean M. Hilburn), 1203
Sub-Unit of Ribosomal Ribonucleic Acid from Yeast (Eiko Otaka, Yukito Oota and Syozo Osawa), 598
Sub-Units : Kinetics of the Enzymic Degradation of Deoxyribonucleic Acid into (Dr. Giorgio Bernardi and Prof. Charles Sadron), 809
Subcutaneous Phycomycosis in Uganda : Two Phycomycetes isolated from (Dr. A. M. M. Wilson), 612
Subjects living at High Altitude : Aldosterone Excretion and Potassium Retention in (P. J. Ayres, Rona C. Hurter, Dr. E. S. Williams and J. Rundo), 78
Sublimation Technique : Adducts of Urea and Thiourea obtained by means of a (B. Casu), 802
Subliminal Stimuli : Response to Series of—an Ethological Method for Investigating the Properties of Nervous Systems (A. J. Pontin), 512
Submarine Irradiance : Time-integrated Measurements of (Ronald Currie and Laurence Draper), 661
Submerged Plants : Inhibition of Growth and Photosynthesis in, with Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
Substance (Antifungal), from *Pisum sativum* L. : Pisatin, an (Dawn R. Perrin and W. Bottomley), 76
Substance (Single) : Multiple Inhibitions of Cell Metabolism by a (M. Harris and Dr. G. A. Morrison), 1276
Substances (Antimicrobial), from Ferns (Prof. Jasper C. Maruzzella), 518
Substances (*M*- and *N*-Blood Group) : Products of Mild Acid and Alkaline Hydrolysis of (Dr. Elzbieta Romanowska), 1408
Substances (Gibberellin-like), in Plants (Margaret Radley)—Leguminous Root Nodules, 684 ; Seaweed (*Fucus vesiculosus*), 685
Substances (Lipid and Lipidophilic), as Adjuvants : Effectiveness of (D. W. Dresser), 1169
Substances (Organic) : Inhibition of Ultrasonic Decolorization of Rhodamine *B* in Presence of (Prof. Satya Prakash and Sheo Prakash), 1292
Substances (Pharmacologically Active), present in the Central Nervous System (Dr. Paul V. Buday), 245
Substances (Radioactive) : Safe Handling of, 1257
Substitution (Fluoride-compensated), of Bivalent Cations in the Magnetoplumbite Structure (Prof. E. Banks and M. Robbins), 1387
Substrate : Dependence on, of the Electrical Potential across the Isolated Gut (Dr. T. W. Clarkson, A. C. Cross and S. Toole), 501
Substrate (An Invariant Casein), for Rennet Standardization, derivable from Diverse Sources of Cows' Milk (Dr. G. W. Scott Blair and J. C. Oosthuizen), 697
Substrates (One-Degree Orientated) : Epitaxial Growth of Crystals on (Dr. A. Goswami), 160
Subtropical Coasts (Eastern Tropical and), of the Americas : Marine Algae of the (Prof. William Randolph Taylor), *review* by Prof. Lily Newton, 1234
Succinate : Synthesis of, from Acetate (D. D. Davies), 1093
Succinate (Œstriol) : Treatment of Thrombocytopaenic Haemorrhage with (Dr. Hubert Poliwoda), 400
Succinic Dehydrogenase : Nucleolar Localization of, in Normal Rat Hepatic Cells (P. De, R. Chatterjee and Dr. S. Mitra), 925
Succinic Dehydrogenase during Chemical Carcinogenesis : Tissue Dilution Artefact—a Re-interpretation of Variations in Levels of (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Sucker of *Echeneis* : Structure and Action of the (Prof. B. Bonnell), 403
Suckled and Unsuckled Female Rats : Induction of Cancer in (Prof. Giuliano Briziarelli), 921
Suckling of various Species : Correlation between the Growth-Rate of the, and the Percentage of Total Calories from Protein the Milk (Dr. F. W. Bernhart), 358
Sucrases in *Phaseolus vulgaris* (R. A. Cooper and R. N. Greenshields), 601
Sucrose from Fat : Metabolic Production of (Prof. H. Beevers), 433
Suesz, A. (Sprau, F., and) : Nematology (Radiotracer Techniques using Phosphorus-32 to indicate that *Longidorus maximus* feeds on the Roots of Beet and is thus a Parasite), 1049
'Sugar Pump' in the Intestinal Epithelium : Localization of the (Dr. T. Z. Csáky and G. W. Fernald), 709
Sugar Transport in Human Red Cells : Common Carrier System for (Dr. L. Lacko and Dr. M. Burger), 881
Sugar Transport (Mediated) : Persistence in Erythrocyte Ghosts of (Paul G. LeFevre), 970
Sugars (Selected) : Relative Sweetness of α- and β-Forms of (Rose Marie Pangborn and Sandra C. Gee), 810
Sugars (Alcohols and) : Regulation of Pyrogallol Oxidations by (B. Z. Siegel, S. M. Siegel and N. S. Goodman), 180
Suginome, Dr. H. : Awarded a Japanese fellowship in chemistry for 1961-62 by the Ramsay Memorial Trust, 337
Sullivan, Kathleen (McManus, Mary Annunciata, and) : Effects of Kinetin and Indole-3-acetic Acid on Multiplication Rates of *Paramecium*, 619
Sulphate in *Blattella germanica* : Metabolism of the Sulphur Amino-Acids and of (Richard J. Block and S. Mark Henry), 392
Sulphated Mucopolysaccharides : Staining of (Dr. I. D. Heath), 1370
Sulphide Ore : Black Shale, Oil and (Prof. K. C. Dunham), 985
Sulphur Amino-Acids : Metabolism of the, and of Sulphate in *Blattella germanica* (Richard J. Block and S. Mark Henry), 392
Sulphydryl Compounds for Normal Growth : Spontaneous Development of *L* Forms of Streptococci requiring Secretions of other Bacteria or (Ayala Frenkel and Dr. Willy Hirsch), 728
Sulphydryl Group, and the Catechol Amines : Interaction of Hydrocortisone, the (Dr. Sidney Roston), 490
Summer School on Corrosion—Corrosion Problems in the Electrical Power Industry (Battersea College of Technology), 651
Summerhayes, V. S. : Proceedings of the Third World Orchid Conference, *review*, 213
Suomalainen, Dr. Heikki, and Keränen, A. J. A. : The First Anthocyanins appearing during the Ripening of Blueberries, 498
Supek, Z. (Jović, M., and) : Formation of 5-Hydroxytryptamine in an Aqueous Solution of 5-Hydroxytryptophan treated with X-Rays, 383
Supercontraction of Iodinated Wools (O. A. Swanepoel), 908
Supplies (Drug), during the American Revolution (George B. Griffenhagen), 761
Supply (Excess), of Heavy Metals to Barley during Germination : Effect of, with special reference to Catalase and Peroxidase (Dr. S. C. Agarwala, A. Kumar and C. P. Sharma), 726
Supported Beam : Initial Vibrations of a (Dr. R. V. Sharman and D. White), 692
Supposed Formation of Hydrogen Peroxide during the Autoxidation of Haemoglobin : Reactions of Haemoproteins with Hydrogen Peroxide and the (Prof. D. Keilin), 769
Surface of the Moon (V. A. Firsoff), *review* by D. H. P. Jones, 424
Surface (Moon's) : Structure of the (Dr. Gilbert Fielder), *review* by D. H. P. Jones, 424
Surface Area (High) : Measurements of Heats of Adsorption of Organic Vapours on Adsorbents of, using a Continuous Flow Calorimeter (G. H. Bell and A. J. Groszek), 1184
Surface Structure : A Relation between the Reactivity of Human Red Cells to Antiglobulin Tests and their (Judith E. Davis, Prof. H. N. Green and Pamela W. Tymms), 923
Surface Structures of Cylindrical Animal and Plant Cells : Circumscribing Irradiation of, with Polonium-210 α-Particles (R. M. Bergström, R. F. Blåfield and M. W. Brenner), 1165
Surface Symmetry and Cell Dimensions of Layer Lattice Silicates (E. W. Radoslovich), 67
Surface Waves in Anisotropic Elastic Media (V. T. Buchwald and A. Davis), 899
Surface Wax on Leaves : Physiological Significance of (D. M. Hall and R. L. Jones), 95
Surface and Underground Waters : Uranium in British (J. D. Peacock), 1189
Surfaces (Dry or Moist) : A Method of replicating, for Examination by Light Microscopy (Joan Sampson), 932
Surfaces (Mammalian Tissue Cell) : Sialic Acid as a Structural Component of some (Dr. Leonard Weiss), 1108
Surfen, a Quinoline with Oncogenic and Heparin-neutralizing Properties (DeWitt T. Hunter, jun., and Joseph M. Hill), 1378
Surgeons of England, Royal College of : Election of Sir Howard Florey and Dr. Owen H. Wangensteen as Honorary Fellows, 126
Surkevicius, H., and others : Reactivity of Calcium Sulphate Hemihydrate, 704
Survey : Land-Use—Nicaragua (Dr. John Grainger), 1259
Survey in Manufacturing Industry on Merseyside : Ageing and the Semi-Skilled—a (Alistair Heron and Sheila M. Chown, assisted by M. S. Featherstone and Catherine Cunningham), 1249
Survey (Gravity), on the Aira Caldera, Kyusyu, Tokyo (Izumi Yokoyama), 966
Surveys (U.H.F. and V.H.F. Television) : A Mobile Laboratory for (E. W. Taylor and L. C. Munn), 1355
Survival (*in vivo*) : Recovery and, of Rabbit Erythrocytes (Dr. G. F. Doebbler, R. G. Buchheit and A. P. Rinfret), 1405
Survival (Plant) : Light Rainfall and—Measurement of Stem Flow Run-off (M. D. Gwynne and J. Glover), 1321
Survival Curves and Target Theory : New Considerations on (Dr. E. L. Powers), 1045
Surwillo, Dr. Walter W. : Frequency of the 'Alpha' Rhythm, Reaction Time and Age, 823
Susceptibility to Induced Pulmonary Tumours in Mice : Inheritance of (Dr. D. S. Falconer and Dr. Joyce L. Bloom), 1070
Susceptibility to Leaf Blight, caused by *Cochliobolus heterostrophus*, in Nigerian Varieties of Maize (C. L. M. van Eijnatten), 515
Susceptible Strains (Resistant and), of Cotton : Leaf Curl Virus and the Flavonoid Content of (Dr. Esam M. Moustafa), 515
Suspensions (Aqueous), of Starved Stationary Phase *Aerobacter aerogenes* : Induced Enzyme Synthesis in (R. E. Strange), 1272
Sussdorf, Dr. D. H. : Awarded the David Anderson Berry Prize for 1961 of the Royal Society of Edinburgh, 229
  Rise of Antibody Titre in Cell-free Spleen Preparations Incubated *in vitro*, 770
Sustained Oscillations in a Catalytic Chemical System (R. A. Spangler and F. M. Snell), 457
Sutherland, Dr. N. S. : Facts and Theories of Shape Discrimination, 581
Sutton, Dr. D. A. : The British Gelatine and Glue Research Association—Twenty-first Meeting of the Research Panel, 857
Sutton, E. : Parasite Biology (Role of Arthropods as Vectors of Parasitic Infections), 134
Suzuki, Akio, and others : Isolation of Anthraquinone from Humus, 415
Svensson, Ingvar (Boman, Hans G., and) : Evidence for a New Enzyme connected with Protein Synthesis, 674
Swallow, Dr. A. J. : Radiation Chemistry of Organic Compounds, *review* by Dr. S. J. Thomson, 317

- Swallowing (Air–), a Mechanism in Photic Reversal of the Bettle *Trypodendron* (Prof. Kenneth Graham), 519
- Swanepoel, O. A. : Supercontraction of Iodinated Wools, 908
- Swarming of the Polychaete *Odontosyllis phosphorea* Moore, var. *Nanaimoensis* Berkeley, near Nanaimo, B.C. (E. Berkeley), 1321
- Sweet Potato (*Ipomoea batatas* (L.) Lam.) : Evolution of the (Dr. D. E. Yen), 93
- Sweetness (Relative), of α- and β-Forms of Selected Sugars (Rose Marie Pangborn and Sandra C. Gee), 810
- Swierszczewski, Dr. S. : Appointed Research Fellow in nuclear physics in the University of Birmingham, 337
- Swimming Ability of Non-aquatic Reptiles (R. R. Tercafs), 125
- Swinton, Dr. W. E. : Appointed head of the Division of Life Sciences at the Royal Ontario Museum, Toronto, 24
- Swisher, Dr. S. N. : Blood Groups in Infra-human Species (Blood Group Systems in the Dog), 653
- Sydney–Hawkesbury District : Rock Engravings of the (F. D. McCarthy), 854
- Sykes, Dr. Charles : New Creep Laboratory of the British Electrical and Allied Industries Research Association opened by, 1049
- Sykes, G. : Elected honorary president of the Society for Applied Bacteriology, 754
- Sykes, J. R. (Cooper, Marion I., and) : Demonstration by Paper Electrophoresis of an Auto-Immunological Precipitin possibly due to Fibrinolysins, 1212
- Sykes, Prof. K. W., and others : Evaporated Carbon Films of Large Area for Adsorption Studies by Electron Bombardment, 487
- Syllables (Nonsense) : Stimulus-Response Compatibility in the Paired-Associate Learning of (A. D. Baddeley), 1327
- Symbiotic Nitrogen Fixation : Root Temperature and (A. H. Gibson), 1080
- Symmetry (Surface), and Cell Dimensions of Layer Lattice Silicates (E. W. Radoslovich), 67
- Sympathetic Transmission : Lack of Evidence for a Cholinergic Mechanism in (Dr. J. E. Gardiner and Dr. J. W. Thompson), 86
- Symptoms of Barley Leaf-Spot Disease : Production of, by Culture Filtrate of *Helminthosporium sativum* (S. K. Gayed), 725
- Synaptic Transmission in Neurosecretory Cells (Hiromichi Morita, Takaaki Ishibashi and Satoru Yamashita), 183
- Syndrome (Grey Speck), of Oats : Manganese and Magnesium in the (P. B. Vose and Dr. D. J. Griffiths), 299
- Syndrome (Malabsorption), and Exudative Enteropathy : Calcium Metabolism in Man with Calcium-45— (Dr. G. Milhaud and Dr. P. Vesin), 872
- Syndrome (Stein–Leventhal) : Physiology and Pathogenesis of the (Dr. Virendra B. Mahesh and Dr. Robert B. Greenblatt)—Urinary Androsterone, Etiocholanolone, Pregnanetriol and Δ^5-Pregnenetriol of Ovarian Origin in a Patient with Stein–Leventhal Syndrome, 888 ; Role of FSH in the Pathogenesis of the Stein–Leventhal Syndrome, 889
- Syndromes (Nephrotic) : Haptoglobinuria in (A. Marnay), 74
- Synge, J. L. : Relativity, the General Theory, *review* by Dr. G. J. Whitrow, 424
- Synthesis of Adenine from Hydrogen Cyanide under Possible Primitive Earth Conditions : Mechanism of (Prof. J. Oró), 1193
- Synthesis of Succinate from Acetate (D. D. Davies), 1093
- Synthesis (Adenosine Triphosphate), in Erythrocytes : A Positive Feedback Mechanism of (Makoto Nakao, Takashi Motegi, Toshiko Nakao, Saburo Yamazoe and Haruhisa Yoshikawa), 283
- Synthesis (A Convenient), of Muramic Acid and other 3-O-Ethers of D-Glucosamine (Dr. Roy Gigg and Patricia M. Carroll), 495
- Synthesis (Haemoglobin) : Control of Specificity in (Dr. J. Bishop, Dr. G. Favelukes, Prof. R. Schweet and Dr. E. Russell), 1365
- Synthesis (Induced Enzyme), in Aqueous Suspensions of Starved Stationary Phase *Aerobacter aerogenes* (R. E. Strange), 1272
- Synthesis (Protein) : Evidence for a New Enzyme connected with (Hans G. Boman and Ingvar Svensson), 674
- Synthesis (Urea), in the Living Rat Brain (R. K. Dacies, A. J. Defalco, D. Shander, A. Kopelman and Prof. J. Kiyasu), 288
- Synthesis and X-Ray Analysis of Diamond (H. Ll. D. Pugh, J. Lees and J. A. Bland), 865
- Synthetic Corundum : A New Technique for the Production of (E. A. D. White), 901
- Synthetic Medium lacking Amino-acids : Formation of Phenethyl Alcohol and Tyrosol during Fermentation of a (R. Stevens), 913
- System : A New Universal Buffer (Dr. D. A. Ellis), 1099
- System (Catalytic Chemical) : Sustained Oscillations in a (R. A. Spangler and F. M. Snell), 457
- System (Central Nervous) : Enzymic Activity of the (Neurochemical Commission of the World Federation of Neurology International Symposium on), 1349
  - Pharmacologically Active Substances present in the (Dr. Paul V. Buday), 245
  - Tryptamine Receptors in the (Dr. J. R. Vane, Dr. H. O. J. Collier and Dr. S. J. Corne, and Dr. E. Marley and Dr. P. B. Bradley), 1068
- System (Central Nervous), of an Insect (*Periplaneta americana* L.) : Exchanges of Sodium Ions in the (J. E. Treherne), 1223
- System (Common Carrier), for Sugar Transport in Human Red Cells (Dr. L. Lacko and Dr. M. Burger), 881
- System (Electron Transport), and Phosphoproteins of Mitochondria (K. Ahmed, J. D. Judah and C. H. Gallagher), 1309
- System (Human Haematopoietic) : Effects of Ionizing Radiation on the—Report of the Subcommittee on Haematologic Effects, Committee on Pathologic Effects of Atomic Radiation (United States National Academy of Sciences—National Research Council, Publication No. 875), 556
- System ('Hunger Motivational') : Evidence of a, in the Lateral Hypothalamus of the Rat (Dr. P. J. Morgane), 672
- System (Nervous) : Chemistry and the, *review* by Dr. R. V. Coxon, 318
  - Histochemical and Homogenization Studies of Mitochondrial α-Glycerophosphate Dehydrogenase in the (R. Hess and Dr. A. G. E. Pearse), 718
- System (Neurosecretory), of the Desert Locust : Induced Changes in the Amounts of Material in the (Dr. K. C. Highnam), 199
- System (Rat Lens Enzyme) : Catalysis of Incorporation of ^{14}C-Uridine into Rat Lens Ribonucleic Acid by (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
- System (Reticulo-Endothelial) : Sensitivity of Mice to Bacterial Lipopolysaccharide following Alteration of Activity of the (Dr. G. N. Cooper and Dr. A. E. Stuart), 294
- System (Reticulo-Endothelial), of Mice : Effect of Added Vitamins on the Phagocytic Activity of the (J. Cordingley and Prof. T. Nicol), 82
- System (Short-term Dating) : Carbon-14 from Nuclear Explosions as a—Use to determine the Origin of Heartwood (Dr. A. T. Wilson), 714
- Systematics Association and the Challenger Society : Symposium on Speciation in the Sea, 229
- Systemic Insecticides : Enhanced Plant-Growth with Two (M. M. H. Wallace), 513
- Systems (Cell-free) : Biosynthesis of Riboflavin in (Prof. T. W. Goodwin and Dr. A. A. Horton), 772
- Systems (Computer), for Searching Chemical Literature : Report on (E. C. Medam and H. R. Koller), (United States National Bureau of Standards Research Information Centre and Advisory Service on Information Processing), 23
- Systems (Computing) : Redundancy Techniques for (Information Systems Branch of the United States Office of Naval Research Symposium on), 1349
- Systems (Dimethyl Sulphoxide–Water) : Interaction of Lipids and Trypsin in (Prof. A. Lukton, H. Donohue and Prof. F. A. Bettelheim), 565
- Systems (Electrodialysis) : Thermo-electric Phenomena in (Dr. Lloyd H. Shaffer), 591
- Systems (Heterocyclic), with Bridgehead Nitrogen Atoms (William L. Mosby), Part 1, *review* by Dr. G. L. Buchanan, 425
- Systems (Nervous) : Response to Series of Subliminal Stimuli—an Ethological Method for Investigating the Properties of (A. J. Pontin), 512
- Systems Engineering : Operations Research and (Charles D. Flagle, William H. Huggins and Robert H. Roy), *review* by Prof. L. S. Goddard, 105
- Szenberg, Dr. Aleksander, and Warner, N. L. : Large Lymphocytes and the Simonsen Phenomenon, 920
- Szenberg, Dr. Aleksander (Dineen, Dr. J. K., and) : Regeneration of Elements of Donor Origin in Orthotopically Grafted Skin following the Homograft Response, 153
- Szentágothai, Prof. János (edited by Prof. Ferenc Kiss and) : Atlas of Human Anatomy, Vol. 1, Osteology, Syndesmology, Myology ; Vol. 2, Splanchnology, Endocrine Glands, Heart ; Vol. 3, Nervous System, Vascular System, Lymphatic System, Sense Organs, *review* by Prof. J. M. Yoffey, 1232
- Szepsenwol, J. : The Effect of various Diets upon Sexual Maturity of Mice, 1112
- Szewczuk, Dr. A., and others : Histochemical Demonstration of Gamma-Glutamyl Transpeptidase, 767
- Szporny, L., and others : Amino-derivatives of 11β, 17α, 21-Trihydroxy-3, 20-Dioxo-1,4-Pregnadiene, 607
- Sztaricskai, F. (Uri, J., and) : Simple, Quick Methods for Detection of 6-Amino-penicillanic Acid, 1223
- Szwarc, Dr. H. : Effects of Ionizing Radiation on Organic and Biological Solids (Use of Electron-Spin Resonance to Demonstrate the Rapid Recombination of Radicals which occurs on Heating Irradiated Cyclohexane through its Transition Point at 186° K.), 1150
- Szymanski, Herman A., and Povinelli, Richard : Infra-Red Spectra of Water-soluble Carbonates, 64

- T-PHASE : Appearance of the (R. Green), 997
- Tables and Nomograms : A Collection of, for the Processing of Observations made on Artificial Earth Satellites (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1315
- Tadpole (Ascidian) : Electron Microscope Observations of the Receptors in the Sensory Vesicle of the (Noël Dilly), 786
- Taha, M. A., and others : Tuber Bulking in the Potato Crop, 782
- Takaku, Fumimaro, and others : Effect of the Bilateral Section of the Splanchnic Nerve on Erythropoiesis, 500
- Takauji, Masa, and others : Controlling Mechanism of the Mechanical Activity of Muscle and that of Blood Coagulation, 80
- Take-Over Bid in Acoustical Training (Prof. E. J. Richards), 748
- Takeyama, N. : Paths of Inter-Molecular Energy Transfer in Photo-sensitized Oxidation-Reduction, 1359
- Talanti, Prof. S., and Hopsu, Prof. Väinö K. : Leucine Aminopeptidase in the Mammary Gland of the Cow and Rat, 86
- Taliaferro, W. H. : Immunity to Protozoa (Cellular Basis of Immunity), 551
- Talwar, Prof. G. P., and others : Changes in the Pentose–Nucleic Acid Content of Sub-Cellular Fractions of the Brain of the Rat during 'Metrazol' Convulsions, 1007
- Tamuro, Hiroko, and others : Chromatographic Fractionation of Hog Thyroglobulin, 1199
- Tancredi, F., and others : Blockage of Transformation of Tryptophan to Nicotinic Acid by Experimental Hepatitis in Mice, 601
- Taneja, G. C., and Gowe, R. S. : Effect of Varying Doses of Undiluted Semen on Fertility in the Domestic Fowl, 828
- Tanganyika : Age of Bed I, Olduvai Gorge (Dr. L. S. B. Leakey, Dr. J. F. Evernden and Dr. G. H. Curtis), 478
- Tapetum Lucidum of the Eye of the Opossum, *Didelphis virginiana*: Cholesterol in the (Antoinette Pirie), 708
- Tapeworms, *Hymenolepis nana* (Cestoda : Hymenolepididae) : A Natural Population of Anomalous Branched, in a Colony of *DBA*/1 Mice (Dr. Donald Heyneman), 297
- Tappel, A. L. (Kumta, U. S., and) : Radiation Damage to Proteins, 1304
- Tapping of *Hevea brasiliensis* : Effect of Ethylene Oxide on the (D. H. Taysum), 1319
- Target Theory : New Considerations on Survival Curves and (Dr. E. L. Powers), 1045
- Tarnay, K. : At the Second International Measurement Conference (Method for Measuring Small Capacities of about 100 pF., with an Accuracy of 1 per cent), 1350
- Tartar, Vance : The Biology of Stentor, *review* by Dr. J. A. Kitching, 1133
- Tarte, P. : Infra-Red Spectroscopic Evidence of Four-fold Co-ordination of Titanium in Barium Orthotitanate, 1002
- Tarutani, Osamu, and others : Chromatographic Fractionation of Hog Thyroglobulin, 1199
- Taste Fibres in the Carp : Function of (Jihei Konishi and Prof. Yngve Zotterman), 286

Taste Thresholds and Food Dislikes (Dr. R. Fischer, F. Griffin, S. England and S. M. Garn), 1328
Tata Memorial Trust : Awards for 1961-62 for research on leukaemia and allied diseases, 228
Tatchell, Dr. J. A. H. : Pulmonary Tumours and Group VII in the House-Mouse, 1125
Tatchell, R. J. : Parasite Biology (Application of New Laboratory Techniques), 135
Tatlow, Prof. J. C., and others (edited by) : Advances in Fluorine Chemistry, Vol. I, *review* by Dr. Richard Dresdner, 319
Tatsuno, T., and others : Toxicology of *Penicillium islandicum*, 864
Tauc, L. (Hughes, Dr. G. M., and) : The Path of the Giant Cell Axons in *Aplysia depilans*, 404
Tavolga, Dr. W. N. (edited by Dr. W. E. Lanyon and) : Animal Sounds and Communication, *review* by Dr. W. H. Thorpe, 741
Tax, Sol., and Callender, Charles (edited by) : Evolution after Darwin, Vol. 3, Issues in Evolution, *review* by Dr. P. G. Fothergill, 425
Taxonomy of the Earthworm in India (G. E. Gates), 227
Taxonomy of *Xanthomonas* and *Pseudomonas* (R. R. Colwell and Prof. J. Liston), 617
Taxonomy (Plant), as a Scientific Discipline (Dr. R. E. Holttum), 990
Taylor, A. L. : Nematology (Use of Nematicides in the United States), 1049
Taylor, A. L. (paper read by) : Nematology (Holotype and Allotype Species of *Meloidogyne* Species and Sub-species), (B. G. Chitwood), 1048
Taylor, Dr. B. W. : Estudios Ecologicos para el Aprovechamiento de la Tierra en Nicaragua (Ecological Land Use Surveys in Nicaragua), 1259
Taylor, E. W., and Munn, L. C. : A Mobile Laboratory for U.H.V. and V.H.F. Television Surveys (B.B.C. Engineering Monograph No. 34), 1355
Taylor, Dr. James : Solid Propellant and Exothermic Compositions, *review* by Dr. W. B. Littler, 3
Taylor, Dr. Joan : Bacteria of the Intestine (Host Specificity and Enteropathogenicity of *Escherichia coli*), 1152
Taylor, Dr. John K. : Appointed chief of the Applied Analytical Research Section of the United States National Bureau of Standards Analytical and Inorganic Chemistry Division, 334 ; work of, 334
Taylor, M. G. : Biorheology and Microcirculation, 758
Taylor, Dr. S. J. : Appointed to the University of London readership in mathematics at Westfield College, London, 1349
Taylor, Prof. William Randolph : Marine Algae of the Eastern Tropical and Subtropical Coasts of the Americas, *review* by Prof. Lily Newton, 1234
Taysum, D. H. : Effect of Ethylene Oxide on the Tapping of *Hevea brasiliensis*, 1319
Tchervyakova, V. I. : At the Second International Measurement Conference (Electrical Measuring Instruments based on the Photo-compensating Amplifier), 1351
Tea : The Concept of Kind of (W. Wight and R. C. J. H. Gilchrist), 14
Tea Plant : Classification of the (Dr. H. H. Mann), 409
Teacher Preparation for Health Education (United Nations, World Health Organization, Technical Report Series No. 193—Report of a joint WHO/Unesco Expert Committee), 441
Teachers' Point of View : Science and Education—the, 555
Teachers (Mathematics) : Shortage of, in Britain, 127
Teachers (Science), in Training (Arthur Guinness Son and Co., Ltd., Awards for), 338
Teachers (Scientific) : Shortage of, in the United Kingdom, 123
Teaching of Mathematics (Committee of Vice-Chancellors and Principals of the Universities of the United Kingdom Conference of professors of mathematics from the Universities of Great Britain to consider the), 1145
Teaching of Psychiatry and Mental Health (United Nations, World Health Organization, Public Health Papers No. 9), 1248
Teaching (Biology) : A New Approach to (Dr. L. H. Finlayson), 554
Techne (Cambridge), Ltd. : Correct price of the 'Tempunit' Temperature Controller, 856
Technical Assistance to Overseas Countries (June 17, 1039), *errata*, 24
Technical Books : Recent Scientific and, Supp. iv, July 29 ; Supp. iv, August 26 ; ccccxciii, September 30
Technical College (Federal), Zurich : Appointment of Dr. W. F. Berg as professor of the Photographic Institute, 1043
Technical Conferences (Scientific and) : Forthcoming International (Department of Scientific and Industrial Research, List No. 29), 959
Technical Co-operation, Department of : Work of the, 440
Technical Co-operation in Africa, Commission for (International Union for the Conservation of Nature and the) : Conference on the Conservation of Nature and Natural Resources in Modern African States, 958
Technical Education : Apprenticeship and, 737
Technical Education Abstracts from British Sources (National Foundation for Educational Research in England and Wales), Vol. 1, No. 1, September–December 1960, 21
Technical Reports of the United States Armed Forces, 1347
Technical Writing : The Technique of (Borough Polytechnic, London, lectures on), 755
Technique of Technical Writing (Borough Polytechnic, London, lectures on), 755
Technique (Light Depolarization) : Crystallization of Isotactic Polypropylene using a (J. H. Magill), 1092
Technique (A New), for the Production of Synthetic Corundum (E. A. D. White), 901
Technique (A New Photometric), using a Variable Shutter Device (Dr. O. C. Jones and Dr. F. J. J. Clarke), 1290
Technique (Peak-Shift), in Gas–Liquid Chromatography—Trimethylsilyl Ether Derivatives of Alcohols (Stanley H. Langer and Peter Pantages), 141
Technique (Sublimation) : Adducts of Urea and Thiourea obtained by means of a (B. Casu), 802
Techniques : Management Sciences, Models and—Proceedings of the Sixth International Meeting of the Institute of Management Sciences, Paris 1959 (edited by Prof. C. West and Prof. Michel Verhulst), *review* by T. H. Hawkins, 209
    Rheological (British Society of Rheology and the Non-Destructive Testing Group of the Institute of Physics and the Physical Society Joint Conference on), 24
Techniques in Tropical Pathology (Prof. B. G. Maegraith, Prof. W. E. Kershaw and D. Dagnall), *review* by Prof. P. C. C. Garnham, 1236
Techniques (Redundancy), for Computing Systems (Information Systems Branch of the United States Office of Naval Research Symposium on), 1349
Technological Awards, National Council for : Report for 1960-61, 754
Technological Education, Regional Advisory Council for, London and Home Counties : Regional Development Plan for Courses for the Diploma in Technology, 1044
Technologists : Science for Scientists and, 311
Technology : Explosives, *review* by Dr. W. B. Littler, 3
    Regional Development Plan for Courses for the Diploma in (Regional Advisory Council for Technological Education, London and Home Counties), 1044
    Solar Energy, 1954-1959 (T. Brimelow), 228
Technology, Battersea College of : Summer School on Corrosion (Corrosion Problems in the Electrical Power Industry), 651
Technology, Bradford Institute of : Course on Recent Developments in the Chemistry and Technology of Polymers, 1349
Technology, Illinois Institute of (Chicago) : International Symposium on Photoelasticity, 755
Technology, Liverpool College of : Postgraduate Courses in Nuclear Studies, 338
Technology of Chemical Processing, *review* by R. H. Villet, 1131
Technology of Polymers : Recent Developments in the Chemistry and (Bradford Institute of Technology Course on), 1349
Technology (Advanced), in Britain : Control of Colleges of, 20
Technology (Advanced), Birmingham College of : Course on Statistical Quality Control and Acceptance Sampling, 337
Technology (Advanced), Welsh College of (Dr. A. Harvey), 127
Technology (Chemical) : Encyclopedia of (edited by Raymond E. Kirk and Donald F. Othmer), second Supplement Volume edited by Anthony Standen, *review* by R. H. Villet, 1131
Technology (*Coal Tar*), *Review of* (Coal Tar Research Association), Vol. 12, Part 1, January–June 1960, 22
Technology (Food) : European Symposium on, 959
Technology (Nuclear Reactor) : Analytical Chemistry in (Oak Ridge National Laboratory Fifth Conference on), 651
Technology (Science and), Manchester College of : Appointment of Ronald Beresford Dew as visiting professor of industrial administration, 651
Technology (Science and), National Lending Library for : *N.L.L. News*, No. 1, 1347
Technology (Science and), Royal College of (Glasgow) : Appointment of Dr. David W. A. Sharp as senior lecturer in the Department of Chemistry, 443
    Appointment of Dr. Graham R. Knox as lecturer in the Department of Chemistry, 443
    Endowment of £800 made by Mrs. Hilda M. Beilby, to be known as the Kelvin Prizes, 1349
Technology (Space) : Ballistic Missile and—Proceedings of the Fifth Symposium held at Los Angeles, 1960 (edited by Donald P. LeGalley), Vol. 1, Bioastronautics and Electronics, with Invited Addresses ; Vol. 2, Propulsion and Auxiliary Power Systems ; Vol. 3, Guidance, Navigation, Tracking and Space Physics ; Vol. 4, Re-entry and Vehicle Design, *review* by W. H. Stephens, 1131
Technology and Geography (Prof. S. H. Beaver), 986
Tegge, G., and Kempf, W. : At the International Starch Conference (Effect of certain Cations on Starch), 237
Teichoic Acids and the Structure of Bacterial Walls (Dr. A. R. Archibald, J. J. Armstrong, Prof. J. Baddiley and J. B. Hay), 570
Telecommunication Union, International : European Conference on Broadcasting, 449
Teleost Fish (Marine), *Pollachius virens* : Pharmacological Characterization of the Oxytocic Peptides in the Pituitary of a (Prof. H. Heller, B. T. Pickering, J. Maetz and F. Morel), 670
Teleosts : Pigment Bodies of the Spinal Neurones of some (Prof. A. Stolk), 924
Telescope (Benelux Radio) : Cross-Antenna of the Proposed (Prof. W. N. Christiansen and Dr. J. A. Högbom), 215
Television : Educational—a Survey and a Plan (John Wellens), 226
    Science and, 20
Television Signal-to-Noise Ratio : An Instrument for measuring (S. M. Edwardson), 1355
Television Surveys (U.H.F. and V.H.F.) : A Mobile Laboratory for (E. W. Taylor and L. C. Munn), 1355
Television (British) : Isaac Shoenberg—Silver Jubilee of, 751
Temperature : Dependence on, of the Distribution of Cations in Oxide Spinels (Ranajit K. Datta and Prof. Rustum Roy), 169
Temperature (High) Compounds : Sintered (Powder Metallurgy Joint Group of the Iron and Steel Institute and the Institute of Metals Symposium on), 1250
Temperature (Low) : Inhibition by Potassium of the Mechanical Responses of Frog Muscles at (H. Lorković), 1011
    Recoil-Atom Reactions at (Slobodanka Veljković and Dr. Garman Harbottle), 1287
Temperature (Root), and Symbiotic Nitrogen Fixation (A. H. Gibson), 1080
Temperature (Viscosity–) Relationships for Dilute Solutions of High Polymers (Dr. W. R. Moore), 1292
Temperatures (Soil), in Iceland (Dr. Bjarni Helgason), 939
Temporal Pole Damage (Unilateral), in the 'Split-Brain' Monkey : Changes in Visual Gnostic Functions and Emotional Behaviour following (Dr. J. L. deC. Downer), 50
'Tempunit' Temperature Controller : Correct price of the (Techne (Cambridge), Ltd.), 856
Tercafs, R. R. : Swimming Ability of Non-aquatic Reptiles, 125
Terminals (Motor Nerve) : Stimulation of (Dr. J. I. Hubbard and Robert F. Schmidt), 1103
Terminology : Neutron (Dr. W. R. Harper), 60
Terms (Petroleum) : Glossary of (edited by George Sell), third edition (Institute of Petroleum), 22
Ternary Compound Formation in the System $CaO{-}Al_2O_3$—MgO (J. H. Welch), 559
Terpene Chemistry, *review* by Prof. B. C. L. Weedon, 1234
Terpenes : The Chemistry of the (Dr. A. R. Pinder), *review* by Prof. B. C. L. Weedon, 1234
Terrestrial Accretion from the Solar Wind (Dr. Ronald Frith), 1182 ; (Dr. E. R. Harrison), 1182 ; (C. M. de Turville), 1183

Terrestrial Exosphere at Heights of 1,000-1,700 km. (Max Römer), 238
Tertiary in Southern England : Tropical Floras in the, *review* by Prof. John Walton, 209
Tertiary Floras (Lower), of Southern England (Marjorie Elizabeth Jane Chandler), I, Palaeocene Floras, London Clay Flora (Supplement), *review* by Prof. John Walton, 209
Terzaghi, K., Founder of the Science of Soil Mechanics, *review* by Kevin Nash, 210
Terzaghi, Karl (selections from the Writings of) : From Theory to Practice in Soil Mechanics, *review* by Kevin Nash, 210
Terzi, Dr. M. : Comparative Analysis of Inactivating Efficiency of Radiation on Different Organisms, 461
Test (A New), for Detecting Anaphylactic Sensitivity—the Basophil Reaction (Prof. Walter B. Shelley and Lennart Juhlin), 1056
Test (Phenylalanine), on Cultures from Multi-carbohydrate Media : A Micro-method for Performing the (D. J. Stewart), 521
Test (Positive Antiglobulin Consumption) : Nature of the Coating Globulin causing a (D. Nelken), 1110
Testing Materials, American Society for (Committee E-14), (Mass Spectrometry Group of the Institute of Petroleum and the) : Conference on Mass Spectrometry, 24
Testing Textiles, *review* by W. J. Onions, 106
Testing (Textile), and Quality Control : Handbook of (Prof. Elliot B. Grover and Prof. D. S. Hamby), *review* by W. J. Onions, 106
Testis Follicles in Miridae : The Number of (Dennis Leston), 93
Tests (Antiglobulin) : A Relation between the Reactivity of Human Red Cells to, and their Surface Structure (Judith E. Davis, Prof. H. N. Green and Pamela W. Tymms), 923
Tests (Quantal Neutralization) : Evaluation of (Prof. S. Fazekas de St. Groth), 891
Testut, R. J. : Appointed president of the sixth International Mineral Processing Congress, 545
^{14}C-Tetrachloroethylene in Mice : Urinary Metabolites of (Dr. Sven Yllner), 820
Tetracycline : Action of, on the Level of Properdin (Vl. Kubelka and M. Rybák), 820
  Mediation of Divalent Metal Ions in the Binding of, to Macromolecules (Dr. Kurt W. Kohn), 1156
Tetragonal Mullite-like Phase from Co-precipitated Gels (J. Ossaka), 1000
Tetrahydrofolic Acid to Folinic Acid : Enzymic Conversion of, by Plant Protein (E. H. Byers, J. Stewart and T. J. Bond), 179
1,3,7,9-Tetramethyluric Acid and Pyrene : Molecular Geometry of a 1:1 Crystalline Complex between (F. De Santis, E. Giglio, Dr. A. M. Liquori and A. Ripamonti), 900
Tetramethylthiuram Disulphide and Sodium Dimethyldithiocarbamate : Inhibition of Growth and Photosynthesis in Submerged Plants with, and Reversal of this Inhibition of Photosynthesis (P. E. Björn Lindahl), 51
Textile Engineering at Leeds, 1346
Textile Research : Polish, 1045
Textile Testing and Quality Control : Handbook of (Prof. Elliot B. Grover and Prof. D. S. Hamby), *review* by W. J. Onions, 106
Textiles : Testing, *review* by W. J. Onions, 106
Thailand, Government of, and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
Thain, Dr. E. M., and others : Biosynthesis of the Pyrethrins, 281
Thalassaemia in an English and in a German Family (Dr. F. Vella and S. A. Ibrahim), 822
Thalassaemia and the Abnormal Human Haemoglobins (Dr. Harvey A. Itano and Prof. Linus Pauling), 398
Thames River (Conn.) : Gross β-Activity in the (D. M. Skauen, T. Hatfield, D. Hanlon and J. S. Rankin, jun.), 1017
Tharp, Marie, and others : The Floors of the Oceans, I, The North Atlantic—Text to accompany the Physiographic Diagram of the North Atlantic (Geological Society of America, Special Paper 65), *review* by Dr. G. E. R. Deacon, 531
Thaung, Dr. Maung Mya : Use of Radio-isotopes in Biological Work in Burma, 875
Theorem (Minimum Energy), for Flow of Dry Granules through Apertures (R. L. Brown), 458
Theoretical Expression for Solubility Product (Prof. B. N. Bhar), 1004 ; (Prof. K. Krishnamurti), 1004
Theoretical Meteorology, *review* by Dr. Robert P. Pearce, 314
  Introduction to (Prof. Seymour L. Hess), *review* by Dr. Robert P. Pearce, 314
Theoretical and Applied Mechanics : Proceedings of the Fifth Congress on ; and the Symposium on Non-Linear Physical Problems (Indian Society of Theoretical and Applied Mechanics), 855
Theoretical and Applied Mechanics (Indian Society of), and Unesco : Symposium on Non-Linear Physical Problems, 855
Théories de l'Évolution des Vertébrés (Erik Jarvik), traduction du Prof. J. P. Lehman, *review* by Dr. E. Trewavas, 945
Theories (Facts and), of Shape Discrimination (Dr. P. C. Dodwell), 578 ; (Dr. N. S. Sutherland), 581
Theory : Abstract Set (Prof. Abraham Fraenkel), second edition, *review* by Dr. R. G. Cooke (June 17, 1047), *erratum*, 126
Theory of Detonation (Ia. B. Zeldovich and A. S. Kompaneets), *review* by Dr. W. L. Murray, 1236
Theory of Markov Processes (E. B. Dynkin), translated from the Russian by D. E. Brown ; edited by T. Kövåry, *review* by D. G. Kendall, 321
Theory to Practice : Fraom, in Soil Mechanics—Selections from the Writings of Karl Terzaghi, *review* by Kevin Nash, 210
Theory of Queueing : Mathematical Methods in the (A. Y. Khintchine), translated by D. M. Andrews and M. H. Quenouille, *review* by Prof. L. S. Goddard, 211
Theory of the Red Shift and the Nature of Planck's Constant (L. Infeld), 1184
Theory of Transition-Metal Ions (Prof. J. S. Griffith), *review* by Prof. C. A. Coulson, 1233
Theory (Filter) : Perceptual Defence and (Neville Moray), 940
Theory (Stability), of Colloids : Discreteness-of-Charge Effect and the (Dr. S. Levine, D. Calvert and G. M. Bell), 699
Theory (Target) : New Considerations on Survival Curves and (Dr. E. L. Powers), 1045
Therapy : Neutron Capture, 1258
Thermal Isomerization of Alpha-Keto-Acid Hydrazones : Application of the Nickel Reaction and, for their Chromatographic Analysis (A. M. Tokushige and Dean E. S. Cook), 797
Thermochemistry and Reactivity of related Free Radicals : Isoelectronic Principle, (Dr. Peter Gray and J. C. J. Thynne), 1357
Thermodynamics and Osmoregulation (Prof. Leonard B. Kirschner), 815
Thermodynamics with Quantum Statistical Illustrations (Prof. P. T. Landsberg), *review* by Dr. W. E. Parry, 1236
Thermoelastic Relaxation induced by Ultrasonics : Crystallization Kinetics on Polyvinylchloride and (Dr. V. Nardi), 563
Thermo-electric Phenomena in Electrodialysis Systems (Dr. Lloyd H. Shaffer), 591
Thermoelectric Power of Single Crystals of Gallium (P. Horner), 58
Thermogravimetry (Differential), versus Differential Thermometry in Studying the Pyrolysis of Polymers (Hugh C. Anderson), 1088
Thermometry (Differential) : Differential Thermogravimetry versus, in Studying the Pyrolysis of Polymers (Hugh C. Anderson), 1088
Thermophysical Properties Research Literature : Retrieval Guide to, Vol. I (edited by Y. S. Touloukian), Book 1, Part A, Guide to Substance Classification and Numerical Codes ; Book I, Part B, Dictionary of Synonyms and Trade Names ; Book I, Part C, Dictionary of Substances ; Book 2, Classified Search Index ; Book 3, Master Bibliography, Author Index, *review* by Prof. A. R. Ubbelohde, 109
Thermoreceptors : The Electrophysiology of (Prof. Herbert Hensel), 1143
Thermoremanent Magnetization : Stress Effects on (Dr. P. M. Stott and Dr. F. D. Stacey), 585 ; (J. M. Hall), 586
'Theta' Pinch : A New 'Wedge' Type Instability observed in a (J. K. Wright, R. D. Medford, J. D. Herbert and R. C. Pottinger), 1054
Thiabendazole, a Highly Effective Anthelmintic for Sheep (Hugh McL. Gordon), 1409
Thiazine Leucobases : Photo-Sensitivity of (D. W. Menzies), 505
Thickness of Nickel-Iron Films : Variation of Anisotropy Axis Dispersion with (H. Clow), 996
Thilo, Prof. E. : Inorganic Polymers, 1046
Thin Layer of Starch-Gel : Electrophoresis in a, followed by a Plastifying Treatment (J. Groulade, Dr. J. M. Fine and C. Ollivier), 72
Thinking (New), in School Mathematics, 335
Thinners (Drilling Fluid) : Alberta Sub-bituminous Coals as (E. J. Jensen), 1144
Thiocyanate Group in Inorganic Compounds : Co-ordination of the (A. Turco and C. Pecile), 66
Thio-diglycollic Acid : Anticancer Properties of (M. B. Sahasrabudhe, M. V. Narurkar, L. B. Kotnis, B. D. Tilak, L. C. Shah and V. N. Gogte), 388
Thioglycolic Acid : Chromium, Uranium, Tungsten and Nickel Complexes of (V. M. Bhuchar), 489
2-Thiouracil : Stimulation of Turnip Yellow Mosaic Virus Protein Production by (Dr. R. I. B. Francki and Dr. R. E. F. Matthews), 1078
Thiourea : Effect of Thyroxine plus, on the Early Development of the Chum Salmon (*Oncorhynchus keta*), (Prof. M. A. Ali), 1214
Thiourea (Urea and) : Adducts of, obtained by means of a Sublimation Technique (B. Casu), 802
Thistlethwaite, F. : Appointed first vice-chancellor of the University of East Anglia, Norwich, 959
Thoday, Prof. J. M. : Location of Polygenes, 368
Thomas, J. A. : Trans-Equatorial Backscatter Observations of Magnetically Controlled Ionization, 792
Thomas, Dr. J. H., and Whittle, Dr. E. : Gas-Phase Reactions of the Halogens and their Compounds, 129
Thomas, Robert : Colorimetric Detection of Penicillins and Cephalosporins on Paper, 1161
Thompson, Ltd., J. Langham : Industrial Research Fellowships, 545
Thompson, Dr. J. W. (Gardiner, Dr. J. E., and) : Lack of Evidence for a Cholinergic Mechanism in Sympathetic Transmission, 86
Thompson, R. H. (Todd, J. R., and) : Methaemoglobin in Chronic Copper Poisoning of Sheep, 89
Thomson, Arthur : Effect of Attention in Peripheral Vision, 732
Thomson, Sir Landsborough : Birds of Eastern and North-Eastern Africa, *review*, 9
Thomson, Dr. S. J. : Radiation Chemistry of Organic Compounds, *review*, 317
Thorium Content of Natural Materials : Measurement of the, by a γ-Ray Counting Method (Prof. J. H. J. Poole and F. N. Byrne), 62
Thorpe, Dr. W. H. : Sounds used by Animals, *review*, 741
Thow, R. F. : Appointed to a lectureship in agriculture at the University of Edinburgh, 545
Three Ectoparasitic Species : Simultaneous Eradication of, from a Colony of Laboratory Mice (Dr. Nigel Bateman), 721
Thresholds (Taste), and Food Dislikes (Dr. R. Fischer, F. Griffin, S. England and S. M. Garn), 1328
Thrombocytopaenic Haemorrhage : Treatment of, with Œstriol Succinate (Dr. Hubert Poliwoda), 400
Thromboplastic Activity of Red Cells (Dr. James A. Inglis and Dr. June W. Halliday), 821
Thromboplastin (Tissue) : Influence of Serum Factors on the Species-specificity of (Christine Hawkey and J. L. Stafford), 920
Thulium Oxide : Rapid Determination of Ytterbium in Aqueous Solutions and in, by Neutron Activation (Minoru Okada), 1090
Thwaites, Bryan (edited by) : Incompressible Aerodynamics, *review* by Prof. Leon Trilling, 315
Thymus Cortex (Mouse) : Periodic Acid–Schiff Positive Giant Cells in the (D. Metcalf and M. Ishidate), 305
Thymus Histone (Calf) : Effect of, on Rats bearing Transplantable Acute Myeloid Leukaemia (Dr. Lubomir Hnilica and Dr. Viktor Holoubek), 922
Thymus Influence in Leukaemogenesis : Analysis of the (Dr. J. F. A. P. Miller), 248
Thynne, J. C. J. (Gray, Dr. Peter, and) : Isoelectronic Principle, Thermochemistry and Reactivity of related Free Radicals, 1357
Thyroglobulin (Dr. A. D. Litonjua)—Effect of Acid, 356 ; Evidence of Thyroid Protease Action, 357
Thyroglobulin (Hog) : Chromatographic Fractionation of (Prof. Nobuo Ui, Osamu Tarutani, Yoichi Kondo and Hiroko Tamura), 1199
Thyroid Feeding : Augmentation of Toxicity of Monoamine Oxidase Inhibitor by (Richard N. Carrier and Dr. Paul V. Buday), 1107
Thyroid Function in Active, Sleeping and Torpid Hummingbirds (Prof. C. J. Shellabarger, R. C. Lasiewski and G. E. Hyncik), 1318

Thyroid Protease Action : Thyroglobulin—Evidence of (Dr. A. D. Litonjua), 357
Thyroid Tissue *in vitro* : Stimulation of Lipogenesis in, by Free Fatty Acids (Prof. Norbert Freinkel, Dr. Augusto D. Litonjua and Edward C. Saef), 804
Thyroidal Iodine-131 : Increase of the Rate of Release of, and of Circulating Thyrotrophic Activity at Early Stages of Propylthiouracil Treatment in the Rat (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Thyrotrophic Activity (Circulating) : Increase of the Rate of Release of Thyroidal Iodine-131 and of, at Early Stages of Propylthiouracil Treatment in the Rat (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Thyroxine and 2,4-Dinitrophenol : Effect of, on the Rate of Utilization of Glucose (Dr. L. Macho), 604
Thyroxine plus Thiourea : Effect of, on the Early Development of the Chum Salmon (*Oncorhynchus keta*), (Prof. M. A. Ali), 1214
Tice, Linwood F., and others (edited by) : Remington's Practice of Pharmacy, twelfth edition, *review* by Dr. J. H. Gaddum, 8
Tierra en Nicaragua : Estudios Ecologicos para el Aprovechamiento de la (Dr. B. W. Taylor), 1259
Tilak, B. D., and others : Anticancer Properties of Thio-diglycollic Acid, 388
Tilapia nigra and *Tilapia leucosticta* : A Natural Hybrid of, from Lake Naivasha, Kenya Colony (H. Y. Elder and D. J. Garrod), 722
Till, J. E. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Generalized Dose-dependent Prolongation of all three stages of the first Synthetic Cycle following Exposure), 341
Timber Engineering (University of Southampton first International Conference on), 338
Time of Antonio Vallisneri : Experimental Method in Biology from the, to the Present (University of Padua Symposium on), 546
Time of Generation of Living Cells : Estimation of (R. J. M. Fry, S. Lesher and H. I. Kohn), 290
Time (Heading), in a Bulk-Hybrid Population of Barley : Stabilizing Selection for (Dr. S. K. Jain), 1123
Time (Minimum), in Gas Chromatography : Role of Pressure Gradients in obtaining (Prof. J. Calvin Giddings), 1291
Time (Reaction), and Age ('Alpha' Rhythm) : Frequency of the (Dr. Walter W. Surwillo), 823
Time-integrated Measurements of Submarine Irradiance (Ronald Currie and Laurence Draper), 661
Times (Recovery) : A Method of Estimating Ionospheric Absorption Heights from (Syed Ziauddin), 1084
S.48 Timothy (*Phleum pratense* L.) : Effects of Light Intensity on Reproduction in (Dr. G. J. A. Ryle), 196
Tinley, G. H. : Effect of Ferric Dimethyldithiocarbamate on the Rooting of Cuttings of *Hevea brasiliensis*, 1217
Tipped Refuse : Pollution of Water by—Report of the Technical Committee on the Experimental Disposal of House Refuse in Wet and Dry Pits (Ministry of Housing and Local Government), 864
Tips (Refuse) : Pollution from (Nora H. Johnson), 864
Tissue (Human Aortic) : Degree of Polymerization of Hyaluronic Acid isolated from (Dr. Sv. Bertelsen and K. Marcker), 386
Tissue (Human Bone) : Blood-Typing Compact (H. E. Ezra-Cohn and Prof. S. F. Cook), 1267
Tissue (Insect Nerve) : Activity of Glutamic Acid Decarboxylase in (Dr. N. Frontali), 178
Tissue (Liver) : Separation and *in vitro* Culture of Cells from (Dr. Justine S. Garvey), 972
Tissue (Non-Photosynthetic Plant) : Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate Dehydrogenase in a (C. R. Benedict and Dr. H. Beevers), 71
Tissue (Thyroid), *in vitro* : Stimulation of Lipogenesis in, by Free Fatty Acids (Prof. Norbert Freinkel, Dr. Augusto D. Litonjua and Edward C. Saef), 804
Tissue Cell Cultures : Immunofluorescence of Pleuropneumonia-like Organisms isolated from (Major W. F. Malizia, M. F. Barile and D. B. Riggs), 190
Tissue Cell Surfaces (Mammalian) : Sialic Acid as a Structural Component of some (Dr. Leonard Weiss), 1108
Tissue Dilution Artefact—a Re-interpretation of Variations in Levels of Succinic Dehydrogenase in Chemical Carcinogenesis (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Tissue Slice Respiration : Oxygen Electrode for Measurement of (E. H. Strickland, F. D. Ziegler and Prof. A. Anthony), 969
Tissue Thromboplastin : Influence of Serum Factors on the Species-specificity of (Christine Hawkey and J. L. Stafford), 920
Tissue Transplantation (University of Chile, and Societies of Santiago and Valparaiso, International Symposium on), 24
Tissue and Organ Cultures (Animal Cell,), in Radiobiology : Use of (New York Academy of Sciences Symposium on), 340
Tissues : Distribution of Sodium and Potassium in certain Cells and (Dr. Norman R. Joseph, Dr. Milton B. Engel and Dr. Hubert R. Catchpole), 1175
  Paper Electrophoresis of Proteins while Preserving the Pattern of their Localization in (Dr. Zh. A. Medvedev), 1021
Tissues of Early Embryos : Amino-Acid Activation in (Dr. Elizabeth M. Deuchar), 1006
Tissues (Cat) : Effects of Drugs on Uptake of Isotopic Norepinephrine by (Hans J. Dengler, Herbert E. Spiegel and Elwood O. Titus), 816
Tissues (Different) : Influence of Polyvalent Ions on Histones isolated from (I. P. S. Agrell and E. G. Christensson), 284
Tissues (Excitable) : Outflux of Inorganic and Organic Phosphate during Membrane Depolarization of (Dr. L. G. Abood, Prof. K. Koketsu and I. Koyama), 395
Tissues (Irradiated Normal) : Effect of, on the Growth of Mouse Carcinoma (Dr. Arthur Compton and Prof. Charles A. Pannett), 1101
Titanium : Infra-Red Spectroscopic Evidence of Four-fold Co-ordination of, in Barium Orthotitanate (P. Tarte), 1002
Titanium Ethoxide (Polymeric), and Titanium Oxide Ethoxides : Structures of (Prof. D. C. Bradley and A. H. Westlake), 273 ; (R. L. Martin and G. Winter), 274
Titanium Oxide Ethoxides : Structures of Polymeric Titanium Ethoxide and (Prof. D. C. Bradley and A. H. Westlake), 273 ; (R. L. Martin and G. Winter), 274
Titre (Antibody) : Rise of, in Cell-free Spleen Preparations Incubated *in vitro* (Dr. Dieter H. Sussdorf), 770
Titterton, Prof. E. W. : Future of Nuclear Physics in Australia, 639
Titus, Elwood O., and others : Effect of Drugs on Uptake of Isotopic Norepinephrine by Cat Tissues, 816
Tobacco Manufacturers' Standing Committee : Research Paper No. 4, Cigarette Smoke Condensate—Preparation and Routine Laboratory Estimation (H. R. Bentley and J. G. Burgan), second edition, 336
Tobacco Mosaic Virus (TMV) : Chromatography of, on Chitin Columns (P. M. Townsley), 626
Tobacco Mosaic Virus (TMV) Lesion Number and Concentration : Relationship of, to the Rate of Lesion Production on Pinto Bean (John Piacitelli and Prof. Vincent Santilli), 624
Tobacco Smoke : Natural Radioactivity in Tobacco and (Dr. V. C. Runeckles), 322
Tobacco and Tobacco Smoke : Natural Radioactivity in (Dr. V. C. Runeckles), 322
α-Tocopherol : Myopathy affecting the Rottnest Quokka (*Setonix brachyurus*) reversed by (B. A. Kakulas), 402
Todd, Sir Alexander : Inorganic Polymers, 1046
Todd, Dr. Audrey : Rigidity Factor of Gelatin Gels, 567
Todd, J. R., and Thompson, R. H. : Methaemoglobin in Chronic Copper Poisoning of Sheep, 89
Token (Type-) Mathematics, a Textbook of Mathematical Linguistics (Dr. Gustav Herdan), *review* by Dr. G. H. Toulmin, 211
Tokushige, A. M., and Cook, Dean E. S. : Application of the Nickel Reaction and Thermal Isomerization of Alpha-Keto-Acid Hydrazones for their Chromatographic Analysis, 797
Tolmach, L. J. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Radiation affects Cell Division much more than Cell Growth), 340
Tomasek, Dr. V., and others : Paper Chromatography (Film showing the Technique of Paper Chromatography of Amino-Acids), 759
Tombs (Megalithic), of France, *review* by Prof. C. F. C. Hawkes, 637
Tombs (Prehistoric Chamber), of France (Dr. Glyn Daniel), *review* by Prof. C. F. C. Hawkes, 637
Tomcsik, Prof. Josef : Elected a Member of the Hygiene Section of the Leopoldina German Academy of Sciences, 122
Tomcufcik, A. S., and others : N,N'-Alkylene-*bis*(Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a New Series of Anti-tumour Agents, 611
Tomkeieff, Dr. S. I. : English–Russian Geological Dictionary, *review*, 9
  Russian–English Geological Dictionary, *review*, 9
  Obituary of Dr. N. S. Shatsky, 542
  Obituary of Prof. A. F. Kapustinsky, 647
Tomlinson, Dr. Muriel L. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 126
To-morrow : Hopes of, 1030
Toole, S., and others : Dependence on Substrate of the Electrical Potential across the Isolated Gut, 501
Tools (Prehistorical) : Eoliths and, 23
Toothcarp (Viviparous) : Pathological Parthenogenesis in a (Prof. A. Stolk), 507
Topology of Linear Neutron Kinetics (L. G. Kemeny), 263
Torpid Hummingbirds (Active, Sleeping and) : Thyroid Function in (Prof. C. J. Shellabarger, R. C. Lasiewski and G. E. Hyncik), 1318
Total Calories from Protein in the Milk : Correlation between Growth-Rate of the Suckling of various Species and the Percentage of (Dr. F. W. Bernhart), 358
Tóth, J., and others : Amino-derivatives of 11β, 17α, 21-Trihydroxy-3,20-Dioxo-1,4-Pregnadiene, 607
Toulmin, Dr. G. H. : Mathematics and Language, *review*, 211
Toulmin, Dr. Stephen, and Goodfield, June : The Fabric of the Heavens, *review* by Dr. M. A. Hoskin, 840
Touloukian, Y. S. (edited by) : Retrieval Guide to Thermophysical Properties Research Literature, Vol. 1 ; Book 1, Part A, Guide to Substance Classification and Numerical Codes ; Book 1, Part B, Dictionary of Synonyms and Trade Names ; Book 1, Part C, Directory of Substances ; Book 2, Classified Search Index ; Book 3, Master Bibliography, Author Index, review by Prof. A. R. Ubbelohde, 109
Tower, Donald B. (edited by Roscoe O. Brady and) : The Neurochemistry of Nucleotides and Amino-Acids—a Symposium of the Section on Neurochemistry, American Academy of Neurology, *review* by Dr. R. V. Coxon, 318
Townsend, Harry : Appointed to the University of London readership in economics at the London School of Economics and Political Science, 651
Townsley, P. M. : Chromatography of Tobacco Mosaic Virus (TMV) on Chitin Columns, 626
Toxicity of Monoamine Oxidase Inhibitor : Augmentation of, by Thyroid Feeding (Richard N. Carrier and Dr. Paul V. Buday), 1107
Toxicity (Ammonia) : Prevention of, by Amino-acids concerned in the Biosynthesis of Urea (Dr. Francesco Salvatore and Dr. Vincenzo Bocchini), 705
Toxicology of *Penicillium islandicum* (K. Uraguchi, T. Tatsuno, M. Tsukioka, Y. Sakai, F. Sakai, Y. Kobayahi, M. Saito, M. Enomoto and M. Miyake), 864
Toxin (A Selective), produced by *Periconia circinata* (R. P. Scheffer and R. B. Pringle), 912
Toyoura, Etsuko, and others : A Method for Isolating Bacteria capable of Producing 6-Aminopenicillanic Acid from Benzylpenicillin, 1122
Trabold, Dr. N. : Blood Groups in Infra-human Species (Blood Group Systems in the Dog), 653
Trace Analysis with a Rotating Hanging Mercury Drop (Use of the Rotating Hanging Mercury Drop in Analysis), (Dr. M. Van Swaay and R. S. Deelder), 241
Tracers (Radioactive), in Chemistry and Industry (Pascaline Daudel), translated by Dr. Ulli Eisner, *review* by Prof. J. R. Partington, 637
Trade in European Birds for Caging, 124
Trade Unions : The State and the (D. F. Macdonald), 1129
Tradition, Science and Practice in Dietetics (D. F. Hollingsworth), 1343
Traffic Control : Modern Methods of (Exhibition at the Science Museum, London, by the Westinghouse Brake and Signal Co., Ltd.), 1044
Training : Apprenticeship and (House of Commons Debate on), 737
Training of Biochemists (Biochemical Society Colloquium on), 24, 955
Training for Management in Britain, 1331

Training (Acoustical) : A Take-Over Bid in (Prof. E. J. Richards), 748
Trait (Primary Polydipsic), of an Inbred Strain of Mice : Effect of Hybridization on the (Dr. Emanuel Silverstein), 523
Trajectories : Space—a Symposium sponsored by the American Astronautical Society, the Advanced Research Projects Agency and Radiation Incorporated (edited by the Technical Staff, Research Division, Radiation Incorporated), *review* by D. G. King-Hele, 1334
Trajectories (Re-entry) : Space-Flight and (International Academy of Astronautics Symposium on), 960
trans(*cis* and) Dichloro- and Dibromo-ethylenes : Ionization Potentials of (Dr. J. Momigny), 1089
Trans-Equatorial Backscatter Observations of Magnetically Controlled Ionization (J. A. Thomas), 792
Transaminase (Rat Liver Glutamic-Oxalacetic) : Intracellular Distribution Pattern of (Dr. Herbert J. Eichel and Josef Bukovsky), 243
Transaminase Activity in the Cactus Plant : Diurnal Variation in (S. K. Mukerji, G. G. Sanwal and Prof. P. S. Krishnan), 516
Transfer of Calcium and Strontium across Biological Membranes (United States Atomic Energy Commission, United States National Institutes of Health, United States National Science Foundation and the New York State Veterinary College Conference on), 1250
Transfer of Glycerol across the Erythrocyte Membrane : Dimer Formation and the (Dr. W. D. Stein), 352
Transfer of Virulence in *Rhizobium trifolii* (Dr. Hans Ljunggren), 623
Transfer (Cross-modal), in Man (M. Cole, S. L. Chorover and Dr. E. Ettlinger), 1225
Transfer (Electron and Hydrogen) : Coupling of Phosphorylation to, by a Chemi-Osmotic Type of Mechanism (Dr. Peter Mitchell), 144
Transfer (Glucose), across the Membrane of the Red Blood Cell : Dimer Formation and (Dr. W. D. Stein), 1277
Transfer (Inter-Molecular Energy), in Photo-sensitized Oxidation-Reduction : Paths of (N. Takeyama), 1359
Transfer (Passive), of Contact Sensitivity to Picryl Chloride in Guinea Pigs, with Subcellular Material (Dr. J. L. Turk), 915
Transfer Function of a Biological Photoreceptor (Dr. Lawrence Stark and Dr. Howard T. Hermann), 1173
Transferins (Serum), in the Genus *Macaca*—Species Distribution of Nineteen Phenotypes (Prof. Morris Goodman and Emily Poulik), 1407
Transform (Laplace) : Inversion of a, arising from a Problem in Applied Chemical Kinetics (T. Wood), 589
Transformation of Cathodically Impregnated and Cooled Austenite (E. G. Ramachandran and C. Dasarathy), 998
Transformation in Plants of Sodium Dimethyldithiocarbamate into other Fungitoxic Compounds (H. M. Dekhuijzen), 198
Transformation of Tryptophan to Nicotinic Acid : Blockage of, by Experimental Hepatitis in Mice (M. Piazza, F. Tancredi and Prof. E. Quagliariello), 601
Transition : Universities in (Prof. H. C. Dent), 1027
Transition-Metal Chemistry, *review* by Prof. C. A. Coulson, 1233
  An Introduction to—Ligand-Field Theory (Dr. Leslie E. Orgel), *review* by Prof. C. A. Coulson, 1233
Transition-Metal Ions : The Theory of (Prof. J. S. Griffiths), *review* by Prof. C. A. Coulson, 1233
Transmission (Arthropod), of Micro-organisms (Dr. John Macleod), 885
Transmission (Cholinergic), in Fish Muscle (K. Krnjević), 1403
Transmission (Experimental), of *Borrelia anserina* (Sakharoff 1891) by *Aedes aegypti* (J. A. Roberts), 1225
Transmission (Sympathetic) : Lack of Evidence for a Cholinergic Mechanism in (Dr. J. E. Gardiner and Dr. J. W. Thompson), 86
Transmission (Synaptic), in Neurosecretory Cells (Hiromichi Morita, Takaaki Ishibashi and Satoru Yamashita), 183
Transpeptidase (*γ*-Glutamyl) : Histochemical Demonstration of (Prof. Z. Albert, Dr. Marian Orlowski and Dr. A. Szewczuk), 767
Transplantable Acute Myeloid Leukaemia : Effect of Calf Thymus Histone on Rats bearing (Dr. Lubomir Hnilica and Dr. Viktor Holoubek), 922
Transplantation : Tissue (University of Chile, and Societies of Santiago and Valparaiso, International Symposium on), 24
Transplantation of Murine Leukaemia by Unconventional Routes (Dr. Harold B. Hewitt), 1213
Transplants (Cell), of Avian Lymphomatosis treated with Hydrogen Peroxide (Dr. V. L. Sanger), 1406
Transport (Active Cation), as a Pacemaker of Respiration (Dr. R. Whittam), 603
Transport (Electron) : Quinones in (Ciba Foundation Symposium on), (edited by G. E. W. Wolstenholme and Cecilia M. O'Connor), *review* by A. I. Scott, 321
Transport (London) : Retirement of A. T. Wilford as director of research, 751
  Appointment of H. E. Styles as director of research, 751
Transport (Mediated Sugar) : Persistence in Erythrocyte Ghosts of (Paul G. LeFevre), 970
Transport (Sodium), in the Loop of Henle : Stimulation by Aldosterone of (Dr. J. Crabbé), 817
Transport (Sugar), in Human Red Cells : Common Carrier System for (Dr. L. Lacko and Dr. M. Burger), 881
Transport System (Electron), and Phosphoproteins of Mitochondria (K. Ahmed, J. D. Judah and C. H. Gallagher), 1309
Trauner, Prof. Richard : Elected a Member of the Stomatology Section of the Leopoldina German Academy of Sciences, 122
Trautwein, Prof. K. (Urbaschek, B., and) : Occurrence of an *Rh*-like Antigen in Red Cells of the Sheep, 193
Travel Scholarship : Bowles Memorial (Royal Horticultural Society), 1349
Travelling Disturbance in the *F* Region of the Ionosphere : Group and Phase Velocities of a (Dr. L. H. Heisler and Dr. J. D. Whitehead), 157
Travelling Wave Tubes, their Characteristics and Operation (English Electric Valve Co., Ltd.), 1348
Travis, D. N., and others : Rotational Analysis of Absorption Bands of Lead Monoxide, 374
Treating Asbestos Filter Pads for Virus Filtration : A Method of (N. St. G. Hyslop), 305
Treatment of Hops (*Humulus lupulus* L.) with Gibberellic Acid—Effect of Spraying with Gibberellic Acid on Yield and Composition (R. Stevens, J. B. Roberts and I. H. Williams), 360 ; Effect on Growth and Development (I. H. Williams), 361
Treatment of Thrombocytopaenic Haemorrhage with Œstriol Succinate (Dr. Hubert Poliwoda), 400
Treatment of Varicose Veins (Yùtaka Kato and Robert A. Nabatoff), 335
Treatment (High-Pressure) : A New Phase formed by—Face-centred Cubic Molybdenum Monocarbide (E. V. Clougherty, K. H. Lothrod and J. A. Kafalas), 1194
Treatment (Plastifying) : Electrophoresis in a Thin Layer of Starch-Gel, followed by a (J. Groulade, Dr. J. M. Fine and C. Ollivier), 72
Treatment (Propylthiouracil), in the Rat : Increase of the Rate of Release of Thyroidal Iodine-131 and of Circulating Thyrotrophic Activity at Early Stages of (Dr. F. Escobar del Rey, G. Morreale de Escobar, M. D. García García and J. Mouriz García), 1171
Treatment and Examination (Water), Society for : Autumn Meeting, 856
Tree (Jamaican Shade), *Pithecolobium samath* Benth. : Pharmacology of the Alkaloidal Fraction from the Bark of the (B. E. Leonard and Dr. H. S. A. Sherratt), 287
Treherne, J. E. : Exchanges of Sodium Ions in the Central Nervous System of an Insect (*Periplaneta americana* L.), 1223
Treloar, Dr. L. R. G. : Awarded the Colwyn Medal of the Institution of the Rubber Industry, 755
Trémolières, Dr. J. : At the Third International Congress of Dietetics (Diet and Atherosclerosis), 1343
Trends (Limnological), in Lake Kariba (D. Harding), 119
Trends (New), in Atomic Research and their International Significance (Dr. L. Kowarski), 853
Trethowan, Prof. William Henry : Appointed to the chair of psychiatry in the University of Birmingham, 545
Trewavas, Dr. E. : Vertebrate Phylogeny, *review*, 945
Tri-*o*-Cresyl Phosphate Metabolite : Biological Activity of a (Prof. John E. Casida, Morifusa Eto and Ronald L. Baron), 1396
Triassic Sediment : Fossil Chlorins in a (Max Blumer and Gilbert Omenn), 161
Tribe (Chibcha Indian) : New *Rh* Phenotype, *Dcceieif*, found in a (Dr. Miguel Layrisse, Zulay Layrisse, Esperanza García, Dr. Johannes Wilbert and Joaquín Parra R.), 503
Tribolium confusum Duv. : Sterile Crosses between Mutations of (Prof. John Stanley), 934
Triethylenetetraamine-hexaacetic Acid: Removal of Internally Deposited Radionuclides by (Prof. A. Catsch and D. Schindewolf-Jordan), 715
Trifolium repens L. (Kent Wild White Clover) : Flower Initiation in, under Controlled Environmental Conditions (R. J. Haggar), 1120
11*β*, 17*α*, 21-Trihydroxy-3,20-Dioxo-1,4-Pregnadiene : Amino-derivatives of (J. Tóth, Z. Tuba and L. Szporny), 607
Trikojus, Prof. V. M. : Biochemistry at the University of Melbourne, 1238
Trilling, Prof. Leon : Incompressible Aerodynamics, *review*, 315
Trimethylsilyl Ether Derivatives of Alcohols : Peak-Shift Technique in Gas–Liquid Chromatography— (Stanley H. Langer and Peter Pantages), 141
Trinity College, Dublin : Appointment of Dr. D. C. Pepper to the newly established chair of physical chemistry, 333
Triphosphate (Adenosine) : Electron Spin Resonance of (D. B. Russell and S. J. Wyard), 65
Triphosphate (Adenosine) Synthesis in Erythrocytes : A Positive Feedback Mechanism of (Makoto Nakao, Takashi Motegi, Toshiko Nakao, Saburo Yamazoe and Haruhisa Yoshikawa), 283
Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate Dehydrogenase in a Non-Photosynthetic Plant Tissue (C. R. Benedict and Dr. H. Beevers), 71
Triplet→Singlet Emission Spectra : Polarization of (V. G. Krishna and Prof. Lionel Goodman), 800
Trisaccharides (Two Serologically Active), isolated from Human Blood-Group *A* Substance (I. A. F. Lister Cheese and Prof. W. T. J. Morgan), 149
Triterpenoid Sapogenin (A New), of Animal Origin (Sea Cucumber), (Takao Matsuno and Toshihiko Yamanouchi), 75
Tritiated Pyrimidine-Nucleosides : Effect of Ribonuclease and Deoxyribonuclease on Incorporation of, into Ribonucleic Acid and Deoxyribonucleic Acid in Human Cancer Cells (HeLa) in Culture (Dr. L. E. Feinendegen, V. P. Bond and R. M. Drew), 1398
Trollope, Dr. D. H. : Effective Contact Stresses and Friction, 376
Trophoblasts during the Post-Partum Period : Antibodies to (J. F. Hulka, K. C. Hsu and S. M. Beiser), 510
Tropical Animal Ecology, Nuffield Unit of : Appointment of Dr. R. M. Laws as senior investigator, 651
Tropical Ecology, International Society for : Proceedings of the Symposium on Forest Ecosystem (Montreal, 1959), 755
Tropical Floras in the Tertiary in Southern England, *review* by Prof. John Walton, 209
Tropical Pathology : Techniques in (Prof. B. G. Maegraith, Prof. W. E. Kershaw and D. Dagnall), *review* by Prof. P. C. C. Garnham, 1236
Tropical Seeds : Dispersal of, by Ocean Currents (R. Mason), 408
Tropical West African Estuary : Seasonal Fluctuations and Distribution of Nitrite in a (J. C. D. Watts), 929
Tropical and Subtropical Coasts (Eastern), of the Americas: Marine Algae of the (Prof. William Randolph Taylor), *review* by Prof. Lily Newton, 1234
Trotman, C. G. : Design and Use of Respirators (History of Respirators), 655
Trotter, Dr. F. M. (Welch, Dr. F. B. A., and) : Geology of the Country around Monmouth and Chepstow (Memoirs of the Geological Survey of Great Britain—England and Wales), 227
Trotter, Dr. F. M. (Stubblefield, Dr. C. J., and) : Coal in Oxfordshire, 953
Trowell, O. A. : Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (Influence of various Gas Mixtures on the Action of Radiation on Lymphocytes from Rat Mesenteric Lymph Nodes), 340
Trucco, Ernesto (edited by Nicolas Rashevsky and) : Arms and Security, a Mathematical Study of the Causes and Origins of War (Dr. Lewis F. Richardson), *review* by Sir Cyril Burt, 427
Truelsen, T. A. : Growth Stimulation by High Indole-3-Acetic Acid Concentrations, 1410
Trump, H. J. : Appointed director of adult education in the University of Southampton, 443
Trypan Blue (Commercial) : Chromatographic Separation of Biologically Active Components from (J. Dijkstra and J. Gillman), 803
Trypanosoma rhodesiense : Cyclical Infection of *Glossina mortisans* with Culture Forms of (the late Prof. R. M. Gordon and J. K. Miller), 1317
Trypondendron (Beetle) : Air-Swallowing, a Mechanism in Photic Reversal of the (Prof. Kenneth Graham), 519

Trypsin : Interaction of Lipids and, in Dimethyl Sulphoxide–Water Systems (Prof. A. Lukton, H. Donohue and Prof. F. A. Bettelheim), 565
Tryptamine Receptors in the Central Nervous System (Dr. J. R. Vane, Dr. H. O. J. Collier and Dr. S. J. Corne, and Dr. E. Marley and Dr. P. B. Bradley), 1068
Tryptophan to Nicotinic Acid : Blockage of Transformation of, by Experimental Hepatitis in Mice (M. Piazza, F. Tancredi and Prof. E. Quagliariello), 601
Tryptophan-Pyrrolase : Effect of 5-Fluorouracil on Hepatic Induced Increase of (Sancia Gaetani and M. Antonietta Spadoni), 1296
Tsukioka, M., and others : Toxicology of *Penicillium islandicum*, 864
Tuba, Z., and others : Amino-derivatives of 11β, 17α, 21-Trihydroxy-3,20-Dioxo-1,4-Pregnadiene, 607
Tube (Elastic) : Fatigue in a Fluid-filled Pulsating (Group-Capt. John Erskine Malcolm), 1012
Tuber Bulking in the Potato Crop (R. W. Radley, M. A. Taha and P. M. Bremner), 782
Tuberculous and Non-tuberculous Conditions : Mycobacteriophages isolated from Persons with (Dr. E. Mankiewicz), 1416
Tubes : Travelling Wave—their Characteristics and Operation (English Electric Valve Co., Ltd.), 1348
Tubules (Malpighian) : Excretion of Inulin by (Dr. J. A. Ramsay and Dr. J. A. Riegel), 1115
Tubules (Single Perfused Proximal), of Rat Kidneys : Comparison of Short-Circuit Current and Net Water Movement in (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Tudor Times : Doctors and Disease in (W. S. C. Copeman), *review* by Sir Russell Brock, 428
Tuft, Dr. Peter : A Morphogenetic Effect of Beta-Mercaptoethanol—Distribution of Water in the Embryo, 1072
Tuft, Dr. Peter (Jurand, A., and) : A Morphogenetic Effect of Beta-Mercaptoethanol—Distribution of Water in the Chick Blastoderm, 1073
Tumor Research (Experimental) : Progress in (edited by F. Homburger), Vol. I, *review* by Prof. F. Bergel, 1231
Tumour (Ehrlich Mouse Ascites) : Effect of Alpha-Amylase on the (Dr. F. Steckerl, A. Ofodile, R. R. Campbell and G. H. Friedell), 1113
Tumour Cells (Human and Mouse) : Selective Uptake of Specifically Bound Cobalt-58 Vitamin B_{12} by (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Tumour Metabolism, *review* by Prof. F. Dickens, 1335
Tumour Research : Progress Reports and, *review* by Prof. F. Bergel, 1231
Tumour (Anti-) Agents : N,N'-Alkylene-*bis*(Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a New Series of (A. S. Tomcufcik, S. D. Willson, A. W. Vogel and A. Sloboda), 611
Tumours : The Glycolysis and Respiration of (Dr. Alan C. Aisenberg), *review* by Prof. F. Dickens, 1335
    Induction of, by Polyoma Virus—Enhancement by Chemical Agents (K. E. K. Rowson, F. J. C. Roe, J. K. Ball and Dr. M. H. Salaman), 893
Tumours (Induced Pulmonary), in Mice : Inheritance of Susceptibility to (Dr. D. S. Falconer and Dr. Joyce L. Bloom), 1070
Tumours (Pulmonary), and Group VII in the House-Mouse (Dr. Joyce L. Bloom), 1124 ; (Dr. J. A. H. Tatchell), 1125
Tunable Source of Radiation for the Far Infra-Red using Beats between Optical Masers : A Proposal for a (Dr. D. C. Lainé), 795
Tungsten and Nickel Complexes (Chromium, Uranium,), of Thioglycolic Acid (V. M. Bhuchar), 489
Turcan, Dr. J. R. : Appointed Research Fellow in the Department of Engineering Production, University of Birmingham, 337
Turco, A., and Pecile, C. : Co-ordination of the Thiocyanate Group in Inorganic Compounds, 66
Turk, Dr. J. L. : Passive Transfer of Contact Sensitivity to Picryl Chloride in Guinea Pigs, with Subcellular Material, 915
Turnbull, Prof. H. W. : *Obituary* by Prof. A. C. Aitken, 223
Turner, B. M. : Grant of £2,284 from the Paul Instrument Fund, for the further development of micro-scale chromatography and electrophoresis techniques, 225
Turner, J. H. : Appointed lecturer in pathology at the University of Edinburgh, 337
Turner, J. R. G., and others : Genetics of a Difference in the Male Genitalia of East and West African Stocks of *Papilio dardanus* (Lep.), 935
Turnip Yellow Mosaic Virus Protein Production : Stimulation of, by 2-Thiouracil (Dr. R. I. B. Francki and Dr. R. E. F. Matthews), 1078
Turtle : Cytochrome c in the Heart of the (Prof. Gunnar Biörck and Dr. Sven Paléus), 712
Turumi, Dr. Koh-Iti, and others : Hexosamine and Sialic Acid Contents in Cells, 596
Tutin, Prof. T. G. : Flora Europaea, 447
Twins (Monozygotic) : The Diego Factor in a Puerto Rican Family—a Case of Anti-Diego in (Dr. Hubert J. Van Peenen, Dr. John Scudder, James A. Jack and Erika Awer), 188
Two Hundred Precious Metal Years—a History of the Sheffield Smelting Company, Ltd., 1760-1960 (Ronald E. Wilson), *review* by Prof. R. W. K. Honeycombe, 108
Two Kinds of Arbor Virus Group *B* : Infectious Ribonucleic Acids derived from Mouse Brains infected with (Prof. Masahiro Nakamura), 624
Two Phycomycetes isolated from Subcutaneous Phycomycosis in Uganda (Dr. A. M. M. Wilson), 612
Two Sense-Modalities : Learning in (Dr. G. Ettlinger), 308
Two Serologically Active Trisaccharides isolated from Human Blood-Group *A* Substance (I. A. F. Lister Cheese and Prof. W. T. J. Morgan), 149
Two-Stage Method (A New), for Cross-linking Proteins (Dr. Felix Borek), 1293
Two Unexplored Records of Quaternary History (A. H. Stride and R. Bowers), 1000
Tymms, Pamela W., and others : A Relation between the Reactivity of Human Red Cells to Antiglobulin Tests and their Surface Structure, 923
Type (Different), of Fluorescent Material as an Optical Maser : Use of a (Jordan J. Markham and Dickron Mergerian), 586
Type-Token Mathematics, a Textbook of Mathematical Linguistics (Dr. Gustav Herdan), *review* by Dr. G. H. Toulmin, 211
Types of Bacteria (Numbers and), from the Rhizosphere of Pasture Plants—Possible Occurrence of *L*-Forms (G. Jagnow), 1220
Typing (Blood-) Compact Human Bone Tissue (H. E. Ezra-Cohn and Prof. S. F. Cook), 1267
Tyrosinase Competence in *Streptomyces scabies* : Apparent Cytoplasmic Inheritance of (Prof. K. F. Gregory and Wei-jen Shyu), 465
Tyrosine Residue (An Unreactive), in Insulin and the Exclusive Iodination of the *A* Chain (Dr. P. H. Springell), 1372
Tyrosol (Phenethyl Alcohol and) : Formation of, during Fermentation of a Synthetic Medium lacking Amino-acids (R. Stevens), 913
Tyulina, N. I., and others : A Soviet View of British Libraries (translated by A. Thompson), (Library Association, Pamphlet No. 22), 752

UBBELOHDE, Prof. A. R. : Graphite, 27
    The Retrieval of Published Information, *review*, 109
Uchida, Kohki, and others : Controlling Mechanism of the Mechanical Activity of Muscle and that of Blood Coagulation, 80
Uemura, Teijiro (Hayashibe, Masaya, and) : Release from the Feedback Inhibition controlling the Biosynthesis of Isoleucine, 1417
Uganda : Education in (Dr. B. E. Lawrence), 990
    Two Phycomycetes isolated from Subcutaneous Phycomycosis in (Dr. A. M. M. Wilson), 612
Ui, Prof. Nobuo, and others : Chromatographic Fractionation of Hog Thyroglobulin, 1199
Úlehla, Jiří : Correlative Inhibition of Formation of Chlorophyll in the Leaves of Etiolated Pea Plants, 613
U.H.V. and V.H.F. Television Surveys : A Mobile Laboratory for (E. W. Taylor and L. C. Munn), 1355
Ultrabasic Liquids (R. H. Clark and Prof. W. S. Fyfe), 158
Ultracentrifugal Differences in Soybean Protein Composition (W. J. Wolf, G. E. Babcock and A. K. Smith), 1395
Ultrasonic Absorption of Polymer Solutions (Dr. G. Gooberman), 693
Ultrasonic Decolorization of Rhodamine *B* : Inhibition of, in Presence of Organic Substances (Prof. Satya Prakash and Sheo Prakash), 1292
Ultrasonic Velocity in Aqueous Silver Nitrate Solution (D. S. Allam and W. H. Lee), 1388
Ultrasonic Velocity in Aqueous Solutions of some Electrolytes (M. G. Seshagiri Rao and Prof. R. Ramachandra Rao), 164
Ultrasonic Waves : Aniline Oxidation initiated by (Dr. Wiktor Wawrzyczek), 701
Ultrasonics : Crystallization Kinetics in Polyvinylchloride and Thermoelastic Relaxation induced by (Dr. V. Nardi), 563
Ultra-Thin Sections of Vitrinite in Coal : Electron Microscopic Observations of Structure in (J. T. McCartney, Sabri Ergun and R. E. Walline), 1361
Ultra-Violet : A Catalogue of the, *review* by Dr. E. G. Kellett, 107
Ultra-Violet (Far) : Irradiated Lithium Fluoride as an Optical Filter in the (J. L. Weeks, S. Gordon and G. M. A. C. Meaburn), 1186
Ultra-Violet Absorption Spectra of 3,4-Benzopyrene : Effect of Ozone on the Fluorescence and (Z. Morlin and K. M. Sáringer), 907
Ultra-Violet Absorption Spectra of Proteins in Deuterium Oxide (Dr. G. H. Beaven and Elizabeth Bailey), 914
Ultra-Violet Irradiation : Effect of, on the Electrical Conductivity of Cathodes coated with Barium Oxide (Dr. C. H. B. Mee), 1383
Unconventional Routes : Transplantation of Murine Leukaemia by (Dr. Harold B. Hewitt), 1213
Undercurrent (Eastward Equatorial), in the Atlantic : Evidence of an, from Measurements of Current Shear (Arthur D. Voorhis), 157
Underground Waters (Surface and): Uranium in British (J. D. Peacock), 1189
Underwater Acoustics : Advanced Study Institute on (Imperial College of Science and Technology, London), 229
Undiluted Semen : Effect of Varying Doses of, on Fertility in the Domestic Fowl (G. C. Taneja and R. S. Gowe), 828
Unesco : Science Study Fellowships, 1250
Unesco (Indian Society of Theoretical and Applied Mechanics and) : Symposium on Non-Linear Physical Problems, 855
Unexplored Records (Two), of Quaternary History (A. H. Stride and R. Bowers), 1000
Ungnade, Herbert E. (edited by) : Organic Electronic Spectral Data, Vol. 2, 1953-1955, *review* by Dr. E. G. Kellett, 107
Unified Europe : The Non-Ferrous Metals Industry in a (Baron Snoy et d'Oppuers), 546
Uniformity (Non-) of Cross-linking in Ion-Exchange Polymers (Dr. E. Glueckauf and R. E. Watts), 904
Unilateral Temporal Pole Damage in the 'Split-Brain' Monkey : Changes in Visual Gnostic Functions and Emotional Behaviour following (Dr. J. L. deC. Downer), 50
Unilever, Ltd., jointly with the Department of Economics of the University of Manchester : To set up a Centre for Business Research, 337
Unions (Trade) : The State and the (D. F. Macdonald), 1129
United Arab Republic, Government of the, and others : To set up and operate an Aeronautical Research Laboratory and three Civil Aviation Training Centres, 1043
United Kingdom : Population Statistics in the, 1347
    Shortage of Scientific Teachers in the, 123
    Strontium-90 in Milk and Agricultural Materials in the, 1959-1960 (Agricultural Research Council, Report No. 4), 20
United Kingdom, Committee of Vice-Chancellors and Principals of the Universities of the : Conference of professors of mathematics from the Universities of Great Britain, to consider the Teaching of Mathematics, 1145
United Kingdom Atomic Energy Authority : Progress on the Advanced Gas-cooled Reactor at Windscale, 853
    Seventh Annual Report (1960-61), 857
United Kingdom Atomic Energy Research Establishment : Course on the Principles of Radiation Protection, 856
United Kingdom Courses in Nuclear Energy, 125
United Kingdom Petroleum Industry Statistics relating to Consumption and Refinery Production, 1959 and 1960 (Petroleum Information Bureau), 123
United Nations : Demographic Yearbook for 1960, 1346
United Nations (Food and Agriculture Organization) : Forum in Tokyo on the Fishing Research Vessel, 229
    Meetings on Nutrition in Latin America, 959
    Appointment of Dr. Fabian Recalde as a nutrition officer, 1045
    International Conference on Fish in Nutrition, 1045
    Technical Meeting on Plant Exploration and Introduction, 1240

United Nations (Food and Agriculture Organization), and others : Conference on the Use of Radioisotopes in Animal Biology and the Medical Sciences, 959
United Nations (World Health Organization) : Technical Report Series No. 215, The Planning of Public Health Services—Fourth Report of the Expert Committee on Public Health Administration, 441
  Technical Report Series No. 193, Teacher Preparation for Health Education—Report of a joint WHO/Unesco Expert Committee, 441
  Technical Report Series No. 221, Scientific Meeting on Rehabilitation in Leprosy—Report, 1248
  Public Health Papers No. 9, Teaching of Psychiatry and Mental Health, 1248
  Public Health Papers No. 10, Control of Soil-transmitted Helminths (Prof. Paul C. Beaver), 1249
  WHO Chronicle, Vol. 15, No. 7, Health in Yugoslavia, 1260
  European Standards for Drinking Water, 1261
United Nations (World Health Organization), and others : Conference on the Use of Radioisotopes in Animal Biology and the Medical Sciences, 959
United States : Cactus Virus in the (the late Irene M. Sammons and Prof. M. Chessin), 517
  Chemical Composition of Precipitable Water Vapour over the (Dr. Henry M. Papée and Dr. Alberto Montefinale), 136
  Goals for Science in the, 312
  Improving Biological Communications in the, 23
  Water Resources of the (Prof. W. G. V. Balchin), 444
United States Air Force Cambridge Research Laboratories (Thermal Radiation Laboratory of the Geophysics Research Directorate) : Conference on Electrically Exploded Wires, 1250
United States Armed Forces : Technical Reports of the, 1347
United States Atomic Energy Commission, and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
United States Department of Health, Education and Welfare : Public Health Service Publication No. 815, Highlights of Research Progress in General Medical Sciences (1960), 658
  Public Health Service Publication No. 854, Research Highlights in Ageing, 1145
United States National Academy of Sciences : Election of foreign associates, 18
United States National Academy of Sciences—National Research Council : Grant of 56,000 dollars from the National Science Foundation, for a one-year study of Chemical Notation Systems, 23
  Report on Science in Space, 124
  Sector-Focused Cyclotrons—Proceedings of an Informal Conference, Sea Island, Georgia, 1959 (edited by F. T. Howard), (Nuclear Science Series, Report No. 26, Publication No. 656), *review* by M. Snowden, 532
  Publication No. 848, Effects of Inhaled Radioactive Particles, 556
  Publication No. 849, Long-Term Effects of Ionizing Radiations from External Sources, 556
  Publication No. 875, Effects of Ionizing Radiation on the Human Haematopoietic System, 556
United States National Bureau of Standards : Handbook No. 78, Report of the International Commission on Radiological Units and Measurements, 28
  Appointment of Martin T. Decker as chief of the Tropospheric Measurements Section, 334
  Appointment of John L. Hague as chief of the Standard Reference Materials Section, 334
  Appointment of Dr. John K. Taylor as chief of the Applied Analytical Research Section of the Analytical and Inorganic Chemistry Division, 334
  Appointment of Dr. David M. Gates as editor of Section D, Radio Propagation, of the *Journal of Research*, 856
  Appointment of Dr. Harry C. Allen, jun., as chief of the Analytical and Inorganic Chemistry Division, 1346
  Monograph No. 19, Atomic Energy Levels in Crystals (J. L. Prather), 1348
United States National Bureau of Standards (Informations System Branch of the Office of Naval Research Information Centre) : Symposium on Optical Character Recognition, 1145
United States National Bureau of Standards (Research Information Centre and Advisory Service on Information Processing) : Report on Computer Systems for Searching Chemical Literature (E. C. Medam and H. R. Koller), 23
United States National Cancer Institute, and others (sponsored by) : Proceedings of a Conference on Biological Activities of Steroids in relation to Cancer (edited by Gregory Pincus and Erwin P. Vollmer), *review* by E. Reid, 1235
United States National Institutes of Health, and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
United States National Museum : Bulletin No. 225, Drug Supplies during the American Revolution (George B. Griffenhagen), 761
United States National Research Council (National Academy of Sciences) : Grant of 56,000 dollars from the National Science Foundation, for a one-year study of Chemical Notation Systems, 23
  Report on Science in Space, 124
  Sector-Focused Cyclotrons—Proceedings of an Informal Conference, Sea Island, Georgia, 1959 (edited by F. T. Howard), (Nuclear Science Series, Report No. 26, Publication No. 656), *review* by M. Snowden, 532
  Publication No. 848, Effects of Inhaled Radioactive Particles, 556
  Publication No. 849, Long-Term Effects of Ionizing Radiations from External Sources, 556
  Publication No. 875, Effects of Ionizing Radiation on the Human Haematopoietic System, 556
United States National Science Foundation : Grant of 56,000 dollars to the National Academy of Sciences—National Research Council, for a one-year study of Chemical Notation Systems, 23
  Establishment of an Office of Antarctic Programs, 125
  Appointment of Dr. Thomas O. Jones as head of the Office of Antarctic Programs, 125
  Reviews of Data on Research and Development, No. 27, Report on Scientists and Engineers engaged in research and development in Colleges and Universities in the United States for 1958, 225
  Reviews of Data on Research and Development, No. 28, Capital Expenditure of Colleges and Universities in the United States for research and development in the Natural and Social Sciences in 1958, 545
  Science Information Personnel—the New Profession of Information combining Science, Librarianship and Foreign Languages (Leonard Cohen and Kenneth Craven), 452
United States National Science Foundation, and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
United States Naval Observatory : Reprint No. 19, Resources and Treasures of the Library (Marjorie S. Clopine), 22
United States Nuclear Power Projects : Fact Sheets on, third edition, 958
United States Office of Naval Research (Information Systems Branch) : Symposium on Redundancy Techniques for Computing Systems, 1349
United States Public Health Service : Research Grants in Radiological Health, 442
United Steel Companies, Ltd. : Appointment of David Owen as head of the Department of Operational Research and Cybernetics, 443
Units (Sub-) : Kinetics of the Enzymic Degradation of Deoxyribonucleic Acid into (Dr. Giorgio Bernardi and Prof. Charles Sadron), 809
Units and Measurements (Radiological) : Report of the International Commission on (United States National Bureau of Standards, Handbook No. 78), 28
Universal Buffer System : A New (Dr. D. A. Ellis), 1099
Universe (The Steady), with Charge Excess (Ll. G. Chambers), 262
Universe (An Unsteady), with Excess of Charge (Ll. G. Chambers), 1082
Universities in Britain, 1027
Universities of the British Commonwealth, Association of : Commonwealth Universities Yearbook 1961, *review*, 843
Universities in Transition (Prof. H. C. Dent), 1027
Universities of the United Kingdom, Committee of Vice-Chancellors and Principals of the : Conference of professors of mathematics from the Universities of Great Britain, to consider the Teaching of Mathematics, 1145
Universities (British) : Scientific Research in, 1960-61 (Department of Scientific and Industrial Research), 228
Universities (Colleges and), in the United States : Report on Scientists and Engineers engaged in research and development in, for 1958 (United States National Science Foundation), 225
  Capital Expenditure of, for research and development in the Natural and Social Sciences in 1958, 545
Universities Council for Adult Education : Report for 1959-60, 861
Universities Federation for Animal Welfare : Annual Summer Congress, 755
  Symposium on the Assessment of Pain, 1353
Universities Yearbook : Commonwealth, 1961 (Association of Universities of the British Commonwealth), *review*, 843
University of Arizona : Lunar and Planet Laboratory Contributions, No. 1, Orthographic Atlas of the Moon (compiled by D. W. G. Arthur and E. A. Whitaker ; edited by Gerard P. Kniper), Edition 'A' showing the Standard Orthographic Coordinate Grid, Part 1, Central Area, *review* by D. H. P. Jones, 424
University of Baghdad : Grant of £7,500 from the Gulbenkian Foundation, for the Faculty of Engineering, 754
University of Birmingham : Appointment of Dr. L. Riddiford as senior lecturer in the Department of Physics, 337
  Appointment of G. Martelli as lecturer in the Department of Physics, 337
  Appointment of Dr. S. Swierszczewski as Research Fellow in nuclear physics, 337
  Appointment of Dr. J. H. Broadhurst as senior research associate in nuclear physics, 337
  Appointment of D. E. Kidd as research associate in nuclear physics, 337
  Appointment of Dr. C. A. Barson and Dr. A. E. Pedler as senior Research Fellows in the Department of Chemistry, 337
  Appointment of R. J. Heitzmann as Research Fellow in the Department of Chemistry, 337
  Appointment of R. G. Bird as lecturer in the Department of Civil Engineering, 337
  Appointment of B. K. Gazey as Research Fellow in the Department of Electrical Engineering, 337
  Appointment of Dr. B. Henderson as Research Fellow in the Department of Physical Metallurgy, 337
  Appointment of G. R. Ogram and B. Walker as Research Fellows in the Department of Industrial Metallurgy, 337
  Appointment of Dr. A. T. Kolnai as Lloyd-Muirhead Fellow in social philosophy, 337
  Appointment of J. R. Turcan as Research Fellow in the Department of Engineering Production, 337
  Appointment of Dr. B. J. Key as lecturer in neuropharmacology, 337
  Appointment of Dr. R. R. Dils as lecturer in the Department of Medical Biochemistry and Pharmacology, 337
  Appointment of D. Rimmer as lecturer in the Department of Economics, 337
  Appointment of Prof. William Henry Trethowan to the chair of psychiatry, 545
  Gulbenkian Foundation Conference on the Biology Syllabus for Sixth Forms, 554
  Appointment of J. T. Allanson to the second chair of electrical engineering, 647
University of Bristol : Long Ashton Research Station, Bristol (R. W. Marsh), 547
  Third International Conference on Neurosecretion, 856
University of Cambridge : Grant of £150 for three years from the Gulbenkian Foundation, in aid of the Arctic Canada expedition, 754
  Grant of £100 for three years from the Gulbenkian Foundation, in aid of the expedition to Nagir, Karakoram, 754
  Grant of £50,000 from the Gulbenkian Foundation, for three fellowships at Churchill College, 855
  Grant of £5,500 from the Gulbenkian Foundation, to the Pepys Library, Magdalene College, for preparation and publication of a catalogue, 855
  Election of Dr. A. Hewish to a Fellowship in Churchill College, on appointment as College lecturer in physics, 856
  Election of J. A. Miller and R. M. Loynes to Junior Research Fellowships in Churchill College, 856

  Election of N. W. Ashcroft, S. J. Bernau, G. R. G. Lewison, D. McCormack Smyth and W. K. Stell to Research Studentships in Churchill College, 856
  Election of S. Chatterjee and E. A. Kohll to Postgraduate Studentships in Churchill College, 856
University of Chile, and others : International Symposium on Tissue Transplantation, 24
University of Dublin : Appointment of Dr. D. C. Pepper to the newly established chair of physical chemistry in Trinity College, Dublin, 333
University of Durham : Fifteenth Report of the Appointments Board, 649
  Establishment by the Medical Research Council of a Research Group on Demyelinating Diseases, 1143
University of East Anglia : Appointment of F. Thistlethwaite as first vice-chancellor, 959
University of Edinburgh : Appointment of J. H. Turner as lecturer in pathology, 337
  Appointment of Dr. I. Bihler, Dr. J. Newham, C. McGreavy, Herman Wen-Geun Chew and Dr. A. S. Milton as I.C.I. Research Fellows, 337
  Appointment of Dr. Eric Samuel as reader in radiodiagnosis, 443
  Appointment of Dr. H. M. Adam as reader in pharmacology, 443
  Appointment of Dr. J. S. Robson as reader in therapeutics, 443
  Appointment of Dr. N. A. Mitchison as reader in zoology, 443
  Appointment of Dr. P. P. Brown as lecturer in bacteriology, 443
  Appointment of Dr. W. P. Doyle and Dr. J. L. Holmes as lecturers in chemistry, 443
  Anonymous gift of £1,000 to the Department of Radiotherapy, 443
  Appointment of Juris Reinfelds and Imre Leszlo as I.C.I. Research Fellows, 545
  Appointment of R. F. Thow to a lectureship in agriculture, 545
  Appointment of Dr. L. M. Muggleton to a lectureship in electrical engineering, 545
  Appointment of Benjamin Mitchell to a lectureship in veterinary surgery, 545
University of Glasgow : Appointment of Dr. John Lamb to the James Watt chair of electrical engineering, 224
  Appointment of Dr. David W. A. Sharp as senior lecturer in the Department of Chemistry in the Royal College of Science and Technology, 443
  Appointment of Dr. Graham R. Knox as lecturer in the Department of Chemistry in the Royal College of Science and Technology, 443
  Appointment of Dr. T. R. F. Nonweiler to the Mechan chair of aeronautics and fluid mechanics, 853
  Endowment of £800 made by Mrs. Hilda M. Beilby to the Royal College of Science and Technology, Glasgow, to be known as the Kelvin Prizes, 1349
University of Hamburg : European Symposium on Vitamin B_{12} and Intrinsic Factor, 1154
University of Leeds : Appointment of Dr. J. W. Craggs to the newly created chair of mathematics, 122
  Grant of £16,600 a year for seven years from the Foundation for Management Education, 228
  Appointment of Dr. A. Chadwick to a lectureship in zoology, 228
  Appointment of Dr. B. L. Shaw to a lectureship in inorganic and structural chemistry, 228
  Appointment of F. P. G. Whitaker as director of management studies in the Department of Economics and Commerce, 228
  New Courses leading to honours and ordinary B.Sc. degrees in Food Science, 546
  Appointment of Dr. P. Grosberg to a research chair of textile engineering, 650
  Appointment of Dr. P. R. Brook and Dr. G. A. Morrison as lecturers in the Department of Organic Chemistry, 650
  Appointment of R. S. Davidson as Brotherton Research Fellow in the Department of Organic Chemistry, 650
  Appointment of Dr. I. G. Gass as a lecturer in the Department of Geology, 650
  Appointment of W. Houghton-Evans as lecturer in architectural engineering, 650
  Appointment of M. Kirk as a lecturer in the Department of Social Studies, 650
  Appointment of P. Levi as Bernard Hickson Fellow in the Department of Botany, 650
  Appointment of Dr. G. A. Salmon as J. W. Wootton Research Fellow in the Department of Chemistry, 650
  Appointment of Dr. Jean E. Wilkinson as Medical Research Council Research Fellow in the Department of Medicine, 650
  Grant of £1,000 from the Yorkshire Council of the British Empire Cancer Campaign to the Department of Physical Chemistry, 650
  Grant of £15,000 a year for seven years from the Anglo-American Corporation of South Africa, Ltd., to continue the work of the Research Institute of African Geology, 650
  Grant of £13,362 during two years from the Department of Scientific and Industrial Research to the Department of Geology, for an investigation into African rocks, 650
  Grant of £1,000 from Courtaulds, Ltd. to the Department of Textile Industries, 650
  Grant of £1,000 during two years from W. L. Ingle, Ltd. to the Procter Department of Food and Leather Science, 650
  Grant of £2,470 from the Ministry of Aviation for a research project in the Department of Metallurgy, Houldsworth School of Applied Science, 650
  Grant of £2,897 during two years from the Department of Scientific and Industrial Research, for a research project in the Department of Biochemistry, 650
  Appointment of Dr. P. Grosberg to the chair of textile engineering, 1346
University of Leicester : Grant of £200 for three years from the Gulbenkian Foundation, in aid of the expedition to East Greenland, 754
University of Liverpool : Appointment of Dr. A. S. King as professor of veterinary anatomy, 648
University of London : Appointment of Dr. J. S. Webb to the University chair of applied geochemistry at the Imperial College of Science and Technology, 229
  Appointment of Dr. F. G. A. Stone to the University readership in inorganic chemistry at Queen Mary College, 229
  Title of reader in biology in the University (at the Royal Free Hospital School of Medicine) conferred on Dr. Agnes M. Hughes, 229
  Appointment of Prof. J. N. P. Davies to the University readership in morbid anatomy at the Postgraduate Medical School of London, 229
  Appointment of H. D. Ritchie to the University readership in surgery at the London Hospital Medical College, 229
  Title of reader in dental anatomy in the University (at the London Hospital Medical College) conferred on R. W. Fearnhead, 229
  Title of reader in organic chemistry in the University (at Royal Holloway College) conferred on Dr. T. G. Bonner, 229
  Advanced Study Institute on Underwater Acoustics, at the Imperial College of Science and Technology, 229
  Appointment of Dr. M. Gordon to the University readership in physical chemistry at the Imperial College of Science and Technology, 337
  Title of reader in demography in the University (at the London School of Economics and Political Science) conferred on J. Hajnal, 337
  The Chester Beatty Research Institute of the Institute of Cancer Research, Royal Cancer Hospital (Prof. A. Haddow), 430
  Appointment of Dr. C. B. Alcock as reader in chemical metallurgy at the Imperial College of Science and Technology, 443, 1349
  Appointment of Dr. J. N. Hunt as reader in physical oceanography at the Imperial College of Science and Technology, 443, 1349
  Appointment of Dr. J. A. Kitchener as reader in the science of mineral processing at the Imperial College of Science and Technology, 443, 1349
  Appointment of S. B. Watkins to the University readership in chemical engineering at King's College, 546
  Title of reader in pure mathematics (at Queen Mary College) conferred on Dr. K. W. Gruenberg, 546, 651
  Title of professor emeritus of geography (at the London School of Economics and Political Science) conferred on Prof. R. O. Buchanan, 546
  Title of professor emeritus of bacteriology (at St. Bartholomew's Hospital Medical College) conferred on Prof. L. P. Garrod, 546
  Title of professor emeritus of medical statistics (at the London School of Hygiene and Tropical Medicine) conferred on Sir Austin Bradford Hill, 546
  Title of professor emeritus of chemistry (at University College) conferred on Sir Christopher Ingold, 546
  Title of professor emeritus of pharmaceutical chemistry (at the School of Pharmacy) conferred on Prof. W. H. Linnell, 546
  Title of professor emeritus of psychology (at Birkbeck College) conferred on Prof. C. A. Mace, 546
  Title of professor emeritus of chemical engineering (at the Imperial College of Science and Technology) conferred on Prof. D. M. Newitt, 546
  Title of professor emeritus of pharmacology (at University College) conferred on Prof. F. R. Winton, 546
  Appointment of Prof. W. D. Gill to the chair of oil technology at the Imperial College of Science and Technology, 651
  Appointment of S. B. Watkins to the University readership in chemical engineering at King's College, 651
  Appointment of Dr. Brian Abel-Smith to the University readership in social administration at the London School of Economics and Political Science, 651
  Appointment of L. P. Foldes to the University readership in economics at the London School of Economics and Political Science, 651
  Appointment of Harry Townsend to the University readership in economics at the London School of Economics and Political Science, 651
  Title of professor of civil engineering (at King's College) conferred on J. K. T. L. Nash, 651
  Title of professor of powder technology (at King's College) conferred on Dr. H. E. Rose, 651
  Title of reader in economics (at the London School of Economics and Political Science) conferred on J. Wiseman, 651
  Title of reader in engineering science (at King's College) conferred on Dr. J. M. Zarek, 651
  Grant of £15,000 from the Gulbenkian Foundation to the School of Oriental and African Studies, 754
  Grant of £10,000 from the Gulbenkian Foundation, to establish a Gulbenkian Fund at King's College, 855
  Fourteenth International Instruction Course at the Imperial College of Science and Technology by Carl Zeiss, Jena, on Fine Measuring Instruments, 1045
  Appointment of James Durbin to the University chair of statistics at the London School of Economics and Political Science, 1247
  Appointment of J. P. Quilliam to the chair of pharmacology at St. Bartholomew's Hospital Medical College, 1349
  Appointment of Dr. S. J. Taylor to the University readership in mathematics at Westfield College, 1349
  Title of professor of electrical engineering in the University (at the Imperial College of Science and Technology) conferred on Dr. J. H. Westcott, 1349
  Appointment of Dr. J. R. Butler to the readership in pure geochemistry at the Imperial College of Science and Technology, 1349
  Appointment of J. C. G. Coleridge to the readership in physiology at the Royal Free Hospital School of Medicine, 1349
  Appointment of Prof. J. N. Phillips to the readership in morbid anatomy at the Postgraduate Medical School of London, 1349
University of London School of Pharmacy : Title of professor emeritus of pharmaceutical chemistry conferred on Prof. W. H. Linnell, 546
University of Manchester : Appointment of Dr. F. Koenigsberger to the newly created chair of machine tool engineering, 19
  Unilever, Ltd., jointly with the Department of Economics, to set up a Centre for Business Research, 337
  Appointment of R. H. Kantorowich as professor of town and country planning, 443
  Appointment of Dr. F. Ursell to the Beyer professorship of applied mathematics, 647
  Appointment of Ronald Beresford Dew as visiting professor of industrial administration at the Manchester College of Science and Technology, 651
University of Melbourne : Biochemistry at the (Prof. V. M. Trikojus), 1238
University of Michigan : Studies, Scientific Series Vol. 21, Marine Algae of the Eastern Tropical and Subtropical Coasts of the Americas (Prof. William Randolph Taylor), *review* by Prof. Lily Newton, 1234

University of Nottingham : International Symposium on Inorganic Polymers, 1046
  Proceedings of the Seventh Easter School in Agricultural Science—Digestive Physiology and Nutrition of the Ruminant (edited by Dr. D. Lewis), *review* by Dr. I. W. McDonald, 1334
University of Oporto : Grant from the Gulbenkian Foundation, in aid of biochemistry, 754
University of Oxford : First award of the J. H. Burn fellowship (in the Department of Pharmacology) for 1961-62 made to H. P. Rang, 229
  Grant of £100 for three years from the Gulbenkian Foundation, in aid of the expedition to the Andes of Peru, 754
  Grant of £100 for three years from the Gulbenkian Foundation, in aid of the expedition to the Atlas Mountains of Southern Morocco, 754
  Grant of £100 for three years from the Gulbenkian Foundation, in aid of the expedition to the South Caspian, 754
  Grant of £50 for three years from the Gulbenkiah Foundation, in aid of the women's expedition to the Madeiras, 754
  Grant of £22,000 from the Gulbenkian Foundation, for lecture rooms in the New Law Library, 855
  Retirement of Sir Wilfrid Le Gros Clark from the chair of anatomy, 957
  Appointment of Prof. G. W. Harris to the chair of anatomy, 957
University of Padua : Symposium on the Experimental Method in Biology from the Time of Antonio Vallisneri to the Present, 546
University of Reading : Annual Report for 1960 of the National Institute for Research in Dairying, 237
  Annual Report for 1960 of the Museum of English Rural Life, 544
University of Roorkee : Theoretical and Applied Mechanics at the, 855
University of St. Andrews (Mathematics Department of Queen's College), in collaboration with Standard Telephones and Cables, Ltd. : Symposium on Digital Computers, their Use and Control, 554
University of Sheffield : Appointment of Dr. L. Mirsky to a readership in pure mathematics, 229
  Appointment of Dr. V. R. Pickles to a readership in physiology, 229
  Appointment of Dr. F. A. Benson to a readership in electronics, 229
  Appointment of G. Lederer as a lecturer in pure mathematics, 229
  Appointment of Dr. P. B. N. Neal as senior Research Fellow in mechanical engineering, 229
  Appointment of A. B. Hedley to the Central Electricity Authority research fellowship in fuel technology, 229
  Appointment of Dr. N. H. March to the newly created second chair of physics, 337, 543
  Appointment of Dr. V. C. L. Hutson as lecturer in applied mathematics, 337
  Appointment of J. W. Ross as junior Research Fellow in physics, 337
  Appointment of Dr. I. Hawkes as lecturer in the Postgraduate School of Mining, 337
  Appointment of Dr. C. J. Ball as lecturer in metallurgy, 337
  Appointment of I. Livingstone as lecturer in economic statistics, 337
  Appointment of P. E. Brown as senior lecturer in preventive medicine and public health, 337
  Appointment of W. T. Baker as health physicist, 337
  Contributions to the Development Fund now total £480,975, 651
University of Southampton : First International Conference on Timber Engineering, 338
  Appointment of B. M. Bland to the University librarianship, 443
  Appointment of H. J. Trump as director of adult education, 443
  Appointment of Dr. J. P. Jones to the Westland readership in helicopter engineering, 443
  Title of reader in chemistry conferred on Dr. I. G. M. Campbell, 443
University of Sussex : Appointment of Dr. C. Eaborn as professor of chemistry, 1349
  Appointment of Dr. R. J. Blin-Stoyle as professor of theoretical physics, 1349
  Appointment of Dr. K. F. Smith as professor of experimental physics, 1349
University of Wales : Retirement of Prof. V. C. Morton from the chair of pure mathematics in the University College of Wales, Aberystwyth, 333
  Appointment of Dr. W. B. Pennington to the chair of pure mathematics in the University College of Wales, Aberystwyth, 333
  Retirement of Prof. E. J. Roberts from the chair of agriculture in University College of North Wales, Bangor, 439
  Appointment of Ian A. McK. Lucas to the chair of agriculture in University College of North Wales, Bangor, 439
  Grant of £200 for three years from the Gulbenkian Foundation, in aid of the expedition to Mount Sabalan, 754
University (Australian National), Canberra : Hon.D.Sc. degree awarded to Sir Rudolph Peters and to Dr. J. L. Pawsey, 443
University (Hebrew) : Seminar at the Medical School on Biorheology and Microcirculation, 757
University (National), of Ireland : Appointment of Dr. Eva M. Philbin to the chair of organic chemistry in University College, Dublin, 439
University College, Dublin : Appointment of Dr. Eva M. Philbin to the chair of organic chemistry, 439
University College, London : Title of professor emeritus of chemistry conferred on Sir Christopher Ingold, 546
  Title of professor emeritus of pharmacology conferred on Prof. F. R. Winton, 546
University College of North Staffordshire : To become Keele University in 1962, 229
  Appointment of H. Liebeck to a lectureship in mathematics, 229
  Appointment of Dr. M. Asgar Ali to an I.C.I. research fellowship, 229
  Appointment of M. J. A. Smith to the Mullard Research Fellowship in physics, 229
  Appointment of Dr. W. P. McCann to be Leverhulme research officer, 229
University College of North Wales, Bangor : Retirement of Prof. E. J. Roberts from the chair of agriculture, 439
  Appointment of Ian A. McK. Lucas to the chair of agriculture, 439
University College of Rhodesia and Nyasaland : Grant of £5,000 from the Gulbenkian Foundation, for an archaeological laboratory, 855
University College of Wales, Aberystwyth : Retirement of Prof. V. C. Morton from the chair of pure mathematics, 333
  Appointment of Dr. W. B. Pennington to the chair of pure mathematics, 333
University Extra-Mural Libraries in Great Britain : Aims, Organization and Methods of (E. P. Pritchard), 649
University Selection, *review* by Dr. W. H. King, 947
University Service : The World (Hilda M. Browne), 1140
Unreactive Tyrosine Residue in Insulin and the Exclusive Iodination of the A Chain (Dr. P. H. Springell), 1372
Unsteady Universe with Excess of Charge : An (Ll. G. Chambers), 1082
Unsuckled Female Rats (Suckled and) : Induction of Cancer in (Prof. Giuliano Briziarelli), 921
Unusual Base Composition of the Ribonucleic Acid of Wild Cucumber Mosaic Virus (H. Yamazaki and Prof. Paul Kaesberg), 96
Upper Arm Bone (Australopithecine) : An Australopithecine Scoop made from a Right (Prof. Raymond A. Dart), 372
Upper Atmosphere : Density of the, determined from Satellite Orbits, and its Variation during 1957-61 (D. G. King-Hele and D. M. C. Walker), 114
Upper Plastic Limit of Clays : Role of Interparticle Forces in Development of (Dr. Raymond Yong and E. T. Selig), 938
Uptake of Isotopic Norepinephrine by Cat Tissues : Effects of Drugs on (Hans J. Dengler, Herbert E. Spiegel and Elwood O. Titus), 816
Uptake of Streptomycin by *Escherichia coli* : Influence of Salts on the (Paul H. Plotz, Donald T. Dubin and Bernard D. Davis), 1324
Uptake (Selective), of Specifically Bound Cobalt-58 Vitamin B_{12} by Human and Mouse Tumour Cells (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Uracil (6-Aza-) : Chromosomal Elimination induced by (M. Collette Mahoney, Dr. E. R. Witkus and Dr. C. A. Berger), 627
Uraemia (Acute Experimental) : Elimination of Bovine Serum Albumin in (Dr. G. Gowland, F. G. Smiddy, Dr. R. G. Burwell and F. M. Parsons), 1210
Uraguchi, K., and others : Toxicology of *Penicillium islandicum*, 864
Uranin Solution : Average Extinction Coefficient for Re-absorption of Fluorescence Radiation through (Dr. K. K. Rohatgi and G. S. Singhal), 799
Uranium in British Surface and Underground Waters (J. D. Peacock), 1189
Uranium as Pyrophosphate : Determination of (Dr. F. M. Brewer), 1290 ; (J. S. Wright, T. J. Hayes and J. A. Ryan), 1291
Uranium, Tungsten and Nickel Complexes (Chromium,), of Thioglycolic Acid (V. M. Bhuchar), 489
Uranium Disilicide (Allan Brown and J. J. Norreys), 61
Urbaschek, B., and Trautwein, Prof. K. : Occurrence of an *Rh*-like Antigen in Red Cells of the Sheep, 193
Urea : Phosphate-dependent Degradation of (R. C. Valentine and Prof. R. S. Wolfe), 925
  Prevention of Ammonia Toxicity by Amino-acids concerned in the Biosynthesis of (Dr. Francesco Salvatore and Dr. Vincenzo Bocchini), 705
Urea Cycle in Rat Liver : Effect of Adrenalectomy on the Activity of Enzymes of the (Patricia McLean), 1302
Urea Synthesis in the Living Rat Brain (R. K. Davies, A. J. Defalco, D. Shander, A. Kopelman and Prof. J. Kiyasu), 288
Urea and Thiourea : Adducts of, obtained by means of a Sublimation Technique (B. Casu), 802
Uresch, F., and others : Chemical Character of the Pigments of a New Nitrogen-fixing Micro-organism, 1413
Urgency of International Co-operation, 943
Uri, J., and Herpay, Zs. : Use of Desertomycin Medium in Routine Selective Isolation of Fungi Pathogenic to Man, 1015
Uri, J., and Sztaricskai, F. : Simple, Quick Methods for Detection of 6-Aminopenicillanic Acid, 1223
^{14}C-Uridine : Catalysis of Incorporation of, into Rat Lens Ribonucleic Acid by Rat Lens Enzyme System (Dr. Anima Devi and Dr. N. K. Sarkar), 1094
Urinary Assay : Assessment of Chronic Exposure to Radiostrontium by (Dr. C. L. Comar and Jay Georgi), 390
Urinary Concretions forming on Zinc Implants in Rat Bladders : Incorporation of Phosphorus-32 into (Dr. Richard F. Keeler and Dr. Stuart A. Lovelace), 715
Urinary Excretion of Histamine : Relationship between the Decrease in, and the Initiation of the Labour Process (Dr. Halina Wiskont-Buczkowska), 290
Urinary Excretion (Decreased), of 2-Aminoethanol by Irradiated Human Beings (Dr. Ralph R. Cavalieri, M. T. Van Metre and W. I. Sivertsen), 1303
Urinary Inhibitors of Hyaluronidase (P. J. Knudsen and J. Koefoed), 1306
Urinary Metabolites of ^{14}C-Tetrachloroethylene in Mice (Dr. Sven Yllner), 820
Urine : Determination of Lead in, by Atomic Absorption Spectroscopy (J. B. Willis), 381
Urine (Normal Human) : Quantitative Determination of Metadrenaline and Normetadrenaline in (Dr. Kaoru Yoshinaga, Dr. Chuichi Itoh, Dr. Nozomu Ishida, Dr. Tatsuo Sato and Dr. Yasuo Wada), 599
Urine (Porcine) : Neutral 17-Ketosteroids in (L. G. Huis in't Veld, B. Louwerens and W. Reilingh), 175
Urine Analysis : Determination of Caesium-137/Potassium Ratios in Diet and in the Human Body by (A. Morgan and Gloria M. Arkell), 1100
Urine Nitrogen in Kwashiorkor : Partition of (Dr. J. C. Edozien and E. J. Phillips), 47
Ursell, Dr. F. : Appointed to the Beyer professorship of applied mathematics at the University of Manchester, 647 ; work of, 647
Urwick, L. F. : The Manager, 1332
Use of Animal Cell, Tissue and Organ Cultures in Radiobiology (New York Academy of Sciences Symposium on), 340
Use in Biological Work : A Sealing Compound for (G. Stotzky, W. Culbreth and Dr. L. B. Mish), 410
Use of Cellulose Acetate Membranes for Detecting Penicillinase-producing Organisms (Prof. R. Knox and J. T. Smith), 926
Use of Desertomycin Medium in Routine Selective Isolation of Fungi Pathogenic to Man (J. Uri and Zs. Herpay), 1015
Use of a Different Type of Fluorescent Material as an Optical Maser (Jordan J. Markham and Dickron Mergerian), 586
Use of Glacial Acetic Acid for Killing Parasitic Nematodes for Collection Purposes (Bjørn Berland), 1320
Use in Identification : Essential Oil from Fresh *Cannabis sativa* and its (L. Martin, D. Morison Smith and C. G. Farmilo), 774

Use in Lake Victoria : A Phytoplankton Multi-Sampler and its (Dr. J. H. Evans), 53
Use of Organic Reagents in Inorganic Analysis (A. I. Busec and N. G. Polianskii), translated from the Russian by J. T. Greaves, *review* by Dr. D. T. Lewis, 1336
Use to determine the Origin of Heartwood : Carbon-14 from Nuclear Explosions as a Short-term Dating System— (Dr. A. T. Wilson), 714
Use of Radioisotopes in Animal Biology and the Medical Sciences (International Atomic Energy Agency, the Food and Agriculture Organization and the World Health Organization of the United Nations, Conference on), 959
Use of Radioisotopes in Biological Work in Burma (Dr. Maung Mya Thaung), 875
Use of Respirators : The Design and (Ergonomics Research Society and the British Occupational Hygiene Society Discussion on), 655
Use in Ribonucleic Acid Fractionation : Modified Cellulose Ion Exchangers and their (Dr. L. Bosch, G. van der Wende and Dr. H. Bloemendal), 349
Use of the Rotating Hanging Mercury Drop in Analysis—Anodic Stripping using a Rotating Mercury Drop (Dr. J. J. Engelsman and A. M. J. M. Claassens), 240 ; Trace Analysis with a Rotating Hanging Mercury Drop (Dr. M. van Swaay and R. S. Deelder), 241
Use of Scientific Literature (B. C. Vickery), 1347
Use of Veronal Buffers in Formalin Fixatives (Dr. S. J. Holt and Dr. R. Marian Hicks), 832
Use (The Economic), of Brains (Prof. C. F. Carter), 987
Use (Proposed), of Magnetic Fields in Electron Microscopic Radioautography (Lucien G. Caro), 1188
Use and Control : Digital Computers, their (Mathematics Department of Queen's College, St. Andrews, in collaboration with Standard Telephones and Cables, Ltd., Symposium on), 554
Uses of Castorseed, 753
Usherwood, P. N. R. : Spontaneous Miniature Potentials from Insect Muscle Fibres, 814
U.S.S.R. : Scientific Research in the, 123
  Women Engineers in the, a Study of the Education, Employment and Prospects of Women Engineers in the U.S.S.R. (L. S. Souter and R. Winsdale), 30
U.S.S.R. Academy of Sciences : Mathematical Tables, Vol. 12, A Collection of Tables and Nomograms for the Processing of Observations made on Artificial Earth Satellites (I. D. Zhongolovich and V. M. Amelin), *review* by D. G. King-Hele, 1135
Uterine Activity : Effect of Bradykinin on (Dr. B. Berde and Dr. K. Saameli), 83
Utilizability of Viral Protein during Multiplication of Fowl Plague Virus : Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the (Dr. Christoph Scholtissek and Rudolf Rott), 1023
Utilization of Glucose : Effect of Thyroxine and 2,4-Dinitrophenol on the Rate of (Dr. L. Macho), 604
Utilization (Formation and), of Poly-β-Hydroxybutyric Acid by Knallgas Bacteria (*Hydrogenomonas*), (Prof. H. G. Schlegel, G. Gottschalk and R. von Bartha), 463

VACANCIES (Cation) : Quenching of, in Doped Crystals of Sodium Chloride (the late Sir K. S. Krishnan and S. C. Jain), 162
Vacek, Dr. Z., and others : Role of the Lung in Metabolism of Fat during Ontogeny of the Rat, 85
Vacuole in *Nitella* : Relative Volumes of Cytoplasm and (Dr. Paul Saltman and Dr. Tyge Christensen), 825
Valentine, Prof. D. H. : Flora Europaea (Hybrids in Flora Europaea), 448
Valentine, R. C., and Wolfe, Prof. R. S. : Phosphate-dependent Degradation of Urea, 925
Vallisneri, Antonio : Experimental Method in Biology from the Time of, to the Present (University of Padua Symposium on), 546
Value (Adaptive), of Regenerative Ability (Dr. A. E. Needham), 720
van As, D. (Steyn, J., and) : Radiolytic Oxidation of Ferrous Solutions with Standardized Internal Sources of Polonium-210, 903
van Eijnatten, C. L. M. : Susceptibility to Leaf Blight, caused by *Cochliobolus heterostrophus*, in Nigerian Varieties of Maize, 515
Van Landuyt, J. F., and others : Polarization induced by Radiation in 'Perspex', 595
Van Meter, Clarence T., and others (edited by) : Remington's Practice of Pharmacy, twelfth edition, *review* by Dr. J. H. Gaddum, 8
Van Metre, M. T., and others : Decreased Urinary Excretion of 2-Aminoethanol by Irradiated Human Beings, 1303
van Oene, H., and Cragg, Prof. L. H. : Elimination of the Absorption Correction in the Viscometry of Dilute Solutions of High Polymers, 1160
Van Peenen, Dr. Hubert J., and others : The Diego Factor in a Puerto Rican Family—a Case of Anti-Diego in Monozygotic Twins, 188
Van Proosdy, Dr. C. : Smoking—its Influence on the Individual and its Role in Social Medicine, *review* by Dr. W. Carruthers, 108
van Swaay, Dr. M., and Deelder, R. S. : Use of the Rotating Hanging Mercury Drop in Analysis—Trace Analysis with a Rotating Hanging Mercury Drop, 241
Van Zyl, Dr. A., and Bhaga, M. : A Spray Method for the Simultaneous Detection of Iodide and Iodinated Amino-Acids on Filter Paper Chromatograms, 275
van de Mond, Th. (Mars, P., and) : Selectivity of Palladium Catalysts for the Oxidation of Carbon Monoxide in the Presence of Hydrogen, 1003
Van den Berghs, Ltd. : Memoir to mark the Centenary of the birth of Sir Frederick Gowland Hopkins (Prof. Ernest Baldwin), 439, *erratum*, 546
van den Brande, Prof. J. : Presidential Address at the sixth International Symposium on Nematology, 1048
van der Bij, Dr. R. J. : At the International Starch Conference (Quantitative Estimation of Ether and Ester Groups in Starch Derivatives), 237
van der Grinten, P. M. E. M., and Dijkstra, Dr. A. : Integration with Ionization Detectors in Gas Chromatography, 1195
van der Horst, Dr. C. J. G. : Keto-Acids and Amines in Rumen Liquid of Cattle, 73
Van der Veen, J., and others : Selenomethionine as an Antioxidant, 1201
van der Wende, G., and others: Modified Cellulose Ion Exchangers and their Use in Ribonucleic Acid Fractionation, 349
Vane, Dr. J. R., and others : Tryptamine Receptors in the Central Nervous System, 1068
Vanhuyse, Dr. V. J., and others : Polarization induced by Radiation in 'Perspex', 595
Vanpraet, G. J., and others : Polarization induced by Radiation in 'Perspex', 595
Vapour (Precipitable Water), over the United States : Chemical Composition of (Dr. Henry M. Papée and Dr. Alberto Montefinale), 136
Vapours (Organic) : Measurements of Heats of Adsorption of, on Adsorbents of High Surface Area using a Continuous Flow Calorimeter (G. H. Bell and A. J. Groszek), 1184
Variability (Inter-Individual), in Pigmentation (André Leguebe), 1326
Variable Shutter Device : A New Photometric Technique using a (Dr. O. C. Jones and Dr. F. J. J. Clarke), 1290
Variants (Denatured Haemoglobin), in Acid Buffers : Solubility of (I. D. Fraser and Dr. A. B. Raper), 355
Variates (Infinitely Many) : An Introduction to (Prof. Enders A. Robinson), *review* by Prof. D. V. Lindley, 214
Variation of Anisotropy Axis Dispersion with Thickness of Nickel-Iron Films (H. Clow), 996
Variation (Diurnal), in Transaminase Activity in the Cactus Plant (S. K. Mukerji, G. G. Sanwal and Prof. P. S. Krishnan), 516
Variation (Morphological), in *Ferrobacillus ferrooxidans* related to the Rate of Iron Oxidation (M. P. Silverman and M. H. Rogoff), 1221
Variations in Levels of Succinic Dehydrogenase during Chemical Carcinogenesis : Tissue Dilution Artefact—a Re-interpretation of (G. R. N. Jones, L. Bitensky, J. Chayen and Prof. G. J. Cunningham), 1203
Variations (Seasonal), of Caesium-137 in Air at Ground-Level (K. G. Vohra, V. S. Bhatnagar and C. Rangarajan), 747
Varicose Veins : Treatment of (Yutaka Kato and Robert A. Nabatoff), 335
Varieties (Nigerian), of Maize : Susceptibility to Leaf Blight, caused by *Cochliobolus heterostrophus*, in (C. L. M. van Eijnatten), 515
Varma, D. R. (Benfey, B. G., and) : Stimulation of the Heart of the Spinal Dog by Phenoxybenzamine, 919
Varying Doses of Undiluted Semen : Effect of, on Fertility in the Domestic Fowl (G. C. Taneja and R. S. Gowe), 828
Vascular Smooth Muscle : Spontaneous Spike-Discharges of (Dr. S. Funaki), 1102
Vegetative Propagation in the Coconut (*Cocos nucifera* L.) : Possibilities of (S. R. Gangolly and K. M. Pandalai), 1218
Veins (Varicose) : Treatment of (Yutaka Kato and Robert A. Nabatoff), 335
Veljković, Slobodanka, and Harbottle, Dr. Garman : Recoil-Atom Reactions at Low Temperature, 1287
Vella, Dr. F., and Ibrahim, S. A. : Thalassaemia in an English and in a German Family, 822
Velocities (Group and Phase), of a Travelling Disturbance in the *F* Region of the Ionosphere (Dr. L. H. Heisler and Dr. J. D. Whitehead), 157
Velocity of Cardiac Contraction and Size of the Heart : Relationship between—a Hypothesis (Dr. H. Feinberg), 1373
Velocity (Group) : Wave Propagation and (Dr. Léon Brillouin), *review* by Prof. M. H. L. Pryce, 104
Velocity (Molar Sound), in Molten Hydrated Salts (P. R. K. L. Padmini and Prof. B. Ramachandra Rao), 684
Velocity (Ultrasonic), in Aqueous Silver Nitrate Solution (D. S. Allam and W. H. Lee), 1388
Velocity (Ultrasonic), in Aqueous Solutions of some Electrolytes (M. G. Seshagiri Rao and Prof. R. Ramachandra Rao), 164
Vennesland, Prof. Birgit (Stiller, Mary, and) : Photophosphorylation and the Hill Reaction, 677
Venom (Bee) : Effect of, on Concentration of Blood Glucose and Liver Glycogen in Rabbits (Prof. A. H. Mohamed and K. Zaki), 605
Ventricle (Lateral), of Brain : Antibody Response in Rabbits following Injection of Sheep Erythrocytes into (Prof. B. D. Janković, Dr. M. Draškoci and Dr. K. Isaković), 288
Verco Medal of the Royal Society of South Australia presented to Dr. R. L. Specht, 1247
Verdonk, Prof. G. : At the Third International Congress of Dietetics (Influence of Nutrition and Ways of Life on Blood Cholestrol and the Prevalence of Atherosclerosis and Coronary Heart Disease among Trappist and Benedictine Monks), 1343 ; (Diet and Atherosclerosis), 1343
Vergence (Eye) : Barbiturates and (Gerald Westheimer and Cyril Rashbass), 833
Verhulst, Prof. Michel (edited by Prof. C. West and) : Management Sciences, Models and Techniques—Proceedings of the Sixth International Meeting of the Institute of Management Sciences, Paris, 1959, *review* by T. H. Hawkins, 209
Vermiculite : Complexes of, with Amino-Acids (G. F. Walker and W. G. Garrett), 1389
Vernon, Dr. Leo P. : Appointed director of research of the Charles F. Kettering Laboratory, Yellow Springs, Ohio, 229
Veronal Buffers : Use of, in Formalin Fixatives (Dr. S. J. Holt and Dr. R. Marian Hicks), 832
Vertebrate Phylogeny, *review* by Dr. E. Trewavas, 945
Vertébrés : Théories de l'Évolution des (Erik Jarvik), traduction du Prof. J. P. Lehman, *review* by Dr. E. Trewavas, 945
V.H.F. (U.H.F. and) Television Surveys : A Mobile Laboratory for (E. W. Taylor and L. C. Munn), 1355
Very-Low-Frequency Modulation of Discrete Frequency Solar Noise Bursts (Dr. Jules Aarons, Santimay Basu, William Kidd and Richard Allen), 56
Vesicle (Sensory), of the Ascidian Tadpole : Electron Microscope Observations of the Receptors in the (Noël Dilly), 786
Vesin, Dr. P. (Milhaud, Dr. G., and) : Calcium Metabolism in Man with Calcium-45—Malabsorption Syndrome and Exudative Enteropathy, 872
Veterinary Anatomy at Liverpool, 648
Veterinary College (New York State), and others : Conference on Transfer of Calcium and Strontium across Biological Membranes, 1250
Vibrations (Initial), of a Supported Beam (Dr. R. V. Sharman and D. White), 692
Vice-Chancellors and Principals of the Universities of the United Kingdom, Committee of : Conference of professors of mathematics from the Universities of Great Britain, to consider the Teaching of Mathematics, 1145

Vicia faba : Sub-Chromatid Structure and Chromosome Duplication in (W. J. Peacock), 832
Vickerman, K. (Baker, Dr. J. R., and) : Parasite Biology (Significance of the Trypanosomatid Kinetoplast), 134
Vickers, K. U., and McClean, R. : Furunculosis in Lough Neagh Pollan *Coregonus pollan*, Thompson, 930
Vickery, B. C. : The Use of Scientific Literature, 1347
Victoria, Museum of Applied Science of (Melbourne) : Report for 1959-60, 124
Victoria, Royal Society of : First award of the Research Medal made to Dr. George Baker, 1247
Victoria (Lake) : A Phytoplankton Multi-Sampler and its Use in (Dr. J. H. Evans), 53
Victorian American : The—Lithographs from the Harry T. Peters 'American on Stone' Collection (Antony N. B. Garvan and Peter C. Welsh), 226
Vidal-Beretervide, Kempis (De Vries, Juan X., and) : Some New Esters of Chromone-2-Carboxylic Acid, 171
View : Science and Education—the Teachers' Point of, 555
View (A Soviet), of British Libraries (V. I. Shunkov, G. G. Firsov and N. I. Tyulina), translated by A. Thompson, (Library Association, Pamphlet No. 22), 752
Viewing and Listening : Facts and Figures about (British Broadcasting Corporation), 1051
Villet, R. H. : Technology of Chemical Processing, *review*, 1131
Vilstrup, Dr. Th., and others : Displacement Potentials and Bending of Rod-like Polyelectrolytes, 484
Viral Infection in the Chick Embryo : Mechanism of Recovery from (Dr. Samuel Baron and Alick Isaacs), 97
Viral Protein during Multiplication of Fowl Plague Virus : Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the Utilizability of (Dr. Christoph Scholtissek and Rudolf Rott), 1023
Viral Ribonucleic Acid : Influence of *p*-Fluorophenylalanine on the Production of, and on the Utilizability of Viral Protein during Multiplication of Fowl Plague Virus (Dr. Christoph Scholtissek and Rudolf Rott), 1023
α-Virginis (Spica) Nebula (Walter A. Feibelman), 1083
Virtual Absence of Glutathione Instability of the Erythrocytes among Armenians in Iran (Dr. J. E. Bowman and Dr. D. G. Walker), 221
Virulence in *Rhizobium trifolii* : Transfer of (Dr. Hans Ljunggren), 623
Virus (Arbor), Group *B* : Infectious Ribonucleic Acids derived from Mouse Brains infected with Two Kinds of (Prof. Masahiro Nakamura), 624
Virus (Cactus), in the United States (the late Irene M. Sammons and Prof. M. Chessin), 517
Virus (Foot-and-Mouth Disease) : Effect of *p*-Fluorophenylalanine on the Multiplication of (F. Brown, D. N. Planterose and Doreen L. Stewart), 414
Virus (Fowl Plague) : Influence of *p*-Fluorophenylalanine on the Production of Viral Ribonucleic Acid and on the Utilizability of Viral Protein during Multiplication of (Dr. Christoph Scholtissek and Rudolf Rott), 1023
Virus (Leaf Curl), and the Flavonoid Content of Resistant and Susceptible Strains of Cotton (Dr. Esam M. Moustafa), 415
Virus (Leukaemogenic) : Leukaemia in the Progeny of Mice inoculated with a (Dr. M. H. Salaman and J. J. Harvey), 509
Virus (Polio-) : Chromatographic Analysis of Infectious Ribonucleic Acid from (C. Cocito, A. Prinzie and P. De Somer), 573
Virus (Polio-) Multiplication : Effects of Heavy Water on—Results and Speculations on Mechanism (Dr. David Kritchevsky, Dr. Richard I. Carp and Dr. Hilary Koprowski), 250
Virus (Polyoma) : Induction of Tumours by—Enhancement by Chemical Agents (K. E. K. Rowson, F. J. C. Roe, J. K. Ball and Dr. M. H. Salaman), 893
Virus (Tobacco Mosaic) (TMV) : Chromatography of, on Chitin Columns (P. M. Townsley), 626
Virus (Tobacco Mosaic) (TMV) Lesion Number and Concentration : Relationship of, to the Rate of Lesion Production on Pinto Bean (John Piacitelli and Prof. Vincent Santilli), 624
Virus (Wild Cucumber Mosaic) : Unusual Base Composition of the Ribonucleic Acid of (H. Yamazaki and Prof. Paul Kaesberg), 96
Virus Diseases : Research into (Pfizer Group Laboratories for), 20
Virus Diseases (Potato) : Proceedings of the Fourth Conference on (Braunschweig, 1960), edited by J. Brandes, R. Bartels, V. Völk and C. Wetter (Biologische Bundesanstalt für Land- und Forstwirtschaft, Braunschweig), 657
Virus Filtration : A Method of Treating Asbestos Filter Pads for (N. St. G. Hyslop), 305
Virus Protein Production (Turnip Yellow Mosaic) : Stimulation of, by 2-Thiouracil (Dr. R. I. B. Francki and Dr. R. E. F. Matthews), 1078
Viruses : Plant (Dr. Kenneth M. Smith), third edition, *review* by Dr. B. D. Harrison, 111
Viruses (Bacterial) : Papers on (selected by Gunther S. Stent), *review* by L. B. Quesnel, 320
  X-Ray Diffraction Studies of (Dr. A. C. T. North and Prof. Alexander Rich), 1242
Viruses (Influenza), Receptor-destroying Enzyme and Proteases : Action of, on Blood Group Agglutinogen M^g (Prof. Georg F. Springer and Dr. Karlheinz Stalder), 187
Viscometry of Dilute Solutions of High Polymers : Elimination of the Absorption Correction in the (H. van Oene and Prof. L. H. Cragg), 1160
Viscosity–Temperature Relationships for Dilute Solutions of High Polymers (Dr. W. R. Moore), 1292
Vision (Human) : Limits of (Dr. R. A. Weale), 471
Vision (Peripheral) : Effect of Attention in (Arthur Thomson), 732 ; (B. Babington Smith), 732
Vision Research, Vol. 1, Nos. 1-2, 650
Visit of Russian Scientists to Harwell, 957
Visual Constancy : Measuring, for Stationary or Moving Objects (S. M. Anstis, C. D. Shopland and R. L. Gregory), 416
Visual Gnostic Functions and Emotional Behaviour : Changes in, following Unilateral Temporal Pole Damage in the 'Split-Brain' Monkey (Dr. J. L. deC. Downer), 50
Vitamin: Metabolites of Vitamin B_{12} in Bile after Parenteral Administration of the (Dr. John B. Stokes), 807
Vitamin-Levels in Blood and Serum (H. Baker, O. Frank, I. Pasher, Dr. H. Sobotka and S. H. Hutner), 78
Vitamin B_{12} : Gel Filtration of Sea-Water—Separation of Free and Bound Forms of (Dr. K. W. Daisley), 868
  Metabolites of, in Bile after Parenteral Administration of the Vitamin (Dr. John B. Stokes), 807
Vitamin B_{12} (Specifically Bound Cobalt-58) : Selective Uptake of, by Human and Mouse Tumour Cells (Dr. Bernard A. Cooper and Dr. William Paranchych), 393
Vitamin B_{12} and Intrinsic Factor : European Symposium on, 1154
Vitamins (Added) : Effect of, on the Phagocytic Activity of the Reticulo-Endothelial System of Mice (J. Cordingley and Prof. T. Nicol), 82
Vitreous Silica : Permeation of Gaseous Oxygen through (Dr. Francis J. Norton), 701
Vitrinite in Coal : Electron Microscopic Observations of Structure in Ultra-Thin Sections of (J. T. McCartney, Sabri Ergun and R. E. Walline), 1361
Vivian, H. E. (Lawrence, M., and) : The Action of Calcium Chloride on Mortar and Concrete, 125, *erratum*, 1145
Vivian, H. E. (Roberts, J. A., and) : The Widening of Expansion Cracks in Mortar by Salt Solutions, 125, *erratum*, 1145
Viviparous Toothcarp : Pathological Parthenogenesis in a (Prof. A. Stolk), 507
Vivonia, Charlotte, and others : Subfractionation of Human Serum Leucine Aminopeptidase, 1203
Vlasov, N. A. (edited by) : Fast-Neutron Spectroscopy (R. V. Rybakov and V. A. Sidorov), translated from the Russian, *review* by Dr. P. A. Egelstaff, 8
Vlček, Augustin (Cook, Margaret J., and) : Sex-Ratio in Mice, 89
Vogel, A. W., and others : N,N'-Alkylene-*bis*(Acrylamides), N-(Acrylamidomethyl)-3-Halopropionamides and related Compounds—a New Series of Anti-tumour Agents, 611
Vohra, K. G., and others : Seasonal Variations of Caesium-137 in Air at Ground-Level, 747
Volcanoes in the West Indies : Research on, 225
Völk, V., and others (edited by) : Proceedings of the Fourth Conference on Potato Virus Diseases, Braunschweig, 1960 (Biologische Bundesanstalt für Land- und Forstwirtschaft), 657
Vollmer, Erwin P. (edited by Gregory Pincus and) : Biological Activities of Steroids in relation to Cancer—Proceedings of a Conference sponsored by the Cancer Chemotherapy National Service Center, National Cancer Institute, National Institutes of Health, United States Department of Health, Education and Welfare, *review* by E. Reid, 1235
Voltage-Clamp Experiments with *Nitella* (G. P. Findlay), 812
Volumes (Relative), of Cytoplasm and Vacuole in *Nitella* (Dr. Paul Saltman and Dr. Tyge Christensen), 825
von Albertini, Prof. A. : Elected a member of the Pathology Section of the Leopoldina German Academy of Sciences, 122
von Bartha, R., and others : Formation and Utilization of Poly-β-Hydroxybutyric Acid by Knallgas Bacteria (*Hydrogenomonas*), 463
von Kármán, Prof. Theodore : Space-Flight and Re-entry Trajectories, 960
Voorhis, Arthur D. : Evidence of an Eastward Equatorial Undercurrent in the Atlantic from Measurements of Current Shear, 157
Voprosy Psikhologii (translations from, to be published in *Problems of Psychology*), 958
Vose, P. B., and Griffiths, Dr. D. J. : Manganese and Magnesium in the Grey Speck Syndrome of Oats, 299
Voss, Dinor O. (Bonner, jun., Dr. Walter D., and) : Some Characteristics of Mitochondria Extracted from Higher Plants, 682
Vyskočil, František (Novotny, Dr. Ivan, and) : Inhibition by Physostigmine of the Increase of Oxygen Consumption induced by Potassium in Muscle, 916

WADA, Dr. Yasuo, and others : Quantitative Determination of Metadrenaline and Normetadrenaline in Normal Human Urine, 599
Waelsch, Prof. Heinrich, and others : Incorporation of Histamine into Liver Protein *in vivo*, 1204
Waight, Dr. E. S. : Infra-Red Arts, *review*, 315
Wajda, Isabel, and others : Incorporation of Histamine into Liver Protein *in vivo*, 1204
Waldi, Dr. D. : Paper Chromatography (Separation of particular families of Compounds—Chromatographic Separation of some two hundred Alkaloids on Formamide-treated Paper), 759
Wales : Report on the Water Resources of (Welsh Advisory Water Committee), 135
Wales (England and), National Foundation for Educational Research in : *Technical Education Abstracts from British Sources*, Vol. 1, No. 1, September–December 1960, 21
Walker, B. : Appointed a Research Fellow in the Department of Industrial Metallurgy, University of Birmingham, 337
Walker, C. H. M., and others : Amino-acid Composition of Serum Mucoprotein in Rheumatic Fever, 922
Walker, Prof. D. : Awarded a Royal Society and Nuffield Foundation Commonwealth Bursary, 126
Walker, D., and others : Amino-acid Composition of Serum Mucoprotein in Rheumatic Fever, 922
Walker, Dr. D. G. (Bowman, Dr. J. E., and) : Virtual Absence of Glutathione Instability of the Erythrocytes among Armenians in Iran, 221
Walker, D. M. C. (King-Hele, D. G., and) : Density of the Upper Atmosphere determined by Satellite Orbits, and its Variation during 1957-61, 114
Walker, G. F., and Garrett, W. G. : Complexes of Vermiculite with Amino-Acids, 1389
Walker, P. J. : Parasite Biology (Significance of the Trypanosomatid Kinetoplast), 134
Wallace, H. R. : Nematology (Orientation of *Ditylenchus dipsaci* to Physical Stimuli), 1048
Wallace, M. M. H. : Enhanced Plant-Growth with Two Systemic Insecticides, 513
Walline, R. E., and others : Electron Microscopic Observations of Structure in Ultra-Thin Sections of Vitrinite in Coal, 1361
Wallis, D. I. : Response of the Labellar Hairs of the Blowfly, *Phormia regina* Meigen, to Protein, 917

Wallis, Dr. F. S. : The Museums Association, 553
  Museums and Galleries, 862
Walls (Bacterial) : Teichoic Acids and the Structure of (Dr. A. R. Archibald, J. J. Armstrong, Prof. J. Baddiley and J. B. Hay), 570
Walters, Dr. S. M. : Flora Europaea (Problems of Abstracting and Indexing European Taxonomic Literature), 448
Walton, E., and others : Adrenergic Neurone-blocking Agents related to Choline 2,6-Xylyl Ether Bromide (*TM* 10), Bretylium and Guanethidine, 1312
Walton, Prof. John : Tropical Floras in the Tertiary in Southern England, *review*, 209
Wangensteen, Dr. Owen H. : Elected an Honorary Fellow of the Royal College of Surgeons of England, 126
War : Arms and Security, a Mathematical Study of the Causes and Origins of (Dr. Lewis F. Richardson), edited by Nicolas Rashevsky and Ernesto Trucco, *review* by Sir Cyril Burt, 427
  Mathematical Studies in the Psychology of, *review* by Sir Cyril Burt, 427
War on Hunger : A Strategy for the (Sir Joseph Hutchinson and Prof. A. H. Bunting), 539
Warburton, Frederick E. : Inclusion of Parental Somatic Cells in Sponge Larvae, 1317
Ward, Prof. A. G. : At the Twenty-first Meeting of the Research Panel of the British Gelatine and Glue Research Association (Rupture Properties of Gelatine Gels), 857
Warm-water Species in the Plankton off Newfoundland during Winter Months (V. Bainbridge), 1216
Warner, Brian : Holistic Approach to Selenology, 586
Warner, N. L. (Szenberg, Dr. Aleksander, and) : Large Lymphocytes and the Simonsen Phenomenon, 920
Warren, Diana M., and Wilkins, Malcolm B. : An Endogenous Rhythm in the Rate of Dark-Fixation of Carbon Dioxide in Leaves of *Bryophyllum fedtschenkoi*, 686
Warren, Sir Hugh : *Obituary* by L. J. Davies, 1042
Watanabe, Hiroshi, and others : Isolation of Nigerose and Kojibiose from Dextrans, 278
Water : Pollution of, by Tipped Refuse—Report of the Technical Committee on the Experimental Disposal of House Refuse in Wet and Dry Pits (Ministry of Housing and Local Government), 864
Water in the Chick Blastoderm : Distribution of (A Morphogenetic Effect of Beta-Mercaptoethanol), (A. Jurand and Dr. Peter Tuft), 1073
Water in the Embryo : Distribution of (A Morphogenetic Effect of Beta-Mercaptoethanol), (Dr. Peter Tuft), 1072
Water in Great Britain : Conservation of, 421
Water from the Skin of the Ox : Increase of Evaporative Loss of, in response to Local Heating of the Hypothalamus (Dr. D. L. Ingram, J. A. McLean and Dr. G. C. Whittow), 81
Water (Drinking) : European Standards for (United Nations, World Health Organization), 1261
Water (Drinking-) Standards (Nora H. Johnson), 1261
Water (Fresh-) Eutrophic Lakes of India : Hydrogen Ion Concentration, Plankton and Fish in (Dr. S. M. Das), 511
Water (Heavy) : Effects of, on Poliovirus Multiplication—Results and Speculations on Mechanism (Dr. David Kritchevsky, Dr. Richard I. Carp and Dr. Hilary Koprowski), 250
Water (New Zealand Rain-) : Barium-140 in (G. S. McNaughton and R. N. Woodward), 1344
Water (Old Sea-) : A Lake in British Columbia containing (Dr. P. M. Williams, Prof. W. H. Matthews and Prof. G. L. Pickard), 830
Water (Sea-) : Gel Filtration of—Separation of Free and Bound Forms of Vitamin B_{12} (Dr. K. W. Daisley), 868
Water (Sea-) and Chloride Solutions : Formation of Calcium Chloraluminate by Interaction of Portland Cement with (Dr. L. Heller and Dr. M. Ben-Yair), 488
Water (Warm-) Species in the Plankton off Newfoundland during Winter Months (V. Bainbridge), 1216
Water Committee, Welsh Advisory : Report on the Water Resources of Wales, 135
Water Movement (Net) : Comparison of Short-Circuit Current and, in Single Perfused Proximal Tubules of Rat Kidneys (Dr. Erich E. Windhager and Dr. Gerhard Giebisch), 1205
Water Resources of the United States (Prof. W. G. V. Balchin), 444
Water Resources of Wales : Report on the (Welsh Advisory Water Committee), 135
Water Treatment and Examination, Society for : Autumn Meeting, 856
Water Vapour (Precipitable), over the United States : Chemical Composition of (Dr. Henry M. Papée and Dr. Alberto Montefinale), 136
Water-soluble Carbonates : Infra-Red Spectra of (Herman A. Szymanski and Richard Povinelli), 64
Water and Alcohol Consumption : Comparison between, in Six Animal Species in Free-choice Experiments (Dr. Alpo Arvola and Dr. Olof Forsander), 819
Waterman, Talbot H. (edited by) : The Physiology of Crustacea, Vol. 2, Sense Organs, Integration and Behaviour, *review* by Dr. J. Green, 428
Waters, A. H. : Vitamin B_{12} and Intrinsic Factor (Relationships between Vitamin B_{12} and Folic Acid), 1156
Waters, Dr. W. A. : Physical Methods of Organic Chemistry, *review*, 317
Waters (Acid–Sulphate–Chloride) : Hot Spring Areas with (Dr. A. J. Ellis and S. H. Wilson), 696
Waters (Near-shore), of Porto Novo, South India : Occurrence of *Eutrichocheles modestus* (Herbst) in the (K. Balasubrahmanyan and Dr. J. Jacob), 830
Waters (Surface and Underground) : Uranium in British (J. D. Peacock), 1189
Watkin, Brian : Sterilizing Materials for Hospitals, 1044
Watkins, Dr. J. C. (Curtis, Dr. D. R., and) : Analogues of Glutamic and γ-Amino-*n*-butyric Acids having Potent Actions on Mammalian Neurones, 1010
Watkins, S. B. : Appointed to the University of London readership in chemical engineering at King's College, London, 546, 651
Watson, Dr. D. G. : Glasgow fellowship in chemistry renewed for 1961-62 by the Ramsay Memorial Trust, 337
Watson, Prof. H. E. : The Development of the Neon Glow Lamp (1911-61), 1040
Watson, T. E. (Roff, H. E., and) : Job Analysis (Institute of Personnel Management), 336
Watson, Prof. W. H. : A Concept of Atomic Existence, 658
Watson-Munro, Prof. C. N. : *Obituary* of Dr. G. C. J. Dalton, 1142
Watt-Carter, D. E., and Corke, R. L. : Effect of External Conditions on the Phase of Radio Signals, 1286
Watts, J. C. D. : Seasonal Fluctuations and Distribution of Nitrite in a Tropical West African Estuary, 929
Watts, R. E. (Glueckauf, Dr. E., and) : Non-Uniformity of Cross-linking in Ion-Exchange Polymers, 904
Wave (*P*-) (Refracted) : Possible Method for Increasing the Signal-Noise Ratio in the Detection of the First Motion of a (F. A. Key, J. K. Wright, E. W. Carpenter and B. M. H. Stott), 1382
Wave Discharges (Spike and), and Alterations of Conscious Awareness (L. Goldie and J. M. Green), 200
Wave Propagation and Group Velocity (Dr. Léon Brillouin), *review* by Prof. M. H. L. Pryce, 104
Waves' ('Blood) : Brain Waves and (Henry R. Pantek), 577
Waves (Brain), and 'Blood Waves' (Henry R. Pantek), 577
Waves (Surface), in Anisotropic Elastic Media (V. T. Buchwald and A. Davis), 899
Waves (Ultrasonic): Aniline Oxidation initiated by (Dr. Wiktor Wawrzyczek), 701
Wawrzyczek, Dr. Wiktor : Aniline Oxidation initiated by Ultrasonic Waves, 701
Wax (Surface), on Leaves : Physiological Significance of (D. M. Hall and R. L. Jones), 95
Weald (Western) : The Land and Man in the (Prof. S. W. Wooldridge), 132
Weale, Dr. R. A. : Limits of Human Vision, 471
Weathered Karroo Dolerites : Climate and (Dr. H. H. Weinert), 325
Weaver, Dr. Warren : A Great Age for Science, 312
Weaver-Finches (*Quelea quelea*) : Melanism in Captive (Dr. B. Lofts), 993
Webb, Prof. D. A. : Flora Europaea (Problems of Abstracting and Indexing European Taxonomic Literature), 448
Webb, Dr. J. S. : Appointed to the University of London chair of applied geochemistry at the Imperial College of Science and Technology, 229
Weber, Prof. K., and others : Inhibition of Chemi-Luminescence of Luminol by means of Oximes, 177
Weddell, Dr. A. G. M. : Assessment of Pain (Structure of the Nerve Terminals in the Skin as they appeared in Electron and Optical Microscopy), 1353
'Wedge' Type Instability (A New), observed in a 'Theta' Pinch (J. K. Wright, R. D. Medford, J. D. Herbert and R. C. Pottinger), 1054
Weedon, Prof. B. C. L. : Terpene Chemistry, *review*, 1234
Weeds in Britain, *review* by Dr. Alec Lazenby, 842
Weeds and Aliens (Sir Edward Salisbury), *review* by Dr. Alec Lazenby, 842
Weeks, J. L., and others : Irradiated Lithium Fluoride as an Optical Filter in the Far Ultra-Violet, 1186
Weenink, R. O., and others : Lipids of the Common Pea (*Pisum sativum* L.) with special reference to the Occurrence of Galactolipids, 1301
Weiner, Prof. Murray, and others : Lack of Effect of Coenzyme Q_{10} on Coumarin-induced Hypoprothrombinaemia, 711
Weinert, Dr. E.: Flora Europaea (Problems of Abstracting and Indexing European Taxonomic Literature), 448
Weinert, Dr. H. H. : Climate and Weathered Karroo Dolerites, 325
Weinman, Dr. J., and Manoach, Dr. M. : Biorheology and Microcirculation (Photoelectric Techniques for Studying the Peripheral Circulation in Man), 758
Weinshelbaum, Dr. Edward I., and Wool, Dr. Ira G. : Effect of Adrenalectomy and Corticosteroids on Distribution of Radioactivity in Protein of Cell Fractions from Myocardial Slices, 1401
Weischer, B. : Nematology (Discovery of Two Species of Desmoscolecidae in Vineyard Soils from Bad Ems), 1048
Weiss, Dr. A. D. (Kay, Prof. H., and) : Relationship between Simple and Serial Reaction Times, 790
Weiss, J. B. (Smith, Dr. I., and) : Paper Chromatography, 759
Weiss, Prof. Joseph J., and others : Radiation-induced Formation and Reactions of the Formyl Radical Ion, 1386
Weiss, Dr. Leonard : Sialic Acid as a Structural Component of some Mammalian Tissue Cell Surfaces, 1108
Weissberger, Arnold (edited by) : Physical Methods of Organic Chemistry, third edition, Parts 3 and 4, *review* by Dr. W. A. Waters, 317
Weissberger, Arnold, and others (edited by) : Organic Analysis, Vol. 4, *review* by Dr. D. T. Lewis, 741
Weitz, B. : Immunity to Protozoa (Immunity in Trypanosomiasis), 552
Welbourn, B. : *Obituary*, 542
Welch, Dr. F. B. A., and Trotter, Dr. F. M. : Geology of the Country around Monmouth and Chepstow (Memoirs of the Geological Survey of Great Britain—England and Wales), 227
Welch, J. H. : Ternary Compound Formation in the System $CaO–Al_2O_3–MgO$, 559
Welding Research Association (British) : New Laboratory (R. P. Newman), 1147
Welfare State : Industrial Relations in the, 1129
Welfare (Animal), Universities Federation for : Annual Summer Congress, 755
  Symposium on the Assessment of Pain, 1353
Wellcome Research Fellowships (Animal Health Trust Awards), 1250
Wellcome Trust (Carlsberg Foundation and the) : Award of Carlsberg–Wellcome Research Fellowships for 1960-61, 754
Wellens, John : Educational Television—a Survey and a Plan, 226
Welsh, Peter C. (Garvan, Antony N. B., and) : The Victorian American—Lithographs from the Harry T. Peters 'American on Stone' Collection (Smithsonian Institution, Publication 4466), 226
Welsh Advisory Water Committee : Report on the Water Resources of Wales, 135
Welsh College of Advanced Technology (Dr. A. Harvey), 127
Wentworth, J. W. : At the Maxwell Colour Centenary Conference (Colour Television), 11
Werner, Dr. A. E. : At the sixty-seventh Annual Conference of the Museums Association (Problems of Conservation), 553
West, Prof. C., and Verhulst, Prof. Michel (edited by) : Management Sciences, Models and Techniques—Proceedings of the Sixth International Meeting of the Institute of Management Sciences, Paris, 1959, *review* by T. H. Hawkins, 209

PHYSICS AND ELECTRONICS LIBRARY

THE NATIONAL REFERENCE LIBRARY FOR SCIENCE AND TECHNOLOGY

ABOUT a year ago, on May 31, 1960, the Minister for Science, in reply to a question in the House of Lords, announced that the National Reference Library of Science and Invention, which he had already stated on July 30, 1958, was to be housed in a new Patent Office building to be erected on the South Bank in London, is to be formed as part of the British Museum Library; it was to be housed as a separate unit, and scientific publications at present in the British Museum Library would be incorporated in the new Library. Lord Hailsham then said that the terms of a lease of the site were being settled between the Ministry of Works and the London County Council, and that it was hoped to start building in the spring of 1963, with the view of completion by the end of 1965. Some further information was supplied by the Parliamentary Secretary for Science, Mr. Denzil Freeth, in replying for the Government in an adjournment debate on the subject on March 14, 1961; further, the Association of Special Libraries and Information, in view of the importance of the issues involved, has devoted almost the whole of the March 1961 issue of the *Journal of Documentation* to a symposium of important papers on the subject.

In the first of these, Prof. R. S. Hutton, writing with the authority of his experience on the Council of the Association of Special Libraries and Information Bureaux, and as a user of the Patent Office Library for nearly sixty years, reviews the contribution which that Library has made to the needs of the scientist and technologist, its decline in standards since 1914, and the official procrastination both before and after the Second World War. The difficulties and problems which any such library must face are fairly though briefly stated, but Prof. Hutton lays the responsibility for the present situation unequivocably where it belongs—on the shoulders of successive Governments which have refused to face the issues clearly presented to them by their own advisers. In the second paper, Mr. E. M. Nicholson, director-general of the Nature Conservancy and chairman of the Scientific Library and Technical Information Committee of the Advisory Council on Scientific Policy, reviews in greater detail the steps which, after the abandonment of the proposal for a 'science centre' in London, issued in the present project. He is no more inhibited than Prof. Hutton in his criticism of Government delays, and it is significant that, in welcoming the physical link of the new library with the Patent Office in occupying the same building, he gives as one reason the fact that the London County Council has made it a condition of providing this site that building should begin in the near future. This, Mr. Nicholson quietly remarks, provides the best possible safeguard against a continuation of procrastination in getting on with the job. For all the lip service which Governments of both political parties have paid to the need to support scientific and technical research and its application, and to expand the number of scientists and technologists, it is, in fact, difficult to parallel the record of neglect, indifference and waste of public money and talent which has characterized official policy in this field during the past fifteen years.

A second reason which Mr. Nicholson gives for welcoming the new site is its proximity with a great complex of offices of one of the largest industrial concerns in Europe. This, he rightly points out, should make contact with users easier. Further, he suggests that had adequate contact been maintained between scientific libraries and their users, these libraries would not, alone among scientific institutions, have failed to benefit by the greatly increased resources recently made available for science. At the top level, this lack of contact has meant that even the high prestige and assiduous efforts of the Advisory Council on Scientific Policy have barely been able to neutralize the apathy and inertia which beset almost every effort to secure greater resources for the national institutions of Britain in the library field.

That is putting it generously, for not every informed observer would concede as much. Moreover, Mr. Nicholson emphasizes that information and advice have had in consequence to be obtained from a much more limited range of sources than would be expected in view of the number of interests and institutions potentially concerned; and he suggests that there is virtually no body of senior people professionally trained both as scientists and librarians who could form a source of man-power. That proposition is more open to debate, however, though admittedly on any definition there are few enough such senior people. Responsibility, however, lies to some extent with the profession itself: the perennial discussions on training intelligence or information officers and librarians have not always been either so profitable or constructive as they might have been.

Whether the work that has gone into the launching of the National Lending Library for Science and Technology will be of some benefit to the Reference Library also remains to be seen; but Mr. Nicholson is possibly a little optimistic in looking to the advisory committee under Sir Lindor Brown's chairmanship. It is precisely in respect of the representation of industrial users that the composition of that committee has been criticized. Prof. Hutton, who equally stresses the importance of the users expressing their point of view on the full-scale needs of these libraries, looks rather to the Association of Special Libraries and Information Bureaux, and urges that advisory committees for each library, and opportunities for those who use the libraries to voice their needs, are most desirable. Mr. Freeth, on March 14, explicitly committed the Government to the establishment of an advisory committee for the new library.

Mr. Nicholson lays some stress on the recruitment of suitably qualified scientific staff with adequate competence in librarianship, and is disturbed that recruitment should seriously be contemplated of librarians who know no science or scientists with no training in librarianship. On this point there has been some criticism of the policy adopted for the National Lending Library, on which Dr. D. J. Urquhart does not appear to have entirely satisfied his critics. On Mr. Nicholson's further point that, in organizing the accessibility and communication of this vast harvest of scientific research, we should be virtually devoid of research results and advice in the provision and organization of scientific libraries, some reassurance is to be found in Mr. Freeth's reply on March 14. The Government is already considering how best research into information techniques can be promoted, and it is fully agreed that the new Library should co-operate in this kind of research in any way in which it may be able.

In the meantime, however, the National Science Foundation in the United States is very actively promoting such investigations, and a touchstone of the Government's sincerity in this particular respect may well be found in the extent to which the Association of Special Libraries and Information Bureaux is enabled to undertake similar investigations. This, of course, is not to deny the importance, recognized by Mr. Freeth, of sound judgment in the selection of projects. The formulation and selection of projects, moreover, need not await the coming into operation of the new Library, and, as Mr. Nicholson's paper sufficiently indicates, there are many matters on which we are as yet too inadequately informed for sound decisions as to the equipment and operation of a first-class modern scientific library. That could well be totally different from libraries as even many librarians now visualize them.

In view of the importance of co-operation between user and library, the remaining two papers in the symposium are of special interest. Miss Maysie Webb, who in April 1960 was appointed head of the Patent Office Library with this preparatory work in mind, reviews the pattern of usage of the present Library and the plans for the future; and Mr. A. H. Chaplin, keeper in the Department of Printed Books, British Museum, to which the new reference Library will be attached as a division, considers some of the problems arising out of that relation. Mr. Freeth, on March 14, also referred to the work being done on the internal arrangement of the new Library by Mr. Wilson, of that Department, and by Sir Frank Francis, director of the British Museum, who himself is a member of the library committee of the Advisory Council for Scientific Policy. He rejected for the present Mr. Austen Albu's suggestion of a special advisory committee, and recommended that suggestions which scientists, industrialists, librarians or others may have for the new Library should be sent direct to the people he had named as concerned with its planning.

Miss Webb begins by directing attention to three broad principles on which the operation of the Patent Office Library has been based in the past. First, it has been recognized that in an economy increasingly geared to science and technology, it is prudent to make freely available a store of such knowledge, thus providing the scientist with his raw materials, stimulating invention and facilitating the work of the technical community in general. This outlook is reflected in the 'open-access' facilities, and Miss Webb states explicitly that the whole of the new South Bank library premises will be designed with open access as a basic requirement. This facility has been a most valuable feature of the Patent Office Library; while Miss Webb also indicates that the Library staff will play a more active part in exploiting the resources of the new Library and in helping users at all levels, her paper will be warmly welcomed by scientists and technologists for this firm assurance alone, with its corollary that seating accommodation for at least half the expected number of readers, close to or among the bookshelves, is to be provided.

Miss Webb, moreover, is well aware of the frustration which can arise from the lack of immediacy in a closed-access system, and there is already some uneasiness on this score in view of the fact that this new reference library is to be associated with the British Museum. It was recently pointed out in the House of Commons that, while every user of the British Museum Reading Room greatly appreciates the efficiency, courtesy and ability of the staff, it still takes nearly an hour and a half to obtain a book compared with 12 or 15 min. at the Bibliothèque Nationale in Paris. Miss Webb's paper offers some assurance on this point, and it is evident, too, from Mr. Chaplin's paper that the importance of the time factor in the new arrangements is fully appreciated on the British Museum side. Although many administrative questions have still to be resolved, the final arrangements will be such as to support fully the open access principle and provide rapid and frequent transport between the two libraries for handling the marginal material or older material of only occasional usefulness transferred to the British Museum itself.

The third principle emphasized by Miss Webb is that the Patent Office Library has been concerned in the past with the field of invention, catering in general for the graduate or practising scientist. The new library will broaden the range and thus alter the balance, and in discussing plans for the future Miss Webb refers to the possibility of increasing the depth as well as the range of subjects covered, particularly in respect of material in foreign languages, technical trade literature and translations. It is also hoped that much extra material will be available as a result of the link with the British Museum, though legislation will be needed before this material could be available for consultation at short notice.

This aspect is discussed more fully by Mr. Chaplin, who visualizes the British Museum playing an important part in research in the history of science, provided the legislation referred to by Miss Webb is enacted and that the British Museum is assured of sufficient storage space to receive the material discarded by the Reference Library. Moreover, while he emphasizes the need for rapid and frequent transport between the two Libraries, he recognizes that there are other means of meeting urgent demands which require attention; such devices as the telegraphic transmission of photo-copies or closed-circuit television may be instanced. Like Miss Webb, Mr. Chaplin recognizes that documentation activities should have an important place in the programme of the new library, and he visualizes this as a more specialized extension of work already undertaken by, or in close association with, the British Museum. Miss Webb also referred to the preparation of subject bibliographies and selective reading lists, and it is clear that she contemplates that the new Reference Library will be staffed so as to admit of such activities to a certain extent.

How far such activities will materialize remains to be seen. At present only two of the staff of the Patent Office Library are science graduates and nine professional librarians. While it is not expected that specialists in all the subjects to be covered will be recruited, even in the planning period of the next few years it would seem that there is room for a good deal of improvement in the proportion of academic and professional staff. Miss Webb appears to be well aware of the problem, however, and to recognize that such staff is needed long before the new Library begins to operate.

Meanwhile, Miss Webb puts the emphasis on a detailed research programme, and it should be noted that she looks to find some of the answers to questions about the new Library and its readership in co-operation with its users. The Advisory Council on Scientific Policy has already recommended that research into the whole problem of collation and dissemination of scientific information should be undertaken under the auspices of the new National Lending and Reference Libraries for Science and Technology, and Miss Webb recognizes that, given all the co-operation of users, this work should be proceeding already and requires the recruitment of staff for the purpose.

On that point Mr. Freeth was less reassuring than he might have been. He agreed that the new Library needed a sufficient staff with academic training capable of extending their fields of knowledge in a scientific direction, and that it should have an expert staff capable of providing a first-rate information service for those using the library. But he appeared to think that the matter of research into information techniques and the like could be left until the new Library is operating. As already indicated, this will be a test of the reality of the Government's interest in the matter, and in this connexion the concluding paragraph of Mr. Nicholson's paper should be considered.

"Let us hope", he wrote, "that those who now have to put into execution this vital project will succeed in realizing their opportunities to the full. Let us also remember that until we see the National Science Reference Library opened we can never feel actively confident that there will not be some other slip between the cup and the lip. Anyone who may be tempted to jog the arm that lifts the cup should, therefore, think twice about it." From one who has been so closely associated with the Scientific Library and Technical Information Committee of the Advisory Council on Scientific Policy, such a caution is the more significant. It is clear that Miss Webb and those associated with her in planning the new Library and its services have sensible views of its functions and possibilities, that they are aware of the potentialities of new techniques, as well as of the solid advantages of some practices of the past, and that they are anxious to secure the co-operation of all potential users. Such co-operation should be given generously and imaginatively, but more than constructive criticism is required. Let it not be forgotten that Government parsimony and short-sightedness could yet once again jettison the whole scheme, that procrastination in dealing with needs as they arise could multiply costs once again out of all proportion and destroy efficiency. It is for users, therefore, to co-operate also in seeing that at all levels the Government is kept aware of the magnitude and urgency of the problem, and the needs of the new Library are clearly and continuously presented throughout the planning period and when it is fully operational. In that task not only the individual scientists and technologist but also their professional associations, and such bodies as the Association of Special Libraries and Information Bureaux, the Parliamentary and Scientific Committee and the Advisory Council for Scientific Policy, have a responsibility which should be vigilantly and resolutely discharged.

EXPLOSIVES TECHNOLOGY

Solid Propellent and Exothermic Compositions.
By Dr. James Taylor. (Newnes Technical Surveys). Pp. vii + 153 + 12 plates. (London: George Newnes, Ltd., 1959). 25s. net.

THIS book provides a very useful and interesting survey of the development of exothermic chemical reactions in the solid state as sources of energy for many applications and devices. It contains broad reviews of modern developments in initiators, explosives and propellants. The author, Dr. James Taylor, has spent the greater part of his working life in the explosives industry; he has made many personal contributions to the developments described, and has drawn freely on the work of his colleagues in the Nobel Division of Imperial Chemical Industries, Ltd.

There is a chapter devoted to the history of gunpowder, its applications as a propellant and its present-day use in ignition and delay systems, fireworks and military pyrotechnics. Explosives are rather briefly reviewed—the author dealt comprehensively with the performance of commercial blasting explosives in his monograph *Detonation in Condensed Explosives* (1950). There is a description of the various types of initiating explosives (detonators, fuse-heads and percussion primers) and the modern types of propellants used in small arms and guns are reviewed; this is followed by an interesting account of the gas-producing reactions that have been used in devices to improve the safety of blasting operations. The chapter on rocket motors is particularly well written, and there is an extremely good review of "power cartridges", starting with the "humane cattle killer", which was developed just after the First World War, and leading up to the numerous devices which have been developed in the past thirty years for operations such as starting aircraft engines, inflating life-jackets, propelling model aircraft, etc. All these applications call for a high level of reliability and this has been achieved in spite of the complexity of many of the systems. In each of the fields covered, the thermochemical and ballistic aspects are very adequately dealt with for a proper understanding of the design principles and working of the applications described.

It is, of course, unfortunate that the contributions by Government research organizations towards many of the developments described cannot be dealt with because much of the subject-matter is of a classified nature and this leads, as the author points out in the preface, to some lack of balance in the over-all treatment. However, the book achieves its aim and is warmly commended to those seeking an introduction to branches of explosives technology that have greatly increased in importance in recent years.

W. B. LITTLER

SOME BACTERIAL PLANT DISEASES OF CENTRAL EUROPE

Bacterial Plant Pathogens

By C. Stapp. Translated by A. Schoenfeld. Pp. xviii+292. (London: Oxford University Press, 1961.) 42*s*. net.

DURING the past sixty years the knowledge of plant diseases has been enlarged at an ever-increasing rate, mainly due to the careful investigations of German plant pathologists, which were collected together by Paul Sorauer and appeared in 1928 in the third edition of his *Handbuch der Pflanzenkrankheiten*. As new knowledge accumulated, larger editions were called for, and in each one Dr. C. Stapp contributed the section dealing with bacterial diseases of plants. In the 6th edition, issued in 1956, the material to be dealt with was so great that Dr. Stapp's account was published as a separate volume of the *Handbuch* entitled *Bakterielle Krankheiten*. This great work by so well-known and so highly esteemed an investigator contained accounts of, and references to, all recorded diseases up to 1955 and was admirably illustrated.

The advances in this subject made in the past ten years, the great interest shown by both university and high-school teachers, and the prohibitive price of his *Bakterielle Krankheiten* induced Dr. Stapp in 1958 to bring out a less-expensive book based largely on his previous comprehensive work. It also included accounts of some twenty-four diseases occurring in Europe, with references up to 1957. It was printed on highly glazed white paper on which the numerous photographic illustrations were clearly reproduced and it concluded with a very complete index. The title was *Pflanzenpathogene Bakterien*.

Now, in 1961, this admirable work has been rendered into English because, as Dr. Stapp indicates in the English preface (also dated 1958), besides the rising interest in Germany, a like desire for information on the bacterial diseases of plants has manifested itself in "other Central and Western European countries and also in some countries outside Europe". It is certainly flattering to know that plant pathologists of these "other" countries apparently prefer English to German. The translator has produced an elegant, though not always accurate, rendering of Dr. Stapp's German and includes his very few errors such as *Pseudomonas delphinii* being pathogenic only to the Cruciferae (Stapp, p. 12, Schoenfeld, p. XII) and *Prunus devaricata* for *P. divaricata* (Stapp, p. 177, Schoenfeld, p. 188).

The English version follows exactly the arrangement of the German edition, the chapters, headings and sectional paragraphs are in the same order, and, as in the original, there are two parts, a general part concerned with methods and identification and a special part describing in detail some twenty-four plant diseases. Both parts are equally instructive. In the first we have Dr. Stapp's own bacteriological methods, some of which are rather unusual. He prefers steaming to autoclaving, neutralizes his media either with sodium carbonate or with dilute phosphoric acid and stains his smears on cover-slips, not on slides. The method, which is illustrated, of making transfers of pure cultures whereby both tubes and their extracted plugs are manœuvred into the same hand is not a common practice in Britain nor is it universal in Germany. A slight error occurs in both the German and English editions in the description of sterilizing Crosse and Bennett's selective medium in which the authors state (*Trans. Brit. Myc. Soc.*, 38, 83; 1955) "and sterilized by bringing the pressure slowly (3–5 min.) up to 7 lb." Dr. Stapp's version (p. 26) is "Druck langsam auf 1 atü [that is, 1 atmosphere which equals 15 lb. not 7] bringen und darauf 3–4 Minuten halten". In the reference the abbreviation *Trans.* (*Transactions*) is omitted in both editions (Schoenfeld, p. 10).

In the special part the descriptions of the diseases and their pathogens vary in length, that dealing with crown gall (*Agrobacterium tumefaciens*) being the longest, and containing clear accounts of the various theories of tumour-formation. In the chapter on black-leg of potato nearly 5 pages are devoted to Dr. Stapp's arguments for naming the pathogen *Erwinia phytophthora* (Appel) Holland in preference to *E. atroseptica* (van Hall) Jennison. Of most interest perhaps at the moment is the chapter on fireblight caused by *E. amylovora*, which has only recently been recognized in southern England. The account of plum and cherry canker caused by *Pseudomonas mors-prunorum* (spelt in one word—*morsprunorum*) is thoroughly up to date; the wilt of beans due to *Corynebacterium flaccumfaciens* is also included although it does not occur in Germany.

Some of the phrases used by the translator are apt to be misleading and some are quite inaccurate. As examples, on p. 2 we read about "Koch's steam-pot", a literal translation of "Koch'schen Dampftopf" (p. 19), meaning steam sterilizer or just steamer: on p. 3 is "if the nutrient medium is not bottled immediately", but Dr. Stapp writes (p. 19) "nicht gleich in Röhrchen [that is, tubes] abgefüllt": on p. 4, "The meat infusion is measured and weighed", whereas Dr. Stapp would do one or the other (p. 21, "abgemessen oder abgewogen"). On p. 16 is "breed pathogens from" for isolate in pure culture (German p. 31 "reinzuzüchten") and in the footnote on the same page we find "incubated . . . for the first time" for isolated . . . for the first time (German p. 32, "erstmalig . . . herausgesüchtet"). On the same page occurs "Koch's dishes" for the German (p. 31) "Koch'schen Platterverdünnungen" (that is, Koch's dilution plates). On p. 19 "woodland fruits" is the translation of "Obstgehölze" meaning fruit trees, and later on the same page is "the inserted graft is covered with phloem tissue" for the German (p. 34) "Bast" meaning bast fibre (used by horticulturists).

At the end of section 6 this occurs—"every biologist should acquire during his working life", which is not quite the same as Dr. Stapp's statement (p. 35) "jedem Biologen eigen sein sollte" which might be better rendered—every biologist should naturally possess.

In many places when describing the action of bacteria in milk the German word "peptonisiert" becomes "peptone formed", which may be biochemically correct, but the more common English term would be peptonized or digested or even cleared. On p. 21 the German (p. 37) "auf der letzten Platte" (on the last plate) is rendered "at the bottom of the last plate" and on p. 22 we find the German (p. 37) "rechtwinklig" (right angle) becomes "rectangle"! On p. 55 it is actually stated that "freshly diseased blackleg potato shoots are easily obtainable from the fields throughout the year . . ." an utter impossibility! But Dr. Stapp writes "alljährlich", that is, every year.

Apart from incorrect and misleading statements it would seem that the translator is not too well acquainted with English bacteriological terminology.

A few printing errors have been noted, for example, on p. iv "bakterian" appears for "bakterien" and on p. 146 "See p. 9" should be "See p. 17", p. 236 is followed by p. 137 and in Table 4 on the same pages, *Nicotiana lustica* should be *N. rustica.*

The book concludes with a very comprehensive index after Dr. Stapp's style, but a misprint occurs on p. 286 where *Pseudomonas populans* is printed for *P. papulans*. The numerous references in the text do not all appear at the end of each chapter and for the missing ones recourse has to be made to Dr. Stapp's large volume *Bakterielle Krankheiten.*

Although beautifully produced, the illustrations are not as clear as those of Paul Parey, probably owing to the less highly glazed surface of the cream-coloured paper.

This is not a book which may be recommended for the inexperienced worker as his only source of information. W. J. Dowson

AN APPRAISAL OF PHENOMENOLOGY

The Phenomenological Movement

A Historical Introduction. By Dr. Herbert Spiegelberg. (Phænomenologica, Vols. 5 and 6.) Vol. 1: Pp. xxxii + 392. Vol. 2: Pp. ix + 393–735. (The Hague: Martinus Nijhoff, 1960.) 47.50 guilders the two volumes.

These two volumes, erudite and well produced, set out to offer a historical introduction to that branch of philosophy commonly known as the phenomenological movement. Its chief exponent, Edmund Husserl (1859–1938), would have preferred some such terms as 'circle' to 'movement', but to English-speaking students the difference is immaterial. In fact, the author is at pains to present his work in a form most helpful to readers in the United States: they seem to need a bridge to span the gap between their own intellectual climate and that of Europe. Not that they lack competent exponents; yet the background is very different from what is basically an admixture of *Gestalt* psychology and *Geisteswissenschaften.* Biographers need no reminding that Husserl started as a pupil of the great Weierstrass, and therefore cannot be said to have been devoid of mathematical sensitivity. It is probably true, however, that in claiming phenomenology as fundamental and prior to all scientific thinking he gave an impression of detachment from techniques which might, in a more narrow sense, be said to belong to the natural sciences as we know them. Nevertheless, "back to the things themselves" is not a bad imperative for any laboratory, especially when to it is added the need to orientate ourselves towards phenomena in front of which theoretical patterns have become too obtrusive. That, in brief, is the phenomenologist's aim. Several schools of thought have wrestled with this problem before, but the present attempt is focused more sharply.

Although somewhat negative, one important characteristic of the *Methodik* must be mentioned. It is the critical outlook which emerges in relation to Occam's razor. Probably few devices have been more misconceived and misconstrued. Simplicity and parsimony are all very well as disciplines, but the former is to be distrusted if it means little else than an artificial scraping to the bone of our concepts, and the latter when it leads to a degree of abstraction utterly at variance with the true pattern of Nature. Incidentally, this is why the razor is not the correct tool for—say—rheology and morphology. Here, odd as it may seem, parameters and constants can well be introduced liberally, even if later on their number can be substantially reduced and their scope narrowed. As Dr. Spiegelberg remarks, reverence and the lens are more fitting instruments than a bulldozer. The age-long parable of the wheat and the tares is directly applicable—"Let both grow together until the harvest".

All of which is but to recognize that every type of perception should be given a chance, including even those not necessarily involving the presence of a sense-organ for their registration. Of course, the eye, as the window of the mind, remains paramount, but *gestalten* other than visual are known, and are fully worthy of a place.

The 'feel' of these pages has been deliberately presented in advance of a factual statement of their content. This is because there are almost as many phenomenologies as there are phenomenologists, and to expect a crisp formula describing the labours of the latter would be to ask the impossible. Nevertheless, by a sound system of classification of his material, the author prevents the reader from straying too far from the historical track.

Thus, after some introductory material, the first part deals with the preparatory phase; Part 2 with the German phase. Then comes a very accomplished 'lead-in' as to how and why the movement spread to France (Part 3), where it achieved considerable support and success. Which done, we are asked in Part 4 to assess the position at mid-century, and incidentally the cool reception of the subject in Great Britain stands out clearly. Finally, in Part 5, principles and appraisals give the inquirer as good an idea (outlined in the first part of this review) of what it is all about, as can be required of anybody reporting on so difficult a theme.

Lastly, there are several pages of charts surveying the development of phenomenology in Germany and in France, followed by indexes and a glossary.

All this is a most valuable addition to the literature of the subject. One could make minor criticisms of style, like the irritating repetition of the phrase "to be sure" and the graceless abbreviation "photo". But these are trifles in an excellent treatment. Edmund Husserl remains at the centre of the stage, around him grouped both disciples and critics united, whatever their differences, to do him honour.

F. I. G. Rawlins

MODERN STYLE IN MATHEMATICAL ANALYSIS

Foundations of Modern Analysis

By J. Dieudonné. (Pure and Applied Mathematics: a Series of Monographs and Textbooks, Vol. 10.) Pp. xiv+361. (New York: Academic Press, Inc.; London: Academic Press, Inc. (London), Ltd., 1960.) 8.50 dollars.

In recent decades tremendous changes have come about in many branches of pure mathematics. Not only have content and emphasis altered, but in addition there has been a fundamental change in the interpretation of large sections of classical mathematics. Abstraction and generalization, leading to the unification of previously scattered concepts, have played a powerful part in this process. One of the most vigorous protagonists of this activity has been the Bourbaki school of French mathematicians. The Bourbaki point of view on mathematical analysis is admirably presented in the book by Prof. J. Dieudonné. For every notion the concept itself is emphasized rather than the manipulation involved in using the notion, and this applies to the large number of problems as well as the text itself.

The book starts with an account of the theory of sets and the properties of real numbers and the real line. Then come two very important chapters, on metric spaces and normed spaces. The contents of these chapters form the backbone of the whole work, and are fundamental for all that follows. The important notions in a metric space are completeness, compactness and connectedness. These are carefully introduced, after a good deal of preliminary terminology, which deals essentially with geometrical ideas that remain unaltered under 'deformations'. For a normed space the fundamental results are the continuity criterion and a theorem of F. Riesz characterizing finite dimensional spaces, the latter being vital in spectral theory. The next two chapters deal with Hilbert spaces and with spaces of continuous functions, including the Stone–Weierstrass approximation theorem and some applications. It is at this stage that the reader comes to a presentation of the differential calculus. The theorems are familiar to all mathematicians, but are presented, against the background of the previously developed ideas, in a way which will be new to many readers. This formulation, involving greater abstraction and more mental effort, is considered worth while because it prepares the reader for the ideas of the calculus on a differentiable manifold. There follows a chapter on plane topology (the method of Eilenberg). Then analytic functions with an appendix on applications. A chapter on existence theorems presents results in the theory of differential equations, these results being linked with the notion of completeness. Finally, there is a chapter on spectral analysis, a subject chosen because it draws on all the material presented earlier in the book and leads to one of the main branches of functional analysis.

Apart from its actual mathematical content, the book is especially important because of the impact it will have on mathematical analysts, as to what should be taught to students of pure mathematics and how it should be presented. Prof. Dieudonné is particularly outspoken about several matters. For example, there is no mention of the theory of the 'Riemann integral', and the author states: "It may well be suspected that, had it not been for its prestigious name, this would have been dropped long ago, for (with due reverence to Riemann's genius) it is certainly quite clear to any working mathematician that nowadays such a 'theory' has at best the importance of a mildly interesting exercise in the general theory of measure and integration. Only the stubborn conservatism of academic tradition could freeze it into a regular part of the curriculum, long after it had outlived its historical importance". For another example, it may be noted that in the chapter on analytic functions the common idea of a 'multiple-valued' function is not introduced, and reasons are given why this idea is limiting and undesirable.

It is important that the reader should understand the aim of this book as well as its contents. For it is a book that lives: it has orientation as well as content and the orientation is justified. At the present time, when there is considerable heart-searching as to what should constitute a curriculum in pure mathematics and how it should be presented, it is particularly fitting that this book should appear, for it may help to clear the way in a somewhat twisted jungle of ideas and prejudices. It may be helpful to quote a part of Prof. Dieudonné's introduction:

"My opinion is that the graduate student of to-day must, as soon as possible, get a thorough training in this abstract and axiomatic way of thinking, if he is ever to understand what is currently going on in mathematical research. This volume aims to help the student to build up this 'intuition of the abstract' which is so essential in the mind of a modern mathematician.

"It is clear that students must have a good working knowledge of classical analysis before approaching this course."

L. S. Goddard

AGE AND KINSHIP IN AUSTRALIA

Classification of Kin, Age Structure, and Marriage amongst the Groote Eylandt Aborigines

A Study in Method and a Theory of Australian Kinship. By Frederick G. G. Rose. (Deutsche Akademie der Wissenschaften zu Berlin. Völkerkundliche Forschungen, Band 3.) Pp. xii+572. (397 Abbildungen.) (Berlin: Akademie-Verlag; London: Pergamon Press, 1960.) 100s. net.

This book concentrates on two highly important matters in the analysis of descent systems: the significance of relative age, and the factual documentation of the constitution and working of particular systems. The society dealt with is the

Ingura or Wanindijaugwa of Groote Eylandt, off the northern coast of Australia. The account is based on about four months research in 1941, at which time the population numbered between 300 and 350 individuals. They were organized into eleven localized totemic patriclans, these being grouped into unnamed exogamous moieties.

The major argument is that 'gerontocracy' (the practice of marrying young girls to considerably older men) leads to the abandonment of the general Australian rule of bilateral cross-cousin marriage, and thence to the adoption of the matrilateral rule. The author tries to demonstrate this by assessing the ages of individuals and relating the resultant age-distribution by sex to possible rules of marriage. He shows, for example, that there is an average difference of 15 years between 'full cross-cousins', the patrilateral being the older. It is therefore argued that under gerontocracy this relative could not be married, so that neither patrilateral nor bilateral cross-cousin marriage is possible in this society. But this conclusion relates only to first cousins, whereas typically in a lineal descent system it is a more extensive class of relative, not defined primarily in genealogical terms, which is covered by the marriage regulations. If, then, we consider the ages of all members of the indigenous categories concerned, we have reason to expect a different situation; and in fact the case of individual No. 6, selected solely according to sex (male) and age (23), gives the following results: seven female patrilateral cross-cousins, average age 37; fifteen matrilateral, average age 36. If this case is typical, as on general grounds we may presume it to be, it shows that it is simply the author's European prejudice towards a genealogical definition of status which frames his argument and lends it apparent support.

Moreover, the account of the system is defective. As might be expected with such a short investigation, and an imperfect knowledge of the language, the ethnography is slight and unsatisfactory. The relationship terms seem, on the whole, to indicate an eight-section system, but the genealogical specifications reported are insufficient to establish the precise features of the actual system. Certain positions are not covered by the specifications, and there is an untypical distinction of patrilateral from matrilateral cross-cousin. It is clear, however, that the form of social classification is, contrary to the author's odd assertion, neither 'Kariera' nor 'Karadjeri' (he thinks the 'Aranda' type of system never existed). Also, the normal marriage is said to be with the mother's mother's brother's daughter's daughter who is a 'distant' mother's brother's daughter; but this cannot be reconciled with the system apparently framed by the terminology. Moreover, the abundant tabular data, occupying 220 pages of the book, are no substitute for genealogies, details of group-composition, and territorial distribution, let alone the indigenous ideology, and they cannot yield the evidence which is necessary to structural investigations of the kinds suggested by the author's argument.

In view of the interest of the issues he deals with, Dr. Rose's study is particularly exasperating. His record of ages is precisely the kind of exact evidence which is essential to the comprehension of Australian societies, and he is right to deplore its absence from other accounts; but without a comprehensive structural examination, conducted primarily in terms of the categories employed by the people themselves, this record is of depressingly little sociological use. It is possible, however, that it may serve certain purposes; and the work also includes percipient and forceful observations on a variety of other topics in the study of aboriginal Australian society (see, for example, his criticisms of Radcliffe-Brown's statements about the Kariera). Inadequate though it must be judged, and fallacious as its central argument almost certainly is, Dr. Rose's monograph is a singular (if eccentric) contribution to the field and deserves a place in any library of social anthropology.

R. Needham

SOME ASPECTS OF HÆMATOLOGY

Lectures on Haematology

Edited by F. G. J. Hayhoe. Pp. viii+247+24 plates. (Cambridge: At the University Press, 1960.) 60*s*. net.

The chapters in this book represent a course of thirteen lectures delivered to an audience of post-graduate clinicians and medical research workers. Most of the information has been published elsewhere, but this is in no sense a text-book of hæmatology. Each chapter is a survey, by an expert, of some rapidly expanding or controversial topic in the field. The accounts are of necessity brief, and only some of the most recent work is covered in detail. A good bibliography at the end of each chapter brings in the earlier literature.

The first five chapters deal with abnormalities in production and reactions of erythrocytes. J. V. Dacie writes on acquired hæmolytic anæmia, W. M. Davidson on iron metabolism and iron-deficiency anæmia and R. H. Girdwood on the pathogenesis and differential diagnosis of megaloblastic anæmias. The hazards of blood transfusion are discussed by G. T. Discombe, and J. C. White gives an account of hæmoglobin variants.

Although these chapters are directed primarily to the audience concerned they will provide useful information for a much wider circle of readers. Anyone concerned with the preparation or administration of blood for transfusion would profit from reading this entertainingly written and eminently practical account of the hazards involved. Especially since, as the author mentions, there is at present no comprehensive review of the subject in the English language.

Chapters 6–10 deal with various aspects of leukæmia. F. G. J. Hayhoe, who is also the editor of the book, considers the clinical and cytological recognition and differentation of the leukæmias. G. Wetherley-Mein writes on the myeloproliferative syndromes, and R. Doll on the incidence of leukæmia and the significance of environmental factors in its causation. The chemotherapy of leukæmia is discussed, as a practical problem, by D. A. G. Galton, and H. E. M. Kay writes on the potentialities of marrow transplantation in the treatment of leukæmia.

The last three chapters deal with abnormalities in hæmostasis. R. M. Hardisty discusses the contribution of blood and blood vessels in the hæmostatic process. Congenital and acquired disorders of coagulation are reviewed by G. I. C. Ingram and the pathogenesis of purpura by J. F. Ackroyd.

A great merit of the book is that it is easy to read, for in most cases the lively and personal approach of a lecture has survived in the printed account.

M. E. Nutt

Fast-Neutron Spectroscopy

By B. V. Rybakov and V. A. Sidorov. Edited by N. A. Vlasov. Translated from the Russian. (Supplement No. 6 of the *Soviet Journal of Atomic Energy,* 1958.) Pp. ix+121. (New York: Consultants Bureau, Inc.; London: Chapman and Hall, Ltd., 1960.) 17.50 dollars.

DURING the past few years neutron spectroscopy in the energy-range of 0·3–30 MeV. has made enormous progress, and in this book we have a review of the field up to 1958. Since this is a Russian work the English translation has not appeared until recently and so is already partly out of date. Nevertheless, it has especial interest because of the coverage it gives of fast-neutron spectroscopy in the U.S.S.R.

The most powerful technique which has been introduced into this field recently is the time-of-flight method. Development of fast pulsed sources and fast detectors and electronic equipment has given this method its present overall usefulness. Approximately two-thirds of the book is given to a valuable discussion of these techniques. The authors have been working with the cyclotron at the U.S.S.R. Institute of Atomic Energy and have considerable experience of time-of-flight work. Their description of this field covers their own equipment and experiments, in addition to others.

There are as well chapters covering methods which have a more specialized application. Such methods as proton-recoil, helium-3 spectrometer and scintillation counter techniques are covered adequately.

This review is intended for people already working in this field or about to do so; a graduate background of physics is assumed. The style is fair, some clarity and emphasis being lost in translation. However, the actual technical translation errors do not seem to be many. From the aesthetic point of view the cover design is depressing and the print is tiring. Probably most scientists would find it a relatively expensive book.

In conclusion, this book could be recommended as good reading, but scarcely worth buying for an individual scientist's library. P. A. EGELSTAFF

Atomic and Nuclear Physics

By Prof. Robert S. Shankland. Second edition. Pp. xv+665. (New York and London: The Macmillan Company, New York, 1960.) 49*s.*

THIS is the second edition of Prof. Shankland's undergraduate text-book. It is cast in the form of fairly brief lecture notes with a minimum of mathematics and perhaps one typical experiment for each topic. The range of physics covered is very broad and admirably up to date. Electron physics, molecular physics, solid state, nuclear and high-energy physics and reactor physics are all included. Although the underlying unity of microscopic physics is implied by including them all in one book, the clear demonstration of this is seriously impeded by the rather traditional and individual presentation of each field. That is, the partial emphasis on historical development is not sufficient to make this aspect very clear, but makes it difficult to see the elegant unity which has been achieved with the help of quantum mechanics.

This is a criticism of the overall organization of the book. The individual topics are treated clearly and simply and in each case carefully selected references to the original literature can lead the student to the details of the work. The experiments described for illustrative purposes are generally very modern ones. About 350 problems are collected at the end of the book.

This text is on the whole a very good example of its kind, especially if accompanied closely by lectures in experimental physics and quantum mechanics. E. B. PAUL

Mammals of Northern Rhodesia

A Revised Check List with Keys, Notes on Distribution, Range Maps, and Summaries of Breeding and Ecological Data. By W. F. H. Ansell. Pp. xxxi+180+7 plates. (Lusaka: Government Printer, 1960.) 12*s.* 6*d.*

FAR more than a checklist, this is really an admirably produced pocket guide, into which the maximum amount of information has been compressed without losing simplicity of arrangement and ease of reference. With identification keys, notes on habits, habitats and distribution, as well as seven useful colour plates by P. Dandelot, it is a model of its kind. Both the introduction, with its stress on the need for further collecting before the numbers and range of the mammals are irrevocably reduced by human activity, and the discussion of problems of habitat, ecology and distribution, are well calculated to stimulate or arouse interest in these aspects of the subject. The book will also be of much practical value to the professional working on the mammals of Central Africa. Sections listing rejected species, and species likely to be included as a result of further investigation, help to complete the work, and separate indexes of English, scientific and vernacular names help easy reference.

The only criticism relates to the unfortunate printing of the seventeen full-page distribution maps sideways without a corresponding adjustment of the captions. In two cases, zebra and lechwe, where cross-hatching indicates the distribution of local races, the result is the opposite of what was obviously intended. R. W. HAYMAN

Remington's Practice of Pharmacy

Edited by Eric W. Martin, E. Fullerton Cook, E. Emerson Leuallen, Arthur Osol, Linwood F. Tice and Clarence T. Van Meter. Twelfth edition. Pp. xii+1866. (Easton, Penn.: Mack Publishing Company, 1961.) n.p.

DR. FULLERTON COOK has now played an important part in producing successive editions of this large standard work for more than 60 years. It deals with the whole of American pharmacy from history and ethics to poison control. It contains useful information about all the sciences which a pharmacist must understand, and there are more than 600 pages devoted to the properties of the drugs used in medicine. These drugs are, for the first time, classified pharmacologically, in recognition of the fact that pharmacists are now consulted about the actions of drugs, but a summary of the chemical classification is also included. Among the subjects dealt with in the various parts of the book are statistics, rheology, chromatography, sterilization, methods of manufacture, sustained action medication, aerosols, parasiticides, pesticides, diagnostic drugs, allergenic extracts, radiopharmacy, analytical pharmacy, immunization and many other things. The information on all these topics is full and up to date. The total number of pages has increased by 160 since the last edition was published five years ago. The six editors, 56 assistant editors and more than 160 contributors are to be congratulated on keeping this reference book up to date. J. H. GADDUM

Sofiano (T.A.) English–Russian Geological Dictionary

Edited by I. D. Borneman *et al.* State Publ. Office Techn. Theor. Literature, Moscow, 1957. Pp. 525. Price 17r. 90k.

Sofiano (T.A.) Russian–English Geological Dictionary

Edited by A. P. Lebedev and V. E. Khain. Central Editorial Board, Foreign Language Scient. Techn. Dictionaries, Fizmatgiz, Moscow, 1960. Pp. 559. Price 18r. 60k. (old roubles), 1r. 86k. (new roubles).

THESE two dictionaries, well printed and bound, and of a convenient size (21 × 14 × 3 cm.), contain some 35,000 terms each. The majority of these terms consist of one word, but quite a number of them are adjectival terms, such as, for example, 'deltaic fan', or even more complex phrases like 'planar flow structure'. Besides purely geological, petrological and mineralogical terms there is a number of mining, civil engineering and allied physical, chemical and biological terms. Some adjectival terms are placed under their main term. Thus the term 'sand' is followed by 'arkose sand', 'coral sand', etc. On the whole the compiler of these two dictionaries, Madame T. A. Sofiano, has been rather generous in her collection of terms, which is all to the good. As with other dictionaries, there are occasional mistranslations. The English–Russian dictionary has also a list of English abbreviations, which is not very satisfactory, but there is no list of Russian abbreviations. In spite of these minor defects these two dictionaries represent extremely valuable auxiliary reference books for geologists. S. I. TOMKEIEFF

Linear Programming

Methods and Applications. By Saul I. Gass. Pp. xii + 223. (London: McGraw-Hill Publishing Company, Ltd., 1958.) 50*s*. 6*d*.

Methods of Feasible Directions

A Study in Linear and Non-Linear Programming. By Dr. G. Zoutendijk. Pp. vi + 126. (Amsterdam: Elsevier Publishing Company; London: D. Van Nostrand Company, Ltd., 1960.) 30*s*.

THE first book is a formal mathematical text on linear programming and is to be distinguished from the many general accounts on the subject that have appeared. It contains much information that could in the past be obtained only from original papers. Although writing for those with mathematical leanings, the author has a constant eye on the practical applications of the methods he describes. The book is divided into three parts. The first contains a general introduction and some necessary mathematical background, the second describes the theoretical and computational methods available for use, and the third discusses applications. The book has already become well known in the short period that has elapsed since its publication and is to be highly recommended.

The second book has the sub-title *A Study in Linear and Non-Linear Programming*, and is in the nature of a research monograph. Its appreciation requires a knowledge of present-day linear programming principles and techniques such as might be obtained from the foregoing book. The first half is concerned with linear programming, and in particular with a series of improvements to the product-form algorithm. In favourable circumstances these enable substantial economies to be made in the amount of computation required.

The second half of the book is concerned with methods of solving the general convex programming problem. In all these methods one starts with a feasible solution, determines a feasible direction of advance which will increase the value of the solution, and takes a step of appropriate length in that direction. There are various methods of determining the feasible direction of advance and the length of the step to be taken. Some of these described reduce in the case of linear or quadratic problems to methods which are already well known. M. V. WILKES

Digital Computers and Nuclear Reactor Calculations

By Ward C. Sangren. Pp. xi + 208. (New York and London: John Wiley and Sons, Inc., 1960.) 8.50 dollars; 68*s*.

PROSPECTIVE readers might not gather from the title of this book that the first half contains a valuable general introduction to digital computers written by a very experienced user. This is a pity, since others than nuclear physicists and engineers might profit from this part of the book. The chapter on programming in particular has an authentic ring about it. The chapter on numerical analysis is perhaps less successful being rather too compressed for the novice and neither sufficiently comprehensive nor sufficiently critical to appeal to the expert.

The last four chapters are concerned with the solution of technical problems arising in reactor design and in other branches of nuclear engineering; their scope is indicated by their titles: "A Code for Fission-Product Poisoning", "Diffusion and Age-Diffusion Calculations", "Transport Equation—Monte Carlo", "Additional Reactor Calculations". There is a useful selected bibliography. The author remarks that the problems he describes are good examples of problems in mathematical physics that can be 'solved' sensibly with digital computers: he considers, therefore, that they should interest not only reactor specialists but also applied mathematicians, physicists, and persons professionally interested in computer applications. M. V. WILKES

Birds of Eastern and North Eastern Africa

By C. W. Mackworth-Praed and C. H. B. Grant. Second edition. (African Handbook of Birds, Series 1, Volume 2.) Pp. viii + 1113 + plates 54–96 + photographs 7–19. (London: Longmans Green and Co., Ltd., 1960.) 50*s*. net.

THIS is the indispensable work of reference for all who are interested in the birds of East Africa, and it is not surprising that the demand for copies has called for a second edition. The two volumes were originally published in 1952 and 1955; a second edition of Volume 1 has already appeared and the revision is thus now complete. The work having been reproduced by photo-lithography, the changes are necessarily limited to additional matter inserted in spaces which had been left for the purpose and on some extra pages at the end. A supplementary index to the addenda and corrigenda is conveniently provided. LANDSBOROUGH THOMSON

THE MAXWELL COLOUR CENTENARY

AFTER all the recent questioning caused by Dr. Edwin Land with his demonstrations of two-colour projection, the principles of three-colour reproduction came into their own again at the Maxwell Colour Centenary Conference held at the Imperial College of Science and Technology, London, during May 16–18, under the joint auspices of the Colour Group (Great Britain) and the Inter-Society Color Council (U.S.A.), and attended by about 220 members from twelve countries. The particular centenary to be celebrated was the lecture delivered by Maxwell at the Royal Institution on May 17, 1861, when he gave the first public demonstration of three-colour reproduction by projecting images in red, green and blue light in superposition on a screen.

The Conference was fortunate to be able to arrange a centenary discourse at the Royal Institution itself exactly a hundred years after Maxwell's lecture. The subject of the discourse was "A Hundred Years of Colour Photography", and it was delivered by Dr. D. A. Spencer (Kodak, Ltd., Harrow). One of the most interesting items in the lecture was the report of a piece of detective work by Dr. R. M. Evans, of the Eastman Kodak Company in Rochester, U.S.A., leading to the explanation of how Maxwell had succeeded in obtaining an acceptable colour reproduction at a time when photographic emulsions were sensitive only to wave-lengths extending from the blue part of the spectrum downwards into the ultra-violet. Evans provided convincing evidence to show that, in securing his red separation negative, Maxwell had unwittingly taken advantage of the ultra-violet transmission common to many red dyes and filters. Further, the green filter must have had just sufficient transmission at the long-wave end of the blue part of the spectrum to enable Maxwell to secure a distinctive exposure for the green separation negative. By these fortuitous circumstances Maxwell was thus able to produce a three-colour photograph some twenty years before photographic emulsions sensitive to the green and red had been produced.

The theme of the Conference itself progressed from a study of the facts of three-colour mixture and their biological interpretation to their application in photography, television and printing, with a final day devoted to a discussion of colour appearance. The programme was not overburdened with papers, three introductory talks in each half-day being the normal arrangement, followed by informal discussion. Not all the speakers kept to their allotted 20 min., but at most of the sessions there was a satisfactory division between prepared and extemporary contributions.

The paper by Dr. D. B. Judd (National Bureau of Standards, Washington) on the opening morning had a detective flavour similar to that of Dr. Evans's study, since he had made a fresh analysis of the colour mixture curves obtained by Maxwell and was able to show that they were in closer accord with the Commission International d'Eclairage standard curves than had generally been realized. Maxwell's theoretical ideas, too, had anticipated many of the basic concepts of 'modern' colorimetry, and Dr. B. H. Crawford (National Physical Laboratory, Teddington) reported some new results from the National Physical Laboratory on large-field colour matching which had been inspired by Maxwell's original experiments. In Maxwell's method, colour mixture curves can be derived by mixing two fixed wave-lengths with a third, variable, wave-length so as to match a constant white, thus providing fixed adaptation conditions for all the matches. Crawford found a significant difference between the mixture data calculated from this type of observation compared with those derived directly from more orthodox experiments in which three fixed red, green and blue wave-lengths are mixed to give a match of each wave-length in the spectrum in turn after suitable desaturation. This disagreement may provide a possible clue to the small, but significant, discrepancies in the field tests made on the large-field colour mixture functions prepared by the Colorimetry Committee of the Commission Internationale de l'Eclairage from the Stiles–Burch–Speranskaya data. However, if Crawford's results are confirmed, they imply in effect a failure of additivity in large-field colorimetry, a possibility that has already been the subject of some discussion and which will no doubt be investigated more fully in the near future.

Perhaps the most original contribution to the meeting came from Dr. W. S. Stiles (National Physical Laboratory, Teddington) and Dr. G. W. Wyszecki (National Research Council, Ottawa), when they considered the spectrum as divided into M small wave-length intervals. They then showed that there was a statistical limit to the number of different selections of these M elements which would combine together to reproduce a given colour, ranging from a minimum number of combinations for colours in the spectrum to a maximum for a white surface. Lights of different spectral composition which have the same colour are known as metamers, and Stiles and Wyszecki showed that 'counting metamers' might prove of value, for example, in assessing the colour-rendering properties of two illuminants or comparing the merits of two sets of colour-matching functions.

In the biological session, we were reminded once again, by Dr. W. A. H. Rushton (Trinity College, Cambridge), Prof. Yves Le Grand (Natural History Museum, Paris) and Prof. R. W. Ditchburn (University of Reading), of the complexities of the visual process. However, the ophthalmoscopic arrangement used both by Rushton and by Weale for measurements of the reflectivity of the fundus has led to some surprisingly direct information about the density changes in the visual pigments during bleaching and regeneration, and about their spectral sensitivity. Rushton, indeed, is obtaining gratifying confirmation of the type of colour-mixture curves associated with the classical three-components theory of colour vision, and as derived, for example, by Pitt from work on the dichromatic form of colour defect.

Nevertheless, it is clear from the work on eye movements and on the stabilized retinal image at the University of Reading under Prof. Ditchburn, that the scanning of the retinal image plays a vital part in colour discrimination. Indeed, it seems almost certain that time-coding of the neural information must occur at some stage in its transmission from retina to visual cortex, and Ditchburn suggested that the colours we see may be determined very largely by edge effects occurring at the boundaries separating one area of colour from another in the retinal image.

However that may be, we can agree with Le Grand that the one certainty that emerges at the moment is the complexity of the visual processes and their interactions at all stages. Yet to a question about the possibility of the retinal receptors behaving like wave-guides and of their colour sensitivity being determined by their physical structure, Rushton was prepared categorically to deny this on the evidence of the colour of light scattered sideways into the receptors from other illuminated parts of the interior of the eyeball.

May 17 was devoted to discussions of problems of colour reproduction, and it was fascinating to compare and contrast the differing situation facing photographers, television engineers and printers. Colour photography depends on subtractive colour mixtures using yellow, magenta and cyan dyes; but the dyes that have to be used possess unwanted and overlapping absorptions. Hence no simple relation exists between exposure and density of colour, so that some colour distortion is inevitable. Defects of colour quality in one direction have therefore to be offset by deliberate distortions in the opposite direction; but the enormous popularity of colour photography is a tribute to the successful compromise which has been achieved. Here, as Mr. R. G. Horner (Ilford, Ltd., Brentwood) acknowledged, the eye is very accommodating and tries its best to see things as the brain thinks they should be seen.

Colour photographic prints present greater problems than colour transparencies, and Dr. R. W. G. Hunt (Kodak, Ltd., Harrow) explained how manufacturers had been able to take advantage of the fact that the light from the great majority of colour pictures integrates to grey. Photo-electric methods of controlling the colour balance can therefore be used, although the 'integrating to grey' method is sometimes criticized because of the colour distortion that occurs with special subjects. Mr. L. C. Jesty (Sylvania–Thom Colour Television Laboratories, Ltd.) jokingly congratulated Dr. Hunt because he had described this limitation as 'colour failure', whereas to the disappointed customer it is commonly described as 'subject failure'.

In many ways the situation in colour television is more straightforward. The picture is reproduced by additive colour mixture, the laws and data of trichromatic colorimetry can be fed directly into the system, and transformations of the colour information to a form best suited for transmission and reception can be achieved by the electronics engineer in a box which he labels 'matrix'. All this was admirably surveyed by Mr. J. W. Wentworth (Radio Corporation of America); but the television engineer is still left with the major problem of simplifying and reducing the cost of the colour receiver. The most expensive item, of course, is the colour tube which, in its more common form, comprises a three-electrode gun, a shadow mask and a phosphor mosaic. It would be ironic if someone invented a cheaper receiver based on subtractive colour mixture, and so deprived television of some of the theoretical simplicity of an additive system.

Colour printing is in a different position still, since pigment mixture, as Dr. D. R. Duncan (Paint Research Station, Teddington) emphasized, involves both absorption and scattering and is therefore neither purely subtractive nor purely additive. Hence, as was made clear both by Mr. D. C. Gresham (McCorquodale, Ltd., London) and Mr. W. L. Rhodes (Rochester Institute of Technology) colour printing is very much an empirical process that does not lend itself to any neat theoretical or mathematical solution. Moreover, for various technical reasons, including the need to sharpen the fine detail, it is often necessary to include a black printer. Colour printing then becomes a four- instead of a three-colour process. The skill of the craftsman ensures that excellent colour prints can be made, but the demand for mass printing makes automatic or semi-automatic colour correction a very attractive proposition, and Mr. V. C. Hall (Time, Inc., Springdale) described how this can be done with scanning machines and scanner computers. However, so far, only some 10 per cent of colour prints are made in this way.

The subject for the third day of the Conference could be summed up as 'colour as we see it'. If any physicists present were still under the delusion that the physical stimulus was all that mattered they were rudely disabused by the lively discussion that developed on colour appearance and how it could be studied. Miss Dorothy Nickerson (U.S. Department of Agriculture, Washington) was concerned with the possibility of exploiting the Munsell variables of hue, value and chroma as the co-ordinates in a system of appearance specification, with the colour-rendering properties of light sources particularly in mind. Dr. Crawford also discussed the problem of colour rendering, and he showed how the remembered appearance of known objects, or memory assessment, had proved a valid method of study. Prof. H. Helson (University of Texas) described some experiments in which the appearance of coloured shadows was in fact expressed in terms of the Munsell colour chips from measurements made by a binocular matching technique. Mr. W. C. Granville (Granville Color Service, Libertyville) demonstrated the critical selection of colours which we make in designing a colour scheme, especially in schemes involving near-neutral colours. He considered that in the colour atlases in common use many more samples of low saturation were required in the neighbourhood of the neutral axis.

Mr. M. H. Wilson (Goethean Science Foundation, Stowbridge) took us back to Goethe and treated us to some very effective demonstrations of colour as light and colour as darkness. His description of additive mixture as the mixing of coloured lights and subtractive mixture as the mixing of coloured darknesses gave the audience just the mental shock necessary to keep a conference alive. No doubt to the orthodox physicist such phrases sound like nonsense, but the subject of colour is one where the physicist soon has to leave much of his orthodoxy behind him. Certainly one of the most valuable aspects of the meeting was its success in bringing colour experts of very different backgrounds and experience together into intimate and informal discussion.

For the Colour Group it was an auspicious start to its new existence as an independent body, and Dr. Hunt, the present chairman of the Group, paid a fitting tribute to the Institute of Physics and the Physical Society both for help in organizing the meeting and for the manner in which the Group was enabled to separate from the parent body and launch into an orbit of its own.

W. D. Wright

STORAGE AND RETRIEVAL OF BIOLOGICAL INFORMATION*

By DR. G. C. AINSWORTH

Commonwealth Mycological Institute, Kew, Surrey

MANY problems of storage and retrieval of biological information are common to those of scientific information in general, and to give perspective in a connotation where 'information' is usually thought of as synonymous with 'the literature' certain pecularities of scientific literature must be noted before considering some characteristic features of biological information.

Much of the best scientific literature is ephemeral. Its classics are seldom read. Scientific work is firmly based on the findings of other scientists, and is brought to a right conclusion only when the results are made generally available. In other words, there must be communication, and the modern tempo requires this communication to be rapid. Further, while much literature in the ordinary sense is national, science, and hence scientific literature, are international, and the prestige value of science coupled with the growth of nationalism during recent years has increased the scatter of the languages in which scientific results are reported; but this has been counteracted by the desire of authors to be widely read. The amount written or summarized in English continues to increase.

For biology, as for science in general, the size of the literature and the current output are not known with any certainty. In February this year *Biological Abstracts*, begun in 1926, published its millionth abstract. This comprehensive abstracting journal for all branches of biology except clinical medicine is at present increasing its coverage. This year 87,000 abstracts are promised, and by next a rate of 100,000 abstracts a year is to be attained. But such a coverage would be incomplete, for a recent World Health Organization survey[1] has estimated that the annual output for biology and medicine approaches 400,000 articles and more medical and veterinary literature than non-medical biologists like to think has biological interest (and there are 4,000–5,000 medical periodicals containing about 230,000 papers each year[2]), while biologically relevant data are reported in the fields not only of biochemistry and biophysics but also of chemistry and physics, statistics and semantics, anthropology, psychology, and so on. Admittedly the biological data are few in some of these studies; but probably more fruitful connexions could be made if some specialists were less specialized.

The extent of the literature on some specific biological topics is more accurately known. For example, in 1953, for plant protection in the wide sense, the latest (1960) issue of the annual *Bibliographie der Pflanzenschutzliteratur* records 15,000 items obtained by scanning some 3,000 periodicals, and for fungus diseases of higher animals and man a census of the publications for 1957 has so far yielded 1,105 items. Further, as an example of an estimated total, there are not less than a quarter of a million books and papers on fungi.

As for science in general, the bulk of biological literature is stored as journal articles, and here a rather curious state of affairs may be noted. Although any investigation is only completed when the results are communicated and although State (or other) funds are usually available, if on a modest scale, for scientific investigation, very little money indeed is made available for the costs of publication, as Mellanby[3] has pointed out. Biologists have to unite in co-operatives (or 'publishing societies') and arrange for the publication of their own work. The State recognizes the value of such societies by allowing remission of income tax on an individual's subscriptions to approved societies, by permitting more altruistic members to covenant their subscriptions, and by an annual grant-in-aid of scientific publications (administered by the Royal Society) to enable societies to publish more without going bankrupt. There is a feeling that biological societies have not always received a fair share of this grant-in-aid. For 1959–60, however, biological societies received half the grant distributed[4], but as more than half remained undistributed there seems scope for more importunity by the smaller societies, particularly those with a taxonomic bias, all of which have at times had to restrict their activities owing to printing and publishing costs.

This traditional method of publication has disadvantages. It is wasteful, for the economics of many periodicals depend on the subscribers, both individual and institutional, receiving much material they would never otherwise have bought, thus preventing its availability to others who need it. This has long been realized, and a recent Unesco report and bibliography by Phelps and Herling[5] lists more than a hundred papers and reports on alternatives to the scientific periodical. But nothing is done. The traditional method still works. The position is not yet intolerable.

Biology differs from most other branches of science in that an important part of its information is stored not as literature but as specimens. Even the simplest objects of a biologist's study are complex, and while great progress has been made in describing living things in words, by illustrations, and by musical notation there are frequent uncertainties of identification or problems of affinity which can be resolved only by the comparison of specimens or tape recordings: hence the many collections of specimens, from those of the large national herbaria and zoological and geological museums to the personal collections of individuals. The specimens need not, however, be dead or fossilized. There are national parks and nature reserves, zoological and botanical gardens with their diverse regional and exotic contents, culture collections of micro-organisms of all groups, and one cannot exclude collections of cultivated plants and domesticated animals which shade off into the accumulations of fanciers, whether of tropical fish or alpine plants. All in their different ways contribute to the store of basic biological information.

The retrieval of specimens, which is not always easy (for their cataloguing often leaves much to be desired), is a topic which cannot be given detailed consideration here. It must be sufficient to indicate present trends by recalling that since 1952 the *Index*

ACADEMIC PRESS New York and London

Protein Structure

By Harold A. Scheraga, *Cornell University, Ithaca, New York*

August 1961, *about* 310 *pp.*, 64*s*.

The primary aim of this book is to present some of the quantitative aspects of the physicochemical approach to the protein structure problem, including both gross and internal structure. In discussing gross structure, polymer principles have been applied. In considering the more detailed aspects of internal structure, attention has been directed to interactions between polar groups and nonpolar ones. The material is developed from first principles, assuming only a background of elementary physical chemistry.

The book has evolved from a series of lectures given for C.S.I.R.O. in Melbourne, based on research carried out in the author's laboratory during the past decade. It will be of interest to all students and research workers engaged in the study of the structure of biological activity of proteins. It will also be of value to workers in other biological sciences in which the principles of protein structure and activity are of interest.

CONTENTS:

Hydrodynamic Properties of Protein Solutions
Internal Structure; Effect of Hydrogen Bonding on Side-Chain Reactivity
Limited Proteolysis
Denaturation
Limited Proteolysis and Aggregation in the Fibrinogen-Fibrin Conversion
Some Experimental Methods
Configurational Studies of Insulin, Lysozyme, and Ribonuclease
REFERENCES—SUBJECT INDEX.

Protein Biosynthesis

Proceedings of the Symposium held under the auspices of U.N.E.S.C.O., at Wassenaar, August 29–September 2, 1960

Edited by R. J. C. Harris, *Imperial Cancer Research Fund, London*

June 1961, 409 *pp.*, 95*s*.

Contents listed in Nature, March 11, 1961, *also available upon request.*

This international symposium was sponsored jointly by U.N.E.S.C.O., C.I.O.M.S., and the Netherlands Cancer Institute. This book includes not only the papers but also the major contributions to the discussion. It provides the first authoritative and complete account of progress in this rapidly expanding field.

The treatment is primarily biochemical. All major research groups in this field were represented. This volume will be useful not only to biochemists but also to those cytologists, biophysicists, and chemists who are interested in such topics as the function of nucleic acids, the structure of cytoplasm, the properties of ribosomes, the biosynthesis of viruses, and the synthesis of antibodies.

Amino Acids, Proteins, and Cancer Biochemistry

Papers presented at the JESSE P. GREENSTEIN MEMORIAL SYMPOSIUM, Division of Biological Chemistry, American Chemical Society, September 16, 1959

Edited by John T. Edsall, *Harvard University*
Preface by Sidney W. Fox and Julius Schultz

1960, 244 *pp.*, 56*s*.

"We believe that this book, which includes all of the papers given at the Symposium, will make an important contribution in portraying some of the major current developments in amino acid and protein chemistry and in the biochemistry of cancer—the two great fields in which Greenstein's work was preeminent." —*From the Preface*

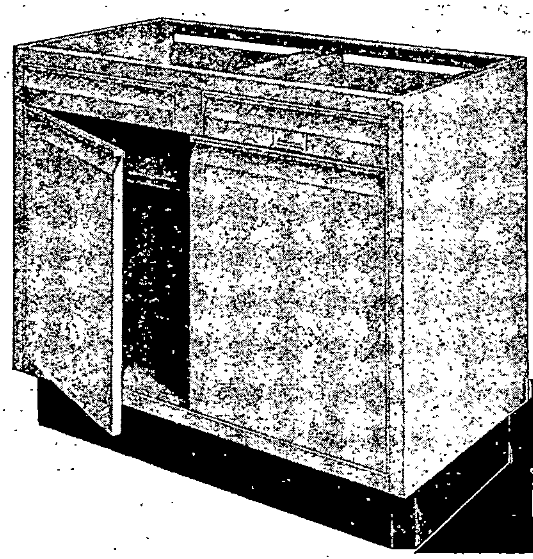
The Griffin-Grundy 'TEN-POINT' All Metal Laboratory Furniture



1 Front and rear welded frames provide maximum rigidity.
2 Removable back gives access to services.
3 Metal drawer tracks and slides incorporate a cam adjustment.
4 Rubber buffers to drawers and doors ensure quiet operation.
5 Recessed door and drawer-handles improve appearance.
6 Adjustable shelves in cupboard units.
7 Easily adjusted levelling feet fitted with P.V.C. shoes protect floor.
8 Detachable toe plinths.
9 Zinc coated mild steel construction for added protection.
10 Stoved melamine-base enamel inside and outside for easy cleaning.

Units dismantle for shipment resulting in
lower freight charges, and easy assembly on site.
Full instructions are provided with each installation.
Write for literature to-day.

Herbariorum[6] (already in its fourth edition) has provided a handy directory to the herbaria of the world (and this work is in the course of supplementation by a list of collectors represented in public herbaria) and that the Unesco-sponsored International Federation of Culture Collections of Micro-organism at Lausanne, founded in 1947, attempts to locate for inquirers any cultures wherever they may be available.

The storage of biological literature should be integrated with the retrieval pattern, and so it is convenient to consider the rationale of storage and the retrieval pattern together.

The most frequently employed retrieval method can only be noted. All 'reading habits of scientists surveys' are in agreement that the first reaction of any scientist needing information is to ask a colleague who it is thought may know the answer. Only when this fails are other avenues explored.

Retrieval can be divided, if somewhat arbitrarily, into retrieval of current literature and retrieval from literature of the past. Retrieval from current literature begins with the arrival of members' copies of society journals. This is supplemented by visits to the departmental library, reprints from others working in the same field, abstract journals, etc. From such sources every research worker notes papers of current interest which he stores in his head or in a more or less convenient and more or less haphazard manner, depending on his temperament and the quality of his secretarial support. For some, noting information becomes obsessional. For most it is a drudgery to evade.

It does seem that a primary requirement for rapid retrieval is an efficient 'contents of current journals' service. *Current Contents*, issued by the Institute for Scientific Information, Philadelphia, with the collaboration of journal proprietors, offers a weekly list of the contents pages of more than six hundred journals in the "chemical, pharmaco-medical, and life sciences". More analytical, but not necessarily more useful, monthly surveys are provided by the well-subsidized and therefore relatively inexpensive *Bibliography of Agriculture* (based at the Library of the U.S. Department of Agriculture, Washington) and the *Index Medicus* (National Library of Medicine, Washington). At the beginning of 1960 the last of these was re-organized and its production mechanized. Each of these periodicals lists 100,000 or more titles a year and each is integrated with a photocopying service. Descriptive zoology is covered in a more leisurely manner by the *Zoological Record,* veterinary science by the *Index Veterinarius,* and more in this way might be done. At the moment suggestions for an *Index Biologicus* are being canvassed.

The next step is provided by the diverse abstracting organizations which scan the literature independently, usually with particular audiences in mind. Much could be said about these services. One generalization is that any item abstracted is likely to be abstracted more than once. The World Health Organization survey already mentioned estimated that 246 journals from 10 countries publish more than one and three-quarter million abstracts a year, that is, more than four times the total output of medical and biological articles.

Retrieval from the past is fraught with difficulties. Memories are short, many special libraries are young, and the searching of annual and cumulative indexes is tedious and very uncertain of results. (One inevitable imperfection of indexing is that indexers can never be sure what posterity will find relevant.)

Biology has one major advantage over other branches of science in having a built-in, internationally used, basic retrieval code (which also reflects a more or less internationally acceptable classification) in the scientific names applied to living things, especially at the generic and specific levels. The truly international character of the binomial names of species is not always fully appreciated. Such Latin names are frequently the only means by which a Western biologist can ascertain the subject of writings in Russian, Japanese, and Chinese. When this is realized, the importance of using names in line with what may sometimes seem to be the arbitrary requirements of the three *International Codes of Nomenclature* (those for zoology, botany and bacteriology) should be apparent.

Scientific names are also the basic grid references by which one experimental biologist is able to relate his observations to those of others. There are, of course, pitfalls. Changes in names necessitated by taxonomic studies tend to give taxonomists an unjust reputation for irresponsibility. Many taxonomists are well aware of the undesirability of disturbing traditional nomenclature. Unfortunately the cataloguing of organisms is far from complete, and many necessary taxonomic changes (and hence changes in names) will have to be made.

One thing that taxonomists are not required to do under the *Codes* is to register their nomenclatural innovations. It is left to others to find the published announcements, and that may take decades. Many names are thus duplicated, and unnecessary confusion results. Even the latest supplement (that for 1950–55) to the *Index Kewensis* (which since 1895 has been compiling the names of the genera and species of flowering plants) has a spread of more than a hundred years. (The average lag in retrieval by current content and abstract journals of, say, 75 per cent of the literature noticed is probably about 9–12 months, a period which approximates to the interval between the submission of a paper to a journal and its subsequent publication.)

There is another outstanding need. While there are lists of varying length and varying degrees of incompleteness of the genera and species of most of the main groups, there are very few complete lists, and no general compilation. A list of the genera proposed for all organisms would be a most valuable tool not only for biologists but also for librarians, information officers, and so on. By consulting such a list, information could be correctly classified for filing, the direction in which to look for further information indicated, and the duplication of names would be less likely. The systematic position of each name could be briefly coded (on the lines suggested by Mullins and Nickerson[7]) and the work, which should be internationally sponsored, need not be larger than one of the sectional volumes of the *London Telephone Directory*—and might be of similar quality and format, for such a compilation would need to be under constant revision, and it would be rational when the latest arrived to discard the previous edition.

This raises the question of the length of life of biological literature. The average life of a physics paper is said to be 2–3 years. Biological literature, much of it still being descriptive, is rather longer-lived although some useful material scarcely survives birth.

During the past two years more than a hundred papers have been published to show that 1 gm. daily of griseofulvin taken orally effectively controls infection of man by diverse dermatophytes in all five continents. Many of these papers were necessary. Some are of high quality and beautifully printed on good paper. This should not mislead. They are mostly already as dead as last night's evening newspaper. They will not be consulted again, but they will survive for long in indexes and bibliographies and so tend to obscure still useful data on a notable antibiotic.

At the other extreme taxonomic biological literature is long-lived. A comprehensive taxonomic paper may have an effective life of anything from fifty to a hundred and fifty or more years and at centres where general taxonomic investigation is undertaken works a century old are in constant use at the bench.

For science in general the small use to which much of the literature is put has been brought recently into prominence by the survey by Urquart and Bunn[8] of the use made of the Science Library serial holdings during 1956. They found that, of the total of 9,120 holdings, 350 titles accounted for 50 per cent of the total use, 1,200 for 80 per cent, and they consider that for perhaps half the present titles the total use is less than 10 times per 10 years. The relevance of this in planning storage is obvious. For some journals one run would be sufficient for the needs of the whole country—provided photocopies or microfilms were loaned—while for bulky, little-used, or rare material microfilms, microcards, or fiche could be used to reduce storage and acquisition costs.

Microtexts (which have recently been most lucidly reviewed by Davison[9]) have many advantages, and to taxonomists it is their retrieval value which appeals so strongly. One of the banes of taxonomic work is one taxonomist copying data from publications not seen from the work of another (who as likely as not copied from a predecessor who, even if he did see the original, probably interpreted what he read; only a very experienced taxonomist can copy what an author actually wrote). A number of useful taxonomic journals and scarce out-of-print books and monographs are already available on cards or fiche. But their production is slow and unplanned, and their cost, the demand being so much below what it might be, relatively high, although cheap compared with originals. In part the small demand is due to prejudice, in part to the lack of a mass-produced reading device, and in large part just ignorance.

One of the chief omissions in this brief survey is a consideration of systems of classification for information storage and for indexing the information stored. Another omission is any mention of the coding and mechanical searching for data. Mechanization begins with the identification of, say, timber-attacking fungi by hand-sorting punched cards with a knitting needle[10], and proceeds via elaborate mechanical sorting of thousands—even tens or hundreds of thousands—of Hollerith or IBM cards to systems of coding on magnetic tape which can be searched at incredible speeds. Some of these methods are of proved value, others are of great potential value. There does, however, seem to be a very real danger of treating comprehensive systems for storage and retrieval as ends in themselves. Much effort can be wasted in coding and storing information for which there proves to be little or no demand. The most urgent present need for biology is for some much simpler aids to information storage and retrieval.

THE CONCEPT OF KIND OF TEA

By W. WIGHT and R. C. J. H. GILCHRIST

Tocklai Experimental Station and Jorehaut Tea Co., Cinnamara, Assam

BY tea we mean the 'black tea' usually consumed in Great Britain and elsewhere which is made from the fermented shoots of *Camellia sinensis* (L.) O. Kuntze, and its hybrids. Our remarks do not refer to unfermented 'green tea' or to partially fermented 'oolong tea'.

When one speaks of tea 'quality' two meanings can be conveyed: to the uninitiated the expression suggests the overall value or acceptability of a tea, in the sense of a summation of its desirable attributes; but in the trade, 'quality' is a particular attribute which, by itself, does not determine acceptability.

Attributes of tea recognized by professional tasters have been described in a recent report[1]. Quality and strength are important, and a full understanding of their separate meaning is necessary if tea markets are to be expanded. In our investigations quality has been defined as a dulcet freshness, like that of a recently caught fish, in contrast with one that has been in cold storage. The quality of tea enhances one's appreciation of its odour. A crude analogy is the sugar that imparts a quality to sauce without making it noticeably sweet. A fresh hazel nut (*Corylus* sp.) has the sweetness of quality. Some tasters might disagree with these definitions, but it is usual for their ordination of teas on a 'quality' [*sic*] basis to be very similar. Strength is a bitterness like bitter beer contrasted with mild beer.

Relative intensities of quality and strength, measured by tasters' scores[2], vary from plant to plant. Between populations the two attributes are often positively associated, with a correlation coefficient of the order of 0·6. The morphological feature of pubescence is positively correlated with quality[3]; and under the same conditions a similar correlation can be expected between pubescence and strength. Whereas pubescence makes roughly equal contributions to these two attributes, other morphological features make unequal contributions: for example, the vascular bundle when defined as the ratio of xylem cells to phloem cells (per unit area of cross-section), makes a positive contribution to quality and a negative contribution to strength, in accordance with the statistically significant ($P < 0{\cdot}01$) equations:

$$\text{Quality} = -27 + 0{\cdot}06C + 5{\cdot}5H + 0{\cdot}16Pi + 50Vb$$
$$\text{Strength} = 22 + 0{\cdot}11C + 4{\cdot}5H + 0{\cdot}05Pi - 22Vb$$

where C is the crop yield of the bush, H is its pubescence, Pi is phloem index[4], and Vb is vascular bundle. C varied from 86 to 171, H from 1·30 to 3·23, Pi from 20 to 116, and Vb from 0·40 to 0·66. The factors are derived from 10 jat populations. The equations are intended only to indicate the nature of the situation within the limits of *C. sinensis* var. *assamica*. It is not possible to enter into details in the present article. It is, however, important to note that vascular bundle (Vb) differs greatly between biotypes.

It is misleading to say that "The various types of tea in commercial use result mainly from differences in manufacture"[5]. All black tea is not alike, and many differences are due to genetical factors. For example, the kinds of tea called 'Ceylon', 'Darjeeling' and 'Assam', are well known and will serve as examples. In common parlance, these teas 'taste' differently; but much of this effect is due to odours the perception of which is independent of taste buds. Thus it is necessary to say that each tea has a characteristic odour.

Good-quality Assam tea that is lacking in strength would lose some cash value, merely because strength is an accepted feature of Assam tea. The strength of good Assam tea is almost quinine-like in its bitterness. Such high strength would be unacceptable to those who drink either Darjeeling or Ceylon tea, and would therefore tend to reduce the cash value of the tea. Thus the value of a tea depends on the market in which it is to be sold. Similarly, prices in auctions depend on a tea conforming to the attributes expected from its designation, as 'Assam tea', 'Ceylon tea', and so on.

These examples show that a certain odour, and a certain balance of quality and strength, define a kind of tea. Odour is decided in the first place by the botanical nature of the plant. It is to be noted that 'aroma', used in an earlier paper[1], was meant to be synonymous with 'odour' used here and by food technologists[6].

The kind of tea known as 'Assam' is made from *C. sinensis* var. *assamica*. It cannot be made from var. *sinensis*[7]. Hybridity with *sinensis* introduces unwanted odours; but hybridity with the southern form of plant seems to introduce desirable odours.

Darjeeling tea is made from populations with pronounced features of the type variety (var. *sinensis*). Some of the populations are hybrids between distinct species[8]. Odours of *sinensis* seem to be needed in Darjeeling tea[7]; but recent investigations strongly suggest that decisive odours have also been contributed by other taxa like *C. irrawadiensis* or *C. taliensis*, or even more distantly related species.

Plants of the Assam variety (var. *assamica*) grown in Darjeeling do not make Darjeeling tea. Representative Darjeeling plants, brought as seed to Assam, do not make Assam tea. Tea from similar plants, established in Assam as the descendants of seed imported directly from China and Formosa, has been accepted as Darjeeling tea by professional tasters.

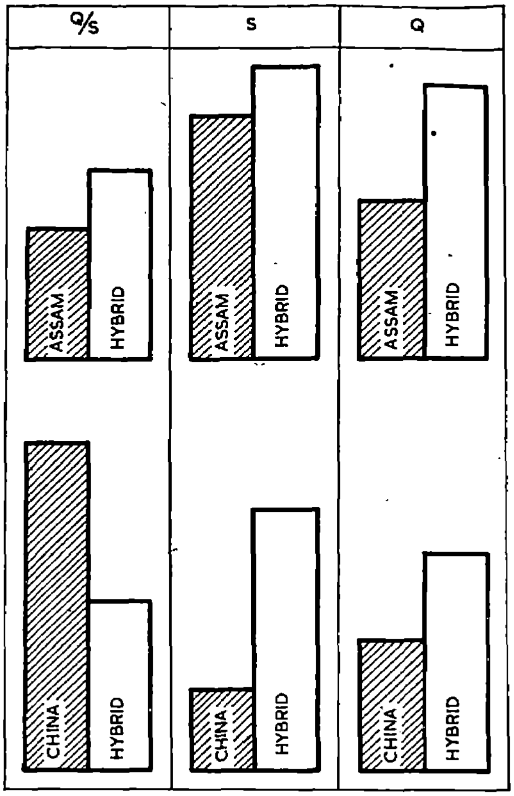

Fig. 1. Nature of the tea made from putative hybrids between *Camellia sinensis* var. *sinensis* and *C. sinensis* var. *assamica*. Column heights indicate the tasters' perception of quality (Q) and strength (S), and the ratio of these measures (Q/S). 'Assam' and 'China' indicate plants not appreciably different from the respective types. 'Hybrid' means plants with some features of the other taxon, but assignable to the type with which they are coupled in the figure

Ceylon tea, like Darjeeling tea, is made from *sinensis* hybrids; but there are more features of the southern form in Ceylon than in Darjeeling[9]. It seems likely that genetical factors derived from the southern form play a large part in determining the characteristic odour of Ceylon tea.

It has not been found possible to make Assam tea from plants of the southern form growing in Assam; but open-pollinated seed of these plants, taken to high elevations in Ceylon, produced plants (of the southern form) that made good Ceylon tea. The possibility of making Ceylon tea in Assam has not been investigated; but the evidence clearly indicates that at least three kinds of tea, which take their names from regions, must be determined primarily by genotype and, possibly, by interactions of genotype with environment. Interactions in terms of 'phloem index' (which is associated with quality[1]) have been demonstrated in transplant experiments[10].

In addition to odour, the balance of quality and strength differs between taxonomic types. Fig. 1 shows that quality relative to strength is high in *sinensis*; conversely, high strength, relative to quality, characterizes *assamica*. Fig. 1 also shows that quality is improved by hybridity—a point that was amplified recently[1]. The figure further shows that the strength of nominal *sinensis* plants is increased by slight hybridity with *assamica*; but, in this connexion, it is to be remembered that strength may not be particularly desirable in tea that can be made from *sinensis*. Comparable data for hybrids with the southern form are lacking, but the quality to strength ratio appears to be the same as that of *assamica*.

New kinds of tea could be a great asset to tea exporters; but it is evident that new odours would be needed. However, the odours in plants of the southern form are sufficiently variable to make them most desirable for breeding new kinds of tea. The form needs more study. It is the conceptual type[11] of material received from Tran-ninh by courtesy of M. du Pasquier who attached importance to the tea plants of that region[12]. Primary selection might lead to a stock as valuable to tea as the Barberton *U*4 strain was to cotton[13]. This would be due to odour. But the need, or otherwise, for strength, depending on prospective markets, would have to be kept in mind. Quality is always needed and is a concomitant of hybridity between distinct types[1]. In short, odour classification[6] and the separate definition of quality and strength seem essential to a progressive tea-breeding programme.

NORWICH MEETING OF THE BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

It can never be sufficiently stressed that the elaborate annual meetings of the British Association for the Advancement of Science, for which the Association is best known, are intended primarily to disseminate scientific knowledge among the lay public. The Association's one-hundred and twenty-third annual meeting: to be held in Norwich during August 30–September 6, may serve to underline this fact, for although Norwich is a historic provincial capital, it is the centre of a predominantly rural community in which scientific processes are not of the widest application. Furthermore, although in the near future it will be, Norwich is not at present a university town, so that it will not call on university resources to assist the meeting, as do the majority of the Association's hosts. Instead, it is calling on the staffs of the City College and schools in Norwich to help in organizing the sectional programmes, on schools and civic buildings to house the meetings and on its civic officers for the general organization.

The meeting will follow the customary pattern of an inaugural meeting: two evening discourses, a full programme of sectional lectures and excursions to many parts of East Anglia, some 45 excursions to places of general interest (in which the area is unusually rich) and a number of social functions, including four garden parties in settings which should prove ideal. There will also be a young people's programme which will include a 'Science in Schools' exhibition and an 'Open Forum' for both adults and young people at which scientists will answer questions impromptu. The presidential address to be given at the inaugural meeting by Sir Wilfrid Le Gros Clark will be entitled "The Humanity of Man".

There are, however, two features in the programme for the coming meeting which are novel. One will be a public demonstration of the new Swiss colour television technique known as Eidophor. Eidophor is a form of large-screen television projection invented by the late Dr. Fritz Fischer, of Zurich. Since his death in 1947 it has been continually developed by Prof. Baumann, and the costly and delicate apparatus used will be brought by road from London and installed in St. Andrew's Hall. It will relay to a smaller hall the proceedings at the inaugural meeting and on subsequent evenings will give demonstrations. This is likely to prove a fascinating feature of the meeting, and Norwich is indeed fortunate that it has been possible to arrange these demonstrations. The other novel feature is also in the sphere of the visual arts: this is a daily programme of scientific films from all nations which will be shown in the Noverre Cinema. There will be a different programme each day, and it is hoped that so comprehensive a collection of outstanding scientific films will prove a great attraction.

As is common, the majority of the branches of scientific study which are catered for at the Association's annual meetings are well reflected in Norwich and Norfolk. Norwich, by historic tradition, beginning with the growth of the the weaving industry, enjoys a great reputation as a home of handicraftsmanship. The decline of the medieval textile industries was offset by the craftsman's inherent versatility, and the change-over to the manufacture of shoes, in particular, during the past century, enabled the city to retain its reputation in this direction. In more recent times the development of light engineering has sustained native potential, and it is with this background that the subject of one of the discourses, "The Impact of Automation", to be given by Dr. B. V. Bowden, principal of the Manchester College of Science and Technology, assumes a particular interest. In the same way as physicists and engineers, the biologists, geologists and archæologists are provided with a fruitful research field, since East Anglia is a distinctive part of the insular land-mass of Great Britain. Once part of a terrain which was joined to the European continent and then largely inundated, its flora and fauna are objects for rewarding comparative study. The coasts and the Broads will be visited on many occasions both by people with specialized interests and those who wish to enjoy their scenic beauty. The subject of the other discourse, which will be given by Field-Marshal Viscount Alanbrooke, will be "Birds of Spain", and this discourse, in an area notable for its wild life, is expected to draw a large audience. Archæologically, Norfolk's records of the historic ages prior to the Roman occupation are of absorbing interest, and of the Roman period itself they are probably unsurpassed in Britain.

Forestry and agriculture are perhaps the two sciences to which most justice can be done, since the Forestry Commission owns many acres in west Norfolk where afforestation is intensively pursued; and in the sphere of agriculture it would be hard to refute Norfolk's claim as the cradle of modern farming methods. From the time of Coke of Norfolk onwards, highly developed farming has been the major industry, and local agricultural experimental stations have made significant contributions to the progress of farming throughout the country.

With these factors in mind, and with the backcloth of a gracious cathedral city, the organizers of the Association's 1961 meeting hope that it will be even more successful than its predecessors in Norwich in 1868 and 1935. Every effort will be made to welcome visitors from outside the area and to ensure that they derive all possible pleasure and benefit from the meeting. D. D. Aldridge

OBITUARIES

Mr. J. Walter Ryde, F.R.S.

John Walter Ryde died at Marlborough, Wiltshire, on May 15, after a short illness. He was sixty-three years old. He was born in Brighton on April 15, 1898, the son of Mr. W. W. Ryde, and was educated at St. Paul's School and in France. Plans for him to continue his studies in Germany and then go to the University of Cambridge were interrupted by the First World War. He returned from Berlin to England just before the outbreak of war and entered the City and Guilds Technical College, Finsbury, where he studied under Prof. Sylvanus Thompson and Prof. Charles R. Darling.

Ryde joined the Royal Engineers voluntarily in 1916, at the age of eighteen, on the completion of his course at City and Guilds, and was trained in anti-aircraft work in Monmouthshire and on the Norfolk coast before being drafted to France during the last few months of the War. He continued to serve in France until his demobilization in 1919.

Ryde joined the Research Laboratories of the General Electric Company, Ltd., as a physicist in 1919, going directly from his war service to the newly established research unit directed by Clifford C. Paterson in the Company's lamp factory at Hammersmith. He was a leading member of the scientific staff of the Laboratories from the start.

In the early days at Hammersmith, and again after the Laboratories had moved to their new premises at Wembley in 1923, the variety of Ryde's research work was indicative of the breadth of interests which was so characteristic of him. They included pure spectroscopy, thermionics and the gaseous electrical discharge. Under his direction the first practical high-pressure mercury vapour lamp was developed—the foundation of a new industry to which he made many subsequent contributions.

His theoretical work on the scattering of light, first applied in the 'twenties to optical diffusing media in glasses, was extended by him during the Second World War to classic studies of the attenuation and the radar echoes produced by meteorological phenomena at centimetre wave-lengths. (A footnote in this paper includes the following: "The author (J. W. R.) and Mrs. Ryde were responsible for the theory and calculation of the effects caused by liquid and solid particles,——".) He was an early worker on crystal valves and quickly recognized the potentialities of germanium as a semiconducting material. Other researches included velocity modulation tubes, luminescent materials and optical projection systems. He contributed much to various research projects undertaken for the United Kingdom Atomic Energy Authority, and he took part in work on the *Fido* fog-dispersal system. It was typical of Ryde to design, in his leisure hours, a pocket illumination chart for use by the Services. It showed levels of illumination, by day and by night, at various latitudes, and was used extensively in military operations.

Ryde was elected a Fellow of the Royal Society in 1948. He was appointed chief physicist at the G.E.C. Research Laboratories—recently named the Hirst Research Centre—in 1950 and chief scientist in 1953. During these recent years he had overall responsibility for the programmes of pure scientific research of the Centre, and his particular interests lay in the fields of new materials, crystal growing and solid-state physics.

He was a member of the Royal Institution of Great Britain since 1935 and chairman of the Davy Faraday Laboratory of the Institution since 1951. He served on the Board of Managers of the Institution and always took a great interest in its affairs. He was a Fellow of the Institute of Physics and the Physical Society, a Fellow of the Royal Astronomical Society, and a member of the Geological Association, the Wiltshire Archæological Society and the Athenæum.

Ryde married, in 1930, Dorothy Ritchie, daughter of the then chief illuminating engineer of the General Electric Co. There is one son.

The Hirst Research Centre has lost a senior man who earned the admiration and respect not only of his colleagues but also of eminent men both in Great Britain and overseas. He lived his life for science, and his leisure activities were very largely extensions of his life's work. Archæology was a persistent interest—at an early age he learned to read hieroglyphic writing and ancient scripts. He was a profound student of astronomy, but, in recent years, microscopy became a dominant hobby. He was particularly interested in diatoms, and his beautifully mounted specimens are evidence of the elegant experimental skill which he retained to the end.

His memory was prodigious and visual. He never forgot the details of work which he had done and could sketch from memory some experimental arrangement or the detailed shape of a specimen long afterwards. Such a memory, supplemented with the many carefully prepared and indexed note-books which he compiled throughout his working life, made Ryde a powerful authority indeed in the world of science.

In all his work he displayed great ability and unfailing perseverance, together with brilliant insight and inspiration. His colleagues will always remember his patient readiness to discuss and assess the problems of the day and his helpful elucidation of critical experiments, often elegant in their simplicity, which he designed to solve them. O. W. HUMPHREYS

Dr. P. A. Gorer, F.R.S.

THE unexpected death of Dr. Peter Alfred Gorer on May 11 will be deeply regretted by all who knew him. Born in 1907, he was educated at Charterhouse before taking up medicine at Guy's Hospital. During this period he developed an interest in hibernation, and his earliest papers were on this subject. After qualification, he left Guy's for the Department of Genetics at University College, London, under J. B. S. Haldane. It was here, and later at the Lister Institute, that he first began a lifelong study of the genetic and immunological implications of tumour transplantation. At this time only the genetic basis of tumour transplantation had been established. Gorer proposed that genetically determined antigens present in neoplastic tissues were the immediate arbiters of the fate of such grafts. If the transplant introduced antigens not possessed by the recipient animal, rejection of the graft would follow. Between 1937 and the outbreak of the Second World War, he produced solid evidence in support of this idea. During hostilities he acted as assistant morbid anatomist, and hæmatologist, at Guy's Hospital, and remained afterwards as reader in the Department of Experimental Pathology. Only this year he had been chosen to fill the chair of a newly created Department of Immunology at Guy's Hospital.

On returning to the subject of his researches after the War, he spent several years developing the serological methods necessary before any further progress was possible. The defeat of these technical difficulties enabled him to perform a detailed analysis of the major system of tissue antigens in mice, known as the H-2 system. His latest paper on this subject indicated the progress which has been made in mapping the genes which dictate the presence of the H-2 antigens.

But Gorer was probably best known for his work on the part played by humoral antibody during the rejection of foreign tissue grafts. He established that such antibodies were present in the serum of mice within three days of receiving a graft of alien tumour; furthermore, normal tissues such as skin were similarly able to excite the formation of humoral antibodies. The function of these antibodies is still the subject of research, but it is clear from his evidence that humoral antibodies have several effects; which one predominates varies according to the target graft, and to a lesser extent the recipient.

At an early stage Gorer was aware of the probability of antigenic differences between normal and malignant tissues. The occurrence of antigenic loss had been implied by much genetic evidence, and he confirmed this by serological means. Few investigations distinguished clearly between normal tissue antigens possessed by tumour cells, and antigens peculiar to the neoplastic state. In 1956, in collaboration with one of his pupils, D. B. Amos, he discovered the first of a series of antigens specific to mouse lymphatic leukæmia cells. Later work showed that such antigens were detectable in spontaneous as well as induced leukæmias. It is sad indeed that he was unable to start on the important investigation of the significance of these antigens.

One cannot account for the pre-eminent position of Peter Gorer merely as a result of his brilliant researches and thoughtful reviews. He had great charm and wit, a breadth of interest rarely found, and perhaps the most striking attribute of all was an ability to discuss his own subject dispassionately. It gave great pleasure to his many friends and pupils when he was elected Fellow of the Royal Society in 1960. We shall greatly miss him.

He leaves a widow, a son and a daughter.

J. R. BATCHELOR

NEWS and VIEWS

U.S. National Academy of Sciences: Foreign Associates

THE following have been elected foreign associates of the U.S. National Academy of Sciences: Prof. K. E. Bullen, professor of applied mathematics in the University of Sydney; Prof. B. Ephrussi, professor of genetics in the Sorbonne, and director of the Genetics Laboratory of the National Centre for Scientific Research at Gif-sur-Yvette; Dr. W. K. Heisenberg, director of the Max Planck Institute for Physics and Astrophysics, Munich; Prof. V. Prelog, professor of organic chemistry and director of the Laboratory, Federal Institute of Technology, Zurich.

Prof. K. E. Bullen, F.R.S.

PROF. BULLEN is a native of New Zealand, born in Auckland in 1906. His interest in seismology was aroused by New Zealand's Hawke's Bay earthquake of 1931 and encouraged by Sir Harold Jeffreys, whom he met the same year, during Bullen's studies in Cambridge. Together they produced the Jeffreys–Bullen tables of seismic travel times, which have been used since 1940 in preparing the *International Seismological Summary*. Bullen's pressure-incompressibility hypothesis, issued in 1946, led to the inference that the Earth's inner core is solid (in the sense that it can transmit seismic waves), although surrounded by a fluid outer core; it also led him to construct his Earth model B, a widely used mathematical model of the Earth's seismic functions. In addition, Prof. Bullen is the author of several papers on the internal structures of Venus and Mars and on the origin of the Moon.

Prof. B. Ephrussi

PROF. EPHRUSSI was born in Moscow in 1901. On completing his secondary education there, he went to Paris in 1919 and continued his studies at the Sorbonne, where he received a Rockefeller Foundation fellowship and obtained the D.Sc. degree in 1932. During 1930–34 he undertook investigations in the field of chemical embryology and tissue culture, becoming in 1931 an assistant to Prof. Faure-Fremiet at the Institut de Biologie Physico-Chimique. Among his numerous writings on these subjects, his book on tissue culture, published in 1932, is now an acknowledged classic. An interest in genetics, occasioned by his studies of tissue culture, led him to apply for a second Rockefeller Foundation fellowship to work with Prof. T. H. Morgan at California Institute of Technology during 1934–35. In the course of his experiments there in genetics and tissue culture, he observed that a certain combination of genes which causes death in embryonic mice is not necessarily lethal at the cellular level, since individual tissue cultures from these embryos will survive far beyond the embryo's ten-day life-span. In 1935 Ephrussi returned to France, accompanied by Prof. G. W. Beadle. Together they undertook a series of eye-disk transplantation experiments in *Drosophila* which resulted in the first experimental proof of the genetic control of biochemical reactions. After the Second World War he began his post-war studies on yeast, and soon discovered that mutations caused by acridine dyes transform aerobic into anaerobic strains. His subsequent classic investigations probed the biochemical interplay between cytoplasmic and nuclear elements, and resulted in a second book dealing with the significance of nuclear and cytoplasmic genetic variation in embryological development. He is now entering on a study of the genetics of mammalian somatic cells in tissue culture.

Prof. W. K. Heisenberg, For.Mem.R.S.

PROF. HEISENBERG won the Nobel Prize for Physics in 1932, for the creation of quantum mechanics. His was a fundamental approach to the problems of atomic mechanics, based on observable physical properties such as the frequencies and intensities of spectral lines emitted by atoms and molecules; this system, known as matrix mechanics, dispensed with unwarranted assumptions inherent in earlier atomic theory, arising from pictorial representations of planetary orbits within the atom. In 1927 he solved the puzzle posed by the existence of two separate spectra of helium gas, showing that one of them arises when the two electrons of the helium atom are paired with opposite spin and the other when the spins are in the same direction. He then predicted, by analogy, that the hydrogen molecule should exist in two forms: one in which the paired hydrogen nuclei spin in the same direction, and another in which they spin in opposite directions. Two years later the two forms of hydrogen were experimentally shown to exist. It was also in 1927 that Heisenberg formulated his famous principle of indeterminacy (or uncertainty principle), which maintains that regardless of the nature of the experiment there is an inherent theoretical limit to the precision with which both position and momentum of a particle can be established simultaneously. He showed that this ultimate limit of physical measurement is defined by a fundamental universal constant that had been introduced into physics by Max Planck at the turn of the century.

Prof. V. Prelog

PROF. Prelog was born in Sarajevo, Yugoslavia, in 1906. He studied chemistry and chemical engineering at the Prague Institute of Technology, where in 1929 he received the degree of doctor of technical sciences. He headed the research laboratory of the G. J. Driza Co. in Prague until 1935, when he joined the Department of Technology of the University of Zagreb as an associate professor. In 1942 he joined the Department of Organic Chemistry of the Swiss Federal Institute of Technology (Eidgenossische Technische Hochschule) in Zurich, where he became associate professor in 1947, professor in 1950, and director of the Department in 1957. He is the author of some 270 scientific papers on such topics as alkaloids and steroids, heterocyclic and many-membered-ring compounds, antibiotics, and stereochemistry.

Applied Mathematics at Belfast: Dr. A. Dalgarno

DR. A. DALGARNO, though only thirty-three years old, has been appointed to a chair of quantum mechanics in the Department of Applied Mathematics at the Queen's University of Belfast. He began his brilliant research career at University College, London, where in 1951 he obtained a Ph.D. degree. In the same year he moved to Belfast as an assistant lecturer, and was promoted successively to lecturer in 1952 and reader in 1956. Last year he was made director of the newly established Digital Computing Laboratory—an appointment he still holds. Since 1951 he has paid a number of prolonged visits to the United States as guest research worker at the Massachusetts Institute of Technology, and as consultant to Air Force Cambridge Research Center and to the Geophysics Corporation of America. Dr. Dalgarno's research interests include the methods of quantum mechanics (especially perturbation theory), atomic and molecular structure, collision processes and upper atmospheric physics. His skill at mathematical analysis is exemplified by his classical paper with Dr. J. T. Lewis (*Proc. Roy. Soc.*, A, 233, 70; 1956) on the calculation of long-range forces between atoms. This paper gives the exact solution to an important problem which had been treated by approximate methods for more than a quarter of a century. As well as being very creative, Dr. Dalgarno is a stimulating supervisor of research students. His appointment will consolidate the strength of the postgraduate school at Belfast.

Machine Tool Engineering at Manchester: Prof. F. Koenigsberger

DR. FRANZ KOENIGSBERGER has been appointed to the newly created chair in machine tool engineering in the Faculty of Technology in the University of Manchester. Dr. Koenigsberger received his engineering training in the Technische Hochschule, Berlin-Charlottenburg, where he qualified for the degree of Dipl.Ing. in 1931 with honours. He obtained the degree of M.Sc.Tech.(Manchester) in 1952 and the degree of D.Sc.(Manchester) in 1954. After a period of research experience under Prof. Schlesinger in Berlin, he obtained industrial experience in Berlin and later in Belgium. During 1935–38 he was chief engineer and chief designer in the Machine Tool Department of Ansaldo, Genoa, and in 1939 became chief mechanical engineer for Messrs. Cooke and Ferguson, Ltd., a post he held until he was appointed lecturer in mechanical engineering in the Manchester College of Science and Technology in November 1947. He was appointed senior lecturer in production engineering in 1955, and reader in machine tools and production processes in May 1957. Dr. Koenigsberger is well known for his work in the field of production engineering, and is a member of the International Institution for Production Engineering Research.

Medical Statistics at Belfast:

Prof. E. A. Cheeseman

Dr. E. A. Cheeseman was recently appointed to a personal chair of medical statistics in the Department of Social and Preventive Medicine at the Queen's University of Belfast.

Dr. Cheeseman was educated at the William Ellis School and the University of London. He obtained his B.Sc. (Economics) in 1938, and Ph.D. (Medicine) in 1947. He was a member of the Territorial Army at the outbreak of war and until early 1945 served with the Royal Artillery. After six months as a statistical staff officer with H.Q. 21 Army Group he was demobilized with the honorary rank of Captain. After the War he joined the Department of Epidemiology and Vital Statistics at the London School of Hygiene as a member of the Medical Research Council's Statistical Research Unit under Prof. A. Bradford Hill. In 1948 he became lecturer in medical statistics in the Department of Social and Preventive Medicine at the Queen's University of Belfast, and adviser in medical statistics to the Northern Ireland Hospitals Authority. He was appointed reader in 1952. He is a member of the Statistical Committee of the Medical Research Council and of the Statistics Sub-Committee of the Registrar-General of England and Wales, and has been the author or part-author of numerous publications in the field of human genetics and the statistical aspects of medical research. His chief professional interests are advising medical colleagues on the design and analysis of experiments and trying to convince medical undergraduates and postgraduates that statistics are not as difficult as they appear to be.

Control of Colleges of Advanced Technology in Britain

On June 22, Sir David Eccles, Minister of Education, made a statement in the House of Commons on the development of colleges of advanced technology. Control of these colleges, which have been maintained by local education authorities, should be transferred to independent governing bodies. These would receive direct grants from the department of education. His proposal stems from the observation that the success of these colleges in developing as national institutions of higher education has engendered new problems of planning and staffing. Though local government has given good service in the past, to-day the colleges are too big for local management. Bearing in mind the quest of the Robbins Committee and the consideration it might be giving to the future of colleges of advanced technology, the Minister is writing to associations of local authorities and teachers to propose this new status. To preserve links with the local authorities, who have been so helpful, it is suggested that the authorities continue to be represented on the new governing bodies.

The Colonial Microbiological Research Institute, Trinidad

The Colonial Microbiological Research Institute, Port of Spain, Trinidad, was opened on July 5, 1948, by Lord Hankey, chairman of the Colonial Products Research Council. The function of the Institute was to devote its energies to fundamental research in microbiology, to the application of the results of its investigations and to assisting agricultural and other industries in improving their products. The Institute maintained a collection of micro-organisms, the Hankey Culture Collection, in which microbes of industrial or agricultural importance received special attention. It has now been decided to close the Institute as from April 30. It had been financed from Colonial Development and Welfare Research funds up to March 31, 1960, and by the Government of Trinidad and Tobago during the past year. The buildings had become the property of the Government of Trinidad and Tobago. They have since been given to the University College of the West Indies and leased by the College to the Trinidad Regional Virus Laboratory in furtherance of closer association between these two institutions. The Hankey Culture Collection is now housed in the Faculty of Agriculture, University College of the West Indies, St. Augustine, Trinidad, and is under the charge of a curator.

Science and Television

The first attempt to provide a connected and long-term series of science programmes on television for adults has been announced by the B.B.C. Broadcast on Saturday mornings, the series has been grouped under the headings of "The Structure of Matter", "Physics in the Service of Man", "Human Biology" and "Science for Medicine", and will continue until the end of the year. Each programme has been broadcast previously on one or other of the B.B.C. programmes, but they have been re-arranged to provide a new basis for study and to illustrate definite themes. The speakers include many well-known men of science from Great Britain and the Commonwealth, and should enrich a collection of programmes which should bring pleasure to many viewers. It will be interesting, later, to see which members of the community have followed the broadcasts. Full details of the whole series have been set out by the B.B.C. in a recent pamphlet entitled *Saturday Morning Television introduces Science on Saturday* (Pp. 16. London: British Broadcasting Corporation, 1961), which can be obtained from 35 Marylebone High Street, London, W.1.

Pfizer Virus Research Laboratories

The latest aid to vaccine research by the Pfizer Group at Sandwich is the provision of a new specially designed building for research into virus diseases. It has extensive laboratory and animal accommodation, and is designed to preclude the possibility of infectious organisms escaping to the outside as well as preventing any contamination entering the building. The unit consists of three sections: a group of laboratories and two groups of animal blocks of four wards each, all completely separate and designed so that movement of personnel and air between each is controlled. Each animal ward and laboratory has its own high-intensity ultra-violet lock entrance. Sterile air is supplied to individual rooms and temperatures can be adjusted individually. One of the most important research projects to take place in this building will be the investigation of trachoma, a virus disease which causes blindness in Africa and Asia. The Pfizer Group are co-operating with the British Medical Research Council's Trachoma Research Group in this project.

Strontium-90 in Milk, 1960

A number of investigations have already indicated that the levels of strontium-90 in milk produced in the United Kingdom have been determined in large measure by the rate of fall-out occurring at or near the time of milk production. Consequently, a fall in the rate of deposition should result in a downward trend of the activity-levels in milk. This is borne out in a report by the Agricultural Research Council on the strontium-90 levels in milk samples, representative of a substantial fraction of United Kingdom milk-production during the period January–June 1960 (Report No. 4, *Strontium-90 in Milk and Agricultural Materials in the United Kingdom*, 1959–1960. Pp. xiii + 81, 34 tables, 14 figures. London: H.M.S.O., 1961. 5*s*.). Thus it appears, on one hand, that the deposition in the first six months of 1960 was less than 25 per cent of that in the same period of 1959, and, on the other, that the strontium-90 levels in milk at June 1960 were about one-half of those observed twelve months previously. Complete information on strontium-90 levels for other items of the diet in 1960 is not yet to hand, but the milk results give a preliminary indication that the mean level in the total mixed diet of the population was appreciably lower for 1960 than for the previous year. In addition to a full discussion of the milk results, the report assesses the results of a survey of strontium-90 in permanent pastures and animal bone carried out during 1959. It also includes useful summaries of the results of experimental investigations designed to elucidate the factors controlling the passage of fission products through food chains. Throughout, the discussion is lucid, and the experimental results are well presented.

Technical Education Abstracts

The place of technical education in the national economy is now so fundamental that any journal devoted exclusively to its promotion deserves the warmest of greetings. In the case of the newly launched *Technical Education Abstracts*, however, some qualification is necessary. (The National Foundation for Educational Research in England and Wales. *Technical Education Abstracts from British Sources*, September–December, 1960 (Vol. 1, No. 1). Pp. 57 + xxviii. (London: National Foundation for Educational Research in England and Wales, 1961.) Subscriptions: 42*s*. per volume of four quarterly issues.) Many of the abstracts necessarily relate to articles which are largely persuasive, and, though compelling interest at the time of publication, lack much of the force of the original articles both because of the condensed form and because they refer to topics which may have lost their urgency. This criticism may be offset if the publishers can, as they suggest, reduce the time between abstraction and the date of publication. A further improvement could be made in the selection of abstractors. Few of these are known in the field of technical education and this may explain why so many of the abstracts are taken from relatively few journals. The range could be widened if more help were obtained from industrial correspondents, many of whom would give their services voluntarily.

History of Medicine and Pharmacy at London

The Faculty of History of Medicine and Pharmacy was founded under the auspices of the Worshipful Society of Apothecaries of London (which received its Charter from King James I in 1617) on April 3, 1959. The aims of the Faculty are to foster and extend more general interest in medical history by enlisting the support of all medical corporations, schools, societies, clubs and individuals. The Faculty also welcomes the interest and support of general historians in forging closer links between medical and pharmaceutical history and general, social and economic history. The Society's ancient Hall in the City of London serves as a general meeting place for lectures, discussions and other meetings held in pursuance of these aims. In the second annual report (*The Worshipful Society of Apothecaries of London: Faculty of the History of Medicine and Pharmacy. Second Annual Report and List of Members*, 1960–61. Pp. 20. London: The Worshipful Society of Apothecaries of London, 1961) the Faculty describes some of the considerable progress during the past year. Membership now stands at 304, and, on the initiative of the Faculty, St. Thomas's Hospital Medical School has appointed "a Society of Apothecaries Lecturer in the History of Medicine", and the governing body of King's College Medical School has already approved the establishment of a similar appointment. The Faculty's endowed lectures have now been named; the annual students' lecture will henceforth be known as "The Osler Lecture", and the autumn lecture will be named "The Sydenham Lecture", after the great English clinician of the seventeenth century, Thomas Sydenham. Dr. Kenneth Dewhurst has accepted an invitation to give the first "Sydenham Lecture" on November 22, 1961, at Apothecaries' Hall; his subject will be Thomas Sydenham. The second British Congress on the History of Medicine is to be held in London during September 28–29.

The Library Association

The annual report of the Council of the Library Association for the year ended December 31, 1960, presented at the annual meeting in Hastings, 1961, describes the steps taken to press for early action by Parliament on the proposals of the Roberts Committee for the reform of the public library service (Pp. 28. London: Library Association, 1961). A memorandum on the status and training of reference librarians has been adopted by the Council and distributed to all chief librarians, and, at the request of the Select Committee on Estimates, a memorandum regarding the House of Commons Library was presented to the Select Committee, and a deputation later gave oral evidence. An investigation was initiated into ways and means of helping the developing Commonwealth countries, particularly in Africa and Asia, to establish more adequate library services. As a first step a survey is being made of existing services in these countries. A comprehensive and detailed guide to British periodicals is being compiled, and suggestions for improving the classification and expansions to the schedules have been sent to the editor of the Dewey Decimal Classification. The Association is taking steps to establish a National Advisory Council for Micro-reproduction following a meeting at which all types of libraries, learned societies and institutions were represented; a steering committee has been appointed.

The Brown Library, Liverpool

An illustrated booklet issued by the City of Liverpool Libraries, Museums and Arts Committee as a guide to the rebuilt Brown Library and the new links with the Picton and Hornby Libraries gives a concise history of the Brown Library, and then describes briefly the services which the rebuilt library offers in commerce, science and technology (Pp. 32. Liverpool: Brown, Picton and Hornby Libraries, 1961). Besides the special research services to science and industry offered by Ladsirlac, these include a

R326

commercial and social sciences library, technical library, science library, technical documents unit, patents library and microfilm unit. In the arts the library includes a Commonwealth library, an American library, international library, biography library, reference issue foyer, and a record office and local history library. The booklet displays well the regional character of the libraries and their services, and it should be noted that they are depository libraries for the publications of the American, British and European Atomic Energy Commissions, and for the publications of the United Nations Organization and the United Nations Educational, Scientific and Cultural Organization.

Library of the U.S. Naval Observatory

AN article by Marjorie S. Clopine, librarian of the United States Naval Observatory, reprinted from *Special Libraries* (52, No. 2, February 1961) and issued by the Observatory as Reprint No. 19, describes the resources and treasures of the Library, which are of particular interest for astronomers. By 1960 the Library contained more than 55,000 catalogued volumes and also many sets of periodicals, the mathematics collection being especially strong in analysis and noted for its value in reference work. There is a collection of 500 rare books printed before 1800. Besides long sets of nautical almanacs, the Library has a valuable collection of star catalogues and charts, observatory publications, bibliographical reference works in astronomy, the complete works of many astronomers and mathematicians, and mathematical tables.

Chemical and Allied Industries at the Science Museum Library

UNDER the title *Books on the Chemical and Allied Industries* the Science Museum Library has issued, for the Ministry of Education, a short-title list of books published in 1930 and onwards on the chemical industry, with books on mining and metallurgy, and the paper, leather and textile industries and received in the Science Library up to the end of 1959 (Pp. ix + 118. London: H.M.S.O., 1961. 12*s*. 6*d*. net). The list has been compiled by L. R. Day from the subject catalogue in the Library and is the second in a series of catalogues, each carrying a large division of the Science Library's collection. Entries are arranged in broad subject groups selected from the Universal Decimal Classification, and both an author index and a subject index are included. While intended primarily to enable users to take advantage of books available in the Library it is hoped that the list will assist other libraries in both the selection and classification of works in these fields. A Supplement, issued as Science Library Bibliographical Series No. 781, includes books received in the Science Library in 1960 (Pp. 10. London: Science Museum, 1961).

New American Electricity Plant

THE largest power plant in the western hemisphere has recently begun to operate on the United States–Canadian border. It harnesses the power of the River Niagara, which drops 325 ft. over cataracts and falls in its 34-mile course between Lake Erie and Lake Ontario. The new hydro-electric development, one of the world's largest, is the Robert Moses Niagara Power Project. The power output of its two generating plants is 2,190,000 kilowatts, exceeding the giant United States' Grand Coulee Dam. The new Niagara River project began power production three years to a day after contracts for its construction were signed. Construction has been rushed and limited operation started because of a power shortage that has existed since 1956, when a power plant was destroyed by a rock-slide at Niagara Falls. Only two of the plant's 13 generators are now operating, but the remaining 11 will be completed and placed in use at the rate of one each five months. The Robert Moses Niagara Power Project, built by the New York State Power Authority and named after its first chairman, is a 720,000,000-dollar non-profit undertaking, financed through the sale of bonds to private investors. Cost of the plant and interest to investors will be paid through the sale of electricity. Several utility companies have contracted to buy the plant's electrical output. Because of limitations of water-diversion, the United States' share of river-flow during daylight in summer is not sufficient for continuous operation of the new plant. To ensure a constant water supply, the Robert Moses project includes a 1,880-acre storage reservoir which will be filled through diversion of Niagara River water during the winter. The reservoir, however, is more than an alternative source of water for operation of the power plant. It has been equipped with a reversible pump-generating system, and is used for production of 240,000 kilowatts of electricity.

Coal Tar Technology

Review of Coal Tar Technology, for the first half of 1960, presents the customary authoritative survey of international research, development, production, purification and patents relative to coal tar and its products covering that period. (January–June, 1960, 12, Part 1. Pp. ii + 63. Gomersea, Leeds: Coal Tar Research Association, 1960. 20*s*. per volume.) Section 1 reviews the then current work on coal tar itself, the primary fractions light oils, benzole, pitch and bitumen; tar acids; tar bases; monocyclic and polycyclic aromatic hydrocarbons; also utilization, which ranges from road tar, paints, pipecoatings, solid and liquid fuels, lubricants, plastics and resins, to wood preservatives and pesticides. Section 2 is devoted to general chemistry and chemical technique of coal tar and products; space is taken up chiefly with catalytic processes, for example, alkylation, isomerization, hydrogenation, oxidation, desulphurization, cracking. Physical chemistry of these substances concerns mainly rheology, vapour pressure and thermal properties. The paragraphs on analytical work include spectroscopic and chromatographic applications to coal tar and products, while a concluding category of chemical techniques describes recent work in connexion with distillation and crystallization problems.

Glossary of Petroleum Terms

THE *Glossary of Petroleum Terms*, first published in 1951, with a second edition in 1955, has now been revised and enlarged, bringing it up to date. (Third edition, revised and enlarged. Edited by George Sell. Pp. vii + 39. London: Institute of Petroleum, 1961. 5*s*.) The petroleum industry is no exception to the trend of many others in developing over the years of its evolution a colloquial vocabulary understood only by those engaged in its day-to-day pursuits. In fact, especially in English-speaking international environments, the particular 'jargon' involved is, to the layman, probably more incomprehensible than in the case of many other modern, comparable commercial undertakings. Such words as 'bean', 'bund', 'Christmas tree', 'feedstock', 'fishing', 'go-devil', 'overhead', 'packer', 'sweating', 'wildcat', to quote only a few, have quite different meanings in this industry from those ordinarily understood in general conversation. There is need for such specialized guidance as this, especially for the non-technical people in the industry, but this diminutive pamphlet (it is scarcely more than that, for of its 39 pages, 29 are devoted to the 'glossary' itself, 7 to an appendix on petroleum terms in U.K. legislation, 3 to abbreviations of titles of some official bodies, for example, API, DTD, IP, NCB, SAE, etc.) provides only modest fulfilment. Petroleum technology to-day is such an enormously ramified subject that nothing short of a comprehensive dictionary devoted to its tenets can cover the ground of its words and meanings adequately. The task has been attempted elsewhere some years ago, but even then on a rather limited scale. Whether the time is now ripe for conception and execution of a bold enterprise of this nature is a matter of judgement, policy and cost, but it is one to which the Institute of Petroleum, responsible for this *Glossary*, might well give careful consideration before the next edition is due for publication.

Improving Biological Communications in the United States

Establishment of a Biological Serials Record Centre is a principal recommendation of the Biological Communications Project, supported by the National Science Foundation, with the objective of collecting and disseminating detailed information on all biological serial and periodical publications, estimated at 25,000–50,000. The Centre will assess what proportion of this material is available to biologists in the United States, and will also study the general effectiveness of present periodicals as a system of communication. The National Science Foundation has also made a grant of 56,000 dollars for a one-year study of chemical notation systems, to be conducted by the National Academy of Sciences–National Research Council, and is supporting for a second year the Chemical Abstracts Service of the American Chemical Society's project to provide a centralized information service for chemists. A survey of computer systems for searching chemical literature has been completed by the National Bureau of Standards Research Information Centre and Advisory Service on Information Processing, and its results are available in a report by E. C. Medam and H. R. Koller, obtainable at 2.25 dollars from the Office of Technical Services, U.S. Department of Commerce, Washington 25, D.C.

Eoliths and Prehistorical Tools

As far back as 1911 there were furious quarrels among British prehistorians as to whether or not the Tertiary eoliths found by Reid Moir were really fashioned by man. To some extent the quarrel was theological: Was it conceivable that mankind could be as old as was suggested by the finds? Much research was undertaken, and at the time it was determined that Nature could chip, the blows coming from one or many directions, but not from two, or, better, three directions only. Further, if a piece of tabular flint was boldly chipped along one edge and then the aretes between the flake scars carefully removed by subsequent flaking so as to produce a sharp, flaked edge, then Nature could not have been responsible for the work. Briefly, if it were possible to demonstrate design then the chipped object had been fashioned by man. Later the study of prehistory spread to other continents, but the above criteria were largely forgotten. Much chipped material claimed to be man's handiwork was unearthed and this material in turn became the yardstick for the study of still more flaked objects. Now the matter is being carefully reconsidered, and Dr. Desmond Clark has undertaken considerable research work, especially as regards materials other than flint. In a recent monograph (*Bull. Brit. Mus.* (*Nat. Hist.*), 5, No. 4. Pp. 71–90 + plates 15–23. London: British Museum (Natural History). 17*s.* 6*d.*), Dr. Clark concerns himself with specimens of very early Pleistocene age from certain beds in Israel. His conclusions are that probably every one of the specimens in question has been flaked by natural agencies, and these agencies he describes in some detail. Of course, should man have been in existence at the time in what is now Israel there was nothing to stop him picking up a naturally chipped object and using it as a tool. But that is not the question under consideration. The article has a wider interest than merely whether certain specimens from Israel were fashioned by Nature or by man; the detailed studies of how Nature can work will be very useful to prehistorians in other areas when they have to determine whether or not their early finds are really genuine tools or *lusi naturae*.

The Institute of Fuel

Dr. James Burns, deputy chairman, North Thames Gas Board, has been elected president of the Institute of Fuel, and will take office in October. Sir Harold Hartley has been made an honorary member of the Institute. Sir Harold was chairman of the Fuel Research Board of the Department of Scientific and Industrial Research during 1932–47; chairman of the British National Committee and of the International Executive Council of the World Power Conference during 1935–50; and president of the Conference during 1950–56.

Commonwealth Scientific and Industrial Research Organization Chemical Research Laboratories

Following the appointment of the director of the Commonwealth Scientific and Industrial Research Organization Chemical Research Laboratories, Dr. I. W. Wark, to the Executive, it has been decided that, in future, overall management of these Laboratories will be the responsibility of a committee of the chiefs and officers-in-charge of the various divisions and sections at Fishermen's Bend, Melbourne. The first chairman is Dr. A. L. G. Rees, chief of the Chemical Physics Division.

A New Computing Centre

On June 7 the IBM Co. opened a new data-processing centre at 58 Newman Street, London. This centre is equipped with type 7090 and type 1401 computers; the former machine is one of the most powerful at present in operation, and the latter forms a suitable second echelon support device. Users of the centre are expected to do their own programming, but this is relatively easy because the *Fortran* automatic programming system is available and this is backed by the *Share* user co-operation system. The centre staff will be available for basic training and also to give advice to users in particular cases.

The Selby Fellowship

THE Selby fellowship has been established to bring graduates of high promise and proved capacity for research to work in the laboratories of universities or research institutions in Australia. The fellowship may be awarded in any branch of physical or biological science, and is tenable at any university or research institution in Australia, normally for one full year of work. Candidates must have taken their first university degree, and have had preliminary research experience, at some university or universities in a country other than Australia. In general, they should hold a Ph.D. degree or have equivalent status and experience, but the fellowship will not normally be given to those who have already held a senior research award. Applicants should be less than thirty years of age on July 1 in the year in which his application is received. The fellowship will carry a stipend of £1,500 (Australian) per annum. The costs of the Fellow's travel to Australia, and back to his country of origin at the conclusion of the fellowship, will be provided, up to a limit of £A500, including dependants, if any. Applications should be sent to the Assistant Secretary, Gordon Street, Canberra City, A.C.T., before July 30.

Challenger Society Grants for Marine Biology or Oceanography

THE Challenger Society has announced that it is prepared to make small grants for research in marine biology or oceanography at a recognized laboratory during the year June 1961–62. Applications, accompanied by details of the proposed research, should reach the Honorary Secretary, Challenger Society, National Institute of Oceanography, Wormley, Godalming, Surrey, not later than July 14.

The Training of Biochemists

THE Biochemical Society is organizing a colloquium on "The Training of Biochemists", on July 13, during the course of the Society's two-day meeting in Oxford (July 13–14). Included in the programme will be the following topics and speakers: biochemistry as an honours degree subject (Prof. S. V. Perry); the graduate biochemist and industry (Dr. W. F. J. Cuthbertson); university and departmental entrance requirements (Dr. Margaret Kerly); the teaching of biochemistry at Oxford (Prof. D. D. Woods); teaching in a small non-professorial department (Dr. G. R. Tristram); the M.Sc. course in biochemistry (Dr. E. M. Crook); summarizing remarks (Prof. F. C. Happold). Further information can be obtained from Dr. K. S. Dodgson, Department of Biochemistry, Physiology Institute, University College of South Wales and Monmouthshire, Newport Road, Cardiff.

Announcements

DR. W. E. SWINTON, of the Department of Palæontology, British Museum (Natural History), South Kensington, has been appointed head of the Division of Life Sciences at the Royal Ontario Museum, Toronto; Dr. Swinton will take up his new appointment in September.

MR. B. L. J. HART has succeeded Mr. Frank Worsfold as principal of the Computer Application Training Centre, of International Computers and Tabulators, Ltd., at Bradenham Manor. Mr. Hart was formerly a member of the International Computers and Tabulators' Computer Group, and is well known for his work on management and production control.

THE British Society of Rheology and the Non-Destructive Testing Group of the Institute of Physics and the Physical Society are holding a joint conference on "Rheological Techniques" in Llandudno during September 20–22. Further information can be obtained from Dr. Peter Lord, Royal College of Advanced Technology, Peel Park, Salford 5.

AN international conference on "Embryology", the fifth of its kind, is being sponsored by the editorial board of the *Journal of Embryology and Experimental Morphology*, and will be held in London at the Middlesex Hospital Medical School during September 18–21. Further information can be obtained from Dr. L. Brent, Department of Zoology, University College, Gower Street, London, W.C.1.

JOINTLY the Science Council, the Physical Society and the Crystallographic Society of Japan are organizing an international conference on "Magnetism and Crystallography" at Kyoto during September 25–30. Further information can be obtained from either Prof. T. Nagamiya or Prof. S. Miyake, Organizing Committee of the International Conference on Magnetism and Crystallography, Science Council of Japan, Ueno Park, Tokyo, Japan.

AN informal conference organized jointly by the European Organization for Nuclear Research and the Max Planck Institute, Heidelberg, on "Fission and Spallation Phenomena and their Application to Cosmic Rays", will be held at the Organization's Laboratories, Meyrin (Geneva), during September 26–29. Further information can be obtained from the Scientific Conference Secretariat (E. W. D. Steel), CERN, Geneva 23, Switzerland.

THE Mass Spectrometry Panel of the Institute of Petroleum, in conjunction with the American Society for Testing Materials (Committee *E*-14), is organizing a conference on "Mass Spectrometry" at the University of Oxford during September 12–15. Further information can be obtained from the organizing secretary, Mr. W. J. Brown, Instrumentation Division, Associated Electrical Industries (Manchester), Ltd., Trafford Park, Manchester 17.

THE University of Chile and various societies of Santiago and Valparaiso are organizing an international symposium on "Tissue Transplantation", to be held in Santiago and Valparaiso, Chile, during August 30–September 2. The programme will cover: the genetical basis; immunological problems; present status and prospective applications of tissue transplantation. Further information can be obtained from Dr. Alberto P. Christoffanini, secretary of the organizing committee of the symposium, Maximo Humbser 567, Santiago, Chile.

ERRATA. In the article on "Technical Assistance to Overseas Countries" in *Nature* of June 17, p. 1039, par. 4, lines 5 and 6, for "directorates of the Overseas Services and the Overseas Geological Surveys" read "Directorate of Overseas Surveys and the Overseas Geological Surveys".

THE sixth International Nematology Symposium will be held in Ghent during July 24–28. It is regretted that on p. 963 of the June 10 issue of *Nature* the word "Hæmatology" was printed for "Nematology".

NEW RESEARCH LABORATORIES FOR THE PAINTS DIVISION OF IMPERIAL CHEMICAL INDUSTRIES LTD.

It is no exaggeration to say that, within the past twenty-five to thirty years, a revolution has taken place in the paint industry which has changed paint-making from an art into a science. As a result, the simple linseed oil/natural resin paints which had been in use for centuries have been displaced almost entirely by a wide range of synthetic coatings, each of which is specially formulated for the conditions under which it will be applied, and for the performance it will have to give, whether this is on a house, a high-speed aircraft, a motor-car, a household appliance or on one of the many other surfaces to which paints and lacquers are now applied.

This rapid development of modern paint coatings is the result of the interplay between the increasingly stringent requirements of the users and the research and development work carried out within the industry to anticipate these needs. The applied research necessary to produce the required products has in turn been nourished and stimulated by the fundamental research on polymers carried out within the industry and at universities and research institutions, and by the increasing range of synthetic raw materials that have become available from the chemical industry.

The Paints Division of Imperial Chemical Industries Ltd., which was one of the first paint companies in the United Kingdom to establish a research department some thirty years ago, has always placed considerable emphasis on research directed towards improving its existing products and to the production of new ones. To improve the accommodation for its Research Department, a five-storey block of laboratories has been erected recently on the Division's headquarters site at Slough, Bucks.

The new building, which is 48 ft. wide × 160 ft. long, provides about 30,000 sq. ft. of working space for laboratories, offices and the library of the Division.

It is constructed of *in situ* concrete faced with Leicester golden brown and Vandyke brown bricks, ornamented with blue mosaic column facings and artificial stone copings, and is planned on a 5-ft. longitudinal module. On all floors, the main corridor has been offset from the centre line, giving 22-ft. wide rooms on the north side and 15-ft. wide rooms on the south side. On the lower floors, where it is unlikely that the function or size of rooms will need to be altered, the walls are generally of solid construction; but on the higher floors, where changes are more likely to occur, 'Holoplast' partitioning has been used.

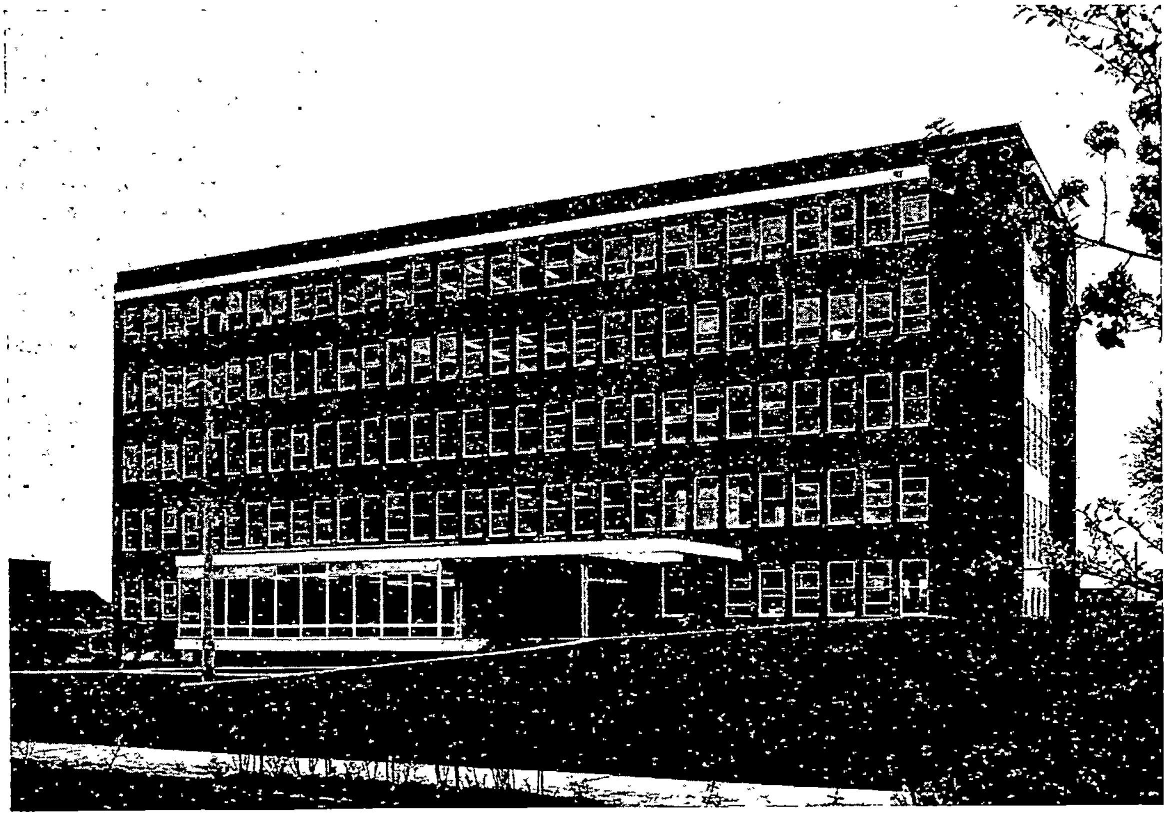

Fig. 1. North and west sides of I.C.I. Paints Division's new research laboratories at Slough, Bucks., showing the entrance and library reading room on the left

Floors generally are covered with large grey linoleum tiles finished with a polyurethane lacquer. The 5-ft. spacing of the columns on the outside walls has allowed for the provision of large sash windows, and the false ceilings, above which are carried the horizontal service distributions for the floor above, are rebated on the window side to increase the window height to the maximum.

Space heating is carried out by means of hot-water convectors built into the walls below the window sills. Window ventilation is relied on for offices, but in the laboratories, the fume-cupboard system provides the main ventilation. The fume-cupboard fans are run continuously throughout the day, warmed replacement air, cleaned by electrostatic precipitation, being supplied to all laboratories through a system of trunking concealed in the corridor ceiling.

To enable the extract ducts from fume cupboards on the lower floors to be carried up to the roof without interfering with the design of laboratories on the upper floors, the majority of the fume cupboards are recessed into a 4-ft. wide longitudinal strip which has been provided on all floors between the corridor and the laboratories on the wide side. Vertical ducts located in this strip carry the extract trunking from the different groups of fume cupboards up to the exhaust fans on the roof. Similar ducts carry the main risers for the piped and electrical services and the laboratory drainage. Access to all these ducts and to the backs of fume cupboards is provided from doors in the corridor, thereby minimizing interference with work in the laboratories when maintenance is necessary.

In general, 5-ft. wide double-sided island benches at right-angles to the windows have been adopted as the standard with a 5-ft. walk-way between, giving a 10-ft. centre-to-centre spacing between benches, corresponding to the 10-ft. tap-off systems on the ring mains and the 5-ft. columns on the window walls. With the present staff, this type of layout provides an average of about 15 ft. of bench per person. A special feature of the benches is the grouping of the service outlets into towers. Electrical sockets are mounted vertically on the fronts of these towers, with the water-control valves immediately above them, the corresponding water outlets being located at the side of the towers over a central lead-lined trough drain. The outlets for gas services (town gas, compressed air or nitrogen) are at the base of each tower, with extended control spindles to handles mounted on the fascia of the bench. The tops of the towers are recessed to carry the ends of over-bench shelves, beneath and on each side of which are mounted lengths of 'Unistrut' channel. On these slide specially designed clamps for the erection of bench scaffolding, thus eliminating the need to use retort stands for the support of apparatus. Similar 'Unistrut' channels have been provided on the walls in many laboratories for the erection of tall apparatus, and in these locations wall service outlets have also been provided.

Bench tops are either of teak, stainless steel or 'Formica' according to the particular type of work being carried out on them. The underbench furniture is of painted softwood and consists of 3-ft. 4-in. long interchangeable cupboard and drawer units.

The laboratories on the top floor of the building are devoted to organic chemical work directed towards the discovery of new polymers which may be of value as surface coatings, while those on the second and third floors are concerned with the further development of these polymers into paints and with their evaluation in comparison with standard products. The second floor also provides accommodation for the research management, administration, a central typing service and a conference room. The first floor is almost entirely occupied by the Physical Chemistry and Analytical Sections, both of which make extensive use of physical techniques such as infra-red and ultra-violet spectroscopy, polarography and chromatography, etc. The Physics Section, which is housed on the ground-floor, is concerned with problems involved in the dispersion and physical behaviour of pigments and with the physical characteristics of paint films and their effect on such properties as gloss, hardness, adhesion and durability. The remainder of the ground-floor is occupied by the Division Library and Information Service, which, in addition to housing a library of some 20,000 volumes dealing with a wide range of scientific interests, provides information in the form of bulletins, literature surveys, translations, etc.

The basement, as well as housing the main engineering services for the building, also provides accommodation for two air-conditioned rooms used for physical tests on paint films.

J. W. DORLING

NORTH BORNEO EXPEDITION 1961

MOUNT KINABALU (13,455 ft.) is the highest peak between the Himalayas and the Snow Mountains of New Guinea, and, though not a snow-mountain itself, it has an alpine flora relating these two parts of the world. It was first climbed in 1851 by Sir Hugh Low and has since attracted many botanists, zoologists and geologists. It is now known to have one of the richest floras of any mountain, but a great part of it remains to be explored.

To further the biological exploration of North Borneo, which will also assist the Government of North Borneo in its plans for the establishment of a national park on this famous mountain, the Royal Society set up in 1960 a committee under the chairmanship of Sir Joseph Hutchinson. This year, in co-operation with the Government of North Borneo, the Society has sent out a reconnaissance expedition under the leadership of Mr. E. J. H. Corner to investigate the practically unexplored eastern side of the mountain, where the forest extends down to the lowlands. In particular, the vegetation and soils are being studied as indicators of land which should be conserved within the boundaries of the national park. It is well known that in these precipitous regions of high rainfall, the clearing of luxuriant primary forest may lead to irreparable impoverishment of the soil with erosion and consequent silting and flooding of the rivers.

As soil-scientist, Mr. G. P. Askew (Wye College, University of London) is accompanying the expedition to work in conjunction with the Soils Division of the Department of Agriculture in North Borneo. Mr. Adam Stainton, who has taken part in the botanical exploration of Nepal, organized through the British

Museum (Natural History), is assisting in botanical and photographic work. Other personnel have been drawn from Malaya, Sarawak and North Borneo, with the intention of developing regional interest in the project. The Government of Singapore has made available from the staff of the Singapore Botanic Gardens the services of the botanist, Dr. Chew Wee Lek, and of two plant collectors, Md. Shah and Kadim b. Tassim. Much scientific work on the flora of Borneo has been done at these Gardens, the herbarium of which contains a very valuable set of Bornean plants. Md. Shah is the son of the late Haji Md. Nur, who contributed so much to the scientific work of the Gardens. General vertebrate zoology is in the charge of Prof. J. L. Harrison (Nanyang University), who joined the expedition for a month during June 17–July 22, and Mr. Chin Phui Kong (assistant fisheries officer, North Borneo). Mr. B. E. Smythies (conservator of forests, Sarawak), the author of the recently published book *Birds of Borneo*, is joining the expedition as ornithologist in July. The Forest Department, North Borneo, is assisting in opening up the intended trail up the eastern shoulder of the mountain and across the so-called Pinosuk Plateau, which is of great scenic and biological interest, but apparently of little use for economic development. Various members of the Department are visiting the expedition in its different stages.

The members of the expedition passed through Singapore to Jesselton at the end of May and are spending from June until mid-September on the slopes of the mountain. It is intended to use a portable aluminium sheet hut as a base camp at an altitude of 5,000 ft., whence local expeditions will be made with tents up the unexplored eastern approaches of the mountain. Since exact localization will often be necessary, a set of aerial photographs is being used in conjunction with the War Office and Air Ministry survey maps (1 : 50,000).

Among the many objects of the expedition, special attention is being given to the soil conditions in the mossy forest at 5,000–7,000 ft. altitude and in the areas of ultrabasic rock, to the occurrence of the great parasitic flower *Rafflesia*, to the extraordinary variety of wild figs, and to the opportunity for obtaining photographs to illustrate Mr. Corner's durian theory of tropical forests; Borneo being the centre of the remarkable genus of durian trees.

Local arrangements are being made through the office of the Resident, West Coast Residency, North Borneo, and Messrs. Harrisons and Crosfield have undertaken to act as the Expedition's agents in North Borneo. The botanical and zoological results will be co-ordinated by the staffs of the Royal Botanic Gardens, Kew, and the British Museum (Natural History) respectively.

ATOMIC STRUCTURE OF GRAPHITE AND GRAPHITIZATION

An informal discussion on graphite, under the auspices of the Faraday Society, was held on January 26 in the Chemical Engineering and Chemical Technology Department of the Imperial College of Science and Technology, London. About 120 people were present, including five from France and one or two others from the Continent.

The programme was opened by the chairman, Prof. A. R. Ubbelohde (Imperial College of Science and Technology), who outlined the scope of the papers to be presented and indicated the kind of problems which it was hoped would be clarified by the papers and subsequent discussion. The first paper, by Prof. C. A. Coulson (Mathematical Institute, University of Oxford), was on the electronic band structure of graphite and the results of a calculation of the energy-levels by conventional tight-binding methods. For the case of a single graphite plane, it is found that the π electrons have energy-levels which fall into two half-bands, just touching one another at the ends where the density of states is zero. Under the influence of neighbouring layers the two half-bands broaden and overlap, so that the valance band is not quite full and the upper (conduction) band is not quite empty. From this energy-level distribution, both the bond-length and the shape of the X-ray emission band can be calculated and they are in good agreement with experimental results. Other properties, such as the electrical conductivity and the de Haas–Van Alphen effect, depend only on the nature of the top occupied levels, and reasonable agreement with the calculation in found in practice. Finally, Prof. Coulson discussed the electronic behaviour at the edges of a graphite layer and the possible situations when either neighbouring sites or a single separated site are involved. Both adsorption experiments and quenching by oxygen are explicable if it is supposed that there are unpaired electrons at a few sites around the edges.

In the following paper, Dr. G. E. Bacon (Atomic Energy Research Establishment, Harwell) reviewed the outcome of the study of graphite by diffraction methods in terms of: (1) the limited crystallographic perfection; (2) the distribution of electrons around the carbon atoms; (3) the texture of artificial graphites; (4) the effect of irradiation by neutrons. The characteristic features of X-ray powder photographs could be explained in detail in terms of random displacements of the carbon planes about the *c*-axis, with a measureable difference in the inter-layer spacing between oriented and mis-oriented planes. The proportion of rhombohedral modification can be varied by mechanical working or by treatment with strong acids or bromine, but the detailed manner in which the transformation takes place is not understood. A combination of neutron diffraction data, careful measurement of X-ray intensities and theoretical calculations has established that the departures from spherical symmetry in the electronic distribution are very small. Irradiation in a nuclear reactor produces significant changes in macroscopic properties, such as elasticity and bulk dimensions, and although these can be explained in general terms as due to interstitial carbon atoms and vacancies, the detailed nature of these defects is still uncertain.

Under the title "Defauts Cristallins dans le Graphite", Prof. J. Mering (Institut National de Recherche Chimique Appliquée, Paris) gave a systematic classification of the various types of defect which can be found in graphite crystals, and discussed their detection and observation and their influence on chemical and physical properties. At the outset he emphasized the outstanding difficulties in this kind of work—the non-existence of a perfect graphite crystal as a reference standard, and the impossibility of introducing or removing in any simple way faults of a given type. The main classification was into point, line and planar faults. Point faults are the simplest type, but they are difficult to detect by direct means, although they produce relatively simple effects on physical properties (such as electrical resistivity and the Hall coefficient) and on the chemical properties, in particular the tendency to form lamellar compounds. These point faults can be subdivided in terms of substitution atoms, vacancies and interstitials. Faults associated with dislocations and with surfaces are the least simple to define and interpret, but they are detectable more directly by diffraction methods and optical and electron microscopy. Planar faults were subdivided into 'surfaces of dislocations' (such as occur between the not-quite-parallel domains in so-called single crystals of natural graphite or between hexagonal and rhombohedral regions) and errors in layer stacking (such as the orientation faults, which are particularly noticeable in artificial graphites, or random mistakes in an *AB* or *ABC* stacking sequence).

The second session of the meeting dealt with slightly more technological aspects of graphite and was opened with a paper by Mr. P. K. C. Wiggs (Morgan Crucible Co., Ltd., London) on "Elastic Properties of Graphite". Single crystals of graphite have a Young's modulus parallel to the basal planes which is about three times as high as for steel, but parallel to the *c*-axis the modulus is many times smaller. The easiest mode of deformation is, as would be expected, a shear in which neighbouring planes slide over one another. The properties of polycrystalline graphite bear little resemblance to those of the ideal single crystal, and are determined very largely by the disordered material at the junctions between crystallites and by internal voids: such anisotropy as exists is a consequence of the texture which results from the nature of the starting materials and mode of manufacture. As a consequence of this, it is found that all the elastic moduli of polycrystalline graphite are of the same order of magnitude as the low-shear modulus for the sliding of adjacent planes in the single crystal. Only for the more recent developments of pyrolytic graphite and graphite whiskers, where stresses cannot be relieved by sliding, do the high modulus and strength of the single crystal parallel to the planes become apparent. At temperatures greater than 2,000° C., electric furnace graphite is deformed plastically to a very significant extent, but on heating up to this temperature there is a two-fold increase in the elastic moduli on account of the increasing thermal motion of the carbon atoms, which reduces the ability of one plane to slide over another.

A paper by Dr. E. G. Steward (Northampton College, London) described the crystallographic changes which occur during graphitization. There is still considerable doubt about the structural details of poorly crystallized material, which gives very diffuse X-ray diffraction patterns. Recently, there has been a revival of suggestions of non-planar structures, such as a diamond-type of bonding, particularly from electron diffraction observations. As graphitization proceeds and the crystallites grow, the interpretation is much clearer: a progressive modulation of the two-dimensional bands and a general sharpening of the reflexions demonstrates the approach towards the ideal Bernal structure. The ease of graphitization depends on the structure of the crystal nuclei and whether these are separated by cross-linkages. Initial growth occurs by incorporation of non-organized carbon at the crystallite edges, but further progress depends on the existence of near-parallel orientation between neighbouring crystallites. An important characteristic of the final product may be the size of the quasi-perfect macro-units which are much larger than the regions of higher structural perfection revealed by X-ray diffraction. Recent developments in the work on pyrolytic carbons and the examination of moiré fringe patterns in the electron microscope were also discussed.

The final paper, by Prof. W. F. K. Wynne-Jones (King's College, Newcastle upon Tyne), dealt with physical and chemical studies of the graphitization process.

A number of questions and general discussion followed each of the sessions. One of the principal topics was the lack of understanding of the transformation from ordinary to rhombohedral graphite and the energy relations between the two forms. It was also evident that we still have little precise knowledge of the intergranular material which bonds together the individual crystallites, and which is so important in determining the physical and chemical properties of ordinary non-ideal material. G. E. Bacon

RADIOLOGICAL UNITS AND MEASUREMENTS

RADIATION dosimetry is an immensely complicated subject and many of its problems have been only partially resolved. The difficulties are of a fundamental nature and arise: (*a*) from the complexity of the interactions of neutrons and electromagnetic radiations with matter; (*b*) from the still greater complexity of interaction of charged particles, especially electrons, with matter. So long as the understanding of these basic processes remains incomplete, there will be outstanding problems in the dosimetry of ionizing radiations. There is consequently a recurring need—it amounts to a necessity—for authoritative pronouncements on this developing subject to maintain world-wide uniformity in the units, standards and measurements of radiation and radioactivity. The National Bureau of Standards *Handbook 78** is intended to satisfy this need. It supersedes the 1956 report of the International Commission on Radiological Units and Measurements, and the chief interest lies in the difference between the two reports. There has been no major revision and the differences consist almost entirely of accretion and expansion; the new handbook is in fact twice as long as the old. The chief aim according to the preface is ". . . to improve the accuracy of the evaluation of absorbed dose in all places of interest in a patient or other objects". To this end, there is a greatly expanded section on clinical and biological applications, including a new and detailed treatment of energy absorption in and near bone. An important new recommendation for radiotherapists is that the routine recording of bone doses and of tumour doses should now include a statement of maximum and minimum absorbed doses in rads. There is a section entitled "Report on an Inquiry on Current Errors in Clinical Dosimetry" which is somewhat disturbing; it should be carefully studied by all concerned.

---

* United States Department of Commerce: National Bureau of Standards. Handbook No. 78: Report of the International Commission on Radiological Units and Measurements (ICRU), 1959. Pp. x+90. (Washington, D.C.: Government Printing Office, 1961.) 65 cents.

In Part 3 ("Physical Aspects of Dosimetry") linear energy transfer and neutron dosimetry are treated in much greater detail, and there are entirely new sections on chemical, solid state, calorimetric and photographic dosimetry. The appendixes contain some interesting and often impressive accounts of international comparisons of various radioactivity standards, and it is noteworthy that Hönigschmid's weighings of radium standards, in which he estimated an error of about 0·02 mgm. (in around 20 mgm.), have now been accurately confirmed by ionization and calorimetric measurements. There are new appendixes on focal spots and the estimation of integral absorbed dose and the final appendix states the International Commission on Radiological Units and Measurements Position Plan adopted at Geneva in September 1958.

Many of the larger criticisms that could be raised against this report are now under active debate in preparation for the major revision referred to in the preface. In a composite production of this nature it is very difficult to preserve consistency. Thus, in referring to the calculated values of mass stopping power ratios (s_m) in Table 8·3, it is stated in footnote 24 "... that an uncertainty of the order of 1 per cent exists in s_m ..." yet later in the same section on page 37 it is recognized that the basis of these calculations is incorrect. The earlier admission on page 1 of errors "... of the order of a *few* per cent ..." would appear to convey the requisite degree of caution. The symbolism is not always consistent and in some places (for example, p. 40 and Figs. 8·6 *b–d*), 'E' is used to denote particle kinetic energy, whereas in other places (for example, p. 51 and Figs. 8·3 *a–c*), 'T' is used for the same purpose.

It is almost superfluous to add that this *Handbook* is essential reading for all radiation physicists, radiotherapists, radiologists and radiobiologists. Unfortunately it is rather unattractively produced, it has several misprints and grammatical errors, and the numerous footnotes are scarcely legible without the aid of magnification.

P. R. J. Burch

THE RED DEER COMMISSION

THE Red Deer Commission was constituted in October 1959 with the general aim of furthering the conservation and control of red deer in Scotland. Its setting up marked the first comprehensive attempt to deal with a controversial problem which has vexed the Highlands for the best part of two centuries.

The introduction of large-scale sheep farming into the Highlands in the latter half of the eighteenth century, replacing the old population of farmers with their primitive breeds of cattle and sheep, resulted, towards the end of that century, in the reduction of deer stocks to probably their lowest level. At the beginning of the nineteenth century another influence was introduced by the development of the sport of stalking, giving a new value to the deer. When prices of wool and mutton declined towards the end of that century, the area given over to deer forests increased rapidly, from less than two million acres in 1883 to more than three and a half million acres at its peak in 1912. In 1952, however, the area of deer forests was estimated to have been reduced to about three million acres.

The influence of these developments on the range and population of deer affected every aspect of highland life, causing deep dissensions. Between 1872 and 1952 six different committees or commissions were appointed by Parliament to make recommendations with regard to conservation and control, but little or nothing was achieved until 1939. The Deer and Ground Game (Scotland) Bill introduced in that year provided powers to control deer, to be exercised by the Department of Agriculture with the assistance of an Advisory Committee and local committees. Developments were prevented by the War, and it was not until 1959 that an Act of Parliament was passed to introduce close seasons for deer in Scotland.

The Act is divided into five parts. Part 1 deals with the setting up of a Commission and its powers. Part 2 specifies close seasons for stags during October 21–June 30 and for hinds during February 16–October 20, to come into force on October 21, 1962. The Commission has now issued its first report*, and, in it, states that, "we consider that if viable stocks of deer are to be maintained throughout the traditional deer forest areas of the Highlands they should not be broken up into isolated fragments. At the same time, if they are not to continue as a serious liability to agriculture and forestry, they must be kept under control. In other words, as grazing animals they should be subject to reasonable standards of management."

The numbers and population densities of deer, unlike those of many other wild animals, do not appear to be self-limiting. In the absence of natural predators such as wolves, or of sufficient killing, deer will increase until they overgraze and damage their habitat, die in large numbers from starvation, or overspill on to agricultural land. Persistent overgrazing must lead to the progressive impoverishment of the hill pastures, on which they depend for their food, and a declining productivity. For the past two centuries, man has provided the only check against this deterioration. The fact that he has not everywhere been exercising sufficient control is the prime reason for the setting up of the Red Deer Commission, with certain over-riding powers, including authority to go on private land in the exercise of its functions.

During the period under review, the Commission has been concerned primarily with the control of marauding deer. Experience this year has shown that it is both widespread and continuous. Where estates are under good management, effective measures are taken to protect tenants and neighbours from damage. There are, however, areas where much more could be done to protect those who suffer. In general, where the laird or factor is permanently resident, satisfactory co-operation and understanding are most easily achieved. Where there is no one of sufficient authority to deal with it on the spot, and the estate concerned is factored from an office outside the Highlands, it is inevitably more difficult.

---

* The Red Deer Commission. Report for the period 1st October 1959, to 31st December, 1960. Pp. 22. (London: H.M. Stationery Office, 1961.) 1*s*. 3*d*. net.

In some areas where marauding is prevalent there are not enough stalkers and gamekeepers available to deal with the situation. The Commission believes that the widespread marauding taking place throughout the year is probably a symptom of overstocking on recognized deer land in the vicinity, and that the root of all deer 'trouble' is lack of adequate management. The annual kill of hinds, for example, is generally too low; the only way to reduce overlarge stocks is in the culling of hinds. When it is left to an inadequate staff of stalkers or gamekeepers this most important aspect of management is apt to go by default. Sometimes, excessive stocks of deer have been maintained to make allowance for the slaughter done by gangs of poachers. Whatever justification there may have been for this practice in the past, it no longer exists.

Estates in some areas are seriously handicapped in stag shooting by the incursion of the public in the later summer and autumn. If such estates are to be enabled to carry out their obligations during the open (stalking) season, means will have to be found to dissuade the public from disturbing the ground and possibly courting danger to themselves.

WOMEN ENGINEERS IN THE U.S.S.R.

WOMEN form a much higher proportion of engineers and technologists in the U.S.S.R. than in Western Europe or the United States. A study arranged by the Caroline Haslett Memorial Trust was designed to throw light on the factors giving rise to this high proportion, on the capability of women to benefit from a technical education, and on the employment prospects of women so trained. The study included an investigation in the U.S.S.R. itself, and this was undertaken by Miss L. S. Souter, head of the Magnetic Materials Section of the Associated Electrical Industries Research Laboratory, Harlow, and Miss R. Winslade, assistant instruments group manager, Research and Control Instruments, Ltd.

In their report* the authors show that, under the national educational system of the U.S.S.R., co-education of boys and girls is the general practice. In 1943 the sexes were separated into different schools, but, after a ten-year trial, the experiment was abandoned under pressure of public opinion. Only one trace of the separation remains; while boys of 11–14 are having carpentry lessons, girls are being taught domestic science. For all other subjects boys and girls attend the same classes, and, with few exceptions, girls have the same choice of specialities as boys. Comparisons of the performance of men and women as engineers have been made easier by this common educational background. Although the right of entry into university was not fully extended to women until after the 1917 revolution, the limited right of attendance at higher educational courses (some specially set up for women) was granted in 1905 as a result of revolutionary developments at that time and, by 1907, a number of technical institutions were open. There are records of women attending engineering classes at polytechnics during 1907–9, but the numbers were comparatively small.

Equality of opportunity brought the proportion of women in some of the universities up to 50 per cent in 1920. While at the higher medical schools 80–85 per cent of the students were women, the entry into the engineering schools appears to have been much slower. Even as late as 1928, only 1 per cent of the students of thermal power were women; the proportions of women students taking chemistry, physics and mathematics courses was much higher.

The rate of entry of girls into engineering at a lower level appears to have been somewhat faster, and was encouraged by the all-out drive to make good the technical backwardness of the country as a whole. By 1929, 37·1 per cent of pupils at the technicums or trade schools were girls.

In the middle 1930's the entry of girls into engineering institutes increased gradually and then rapidly, partly as a result of the drive to develop industry throughout the country. By 1938 about 28 per cent of the engineering students were women, and by the end of the decade the 30 per cent mark appears to have been passed. Young men were sharing engineering classes with a high proportion of girls and were taught by staffs which in 1939 included 23 per cent women. They came to take it for granted that engineering was not only a possible but also a suitable profession for women.

The increasing proportion of women students in engineering institutes continued after the Second World War, but the rate of increase was falling; the numbers are now increasing slowly, and there has been negligible change in the 33–35 per cent level reached in the late 1940's. There has, however, been a considerable increase in the number of women holding higher engineering qualifications. The industries which attract women engineers show marked differences from Great Britain. Here, industries with a long tradition of women operatives are slow to attract (or accept) women engineers; in the U.S.S.R. it is the textile and food industries which have the highest proportion of women engineers. The high proportion of women engineers in the U.S.S.R. was so much taken for granted that the reasons for the Souter–Winslade study were frequently called into question and led to no little amusement.

Throughout the U.S.S.R. women are forbidden to take up any branch of engineering which is considered to be prejudicial to health. Some examples are: (1) at trade-level—girls are not permitted to service television sets because of the danger of radiation and because of the heavy weights of the sets themselves; they are permitted to train as telephone service engineers, but not allowed to carry out work involving the climbing of roofs or poles, or to work on underground cables; (2) at professional level—girls are permitted to study as mining engineers and may exercise their profession in surface jobs, but they are forbidden to work underground.

* Caroline Haslett Memorial Trust. *Women Engineers in the U.S.S.R.: a Study of the Education, Employment and Prospects of Women Engineers in the U.S.S.R.*, carried out under the auspices of the Caroline Haslett Memorial Trust. By L. S. Souter and R. Winslade. Pp. 28. (London: The Caroline Haslett Memorial Trust, 25 Foubert's Place, W.1, 1960).

Strong attempts are made to discourage girls from some types of work which are regarded as unsuitable although not forbidden by law. These posts fall into the categories of physically dangerous or arduous, such as forging or rolling processes, or unpleasant, such as some of the processes of chemical engineering. As a general rule, there are fewer women in heavy industry than in the textiles, food, watch and clock industries.

The Krasny Oktyabr sweet factory appears to be typical of the food industry, and here a women occupies the post of director, and women are in charge of the departments concerned with planning (engineering economist), costing (economist), analytical planning, technical control of output, mechanical engineering and design. The women acting in a supervisory capacity are: the deputy chief mechanical engineer, 15–20 design engineers and 2–4 production shop supervisors. Women head most of the ancillary departments, including book-keeping, library, polyclinic and canteen. Men occupy the posts of commercial director (combined with the post of vice-director), chief engineer, chief mechanical engineer, head of wages department and 2–4 of the production shop supervisors. There was general agreement that girls and women show a particular preference for engineering economics, engineering design, laboratory work and teaching. Engineering economics, in particular, is popular with girls, and, until the current year, made up 95 per cent of the students of faculty in the Leningrad Polytechnic. Engineering economics includes the economy of distribution and supply of energy, metallurgical production and processing, mechanical engineering, machine construction and mechanization of working processes by automation.

Preference for engineering design work was illustrated in the teaching institutes by the number of women students in courses on airfield construction, road, bridge and tunnel design at the Institute of Ways of Communication; the figure of 35 per cent compared with 10 per cent in the mechanical faculties.

The attraction of research work was evident, and the proportion of women in all types of laboratories, such as those concerned with fundamental research, development, works-aid, and material or process control, was much higher than the 28 per cent average. Almost all the research laboratories of the Likhachiov Motor Works are headed by women and some completely staffed by women. 50 per cent of the staff of the Research Institute of Common Technologies are women, and here women head a fair proportion of the sections. 60 per cent of the staff of the Research Institute for Communications (covering telecommunications) are women.

There is a general shortage of teachers, and there is a drive to make more junior teaching posts more attractive. Engineers are released from industry to the teaching institutions on a part-time basis; no extra hours per week are worked and extra pay is given. Nevertheless, it is difficult to attract people to teaching. In spite of the fact that teaching is said to be fairly high in order of popularity with women, and most teachers of mathematics and physics are women, they comprise only about 20 per cent of the teaching staffs of these institutions, that is, less than the national average among engineers.

Men and women receive equal pay, and there is no reason why women employees should be preferred on this score. The minimum age for retirement for women is 55 compared with 60 for men, but both men and women often continue working for up to ten years after the minimum age.

It was not possible to make a comparable study of the distribution of girls between various trades which are taught in the technicums or of the girls obtaining technical qualifications at junior technical colleges. The authors considered the question of whether or not women in the U.S.S.R. are allowed and encouraged to enter the engineering professions and also whether they achieve promotion to top positions.

In 1957 women formed 10 per cent of the directors, chief engineers and other leading specialists in the national economy, as opposed to 38 per cent employed as engineers. The total figures for all ranks of engineers show that 28 per cent of the positions are occupied by women.

In the U.S.S.R. Miss Souter and Miss Winslade also examined the objections put up to exclude women from senior positions in engineering in Great Britain. They found that girls were putting up performances in mathematics and physics comparable with boys; although the proportion of prizes going to girls varied from year to year; over a ten-year period they averaged a share of the prizes in relation to the total numbers. There is a slight departure from the general trend in Kharkov where, in the Institute's entrance examination, girls put up a slightly better performance than boys in physics, chemistry and foreign languages, while boys do better in mathematics and Russian. At all stages the adequacy of the mental capacity of women was so taken for granted that some difficulty was experienced in bringing discussion with scientists in the U.S.S.R. to a factual level. Schoolgirls appear to have no inhibitions about tackling technical work, and 40–45 per cent of the technical streams of secondary schools are girls. These girls show much enthusiasm for all types of technical work and, in some schools, have the reputation of being more accurate with machine tools than boys.

THE DUST CLOUD ABOUT THE EARTH

In *Nature*, 189, 127 (1961), Dr. F. L. Whipple discusses four possible explanations for the concentration of dust near the Earth. Of these the most favourable consideration is given to the hypothesis that it originates in collisions between meteorites and the Moon.

I would like to propose as at least equally tenable a fifth hypothesis: that the dust originates from meteorites that graze the Earth's atmosphere. Clearly meteorites that strike the Earth's atmosphere at too large an angle (or with too small an impact parameter) will be burnt up in the conventional way. Clearly, too, meteorites that approach the Earth with too large an impact parameter will not be slowed enough to have their orbits greatly changed. Between these limits, however, must be some the velocity of which, on re-emergence from the atmosphere, has been reduced to within the range of 7–11 km./sec. which will lead to their capture by the Earth's gravitational field. Those larger and faster will of course be broken up, liquefied or even vaporized in the process. Particles with an initial speed of 15–20 km./sec. and of masses up to perhaps 10^{-5} gm., however, might be expected to radiate well enough to dissipate their excess energy without complete disintegration. Even if the impact parameter for any one particle must lie between limits only 1 km. apart, perhaps in the region of 100 km. above the Earth's surface, the cross-section available for interplanetary material will be nearly one-tenth the total cross-section of the Moon. All this material will have been captured by the Earth's gravitational field, whereas the fraction of material splashed off the Moon to be so captured must be exceedingly minute.

Of course, most of the captured material will be lost in the atmosphere at the very next perigee of its new orbit. The Moon is still required for this hypothesis although not as an actual source of supply. Its importance is that it will distort the paths of those particles which have long elliptical orbits approaching it at all closely ; roughly half these distortions will make atmospheric capture even quicker by reducing the particle's energy, but the other half will give a gain of energy which will increase the radius of approach to the Earth at perigee and, in some cases, allow the production of the very long-lived orbits required.

The range of initial orbits, from which such quasi-permanent capture is possible, is difficult to estimate, but it seems to me to be at the very least as probable a process as that described by Dr. Whipple.

Consideration of the method of slowing down and of capture suggests the possibility that a higher proportion of iron–nickel particles might be found in the local than in the interplanetary dust and that there might be a preponderance of particles revolving about the Earth in the same sense as does the Moon. The former, though not the latter, suggestion would be reversed according to the lunar-collision hypothesis.

J. H. Fremlin

Department of Physics,
University of Birmingham.

Dr. Whipple[1] has given an excellent summary of rocket, satellite and space-probe measurements demonstrating the existence of a high concentration of interplanetary dust near the Earth. It is the purpose of this article (1) to show in more detail than presented elsewhere[2] how this dust blanket may reasonably be expected to arise, (2) to correct the unfortunate although quite justifiable misinterpretation Whipple[1] has made of my theory[2], which was described too concisely, and (3) to show that Whipple's[1] different spatial dependence of the observations are not in disagreement with the theory presented here in greater detail.

Wyatt and Whipple[3] have shown that the most minute cometary debris acquires nearly circular orbits due to the relativistic aberration of solar radiation pressure[4], and that the debris spirals into the Sun with a radial velocity of twenty to six hundred Earth radii a year at the position of the Earth's orbit, depending on the effect of solar corpuscular radiation[5]. By solving the Lagrangian equations of motion of the particles[2] in the combined solar and terrestrial gravitational fields, one may determine the orbits which the particles follow as they approach the planets during their inward motion. It is important to note that, independent of angular momentum considerations, the planets will attract and concentrate the dust in the ecliptic plane as is readily determined by solving the equation of motion in a direction perpendicular to the ecliptic plane. As discussed in a previous paper[2], inclusion of this effect will cause the concentration of dust in the plane of the ecliptic to vary as the inverse three-halves power of the solar distance which is observed[2] rather than the inverse first power which would be predicted in the absence of the planets[2].

The results for motion within the ecliptic plane may be much more simply understood, however, if one examines their motion in an Earth-centred co-ordinate system and (except for the relative earth-particle velocity due to their differing solar distances) neglects the motion of the Earth and particles about the Sun. This neglect may be shown to be inconsequential when one transforms the exact Lagrangian to an Earth-centred co-ordinate system. Under these conditions the particles encounter the Earth in an initially hyperbolic orbit and a negligible quantity of them enters captured orbits even temporarily. The theory assumes only hyperbolic orbits about the Earth. Even those few which are captured are soon lost due to the effects of radiation pressure, which is a major force on such slight objects as to be affected by the Poynting–Robertson radiation effect[3,4].

Whether or not the particles encounter the Earth (that is, impinge on the atmosphere and are present at low satellite altitudes of a few thousand kilometres) is determined by the conservation of their angular momentum. At infinity, their velocity with respect to the Earth is at least that due to their different solar distance, r :

$$v_\infty = \sqrt{\frac{GM_\odot}{r}} - \sqrt{\frac{GM_\odot}{D}} \sim \frac{1}{2}\sqrt{\frac{GM_\odot}{D}}\,\frac{a}{D} \qquad (1)$$

where $a = r - D$, D is the radius of the Earth's orbit, G the universal gravitational constant, and $M_\odot$ the mass of the Sun. If they are in a circular orbit about the Sun, their moment arm with respect to the Earth is initially $\sqrt{(a^2 + h^2)}$ where h is the perpendicular distance of the particles from the ecliptic plane. (Since the dust is mainly concentrated in the ecliptic plane, most of it has negligible inclination to the ecliptic.) The velocity of the particles at perigee is due to their fall in the Earth's gravitational potential, if one assumes their initial velocity to be slight. Hence in order to reach a distance, b, from the Earth's surface, a and h must satisfy the condition:

$$\frac{1}{2}\sqrt{\frac{GM_\odot}{D}}\,\frac{a}{D}\sqrt{(a^2 + h^2)} \leqslant b\sqrt{2\frac{GM_\oplus}{b}} \qquad (2)$$

in order for the particle's angular momentum about the Earth to be conserved. $M_\oplus$ is the mass of the Earth. Hence, in order to reach the surface of the Earth:

$$a\sqrt{(a^2 + h^2)} \leqslant (2D)^{3/2}\sqrt{M_\oplus/M_\odot} = 1{\cdot}76 \times 10^4 \qquad (2a)$$

where distances have been expressed in terms of the radius of the Earth. Fig. 1 illustrates the maximum

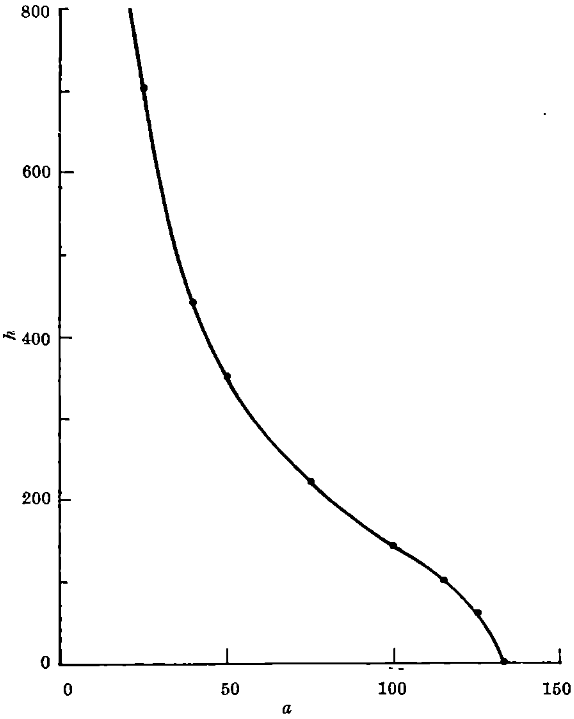

Fig. 1. Maximum permissible solar distance, r, different from the Earth's orbital radius, D, for interplanetary dust initially in a circular orbit about the Sun to reach the Earth's surface. The abscissa, $a = r - D$, and ordinate, h, the distance from the plane of the Earth's orbit, are expressed in terms of the Earth's radius. Values of h and a to the right of the curve require the incident dust to have too much angular momentum to reach the surface of the Earth ($a = 1$)

distance from the Earth in the plane perpendicular to the Earth's orbit from which circularly orbiting dust may be captured. The effect of radiation pressure would be to shift the curve to larger positive values of a, but much the same effective capture cross-section would result. All particles within a radius where their terrestrial gravitational potential exceeds their kinetic energy with respect to the Earth will have their orbits materially affected by the Earth's pull, but they will not be captured (that is, encounter the Earth's atmosphere) unless equations 2 and 2a are satisfied.

The radial velocity of the dust (with respect to the Earth) as a function of distance from the centre of the Earth, l, may be found by assuming a particle's total kinetic energy is due to its fall in the Earth's field and its angular momentum $\mathbf{l} \times \mathbf{v}$ is a constant equal to the left-hand side of equation 2.

$$v_l = \sqrt{2\frac{GM_\oplus}{l}(1 - b/l)} \sim \sqrt{2GM_\oplus/l} \qquad (3)$$

is the equation for the radial velocity of a particle in a hyperbolic orbit, where b is the perigee distance.

The total flux of dust entering a sphere of radius l must be a constant given by:

$$4\pi l^2 v_l n_l = \text{constant} \qquad (4)$$

If the angular dependence is neglected, one obtains an average density for dust approximately equal to:

$$n_l \sim n_0(l_0/l)^{3/2} \qquad (5)$$

where l_0 is the effective range of the Earth's gravitational field, and n_0 is the particle density in the absence of planetary condensation. For $l \sim b, n_l$ would vary as l^{-2} or faster. This effect is compensated in part by those particles within the Earth's gravitational pull the initial positions of which exceed the condition expressed in equation 2 for b equal to the radius of the Earth. Those particles populate the region next to a planet, but are not captured.

Excellent observations of dust-scattered light in the solar corona show that the concentration of dust in interplanetary space[2] is 10^{-14}–10^{-15} particles per c.c. at the position of the Earth's orbit. Yet space-vehicle observations[1] give flux densities of 10^{-12} particles/cm.^{2} at a height of 3,000 km. The dust most probably has a velocity of only $\sim$ 11 km./sec. [6]. Thus, these observations provide the best available evidence for planetary condensation of dust forming a blanket about the planets. Since n_0 is most likely 10^{-15}/c.c., l_0 would have to be about 100 Earth radii.

Rocket observations at about 100 km. give a higher concentration of dust still consistent with the largest estimates of the theory presented here, but indicating a more rapid decrease with height than $l^{-3/2}$ (ref. 1). A more rapid increase in dust concentration with decreasing height than the $l^{-3/2}$ prediction is to be expected from equations 3 and 4 for l approximately equal to perigee, b. Thus if much of the dust had a perigee close to one Earth radius, $n_l \sim (l - b)^{-1/2}$ would be more in agreement with the observations. Furthermore, space-vehicle measurements are of momentum, not mass, and detector thresholds might be expected to decrease rapidly with height in some cases, because particle gravitational energy decreases with height ; since particle number decreases rapidly with particle mass, detectors would count smaller, more numerous particles at lower altitudes in those cases when the relative velocity of particle and vehicle depends appreciably on height. De Jager and Hoffmeister[7] have written interesting, although quite different accounts, of the same subject.

I am pleased to thank Dr. F. S. Johnson for his interest in and support of this work and Dr. F. L. Whipple for pointing out the necessity for a more complete discussion of the theory.

DR. FREMLIN's suggestion of a contribution to the dust cloud near the Earth by meteorites that graze the Earth's atmosphere cannot be disproved. On the other hand, estimates of the total contribution to the Earth by meteorites, for example, G. S. Hawkins[1], add up to only a few tons a day in orbits hyperbolic with respect to the Earth. The total input[2], however, appears to add up to hundreds or even possibly thousands of tons a day. Hence, I should expect the fractional contribution by meteorites to be minor.

In Dr. Beard's preceding article I am pleased to see my statement of his point of view corrected. His conclusion, however, is subject to question. Though the dust particles producing the zodiacal light may well move in nearly circular orbits about the Sun this fact is not yet demonstrated. That their orbital inclinations to the ecliptic are negligible is really very doubtful, unless collisions among them can be proved to reduce the inclinations markedly. Haug[3], for example, finds that the light in the zodiacal cloud is fairly well represented by the distribution of orbital inclinations found for photographic meteors. Thus, the mean velocities of the particles with respect to the Earth and hence the effective gravitational cross-section of the Earth for the particles may not be much greater than its geometrical cross-section, rendering Beard's process ineffective.

From acoustical impact measurements on the satellite *Explorer I*, Hibbs[4] finds, in contrast to the statement in my earlier article, but in agreement with my suggestion, that the evidence strongly indicates that the particles are moving in orbits about the Earth. I am glad of the opportunity to make this correction to the earlier article and to note that particles ejected from the Moon may move in all types of orbits about the Earth. Thus, my predicted concentration towards the Moon's orbit in direct motion may easily be wrong, depending sensitively on the velocity distribution of particles ejected in lunar impact explosions.

Singer[5] finds that particles passing by the Earth isotropically in hyperbolic orbits should demonstrate a shadowing effect of the Earth such that impact-rates on surfaces very close to the Earth's surface will be somewhat smaller than at a distance of a few thousand kilometres. The observational data concerning the number of meteoritic dust impacts made by rockets are highly uncertain and may be much over-estimated. Thus the increase of concentration very near the Earth may well be smaller than I concluded in my earlier article, but still very high. It is clear that more observational data and more detailed theory are needed to clarify these matters.

ANALYSIS OF POLARIZED LIGHT BY THE BEE'S EYE

By Prof. DONALD KENNEDY*

Zoology Department, Syracuse University, Syracuse, and Marine Biological Laboratory, Woods Hole, Mass.

AND

Dr. EDWARD R. BAYLOR

Woods Hole Oceanographic Institution, Woods Hole, Mass.

Bees, like some other arthropods, can orient various movements according to the plane of polarization of the incident light[1]. Such performances have been explained widely on the basis that the compound eye contains an analyser for polarized light. Another view has been proposed, namely, that environmental clues (for example, reflectance patterns) which depend on plane of polarization are perceived instead[2,3].

If the bee's eye is in fact an analyser for polarized light, the analysis could occur either in the dioptric apparatus of the eye or in the receptors (rhabdomeres) themselves. All efforts to locate the analyser in the dioptric apparatus by examining cornea and crystalline cone for dichroism have, however, met with failure. Because of this, and since disagreement exists about the behavioural evidence for or against extra-ocular analysis, it is thought that the receptors themselves are polarization analysers.

The method by which this is most often thought to occur was originally described, as a hypothetical model, by Autrum, and adopted by von Frisch[1] to explain bee orientation to polarized light. Later it was given some physiological substance by Autrum and Stumpf[4]. Briefly, the theory proposes that the opposite pairs of retinula cells with their rhabdomeres, which are shaped in ommatidial cross-section like the segments of an orange, have specific 'sensitive planes' of polarization, owing to their structure or to the orientation of pigment molecules within them (Fig. 1). The latter explanation, in particular, is favoured by Stockhammer[5]. Some support for the notion that the rhabdomeres can act as analysers has come from the demonstration that fixed rhabdomeres are doubly refracting[6,7]; they are, however, more weakly so when fresh, and are not dichroic in any circumstances[8]. The mere existence of molecular orientation would in any event scarcely prove that the structure is used in polarization analysis. With the arrangement of rhabdomeres shown in Fig. 1, in which the arrows in the individual rhabdomeres indicate the 'sensitive planes' of polarization, a polarized light stimulus will always stimulate the same number of receptors regardless of its plane. Thus the electrical output of the ommatidium or of a population of ommatidia should be independent of the plane of polarization. Autrum and Stumpf have shown that this is true for the bee's eye. De Vries *et al.*[9], however, were able to find no 'ripple' in the electro-retinogram from single ommatidia or the whole eye in *Calliphora*, when the plane of polarization was rotated at various frequencies.

A somewhat different sort of electro-physiological test has been applied to this problem more recently. It has yielded results which, we believe, are inconsistent with the Autrum model, like those of de Vries *et al.* The experiments to be described were actually done in 1958 and communicated in the form of abstracts[10]. We report them now in detail because the Autrum model is so widely invoked to explain the orientation of polarized light[5], and even as an aid in interpreting the fine structure of insect rhabdomeres[11]. Von Frisch *et al.*[12], in a recent review, have treated our preliminary note in a surprising manner. They describe it, quite correctly, as being without methodological detail, and then reject its conclusions by citing a personal communication from

---

* Present address: Stanford University, Stanford, California.

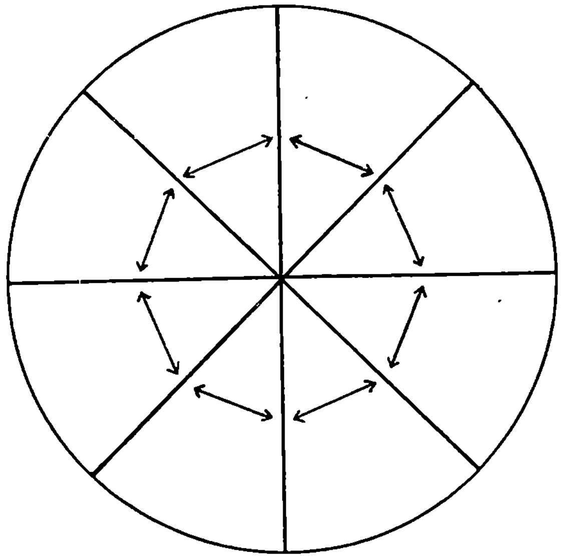

Fig. 1. The model of the bee's ommatidium proposed by Autrum and Stumpf (ref. 4). The arrow located in each rhabdomere indicates its 'sensitive plane' of polarization; opposite pairs of receptors are identical in this respect

Autrum, who suspects that we had not taken certain sources of error into account. Although this is possible, it is difficult to know how Prof. Autrum could have a reasonable basis for such a technical criticism, since no experimental detail was supplied in our abstract. Nevertheless, von Frisch *et al.*[12] had sufficient confidence in this opinion to state, in their summary: "Electrophysiological, polarization-optical and electron-microscopical studies have indicated unanimously that polarized light is analysed within the compound eyes of insects, in the rhabdomeres of the visual cells".

The technique used in our experiments was that of selective adaptation, a method which has been applied with success to other problems in sensory physiology in which the aim is to separate sub-modalities from a compound response. The retinal action potential or electro-retinogram of the honey-bee's eye was recorded from the isolated head preparation with sharpened steel needle electrodes, amplified with a capacitance-coupled pre-amplifier (time-constant of 1 sec., sufficiently long not to distort the responses to brief flashes) and displayed on a cathode-ray oscilloscope from which photographic records were made. The adapting and the stimulating light occupied nearly coincident optical axes, approximately normal to the corneal surface at its centre. The adapting source was a 300-W. tungsten projection bulb, the stimulating source a 20-W. microscope lamp. Stimuli were delivered through a photographic shutter, and more than covered the corneal surface. In the normal experimental procedure, a test-flash was delivered to the dark-adapted eye through a 'Polaroid' filter. The eye was then adapted to light for 30 sec. with the 'Polaroid' in the same position; after this, the course of dark-adaptation was followed by exposing the eye to test-flashes of the same intensity, duration and polarization plane as that which preceded the adaptation. After dark-adaptation was complete, the experiment was repeated with only one difference: the 'Polaroid' filter was rotated 90° for the adaptation period only. The first procedure will be referred to as a 'control' and the second as an 'experimental' adaptation. In effect, then, the procedure tested whether adaptation in a particular plane of polarization spares any significant proportion of the population of receptor units. According to the Autrum hypothesis, those rhabdomeres having 'sensitive planes' different from the planes of polarization of the adapting light should be less affected by it. Therefore, one would expect less light-adaptation, and/or faster recovery in the dark, when the planes of polarization of adapting light and test flash differ.

The intensity of all test-flashes used in these experiments was 125 ft.-candles; that of the adapting light was 3,200 ft.-candles. Test-flash durations were usually 0·1 sec. The intensity of the test-flashes was chosen so as to be in the region where, for most preparations, the change in electro-retinogram amplitude is large for a small intensity increment. Electro-retinogram amplitudes were measured on responses photographed on moving paper from the oscilloscope trace. In all experiments, test-flashes were delivered 7, 12, 17, 22, 32 and 42 sec. following the end of light-adaptation. Dark-adaptation was virtually complete within 1 min., in agreement with the observations originally made by Autrum[13] that the eyes of certain insects (including the bee) are 'fast' in terms of adaptation-rate and the ability to follow flickering stimuli. In plotting the time-course of dark-adaptation, successive amplitudes are expressed as a percentage of the amplitude of the response to the initial flash, before adaptation. In most, adaptation is not quite complete at 42 sec.; but two series, in which the response amplitude at 42 sec. was less than 80 per cent of the dark-adapted value and in which, therefore, some overall change in sensitivity had clearly occurred, were rejected.

Table 1 shows the results of experiments on the extent of light-adaptation produced by the two procedures described here. The figures given are amplitude of the electro-retinogram taken 7 sec. after the end of light-adaptation and expressed as percentages of the initial dark-adapted value. The experiments have been done in pairs, the control either immediately preceding or following the experimental one in the adjacent column. In all pairs of experiments, the difference between adaptation in the same plane of polarization or the perpendicular one is small. The paired experiments naturally differ from one another, since the relationship between the test-flash and adapting intensities used and the sensitivity of the electro-retinogram may vary from preparation to preparation. The important aspect of the results is the high degree of internal consistency shown by the paired experiments. The average reduction for the two groups is identical.

Fig. 2 shows complete dark-adaptation curves, averaged from data such as those shown in Table 1. Six control and six experimental runs made on four

Table 1. Extent of Light-Adaptation, tested by Stimuli in the same Plane of Polarization as that of the Adapting Light (Control) and in the Opposite Plane

Amplitude of responses recorded 7 sec. following the light-adaptation, and expressed in per cent of the amplitude before adaptation

Preparation	Experiment No.	Control	Experimental
2	1	79	67
2	2	58	62
3	1	80	80
3	2	77	77
4	1	74	82
4	2	72	64
5	1	69	66
	Average	73	73

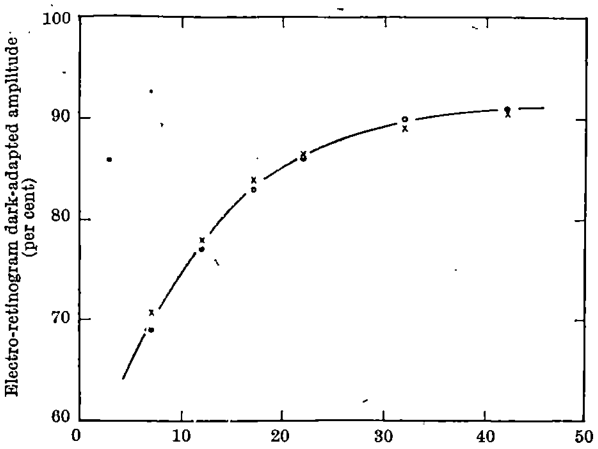

Fig. 2. Dark-adaptation curves for the bee's eye. Each point is the average of six runs on four preparations. 'Control' adaptations are indicated by crosses, 'experimental' adaptations by filled circles

different preparations have been averaged. The two average curves are virtually identical.

These results show that there is no population of receptors contributing to the electro-retinogram which can be adapted selectively to a measurable extent by exposure to intense plane-polarized light. It may be noted that 'contribute' in the sense used above does not mean 'generate'; the receptor cells may or may not play a large part in generating the electro-retinogram, but they surely trigger activity in those post-synaptic units which do generate it directly. For our purposes, the distinction is meaningless, because the effects of adaptation are felt at all levels, not just at the primary one. The electro-retinogram is used only because it is a convenient test of the sensitivity of a system.

The results seem to us inconsistent with the Autrum hypothesis. Since our experiments were performed, however, new evidence in support of the hypothesis has been produced. Some investigators[14,15] have recently obtained intracellular records from two dipteran eyes, *Lucilia* and *Calliphora* respectively. Both groups assumed that the responses, 'generator' potentials without spikes, originate from retinula cells; both show that, in some units at least, the amplitude of the generator potential depends on the plane of polarization of the stimulating light. In the Burkhardt and Wendler experiments, the difference between the response produced by the most effective and least effective planes of stimulus polarization was equivalent to a 46 per cent difference of intensity.

There is no question that these results provide strong support for the Autrum model. In attempting to resolve our own failure to obtain, by selective adaptation, results consistent with the model, three possibilities exist: (1) the inconsistency is explained by a real difference in property between the bee's eye and the dipteran eyes investigated; (2) our experiments lacked the sensitivity required to reveal a differential polarization sensitivity; or (3) the results on recording from single retinula cells do not represent a real act of physiological polarization analysis by the sensory cell. Possibility (1) cannot be evaluated at this point, but does not seem likely. We cannot rule out possibility (2); but it would be surprising if a peripheral mechanism producing, under the favourable conditions of our experiment, a differential polarization sensitivity too small for us to detect, could be useful under natural conditions, where the bee must analyse rather weakly polarized light from the sky. If each retinula cell in the bee's eye actually responded to its 'sensitive plane' of polarization as though it were twice as bright as that 90° away, a selective adaptation experiment of the kind we performed would surely have revealed sensitivity differences; furthermore, steady illumination in one plane of polarization abruptly changed to a plane differing by 90° would be expected to recruit an additional response from less-adapted elements. We have not been able to show such 'shift' responses in the electro-retinogram in our own experiments, nor could de Vries *et al.*[9] with somewhat different methods in *Calliphora*.

The third possibility, that the results from intracellular recording do not indicate real polarization analysis by the sense cell, must at least be considered. In the first place, the responses in question are only inferred to come from retinula cells; there is no way, at present, of being sure that they do. Since such cells are certainly the most likely source of the records, however, it seems fair to assume that they do. Burkhardt and Wendler show records from a single cell, and state that the difference in amplitude of the potential produced by light stimuli having polarization planes 90° apart is equivalent to a 46 per cent difference of intensity. They say that a "large number" of penetrated cells showed such differences, but do not specify what the number is, what percentage of the total observations it represents, or what is the average amplitude difference for different stimulus planes of polarization. Even if one concludes that, in all cells showing the phenomenon, it had the same magnitude as the illustrated case, one has no idea how many cells failed to show it at all. The authors state, indeed, that some did not; and in fact their conclusion that the property of polarization analysis may be restricted to certain retinula cells already involves a departure from the Autrum model in its original form. Those cells in the Burkhardt and Wendler experiments which did show differential responses to different planes of polarization exhibit one rather peculiar property: the difference is dependent on wave-length, appearing only with short-wave-length stimuli. If orientation of the photo-sensitive pigment within the ultrastructure of the rhabdomere is the critical factor in polarization analysis, as proposed by Stockhammer[7], it is difficult to understand why the vibration planes of blue light would be critical in determining absorption and the vibration planes of red light unimportant.

It is well known that structures optically interposed between a source of polarized light and a detector can create a kind of polarization sensitivity by differentially refracting, reflecting or absorbing light of particular *e* vectors. It is possible, though by no means certain, that the intracellular micro-pipette introduced into the retinula cell could act in just this way; if it did, then the results could be explained as an act of polarization analysis by the recording micro-electrode. The absence of the effect in some cells, and its presence in others, might thus be related to the depth of penetration, or to the orientation of the micro-electrode with respect to the stimulating light. Electrodes with tip diameters of less than 0·5μ, the kind used for these experiments, are able to record extracellular potentials only very locally. It may be that a solution to the problem raised by the possible optical action of the penetrating micro-electrode might be to record outside the cells. In some circumstances at least, the micro-electrode should record dominantly the output of one retinula cell, and if the latter indeed varies with stimulus polarization, the recorded extracellular potential should vary too. Burkhardt and Wendler refer briefly to extracellular recordings in connexion with the experiments and state that their amplitude did not change with plane of polarization. It would be an exceptional circumstance if an extracellular micro-pipette of the diameter used recorded equally from all members of a given ommatidial cluster of retinula cells.

At this point, it is evidently impossible to decide which of the three possibilities is correct. The Autrum model continues to be the most attractive explanation of polarized-light sensitivity in insects. Our results are, however, not consistent with it; and it seems reasonable to ask that before it is given the kind of total acceptance accorded it by von Frisch *et al.*[12] and other behavioural workers, direct and unambiguous evidence be brought in its favour.

This investigation was supported in part by a grant from the National Science Foundation.

ENHANCEMENT OF INHIBITION OF INTESTINAL ABSORPTION BY CETRIMIDE–PHLORIDZIN COMBINATION

By J. A. NISSIM

Department of Pharmacology, Guy's Hospital Medical School, London, S.E.1

THE inhibitory effects of trimethylhexadecylammonium bromide (cetrimide) and stearate on the intestinal absorption of glucose in the rabbit, and of glucose, sodium butyrate and methionine in the rat were described by me earlier[1,2]. Later, the anæsthetized mouse was used as a test preparation for the study of intestinal absorption as well as for the rapid assay of substances capable of influencing this function. In this animal, cetrimide was found to exhibit its greatest inhibitory effect on the absorption of glucose, while sodium butyrate and methionine absorption were inhibited to a moderate extent. Phloridzin, on the other hand, which was also found to inhibit the absorption of glucose markedly, and that of butyrate moderately, had no effect whatever on the absorption of methionine. Differences shown by these and other species in the actions and activities of cetrimide and of phloridzin suggested that the effects were enzymic in nature, but further elucidation of the site and mode of action of these substances was desirable. It was considered that the effects of simultaneous intestinal perfusion of these two compounds might throw additional light on this problem, particularly with regard to such matter as synergism, potentiation and antagonism, as well as effect on phosphatase activity. A preliminary report of the results of this investigation is given in this article, while a more detailed account will be published elsewhere.

The effects of cetrimide, phloridzin and combinations of the two substances on the intestinal absorption of glucose, sodium butyrate and methionine were compared by means of the mouse assay method, using both the half-hour and the five-minute intestinal perfusion techniques, which will be described elsewhere. Pure interbred mice of C_3H and *CBA* strains were used. Cetrimide and phloridzin were perfused in concentrations of 0·001, 0·002 and 0·01 per cent singly and in combination, on groups of four animals each, while the concentration of three nutrients investigated was always 0·2 per cent. Chemical estimation of the three substances in the perfusate at the end of the experiment was carried out and their percentage absorption was calculated.

Striking enhancement of the inhibition of the intestinal absorption of both glucose and of butyrate was obtained when equal concentrations of cetrimide and phloridzin were perfused simultaneously. This effect was most noticeable in the case of glucose absorption in the half-hour perfusion experiments, and the results are given in detail in Table 1. In the range of concentrations used, the regression of response on the logarithm of the drug concentration was linear in all three cases (Fig. 1) for half-hour experiment and highly significant, while deviations from regression were not significant.

Table 1. PERCENTAGE ABSORPTION OF GLUCOSE, IN EACH OF FOUR MICE, FROM INTESTINAL PERFUSION FLUID CONTAINING DIFFERENT CONCENTRATIONS OF CETRIMIDE, PHLORIDZIN OR CETRIMIDE + PHLORIDZIN

The fluid was perfused for half an hour in each experiment

Concentration of drug (per cent)	Cetrimide	Phloridzin	Cetrimide + phloridzin
0·001	44·1	18·8	10·2
	40·6	35·7	11·1
	51·9	32·4	3·9
	49·9	39·5	2·7
	Mean 46·625	31·6	6·975
0·002	23·3	19·2	9·4
	27·0	19·6	5·8
	41·3	16·8	2·8

	14·6	10·5	−0·2
	Mean 24·075	7·575	−1·625

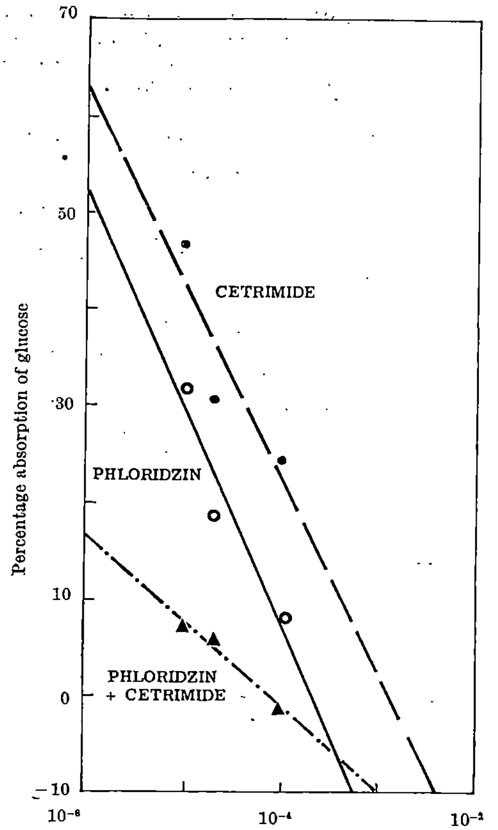

Fig. 1.

The slopes of the dose-response lines were practically the same for the two drugs when these were used singly. When the drugs were used in combination, however, the slope was significantly different. The main statistical results together with a skeleton analysis of variance appear in Table 2.

Phloridzin was about five times as potent in inhibiting the intestinal absorption of glucose in the mouse as cetrimide, while the two substances perfused together were about ten times as active as phloridzin alone. Since the slope of the cetrimide + phloridzin dose-response line differed from that of phloridzin or of cetrimide alone, the potency ratio assumes different values at different concentration-levels, and would be given by the antilogarithm of the distance between any two points taken parallel to the concentration co-ordinate. The value 10·45 of this ratio given in Table 2 was calculated on the assumption of parallelism, and would represent an average. The concentration of cetrimide which produces this enhancement was only 1/10 × 1/5 or 1/50 of that which would be required of this substance to produce the same inhibition of glucose absorption when used alone.

The combination of the two drugs also gave enhanced-inhibition of butyrate absorption. Though the butyrate absorption figures were considerably scattered, so that precise determination of the fiducial limits of the potency ratio was not possible, the potency ratio value of twelve was of the same order as that obtained in the case of glucose. No enhancement of the inhibitory effect on methionine absorption was obtained, however.

The five-minute assays gave an enhancement value of six for the inhibition of glucose absorption. The lower figure obtained in these experiments was the result of the relatively long time required by cetrimide before it exhibits its full effect.

The inhibition of methionine absorption was unchanged, though the inhibition of glucose and of butyrate absorption became much more pronounced when the two drugs were combined. Hence, it seems more likely that the basis of this increase in effect is an enhancement of the action of phloridzin by cetrimide rather than the opposite. This enhancement occurred at a considerable range of concentrations, and its magnitude is probably among the greatest known in pharmacology.

The synergism shown between cetrimide and phloridzin in the inhibition of intestinal absorption is not simply additive. From this it may be concluded that when the drugs act independently, their effects are exerted at different sites in the absorptive mechanism. The degree of enhancement in the combined action is also greater than can be explained by assuming two different sites of inhibition in the same biochemical chain of reaction, though this may in fact represent their basic mode of action. A third mechanism has to be invoked to explain the magnitude of the effect. The formation of a cetrimide–phloridzin complex, which is more active than either compound alone, though theoretically possible, does not seem probable. A conserving action of the cetrimide on the phloridzin appears more likely. This may be due to the protection of the latter drug by the former from rapid destruction or clearance, but the fact that there is no fall in the activity of either compound in half-hour as compared with five-minute perfusion experiments points strongly against such a hypothesis. A suggestion which seems to be compatible with all the facts hitherto

Table 2. ANALYSIS OF VARIANCE, DOSE-RESPONSE LINES, DIFFERENCE BETWEEN SLOPES, AND POTENCY RATIO WITH FIDUCIAL LIMITS FOR CETRIMIDE, PHLORIDZIN, AND CETRIMIDE + PHLORIDZIN IN HALF-HOUR INTESTINAL PERFUSION ASSAYS IN THE MOUSE

	Cetrimide	Phloridzin	Cetrimide + phloridzin
Analysis of variance			
Source of variation:			
Linear regression	$P < 0·01$	$P < 0·001$	$P < 0·01$
Deviation from regression	$P > 0·05$	$P > 0·05$	$P > 0·2$
Dose-response line	$y = 62·55 - 20·17\,x$	$y = 51·46 - 22·51\,x$	$y = 16·11 - 8·79\,x$
x = log concentration			
Difference between slopes	2·34		13·72
	$P < 0·8$		$P < 0·01$
Potency ratio	4·8		10·45
Range of potency ratio at $P = 0·01$	26·7 – 1·9		70·2 – 3·8

established is that cetrimide may exert a conserving effect by displacing the phloridzin from 'silent receptors', where the drug has no action, to 'active receptors', so that the effective concentration is greatly increased. A further possibility is that the surface-active cetrimide may facilitate the penetration of phloridzin into the cell to its site of action. It may prove possible to put this hypothesis to the test by investigating other surfactants of different composition.

The present investigation raises a number of intriguing questions; for example, whether the synergistic action of cetrimide would also extend to the inhibitory effect of phloridzin on glucose re-absorption by the renal tubules, and whether phloridzin in turn would exhibit synergism with respect to the germicidal activity of cetrimide. Answers to such questions are being sought. In preliminary investigations there has been no obvious synergism between the two substances with regard to inhibition of intestinal alkaline phosphatase, though both seem to be equipotent in this respect.

PARTIAL ACID-HYDROLYSIS OF A MUCOPOLYSACCHARIDE WITHOUT APPRECIABLE *N*-DEACETYLATION OF HEXOSAMINE

By Dr. T. J. PAINTER and Prof W. T. J. MORGAN, C.B.E., F.R.S.
Lister Institute of Preventive Medicine, Chelsea Bridge Road, London, S.W.1

IN the partial acid-hydrolysis of polysaccharides which contain residues of *N*-acetyl-hexosamine, scission of the glycosidic linkages is accompanied by *N*-deacetylation of the hexosamine residues[1-3]. This complication is avoided in partial acetolysis[4,5], but during subsequent *O*-deacetylation of the acetolysate, extensive degradation of the oligosaccharides may occur[5,6]. A partial acid-hydrolysate can be re-*N*-acetylated[7]; but we report here some results which show that this step may not always be necessary.

In a previous communication[8], one of us reported the conversion of inulin into oligosaccharides in high yield, by hydrolysis with water-soluble polystyrenesulphonic acid. This was accomplished by dialysing the oligosaccharides continuously from the reaction mixture as they were liberated; they thereby escaped further hydrolysis, since the acid was non-dialysable. It seemed likely that, if applied to a polysaccharide containing *N*-acetyl-hexosamine residues, the same technique would not only improve the yield of oligosaccharides, but also diminish the extent of *N*-deacetylation of the products.

To illustrate this possibility, methyl 2-acetamido-2-deoxy-β-D-glucopyranoside was chosen as a model substance. A solution of this compound (20 mgm.) in 0·2 *N* hydrochloric acid (20 ml.) was heated at 86·5 ± 0·5°, and the liberation of 2-acetamido-2-deoxy-D-glucose was followed by a modification[9] of the Morgan–Elson method. The yield rose to a maximum of 0·77 mole/mole after 100 min., and then slowly decreased. The liberation of 2-amino-2-deoxy-D-glucose was also followed, and the yield of this product after 100 min. was 0·18 mole/mole. (This was measured as reducing power, using Nelson's reagents[10]; with the help of calibration curves, the concentrations of 2-amino-2-deoxy-D-glucose were determined, after subtracting from the total reducing power the contributions of the previously determined concentrations of 2-acetamido-2-deoxy-D-glucose.) Since methyl 2-amino-2-deoxy-β-D-glucopyranoside was hydrolysed to a negligible extent under the same conditions[6], it followed that the yield of 2-acetamido-2-deoxy-D-glucose after 100 min. would have been about 95 per cent, if it had been possible to remove this compound continuously from the reaction mixture as it was liberated.

Experiments were then carried out with a mucopolysaccharide prepared from hog gastric mucin. This material contained residues of fucose (10·2 per cent), galactose (23·5 per cent), 2-acetamido-2-deoxy-glucose (26·8 per cent) and 2-acetamido-2-deoxy-galactose (16·3 per cent); the remainder of the macromolecule consisted essentially of peptide material. (These analytical figures are subject to the usual errors involved in mucopolysaccharide analysis, which arise from incomplete release of monosaccharides by acid-hydrolysis[1-3].) The preparation of the water-soluble polystyrenesulphonic acid, and the general procedure for the hydrolysis, are described elsewhere[8].

To a solution of the mucopolysaccharide (300 mgm.) in water (40 ml.) was added polystyrenesulphonic acid (0·0404 *N*; 20 ml.), and 'Amberlite *IR*-120' (H^+ form) resin (5 gm.). (The 'Amberlite' resin was included to prevent gradual neutralization of the dilute acid by basic substances which were liberated during hydrolysis, and absorbed from the laboratory atmosphere. The 'Amberlite' resin was not an efficient catalyst when used alone, probably owing to the difficulty with which the large mucopolysaccharide molecules penetrated the resin particles.) The reaction mixture (*p*H 2·2) was dialysed at 86 ± 1° against distilled water (800 ml.). The initial effective area of membrane ('Visking' 32/32 tubing) was 240 cm.^{2}. At intervals, the dialysates were replaced by fresh distilled water[8]; the dialysates were evaporated separately, and the residues were weighed. The results are recorded in Table 1.

Table 1

Time (hr.)	1·5	4·0	7·0	11·0	21·0	50·0
Total weight dialysed (mgm.)	43·7	106·7	143·9	177·2	217·7	243·0

These residues were examined on paper chromatograms, which were developed in ethyl acetate/pyridine/water (10:4:3 v/v), and sprayed with silver nitrate–sodium hydroxide reagents[11]. The four above-named monosaccharides were detected, together with at least thirteen different oligosaccharides. Five of the oligosaccharides appeared from their chromatographic mobilities to be the five disaccharides previously isolated from human blood-group *A* substance in this laboratory[12]. Free hexosamine was not detected, either on these chromatograms or on similar chromatograms treated with ninhydrin[13]. None of the oligosaccharides produced a colour with ninhydrin. Most of the oligosaccharides gave a purple colour after treatment with alkali, followed by Ehrlich's reagent[14], indicating the presence of N-acetyl-hexosamine residues.

From the solution remaining in the dialysis bag, 76 mgm. of material was isolated, after neutralization and removal[8] of the polystyrenesulphonic acid and resin. This material consisted largely of free amino-acids, but also contained residues of hexosamine (4·2 per cent) and galactose (3·3 per cent). After taking into consideration the addition of the elements of water to each fragment during hydrolysis, and possible analytical errors, it was evident that about 90 per cent of the total carbohydrate moiety of the mucopolysaccharide had been converted into mono- and oligo-saccharides having their N-acetyl groups still intact.

In an attempt to rationalize this result, the rate of N-deacetylation of 2-acetamido-2-deoxy-D-glucose under the same hydrolytic conditions was studied. This compound (13·5 mgm.) was heated at 86 ± 1° in 0·0135 N polystyrenesulphonic acid (6 ml.). At intervals, samples were withdrawn and neutralized, and their content of 2-amino-2-deoxy-D-glucose was estimated with ninhydrin[15]. The results are shown in Table 2.

Table 2

Time (hr.)	1	2	3	5	7	10	13	16
N-deacetylation (per cent)	1·4	2·8	4·6	7·3	10·0	13·7	17·5	21·2

When the hyperbolic logarithms of the concentrations of 2-acetamido-2-deoxy-D-glucose were plotted against time, a straight line was obtained, having slope $k = 1{\cdot}5 \times 10^{-2}$ hr.$^{-1}$. Similarly, from the results in Table 1, the hyperbolic logarithms of the amounts of carbohydrate material remaining in the dialysis bag were plotted against time. An approximate straight line was obtained, having slope $K = 10{\cdot}5 \times 10^{-2}$ hr.$^{-1}$. Assuming that all the N-acetyl-hexosamine residues in the mucopolysaccharide were N-deacetylated at the same rate, irrespective of their state of combination, and that the proportion of these residues in the diffusible material remained constant throughout the hydrolysis, we can write $C_t = C_0 e^{-(k + K)t}$, where C_0 is the initial concentration of N-acetyl-hexosamine residues in the dialysis bag, and C_t is the concentration after time t. It may be deduced that the percentage N-deacetylation after time t is given by $\frac{100k}{k + K}(1 - e^{-(k + K)t})$. When no provision is made for dialysis, $K = 0$, and the expression simplifies to $100(1 - e^{-kt})$. In Table 3, these expressions have been used to calculate the percentage of N-deacetylation to be expected at various times, with and without the use of a membrane.

Table 3

Time (hr.)	N-deacetylation (per cent)	
	With dialysis	Without dialysis
2	2·7	2·9
5	5·7	7·2
10	8·8	13·8
20	11·4	26·0
50	12·5	52·8
100	12·6	77·7
∞	12·6	100·0

The maximum possible extent of N-deacetylation to be expected when the membrane was used is seen to be 12·6 per cent. Although these assumptions are unlikely to be strictly valid, this calculated result accounts satisfactorily for the observed high yield of N-acetylated mono- and oligo-saccharides.

The residues obtained from the various dialysates were combined and separated into mono- and oligosaccharide fractions by selective displacement from a charcoal–'Celite' column[16]. The yield of oligosaccharides represented about 40 per cent of the original weight of the mucopolysaccharide. This yield was more than three times as great as the maximum yield which we were able to obtain by hydrolysis with mineral acid. Separation and identification of the oligosaccharides are now in progress, details of which will be reported later.

INTERMEDIATE POOL BETWEEN AMINO-ACIDS AND GLOBIN IN DUCK BLOOD *IN VITRO*

By L. BIANCO, G. GIUSTINA* and E. LAZZARINI
Istituto di Fisica del Politecnico, Milano

If duck red cells, previously incubated *in vitro* in their plasma with 2-^{14}C glycine, are washed and re-incubated in unlabelled plasma, the activity of hæmoglobin increases with time (re-incubation time) according to an exponential law[1]. These data are shown in Table 1. We find that inside red cells there is a pool of radioactive substances which cannot be removed completely by washing and which are used for hæmoglobin synthesis. The following equation fits the experimental points:

$$\alpha = 1 - A \exp(-\lambda t) \qquad (1)$$

a = specific activity in dis./min./mgm.

in the second. They were different for amounts of inactive glycine, serine and alanine, carriers added. Except for 2-^{14}C glycine, which was not added, all other conditions were the same as described for hæmolysate incubation experiments.

From the data reported (Table 5) the following conclusions can be deduced: (*a*) Globin can absorb radioactivity from labelled ultrafiltered substances. (*b*) This radioactivity taken up is not due to free radioactive glycine or serine or alanine, which can be formed from glycine conversion[3], because the added carriers were not effective in reducing globin specific activity. Therefore, we suggest a free peptide pool as globin precursor in duck blood *in vitro*.

Further experiments are in progress to prove precursor product relationships between the transient part of the microsomes and these peptides and globin, and to find the molecular weights of these peptides. Indeed, we know only an upper limit, because almost all radioactivity of ultrafiltrate can dialyse.

We wish to thank Prof. S. Ranzi of the University of Milan for the ultracentrifugations and Mr. F. Bamonte for technical assistance in collecting experimental data.

DIDEOXYSUGARS OF *PASTEURELLA PSEUDOTUBERCULOSIS*-SPECIFIC POLYSACCHARIDES, AND THE OCCURRENCE OF ASCARYLOSE

By Dr. D. A. L. DAVIES

Microbiological Research Establishment, Experimental Research Establishment, Porton

THE isolation and composition of the type-specific polysaccharides of the five serotypes of *Pasteurella pseudotuberculosis* have previously been described[1]. The identity of the 3,6-dideoxy-hexoses present in these materials, and to which the serological specificity may be largely due, was, however, left in some doubt.

Sugars of the 3,6-dideoxy-hexose series (paratose, abequose, colitose and tyvelose) are known to occur in polysaccharides of Enterobacteria[2], where they occupy the positions of non-reducing end-group residues and are the specific serological determinants responsible for some 'antigens' of the Kauffmann–White scheme. One other sugar of this series, ascarylose, is known to occur in the egg cell membranes of *Ascaris* worms[3].

It was previously reported that *P. pseudotuberculosis* type II polysaccharide contains abequose (3,6-dideoxy-D-*xylo*-hexose); this was based on chromatographic data only. This identification has been confirmed in the following way, using a serological cross-reaction which has long been known[4]. Specific polysaccharide extracted from *Salmonella salinatis* (which contains abequose, responsible[5] for Kauffmann–White 'antigen' 4) was adsorbed on to sheep erythrocytes[6], which thus became agglutinable not only by homologous *Salmonella Gp. B* antisera but also by *P. pseudotuberculosis* type II antiserum. Similarly, erythrocytes sensitized with *P. pseudotuberculosis* type II polysaccharide could be agglutinated by both antisera. The hæmagglutination of both kinds of sensitized sells by the heterologous antisera could be inhibited by abequose (isolated fron *S. salinatis* polysaccharide) but not by any other sugar tested, including those most closely related structurally to abequose (for example, D-fucose, D-galactose, D-glycero-D-galactoheptose, tyvelose). Sufficient dideoxy-sugar was isolated from *P. pseudotuberculosis* type II polysaccharide to test in this system, and inhibition was again obtained, leaving no doubt that this sugar is abequose.

It was previously reported[1] that *P. pseudotuberculosis* type IV polysaccharide contains tyvelose (3,6-dideoxy-D-*arabino*-hexose), but again only on chromatographic evidence. It is already known[7] that this type is related serologically to *Salmonellae* of group *D*, due to Kauffmann–White antigen 9, and that this 'antigen' is due to tyvelose end-groups in the group *D* specific polysaccharide[8]. The cross-reaction could be demonstrated readily by hæmagglutination as already described, but in this case the reactions could not be inhibited by tyvelose (isolated from *S. typhosa* polysaccharide), ascarylose (its optical enantiomorph), or any other sugar tested. The dideoxy-sugar was therefore isolated from *P. pseudotuberculosis* type IV polysaccharide; material was hydrolysed for 20 min. in *N* sulphuric acid at 100°, neutralized with barium hydroxide and the salt-free hydrolysate concentrated to a thin syrup. The leading component was isolated by elution from chromatograms run on Whatman 3-mm. paper irrigated with butanol/pyridine/water (6 : 4 : 3); the eluates were concentrated to a syrup, which gave a strong positive rotation. Since ascarylose has a negative rotation, the *P. pseudotuberculosis* type IV sugar is tyvelose.

The polysaccharide of *P. pseudotuberculosis* type V contains a sugar which cannot be distinguished chromatographically from tyvelose[1]. In view of the different specificities of the type IV and V materials, the sugar would be either tyvelose differently linked in the two instances or alternatively the type V material might contain the optical isomer ascarylose (3,6-dideoxy-L-*arabino*-hexose). The dideoxy-sugar of type V polysaccharide was isolated chromatographically as previously described and the syrup, after filtration through charcoal, gave a strong negative rotation ($[\alpha]_D = -20°$, about 2 in water), approaching that of crystalline ascarylose ($[\alpha]_D = -25°$). This identity was confirmed by preparing the dideoxy-hexitol[3]; the syrup (approx. 25 mgm.) was reduced in aqueous solution with $NaBH_4$ (25 mgm.) and left at room temperature overnight, excess $NaBH_4$ was then destroyed with a little *N* acetic acid. The solution was evaporated to dryness over phosphorus pentoxide and sodium hydroxide pellets and the residue extracted with methanol; the methanol solution was dried and extracted several times with boiling acetone, the acetone solution reduced in volume and left in the cold to crystallize. After recrystallization from acetone the dideoxy-hexitol gave $[\alpha]_D = +38 \pm 3°$ (in methanol) and had an m.p. of 112–113°. This is clearly the optical isomer of tyvelitol and the *P. pseudotuberculosis* type V sugar is ascarylose.

For polysaccharides of *P. pseudotuberculosis* types I and III, chromatograms indicated that the dideoxy-sugars differed from abequose and tyvelose (or their optical isomers colitose and ascarylose), and migrated in the position of paratose (3,6-dideoxy-D-*ribo*-hexose)[9]. The chromatographic separation of these sugars differed from abequose and tyvelose (or their separation could be obtained on paper electrophoresis in borate buffer[10]. In this system the sugars could be separated completely from one another in a 2-hr. run, with R_{rhamnose} values of 1·03 for abequose/colitose, 1·22 for tyvelose/ascarylose and 1·38 for paratose. The types I and III dideoxy-sugars gave R_{rhamnose} 1·38 but the different specificities of the polysaccharides required a demonstration of whether the sugars were indeed identical or again a pair of optical isomers.

The sugars were isolated as described above. The specific rotation of paratose is only +10° and the sugar syrups both gave positive rotations; with the amount of material available, however, the absolute readings were too small to be convincing. From the solutions, dideoxy-hexitols were prepared by reduction with $NaBH_4$ as described above, and in both cases the hexitols gave $[\alpha]_D$ approx. −20° (paratitol $[\alpha]_D$ −18°). It is clear, therefore, that paratose is present in both type I and III polysaccharides and is presumably linked in a different way in each instance to give the different specificities.

The situation is thus, that all the known 3,6-dideoxy-hexoses occur in bacterial polysaccharides[11] and these include all the configurations except the L-*ribo*- and D- and L-*lyxo*- forms.

SIALIC ACIDS AND THE ELECTROKINETIC CHARGE OF THE HUMAN ERYTHROCYTE

By G. M. W. COOK, Dr. D. H. HEARD and Dr. G. V. F. SEAMAN*

Department of Radiotherapeutics, University of Cambridge

IT has long been recognized that strongly acidic groups are responsible for the net negative charge of the erythrocyte. Furchgott and Ponder[1] suggested that the charge was derived from a phospholipid, possibly cephalin. Winkler and Bungenberg de Jong[2] came to similar conclusions from charge reversal spectra work.

Recent evidence indicates that the electrokinetic behaviour of the erythrocyte may derive from mucosubstances. Hirst[3] suggested, from erythrocyte virus adsorption and elution studies, that the sites of adsorption may have a mucoprotein character. Hanig[4] showed that adsorption of virus with concomitant agglutination of the red cells followed by elution of the virus was associated with a very marked decrease in the microelectrophoretic mobility of the red cells. Stone and Ada[5] examined more fully the relationship between changes in the microelectrophoretic mobility of red cells and their agglutination after treatment with viral enzymes and discussed the changes in terms of the receptor gradient of Burnet[6].

The specificity of an enzyme derived from *Vibrio cholerae* cultures (receptor-destroying enzyme) was examined by Gottschalk and Lind[7], and afterwards recognized as a glycosidase by Gottschalk[8] and termed 'neuraminidase' by him[9] because of its ability to liberate acylated neuraminic acids by cleavage of an α-glycosidic linkage[10].

Klenk and Uhlenbruck[11] have found that the receptor-destroying enzyme will liberate acylated neuraminic acids from erythrocyte stroma of various mammalian species. Furthermore, Klenk and Lempfrid[12] found that the sialic acid liberated by the receptor-destroying enzyme from human erythrocyte stroma was N-acetylneuraminic acid (NANA). Klenk[13] suggested that the negative charge of the erythrocyte could be ascribed to an acylated neuraminic acid.

Trypsin releases a sialomucopeptide[14] which is thought to be related to the decrease in the electrophoretic mobility of the treated erythrocyte[15,16].

* Beit Memorial Research Fellow.

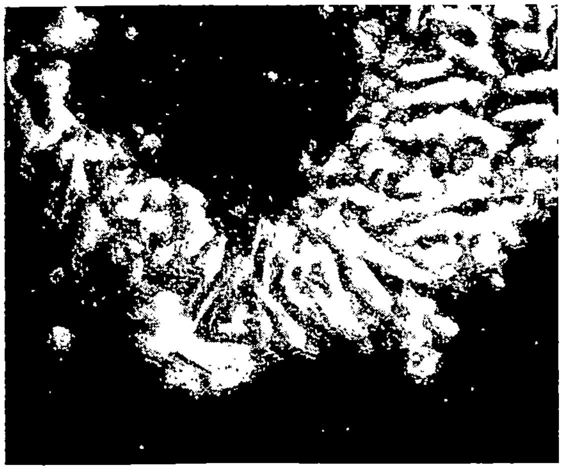

Fig. 1. Photograph of sialic acid crystallized from the supernatant of erythrocytes treated with receptor-destroying enzyme using methanol/diethyl ether/light petroleum mixture. Dark ground illumination. (× *c.* 150)

It is shown here that the decrease in erythrocyte charge observed after treatment by crystalline neuraminidase is brought about by the release of an N or O,N-acetylated neuraminic acid, the carboxyl group of which is in consequence removed from the electrophoretic plane of shear. The reduction in the electrokinetic charge of the erythrocyte is shown to be essentially a loss of anionic groups rather than the generation of a significant proportion of cationic groups.

Standard washed human erythrocytes[16] phenotypes (*ARh*+ve, *ORh*+ve and −ve) were used in the experimental work. Packed red cells (about 1 c.c. per experiment) were treated with receptor-destroying enzyme prepared according to the method of Ada and French[17]. The receptor-destroying enzyme solution 1 vol. (activity 1,500 units per ml. [1 mgm. receptor-destroying enzyme protein = 10^7 units] in 0·145 *M* aqueous sodium chloride : 0·005 *M* aqueous calcium chloride buffered to *p*H 7 with 0·5 *M* aqueous sodium bicarbonate) was incubated for 1 hr. at 37° with 1 vol. of human erythrocytes (packed 2,000*g* for 15 min.). The erythrocyte suspensions treated with receptor-destroying enzyme were centrifuged (2,000*g* for 10 min.) and the supernatant fluids removed for analysis.

The receptor-destroying enzyme-treated and the appropriate control red cells were given a standard wash in 0·145 *M* aqueous sodium chloride[16] and the treated red cells examined by microelectrophoresis[18]. Samples of standard washed red cells subjected to the receptor-destroying enzyme were treated with a 2 per cent v/v acetaldehyde solution in 0·145 *M* aqueous sodium chloride buffered to *p*H 7·5 with 0·5 *M* aqueous sodium bicarbonate solution[19]. The receptor-destroying enzyme/acetaldehyde-treated red cells were stored for not less than twenty days, given a standard wash in 0·145 *M* aqueous sodium chloride solution and then examined by microelectrophoresis. The *p*H of the 0·145 *M* aqueous sodium chloride solution was adjusted by means of isotonic aqueous hydrochloric acid or sodium hydroxide.

The supernatant fluid from the red cells treated with receptor-destroying enzyme was deproteinized by the addition of 1 vol. of 10 per cent w/v aqueous trichloroacetic acid solution to 1 vol. of supernatant fluid. After flocculation and centrifugation (2,000*g* for 10 min., 4° C.) the clear supernatant fluid was assayed for sialic acids by the resorcinol-hydrochloric acid method of Svennerholm[20] using NANA as a standard. Sialic acids found in the control supernatant fluids were negligible.

The sialic acid released was characterized microscopically by its crystalline form and by paper chromatography. The supernatant fluid from 2-c.c. packed erythrocytes treated with receptor-destroying enzyme was deproteinized with trichloroacetic acid, filtered through a Whatman No. 50 paper and the clear filtrate extracted with diethyl ether. The aqueous phase was not desalted so as to avoid unnecessary loss of any labile sialic acids, but was concentrated directly under reduced pressure at 50° C. and an equal volume of methanol added. The sialic acid was crystallized by adding a few drops of diethyl ether : light petroleum (60–80° C.) (1 : 2 by vol.) mixture and leaving at 4° C. for 24 hr. Clusters of fluffy needle-like crystals (about 200 μgm.) were obtained (Fig. 1). The mixture from which sialic acids could be crystallized was examined by descending paper chromatography (Whatman No. 1 paper) using: (*a*) butan-1-ol : acetic acid : water (4 : 1 : 5), organic phase; (*b*) butan-2-ol : acetic acid : water (4 : 1 : 5). The air-dried chromatograms were dipped in orcinol–trichloroacetic reagent (3 : 5-dihydroxytoluene (0·5 gm.) trichloroacetic acid (15 gm.) dissolved in water-saturated butan-1-ol (100 ml.)) and developed at 105° C. The chromatographic behaviour of NANA (in solvent *b*) was examined in the presence of the same quantity of sodium chloride as in the experimental samples (Fig. 2).

It has been suggested[21] that the decrease in the electrophoretic mobility of erythrocytes after treat-

ment with the *PR*8 strain of influenza virus, results from the appearance of cationic groups. The titration studies of Curtain[22] on urinary inhibitor, which showed that treatment of this inhibitor with receptor-destroying enzyme yielded a substance possessing cationic groups of about *p*K 11, supported this view. Recent work on the specificity of neuraminidases by Gottschalk[8] has shown that the receptor-destroying enzyme is an α-glycosidase, and therefore that its action is unlikely to yield cationic groups.

Aldehyde treatment of normal human erythrocytes produces no detectable change in their electrophoretic behaviour[19], which from the specificity of aldehydes for potential cationic groups[23] suggests the absence of cationic groupings effective at the electrophoretic slip plane[19]. The relatively small change in mobility of human erythrocytes subjected to receptor-destroying enzyme after treatment with acetaldehyde, in conjunction with constancy of the isopotential *p*H (Fig. 3) indicates that only a small part of the reduction in charge of the red cell treated with receptor-destroying enzyme could be attributed to cationic groups.

The possibility that the changes in electrokinetic behaviour of the red cell observed after treatment with receptor-destroying enzyme could be brought about by the irreversible adsorption of the enzyme or by impurities in the receptor-destroying enzyme is considered to be unlikely for the following reasons: (1) Purification of the crystalline receptor-destroying enzyme normally involves its adsorption and facile elution from packed washed human erythrocytes. (2) The receptor-destroying enzyme has been shown from hæmagglutination studies[24] to be eluted from red cells and the red cells to be incapable of further adsorption of enzyme[24]. (3) There is not likely to be sufficient material present as an impurity in the receptor-destroying enzyme (total protein 0·1 μgm./ml.) to produce significant coverage of 10^{10} red cells.

The *p*H-mobility relationships in 0·145 *M* aqueous sodium chloride for normal, receptor-destroying enzyme treated and receptor-destroying enzyme/acetaldehyde treated human red cells given in Fig. 3 show: (1) For the normal red cell the *pKa* of the surface ionogenic groups is at about 2·8 (the *pKa* of NANA is 2·6 (ref. 25)). (2) For the receptor-destroying enzyme/acetaldehyde-treated red cells there is only a small increase in the mobility compared with the corresponding red cells treated with receptor-destroying enzyme. The cationic character of the treated red cell is too small to account for the reduction in mobility of the normal red cell on treatment with receptor-destroying enzyme; these observations are consistent with those of Stone and Ada[5].

Assuming the sialic acid released by the action of the receptor-destroying enzyme to be free NANA[12] of mol. wt. 309, and when bound in the membrane of the erythrocyte that its carboxyl group is effective at the electrophoretic plane of shear, the theoretical quantity of a sialic acid expected to be released per 10^{10} human erythrocytes for a given reduction in surface charge density was calculated. The carboxyl group of each sialic acid moiety when bound in the red-cell membrane was assumed to correspond to one electron charge on the surface of the erythrocyte. The red-cell charge densities were calculated from the Gouy–Chapman equation which at 25° C. for uni-univalent electrolytes reduces to:

$$\sigma = 3{\cdot}52 \times 10^4 . I^{1/2} . \sinh(\zeta/51{\cdot}3)$$

where σ is the charge density in e.s.u. cm.$^{-2}$, *I* is the ionic strength[26] and ζ the zeta potential in mV. The

yield of NANA

Gouy–Chapman equation may yield low charge densities for an ion-penetrable system, such as a red cell. Haydon[27] has pointed out that for such a system the following equation would be more likely to yield a reliable value for σ:

$$\sigma = (1 + \sqrt{1 - \alpha})\, 3{\cdot}52 \times 10^4 . I^{1/2} . \sinh(\zeta/51{\cdot}3)$$

where α is the fraction of the total space within the surface which is not available for counter ions. For $\alpha = 1$ the Gouy–Chapman equation is obeyed; for $\alpha = 0$ the actual surface charge density will be twice that found from the Gouy–Chapman equation. At present, in the case of a red cell, only an arbitrary value can be ascribed to α.

The experimental yields of sialic acids are given in Table 1 and are about twice those expected from the Gouy-Chapman theory. Even though the overall accuracy of the experimental results is unlikely to be better than about ± 20 per cent, because of the error involved in red cell counts and the unavoidable slight hæmolysis during the treatment with receptor-destroying enzyme, not all the variation between the experimental results is likely to be accounted for by this error. The Haydon factor α is unlikely to account completely for the discrepancy between the theoretically calculated yields of sialic acid and those found experimentally. The divergence between the theoretical and experimental figures indicates that the sites of neuraminidase action may not be sterically localized in the regions of the cell surface where the carboxyl group of the sialic acids are electrokinetically fully effective. It is therefore probable that some sialic acid has arisen from regions deep to the electrophoretic plane of shear and that this portion of the total sialic acid liberated by the receptor-destroying enzyme may depend on stereospecific factors and therefore be liable to variation from person to person, thus possibly accounting for the variation in the experimental results.

The chromatographic behaviour of the material released from the red cell by treatment with receptor-destroying enzyme (Fig. 2) is indicative of NANA with possibly some O,N-acetylated neuraminic acids present; the NANA could have originated from the decomposition of a labile O,N-acetylated neuraminic acid.

The results described in this article indicate that the dominant ionogenic group at the surface of the human erythrocyte is the carboxyl group of a bound N or O,N-acetylated neuraminic acid.

We wish to thank the Medical Research Council for financial assistance; Dr. G. Ada for samples of crystalline receptor-destroying enzyme; Prof. G. Blix, Mr. M. J. Barnes, Prof. E. Klenk and Dr. L. Svennerholm for samples of various sialic acids; Prof. W. T. J. Morgan for a sample of sialo-mucopolysaccharide and Mr. E. W. Mitchell for the photography.

PARTITION OF URINE NITROGEN IN KWASHIORKOR

By Dr. J. C. EDOZIEN and E. J. PHILLIPS

Department of Chemical Pathology, University College, Ibadan

It has been known for many years that the level of dietary protein intake greatly affects the partition of nitrogen in the urine[1]. In particular, low protein diets are associated with reduced relative excretion of urea nitrogen and with increased relative amounts of ammonia and of "undetermined nitrogen"[1,2]. Recent investigations[3] have shown that there is an increase in the excretion of free amino-acids in severe protein deficiency in children (kwashiorkor), from which it may be inferred that part of the increase in the "undetermined nitrogen" of urine in subjects on poor protein diet is caused by increased amounts of free amino-acid nitrogen. During investigation of the excretion of free amino-acids in kwashiorkor, we observed that in many of our patients the formol titration method of determining amino-acids in urine showed a much higher degree of amino-aciduria than is evident from chromatograms of the free amino-acids of the urines. It was suspected that there may be an increased excretion of other urine constituents which are estimated as 'amino-acids' by the formol titration procedure. We therefore examined the amino-acids of hydrolysed urines and we present here a preliminary report on observations on the partition of urine nitrogen and the excretion of bound amino-acids in kwashiorkor.

Urine ammonia was estimated by direct nesslerization of diluted urine: the results do not differ significantly from values obtained by the microdiffusion method of Conway[4]. Urea plus ammonia was determined by nesslerization after incubating with urease. Urea was obtained by difference. Total nitrogen was determined by the micro-Kjeldahl method. Creatinine, and creatinine plus creatine, were measured by the alkaline picrate method, before and after boiling with picric acid[5]. Creatine was obtained by difference. Uric acid was determined by the uricase method[6] and amino-acid nitrogen by formol titration with subtraction of ammonia nitrogen[7]. Two-dimensional chromatography was carried out in butanol/pyridine/water and phenol/ammonia/water according to the procedure described by Smith[8]. For free amino-acids, electrolytically desalted urine was applied to the paper, aliquots containing 250 μgm. nitrogen being used for normal urines. Free plus bound amino-acids were examined after the urine was hydrolysed by refluxing 1 ml. of protein-free urine with 9 ml. of 6 *N* hydrochloric acid for 24 hr., removing the hydrochloric acid by evaporating to dryness and re-dissolving the residue in 4 ml. water and desalting. A four-fold dilution of the original urine was thus made during this process. The excretion of bound amino-acids was assessed by noting qualitative and quantitative changes in the chromatogram of the hydrolysed urine as compared with that of unhydrolysed urine containing an equivalent amount of total nitrogen.

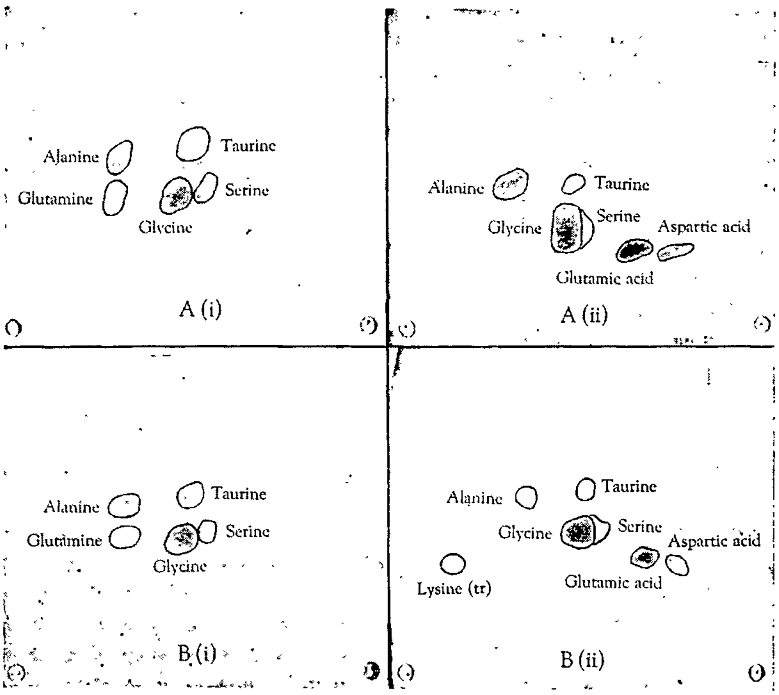

Fig. 1. Amino-acid excretion in healthy children
A (i) and *B* (i), free amino-acids in urine.
A (ii) and *B* (ii), free plus bound amino-acids after acid hydrolysis. All samples contain 250 μgm. nitrogen.

The partition of urine nitrogen in healthy Nigerian children presumed to be on normal protein diets, in healthy Nigerian children presumed to eat low protein diets and in children with kwashiorkor are shown in Table 1. The results confirm earlier observations that in kwashiorkor there is an increase in the relative amounts of ammonia and of amino-acids. They also show that there is an increase in the relative excretion of creatine and of uric acid. It should be emphasized, however, that the increases are in relative amounts, and do not necessarily indicate increased daily output. In kwashiorkor, urine volume is suppressed to about half to one-third of normal, and since the concentration of total nitrogen is also reduced to about a half, only those substances which show an increase in relative amounts of more than approximately four times are likely to show increase in absolute amount per 24 hr.

The relative excretion of urea is very significantly less than normal: there is very little change in the relative concentration of creatinine. The absolute amounts of these two substances per 24 hr. are very much below normal.

Table 1. PARTITION OF NITROGEN IN URINE IN HEALTHY CONTROLS AND IN KWASHIORKOR
Values expressed as percentage of total nitrogen, unless stated otherwise

	Controls: *A* (12)	Controls: *B* (13)	Kwashiorkor (25)
Total nitrogen (gm./litre)	8·0	7·0	3·8
Ammonia	4·5	7·5	20·2
Urea	79·5	54·9	41·2
Creatinine	4·1	3·4	3·8
Creatine	0·2	—	2·5
'Uric acid'	3·5	—	6·8
'Amino-acids'	3·2	—	25·3

Controls *A*: Healthy children, being children of African members of the academic staff of the University College and presumed to eat normal protein diets.
Controls *B*: Healthy children from Imesi, a village about 100 miles from Ibadan and presumed to eat the traditional low-protein diet.

Fig. 1 shows photographs of chromatograms of free and total amino-acids in two healthy children on normal protein diets. Serine, glycine, taurine, alanine and histidine (sometimes methyl histidine) are usually present, but essential amino-acids (leucine plus *iso*leucine plus phenylalanine in one spot, valine plus methionine plus tryptophan in one spot, arginine, lysine, tyrosine, tryptophan) and other spots (asparagine, ornithine) are occasionally observed, though when present they are excreted in only trace amounts. The hydrolysed urines usually show an increase in the intensity of glycine and alanine and the appearance of aspartic acid and glutamic acid. Glutamine is destroyed in the process. Traces of other amino-acids may appear in some cases.

Kwashiorkor urines usually show varying degrees of amino-aciduria (Fig. 2). Chromatograms of free amino-acids comparable with those for normal children can usually be produced by spotting a volume of urine containing 2–15 (usually 4) times less nitrogen than we apply in the case of normal urines, indicating that there is an approximately four-fold increase in the proportion of free amino-acid nitrogen to total nitrogen in the urine of kwashiorkor patients. Essential amino-acids are not involved in this increase: in the majority of cases essential amino-acids (with the exception of lysine) could not be identified in chromatograms of the urine. The almost invariable over-excretion of β-amino*iso*butyric acid and the appearance of ethanolamine in several cases are other features of the amino-aciduria of kwashiorkor. Bound amino-acids also show considerable increase. The increase in bound amino-acids in most cases appears to be more than the increase in the excretion of free amino-acids. Clinical recovery is associated with

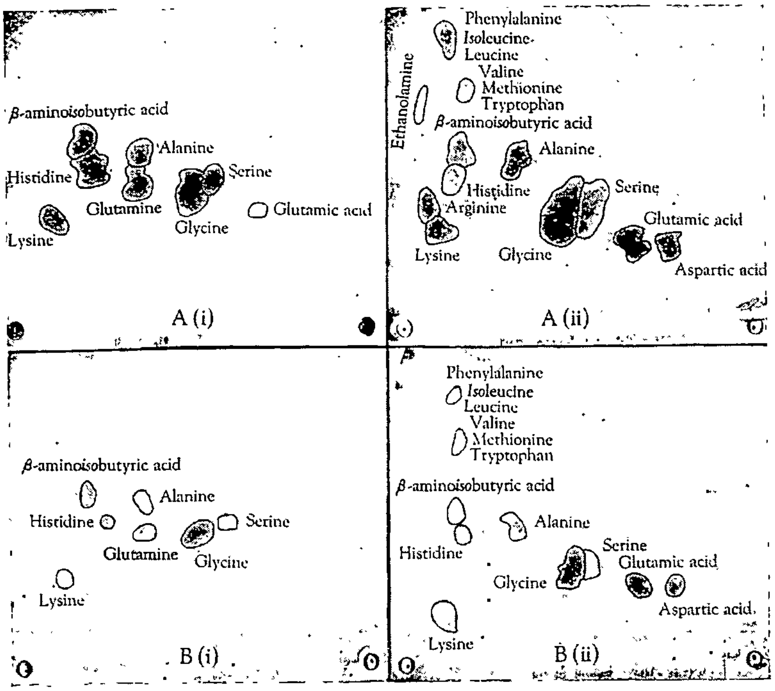

Fig. 2. Amino-acid excretion in a child with kwashiorkor

A (i), free amino-acids, and *A* (ii), free plus bound amino-acids, after acid hydrolysis. Urine spotted contained 250 μgm. nitrogen.

B (i), free amino-acids, and *B* (ii), free plus bound amino-acids, after acid hydrolysis. Urine spotted contained 62·5 μgm. nitrogen.

When this is compared with Fig. 1, it shows that there was more than a four-fold increase in both free and bound amino-acids.

return of the excretion of free and total amino-acids to normal, but over-excretion of β-amino*iso*butyric acid may persist for some time.

Creatine, creatinine and uric acid were also determined in blood serum. The results are shown in Table 2.

Table 2. Serum Concentration in mgm./100 ml.

Determination	Control children (30)	Kwashiorkor (25)
Creatine	1·41 ± 0·38 (0·8 – 2·3)	1·50 ± 0·79 (0·4 – 3·6)
Creatinine	0·75 ± 0·18 (0·5 – 1·2)	0·60 ± 0·23 (0·4 – 1·0)
'Uric acid'	3·95 ± 1·3 (1·6 – 6·3) In only 1/30 serum-level > 6·0 mgm./100 ml.	8·5 ± 4·3 (1·3 – 23·3) In 17/25 serum-level > 6·0 mgm./100 ml.

The increased output of ammonia is probably the result of increased excretion of organic acids[9] and of failure of the kidneys to produce acid urine[10]. Dean[11] has suggested that the excretion of large amounts of ammonia may show that ammonia is being produced that cannot be carried to urea because the xanthine–citrulline–arginine cycle is defective: it should be pointed out, however, that normally urinary ammonia is not derived from blood ammonia, but is produced in the kidneys as a defensive mechanism for body cation. The creatinuria is associated with increased breakdown of muscle. The fall in total creatinine excretion is probably due to the diminished mass of muscle; decreased renal clearance of creatinine has been postulated as an additional factor, but, as our results show that there is no increase in creatinine-level in plasma, we do not consider this likely. The etiology of the amino-aciduria of kwashiorkor has been discussed in a previous communication[3], in which it was also shown that ethanolaminuria is caused by deficiency of methyl donors.

The daily urinary excretion of uric acid is not a very sensitive index of the total uric acid turnover, because extra-renal excretion eliminates a considerable portion of the uric acid produced each day[12]. The level of uric acid in the plasma is a more reliable index, and the substantial rise in serum uric acid observed in kwashiorkor points clearly, in the absence of severe renal damage, to over-production of uric acid in this disease. Dean[11] has observed that in kwashiorkor the urine contains increased quantities of purine metabolites other than uric acid; these purines contribute to the urine as much nitrogen as uric acid, and thus account for part of the "undetermined nitrogen". We have been able to account for practically all the "undetermined nitrogen" without allowing for these purines; it may well be that uricase is not specific for uric acid and that part of the increase which we have noted is due to these abnormal purines. The accumulation of purine metabolites points, like the over-production of β-amino*iso*butyric acid, to rapid cellular breakdown.

The bound amino-acids present in urine include peptides and amino-acids conjugated with other urine constituents. It can readily be demonstrated by treating, with biuret reagent, urine which has been de-colorized with activated charcoal and deproteinized with zinc sulphate and sodium hydroxide, that much of the increase in the bound amino-acids of kwashiorkor urine is due to increased peptide excretion. It is not yet clear whether this peptiduria is due to rapid tissue breakdown, or whether it is associated with failure of protein synthesis caused either by enzyme deficiencies or by deficiency of key amino-acids required to link the peptide chains together. Some of these peptides may be biologically active and may relate to the retention of fluid and to the circulatory collapse which sometimes supervenes in the course of severe kwashiorkor.

CHANGES IN VISUAL GNOSTIC FUNCTIONS AND EMOTIONAL BEHAVIOUR FOLLOWING UNILATERAL TEMPORAL POLE DAMAGE IN THE 'SPLIT-BRAIN' MONKEY

By DR. J. L. deC. DOWNER

Scientific Staff, Medical Research Council, Department of Anatomy, University College, London

DURING the course of investigating inter-hemispheric transfer of visual discrimination habits in monkey (*Macaca mulatta*), it was found in three animals that transfer of monocularly learned visual discrimination habits did not occur following mid-sagittal division of optic chiasma, corpus callosum, anterior commissure and that part of the hippocampal commissure lying subjacent to the corpus callosum[1,2]. Transfer of these habits did occur in a fourth animal in which the anterior commissure remained intact although optic chiasma, corpus callosum and hippocampal commissure had been sectioned. Since the anterior commissure is the major commissure between the temporal poles[3–5,7] these observations suggested that the temporal poles might play some part in the transfer of visual gnostic behaviour.

A right unilateral temporal pole resection was carried out in an animal (*D*-26) that had previously completed a visual discrimination training sequence following mid-sagittal sectioning of optic chiasma and cerebral commissures. Following a recovery period of two weeks duration, the eye ipsilateral to the temporal pole lesion was left open and the opposite eyelids sutured shut. There appeared immediately many of the behavioural patterns described by Kluver and Bucy[6,7] in animals with bilateral temporal pole removals. The animal seemed unable to recognize edible from non-edible objects by visual cues alone; it would pick up the objects and spend considerable time sniffing and biting before either eating or rejecting them. The post-operative changes in affective behaviour were of especial interest. Prior to the temporal pole removal this animal was wild and intractable. When observers looked into its cage the animal would bare its teeth and dash forward, jumping at the door and attempting to bite and claw. Following the temporal pole removal the animal responded placidly to such visual stimulation and would approach the experimenter peacefully and take raisins from his hand. It is important to note that this placid behaviour occurred only in response to visual stimuli. If one attempted to touch the animal or grasp its arm, a full aggressive reaction would occur.

Opening the eye projecting to the undamaged side and closing the other eye resulted in an abrupt change in behaviour back to the pre-operative level. There were no signs of visual agnosia, and the animal showed a persistent aggressive response at the appearance of the experimenter.

The question then arose as to whether or not the change in emotional behaviour to visual stimulation was merely a reflexion of the visual agnosia or due to damage to sub-cortical structures, in particular the amygdaloid complex, which had been removed during the unilateral temporal pole ablation. In an attempt to answer this, another animal (*D*-28) that had previously undergone mid-sagittal sectioning of optic chiasma and cerebral commissures was subjected to unilateral amygdalectomy. To avoid damaging the temporal neocortex, the amygdaloid area was approached from beneath the right frontal pole and removed using the aspiration technique. During the course of surgery, it was found necessary to section the right olfactory tract in order to obtain adequate exposure. Post-operative recovery was uneventful.

This animal showed no signs of visual agnosia irrespective of which eye was open. Similarly, there did not appear to be much change in affective behaviour although, superficially, it seemed as if the animal was a little more placid when the eye ipsilateral to the side of the amygdalectomy alone was open. Another craniotomy was then carried out. The left hemisphere was gently retracted from the falx, and the incision along the length of the corpus callosum was reopened. In addition, the hippocampal, habenular and posterior commissures were completely sectioned. The incision was extended to include the massa intermedia. The supra-optic recess was entered, and the tip of the knife passed between the medial walls of the hypothalamus until the sphenoid bone was reached. Post-operative recovery revealed a transient left abducens nerve palsy and a mild but persistent right hemiparesis.

Following the second operation, this animal did not differ from the typical wild and aggressive monkey when observed with both of its eyes open. At the sight of an observer, it would grimace, bare its teeth and jump around the cage. Closing the eye on the side of the amygdalectomy did not result in any observable change. However, opening this eye and closing the opposite eye produced a dramatic change in behaviour. The animal showed no signs of aggression or fear at the sight of human observers and would approach the front of the cage to take raisins from the experimenter's hand.

As in the instance of the animal with the entire temporal pole removal, this placidity occurred only in response to visual stimulation; touching or prodding the animal's arm would produce a momentary aggressive reaction. The placid response to visual stimuli promptly disappeared when the eyelids on the side of the amygdalectomy were sutured shut and the other eye opened. These alternations in affective behaviour were observed over a period of three months, after which the animal was killed and its brain prepared for histological examination.

Although these observations are of interest in themselves, their primary importance lies in illustrating an approach to the investigation of the behavioural correlates of central nervous system lesions which has the advantage of permitting repeated control and experimental observations of the same animal. In the 'split-brain' animal, a unilateral lesion is functionally comparable with a symmetrical bilateral ablation (with respect to visual stimulation) when the eye ipsilateral to the lesion is open and the opposite eyelids sutured shut. When the eye contralateral to the lesion is open and the ipsilateral eyelids closed, the animal behaves with respect to visual stimuli as in its immediate pre-operative state. This suggests that one can, in effect, 'remove' brain tissue and 'replace' it by opening and closing the appropriate eye. Among the several possible extensions of this approach comparing the effects of different lesions performed in opposite hemispheres in the same animal may prove to be especially intriguing.

INHIBITION OF GROWTH AND PHOTOSYNTHESIS IN SUBMERGED PLANTS WITH TETRAMETHYLTHIURAM DISULPHIDE AND SODIUM DIMETHYLDITHIOCARBAMATE AND REVERSAL OF THIS INHIBITION OF PHOTOSYNTHESIS

By P. E. BJÖRN LINDAHL
Institute of Plant Physiology, University of Uppsala

THE biological action of certain dithiocarbamyl compounds has been reviewed by Goksøyr[1]. Their fungicidal action and the inhibition of certain aldehyde dehydrogenases caused by 'Antabuse' account for most of their biological effects. According to Green *et al.*[2] photosynthesis in *Chlorella* is markedly inhibited by sodium diethyldithiocarbamate (Na-DEDT). This effect is related to a similar one of other inhibitors, which like Na-DEDT are denoted "Cu-poisons" by these authors. The inhibition of the oxygen production of isolated chloroplasts by 5×10^{-3} *M* Na-DEDT is about 30–50 per cent[3]. On the other hand, the photosynthetic phosphorylation in isolated chloroplasts is not inhibited by 1×10^{-3} *M* Na-DEDT[4].

No inhibition of photosynthesis by tetramethylthiuram disulphide (TMTD) or homologous substances has been described so far. In a Dutch horticultural paper, however, a gardener reports that he has cleared the soil from algal fouling with TMTD[5].

In the present investigation the action of different concentrations of TMTD and sodium dimethyldithiocarbamate (Na-DMDT) on the growth of 2–5 mm.-long thalli of the green alga *Enteromorpha linza* was investigated using a non-sterile procedure of cultivation. Considerable inhibition of growth was obtained with both substances (Fig. 1). The relatively large dispersion of the replicates results from the inhomogeneity of the inoculated material (cf. controls) and on the instability of the applied chemicals. It is known that the presence of trace elements in the nutrient solution causes the concentration of DMDT⁻ to drop below the intended level, and that metal-DMDT-complexes, which are possibly toxic, are formed[1]. The number of equivalents necessary in order to induce inhibition seems to be the same for the two substances (Fig. 1).

Starting from the growth inhibitions, caused by TMTD and Na-DMDT, the action of these substances on photosynthesis and respiration in the dark was investigated. Photosynthesis was measured with no correction for the simultaneous light-respiration. The determinations were made using both *p*H measurements and a Warburg-method. Respiration in the dark was determined only with the Warburg method.

The first method involves measurements of the changes in *p*H caused by photosynthesis in submerged plants. Each experiment includes measurements of simultaneous changes in two media, one with and one without inhibitor. When inhibition of photosynthesis occurs, the *p*H is changed to a smaller extent in the solution containing the inhibitor than in the other solution. In this a suitable quantity of algae at adequate temperature and light changes the *p*H from 8 to 9 or more during 2–3 hr. of photosynthesis. Non-protolytes or substances, nearly completely protolysed at *p*H 8, can be tested for inhibitory effect with this method. In this investigation the method has been used to determine the extent of inhibition of photosynthesis by TMTD in different species of submerged plants. The degree of inhibition of photosynthesis is taken from a nomo-

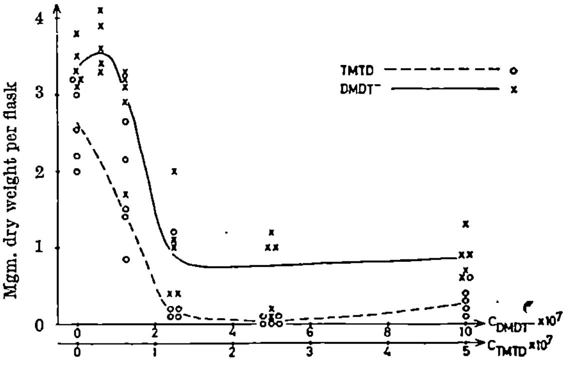

Fig. 1. Growth of thalli of *Enteromorpha linza* at different concentrations (moles per litre) of TMTD and Na-DMDT. Medium: sea water with addition of 0·01 per cent sodium nitrate, 0·005 per cent dipotassium hydrogen phosphate, 0·1 per cent *tris*-buffer, and trace elements chelated with Na_3-versenol (medium *ASP6* (ref. 6)). Initial *p*H 7·6. In each flask 5–10 thalli 2–5 mm. long. Light intensity about 4,000 lux. Temperature 18° C. The TMTD series was gathered after 14 days, and the Na-DMDT series after 13 days. Thalli were dried at 105° C. and weighed

gram which has on a theoretical basis been calculated for each kind of medium applied. Sea water was used as medium for marine algae and fresh water, rich in bicarbonate, for submerged higher plants. The conditions were as follows:

(*A*) Sea water of salinity 32 thousandths. The algae were stored in sea water one day and night before the experiment. The sea water, which was saturated with TMTD, also contained small amounts of DMDT-. The experiments were performed at a light intensity of about 650 lux and at a temperature of about 18° C.

(*B*) Sea water of salinity 25 thousandths. The algae were partly cultivated and partly stored in the medium given in the legend of Fig. 1. The experiment was carried out at an illumination of about 7,000 lux and at a temperature of 18° C. $C_{\mathrm{TMDT}} = 0{\cdot}3 \times 10^{-4}\ M$.

(*C*) Fresh water with an addition of 1 m.mol. sodium bicarbonate and 0·05 m.mol. sodium hydroxide per litre. The plants were acclimatized and cultivated in this medium for 1 and 20 days respectively. The illumination was about 7,000 lux and the temperature 18° C. $C_{\mathrm{TMTD}} = 0{\cdot}7 \times 10^{-4}\ M$.

About equal quantities of plants were placed in four test tubes containing 10 ml. solution, two of the tubes with TMTD and two without inhibitor. No corrections have been introduced in order to compensate for the differences in the photosynthesis before the addition of the TMTD solution.

The extent of inhibition (Table 1) is given in per cent of photosynthesis without inhibitor.

Table 1

	Condition	Inhibition (per cent)
Chlorophyceae		
Ulva lactuca	*B*	70, 85
Enteromorpha compressa	*A*	100, 105
Enteromorpha linza (not cultured)	*B*	85, 105
Enteromorpha linza (cultured)	*B*	110, 115
Cladophora rupestris	*A*	70, 80
Acrosiphonia centralis	*B*	30, 50
Phaeophyceae		
Pylaiella littoralis (cultured)	*B*	60, 75
Ectocarpus confervoides	*A*	80, 80
Rhodophyceae		
Ceramium strictum	*A*	100, 100
Ceramium rubrum	*A*	95, 100
Callithamnion corymbosum	*A*	90, 100
Polysiphonia urceolata	*B*	45, 50
Submerged moss		
Campylium sp.	*C*	70, 80
Submerged higher plants		
Utricularia intermedia	*C*	40, 55
Hydrilla verticillata	*C*	95, 105

According to this the photosynthesis of submerged plants seems generally to be inhibited by TMTD.

The concentrations of TMTD in the water solutions used have been analysed according to a method worked out by Åkerström and based on some of his investigations[7]. Work by Åkerström and me on the effect of derivatives of TMTD and of related substances on photosynthesis is progressing.

Enteromorpha linza used in the experiments with the Warburg method has been taken partly from a non-sterile culture, *E.l.*(cult), in the nutrient solution (cf. legend to Fig. 1) and partly from the sea, *E.l.*(sea), off the west coast of Sweden. The *E.l.*(sea), before being used, was kept in light in the nutrient solution for different lengths of time.

The manometric experiments have been carried out in conical vessels of about 17 ml. at 18° C. and with a light intensity of 6,800 lux at the bottom of the vessel. The bicarbonate solution described in the legend of Fig. 1 was used, but without addition of Na_3-versenol and trace elements. Its *p*H was adjusted to 8·3–8·4, after which the solution was brought to equilibrium with atmospheric carbon dioxide by aeration, and 3·0 ml. of this medium with or without inhibitor was pipetted into the main compartment and 0·5 ml. into each side-arm. Readings were taken every 5 min. for 100–140 min. The quantity of algae in each vessel was chosen so as to make the increase in pressure not to exceed 70 mm. Brodie solution.

In order to measure a possible inhibition of endogenous respiration experiments were performed in the dark. These differed from the above only as regards the duration of the experiments and the illumination. Because of the low respiratory-rate, readings, were taken every 30 min. for 280–340 min. The quantity of algae in each vessel was chosen so as to produce a decrease in pressure not less than 25 mm. Brodie solution. The ratio of the oxygen production in light and the oxygen uptake in the dark of the same thallus varies from 35/1 to 25/1. From this it is obvious that the inhibition of the photosynthesis studied cannot be interpreted as a consequence of stimulation of respiration.

TMTD and Na-DMDT inhibit photosynthesis in both *E.l.*(cult) and *E.l.*(sea). Fig. 2 shows the extent of this inhibition in *E.l.*(cult) at different concentrations of both substances. TMTD has evidently a much stronger effect than Na-DMDT. A comparison between Figs. 1 and 2 reveals that the ranges of concentration in which the inhibition of photosynthesis occurs do not coincide with the corresponding range of concentration for inhibition of growth. In the dark no inhibition of the endogenous respiration in *E.l.*(cult) is obtained either by $0{\cdot}38 \times 10^{-5}\ M$ TMTD or by $1 \times 10^{-4}\ M$ Na-DMDT.

The inhibition of photosynthesis by $1 \times 10^{-4}\ M$ Na-DMDT in *E.l.*(sea) can be lowered by addition of equivalent quantities of certain metal ions, namely, Cd^{2+}, Pb^{2+}, Ni^{2+}, Co^{2+}, Cu^{2+} and Au^{3+}. In some experiments with Cu^{2+} complete reversions of the inhibitions were obtained. No reduction of the inhibition is obtained by the same concentration of Mn^{2+}, Sn^{2+} and Fe^{3+}, while at the same concentration of Zn^{2+} photosynthesis is further diminished. Besides, the inhibition is decreased by $1 \times 10^{-4}\ M$ glutathione and $2 \times 10^{-4}\ M$ cysteine, whereas $1 \times 10^{-4}\ M$ of the latter substance does not reduce the inhibition.

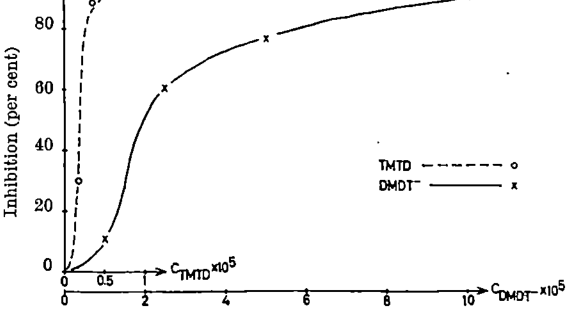

Fig. 2. Inhibition of photosynthesis in *Enteromorpha linza* (cultured) at different concentrations (moles per litre) of TMTD and Na-DMDT

In a corresponding manner, an inhibition induced by TMTD has been investigated. The inhibition in *E.l.*(cult) by 0·69 × 10^{-5} *M* TMTD is not lowered by addition of 1 × 10^{-4} *M* Cu^{2+}, whereas this is the case in the presence of 1 × 10^{-4} *M* Au^{3+}. The inhibition of photosynthesis in *E.l.*(sea) by 0·54 × 10^{-4} *M* TMTD and in *E.l.*(cult) by 0·36 × 10^{-4} *M* TMTD is considerably diminished by the addition of 1 × 10^{-4} *M* glutathione, and in the former material also by 2 × 10^{-4} *M* cysteine.

It appears from the above that the inhibition of photosynthesis caused by both TMTD and Na-DMDT is almost completely reversible. The reduction of the Na-DMDT-induced inhibition by different metal ions can be explained by the drop in concentration of $DMDT^-$, caused by the formation of metal-DMDT-complexes. The fact that the TMTD-induced inhibition is not diminished by addition of 1 × 10^{-4} *M* Cu^{2+} could, however, be due to the circumstance that $DMDT^-$ ions *per se* are not responsible for this inhibition. Under the presumption that the photosynthesizing plant is able both to oxidize $DMDT^-$ and to reduce TMTD, the observed phenomena may be regarded as effected by TMTD only. In keeping with this is the fact that addition of glutathione or cysteine diminishes inhibition caused both by Na-DMDT and TMTD. Further, the reversal of the inhibition with metal ions, when this is induced by $DMDT^-$, could thus be due to the ability of the plant to reduce earlier formed TMTD to $DMDT^-$, which is then complexed.

A full description of the present investigations will appear in *Svensk Botanisk Tidskrift* and *Physiologia Plantarum*.

A PHYTOPLANKTON MULTI-SAMPLER AND ITS USE IN LAKE VICTORIA

By Dr. J. H. EVANS
Royal Holloway College, Englefield Green, Surrey

FROM April until August 1960, many phytoplankton samples were taken with a Ruttner sampler from the northern end of Lake Victoria, especially in the north-west corner of Pilkington Bay of Buvuma Island (Fig. 1). The main constituents of the phytoplankton were *Melosira nyassensis* var. *victoriae*, *M. granulata*, *M. varians*, *M. agassizii*, *Aphanocapsa elachista*, *Lyngbya circumcreta*, *Anabaena circinalis* and *Merismopedia elegans*. Certain other diatoms and blue-green algae were observed sporadically as were twelve species of the Chlorococcales. Very wide variations in the horizontal and vertical distributions of phytoplankton were found in Pilkington Bay, and in the north-west corner of the bay there was a sharp overall increase in phytoplankton during May. The variations in distribution, and the May increase, although the latter might have been a reflexion of seasonal change, were possibly due to water movements. The possible association between water movements and variations in plankton density has been mentioned by Talling[1], and Fish[2] has referred to exchanges between deep and shallow water and the possible increase in fertility of the main lake resulting from the outward movement of fertile inshore waters.

To investigate water movements and the carriage of phytoplankton near the surface, a multi-sampler was designed and constructed (Fig. 2). This consisted of a 'Dexion' No. 112 alloy-angle framework with four empty, sealed 1-gallon cans acting as floats. Eight phytoplankton nets held on galvanized steel loops were attached to the frame. The narrow end of each net was tied tightly on to a connecting tube of plastic, which in turn led into a collecting tube which, kept in place only by a close-fitting rubber sleeve, could

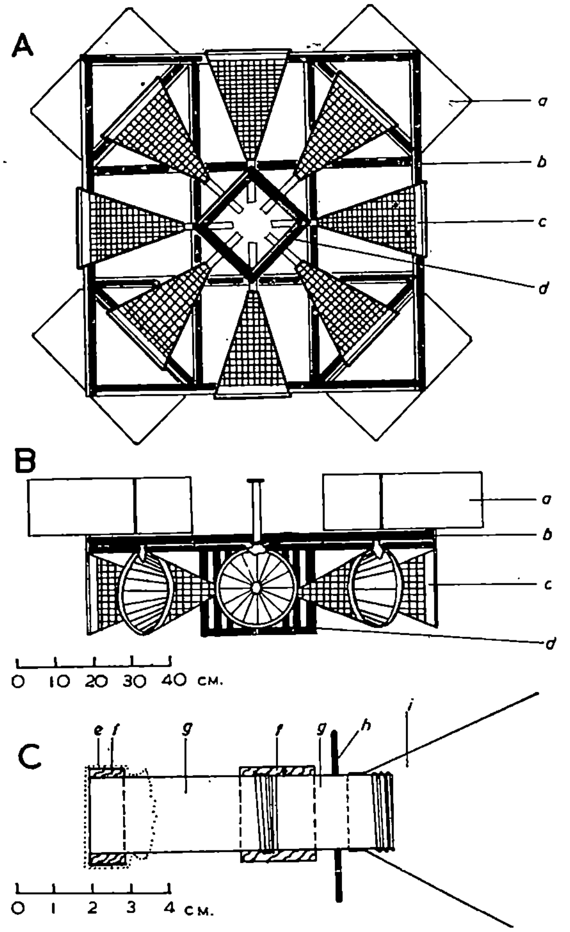

Fig. 2. The phytoplankton multi-sampler. *A*, plan view, from beneath; *B*, elevation; *C*, collecting tube in half-section. *a*, Float; *b*, framework of 'Dexion' No. 112 alloy-angle; *c*, phytoplankton net on wire loop; *d*, centre-piece of framework; *e*, fine-mesh phytoplankton netting; *f*, rubber tubing as sleeve; *g*, plastic tube; *h*, edge of alloy angle upright of centre-piece; *i*, inner end of phytoplankton net

easily be detached. Each collecting tube was closed at its outer end (away from the net) by a piece of phytoplankton mesh retained over a short length of rubber sleeving by a rubber band. Wide-mouth, screw-cap, 9 × 5 cm. plastic bottles, each containing about 10 ml. sterile, distilled water and each marked *N*, *N.W.*, *W*, etc., were carried for storing the collecting tubes.

The multi-sampler was placed in the water with the centre of each net opening at about 15 cm. below the surface. With the floats marked *N*, *S*, *E* and *W*, the multi-sampler was orientated in a north–south direction and held in position from a small launch or from a dinghy at anchor, usually for 10 min. At the end of this time the collecting tubes were detached carefully and each placed quickly in the appropriate bottle. In the laboratory, the contents of each collecting tube were washed into a 50 ml. measuring cylinder, made up to a known volume and, after shaking, a sample taken for a quantitative determination of the phytoplankton by the sedimentation technique[3,4]. The results, after corrections for dilutions and the time of each run, were recorded for each net as units/min. All species of *Melosira* were counted together as cells, species of *Pediastrum* and *Scenedesmus* as cœnobia, *Anabaena circinalis* as cells, *Lyngbya circumcreta* as coil turns, *L. limnetica* as filaments, *Aphanocapsa elachista* as colonies, *Merismopedia elegans* as groups of eight cells and all other algae as individual cells. During each use of the multi-sampler, three surface-water samples were taken to determine the general concentration of phytoplankton in the vicinity of the apparatus.

The first trial run was in the Napoleon Gulf where there was known to be a current of about 20 cm./sec. In parallel with the multi-sampler, an Ekman current meter was used. The multi-sampler results can be plotted as histograms and vector diagrams, and four of them are shown in Fig. 3. The resultant component indicates the general flow direction during the sampling period, and this was found to be close to that given by the Ekman current meter (Fig. 3*A*). The resultant component can also be regarded as being approximately related to the rate of flow.

As there are practical difficulties involved, such as local turbulences, net resistances at higher rates of flow and net clogging in high concentrations of phytoplankton, it is not proposed here to attempt to calculate accurately absolute velocities of currents from the multi-sampler results. It is believed, however, that the multi-sampler results, in comparison with the phytoplankton concentrations in the water samples taken in parallel, do give some indication of current velocities and a comparison of several such results with actual rates of flow as determined with the Ekman current meter (Table 1) supports this. For the sake of simplicity, however, the result for a single net, that which collected the most phytoplankton, has been used, rather than the resultant component of the vector diagram, in calculating the current velocity. This method, although possibly less precise, is believed to be sufficiently accurate for such approximations. In two of the results included in Table 1, only counts of *Melosira* were considered as all the blue-green algae on those occasions were restricted to the water surface. These results suggest that provided there are no serious turbulences there is a relationship between current velocity and the quantity of phytoplankton trapped by the net most closely facing the prevailing current.

That is:

$$F = P.k \text{ cm./sec.}$$

where F = calculated rate of flow;

Table 1. RELATIONSHIPS BETWEEN RATES OF FLOW AS DETERMINED BY EKMAN CURRENT METER AND FROM PHYTOPLANKTON COUNTS

Time and place	E = rate of flow in cm./sec. measured from an Ekman current meter	$P = \dfrac{\text{phytoplankton units/min.}}{\text{phytoplankton units/ml.}}$	$k = E/P$
(1) Napoleon Gulf 1600–1610 30.5.60	19.5	13	1·50
(2) Pilkington Bay 1420–1430 30.8.60	< 6·0	4	< 1·50
(3) Pilkington Bay 1730–1740 24.6.60	5·0	4	1·25

For (1) and (3) only *Melosira* counts, as cells/min. and cells/ml. were included in the calculations as, on these occasions, the Cyanophyceae were restricted to the water surface above the level of the nets.

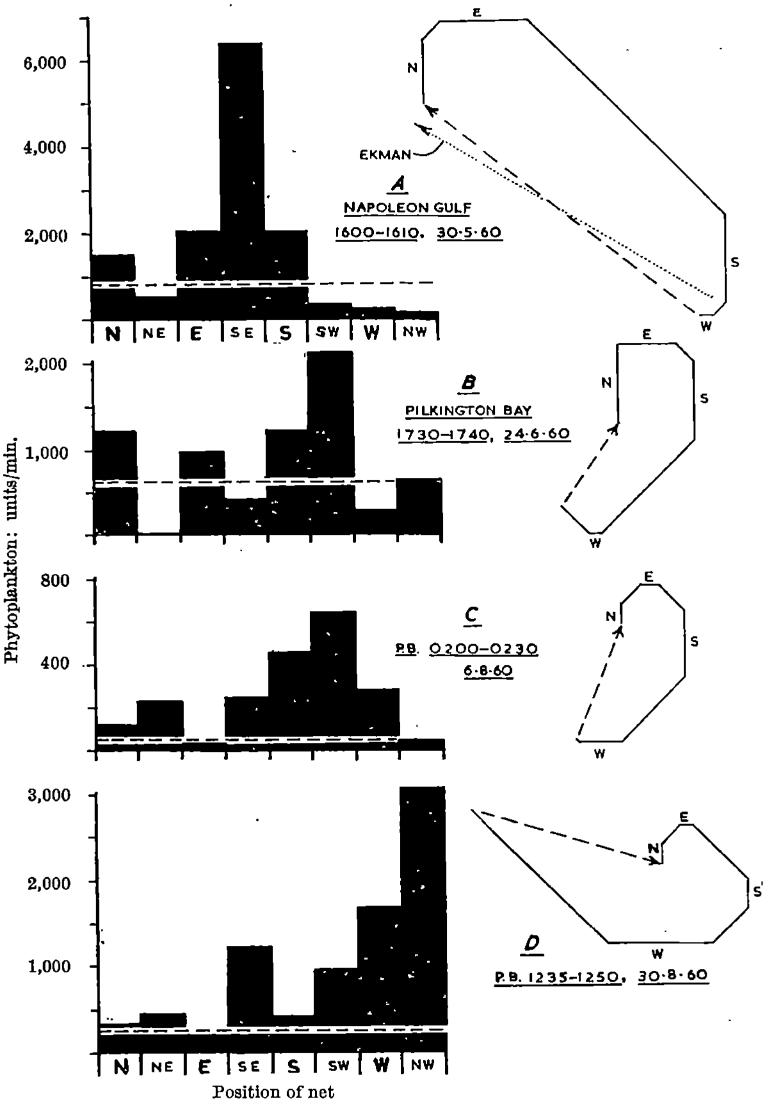

Fig. 3. Some results obtained with the phytoplankton multi-sampler. For the histograms, the broken horizontal line represents the mean density of phytoplankton, in units/ml., in the surface water during the sampling period. For the vector diagrams, on the right, the results have been plotted in the eight directions of the compass, but the diagrams are not all to the same scale. The broken line of the vector diagrams is the resultant component, and indicates the general flow direction. For the top figure (*A*), the flow direction indicated by an Ekman current meter is included for comparison. For *D*, the multi-sampler was at the mouth of the bay

$$P = \frac{\text{phytoplankton units/min.}}{\text{phytoplankton units/ml.}} \text{ in water sample ;}$$

k is a value in the range 1·25–1·50.

As is to be expected, with decreasing velocities there was a closer and closer approach of calculated rate of flow to actual rate of flow. Below a rate of flow of about 5 cm./sec. the Ekman current meter will not register over a short period of time. The multi-sampler, however, will give results, within 10 min., at rates of flow of less than 5 cm./sec. These results may be used comparatively, and, bearing in mind that they are still approximations, some indication of absolute rate of flow may be determined. In one series of samples, for example, the calculated rate of flow was in the range 1·1–1·3 cm./sec., and it is not unreasonable to conclude that the actual rate was in the range 1·0–1·5 cm./sec.

The area under investigation is well removed from the Lake Victoria outflow, and the major cause of surface water currents was the wind (cf. Hutchinson[5]) which, until about midday on most days, tended to blow gently into the Bay from a northerly direction and then change abruptly to a stronger wind from a southerly direction. The results for Fig. 3*D* were obtained, however, at a time when a strong wind from west-north-west produced a surface flow of about 15 cm./sec. Surface water currents from, or near, the south-west, south or south-east would tend to carry phytoplankton from shallow inshore regions to the mouth of the Bay and through into the open, deeper water of the Buvuma Channel and so, possibly, act as an inoculum of algae for the open water of the lake north of Buvuma Island. At the same time there would be an inflow of water, below the surface, into the Bay, which might result ultimately in the return of algae, such as *Melosira*, sunk deep in the Buvuma Channel, to the photic zones in the shallower, inshore parts of the Bay. An incoming, oblique up-current was once observed, by virtue of a dense concentration of visible clumps of blue-green algae, from a dinghy anchored in the mouth of the Bay. This current was possibly due to a combination of a wind from the north and a local internal *seiche* movement.

The generally slower surface currents from northerly directions carried some algae into the Bay, and during one sampling (Fig. 3*D*) about 95 per cent of the phytoplankton from the north-west was *Melosira*. The current veered round completely during the sampling period, however, and it was found that currents from the south and south-east, and from the north-east, contained 70–90 per cent Cyanophyceae. This suggests the occurrence of localized areas of *Melosira* outside the Bay to the north-west and of Cyanophyceae to the north-east and inside the Bay.

A near replica of the phytoplankton multi-sampler has been constructed for trials in Britain, and an entirely new, more compact multi-sampler is being devised for later use.

My thanks are due to the Colonial Office for the award of a research fellowship, and to the staff of the East African Fisheries Research Organization for much practical help and encouragement during this and other work carried out in Central East Africa.

RADIOASTRONOMY

Very-Low-Frequency Modulation of Discrete Frequency Solar Noise Bursts

In the radio-frequency spectrum, solar radio bursts have been classified according to their dynamic structure. Information on the velocity of shock waves or the solar corpuscular stream as well as on the physical mechanism of the radiation has been obtained by this recording method. Another technique for studying the mechanism of solar radio radiation is to observe the modulation structure of bursts and the quiet Sun at discrete frequencies. Jager and Veer[1] studied solar radio transients by recording 200 Mc./s. radio noise on fast paper tape. Their observations were concerned with the time duration and distribution of radio-pips, their band-width and the presence of the echo phenomena.

In an effort to study the very-low-frequency details of different types of solar radio bursts, observations were made at the Sagamore Hill Radio Observatory, Massachusetts, on three discrete frequencies, 220 Mc., 400 Mc. and 3,000 Mc./s., with an 84-ft parabolic antenna. The magnetic tape records, taken to observe d.c. to 600 c./s. fluctuations, were analysed over 5–550 c./s. to detect enhancements or absorption in this range. The power spectra of the modulation envelope show that the high-frequency end of the very-low-frequency band is accentuated.

Type II and type IV bursts reveal marked attenuation over certain very-low-frequency bands. An isolated burst at 220 Mc./s. was associated with a sharp and fast development on one particular band.

The spectra of random noise, limited to a narrow intermediate-frequency band of centre frequency f_0, may be written as:

$$x(t) = x_i(t)\cos 2\pi f_0 t + x_q(t)\sin 2\pi f_0 t \qquad (1)$$

where $x_i(t)$, $x_q(t)$ are in-phase and quadrature components respectively at any instant and are totally independent of each other.

Assuming square-law detection, it can be shown that the power spectra of the envelope of narrow band-limited random noise will be triangular. The triangular spectrum when sampled over a very small band compared with the band limit of the noise will yield a flat spectrum. In the present investigation the very-low-frequency band extended from 5 to 550 c./s., which is very small compared with the intermediate-frequency band-widths of at least 1 Mc./s. In this case, therefore, the modulation spectrum of the random noise in the envelope is expected to be flat.

Solar radio radiation was received at 220 Mc., 400 Mc. and 3,000 Mc./s. The intermediate-frequency band-widths varied, ranging from 1 Mc. at 220 Mc. to 200 Mc. at 3,000 Mc./s. (using travelling-wave tubes in the latter system). The intermediate-frequency signal, approximately a square bandpass, was detected in square-law detectors and recorded on a frequency-modulated magnetic tape. The solar event of August 11, 1960, provided an opportunity to record all types of bursts. Using the dynamic spectra taken at Fort Davis, Texas, by A. Maxwell and A. R. Thompson (private communication), particular periods of type II, type III and type IV bursts could be selected and the very-low-frequency spectra analysed within the range of 5–550 c./s. The records were normalized against noise tube and noise diode spectra.

Theoretically, the spectrum of the noise generator envelope within the very-low-frequency band was expected to be flat. Fig. 1, showing this spectrum, illustrates the relatively flat frequency response of the entire receiver, recorder, and analysing system. The spectrum of quiet Sun emission is also observed to be flat, as illustrated in Fig. 2.

However, the envelope spectra of all types of bursts when normalized against noise samples show definite structure (Fig. 3, *a–d*). The enhanced response at 60 c./s. and its harmonics may be disregarded as possible power frequency pick-up. The high end of the band is accentuated in all three frequency channels. Type II and type IV burst envelopes display certain bands with marked attenuation (Fig. 3, *a–d*). These spectral regions are distributed throughout the analysed band and have a maximum band-width of approximately 60 c./s. The spectrum of the envelope of an isolated burst shows sharp and fast development of structure around two narrow very-low-frequency bands (arrows in Fig. 4). This is followed by a gradual widening of the feature. The time-interval between succeeding spectra is 4 sec.

The emphasis on the high-frequency end of the very-low-frequency power spectra of the envelope indicates that the solar noise bursts do not fit the

normal law of random functions. The development of a narrow-band structure in the case of an isolated burst may be explained on the basis of a model in which the source is situated above the zero-refractive-index layer and a delayed interaction exists between the direct and the reflected ray. The consequent phase delay might give rise to a definite very-low-frequency modulation structure. A proper distance scale between the source and the reflector might account for the attenuation bands in type II and type IV spectra. The possibility of an inherent modulation at the source from the shock wave mechanism also exists.

A more detailed study of the modulation spectra over a wider band should be undertaken before any hypothesis is advanced on the envelope spectra of different types of solar bursts. A new technique for observing solar mechanisms might result, particularly if the effect of the magnetic field around sunspots as well as a general magnetic field could be observed by the envelope studies of the modulation process.

Lunar Occultation of a Radio Source

At present only a small number of radio sources have been satisfactorily identified with photographic objects. The important task of establishing further identifications faces a serious difficulty because of the uncertainty in the measured positions of the radio sources. This uncertainty usually amounts to several minutes of arc, and it is only for a few intense sources that the error has been reduced to less than one minute of arc.

It has been suggested by several authors, for example by Link and Neuzil[1], that observations should be made of the occultation of radio sources by the Moon, and this technique has already been used to study some intense sources of large angular diameter[2–5]. It is the purpose of this communication to direct attention to the high precision with which source positions can be measured by observing lunar occultations with equipment which can track the Moon continuously. The results of a preliminary test of the technique on a radio source are described here.

On December 8, 1960, the 250-ft. radio telescope at Jodrell Bank was used for observing the occultation by the Moon of the radio source 3*C* 212 (ref. 6). The measurements were made at a frequency of 237 Mc./s. using a receiver with a band-width of 2 Mc./s. and a post-detector time constant of 4 sec. The observations were carried out by recording the output of the receiver with the telescope in automatic motion following the centre of the Moon. The beam-width of the aerial was about 1·2° between half-power points and therefore covered an area considerably larger than the Moon's disk.

The occultation was observed as a sharp fall in the received power as the source was covered by the Moon, followed later by a sharp rise as the source reappeared. The measured times at which these events occurred are:

Time of disappearance 08h. 03m. 52·5s. ±5s. U.T.
Time of reappearance 08h. 40m. 49s. ±5s.

These times correspond to the passage of the source across the limb of the Moon and they have been derived from the records on the assumption that the angular size of the source is small compared with the diffraction pattern of the Moon's limb.

H.M. Nautical Almanac Office has kindly calculated the celestial co-ordinates of the source from the observed times which define two possible positions of the source, one on either side of the centre of the Moon on a line perpendicular to its direction of motion. In principle this ambiguity can be resolved by observations of a subsequent occultation; however, in the present case, the position given in the Cambridge 3*C* Catalogue is sufficiently precise to allow one of the two possible positions to be chosen. The calculated mean place of the source for 1950·0 is given below together with the data from the Cambridge 3*C* Catalogue.

Position computed from occultation (1950.0)
Source 3*C* 212: *R.A.* 08h. 55m. 55·7s. ± 0·3s.
Dec. 14° 21′ 27″ ± 2″

Catalogue data (6)
Source 3*C* 212: *R.A.* 08h. 56m. 00s. ± 5s.
Dec. 14° 25′ ± 8′
Flux 21×10^{-26} W. m.$^{-2}$ (c./s.)$^{-1}$ at 160 Mc./s.

The quoted errors in the computed position have been estimated only from the errors in measurement of the time of immersion and emersion, and neglect any possible refraction in a lunar ionosphere or the effect of irregularities in the Moon's limb. The high degree of accuracy achieved is due to the circumstances of the occultation. The closest approach of the source to the centre of the Moon was about 12 minutes of arc, and under these conditions an error of one minute in the duration of the occultation introduces an error of only 12″ of arc in the declination. If the source had passed close to the centre of the Moon the accuracy would have been considerably reduced, as in this case a similar error in duration would have produced a declination error of about three minutes of arc.

The measurement reported here probably represents the most accurate determination yet made of the position of a radio source. The method used has the great advantage that it is not subject to uncertainties introduced by refraction in the Earth's troposphere or ionosphere. It is also free from the effects of confusion, as the solid angle subtended by the Moon's diffraction pattern is only of the order 1/100 sq. degree. A significant source of error is likely to lie in the assumption that the angular diameter of the source is negligible. However, a preliminary comparison of the observed occultation curves with the theoretical diffraction pattern shows that the diameter of the source must be less than or equal to eight seconds of arc, and hence the resultant error in declination will not be greater than approximately four seconds of arc. It may therefore be concluded that, taking into account all sources of error, the estimated position of the source is probably accurate to within about five seconds of arc.

The work described here was carried out as part of a programme designed to measure accurate positions of a number of radio sources by the method of lunar occultations. A detailed description of the method together with an analysis of all the data so far obtained will be published later.

I wish to thank Sir Bernard Lovell and Prof. R. Hanbury Brown for their interest in the work, and Mrs. Flora McBain Sadler of H.M. Nautical Almanac Office for the calculation of the position of the source.

PHYSICS

Thermoelectric Power of Single Crystals of Gallium

As part of a programme to investigate the anisotropy of non-cubic crystals, the thermoelectric power of single crystals of the orthorhombic metal gallium has been examined. The aim of the programme is the explanation of the large magnitude of the anisotropies of the physical properties of gallium.

The single crystals were prepared from gallium of at least 99·99 per cent purity, and they were grown in the form of cylindrical rods encased in a glass tube. The length of the specimens was 10–13 cm. and their diameter was about 0·35 cm. The single crystals were grown from seed by passing a freezing plane through the super-cooled melt and three crystals were produced such that the rod axis in each case was aligned parallel to a principal crystallographic axis. In each case the rod axis and crystallographic axis coincided to one degree or better.

The three crystals were set up so that their upper ends protruded into a 'Perspex' container. Commercial copper wire, 20 s.w.g., was used as the reference material after being annealed to cherry red heat. A copper lead was welded to each end of the crystal to give a good mechanical and electrical contact. During this procedure, care was taken to minimize constraints in the annealed copper. The three sets of leads were connected to the three channels of a Cambridge vernier potentiometer which was used to measure the Seebeck e.m.f.'s. A Hilger-Watts *F.A.*1 galvanometer-amplifier was used as a null detector for the potentiometer, which was graduated in 0·1-μV. steps. By galvanometer interpolation it was found possible to estimate potentials to 0·02 μV.

The lower ends of the specimens were immersed in a Dewar flask of alcohol. The upper 'Perspex' container was filled with a mixture of ice and water and the temperature of the lower bath altered by the addition of solid carbon dioxide, the temperature being recorded by an alcohol-in-glass thermometer. In this manner the Seebeck e.m.f. (e) of the three crystals with respect to copper was measured with one junction maintained at 0° C., while the lower junction was maintained at temperatures + 30° C. to −70° C.

Fig. 1 shows the results obtained for the three crystals aligned along the (100), (010) and (001) crystallographic axes. With the resources available, it was not found possible entirely to eliminate spurious thermal e.m.f.'s set up in the measuring circuit, but the results near the origin of Fig. 1 indicate that these were fairly small compared with the magnitudes measured. The normal convention as regards the sign of the Seebeck e.m.f.'s was used, that is, the e.m.f. is considered positive if the electrical current produced by the temperature gradient flows from the variable to the ice-cold junction through the specimen.

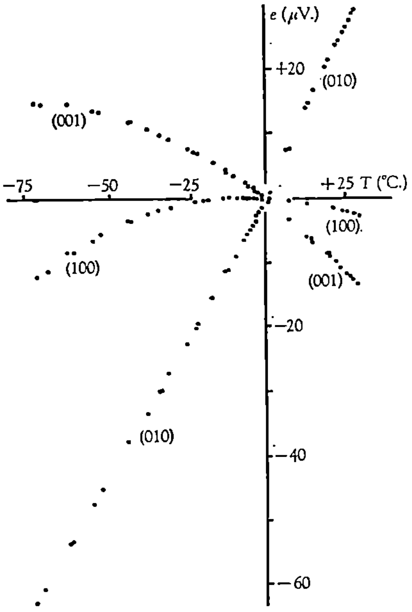

Fig. 1. The variation of the Seebeck e.m.f. (μV.) with temperature of the variable junction (° C.) for three gallium crystals aligned along the principal axes

Table 1 gives, with respect to copper, details of the thermoelectric power (Q) of the specimens as calculated from Fig. 1, that is, $Q = (de/dT)$. As is usual, the variation of Q with temperature is approximately linear, being of the form $Q = A + BT$. The respective values of the coefficients A and B are shown in Table 1.

Table 1. GALLIUM SINGLE CRYSTALS—THERMOELECTRIC PARAMETERS WITH RESPECT TO COPPER

Crystal orientation	(100)	(010)	(001)
Thermoelectric power (Q) at 0° C. in μV. deg.$^{-1}$ C. (A)	$-0{\cdot}02_3$	$+0{\cdot}96_2$	$-0{\cdot}38_0$
Temperature coefficient of Q in μV. deg.$^{-2}$ C. (B)	$-0{\cdot}005_2$	$+0{\cdot}003_8$	$-0{\cdot}004_7$

Though the scale of Fig. 1 is too small to show the details in the region of the origin, the results for the (100) crystal exhibit, with respect to copper, a neutral temperature at about − 3° C. and an inversion temperature at about − 6° C.

The absolute thermoelectric power of copper has been determined by several workers and the latest results[1] give good agreement with previous values. These authors found that the absolute thermoelectric power (Q^*) of copper was not significantly affected by impurities above 100° K., and that it could be represented by the expression:

$$Q^*_{\mathrm{Cu}} = +\,5{\cdot}4 \times 10^{-3}\,\theta\,.$$

where θ is in degrees absolute. Using this information, the present results can be corrected to absolute values. Again, expressing the results in the form $Q = A + BT$, where T is in degrees centigrade, this gives:

$$Q^*_{\mathrm{Ga}(100)} = 1{\cdot}46 + 0{\cdot}000_2 T$$

$$Q^*_{\mathrm{Ga}(010)} = 2{\cdot}44 + 0{\cdot}009_2 T$$

$$Q^*_{\mathrm{Ga}(001)} = 1{\cdot}10 + 0{\cdot}000_7 T$$

These results are interesting in that the anisotropy ratios of the coefficients A are not as large as those of the electrical or thermal conductivity[2]. The B coefficients are also interesting in that the coefficient for the (010) axis is considerably larger than those for the (100) and (001) axes. For the latter axes, the value of B is practically zero, which indicates that the Thomson coefficients ($T(dQ^*/dT)$) for these two directions are practically zero for the range of temperature under consideration. It is considered that these effects may be of fundamental importance and it is hoped to discuss them more fully later.

This programme on anisotropy is under the general direction of Prof. A. J. Woodall, to whom thanks are due for encouragement and advice. The Dean of the Royal Military College of Science is thanked for permission to publish this communication.

Neutron Terminology

Weinberg and Wigner[1] have made a plea for a more scholarly exposition of reactor technology; Ghose and Young[2] suggest that the proposed introduction of a unit of neutron flux be made an opportunity to make customary the use of the word 'flux' in this context. Their suggestion, however, involves an over-simplification, through neglecting to make allowance for the two concepts of neutron current and neutron flux, the importance of which I have emphasized elsewhere[3].

In reactor terminology, neutrons traversing unit area in unit time are measured as neutron current, not as neutron flux. It would be more correct to say neutron current density, but there is no good reason to prefer flux density. Neutron flux has, conventionally, the same dimensions as neutron current, but arises from a different point of view: whereas neutron current is a rate of crossing a surface by neutrons, neutron flux is a rate of track formation by the neutrons in a volume, being equal to the neutron density (in the sense of concentration) times the mean speed. If Ghose and Young's suggestion of calling this quantity 'flux density' were adopted, then flux would become total number of neutrons times mean speed—a change that would make confusion worse confounded. It should be noted that though a unit of flux would, on dimensional considerations alone, be valid for neutron current also, this extension of its use would lead to a possibility of error because, in going from flux to current, a factor of $\frac{1}{2}$ appears (for random motion) as a result of the inclination of the line of flight to a surface becoming involved.

While feeling that the meaning at present attached to 'neutron flux' can be justified, there is another usage which cannot. Whereas a microscopic cross-section has dimensions L^2, the so-called macroscopic cross-section has dimensions L^{-1}: it is not a cross-section at all. It can, for example, be an absorption coefficient, and has the correct dimensions for one. Terms such as 'absorption coefficient' are already well known, are less cumbersome, and using them instead of macroscopic cross-section would permit the word 'microscopic' to be dropped when referring to a true cross-section.

It would, furthermore, lead to greater clarity if 'multiplication constant' were reserved for a regular lattice of fuel and moderator of infinite extent, and not used for the most important variable in a real reactor. For the latter, 'reproduction ratio' seems the appropriate choice.

Neutron 'Flux'

It is the title, not the definition, of 'neutron flux' which is ambiguous, particularly the application of a vector term to a scalar quantity. The title should imply some connexion with the flow of neutrons; in fact, as the velocities are integrated regardless of direction, the function defines the rate of generation of neutron track-lengths per unit volume at a given point. This is important in reaction problems because, as the elementary particles are treated as spherical and hence presenting a fixed cross-section to any neutron, it measures the collision potential. It is nothing whatever to do with the flow of neutrons, except in such special cases as collimated beams or by indirect calculation when the distribution pattern has been determined; yet the phrase gives this impression and misleads many entrants to the nuclear field.

The mere fact that neutron flux, like the pressure or temperature of a gas, is caused by the movement of the particles involved, is no good reason for applying to a scalar a title which in all other branches of science is reserved for vectors; my own preferred alternative is neutron (collision) potential, but even a synthetic proposal would be better than the present term.

CRYSTALLOGRAPHY

'Effective' Ionic Charge in Crystals

A RECENT communication by Mooser and Pearson[1] has directed attention to the confusion which can result from two distinct usages of the term 'ionic'. As an example they cite discussions of the bonding in zinc blende, where the tetrahedral bonds may be said to arise from resonance involving (i) $Zn^{2-}S^{2+}$ and (ii) $Zn^{2+}S^{2-}$. The first is the extreme covalent structure which gives each atom four valence electrons; the second is conventionally called the fully ionic structure since both atoms have closed-shell configurations. As Mooser and Pearson point out, both (i) and (ii) are physically ionic, and the convention which describes 'neutral bonded' Zn^0S^0 as 50 per cent ionic, because it involves equal resonance contributions from (i) and (ii), can be most misleading.

The question of the ionic charge in compounds isomorphous with zinc blende, a class which includes several important semi-conductors, has been much discussed, since for such purposes as energy-band calculations or the calculation of electronic levels at a vacancy it is necessary to know the electrostatic potential in the crystal. There is considerable confusion in the literature on the question of how this ionic charge may be measured. The confusion is due partly to the situation to which Mooser and Pearson have directed attention, but is also a result of the use of the term 'effective ionic charge'. Since these authors also use this expression without defining it, their timely article will not decrease the confusion on this point. As an example of the way in which effective ionic charge can be determined physically, they instance the dipole moment μ of a hydrogen halogenide molecule for which the nuclear separation is r_0. The effective ionic charge is then taken to be $Ze = \mu/r_0$, from which it is apparent that the definition of effective ionic charge which they intend may be "the value for the ionic charge deduced from a physical measurement on the basis of an over-simplified model or theory". The purpose of the present communication is to point out that the effective charge which can be deduced from certain physical measurements on crystals is clearly not the ionic charge, although it has been used as such[2].

I shall confine attention to crystals isomorphous with zinc blende. Methods of measuring the ionic charge which have been suggested may be classed as: (*a*) miscellaneous, (*b*) X-ray diffraction, and (*c*) those depending for their interpretation on the theory of lattice dynamics. Under (*a*) we may instance studies of microcleavage[3], precise measurements of the wave-lengths of the $K\alpha_1$ and $K\alpha_2$ lines of sulphides[4], and paramagnetic resonance experiments[5] on zinc blende–manganese. None of these gives a quantitative result. Accurate X-ray measurements on zinc blende have been made by Jumpertz[6], who claims to have shown that the zinc atom carries a charge of $1\cdot29|e|$. This result can be disregarded since it was obtained by deriving individual atomic scattering factors $f(s)$ from the measured structure factors, and is therefore entirely dependent on the way in which the empirical curve for $f_{\mathrm{Zn}}(s)$ is extrapolated to $s = 0$.

The ionic charge can in principle be determined unambiguously by X-ray diffraction only when a boundary can be drawn around the ion so as to pass through regions of the unit cell in which the electron density is small compared with the reciprocal of the volume enclosed. This will seldom, if ever, be the case: it can never be the case in a crystal in which there is appreciable covalent bonding. It may, of course, be possible to measure the charge in some arbitrarily specified volume, and to relate this to the ionic charge on a theoretical basis.

There remain the methods which we may class as 'lattice dynamical'. These include the comparison of measured and calculated cohesive energy, dielectric constant, elastic constants, piezoelectric modulus and infra-red absorption and reflectivity. The theory involves several approximations; in particular it is usually assumed either that the electronic polarizability of ionic crystals can be neglected, or that the electronic dipole moment of an atom is directly proportional to the Coulomb field[7]. On either assumption; (*a*) the elastic constants C_{11}, C_{12}, C_{44}; (*b*) the piezoelectric modulus e_{14}; (*c*) the difference $\varepsilon_s - \varepsilon_e$ between static and high-frequency dielectric constants: (*d*) the ratio ω_L/ω_T of the frequencies of longitudinal and transverse optic modes of vibration (which determines the width of the band of high reflectivity in the infra-red); (*e*) the occurrence of infra-red absorption at the frequency ω_T, all involve the ionic charge Ze. Either assumption, however, leads to unsatisfactory results when the frequencies of the normal modes of vibration are calculated for alkali halides, and results in considerably better agreement with experiment[8] are obtained for sodium iodide if it is assumed that the dipole moments also depend on the short-range exchange forces between the atoms, and conversely. Similar calculations have recently been made[9] for crystals of the zinc blende type, and show that the charge determining (*c*), (*d*) and (*e*) is an effective charge $Z'e$ which differs from the ionic charge by an amount which depends on the difference of the electronic polarizabilities of the two atoms concerned, and on the values of parameters describing the short-range interaction, as for the alkali halides. It is therefore possible to have $Z = 0$, but $Z' \neq 0$; that is, for a physically non-ionic crystal to exhibit properties which have hitherto been regarded as a test of ionicity. This unexpected conclusion is confirmed by the recent work of Tolpygo[10], whose earlier work in this field[11] has been overlooked in more recent theories[12] of the relation between Z and Z' in alkali halides. In general the piezoelectric modulus is found not to be directly proportional to Z, although it may be under certain conditions. Only the elastic constants C_{11} and C_{12} are found to be independent of the electronic polarizability and of the parameters which describe the short-range interaction between electronic dipole moments and atomic displacements. Detailed results will not be given here; but it seems worth mentioning that the values of the elastic constants of gallium arsenide and of similar III–V compounds, and a comparison of these values with those of germanium, indicate that $\mathrm{Ga^0As^0}$ is a much better physical description than is $\mathrm{Ga^+As^-}$, and that the values of Z' which have been reported[13] are not inconsistent with this conclusion.

Finally, we may note that, in at least one other branch of solid-state physics, ionic charges are deduced by gross over-simplification. It appears to be generally assumed that the spontaneous polarization of a ferroelectric is given by:

$$P = \sum_j Z_j e u_j$$

where u_j is the displacement of the jth atom from its position in the unit cell of the phase of higher symmetry. It has, however, been shown[14] that the charges defined by this equation are apparent charges the relation of which to the ionic charges is quite complicated.

Uranium Disilicide

A URANIUM–SILICON phase with a hexagonal *C*32-type structure, described by Zachariasen[1] as stoichiometric β-$\mathrm{USi_2}$ and thought by Kaufmann, Cullity and Bitsianes[2] to be deficient in silicon, was shown by us[3] to be $\mathrm{USi_{1\cdot67}}$($\mathrm{U_3Si_5}$). At the same time attention was directed to the existence of another phase with the *C*32 ($\mathrm{AlB_2}$)-type structure which was shown to be stoichiometric $\mathrm{USi_2}$. This phase is isostructural with β-$\mathrm{ThSi_2}$.

A further phase described as α-$\mathrm{USi_2}$ by both Zachariasen and Kaufmann *et al.* has been found by us to occur at approximately 65 atomic per cent silicon. Arc-melted alloys containing 66·7 atomic per cent silicon consisted of this phase and $\mathrm{USi_3}$, in the ratio of about 5 : 1 by weight. These results suggest that this phase is non-stoichiometric and has the formula $\mathrm{USi_{1\cdot88}}$. This composition corresponds to one vacant silicon lattice-site in each pair of tetragonal structure cells.

Further experiment has shown that hexagonal $\mathrm{USi_2}$, prepared by reaction of the elements in liquid bismuth, is stable only up to 450° C. Above this temperature $\mathrm{USi_3}$ is obtained as the product of reaction in the liquid. When hexagonal $\mathrm{USi_2}$ is heated alone above 450° C., mixtures of $\mathrm{USi_{1\cdot88}}$ and $\mathrm{USi_3}$ are obtained. The relative proportions of the two phases are the same as in the arc-melted alloy

Table 1

Phase	Composition in at. percentage silicon	Structure type and space group	Structure cell dimensions (Å.)
$USi_{1\cdot67}$	62·5	Hexagonal defect $C32$-type $C6$/mmm.	$a_0 = 3\cdot843 \pm 0\cdot001$ $c_0 = 4\cdot069 \pm 0\cdot001$
$USi_{1\cdot88}$	65	Tetragonal defect C_c-type I 4/amd.	(i) heat treated below 650° C. $a_0 = 3\cdot930 \pm 0\cdot001$ $c_0 = 14\cdot06 \pm 0\cdot01$ (ii) arc-melted alloy $a_0 = 3\cdot948 \pm 0\cdot002$ $c_0 = 13\cdot67 \pm 0\cdot01$
USi_2	66·7	Hexagonal $C32$-type $C6$/mmm.	$a_0 = 4\cdot028 \pm 0\cdot001$ $c_0 = 3\cdot852 \pm 0\cdot001$

containing 66·7 atomic per cent silicon. No transformation comparable with that of β- to α-$ThSi_2$ [3,4] has been found as a result of heat-treating hexagonal USi_2.

Slight differences have been noted between the X-ray powder patterns of $USi_{1\cdot88}$ heat-treated above and below 650° C. This is considered to be a consequence of differences in ordering of the silicon atoms on the available lattice sites.

Crystallographic data for the three related uranium–silicon phases are summarized in Table 1.

This work was supported by the United Kingdom Atomic Energy Authority, Harwell, and we wish to thank the Director for permission to publish the results.

GEOCHEMISTRY

Measurement of the Thorium Content of Natural Materials by a γ-Ray Counting Method

RECENT work by S. Raboy and C. C. Traul[1] on the background of sodium iodide scintillation counters suggested to us that it should be possible to measure the thorium content of a rock directly by counting the 2·62 MeV. γ-ray emitted in the decay of thorium C'' (^{208}Tl) to stable lead-208, since this γ-ray is more energetic than any in the uranium series. Through the generosity of the American Government a large sodium iodide crystal and suitable photomultiplier and the necessary electronic equipment were available to us to try out the method.

In an ordinary igneous rock the thorium content is usually about three times the uranium content. Fig. 1 shows the high-energy end of the γ-ray spectra of the thorium and uranium families, there being three times as much thorium as uranium. It will be seen that by using a wide-window single-channel analyser with its lower gate set at channel 25 on the spectrum, and its upper gate at channel 39, practically only the thorium C'' γ-ray will be counted. It was found experimentally that for a typical rock with a thorium/uranium ratio of three about 3 per cent of the net count in the chosen window was due to the uranium family. If the uranium content of the rock is known, the necessary correction to the observed net count can readily be made.

The sodium iodide crystal used was 4⅝ in. in diameter and 1·8 in. deep, coupled to an E.M.I. 9530*B* fused silica photomultiplier with a cathode 4·4 in. in diameter. A special container was made so that the bottom and sides of the crystal could be surrounded by a ½-in. layer of powdered material. This container held about 600 gm. of powdered rock.

It was found that there was a large thorium count in the background, apparently due to the thorium content of the granite walls of the building. By surrounding the crystal and photomultiplier with 4 in. of lead this was practically eliminated, but a trace was left, probably due to the small amount of thorium in the materials inside the shield.

The apparatus had to be standardized by using a sample of known thorium content. This was made by mixing pure thorium oxide containing 2 gm. of thorium with 1 kgm. of a sand of low thorium content. The oxide came from Joly's laboratory and is at least 50 years old. Since mesothorium-1 is the longest-lived daughter element in the thorium family with a half-life of 6·7 years, the oxide must be practically in radioactive equilibrium. It was found that a certain quantity of thoron escaped from this standard, consequently the standard sample holder was hermetically sealed. The count obtained per gm. of thorium is about 1,370 counts/min. 1 gm. thorium-232 produces $2\cdot16 \times 10^5$ disintegrations/min., but since only 34 per cent of these lead to the thorium C'' branch, the total theoretical 2·62-MeV. γ-ray emission should be $7\cdot35 \times 10^4$/min. Thus only about 2 per cent of this theoretical total is counted in the 2·62-MeV. peak. This result is in reasonable agreement with the efficiency as determined by K. J. Van Oostrum and A. C. Meijer[2] for a large sodium iodide crystal and E.M.I. photomultiplier.

The background is about 4·0 counts/min., and 600 gm. of a rock containing 10^{-5} gm. thorium/gm. gives a net count of 8·2/min., that is, about double the background count. The minimum quantity of thorium which can be measured is assumed to be that which will give a net count equal to four times its standard deviation. This gives a value of $0\cdot04 \times 10^{-5}$ gm. thorium/gm. of sample if 600 gm. of the specimen is counted for 20 hr.

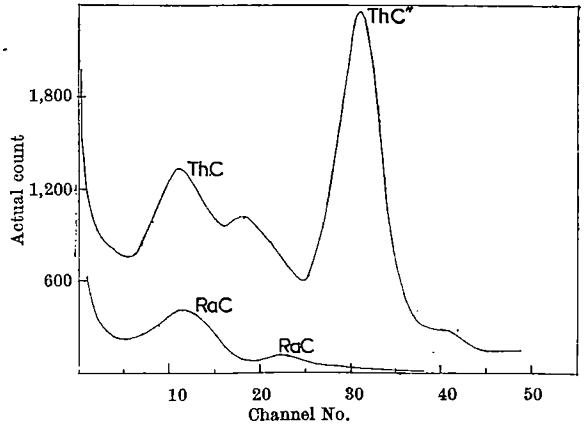

Fig. 1

Table 1

Material	Thorium 10^{-5} gm./gm.	
	γ-Ray method	Flow method
Average for six Deccan basalts	$0\cdot25 \times 10^{-5}$	$0\cdot46 \times 10^{-5}$
Basalt from Idaho Falls, Snake River, Oregon	$0\cdot19 \times 10^{-5}$	$0\cdot50 \times 10^{-5}$
Rapakivi Granite, Finland	$3\cdot03 \times 10^{-5}$	$6\cdot00 \times 10^{-5}$
Eclogite, Eppenreuth, Bavaria	$< 0\cdot03 \times 10^{-5}$	$0\cdot30 \times 10^{-5}$
Wicklow Granite, Ireland	$1\cdot15 \times 10^{-5}$	—
Globigerina Ooze, 2,493 fm., 48° 17′ N., 39° 49′ W.	$0\cdot32 \times 10^{-5}$	—
Globigerina Ooze, 720 fm. 38° 46′ W., 28° 31′ N.	$0\cdot41 \times 10^{-5}$	—

There are two chief objections to this method: first, a comparatively large sample is required; secondly, the requisite apparatus though entirely standard is moderately expensive. Unfortunately, most of the specimens the thorium content of which had already been measured by flow methods were too small to use. Some of the results we have obtained so far are given in Table 1.

The values given for the flow method were those obtained on the same specimens before 1930 and confirmed the modern view that such values were too high. The results for the Wicklow granite and for the Deccan basalts agrees very well with the modern estimate for the average thorium contents of such rocks.

We include the figures for the Globigerina oozes, since they seem to show that thorium is present in the oceanic deposits. The first specimen is situated west of the Atlantic Ridge, and the second is on the ridge and quite close to the Azores. It will be noticed that the shallower water specimen gives a considerably higher value These samples were dredged up by the cable ship *Faraday* in 1907. E. Picciotto and S. Wilgain[3] have given values varying from $0\cdot41 \times 10^{-5}$ gm. thorium/gm. to $0\cdot85 \times 10^{-5}$ gm. thorium/gm. for red clays from the Central Pacific cores of the Swedish Deep-sea Expedition 1947–48.

In conclusion, we may mention that P. M. Hurley[4] has also used a γ-ray spectrometer method for estimating the thorium content of rocks. He, however, worked at the lower-energy end of the spectrum, which means that the calculation of the results is much more complicated due to the greater contribution of the uranium series at these levels. It is of interest to note, however, that his result of $0\cdot28 \times 10^{-5}$ gm. thorium/gm. for a Deccan basalt agrees very closely with ours.

METALLURGY

Resistivity Changes due to Formation of *G. P.* Zones (Clusters rich in Solute)

An anomalous increase in resistivity has been observed during formation of *G. P.* zones (clusters rich in solute) in several aluminium alloys[1,2]. Mott[3] suggested that this effect may be due to a critical scattering of the conduction electrons when the zone grows to dimensions of the wave-length of the conduction electrons. Matyas[4] showed on theoretical grounds that a maximum should occur for the resistivity change during zone formation.

The changes in resistance during zone formation in an aluminium–zinc alloy were discussed extensively in a recent paper by Panseri and Federighi[5]; the authors assumed that a zone of critical size is associated with the peak in resistance, and that the magnitude of the peak goes up with increasing number of zones.

The object of our research has been to test whether a zone of definite size is associated with the maximum in resistance which occurs during ageing. An alloy of aluminium–5·3 at. per cent zinc has been studied, using both resistance measurements and small-angle scattering of X-rays. For the resistance measurements, the resistance of a specimen 0·005 in. thick was measured at the temperature of liquid nitrogen. The specimen was quenched from 300° C. into water at 25° C. and aged at 0° C. or 30° C. Fig. 1 shows the variation in resistance with time. The resistance maximum occurs at 2 min. for ageing at

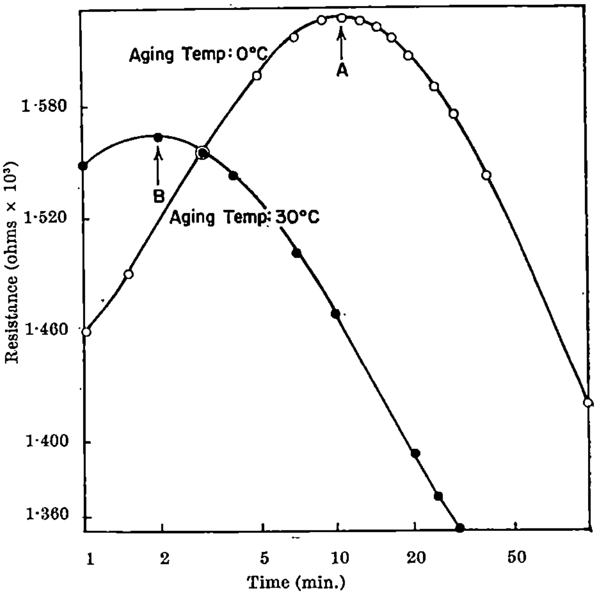

Fig. 1. Resistance in ohms versus log time for ageing at (*A*) 0° C. and (*B*) 30° C. after quenching from 300° C.; aluminium–5·3 at. per cent zinc

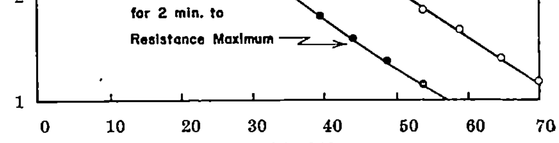

Fig. 2. Log intensity in counts/sec. versus ε^2, where ε is the scattering angle, 2θ, in radians. The specimens were aged to the time of the resistance peaks at (*A*) 0° C. and (*B*) 30° C.; aluminium–5·3 at. per cent zinc

30° C., and at 11 min. for ageing at 0° C. The magnitude of the peak at 0° C. is some 4 per cent higher than that of the peak at 30° C. Fig. 2 shows the small-angle scattering obtained from a specimen 0·005 in. thick of the same alloy and given treatments identical with the specimens used for resistance measurements. Ageing of the specimen was halted at the time of the peak in resistance by bringing it to −195° C. (liquid nitrogen), at which temperature the X-ray data were obtained. Balanced filters were used to obtain monochromatic copper $K\alpha$ radiation; step-scanning was employed due to the long exposures required. (The results are plotted as log I in counts/sec. versus ε^2, where ε is the scattering angle, 2θ, in radians.) The slope of the linear region to the right of the maximum gives the radius of gyration, R_g, of the spherical zone[6]. R_0, the zone radius, is given by $R_0 = (5/3)^{1/2} R_g$. R_0 is an average which emphasizes the largest zones, and since the scattering curves are not linear to the right of the peak (Fig. 2) there must be a range of sizes. The average radius can be expected to be about $\frac{1}{2} R_0$ for any reasonable distribution ; this is 5 Å. for both the 0° C. and 30° C. resistance peaks. The maximum probable uncertainty in radius due to counting statistics and stability of X-ray output and counter was about 3 per cent.

The resistance maxima are then associated with zones of an average size of 10 Å. in diameter. Matyas's equation applied to the case investigated predicts about 7 Å. for the zone diameter. This is in reasonable agreement with what has been observed here experimentally ; the results confirm the relation between the resistance maximum and zone size.

Re-ageing after reversion yields sizes closely the same as those quoted above, despite the fact that the ageing kinetics are different. These results will be part of a more detailed publication.

This investigation was sponsored by the U.S. Air Force Office of Scientific Research under contract No. *AF* 49(638)–524.

Porous Nickel Oxide

IN the course of an investigation of the oxidation properties of nickel strip used in the manufacture of electron-tube cathodes, a phenomenon was observed which may be of general interest.

Two samples of nickel in the form of strip 0·002 in. thick were oxidized by heating in air for 5 min. at 1,000° C. Dilute nitric acid was used to dissolve the metal and provide small pieces of coherent oxide film about 0·0001 in. thick. Under microscopic examination, the film from one sample was found to be apparently homogeneous and entire (Fig. 1*a*), while the other contained pores or holes about 1μ in diameter (Figs. 1*b*, *c*). The only distinguishing characteristic of the strip which produced this porous oxide film was that it contained about 0·02 per cent aluminium ; the other strip contained about one-tenth of that amount.

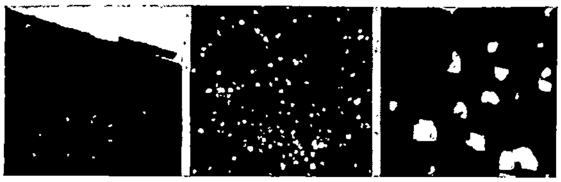

Fig. 1. Electronmicrographs of nickel oxide films formed on: (*a*) nickel containing 0·002 per cent aluminium (× *c*. 390); (*b*) nickel containing 0·02 per cent aluminium (× *c*. 390); (*c*) nickel containing 0·02 per cent aluminium (× *c*. 1,880)

It is possible that small crystals of alumina are formed similar to those found by Allison and Samelson[1] when they oxidized nickel in wet hydrogen. These crystals may have fallen out of the nickel oxide layer when the nickel was dissolved, leaving the sharp-cornered holes in the oxide.

I am indebted to Dr. E. P. Bertin for the electron-micrographs.

CHEMISTRY

Infra-Red Spectra of Water-soluble Carbonates

INFRA-RED spectra of some carbonates have been reported by Hunt, Wisherd and Bonham[1], Underwood, Toribara and Neuman[2] and by Miller and Wilkins[3]. Hunt *et al.* suggested that the position of the band near 11μ was a function of the atomic weight of the cation, and also pointed out that Miller and Wilkins's work substantiated this suggestion with the exception of lithium carbonate. We have evidence that this is not so. Further, Underwood *et al.* reported the 11μ band for sodium and potassium at different positions from that reported by Miller and his workers. Although they indicated their results were in general agreement with Miller and Wilkins, no attempt to point out or explain this discrepancy was made. Finally, the role of water in influencing both band positions and broadness appears to have been neglected in interpreting spectra of water-soluble inorganic compounds and this will be discussed here.

We find that for the soluble carbonates (sodium, potassium, rubidium and cæsium), this band appears at 11·4μ when they are in the anhydrous state and 11·6μ when they are hydrated. The band is therefore not a function of the atomic weight of the cation (at least for the soluble carbonates) but of the degree of hydration. As the degree of hydration is increased the band decreases in intensity and disappears when complete solution is obtained. No attempt was made to study which hydrate exists when the band shifts from 11·4 to 11·6μ, but it has been found that only slight traces of water are required, especially for the more soluble carbonates of rubidium and cæsium, to produce this shift. Decius[4] has related this position of the band for calcium carbonate to its crystal structure.

The band at 6·95μ for the anhydrous carbonates is shifted to 7·2 when complete solution is obtained. The intermediate states of hydration, however, give both bands, and, depending on the concentration of water, one appears as a shoulder on the other, or they are broadened into one band appearing midway between the two. Thus the broadness and position of this band depend to a great extent on the water content, a fact apparently not recognized by many workers: although Miller and Wilkins, in their work, suggested that this possibility existed, they carried out no further investigation of it.

Attention should be directed to a band in the 9–10μ region for some of the carbonates. This band appears in strontium and lead carbonates in the work reported by Hunt *et al.* and also appears at 9·55μ in the spectra of sodium, potassium, rubidium and cæsium carbonate. According to Gatehouse *et al.*[5], this band appears only for carbonates having the aragonite structure.

These results were obtained in 'Nujol' and fluorcarbon mulls, potassium bromide pellets, powders dispersed on salt plates (for sodium carbonate only) and using physically sorbed water of synthetic zeolites as a solvent. This latter technique is useful for studying varying concentrations of water on carbonate spectra and was carried out in apparatus described elsewhere[6]. The problem of exchange in all these media was also studied and will be reported later.

We thank David Teloh for recording some of the spectra used in this work. One of us (R. P.) received a grant from the Petroleum Research Fund of the American Chemical Society.

Electron Spin Resonance of Adenosine Triphosphate

IT has been suggested that in adenosine triphosphate (ATP) the phosphate chain and the adenine are linked by the pentose, so that the two terminal phosphates touch the two nitrogen atoms at positions 6 and 7 in the adenine ring[1]; and that, since triphosphate compounds might be electron acceptors and adenine is a good electron donor, the adenine group might donate an electron to the triphosphate group[2]. I. Isenberg and A. Szent-Györgyi[2] obtained an electron spin resonance signal from ATP (di-sodium salt) which they attributed to internal charge transfer between the adenine and the triphosphate. They also suggested that there was a possibility that the signal could be due to a transition metal impurity in the form of a transition metal – ATP complex. In view of the great importance of ATP in living processes, we have re-examined the electron spin resonance of this compound to decide between these possibilities.

The electron spin resonance spectrometer used in these experiments operates at 9·42 kMc./s. and has a conventional phase-sensitive detector system with a field modulation of 280 c./s. In these experiments the spectrometer sensitivity is 10^{13} ΔH spins, where ΔH is the line-width of the resonance signal of the material under investigation.

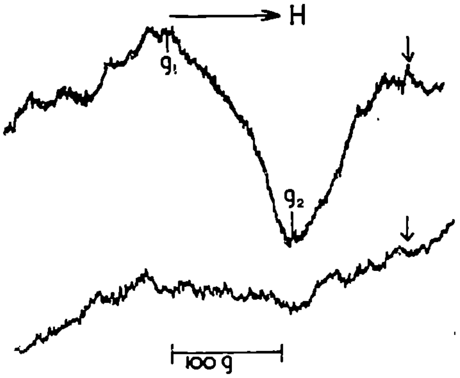

Fig. 1. First derivative of electron spin resonance absorption. Upper curve is commercial ATP, lower curve is purified ATP. The arrow indicates the free electron resonance

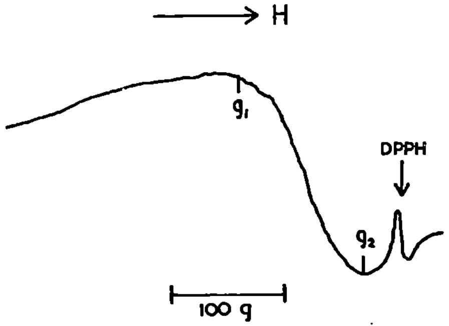

Fig. 2. First derivative of the electron spin resonance absorption of copper phthalocyanine

When commercial ATP (di-sodium salt) similar to that used by I. Isenberg and A. Szent-Györgyi was examined in the spectrometer, an anisotropic line of several hundred gauss line-width was obtained (Fig. 1). The full line shape could not be recorded as the largest field swept was 460 ± 20 gauss. Two arbitrary g values, $g_1 = 2{\cdot}128 \pm 0{\cdot}010$ and $g_2 = 2{\cdot}064 \pm 0{\cdot}004$, where g_2 is approximately equal to $g_\perp$ and g_1 is related to $g_\parallel$, were measured. These values are significantly higher than the free electron value of 2·0023. The position and shape of the signal indicated the presence of copper bound in some way to the nitrogen atoms of the adenine group. The ATP was therefore analysed for copper, which was estimated colorimetrically at 435 mμ with diethyldithiocarbamate[3], and the amount found was 75·2 ± 4·0 μgm. copper/gm. ATP.

Copper phthalocyanine was prepared to test whether copper bonded to nitrogen was responsible for the electron spin resonance signal observed in ATP. The copper phthalocyanine gave a spectrum of the same anisotropy as the ATP spectrum. Two arbitrary g values were measured as before, $g_1 = 2{\cdot}087 \pm 0{\cdot}004$ and $g_2 = 2{\cdot}025 \pm 0{\cdot}001$. The differences between the values of g_1 and g_2 for ATP and copper phthalocyanine are the same, which suggests that the resonance signal observed in ATP is due to copper, the differences in the absolute values of g_1 and g_2 in the two cases being due to slight differences in the chemical bonding of the copper.

To confirm this suggestion, a known weight of copper phthalocyanine, diluted with aluminium oxide, was placed in a quartz tube, so that the length of the sample was the same length as the ATP sample, and a spectrum recorded. The amount of copper present in the ATP was calculated from the relative signal sizes, assuming that the shapes of both signals were the same. The value obtained was 83·5 ± 13·5 μgm. copper/gm. ATP, which agrees within experimental error with the figure of 75·2 ± 4·0 μgm. copper/gm. ATP obtained by the diethyldithiocarbamate method. A second sample of commercial ATP gave the values 71·5 ± 4·0 μgm. copper/gm. ATP by the diethyldithiocarbamate method and 70·4 ± 10·1 μgm. copper/gm. ATP from electron spin resonance measurements. A sample of ATP purified by the method of Dubois, Albaum and Potter[4] was found to contain 17·8 ± 4·0 μgm. copper/gm. ATP by the diethyldithiocarbamate method, which agrees with that obtained by electron spin resonance measurements (17·8 ± 2·9 μgm. copper/gm. ATP).

These results show that the electron spin resonance signal observed in ATP is most probably due to copper impurity present as a metal-ATP complex. Other work indicates that the complex is very stable (Russell, D. B., unpublished work) and that ATP forms stable complexes with iron (Russell, D. B., unpublished work) and manganese[5]. If charge transfer does occur between the adenine and the triphosphate, there is insufficient unpairing of electron spin for this to be observed on the electron spin resonance spectrometer used.

We thank Dr. P. J. Warren, of the Department of Chemical Pathology of this hospital, who estimated the copper content of the ATP samples by the diethyldithiocarbamate method.

Co-ordination of the Thiocyanate Group in Inorganic Compounds

There has been a rapid growth of interest in the study of the thiocyanate ion in inorganic compounds.

Previously we have investigated the vibrational behaviour of the thiocyanate group in several inorganic compounds[1]. Similar investigations have been carried out independently and with different compounds by Chamberlain and Bailar[2], Kinell and Strandberg[3] and Mitchell and Williams[4]. However, the last two authors have limited their work to the CN-stretching vibration.

There are three ways in which the di-functional thiocyanate ion can be attached to a metal cation, namely, *M*–SCN, *M*–SCN–*M* and *M*–NCS. They can be differentiated by the frequencies assigned to the fundamental stretching modes of the triatomic group, approximating to CN- and CS-stretching. In fact, we find that the CS-stretching frequency is more diagnostic, particularly in the absence of *M*–SCN–*M* 'bridges'. Moreover, the observation of the 5μ region, where the CN bands occur, is often particularly difficult when working with solid samples.

Table 1. Fundamental Stretching-Frequencies (cm.$^{-1}$) of the SCN Group in Some Thiocyanate Complexes*

Compound	ν_3 (SCN)	ν_1 (SCN)	Structure	Ref.

(*k*) These results are in good agreement with those reported by Chamberlain and Bailar (ref. 2).

(*l*) Frequencies reported by Chamberlain and Bailar (ref. 2).

Our recent results are summarized in Table 1, together with those for other compounds examined by us[1].

An analysis of the CS-stretching frequencies ν_1(SCN) in compounds of known structure clearly indicates the infra-red criterion for the characterization of the metal-thiocyanate bond. The symmetrical band ν_1 occurs between 690 and 720 cm.$^{-1}$ for the $M \leftarrow$ SCN compounds, and is in the range 780–860 cm.$^{-1}$ for the $M \leftarrow$ NCS compounds. An extension of this criterion to compounds of unknown structure listed in Table 1 leads to the following conclusions, which may be of general interest for class (*b*) metals.

The CS-stretching frequencies found in $[Pd(SCN)_4]^{2-}$ and $[Pt(SCN)_4]^{2-}$ are in agreement with *M*–S bonds, whereas in the complexes with the phosphines the metal must be bound to the nitrogen atom. It is worth noting that we also verified that sulphur binding in $[Pd(SCN)_4]^{2-}$ and $[Pt(SCN)_4]^{2-}$ places SCN^- in the same position as Cl^- in the spectrochemical series. The shift of the ultra-violet absorption bands towards higher frequencies (as compared with the frequencies of the chloride derivatives) is fairly clear (1,500 cm.$^{-1}$) in the case of $Pd(PPr^i_3)_2(NCS)_2$, but is indistinguishable in $Pd(PEt_3)_2(NCS)_2$.

The change from *M*–S to *M*–N bonds when two SCN groups of $[M(SCN)_4]^{2-}$ are replaced by two phosphine molecules is not observed when the same SCN groups are substituted by two ammonia molecules giving $M(NH_3)_2(SCN)_2$. These results indicate that in complexes where SCN is not the sole ligand, the type of co-ordination of the thiocyanate group may depend on the nature of the second ligand partner. There must be a critical point where, with a particular ligand, change in the co-ordination can occur. It should then be possible, in the case of complexes with general formula $M(CNS)_mX_n$, to prepare two structural isomers of the same compound, depending on the correct choice of the X ligand or alternatively by changing the ratio $m : n$. No two such isomers with any particular metal has yet been reported. It has been suggested that the $[Ag(SCN)_2]^-$ ion in solution is an equilibrium mixture having Ag–N as well as Ag–S bonds[5]. However, further evidence to support this point seems necessary.

Previous workers have pointed out that a given metal ion becomes attached to one end of the SCN group rather than the other[6]. The binding is generally through sulphur in those cases where the stability sequence among the halides is $I^- > Br^- > Cl^- > F^-$ (ref. 7) and the change from *M*–SCN to *M*–NCS bonding coincides approximately in the Periodic Table with the change in relative stability from the above sequence to $F^- > Cl^- > Br^- > I^-$ (ref. 4). Some authors have pointed out that this is due to a change in the relative importance of covalent and ionic bonding in the compounds[4,7], whereas others have stressed the importance of the overlap between particular sets of orbitals in explaining the above stability series[8]. We believe that the π-orbitals of the thiocyanate group should not be neglected as a factor in the stabilization of the *M*–S bond.

There are two sets of antibonding π-orbitals in the thiocyanate ion and both are localized on the sulphur atom ; use of the empty *d*-orbitals of sulphur can confer further acceptor properties on the sulphur end of the group. Interaction of d_π electrons on the metal atom with these empty orbitals will result in additional stability of the *M*–S bond. Whether or not this factor of additional stability will be of importance will depend on the availability of the d_ε electrons of the metal and on their relative energy as compared with that of the antibonding π-orbitals of the thiocyanate.

The change from *M*–S to *M*–N bonds for the complexes of platinum in Table 1 can be explained by considering that strong π-electron acceptors, as tri-substituted phosphines are believed to be, can make the d_ε electrons less available for binding with the π-orbitals of SCN, that is, for a bond on the sulphur end.

In the cases mentioned the effect of the phosphine molecules is to change the co-ordination from *M*–S to *M*–N. However, there are also compounds with the same ligands where the thiocyanate group still retains a distinct bridge configuration. In such cases one finds that the *M*–S bond is weakened, whereas the *M*–N bond apparently is not affected. A Pt–S bond-length (2·44 Å.) greater than the sum of the atomic radii (2·36 Å.) has been found by Owston and Rowe in $[Pt_2(SCN)_2Cl_2(PPr)^n_3)_2]$, and this result has been explained with somewhat similar arguments to those adopted above[9]. Also, in the case of $AgSCN.PPr^n_3$, the Ag–S bond-lengths are considerably greater (2·75 Å.) than expected (2·43 Å. in AgSCN)[10]. These results can be compared with the 'normal' bond-lengths of 2·30 and 2·27 Å. reported in *cis*- and *trans*- $Pt(NH_3)_2(SCN)_2$ (ref. 11).

A broad generalization based on the few cases discussed here is obviously not possible ; more experimental material is required in order to appreciate the factors affecting the change from *M*–SCN to *M*–NCS bonding. Nevertheless, our observations suggest that π-bonding may be of importance in balancing the equilibrium $M\text{–NCS} \rightleftarrows M\text{–SCN}$ far to the right for cations such as Pd(II) and Pt(II). If our interpretation is correct, the same change in co-ordination of the thiocyanate as observed for the complexes with the phosphines may be predicted to occur by different, strong π-electron acceptor ligands.

Surface Symmetry and Cell Dimensions of Layer Lattice Silicates

In a previous communication[1] it was pointed out that the ditrigonal surface symmetry observed for a number of layer lattice silicates probably plays an important part in determining polymorphism among the micas. This idea has now been extended considerably by theoretical and experimental studies to be reported elsewhere. It appears to me that the ideal layer lattice structures must have ditrigonal, rather than hexagonal, surface symmetry. That is, the tetrahedral groups apparently can rotate quite readily about axes normal to the sheets to allow the tetrahedral sheets to contract to the dimensions of the octahedral sheets.

These concepts have several important implications. For example : (1) it is shown easily that the average tetrahedral rotation is given by $\alpha = \cos^{-1}(b_{\text{obs.}}/b_{\text{tetr.}})$, where $b_{\text{obs.}}$ is observed *b*-axis, and $b_{\text{tetr.}}$ is *b*-dimension which the given tetrahedral layer would assume, if unconstrained. This gives reasonable agreement to $\alpha_{\text{obs.}}$ for those structures for which the latter is known. Values of $\alpha_{\text{calc.}}$ for a large number of layer lattice silicate structures show that almost all these minerals have more or less ditrigonal surface networks, for example, α for micas = 6–23°.

(2) The substitution of aluminium for silicon in the tetrahedral layer will not increase $b_{\text{obs.}}$ but merely increase α, that is, change the surface configuration. Previous unit cell formulæ giving $b_{\text{obs.}}$ in terms of composition[2] are therefore wrong in this respect. Multiple regression analyses, of *b* against composition,

computed separately for experimental data for kaolins, micas and chlorites have each yielded non-significant regression coefficients for tetrahedral Al^{iv}, confirming the theoretical predictions.

(3) In the case of the micas, the interlayer cations play a major part in determining the unit-cell dimensions, a direct contradiction of current concepts. In general the 'Si'–O tetrahedra rotate until the nearer six oxygens (of the twelve) are 'in contact' with the interlayer cation, as I[3] have shown in the particular case of $2M_1$ muscovite. A large interlayer cation therefore contributes significantly to the value of $b_{\text{obs.}}$; interlayer K^+ has a greater effect than octahedral Fe^{++} for micas. This physical concept has been confirmed by the multiple regression analyses mentioned. A single relation obtained from the mica data, giving b in terms of composition, fits both normal and brittle micas adequately, and both dioctahedral and trioctahedral types. For example, the unusual brittle mica xanthophyllite has $b_{\text{obs.}} = 9{\cdot}01$ and $b_{\text{calc.}} = 9{\cdot}016$, whereas earlier formulæ break down altogether[2].

(4) It is obvious that the relative rigidity of the Si–O tetrahedral group takes control of the b-axis dimensions of those layer minerals for which the octahedral layer would be significantly larger than the tetrahedral layer. It is for this reason that $b_{\text{obs.}} = 9{\cdot}15$ for talc, rather than $\approx 9{\cdot}3$; and the same factor is possibly an important one in distinguishing the chrysotile from the antigorite structures.

Necessary experimental results to support these ideas are now being submitted for publication. Some of these data have been kindly supplied by Dr. K. Norrish of this Division, with whom I have had very profitable discussions of this work.

R_M and Solvent Composition in Paper Chromatography

WHEN information concerning the structure of substances is required from paper chromatographic data, R_M values are used rather than R_F as they are more directly related to the different groups of which the molecules of these substances are composed[1]. In cases when one phase forming the chromatographic system is composed of two solvents practically immiscible with the other liquid phase, at any proportion of the component solvents (for example, hexane + chloroform/water; hexane/water + dimethylsulphoxide) and assuming that chromatography is a true counter-current extraction process, following the plate theory, a simple equation can be derived relating the R_M value to the composition of the two-component phase.

In the systems mentioned, under ideal conditions, the partition coefficient of a substance between the mixed two-component phase (1 + 2) and the other phase is related to the volume fractions of the component solvents (u_1 and u_2) and to the partition ratios of the substance between the pure component solvents and the other phase (K_1 and K_2) by Kemula–Buchowski's equation[2]:

$$\log K = u_1 \log K_1 + u_2 \log K_2 \qquad (1)$$

Taking into account that $u_1 + u_2 = 1$ we can write:

$$\log K + \log r = u_1 \log K_1 + u_2 \log K_2 + u_1 \log r + u_2 \log r$$

or

$$\log Kr = u_1 \log K_1 r + u_2 \log K_2 r \qquad (2)$$

(r is volume coefficient or 'paper constant' is ratio of cross-sectional areas of non-polar and polar phase.)

As K_1, K_2 and K are usually defined as ratios of concentrations of substance in the non-polar and polar phase, at equilibrium, then $R_M = -\log Kr$ in conventional paper chromatography and $R_M = \log Kr$ in reversed phase chromatography[1] so that in both cases:

$$R_M = u_1 R_{M1} + u_2 R_{M2} \qquad (3)$$

where R_M, R_{M1}, R_{M2} denote the R_M values of the substance in the systems: mixed solvent (1 + 2)/other phase; pure solvent 1/other phase; pure solvent 2/other phase.

If the volume coefficient r is constant and independent of the composition of the mixed solvent (1 + 2), the R_M value of a substance should thus be a linear function of the volume composition of the mixed solvent (this will also apply if r is an exponential function of volume composition, that is, $\log r = ku_1$).

In order to give an experimental illustration of this simple rule, in Fig. 1 some results from other work[3] are given, represented in the form of R_M versus volume composition plots. Experimental details are to be found in ref. 3.

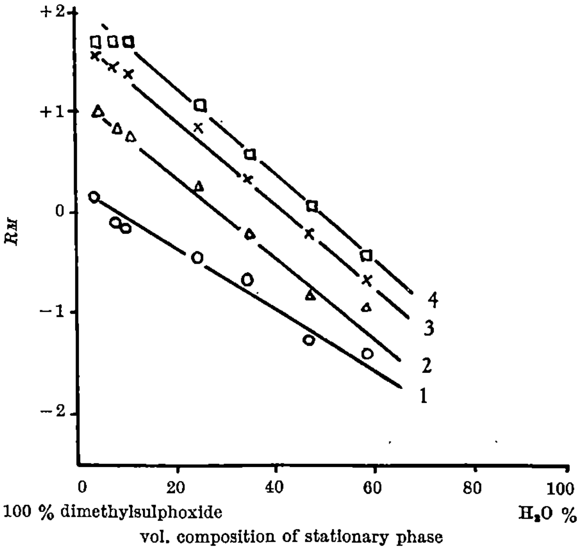

Fig. 1. Mobile phase in these experiments was *iso*propylether

It can be seen that for certain solvent systems results may be obtained in accordance with equation 3. Similar relationships can also be expected in cases when the paper is impregnated with a non-polar liquid (for example, paraffin oil) and developed with mixtures of water and alcohol, etc.

BIOCHEMISTRY

Separation Methods based on Molecular Sieving and Ion Exclusion

CROSS-LINKED dextran ('Sephadex') has been shown to possess properties of a molecular sieve[1]. The size limits for effective molecular sieving depend on the degree of cross-linking. Molecules or ions capable of entering the gel phase may be subject to specific interaction with the matrix substance. Thus, for example, when certain aromatic compounds are passed through 'Sephadex' columns, a more extensive retardation is found than if the gel acted as a molecular sieve only.

It has now been found that, due to the superimposed sieving and sorption effects (the latter due to aromaticity and charge), polypeptides such as oxytocin and vasopressin are not easily separated from salts, amino-acids and many other substances of low molecular weight (with K_d about 1). It was thought that the separation factors in such cases would be increased if the swelling of the gel grains were more restricted. Following up this idea, we tried solvent systems that contained various proportions of acetic acid, pyridine and water. The swelling of the gel in such solvents is less extensive than in water, and, as expected, some compounds could be effectively excluded while others were distributed to different extents between the gel phase and the free liquid. The distribution is highly dependent on the concentration of acetic acid, which, when large effects are desired, should exceed 40 per cent by volume. In our experiments 15–30 per cent of pyridine was also included both to limit the swelling and avoid too high an acidity of the medium, and also to make effective desalting of peptides possible.

Fig. 1 shows two superimposed diagrams of similar filtration experiments made under the following conditions. Seven grams of low molecular weight substances from posterior lobes of hog pituitaries, prepared by gel filtration as described in an earlier publication[2], were dissolved in 50 ml. of a solvent mixture consisting of 60 parts of acetic acid, 15 parts of pyridine and 25 parts of water (by volume). The solution was filtered through a 'Sephadex' *G* 50 column, 65 cm. × 4·5 cm., packed and pre-washed in the same solvent. The rate of flow was about 25 ml. per hr. Ninhydrin reaction[3] was determined in 0·05-ml. aliquots, from fractions of 12–13 ml. Similar results were obtained with 'Sephadex' *G* 25. It was found by other methods that the substances in fractions 1, 2 and 3 consisted mainly of peptides ; for example, vasopressin was found in peak 2. Fraction 5–7 consisted of amino-acids and other ninhydrin-reactive compounds.

Ion exclusion on xerogels is another principle for fractionation of electrolytes[4]. Using this principle, we have separated peptides on ion exchangers derived from cross-linked dextran (kindly put at our disposal by Dr. P. Flodin, Pharmacia, Uppsala).

As a principle for separation, ion exclusion, with the fixed ionizable groups completely titrated, is

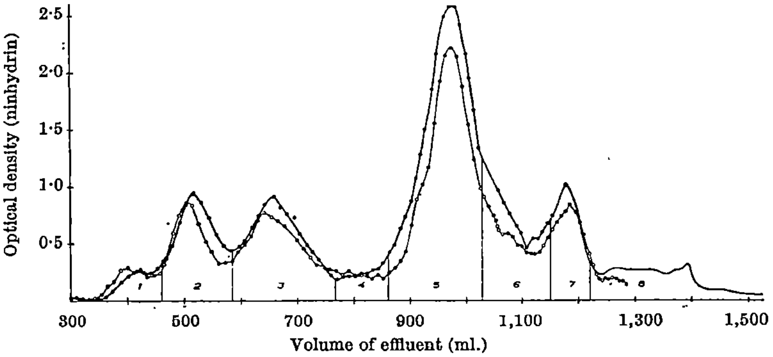

Fig. 1. Distribution diagrams of two similar gel filtration experiments on a 'Sephadex' *G* 50 column. Solvent system: 60 parts of acetic acid, 15 parts of pyridine and 25 parts of water

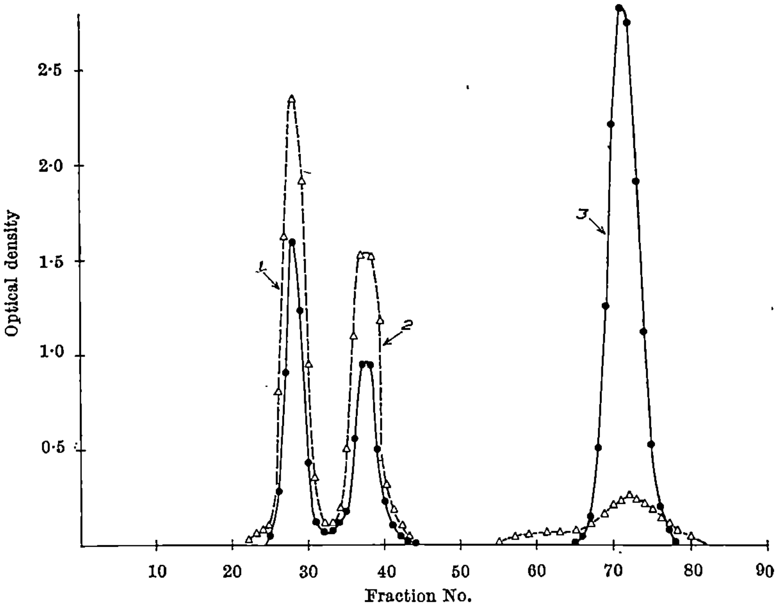

Fig. 2. Ion-exclusion diagrams on a DEAE-'Sephadex' *A* 25 column. Folin–Lowry reaction, -Δ-Δ-Δ-, and ninhydrin, -●-●-●-. Vasopressin is found in peak 1 and oxytocin in peak 2

probably in some respects superior to ion exchange. The contact with the ion exchanger is less active, since intimate interaction with strong adsorption centres is avoided. The capacity appears to be larger and the reproducibility better than is generally the case for ion-exchange chromatography, in which eluants of constant composition are employed. However, the resolution is possibly inferior to what may be achieved in ion-exchange chromatography. The ion or molecular sieving confers a property on the charged gel that converts ion exclusion into something more than merely an inversion of exchange. The sorption or exclusion of ions and molecules is chiefly based on the interplay of restricted diffusion and electrostatic repulsion.

Fig. 2 illustrates ion exclusion of neurohypophyseal peptides that originally were bound to proteins[2]. The experiment was carried out on a diethylaminoethylether derivative of cross-linked dextran (DEAE-'Sephadex' *A* 25, 2·4 m.equiv./N/gm. dry weight : water regain, 5·5 ; particle size, 200–400 mesh). 250 mgm. peptide material were dissolved in 5 ml. of 0·1 molar pyridinium acetate and introduced into a 95 cm. × 3·5 cm. column bed. The chromatogram was developed in 0·1 molar pyridinium acetate at a speed of 30 ml. per hr. After 90 ml. eluent had passed into the column, 7·5 ml. fractions were collected. Aliquots of 0·1 ml. were analysed with ninhydrin and 0·2 ml. aliquots by the Folin–Lowry method[5]. The reproducibility is excellent. Peak 1 contains lysine vasopressin (150–200 international rat blood-pressure units per mgm.), and peak 2 chiefly consists of oxytocin (300–400 international avian blood-pressure units per mgm.). Negatively charged ion species are of course adsorbed and may be eluted at a later stage either with the same eluant (if the sorption forces are weak enough) or by displacement.

The outcome of a number of preliminary experiments made under other conditions and with other substances indicates that the methods described here ought to find applications in many fields.

Further details of this work will be published later.

Simplified Procedure for removing Non-specific Staining Components from Fluorescein-labelled Conjugates

Coons and Kaplan[1] in their description of the fluorescent antibody technique using antisera coupled with fluorescein isocyanate found that the non-specific staining which occurred when such conjugates were applied to tissue sections could be minimized by dialysing the conjugates against 0·01 *M* phosphate buffer solution *p*H 7·0 for several days, followed by treatment with liver powder.

Marshall *et al.*[2] showed that fluorescein isothiocyanate was superior to the isocyanate in this technique, and in their description of the simpler conjugating procedure which is possible using this compound they also dialysed against buffer *p*H 7·0 to remove non-specific staining components from the solution.

It has been found that non-specific staining material in conjugates prepared from fluorescein isothiocyanate can all be removed by serial treatment with liver suspension alone, thus eliminating the long dialysis procedure.

In these experiments the following systems were employed : (1) human group '*A*' stomach sections treated with rabbit anti-'*A*' serum[3] followed by goat anti-rabbit γ-globulin conjugate ; (2) calf thyroid sections treated with lupus erythematosus serum containing antinuclear factor[4] followed by rabbit anti-human γ-globulin conjugate. In addition to these 'sandwich' tests the conjugates were also applied direct to the sections, all of which were cut in a cryostat.

Conjugates of crude globulin preparations were prepared according to the method described by Marshall *et al.*[2], and after overnight mixing in the cold aliquots of the reaction mixture were treated : (1) by dialysis against buffer *p*H 7·0 as described by Coons and Kaplan[1], followed by a single absorption with liver suspension ; (2) by serial treatment with liver suspension. The anti-rabbit conjugate was treated with human liver and the anti-human conjugate with rabbit liver. The liver suspensions were prepared by suspending the dried powder, made by the method of Coons and Kaplan, in *p*H 7·0 buffered saline, centrifuging, and the excess fluid decanted. The use of such a moist suspension eliminates the considerable loss of conjugate which occurs when dry powder is used. Equal volumes of the packed suspensions were added to aliquots of the conjugates and the mixtures slowly rotated for 10 min. at 4° C. The supernate was removed after centrifugation and for serial absorption was treated with a further volume of suspension ; after mixing for 10 min. and centrifuging, the supernate was finally treated with a third volume of suspension.

The results obtained by treating sections with the various conjugate preparations are summarized in Table 1.

Table 1. EFFECT ON NON-SPECIFIC STAINING AND AGGLUTININ TITRE OF DIALYSIS AND/OR TREATMENT WITH LIVER

Treatment	Non-specific staining	Specific staining	Agglutinin titre of anti-human γ-globulin conjugate
Dialysis + 1 liver treatment	Very slight	Bright	1,280
Undialysed 1 liver treatment	Moderate	Bright	1,280
Undialysed 2 liver treatments	Very slight	Bright	1,280
Undialysed 3 liver treatments	Minimal	Moderate	640

It will be seen that two treatments with liver suspension resulted in conjugates which gave satisfactory specific staining and no more non-specific staining than the conventional procedure. Conjugates treated three times with liver showed least non-specific staining but detectable reduction in the brightness of the specific staining. This latter observation was confirmed by titrating the various preparations of the anti-human γ-globulin conjugate for their agglutinating activity against human *Rh*+ erythrocytes sensitized with incomplete anti-*D* antibody. The titres obtained are shown in Table 1.

In the orthodox procedure one of the effects of dialysis is to reduce the *p*H of the mixture from 9·0 to 7·0. It therefore seemed possible that the failure of one liver treatment to bring about an adequate reduction in non-specific staining might be attributable to the higher *p*H of the undialysed solution.

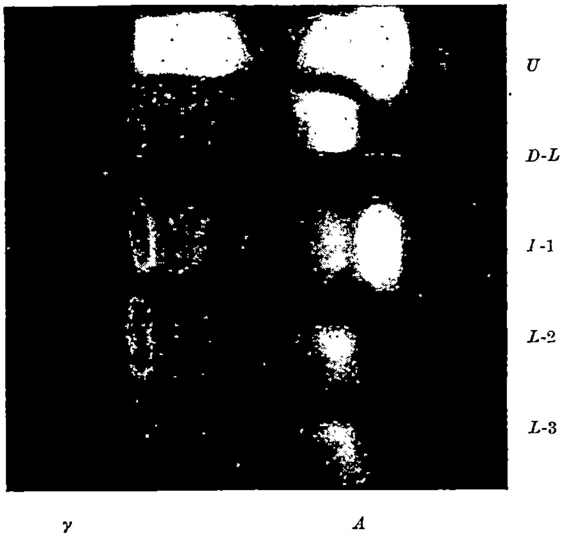

Fig. 1. Electrophoresis of fluorescent conjugate solutions, carried out on cellulose acetate membranes in borate-barbitone buffer, *p*H 8·6 at about 15 V./cm. *A*, albumen position; γ, γ-globulin position; *U*, untreated; *D-L*, dialysed and treated once with liver suspension; *L*-1, *L*-2, *L*-3, one, two and three liver treatments respectively of the undialysed conjugate

That this is not so was shown by adjusting the reaction of an undialysed conjugate to *p*H 7·0 by the addition of phosphoric acid. After one treatment with liver suspension this preparation gave as much non-specific staining as the same conjugate treated with liver at *p*H 9·0.

Electrophoresis of the conjugate preparations was carried out on cellulose acetate membrane at about 15 V./cm. in borate-barbitone buffer, *p*H 8·6 for 1 hr. The strips were photographed in ultra-violet light and the results are shown in Fig. 1. The untreated conjugate gave a serum protein pattern on which two bright zones were superimposed, one just ahead of the albumin, the other in the β–α_2-globulin region. It is evident that dialysis followed by a single liver treatment, and serial liver treatment alone, have similar effects on the electrophoretic patterns obtained, the brightest two zones being considerably reduced by both procedures. It is of interest that the γ-globulin components of the conjugates constitute a very small proportion of the fluorescent material present, although when these strips were stained with protein dyes the γ-globulin stained strongly and was a major component. It therefore appears that the fluorescein reagent has a greater affinity for proteins other than γ-globulin.

On the basis of these results serial treatment with appropriate organ suspension alone appears to give satisfactory conjugate preparations for staining tissue sections.

The electrophoresis was carried out by Dr. R. Consden, and it is a pleasure to acknowledge his help and interest in this work.

Triphosphopyridine Nucleotide-linked Glyceraldehyde Phosphate Dehydrogenase in a Non-Photosynthetic Plant Tissue

It has been established that, whereas the usual diphosphopyridine nucleotide (DPN)-linked glyceraldehyde-phosphate dehydrogenase is found generally distributed in higher plant tissues, a separate enzyme, specifically requiring triphosphopyridine nucleotide (TPN) as coenzyme, is restricted to leaves[1–4]. The distinctive association of the TPN-glyceraldehyde phosphate dehydrogenase with the photosynthetic apparatus and the specificity for TPN shown in some types of photosynthetic phosphorylation have encouraged the view that the reductive step in hexose synthesis in leaves is mediated by this enzyme.

An active hexose synthesis from acetate which also involves a reversal of the glycolytic sequence occurs in the colourless endosperm tissue of some germinating fatty seedlings. It was therefore of interest to find that in this non-photosynthetic tissue both types of glyceraldehyde phosphate dehydrogenase are present.

Extracts were prepared in sucrose phosphate mixtures from endosperm tissue of castor beans which had been grown in the dark for 4–5 days (see ref. 5). Enzyme activity of the supernatant solution after centrifuging at 18,000*g* was measured by the procedure outlined by Gibbs[6] in which reduction of the coenzyme is followed in the presence of fructose-1,6-diphosphate (to provide substrate through the action of aldolase), arsenate and fluoride. The results in Table 1 show that both TPN and DPN are reduced and that the rate of reduction increases with enzyme concentration. The maximum rates achieved with DPN are considerably higher than those with TPN. The results in Table 2 show the effect of increasing substrate concentration on enzyme activity. It is seen that the TPN enzyme is saturated at lower substrate-levels than the DPN enzyme.

Table 1. EFFECT OF INCREASING THE AMOUNT OF ENZYME EXTRACT ON THE INITIAL RATES OF DPN AND TPN REDUCTION

The reaction mixtures contained, in micromoles: *tris* buffer (*p*H 8·5)' 100; sodium arsenate, 51; sodium fluoride, 60; enzyme extract and (DPN, 0·15 plus fructose-1,6-diphosphate, 2·6) or (TPN, 0·13 plus fructose-1,6-diphosphate, 0·3). Total volume, 3·0 ml.

Enzyme added (ml.)	TPN reduction	DPN reduction
	(Δ O.D.$_{340}$/min.)	
0·025	0·004	0·012
0·050	0·0145	—
0·080	0·025	—
0·10	0·030	0·048
0·20	—	0·081
0·30	—	0·089

Table 2. EFFECT OF INCREASING AMOUNTS OF SUBSTRATE ON DPN AND TPN REDUCTION

Reaction mixtures as in Table 1, with 0·1 ml. enzyme solution and fructose-1,6-diphosphate as indicated

Fructose-1,6-diphosphate (μmoles)	TPN reduction	DPN reduction
	(Δ O.D.$_{340}$/min.)	
0·0	—	0·003
0·056	0·016	—
0·112	0·020	—
0·168	0·0205	—
0·187	—	0·021
0·224	0·0225	—
0·370	—	0·031
1·30	—	0·046
2·60	—	0·049

The possibility that TPN reduction was due to glucose-6-phosphate dehydrogenase rather than glyceraldehyde-phosphate dehydrogenase was eliminated by the following observations:

(*a*) The rate of reduction of TPN was much lower when glucose-6-phosphate was used instead of fructose-1,6-diphosphate. (*b*) The reduction was completely inhibited by 0·001*M* iodoacetate. (*c*) Reduction of TPN was observed when glyceraldehyde-3-phosphate was used directly as substrate.

In crude extracts TPN reduction does not require the addition of arsenate or phosphate (cf. ref. 6). In experiments with a partially purified preparation, which contains relatively greater amounts of the TPN enzyme, arsenate stimulations are observed. Nevertheless, a considerable fraction of the TPN reduction appears to be catalysed by a third (non-reversible) dehydrogenase which was also discovered originally in green leaves[8,9]. The properties and intracellular distribution of the various dehydrogenases will be described in another communication[10].

Electrophoresis in a Thin Layer of Starch-Gel followed by a Plastifying Treatment

QUANTITATIVE analysis after starch-gel electrophoresis is usually difficult due to : (1) the diffusion of protein fractions, (2) the difference of migration according to the thickness of the gel, and (3) the fragility and opalescence of this migrating medium.

The cutting of the gels accompanied by superficial staining of the surfaces only partially resolved these difficulties. Some progress has been obtained by cutting thin slices in the median zone of the gel, which can be stained and rendered transparent after inclusion in agar and dried by heating[1,2]. On the other hand, immersion in pure glycerol[3] or transformation into 'plastic' by heat only[4] has been tried. However, the results obtained did not permit a true quantitative analysis. The technique described here resolves these problems: (1) the stain penetrates into the gel completely, (2) the gel is transformed into a thin, transparent and supple film.

Smithies's technique[5] is used for the preparation of the starch-gel. The gel is poured into the apparatus giving a homogeneous layer 3 mm. thick[7]. The lateral diffusion of the more concentrated proteins (for example, albumin) is limited by cutting a thin band (2 mm.) of gel between the samples. A sheet of polyethylene protects the gel from the air. The introduction of the sample is done by mixing the serum in some gel in order to obtain a continuous medium.

With this technique, the serum components give strictly parallel bands. After electrophoresis, there are two possible treatments :

(1) It is possible to transform the gel into plastic before staining. The gel is placed for 1 hr. in a bath of an aqueous solution containing 5 per cent acetic acid and 5 per cent glycerol. It is then heated with an infra-red tube of 1,200 W. for 3 hr. at a distance of 65 cm. The plastified and transparent plate is stained in aqueous dye solution during 2 hr. (naphthalene black 0·5 gm., glacial acetic acid 50 ml., distilled water 1,000 ml.). Decoloration is obtained by successive washings in 5 per cent aqueous acetic acid solution. The last bath contains 50 per cent glycerol. The gel is dried with filter paper and is heated by an infra-red lamp for 20 min.

(2) It is also possible to stain the gel directly for 4 hr., then after successive washings it is placed for 1 hr. in an aqueous solution containing 5 per cent acetic acid and 5 per cent glycerol. The gel is heated for 3 hr. with infra-red on a glass plate.

The first technique reduces the risk of deterioration during manipulation. The second results in a more supple plastic film. The transparent band can be measured by direct photometry (Fig 1).

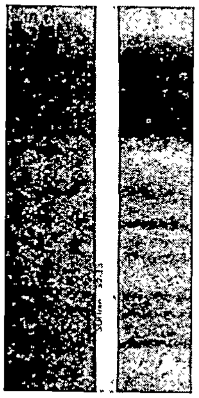

Fig. 1

In addition we noted that Poulik discontinuous buffer system[6] has the advantage of giving a narrow zone (1 cm. wide) of albumin and clearer pre- and post-albumin zones.

Changes in Glucose-6-phosphatase Activity in Liver and Kidney at Birth

GLUCOSE-6-PHOSPHATASE catalyses the last step in the chain of reactions by which glycogen is converted to glucose. The enzyme is found only in liver, kidney and intestinal mucosa. Its activity is low in fœtal liver and increases at birth in the guinea pig[1] and the rat[2]. Glucose-6-phosphatase has been measured in human liver only in the first half of gestation. Cori and Schulman[3] found very low levels in an 18-week fœtus. Villee[4] used the production of glucose by liver slices as a measure of glucose-6-phosphatase. Activity appeared about the tenth week of gestation and had reached about half adult levels by 22 wk. Aurichio

Table 1. CHANGES IN GLUCOSE-6-PHOSPHATASE ACTIVITY AT BIRTH

Species		Fœtus at term	24 hr. after birth	Adult
Rat	Liver	4·9	68·6	20·7
	Kidney	3·3	8·6	26·2
Rabbit	Liver	7·9	46·4	16·0
	Kidney	5·3	8·8	16·8
Guinea pig	Liver	3·4	38·6	16·7
	Kidney	6·0	22·4	17·3
Sheep	Liver	5·7	45·7	20·9
	Kidney	6·0	31·4	24·1

Results are expressed in μM glucose-6-phosphate hydrolysed per mgm. N/hr.; each figure is the mean of at least three determinations done in duplicate.

System: Glucose-6-phosphate, 0·02 M; *tris* buffer pH 7·0, 0·1 M; enzyme 0·1 ml. of a 10 per cent homogenate in 0·25 M sucrose. Final volume 0·5 ml. Substrate was omitted from the blank. Incubated for 10 min. at 37° and de-proteinized with 1 ml. 10 per cent (w/v) trichloracetic acid. Inorganic phosphate liberated was determined by the method in ref. 10.

and Rigillo[5] found low, but variable, activity in post-mortem material from 20 to 40 weeks of gestation.

In the rat, activity increases in the first 24 hr. after birth to levels several times those in adult liver[6,7]. Glucose-6-phosphatase activity has now been measured in liver and kidney in a number of species of differing maturity at birth.

Table 1 shows glucose-6-phosphatase activity in liver and kidney of the fœtus at term, the new-born animal 24 hr. after birth and the mother in four different species. The rat is very immature at birth, with closed eyes and no hair. The new-born rabbit is more mature than the rat, but less mature than the lamb and guinea pig which are born with eyes open and able to run about within a short time of birth. Nevertheless, in all these species there is a considerable increase in glucose-6-phosphatase activity in the liver just after birth. Kidney glucose-6-phosphatase behaves rather differently. In the rat and rabbit there was only a small increase at birth and adult activity was reached 2 weeks after birth. In the lamb and guinea pig, however, activity reached adult-levels within 24 hr. after birth. This species difference might be related to differences in the maturity of renal function at birth.

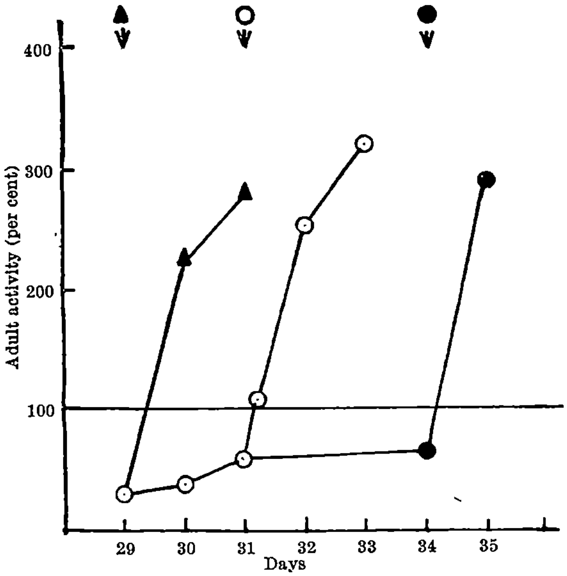

Fig. 1. The effect of premature and postmature delivery on liver glucose-6-phosphatase activity in the new-born rabbit. Results are expressed as a percentage of adult activity (16·0 μM glucose-6-phosphate hydrolysed/mgm. N/hr.). Mature, ○; premature, ▲; postmature, ●. Delivery is indicated by the arrow

The effect of delivery on the increase in activity of glucose-6-phosphatase is shown in Fig. 1. The same rise in activity was found in animals delivered at term naturally and by Cæsarean section. Animals delivered two days before term by Cæsarean section showed a rise within 24 hr. to levels as high as those in 24 hr.-old rabbits delivered at term. When pregnancy was prolonged with chorionic gonadotrophin[8], there was no increase until after delivery, when a rise again occurred within 24 hr.

At the end of gestation large amounts of glycogen have accumulated in the liver in all species which have been examined[9]. One possible factor may be low glucose-6-phosphatase activity, as originally suggested[1]. Immediately after birth, liver glycogen disappears very rapidly, presumably to maintain blood glucose in the new-born animal. At this time, there is a very considerable increase in glucose-6-phosphatase activity in the liver in all species which have been examined. This increase in activity is not related to maturity at birth. The effects of early and late delivery suggest that the stimulus for the increase in activity is related to delivery. Nemeth[8] has described similar findings on the effect of delivery on tryptophan pyrollase activity in rabbit liver.

Keto-Acids and Amines in Rumen Liquid of Cattle

AN investigation was made into the occurrence of keto-acids in rumen liquid of cattle; simultaneously the amino-acids and the amines were examined, as electrophoresis at pH 4·5 revealed that basic components occurred in rumen liquid. The following methods were used:

Keto-acids: After adjustment of the pH to 4·7 and a treatment with 'Norit', rumen liquid is passed through a 'Dowex 50*W*' column in order to remove the amino-acids. As mentioned in an earlier communication[1] concerning keto-acids in serum and urine of cattle, the keto-acids are converted into 2,4-dinitrophenyl hydrazones, after which they are reduced by hydrogen to amino-acids and identified as such.

Amino-acids: From the 'Dowex 50*W*' column the amino-acids are eluted with 6 N ammonia. After evaporation to dryness, the residue is submitted to electrophoresis with evaporation at pH 4·5. In this way a good separation in groups up to and including the amines is obtained. The amino-acids are detected by ninhydrin and copper nitrate solution. The red-coloured spots are eluted with methanol and the extinction is measured at 525 mμ. This method is semi-quantitative, but it gives sufficient information about the changes in the concentrations.

Amines: The pH of a suitable quantity of rumen liquid, for example 40 ml., is adjusted to 4·5, after which the liquid is centrifuged. Then sodium hydroxide solution is added and a mixture of salts (sodium sulphate and disodium hydrogen phosphate[2]). The *p*H must be ± 12. The liquid is first extracted with ether in order to remove lipids and other interfering material and then three times with butanol. The butanol solution is concentrated *in vacuo* to a small volume and then submitted to electrophoresis, combined with evaporation at *p*H 11·7. Afterwards the paper (27 × 55 cm.) is chromatographed in propanol/0·2 *N* ammonia (3 : 1). From Fig. 1 it can be seen that a good separation even of cadaverine and putrescine is obtained.

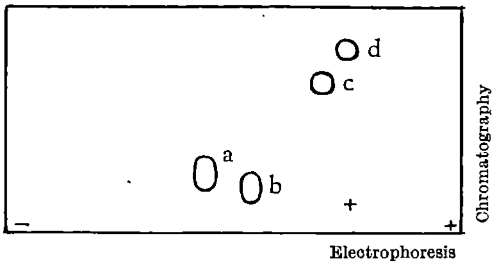

Fig. 1. Separation of amines in the butanol fraction. *a*, Cadaverine; *b*, putrescine; *c*, histamine; *d*, tyramine

In this way the following keto-acids could be shown: pyruvic acid, hydroxypyruvic acid, glyoxilic acid, α-keto-*iso*valeric acid, α-keto-*iso*caproic acid or α-keto β-methylvaleric acid, oxalo-acetic acid and α-keto-glutaric acid. A few components are still under investigation.

It appeared that the concentration of the keto-acids increases within 30 min. after feeding. An examination of hay and grass revealed that these foodstuffs contain keto-acids. Therefore, glucose was added to rumen liquid in order to investigate if keto-acids would be formed. Indeed, it appeared that the concentration of pyruvic acid was now strongly increased. Moreover, it was remarkable that the *p*H decreased noticeably, and that the concentration of the amino-acids and other basic components increased strongly. The fall of the *p*H depends on the time when the sample is taken: shortly after feeding, the decrease of *p*H, after addition of glucose, is at its greatest.

As it was possible that the basic components contain amines, for example, histamine and tyramine, which Dain *et al.*[3] identified in rumen liquid of experimentally over-fed sheep, an investigation in this direction was carried out.

In a first experiment glucose, histidine, tyrosine and tryptophan were added to rumen liquid in order to examine if decarboxylation occurred. Indeed, histamine, tyramine and probably tryptamine could be detected after 24 hr. Afterwards, rumen liquid, to which fodder-cakes, caseine and glucose, and caseine alone were added, was examined. Frequently, histamine and tyramine could be detected, but cadaverine, putrescine and colamine occurred in far greater amounts. If lysine were the most important component of the basic amino-acids, the concentration of cadaverine was high; by addition of arginine to rumen liquid the concentration of putrescine increased strongly. From these results it is postulated that lysine in the rumen forms cadaverine and that arginine, after conversion to ornithine, forms putrescine.

The factors responsible for the formation of the amines and amino-acids are under investigation *in vitro* and *in vivo*. In one case, namely, a heifer, a greater concentration of amines was found in the rumen.

I am much indebted to Prof. G. Wagenaar for putting the cows at my disposal and to Mr. C. G. van der Kamp for technical assistance.

Haptoglobinuria in Nephrotic Syndromes

As a rule, only traces of haptoglobin can be found, by titrimetric method, in the urine of patients presenting a nephrotic syndrome with considerable proteinuria, as against their serum, which is very rich in α_2 globulin and especially in haptoglobin. Actually, it is so only in the case of patients belonging to Smithies's groups *2·1* and *2·2* (ref. 1), for, when the serum belongs to group *1·1*, the haptoglobin, of lower molecular weight, filtered through the nephrotic kidney, can reach a concentration of several gm. per litre[2,3].

I have had the opportunity of examining the urines of patients whose haptoglobin was type *2·2* in some, while in others it was type *2·1*.

In the urines of patients with haptoglobin of type *2·2*, I could never find any haptoglobin either by Jayle's titrimetric method (measure of the peroxidasic activity of the hæmoglobin–haptoglobin complex), or by electrophoresis in starch-gel, even when the haptoglobin was very much increased and the proteinuria very considerable. For example, in the case of patients with renal amyloidosis, the serum haptoglobin was as high as 10 gm./l., the proteinuria was 20 gm./l.; the urine, very rich in seromucoid α_1, contained no haptoglobin. The same result was found in the case of lipoidic nephrosis belonging to Smithies's group *2·2*, and this, whatever the rate of haptoglobin in the serum.

With patients having haptoglobin of group *2·1*, the titrimetric method has always allowed detection of a small quantity of haptoglobin in the urine, either directly if the proteinuria were important, or by concentrating the urine after dialysis if the proteinuria were rather low. For example, in the case of a patient whose serum haptoglobin remained about 5 gm./l., 0·50 gm. of haptoglobin was found in the urine for a proteinuria of 25 gm./l. When the latter was 7 gm., there was still 0·10 gm. of haptoglobin; when it went down to 0·20 gm./l., I still could, by sufficient concentration of the urine, reveal a small quantity of haptoglobin. In other patients with haptoglobin of the same group *2·1* and haptoglobinæmia of 4·5 gm./l., but with a comparatively low proteinuria (about 2 gm./l.), I found, by concentrating the urine ten times, a very small but still measurable quantity of haptoglobin.

The urine of all these patients was analysed by electrophoresis in starch-gel following Smithies's method, after preliminary addition of hæmoglobin so as to reveal the hæmoglobin–haptoglobin complexes, very small quantities of which can be detected by benzidine staining.

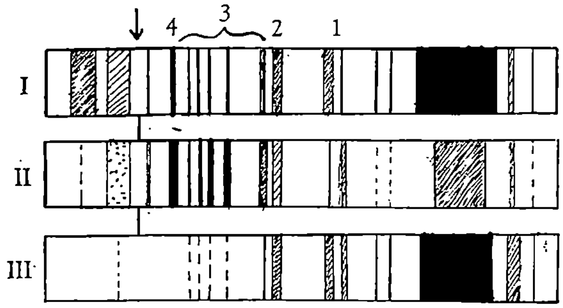

Fig. 1. Amidoblack coloration. I, Normal serum; II, nephrotic serum; III, nephrotic urine. (1) Haptoglobin *1·1*; (2) β globulin *C*; (3) haptoglobin zone; (4) slow α2

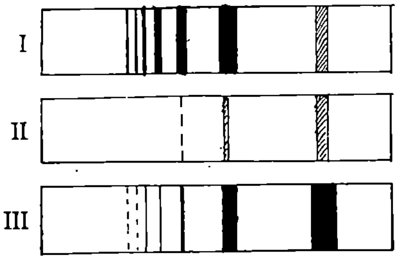

Fig. 2. Haptoglobin *2·1* hæmoglobin complex in nephrotic syndrome; benzidine coloration. I, Serum; II, urine; III, haptoglobin obtained from urine, by saline precipitation

When proteinuria is very low, the urines are concentrated before including them in the starch-gel, or the haptoglobin can also be isolated by salt precipitation.

Results: (*a*) Homozygous patients with haptoglobin *2·2* have no haptoglobin in their urine. (*b*) Heterozygous patients with haptoglobin *2·1* have three distinct bands in their urine. The first corresponds to haptoglobin *1·1*, the second to haptoglobin β and the third to the most anodic band of the αβ haptoglobins (haptoglobin *1·1* and β do not occur in sera of group *2·2*) (Figs. 1 and 2).

It is to be noted that the intensity of haptoglobin *1·1* is the same as in the serum, while that of the following band is much weaker than in the serum. The pattern of urinary haptoglobin is identical, whether the concentration of haptoglobin in the urine is 0·1 gm. or 1 gm./l.

In the case of a patient suffering from renal amyloidosis and whose proteinuria was very high, we separated the urinary haptoglobin by salt precipitation and I obtained 0·8 gm. per 100 ml. solution. The starch-gel electrophoresis pattern showed all the bands of the serum, but their proportion varied greatly in the urine and the serum. A very large quantity of haptoglobin *1·1* and very small quantities of the least anodic components were found. The β component is less considerable than the haptoglobin *1·1*; in serum, on the other hand, it is much more intense.

Table 1

Haptoglobin type	Serum haptoglobin (gm./l.)	Proteinuria (gm./l.)	Urinary haptoglobin (gm./l.)	
			Directly titrated	After concentration
La 2·1	4·9	25	0·50	
	5·5	7	0·10	
	5·0	6		0·60
	5·0	2		0·12
	5·2	1·5		0·10
	5·0	0·2		0·10
B 2·1	4·0	2		0·10
	4·2	2·3		0·14
	5·0	1		0·05
	5·0	0·5		traces
Le 2·1	5·0	20	0·10	
	5·0	24	0·10	
	5·5	18	0·08	
R 2·2	10·0	20	0·00	
Ca 2·2	4·6	24	0·00	
	5·0	8	0·00	0·00

These results confirm that the haptoglobin zones represent distinct protein components, and confirm the difference between the molecular size of these haptoglobins. I find mostly, in nephrotic urine, haptoglobins the molecular weight of which is relatively low and which belong to type *2·1* and not to type *2·2*.

A New Triterpenoid Sapogenin of Animal Origin (Sea Cucumber)

In earlier papers one of us (T. Y.)[1] reported the isolation, chemical properties, and toxicity to fish and warm-blooded animals, of crystalline saponin from the body wall of the sea cucumber, *Holothuria vagabunda*, and designated this as a new saponin, holothurin.

A similar saponin also named holothurin was independently isolated by Nigrelli *et al.*[2] from *Actinopyga agassizi*, a sea cucumber found in the Bahama Islands. Recently, by the extensive study of Sobotka *et al.*[3], holothurin was shown to be further separable into two components: precipitable and non-precipitable by cholesterol. The former component was designated holothurin *A* and proved to be a mixture of several glycosides each of which contains a steroid aglycone of about 26–28 carbon and 4–5 oxygen atoms, one molecule each of four different sugars and one molecule of sulphuric acid as the sodium salt. As sugar components, glucose, xylose, glucomethylose and 3-O-methyl glucose were identified.

Naturally occurring saponins can be divided into two groups. The first of these gives steroidal sapogenins on hydrolysis, the second triterpenoid sapogenins. Triterpenoid sapogenins, so far as we know, have been isolated only from the plant kingdom. It is, therefore, of considerable biogenetic interest to report in this communication the isolation of a triterpenoid sapogenin of animal origin, sea cucumber.

The main sapogenin which was obtained by acid hydrolysis of holothurin was found to be $C_{30}H_{44}O_5$ (I), m.p. 301°, $[\alpha]_D + 14{\cdot}9°$, giving a brown coloration with tetranitromethane. It appeared to be an unknown triterpene and was named holothurigenin. Both holothurin and holothurigenin showed an infra-red absorption band at 1,767 cm.$^{-1}$ attributable to a five-membered lactone. This would indicate that the lactone ring was present in the animal material rather than produced during the acid hydrolysis of the saponin. The direct proof for its presence was provided by the course of the lithium aluminium hydride reduction of holothurigenin (I), which led to the corresponding diol (II), $C_{30}H_{48}O_5$, m.p. 223°, $[\alpha]_D$ + 62·8°, $\lambda_{max.}$' 244 mμ, log ε 4·22, infra-red: 3,448, 3,509, and 3,636 cm.$^{-1}$.

On mild acetylation with acetic anhydride–pyridine of (I), monoacetate (III), $C_{32}H_{46}O_6$, m.p. 277–8°, $[\alpha]_D$ + 10·3°, $\lambda_{max.}$ 244 mμ, log ε 4·42, infra-red: 1,724, 1,767, and 3,636 cm.$^{-1}$ was obtained, which was unaffected by chromic acid/pyridine. Chromic acid/pyridine oxidation of (I) gave a monoketone (IV), $C_{30}H_{42}O_5$, m.p. 290–1°, $[\alpha]_D$ −40, $\lambda_{max.}$ 244 mμ, log ε 4·28, $\lambda_{max.}$ 285 mμ, log ε 2·65, infra-red: 1,701, 1,767, and 3,636 cm.$^{-1}$, which was identical with monoketone obtained by chromic acid oxidation (equivalent to one oxygen atom) in acetic acid solution of (I) at room temperature. Drastic acetylation of (I) led to the corresponding triacetate (V), $C_{36}H_{50}O_8$, m.p. 248°, $[\alpha]_D$ −26·4, infra-red: 1,724, 1,736, and 1,764 cm.$^{-1}$. (V) was reconverted into the parent triterpene (I) on saponification.

Thus the five oxygen atoms were demonstrated to be present as five-membered lactone ring and three hydroxyl groups which differed in their reactivity. It was clear that two of three hydroxyl groups are oriented in hindered positions.

The ultra-violet absorption of (I) exhibited a primary maximum at 244 mμ (log ε 4·15), with subsidiary maxima at 238 and 255 mμ. Coupled with the colour reaction with tetranitro-methane of (I), this suggested the presence of a conjugated heteroannular diene. By catalytic hydrogenation in acetic acid solution of (I), dihydroholothurigenin (VI), $C_{30}H_{46}O_5$, m.p. 285°, $\lambda_{max.}$ 215 mμ, log ε 3·01, was obtained in which the ultra-violet absorption band observed at 244 mμ had disappeared due to a conjugated double bond.

At this stage of the investigation it was concluded that holothurigenin was a trihydroxy-lactone-diene belonging to the triterpenoid series. The structure of holothurigenin is now being investigated.

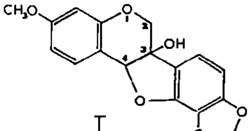
Pisatin: an Antifungal Substance from *Pisum sativum* L.

It is obvious that plants are resistant to attack by fungi that are non-pathogenic to them. However, until recently, the mechanism of this resistance has been obscure. Pisatin, a substance believed to be responsible for such resistance in the garden pea (*Pisum sativum* L.), has been recently isolated from pea pods inoculated with fungal spores[1].

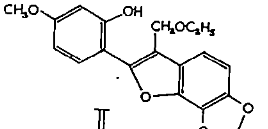
Pisatin has the molecular formula $C_{17}H_{14}O_6$, and, from chemical and spectroscopic evidence, contains one alcoholic hydroxyl, one methoxyl and one methylenedioxy group. Detailed examination of pisatin and some of its degradation products by physico-chemical methods, including nuclear magnetic resonance, ultra-violet and infra-red spectra, indicates that pisatin has structure I.

The location of the methoxyl and methylenedioxy groups is suggested by the very close similarity of the ultra-violet and infra-red spectra to those of pterocarpin[2], although the possibility that the methylenedioxy group is attached to different positions in the same ring cannot be entirely excluded. Pisatin has ultra-violet absorption maxima at 309 mμ (log ε 3·86) and 286 mμ (log ε 3·68) with an inflexion at 281 mμ, while pterocarpin has maxima at 310 mμ (log ε 3·92) and 286 mμ (log ε 3·69) with an inflexion near 280 mμ. Pisatin is optically active with $(\alpha)^{20°}_{578} = +280°$ ($c = 0·11$ in ethanol). Pterocarpin has comparable optical activity, but is lævorotatory[2]. Pisatin appears to differ from pterocarpin only in having a hydroxyl group on carbon 3, and also by possibly having the opposite optical configuration.

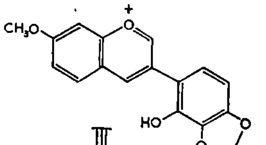
The presence of the hydroxyl group confers some interesting chemical properties on pisatin. Thus in the presence of acid, pisatin readily loses a molecule of water across positions 3 and 4 to form anhydropisatin, $C_{17}H_{12}O_5$ (ref. 1). The disappearance of the band at 3,610 cm.$^{-1}$ in the infra-red spectrum confirms the loss of a hydroxyl group in passing to anhydropisatin. This dehydration extends the conjugation over the whole molecule and leads to a considerable displacement of the ultra-violet absorption maxima towards the visible, with a concomitant intensification of absorption. The ultra-violet absorption spectrum of anhydropisatin ($\lambda_{max.}$ at 339 mμ and 358 mμ; log ε of 4·58 and 4·60) is qualitatively very similar to that reported by Suginome[3] for the closely related substance, anhydrosophorol, formed by cyclodehydration of sophorol, a 2′-hydroxy isoflavanone obtained from *Sophora japonica* L. (Leguminosæ, sub-family Papilionaceae).



I



II



III

When alcoholic solutions of anhydropisatin are heated or exposed to diffuse daylight, fission occurs across the 1 : 2 oxygen–carbon bond giving rise to compound (II). The ultra-violet spectrum of this substance with $\lambda_{max.}$ 269 mμ (log ε 4·18) and 319 mμ (log ε 4·39) is similar to those reported for related 2-phenyl benzofurans[4]. On the other hand, if pisatin itself is irradiated with mercury 253·7 mμ light, it is converted initially to a substance which is spectroscopically very similar to pisatin. This substance differs from pisatin, however, in not forming anhydropisatin on mild acid treatment, and in not showing comparable antifungal activity[5]. Further irradiation followed by acidification gives rise to the isoflavylium compound (III) which is cherry red in strong acid and greenish yellow in weakly acid or neutral solutions (cation has $\lambda_{max.}$ 419, 552 mμ; log ε 4·0, 4·0; neutral molecule has only $\lambda_{max.}$ 419 mμ, log ε 4·0). Spectrophotometric examination shows that this compound is half converted to the cation in 3·4 *M* hydrochloric acid, which indicates that this base is about 100,000 times weaker than the flavylium bases such as anthocyanidins. Compound (III) has similar properties to those reported for the isoflavylium compound prepared by Baker[6].

The ring structure of pisatin occurs in a number of other natural products including pterocarpin and homopterocarpin[2] (from *Pterocarpus santalinus* L.f.), coumestrol[7] (from ladino clover *Trifolium repens* L.), erosnin[8] (from the yam bean *Pachyrrhizus erosus* Rich.), psoralidin[9] (from *Psoralea corylifolia* L.) and wedelolactone[4] (from *Wedelia calendulacea* Less.). It is of interest that in all cases, except *Wedelia calendulacea* (Compositae), the plants, from which this relatively new series of compounds have been obtained, are members of the family Leguminosae (Papilionaceae).

Further details of this work will be published elsewhere.

We wish to thank Mr. B. Moore and Prof. A. J. Birch, of the University of Manchester, for a sample of pterocarpin.

Prodigiosin in an Actinomycete

PRODIGIOSIN, the bright red pigment produced by organisms of the genus *Serratia*, is among the more conspicuous pigments extant in the microbial world. The chemical nature of prodigiosin has been the subject of extensive study and was defined as a tripyrrylmethene by Wrede and Rothhaas in 1934[1]. Subsequent work has demonstrated that the pigment is actually composed of a number of separable components rather than the single entity supposed by earlier workers[1]. Although prodigiosin has been studied predominantly in the genus *Serratia*, the possible presence of the pigment in an actinomycete has been reported[2]. In the course of our isolating vast quantities of actinomycetes from soils collected throughout the world, a small number of orange-red pigmented *Streptomyces* were observed. This communication is concerned with the identification of the pigment produced by these actinomycetes as identical to that produced by *Serratia marcescens*.

The actinomycetes were grown on a medium consisting of soytone, casein hydrolysate, and yeast extract at 0·1 and 3 per cent agar. Plates were inoculated from slants of the actinomycete. After growth for 5 days at 28° C. the cells were washed from the agar surface with acetone/water (50 : 50), dried under vacuum, and extracted with ethanol in a Soxhlet extractor. The pigment was further purified according to the procedure of Williams *et al.*[3].

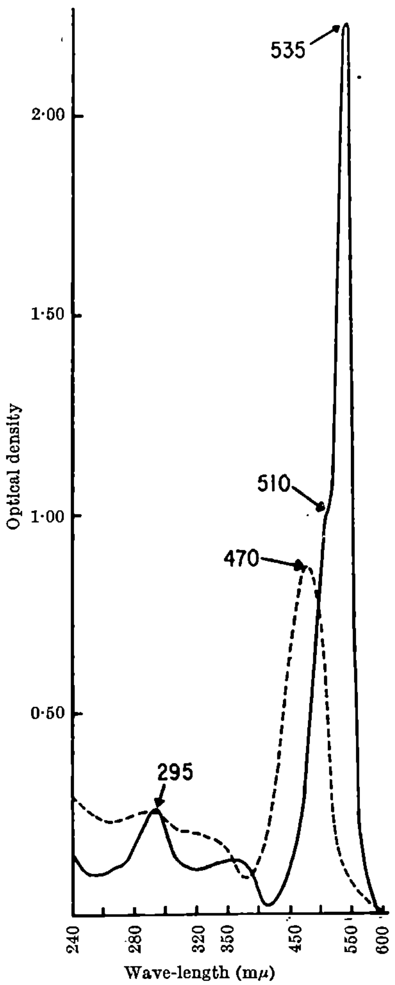

Fig. 1. Spectral properties of purified prodigiosin from an actinomycete. Solid line, when dissolved in absolute ethanol + hydrochloric acid. Broken line, in absolute ethanol + sodium hydroxide

Chromatographic separation of the prodigiosin components was achieved by ascending chromatography using Whatman No. 1 paper and developed with petroleum ether/ethyl ether (2 : 1). Comparison of the chromatographic behaviour of the actinomycete pigment with the bacterial pigment[3] indicated that some differences in the relative quantities of the various components between the two species do exist. The extracts from both actinomycete and *S. marcescens* gave orange-red zones at the following R_F values : 0·92, 0·85, 0·74, 0·46, and a blue spot at the origin.

For the purpose of obtaining ultra-violet and visible spectra of the actinomycete pigment, approximately 100 μgm. of dried pigment was chromatographed. After development, the coloured area at R_F 0·92 was eluted with 10 ml. ethanol. This was the predominant spot on the paper. For a control an equal area of blank paper at the same R_F was also eluted. Spectral analyses were run on a Cary recording spectrophotometer. Acid or alkaline conditions were obtained by adding 1 drop of 1 N hydrochloric acid or 1 N sodium hydroxide to the ethanol extract.

The acid and alkaline spectra of the pigment are presented in Fig. 1. The alkaline spectrum has a peak at 470 mμ. The acid spectrum exhibits peaks at 535 mμ and 295. mμ and a shoulder at 510 mμ. These results are in agreement with published spectra for bacterial prodigiosin[3]. Chromatographic comparison of the bacterial and actinomycete pigment in various solvents[4] showed that the same components were present in each although the relative amounts varied.

The results demonstrate that actinomycetes of the genus *Streptomyces* producing prodigiosin are present in soils. Prodigiosin was isolated, and is qualitatively equivalent to the bacterial pigment, although differences in relative quantities of the components do exist.

PHYSIOLOGY

Vitamin-Levels in Blood and Serum

EXCEPT for folic acid and cyanocobalamin (vitamin B_{12}) only scattered information can be found in the literature on the content of water-soluble vitamins in human blood and serum[1,2]. In order to establish basic values of normal blood and serum vitamin for various clinical investigations, microbiological assays were carried out for a number of vitamins by the methods which we have developed.

Blood was obtained from an antecubital vein and permitted to clot at room temperature for 3 hr. After centrifugation, serum was withdrawn for assay. Care was taken to obtain serum free of any hæmolysis; intracellular contents gave erroneous values. Citrated blood was used for whole-blood assays. Blood and serum were assayed for (*a*) B_{12} with *Ochromonas malhamensis*[3a], (*b*) folic acid with *Lactobacillus casei*[3b], (*c*) unconjugated pteridines with *Crithidia fasiculata*[3c], (*d*) thiamine with *O. malhamensis*[3d], (*e*) nicotinic acid with *Tetrahymena pyriformis*[3f], (*f*) pantothenic acid with *L. plantarum*[3e], and (*g*) vitamin B_6 with *T. pyriformis*[3e]. Table 1 gives the range encountered both in whole blood and in serum of 28 normal subjects. The whole-blood values for folic acid, unconjugated pteridine, thiamine, nicotinic acid, and perhaps for the B_6 group (Table 1) are higher than those for serum; the reverse is true for B_{12}. Nicotinic acid activity almost wholly resides in the cellular elements of the blood.

The folic acid activity of serum, not whole blood, serves as an index of clinical folic acid deficiency[3b]. In blood of normal subjects the cells carry 1/5–1/6 the total B_{12}; in pernicious anæmia their share is 1/2–1/3[4a,b]. Serum B_{12}-levels reflect the tissue supply.

Table 1. VITAMIN ACTIVITIES OF WHOLE BLOOD AND SERUM (μGM./ML.)*

Vitamin	Whole blood	Serum
B_{12}	0·12–0·45	0·14–0·64
Folic acid	14–72	7–27
Unconjugated pteridine	27–70	11–43
Thiamine	20–41	3–15
Nicotinic acid	4,900–9,600	50–80
Pantothenic acid	230–2,075	200–1,650
B_6 group	26–78	26–43

* Based on 28 normal subjects.

In other work, we have observed exceptionally high levels of unconjugated pteridines in sera from patients with gout, while folic acid activity was in the normal range. The normal values presented here have also served as controls in comparative work on the vitamin content in maternal versus fœtal blood[5a,b] and for comparison with the cerebrospinal fluid values in patients with neurologic disease[6a,b].

We thank Dr. T'sai F. Yu of the Department of Medicine, Mount Sinai Hospital, for supplying samples from patients with gout; also we thank the U.S. Public Health Service, the National Association for Mental Health, and the American Cancer Society for financial support.

Aldosterone Excretion and Potassium Retention in Subjects living at High Altitude

IT has been shown[1] that during a prolonged stay at altitudes above 15,000 ft. there is an increase in the salivary excretion of sodium and a decrease in that of potassium. In one subject this change in salivary electrolyte composition showed a marked acclimatization effect (Fig. 1). These findings suggested that, on arrival at a high altitude, the level of circulating aldosterone was likely to be greatly reduced, but that there would probably be a tendency for it to return slowly towards normal values with passage of time.

During July and August 1960, members of the Middlesex Hospital Medical School High Altitude Physiological Expedition spent twenty-four days at an altitude of 14,300 ft. on Mont Blanc[2]. 24-hr. urine collections were made from seven subjects (four men and three women). These specimens were frozen and sent in 'Styrocell' insulated containers by air to London, where they arrived still solid.

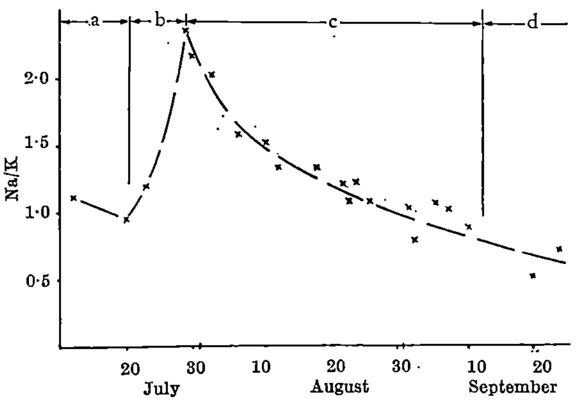

Fig. 1. Salivary sodium/potassium in one individual during an expedition to the Karakoram Mountains. – –, sodium/potassium level in London; *a*, 8,000–10,000 ft; *b*, 10,000–16,000 ft.; *c*, 16,000–20,000 ft.; *d*, below 10,000 ft. Each point is derived from five observations

Assay of urinary aldosterone was carried out by a physico-chemical method modified from that of Ayres *et al.*[3]. The sodium and potassium contents were determined by flame photometry. The results are shown in Fig. 2 and it will be seen that the inference from the earlier work is correct, assuming the validity of urinary aldosterone assay as an index of circulating hormone-levels.

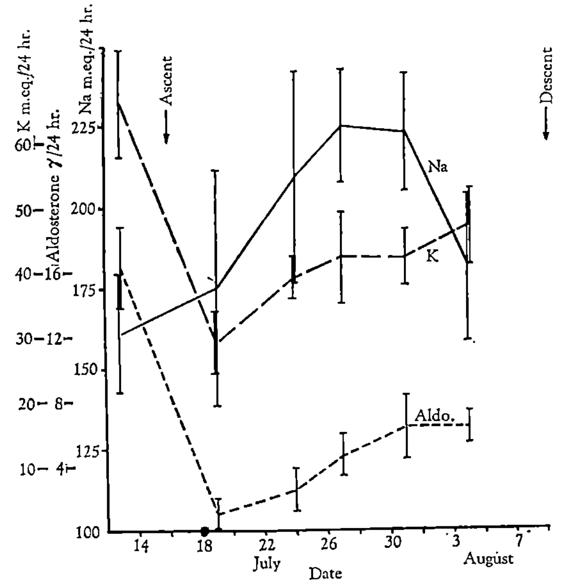

Fig. 2

The decreased potassium excretion apparent from Fig. 2 should result in a demonstrable increase in body potassium content. An attempt was made by one of us (J. R.) to confirm this in three subjects, whose whole body potassium contents were estimated by taking advantage of the naturally radioactive isotope potassium-40, present in potassium to the extent of 0·0119 per cent. The body radioactivity was measured in the human gamma-ray spectrometer[4] at the Atomic Energy Research Establishment, Harwell, before the expedition, and again two days after the descent from the mountain. The results are shown in Table 1. At each measurement the potassium content was calculated from the counting-rates observed in the energy bands 875–1,275 keV. and 1,275–1,675 keV. in the gamma-ray spectrum (potassium-40 emits 1·46 MeV. quanta). The equipment was calibrated by determining the counting-rates in these energy bands from known amounts of pure potassium chloride in aqueous solution in a phantom, and there may be systematic errors of up to about ± 5 per cent in the estimates of the contents of individuals[4]. In all cases the agreement between the two estimates of each subject's content was within the statistical error of counting, indicating the absence of detectable contamination with other radioactive nuclides emitting gamma-rays of energy greater than 0·8 MeV. The values in Table 1 are the weighted means of the pairs of estimates, with statistical standard errors only.

Table 1

Subject	Total potassium content (gm.)		
	Before expedition	After descent	Difference
P. M. ♀	107 ± 3·8	115 ± 3·8	8 ± 5·4
E. W. ♂	146 ± 4·0	152 ± 3·9	6 ± 5·6
W. W. ♀	100 ± 4·2	110 ± 3·8	10 ± 5·7
Total	353 ± 6·9	377 ± 6·6	24 ± 9·6

In only one subject is the increase in potassium content significant at the 90 per cent confidence-level, but the increase in the total content of all three subjects is significant at the 99 per cent confidence-level.

During the stay on the mountain the diet of the subjects consisted largely of dehydrated foodstuffs. In order to establish what effect the diet had on the results obtained, one of the subjects carried out a control experiment at sea-level. 24-hr. urine samples were collected for five consecutive days while he was on a normal diet, and then continued while he was on the same diet as he had eaten on the mountain. These were assayed for sodium and potassium, and three of the five samples relating to the period of normal diet and five of those relating to the period on the special diet were assayed for aldosterone.

The aldosterone results are plotted in Fig. 3 where they are compared with the results from the same subject for the corresponding period on Mont Blanc. It will be observed that a drop in aldosterone

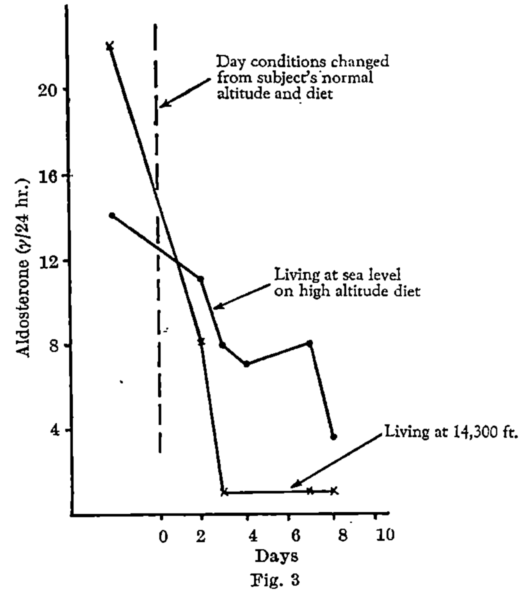

Fig. 3

excretion followed the change in diet, but that this drop was less marked than it was when a change in altitude coincided with the dietary change. If the mean 24-hr. excretion before and after the changed conditions is compared in each case, we see that on the mountain the excretion dropped to 12·5 per cent of its previous mean whereas it dropped to 53·5 per cent when the diet alone was changed.

Controlling Mechanism of the Mechanical Activity of Muscle and that of Blood Coagulation

It has long been suggested that there exists a relationship between colloidal behaviour of muscle and that of blood, namely, (1) molecular structure of actomyosin and that of fibrinogen (both belong to the *k–m–e–f* group[1]), (2) coagulative phenomena both in sarcoplasm and in blood[2], and (3) the role of calcium both in contractile activity of muscle and in blood coagulation[2]. Recently, Heilbrunn[2] has suggested that the mechanism of blood coagulation in relation to the mechanism of cellular activity may be significant. The present communication is concerned with the positive results, which were obtained in a model system of the muscle, to demonstrate the close resemblance between the mechanism in mechanical muscular contraction and that in blood coagulation.

As shown in Fig. 1, phospholipids remove the inhibitory effect[3] of muscle granules on adenosine triphosphatase activity of myofibrils prepared from skeletal muscle. The concentration at which the phospholipid effect begins to appear is relatively low. In Fig. 2, it is shown that heparin inhibits the adenosine triphosphatase activity of myofibrils prepared from skeletal and cardiac muscle. The inhibition is not complete, even if considerably higher concentrations of the agent are used, while the effect begins to appear at relatively lower concentrations, especially in the case of skeletal myofibrils. It is interesting that in the case of myofibrils prepared from heart, which is poor in heparin[2], the inhibitory effect is relatively lower, for example, at 100 units/ml. of heparin it is only about 50 per cent; while, under the similar condition, it is considerably higher in the case of skeletal muscle, which is rich in heparin[2]. The development of tension of a single glycerinated fibre of rabbit psoas muscle due to adenosine triphosphate is also inhibited by the addition of heparin. One more interesting point is that adenosine triphosphatase activity of granules prepared from rabbit skeletal muscle is not inhibited by heparin. The inhibitory action of heparin is therefore specific to the kind of adenosine triphosphatase. The inhibitory action cannot be removed by the addition of calcium and appears regardless of concentrations of adenosine triphosphate.

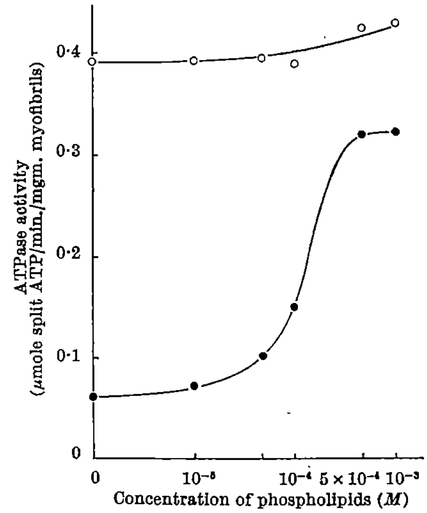

Fig. 1. Phospholipids mixture and the inhibitory action of granules on adenosine triphosphatase activity of myofibrils prepared from rabbit skeletal muscle. ○, Splitting of adenosine triphosphate by fibrils in the absence of granules; ●, that in the presence of granules. The reaction mixture of 3 ml. consisted of 5 m*M* adenosine triphosphate, 5 m*M* magnesium chloride, 5 m*M* potassium oxalate, 360 μgm. protein/ml. of fibrils, 28 μgm. protein/ml. of granules, and 20 m*M* *tris*(hydroxymethylamino)-methane (*p*H 7). Final concentration of potassium in the reaction mixture was 50 m*M*, and the experiments were done at 20° C. Phospholipids mixture used consists of 55 per cent lecithin, 27 per cent colamine-cephalin, 2 per cent serine-cephalin, 5 per cent inositol phosphatid and 5 per cent sphingolipid; and molarity of phospholipids in the reaction solution was calculated as 775 average molecular weight. Concerning myofibrils and granules, see the explanation in Fig. 2

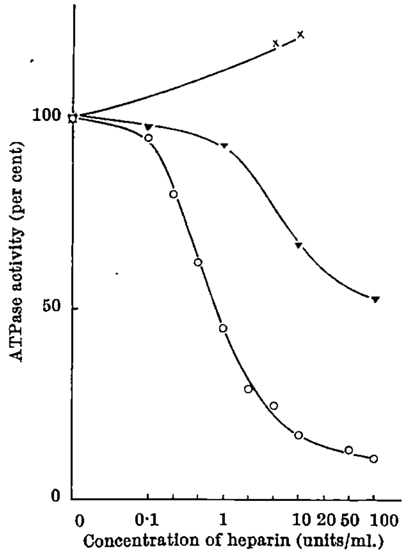

Fig. 2. Effect of heparin on the enzymatic activity of various kinds of adenosine triphosphatase. ○, Myofibrils prepared from rabbit skeletal muscle; ▼, that from dog cardiac muscle; and ×, granules extracted from rabbit skeletal muscle. Myofibrils were obtained according to Perry *et al.* (ref. 8); and granules from 2,600*g* to 35,000*g* were extracted from muscle homogenate, which were obtained in the solution, consisting of 0·1 *M* potassium chloride, 5 m*M* potassium oxalate, and 5 m*M* phosphate buffer (*p*H 7). Conditions of experiments are similar to those of Fig. 1

It is well known that muscle contains various kinds of phospholipids, especially cephalin and lecithin, and heparin[2]. However, their functions are not always clear. Of course, our results are not direct evidence of their significance in the mechanical activity of muscle and do not indicate the dual relationship between the mechanical activity of muscle and blood coagulation, with respect to the processes on which the substances mentioned have an effect. Our results are, however, considered to be very interesting in that substances which play an important part in blood coagulation exert some influence on the function of the contractile element of muscle in the same way as blood coagulation. In view of the liberation of heparin-like substances[2] from skeletal muscle during continued activity and of the existence of lipids[4] in microsome or sarcoplasmic reticulum, it would seem probable from our results that a certain lipid compound, especially a substance related to phospholipids such as cephalin and lecithin, and a certain substance related to heparin, control the activity of the contractile element of muscle. (Our preliminary experiments show that the fatigue substance[2] from frog leg muscles has an inhibitory action on the development of tension of the above fibre due to ATP.)

Many reports[5-7] concerning the mechanism in the excitation-contraction link have been presented. The conclusive solution for this problem has, however, not yet been given. Our results suggest the complexity of the linking mechanism and the resemblance of this mechanism to the mechanism in blood coagulation.

We wish to thank Prof. T. Nagai and Prof. E. Miyazaki for their encouragement in the course of the present work. We are also grateful to Dr. T. Shimojo of the Biochemical Department of Sapporo Medical College for supplying a sample of phospholipids mixture.

Increase of Evaporative Loss of Water from the Skin of the Ox in Response to Local Heating of the Hypothalamus

The existence of centres in the hypothalamus which are concerned with thermoregulation has been established for several species of mammals[1]. In the cat and monkey[2,3] local heating of the region between the optic chiasma and the anterior commissure is accompanied by vasodilatation, an increase in respiratory-rate and sweating.

In the ox, heating of a discrete region of the hypothalamus causes panting and vasodilatation[4], but it is not known if such heating causes any change in the rate of vaporization of water from the skin. Nor is it certain that the sweat glands play any part in thermoregulation[5]. The effect of local heating of the hypothalamus of bull calves on vaporization of water from their skin is reported here.

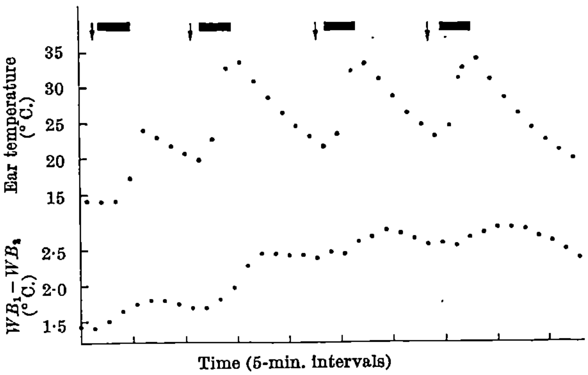

Fig. 1. The figure is taken from a recorder chart on which each temperature was recorded every 80 sec. An increase in the difference between the wet-bulb temperatures ($W.B._1-W.B._2$) indicates an increase in evaporation from the skin. The arrows mark the point at which heating of the hypothalamus was started, while the blocks show the 3-min. periods during which the temperature of the hypothalamus was at 41·5° C.

The brain was heated by means of a radio-frequency voltage applied between two electrodes 1·5 cm. apart on either side of the midline, dorsal to the optic chiasma. A thermocouple midway between the electrodes recorded the temperature to which the brain was heated. Moisture loss from the skin was measured by means of a metal 'sweat cup' through which a stream of air was drawn at a constant rate. The cup was applied to the unshaved skin by means of an elastic belt. Comparison of the wet-bulb temperatures of the air entering and leaving the cup revealed changes in the rate of vaporization of moisture from the skin. Skin temperatures were determined with (40 standard wire gauge) copper-constantan thermocouples applied to the shaved skin of the pinnæ of the ears while skin temperatures under the 'sweat cups' were measured beneath the hair. The rate of respiration was recorded by means of an electro-mechanical counter[6].

Three Ayrshire bull calves, all aged one year, were exposed to room temperatures of 10° C.–20° C. in a climatic room. Three 'sweat cups' were disposed over the thoracic, mid flank and sacral regions of each calf. When the temperature of the hypothalamus was raised to 41·5° C. and held there for 3 min. the rate of loss of moisture in each cup increased in 31 out of 35 instances, although the magnitude of the increase varied. In the four experiments in which there was little or no increase in loss of moisture, the rate of evaporation was already high. The response of one animal (*D*) was considerably lower than that of the other two (*B* and *C*). This animal was much smaller and was known from other work to be inapt in the control of its body temperature in a hot environment.

In all three calves, at the same time as evaporation from the skin increased there was a rise in respiratory-rate, and in those instances in which initially the skin temperatures of the ears were low there was a marked rise in the ear temperature indicating increased blood-flow. Small increases in skin temperature under the 'sweat cups' were also noticed on most occasions. As may be seen in Fig. 1 the rate of loss of moisture increased rapidly while the hypothalamus was being heated and continued to rise after heating had ceased; thereafter evaporation declined slowly. Heating the hypothalamus for less than 3 min. or to less than 41·5° C. produced only a very small increase in evaporation, although a rise in the skin temperature of the ears occurred and respiratory-rate increased.

When the hypothalamus was repeatedly heated to 41·5° C. for 3 min. at intervals, the rate of evaporation from the skin increased progressively (Fig. 1), but the magnitude of the increase tended to decline with successive stimulations.

The results of the present work demonstrate that evaporation from the skin as well as vasodilatation and panting can be stimulated by heating the hypothalamus. It is not, however, suggested that a rise in the temperature of the hypothalamus is a necessary condition for an increase in loss of moisture from the skin.

The increase in evaporation may be related to the active secretion of the sweat glands, or to an increase in diffusion of water through the skin. The progressive increase in evaporation after repeated heating is, however, difficult to account for if evaporative loss is due to simple diffusion.

Effect of Added Vitamins on the Phagocytic Activity of the Reticulo-Endothelial System of Mice

WE have reported that œstrogens stimulate the reticulo-endothelial system in the spleen, liver and lymph nodes and lead to mobilization of the phagocytes into the blood stream and thus probably to an increase of the general defence of the body against infection[1]. We have also shown that antibiotics[2] and sulphonamides[3] have little effect on the phagocytes; but cortisone depresses the reticulo-endothelial system and also reduces the concentration of gamma-globulin in the serum to about half the normal level[4]. Unpublished research in this laboratory also shows that when the reticulo-endothelial system is stimulated with, for example, diethylstilbœstrol, the serum gamma-globulin is increased to about twice the normal level, and the formation of antibody is increased about eight times. Groups of mice and guinea pigs may be protected by this means against challenge with a number of lethal doses of virulent bacteria. Further unpublished results show that, when animals are given a diet free from vitamin *A*, the reticulo-endothelial system becomes greatly depressed and when normal diet (Oxo mouse and rat diet) is resumed the phagocytic index returns to normal in about thirteen days.

The present research was planned to ascertain the effect of added vitamins on the phagocytic activity of the reticulo-endothelial system in normal healthy animals.

Two hundred and ten male white mice (T.O. Swiss strain) of 20–25 gm. weight were used in these experiments. Ten animals were used to test each vitamin. The vitamins used, the dose, route of administration, frequency and duration of dosage are shown in Table 1. The estimated daily vitamin requirements, also shown in Table 1, are those given by Spector[5].

The doses in most of the experiments are greater than the estimated requirement and during the treatment the animals remained on normal diet. Vitamin D was dissolved in olive oil, vitamin E and vitamin K (natural) in arachis oil to which a small amount of 'Teepol' was added, and the remaining vitamins were given in aqueous solution suitably buffered for stability according to information kindly supplied by Roche Products. All the solutions were made up so that one dose was contained in 0·2 ml. The route

Table 1. EFFECT OF ADDED VITAMINS ON THE PHAGOCYTIC ACTIVITY OF THE RETICULO-ENDOTHELIAL SYSTEM

Vitamin used	Estimated daily requirement	Dose	Route	Frequency of dosage	Duration of dosage	Mean phagocytic index (*K* value) ± *S.E.*

Controls						15 ± 2·0

of administration was either intraperitoneal or by stomach tube.

Two days after completion of the vitamin treatment the phagocytic activity was measured in each group of animals by the rate of disappearance of a known amount of specially prepared carbon from the circulating blood[6], the procedure used being that described in a previous communication[3], and the total body phagocytic activity or phagocytic index being denoted by the symbol K.

Ten control animals, receiving no treatment, showed a phagocytic index or K value of 15 ± 2·0.

The results are shown in Table 1. In the doses administered the vitamins given to normal healthy growing mice had no discernible effect on the phagocytic activity of the reticulo-endothelial system. The above results might well have been expected since, for the most part, vitamin action appears to be related to the enzyme systems of normal cellular metabolism. In contrast, in infection, when the metabolism of the reticulo-endothelial cells increases, the requirement for the various vitamins may also be raised.

In these investigations we gratefully acknowledge advice and gifts of vitamins from Roche Products, Ltd., and Glaxo Laboratories, Ltd., and also financial assistance from the Tobacco Manufacturers' Standing Committee and the Medical Research Council.

Effect of Bradykinin on Uterine Activity

It was reported recently[1] that plasma kinin is formed spontaneously in human plasma collected during labour. Tested on the isolated rat uterus, the maximum oxytocic activity was stated to be equivalent to several units of oxytocin per millilitre of plasma. It was suggested that kinin formation may be related to the powerful contractions of the human uterus during parturition.

As yet the only kinin which has been chemically defined and is available in a pure form is bradykinin. We therefore investigated the uterine effect of synthetic bradykinin[2] on the human uterus *in situ* (external[3,4] and internal[5] tocography) and *in vitro*[6], and on the uterus *in situ* of anæsthetized non-pregnant rats, cats[7] and rabbits[8].

Single intravenous injections of up to 2 μgm./kgm. bradykinin and intravenous infusions of 0·14, 0·28 or 0·56 μgm./kgm./min. of bradykinin—each dose infused for a period of 5 min.—had no oxytocic effect on the human uterus *in situ* a few hours before or after labour. In one case, 1·4 μgm./kgm./min. infused for 3 min. was followed by a contraction, which may have been connected with the administration of the peptide. Although no uterine effect could be detected, the administration of higher doses of bradykinin elicited a number of symptoms, such as lowering of the systemic blood pressure, hot flushes, sensation of warmth in various parts of the body, etc.

Isolated strips of human myometrium obtained at Cæsarian section contracted only after bradykinin doses as high as several hundred or even thousand μgm./l. Some strips failed to respond even to 10,000 μgm./l., although their sensitivity to oxytocin ('Syntocinon^{R}'), for example, 25–100 milli-units/l. was normal (100 milli-units oxytocin is equal to 0·2 μgm. peptide).

The rat uterus *in situ* usually gave a short-lived contraction with 100 μgm./kgm. bradykinin (intravenous); 10 μgm./kgm. elicited a response only in a few animals. 100 milli-units/kgm. oxytocin consistently produced a response in all the rats.

In the cat uterus *in situ* 100 μgm./kgm. bradykinin (intravenous) invariably elicited a short-lived response. In many animals 33 μgm./kgm. or 10 μgm./kgm. was also effective, and one responded to as little as 3·3 μgm./kgm. All the cats displayed a characteristic uterine reaction to 40–80 milli-units/kgm. of oxytocin.

The sensitivity of the rabbit uterus *in situ* to bradykinin varied greatly. Whereas in some rabbits the intravenous injection of 1 or 10 μgm./kgm. was followed occasionally by a brief contraction of the uterus, others did not react even to 100 μgm./kgm. (intravenous). All rabbits showed a normal sensitivity to methyl-ergometrine ('Methergin^{R}'): 0·15 mgm./kgm. invariably elicited the usual uterotonic reaction.

The isolated rat uterus is known to have a very high sensitivity to bradykinin: a minute dose of 0·00003 μgm./ml. will sometimes elicit a contraction[9]. However, the findings presented in this communication show that bradykinin can scarcely be regarded as oxytocic in the usual sense of the word. The doses of bradykinin required to elicit a contraction of the rat, cat and rabbit uterus *in situ* are usually much higher than those evoking a marked fall of blood pressure. Moreover, the contraction is of a shape different from that produced by a low dose of oxytocin. The amounts of bradykinin which contract the isolated human myometrium are extremely high, and on the human uterus *in situ* bradykinin is virtually devoid of any effect, even in doses producing considerable distress.

These findings do not favour the view that bradykinin might be a physiological oxytocic factor responsible for increased uterine activity during labour in the human being.

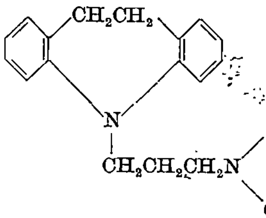
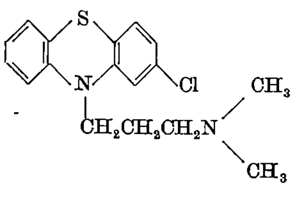
Demonstration of Anti-Depressant or Stimulant Properties of Imipramine in Experimental Animals

IMIPRAMINE (I) is a drug that is related chemically to the major tranquillizers of the phenothiazine group such as chlorpromazine (II).



(I)



(II)

As distinct from chlorpromazine, however, imipramine is claimed to be of considerable value in the treatment of depression, particularly of the endogenous type[1-3]. Pharmacologically, imipramine has many of the properties of chlorpromazine although it is quantitatively less potent. Thus in the mouse, imipramine, like chlorpromazine, reduces motor activity, prolongs hexobarbitone sleeping time, and causes a fall in rectal temperature[4,5]. Both imipramine and suitable doses of chlorpromazine counteract the hypothermia, ptosis, bradycardia, and diarrhœa caused by reserpine administration in rats[6], and both drugs produce sedation in the cat and dog[4]. In the curarized cat, both drugs block the electrocortical desynchronization caused by electrical stimulation of the mesencephalic reticular formation[4], although it has been suggested[7] that this action of imipramine is due to atropine-like properties rather than to chlorpromazine-like sedation. Slight qualitative differences have been observed between chlorpromazine and imipramine in their action on the electrical activity recorded from certain sub-cortical areas in the rabbit. The resemblance between the pharmacological actions of these two drugs has led to the view[6] that the differences between the pharmacological effects of chlorpromazine and imipramine are, at present, only quantitative, rather than qualitative. Furthermore, unlike other drugs, such as iproniazid and nialamide, used at present in the treatment of depressive illnesses, imipramine is not an inhibitor of mono-amine oxidase[9]. There appeared, therefore, to be no pharmacological basis for its important clinical anti-depressant properties.

We wish to report on the action of imipramine in two laboratory tests which clearly reveal actions indicative of central stimulant or anti-depressant properties and which are qualitatively different from those of chlorpromazine and related phenothiazine derivatives.

(*a*) *Production of secondary conditioned responses in the rat.* A conditioned avoidance situation similar to that previously described[10] was used, in which rats were trained to climb a vertical rope at the sounding of a buzzer (conditioned stimulus), in order to avoid an electric shock (unconditioned stimulus). The three types of response which conditioned rats may show when placed in this situation are: (1) climbing the rope at the first conditioned stimulus (this is the response shown by most fully conditioned animals); (2) climbing the rope after a number of conditioned stimuli, or not climbing at all (this indicates that the conditioned reflex has been partly or completely inhibited); (3) climbing the rope before the conditioned stimulus is given. This last type of response has been termed a secondary conditioned response[11]. The ability of imipramine and other drugs either to block the conditioned reflex or to induce a secondary conditioned response was determined at intervals after administration. All the rats used in this investigation were selected from those giving consistent performances and climbing on the first conditioned stimulus.

(*b*) *Reversal of reserpine-induced ptosis in the rabbit.* In order to demonstrate an anti-reserpine property of imipramine we used the following method: Reserpine was infused intravenously into conscious rabbits restrained in a stock until a dose of 2·5 mgm./kgm. had been administered. Approximately 30 min. after the

Chlorpromazine hydrochloride	s.c.	3·0	—	—	General sedation, complete or partial ptosis, reduction in motor activity, some loss of muscle tone.	>40

reserpine infusion, the rabbits developed symptoms of sedation including loss of reactivity, ptosis, hypothermia, and often loss of the righting reflex. This central depression was marked 1 hr. after the reserpine, and lasted for at least 4 hr. One hour after the administration of reserpine, a dilute solution of the drug under test was infused intravenously at the rate of 0·4 ml./min. The quantity of drug required to reverse the reserpine sedation completely was measured. We found that the degree of ptosis of the animals was the most satisfactory criterion of reserpine-induced sedation, since this followed closely the level of general reactivity and enabled a sharp end-point of the reserpine reversal to be obtained.

Table 1 sets out the activities of imipramine in these two tests in comparison with chlorpromazine, dexamphetamine and cocaine. Inhibitors of mono-amine oxidase, such as iproniazid and nialamide, were inactive in the two procedures.

At low doses in the rat, imipramine showed clear-cut stimulant properties; but as the dose was increased, chlorpromazine-like central depressant properties became more apparent. In the rabbit, complete reversal of reserpine-induced ptosis was observed after intravenous infusions, and if the infusion were continued exophthalmos became prominent. These changes were accompanied by an increase in alertness and general reactivity.

The fact that iproniazid and nialamide are inactive in these tests whereas imipramine shows clear-cut activity suggests that the mechanism of the anti-depressant action of these drugs is quite different. Sigg[4] has suggested, from experiments on the nictitating membrane of the anæsthetized cat, that imipramine bears some resemblance to cocaine in its peripheral actions and that its anti-depressant effect may be due to sensitization of central adrenergic synapses. Although we have no evidence on this point, imipramine would appear to differ from cocaine in that it shows stimulant properties at low doses only, while at high doses a chlorpromazine-like type of sedation is observed.

It is of interest that the effective doses of dexamphetamine, cocaine and imipramine in the tests in the rat and rabbit are of the same order of magnitude and this suggests that the same central property is being measured in the two procedures. Whether this property is the one which in man is responsible for the clinical anti-depressant effects we cannot say. However, these experiments clearly differentiate imipramine from chlorpromazine and show its resemblance to the classical central stimulants.

Role of the Lung in Metabolism of Fat during Ontogeny of the Rat

Milk of the rat contains up to 20 per cent fat[1], and the gastro-intestinal tract of infant rats absorbs fat more rapidly than that of adult animals[2]. The cells of the intestinal mucosa of infant rats after a meal contain much more neutral fat than those of adult animals where more 'acid lipids' are found[3] (using nile blue). This, together with a lower intestinal esterase activity in infant rat intestine[3], indicates a different absorption and perhaps transport of fat. Since fat transported via lymphatic pathways must pass through the lungs before entering the blood, it was thought pertinent to examine this organ histochemically during ontogeny of the rat.

First, infant rats (1 and 10 days post-natally) taken directly from the mother animal with their stomachs full of milk were compared with animals aged 45 days (post-weaning stage) and adult rats. As is evident from Fig. 1, fat accumulates in the adventitia of the arterioles and arteries and in the walls of the alveoli in infant rats aged 1 and 10 days. No fat is found in the macrophages. In animals aged 45 days and adult rats there is no fat. Only occasionally, macrophages are seen having fat droplets in their cytoplasm. Complete starvation for 24 hr. resulted in disappearance of all fat from the lungs of infant rats. In adult animals no changes were observed.

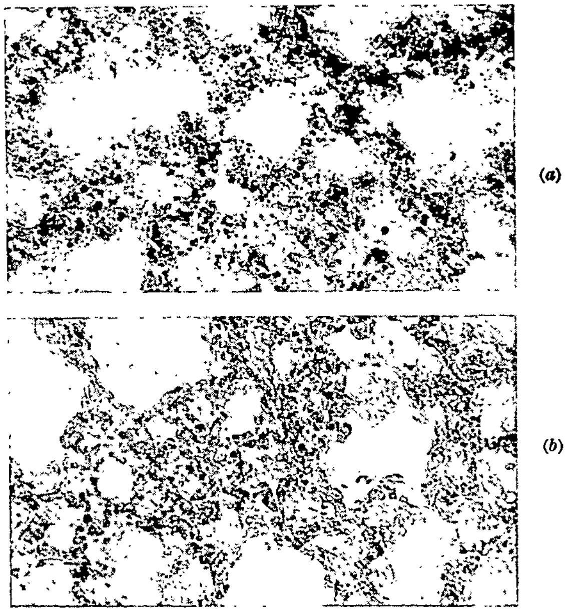

Fig. 1. (*a*) Lung of 10-day-old rat after feeding with milk. Frozen section, oil red 7*B* (× 90). (*b*) Lung of adult rat after feeding. Frozen section, oil red 7*B* (× 90)

In further experiments olive oil or oleic acid (1,000 mgm./100 gm. body-weight) was administered to starving rats and the animals were killed 1 hr. and 3 hr. and, for adult rats, also 7 hr. later. The histological picture was exactly the same as in fed animals. Again fat was found in the lungs of suckling rats and none in adult animals.

Schrade and Biegler[4] also found no fat histologically in the lungs of adult rats following a fatty meal. On the other hand, they found an increase in fat content of the lungs as determined chemically. This might indicate that the fat in the lungs is present in a different form in adult and infant rats, and that this might be due to a difference in transport of fat and in the part played by the lungs in this process. A preliminary experiment using a 5-day-old puppy showed the same picture as in infant rats.

Lack of Evidence for a Cholinergic Mechanism in Sympathetic Transmission

THE nerve supply to many sympathetic effector organs contains cholinergic nerve fibres as well as adrenergic fibres. Recently, the hypothesis has been put forward that a cholinergic mechanism is involved in sympathetic transmission[1,2]. It has been suggested that acetylcholine released from cholinergic nerve endings liberates from a local tissue store sympathetic transmitter which in turn acts on the effector organ.

One of the ways in which this hypothesis has been tested has been to use a hemicholinium, HC3 (ref. 3), which inhibits the formation of acetylcholine[4,5]. If sympathetic transmission does depend on the release of acetylcholine the effect of stimulating post-ganglionic sympathetic nerves should be blocked by HC3. Rand and Chang[6] showed that HC3 blocked the contractions of the isolated ductus deferens of the guinea pig produced by stimulation of the sympathetic nerve. Later they showed similar effects on a number of other sympathetic effector organs, including the isolated uterus and colon of the rabbit, the perfused rabbit ear, the isolated atria of the cat and the piloerector muscles of the cat's tail, most of which are known to contain both cholinergic and adrenergic fibres in their nerve supply[7].

To determine whether adrenergic transmission is necessarily mediated via a cholinergic mechanism we have used the nictitating membrane of the cat. This can be set up as an isolated nerve–smooth muscle preparation[8], and the evidence is that under these conditions neuromuscular transmission is purely adrenergic[8]. The post-ganglionic nerve fibres were stimulated with supramaximal square-wave shocks of 0·5 msec. duration at frequencies of 5, 10, 20, 25, 50 and 100 c./s. for periods of 7 sec. repeated every minute. HC3 in concentrations of 20–540 μgm./ml. ($=3{\cdot}5 \times 10^{-5}-9{\cdot}4 \times 10^{-4}\,M$) had no effect on the contractions of the muscle in response to nerve stimulation; even when stimulation was carried out in this way for more than 1 hr., there was no effect. These findings confirm those reported by Wilson and Long[9], who tested the action of HC3 on the nictitating membrane *in vivo*.

HC3 prevents the formation of acetylcholine not by inhibiting choline acetylase directly but by preventing the passage of choline through cellular membranes which enclose the enzyme[5]. The blocking effect of HC3 may not therefore become apparent unless the duration and frequency of nerve stimulation are sufficient to deplete the stores of acetylcholine[4]. In our experiments the higher frequencies of intermittent stimulation were greater than those which were required to produce an effect on the test objects used by Chang and Rand[7]. Nevertheless, the possibility remained that HC3 would not block the contractions of the nictitating membrane unless the nerve were stimulated continuously. When this was done at frequencies of 25 c./s. and 100 c./s. the contraction produced began to wane almost immediately, but the presence of HC3 in concentrations of 60–100 μgm./ml. ($=1{\cdot}05 \times 10^{-4}-1{\cdot}75 \times 10^{-4}\,M$) did not alter the rate at which the contraction decayed, even when HC3 was present for as long as 40 min.

Another indication that transmission is cholinergic might be that choline prevents or reverses the waning contraction produced by continuous stimulation at high frequencies. It was found, however, that choline in concentrations of 1·4–200 μgm./ml. ($=10^{-5}-1{\cdot}42 \times 10^{-3}\,M$) did not diminish the rate of decay.

These results do not support the suggestion that a cholinergic mechanism is concerned in sympathetic transmission over adrenergic nerve fibres.

We wish to thank Dr. M. J. Rand and Dr. H. Wilson for generous supplies of HC3. Experiments in which these gifts of HC3 were used gave results identical to those obtained with HC3 prepared by one of us (J. E. G.).

HISTOCHEMISTRY

Leucine Aminopeptidase in the Mammary Gland of the Cow and Rat

MORPHOLOGICALLY the mammary gland is a cutaneous gland, but physiologically it must be classed as an accessory gland of the reproductive system. In the various stages of the life of the female mammals the mammary gland undergoes many structural changes. Up to the age of puberty it is rudimentary in structure. During pregnancy the endocrine factors furnish a stimulus for proliferation of the mammary tissue, resulting in a complete transformation and maturation of the gland. The appearance of fine granulations and fat droplets in the epithelium cells indicates the onset of secretion in advanced pregnancy.

To our knowledge, the activity of the histochemically demonstrable leucine aminopeptidase in the mammary tissue has not been studied previously; therefore the object of our present work was to investigate the leucine aminopeptidase activity in the mammary gland of the cow and rat in the various stages of development.

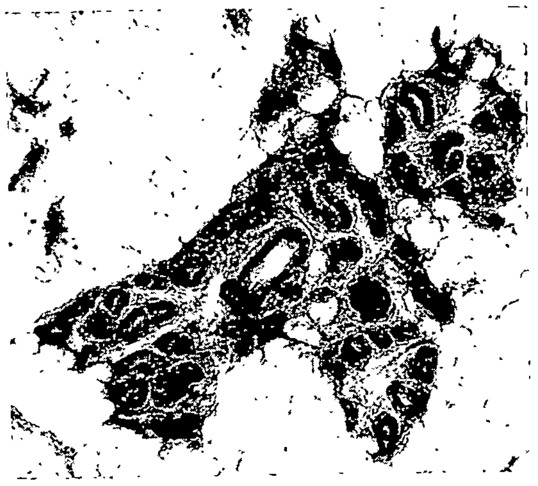

Fig. 1. Great activity of leucine aminopeptidase in the mammary tissue of a pregnant rat. (× 50)

The method employed in the demonstration of the leucine aminopeptidase activity in the tissue was the original method of Nachlas *et al.*[1]. The mammary glands were taken from virgin, pregnant and lactating animals. The parts of glands were cooled with dry ice and sectioned with the Pearse cold microtome[2]. The incubation time was 15–30 min.

The positive areas were characterized by a violet stain. In the mammary glands from virgin and pregnant animals a strong activity of leucine aminopeptidase was observed. This activity was located in the walls of the glandular ducts and also in the epithelium buds representing the glandular tissue in the non-functional gland. These buds were mainly without lumina. An example of this activity is shown in Fig. 1. The connective tissue including adipose tissue was nearly negative. In the lactating gland the activity was very slight (Fig. 2). Its location was the same as that in the non-functional gland. Especially in the alveolar epithelium the activity was minimal, in fact practically absent.

From the physiological point of view, the result is difficult to explain. The role of leucine aminopeptidase in tissues is still obscure. Observations made by Pearse and Tremblay[3] indicate that leucine aminopeptidase participates in the protein synthesis of the parathyroid glands. It also seems likely that the leucine aminopeptidase of the cells of the gastric mucosa is responsible for the pepsin synthesis[4]. This enzyme is, however, not associated with the casein synthesis of the mammary gland during lactation according to the present results. Apparently, the protein synthesis may be independent of the activity of the histochemically demonstrable leucine aminopeptidase.

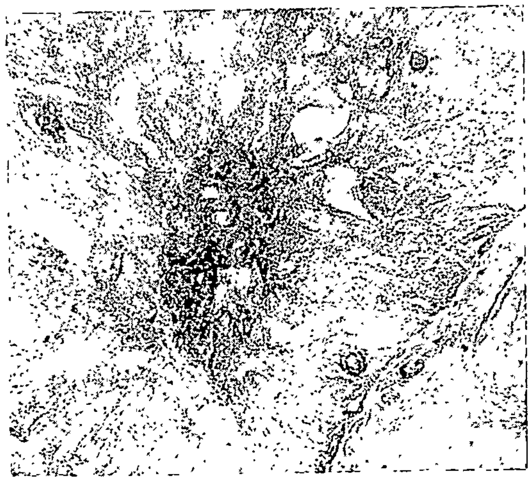

Fig. 2. Mammary gland of a lactating rat. Activity very slight. (× 50)

Further investigations on the effect of various hormones on the leucine aminopeptidase in the mammary tissue are in progress.

PATHOLOGY

Resistance to Infection with *Salmonella paratyphi C* in Mice parasitized with a Relatively Avirulent Strain of *Salmonella typhimurium*

Although previous specific active or passive immunization may prolong slightly the survival-time of mice infected with mouse-pathogenic *Salmonellæ* (for example, *Salm. typhimurium*, *Salm. enteritidis*), the number of long-term survivors is but little improved[1–3]. Similarly, attempts to enhance resistance against mouse typhoid non-specifically, either by previous infection with *Mycobacterium tuberculosis* (strain *BCG*)[4] or by injections of lipid *A* from Gram-negative bacteria[5], have also met with only limited success. On the other hand, Hobson[3] showed that mice were highly resistant to virulent *Salm. typhimurium*, in terms of survival, if they had been infected previously with an avirulent variant of the same species. As *Salm. typhimurium* is a reticulo-endothelial parasite in mice, like *Myco. tuberculosis* and *Brucella abortus*, the possibility arises that this greatly increased resistance might resemble the cellular antibacterial immunity mechanism inferred from investigations with these latter micro-organisms[6–8]. Evidence has been obtained, however, both from *in vitro* macrophage studies and mouse infection experiments, which suggests that 'cellular immunity' following infection with *Myco. tuberculosis* cross-reacts against *Brucellæ* and vice versa[9–12]. The present communication illustrates that there is also a considerable non-specific element in the resistance produced by avirulent *Salm. typhimurium*, for this has been found to be effective against a heterologous *Salmonella* infection. *Salm. enteritidis* was considered unsuitable for use in this role as it shares somatic antigen components with *Salm. typhimurium*. Instead, *Salm. paratyphi C* (6,7,*Vi* : *c* : 1,5) was selected as it shares only one second-phase flagellar antigen with *Salm. typhimurium* (1,4,5,12 : *i* : 1,2) and, although not a natural mouse pathogen, produces an experimental infection similar to mouse typhoid.

A group of 30 female mice of the *LAB.* Grey outbred stock (weight 20–23 gm.) was infected with *Salm. typhimurium* (strain *S2/R*) by injecting intravenously 1,000 bacteria taken from a 6-hr. broth culture. This was the same relatively avirulent strain of *Salm. typhimurium* previously used by Dr. Derek Hobson[3] and kindly provided by him. After 13 days, at which time no deaths had occurred, 5 animals were killed and viable bacterial counts made on the homogenized liver and spleen of each. *Salm. typhimurium* was recovered in all cases with counts varying between 10,000 and 50,000. On the following day (day 14), the phagocytic activity of the reticulo-endothelial system was investigated in a further 5 mice, by following the rate of disappearance of a standard dose of colloidal carbon from the circulating blood according to the method of Biozzi and his colleagues[13]. The results in Table 1 show that the reticulo-endothelial system was more than twice as active, when assessed by the phagocytic index *K*, than in a group of control mice. Furthermore, the mice parasitized with *Salm. typhimurium* showed some relative enlargement of the liver and spleen, although this was pronounced in only 2 out of the 5 animals examined. The remaining 20 mice treated, together with 20 normal animals, were then injected intravenously with *Salm. paratyphi C* (Kauffmann East Africa strain) at a dose of 100,000 bacteria from a 6-hr. broth culture. Whereas 100 per cent mortality occurred in the control group, only one mouse died among those pre-infected with *Salm. typhimurium* during a 30-day period of observation (Table 2). *Salm. paratyphi C* was isolated from the heart blood of this sole fatality.

It seems improbable that such a high degree of resistance, which compares favourably with the result of active immunization against *Salm. paratyphi C* in mice[14], could be explained by the minor flagellar antigenic relationship between these *Salmonella* species (unless, of course, *H* antigens assume an importance in this resistance following parasitization which they do not possess in orthodox immunization procedures). Neither would the raised phagocytic activity of the reticulo-endothelial system alone provide a satisfactory explanation, for greater degrees of stimulation induced by other means have failed to protect against infections of this type[15,16]. In some way, previous parasitization of the reticulo-endothelial cells by *Salm. typhimurium* would seem to inhibit subsequent multiplication within those cells of a secondarily invading *Salmonella*[3], even when this does not necessarily belong to the same or a closely related species.

ANATOMY

Functions of the Mammalian Carotid Rete Mirabile

ALTHOUGH a carotid rete mirabile is present in many mammals, notably the artiodactyla, its function is uncertain. Many workers have suggested that the rete may regulate the cerebral blood-flow[1,2], but emphasis has usually been laid on its effect on the arteries rather than the veins. However, an alternative possibility is that the rete is concerned primarily with assisting the venous return from the interior of the cranium, which is especially liable to be embarrassed in animals that feed with the head dependent. Enhancement of the blood-flow in veins is known to be a function of certain retia mirabilia elsewhere[3].

When present, the carotid rete always lies within a venous lake, usually the cavernous sinus[1]. In man, the expansile pulsations of the internal carotid artery are said to assist the expulsion of venous blood from the sinus[4], but a single thick-walled artery has limited powers of expansion[5]. Replacement of one artery by multiple thin-walled channels must enhance considerably the arterial expansion and, thus, the venous return.

In general, the evidence for such a pumping mechanism is the demonstration of pulsatile flow in the veins draining a part, coincident with the pulsations in the arteries of supply. In the umbilical vein, for example, such coincident pulsations have been recorded[6]; these are certainly due to direct pressure from the companion arteries in the umbilical cord. We have obtained comparable results with respect to the carotid rete of the sheep. In two heads from freshly slaughtered sheep the jugular vein and the common carotid artery were cannulated in the neck, and warm water was perfused via the artery at a pressure of 100 mm. of mercury. The venous pressure settled at 33 cm. of water. Rhythmic occlusion and release of the inflow channel gave rise to coincident pulsations in the venous flow, and the venous pressure rose by 12 cm. and overflowed the manometer tube. In a third sheep's head the vein cannulated was a large one, draining the extracranial tissues only. Rhythmic arterial pulsations had no effect on the flow in this vein, an indication that the venous pulsations noted in the first two experiments were directly transmitted from the arterial vessels to the venous lake within the cavernous sinus, the rete mirabile acting as a venous pump.

BIOLOGY

Sex-Ratio in Mice

The impression gained from glancing through our mouse record cards suggested to us an unusual sex-ratio in some of our strains; some strains appeared to be consistently producing more males than females or vice versa. As impressions are notoriously misleading, it was decided to carry out a brief analysis.

Mice are produced and recorded at the Laboratory Animals Centre, Carshalton, in the manner described by Bartlett *et al.*[1]; under our system mice are sexed not at birth but at weaning. Because of this, the only litters included in the sex analysis were those where all the mice survived until nineteen days of age (that is, until weaning). Total numbers of litters per strain were considered to ascertain whether the proportion analysed could be correlated with abnormal sex-ratio. The period under review was March 1955, until February 1959.

Results obtained from this analysis are recorded in Table 1. Columns 2, 3 and 4 give the figures necessary for analysis of the litters, and columns 5, 6 and 7 those necessary for the sex analysis of the mice from litters where there was 100 per cent survival. The expected numbers of each sex for each strain were calculated on the basis that the male : female ratio equals 1 : 1 and a χ^2 goodness-of-fit test applied to observed and expected numbers of each sex. χ^2 values and probability-levels (P) are tabulated for each strain.

The results show that in the case of the *A*, *C57BR/cd* and the *LAC* albino strains, significantly more females than males were produced whereas the *CE* strain produced more males than females. Other strains showed a more normal sex ratio. No correlation is evident between survival of the whole litter and sex ratio.

Methæmoglobin in Chronic Copper Poisoning of Sheep

After protracted periods of high copper-intake some species of farm animals accumulate large excesses of copper in the liver, and in certain circumstances this copper can be suddenly released into the blood and the clinical entity known as chronic copper poisoning develops[1–4]. Sheep are particularly susceptible, and the sequence of clinical symptoms is generally: anorexia, hæmolysis of red cells, hæmoglobinuria, anæmia, jaundice and death. Although the build-up of copper in the liver may take place over a period of weeks or months, the 'hæmolytic crisis' is an acute illness and death usually occurs within 2–3 days.

Although hæmolysis and hæmoglobinuria are constant features[5,6], the occurrence of methæmoglobin does not appear to have been recorded. In outbreaks of chronic copper poisoning[3,7], it has been observed that blood samples from affected animals are often chocolate brown in colour, and spectroscopic examination showed the presence of methæmoglobin. Estimations of methæmoglobin and total hæmoglobin by the method of Evelyn and Malloy[8] have been carried out on a number of cases and typical results from three affected sheep are set out in Table 1, with normal levels for comparison.

Table 1. TOTAL HÆMOGLOBINS, METHÆMOGLOBIN AND COPPER-LEVELS IN WHOLE BLOOD IN CHRONIC COPPER POISONING

	Blood copper (μgm./100 ml.)	Total hæmoglobins (gm./100 ml.)	Methæmoglobin (gm./100 ml.)
Case 1	1,210	11·5	3·5
Case 2	1,480	8·8	3·6
Case 3	1,000	15·5	3·8
Normal sheep	170	10 to 12	0·1

Copper-levels in blood were extremely high and methæmoglobin constituted 25 per cent to 35 per cent of the total hæmoglobin present. The methæmoglobinæmia was mainly intracorpuscular, but since hæmolysis was taking place, hæmoglobin and methæmoglobin were being released into the plasma, the proportions being approximately the same as occurring in whole blood, for example, plasma total hæmoglobins 2·2 gm. per 100 ml.; methæmoglobin 0·8 gm. per 100 ml. (36 per cent).

The pathological significance of these findings is being investigated.

Release of Heparin from the Mast Cells of the Rat

MAST cells are an important source of tissue heparin and of histamine[1,2]. Histamine is known to be released following disruption of mast cells[3] and in the dog there is an associated release of heparin[4]. In other animals it has not been possible to detect liberation of heparin coincident with release of histamine.

The liberation of heparin from rat mast cells has been investigated *in vitro* following disruption of the mast cells. Cells were obtained from the peritoneal cavity of the rat by a method already described[3]. Mast cells were separated from other peritoneal cavity cells by centrifugation for 30 min. at 0° C. over a column of bovine albumin of 1·109 specific gravity. The mast cells passed through the albumin column and were collected at the bottom of the centrifuge tube. They were washed in physiological saline solution and suspended in saline solution in a concentration of approximately 0·5 million mast cells per ml. of solution. The mast cells in 1 ml. of suspension were disrupted by the following methods: (1) alternately freezing and thawing three times; (2) mechanical disruption in a piston and cylinder type homogenizer; (3) addition of compound 48/80 to give a final concentration of 2×10^{-6} mgm./ml.; (4) osmotic disruption with distilled water; (5) disruption by contact with an antigen–antibody mixture as already described[3]. This mixture consisted of 1 vol. of a 25 per cent suspension of human red cells in physiological saline solution and 5 vol. fresh rat antiserum at 37° C. and *p*H 7. After disruption of the mast cells, the preparations were centrifuged and the supernatant solutions assayed for antithrombin activity by the method of Monkhouse and Jaques[5].

The only supernatant solution of the disrupted mast cells found to have any antithrombin activity was the preparation that had been frozen and thawed three times. Activity equivalent to approximately 3·5 I.U. of heparin was released into the supernatant solution for each million mast cells frozen and thawed. Antithrombin activity remained uniform throughout the supernatant after centrifugation for 1 hr. at 28,000*g* in a 'Spinco' ultra-centrifuge. A residual small amount of activity, less than the equivalent of 0·5 I.U. heparin per million mast cells, was found in the deposit of the disrupted cells.

If the deposits of the other four solutions were digested with trypsin at *p*H 8·0 and then neutralized, the solutions showed antithrombin activity equivalent to approximately 4 I.U. heparin per million mast cells. This value agreed with the antithrombin content of untreated mast cells. As with heparin, the activity was readily neutralized by small amounts of protamine sulphate.

Microscope examination of stained smears of the disrupted mast cells revealed disruption of the granules only in the preparations which had been frozen and thawed.

It may be concluded that the antithrombin present in rat mast cells is not released into the surrounding solution following disruption of these cells *in vitro* unless the granules also are disrupted. This is in contrast to the results with histamine, which is known to be released from disrupted rat mast cells even though the granules remain intact.

Compound 40/80 used in these experiments was kindly made available by Burroughs Wellcome and Company (Aust.), Ltd.

Mast Cells in Photosensitivity Reactions

IN recent work[1] it was found that cells obtained by washing out the rat's peritoneal cavity with saline could be rendered photosensitive. Exposure to light for a period too brief to affect leucocytes and serosal cells caused the granules of sensitized mast cells to lose their basophilic staining properties, after which they became refractory to the action of the histamine-releaser, compound 48/80. Mast cells reacted in this way even after being separated from the other cells by differential centrifugation.

In order to determine whether histamine had actually been liberated when mast cells lost their basophilic staining reaction, the cells from six rats were obtained by washing out their peritoneal cavities by the method I have described[2]. The washings were centrifuged and the deposit was re-suspended in the fluid which ran down the sides of the tubes. The cell suspension was then divided into three parts.

To two groups hæmatoporphyrin was added to an eventual concentration of 1 part in 20,000 and to the third group was added an equivalent volume of physiological saline without hæmatoporphyrin. One preparation containing hæmatoporphyrin was kept in the dark while the other two were exposed to bright sunlight for 2 min. in watch glasses. The suspending fluid was separated from each by centrifugation and the cells were re-suspended in saline containing compound 48/80 to a concentration of 1 part in 20,000.

After 2 min. the preparations were again centrifuged. The two supernatants from each and the cellular deposits were then all tested for histamine according to the method of Lowry *et al.*[3]. It was found that hæmatoporphyrin did not cause release of histamine in either the preparation exposed to light or in the one kept in the dark. Nor was there any release from the preparation exposed to light without hæmatoporphyrin. The addition of compound 48/80 caused the release of histamine from cells of the two control preparations, but in the case of the cells which had been exposed to light in the hæmatoporphyrin solution, all the histamine remained within the cells. Addition of a drop of 0·5 per cent aqueous azur II solution to a drop of cell suspension confirmed the loss of basophilia by mast cells exposed to light in the presence of hæmatoporphyrin.

When exposure to light of the sensitized cells had not been adequate for complete abolition of basophilia, any granules which retained their staining power were extruded on the addition of compound 48/80.

These features seem to indicate that release of histamine from mast cells depends in some way on the presence of basophilia. The loss of basophilia, however, does not indicate death of mast cells. Exposure to a constant source of light from a slide projector showed that 1 part of hæmatoporphyrin in 20,000 removed mast cell basophilia within 1 min., whereas death of mast cells, which was recognizable by staining of their nuclei by the non-vital stain azur II, occurred only after exposure for 15 min.

Eosin and erythrosin were tested against the rat's peritoneal cells and they, too, caused mast cells to yield their basophilic staining properties when exposed to light, and, as usual, the cells thereby became refractory to compound 48/80.

Apart from these substances, which are active only on exposure to light, there are other substances such as chlorpromazine and promethazine which cause loss of mast cell basophilia in the dark with enhancement of this property on exposure to light. Each of these is a histamine-releaser causing swelling and disruption of mast cells in dilutions up to approximately 1 part in 20,000 parts of saline. In these concentrations they do not affect the basophilia of mast cells, but in dilutions between 1 : 20,000 and 1 : 40,000, they cause mast cells to lose their basophilic staining properties and on exposure to bright sunlight for 2 min. the range is extended to 1 : 80,000, even to 1 : 160,000 in occasional animals.

In addition to the reactions of photosensitivity, heating to 50° C. for 40 sec. causes mast cells to lose their basophilia and become refractory to the action of compound 48/80. Reserpine also affects mast cells in this way, dilutions of 1 : 6,000 in physiological saline causing loss of basophilia in 2 min.. Higher dilutions take longer to accomplish this effect and dilutions between 1 : 12,000 and 1 : 24,000 require about 45 min. Exposure to light has only a small enhancing effect.

The next step in this investigation is to determine the nature of the basophilic substance of mast cell granules and its relationship to 5-hydroxytryptamine.

Failure of Nucleotides to diffuse freely into the Embryo of *Pteridium aquilinum*

In the ferns the embryo develops within the gametophyte and is nutritionally dependent on it until the first root and leaf emerge. In the homosporous leptosporangiate ferns the period of complete nutritional dependence is at least ten days and is usually longer. Despite the fact that the young embryo is in intimate physical contact with the gametophyte during this period, the results of experiments described here suggest that there may, nevertheless, be incomplete metabolic union between the two generations.

Gametophytes of *Pteridium aquilinum* containing young embryos were placed on media containing tritiated thymidine and tritiated uridine. The experimental technique has already been described[1], and the gametophytes were fixed four days after the feeding with the labelled nucleotide.

The autoradiographs show that although radioactivity is concentrated around the embryo there is little if any in the embryo itself. This is particularly clear with the gametophyte fed with tritiated thymidine (Fig. 1*A*), a nucleotide which would enter only the deoxyribonucleic acid. The gametophytic nuclei adjacent to the embryo are heavily labelled and appear black in the autoradiograph, but those of the embryo, despite the fact that nuclear divisions are occurring, are entirely unlabelled. The few grains scattered over the embryo can be put down wholly to background radioactivity. These results are in striking contrast with those of earlier experiments[1] in which it was shown that tritiated thymidine was able freely to enter developing and unfertilized eggs. In the gametophyte fed with tritiated uridine, which would enter only the ribonucleic acid, the cytoplasm of the cells around the embryo is clearly much more heavily labelled than that of the embryo (Fig. 1*B*). The frequency of the grains above the embryo is about four times the background, and about a quarter of that of the grains above the cytoplasm of the cells not adjacent to the embryo. Above the cells around the embryo, which have copious cytoplasm and every appearance of metabolic activity, the grains are too dense to count. Thus it appears that only a small proportion of the radioactivity entering the gametophyte with the uridine reaches the embryo.

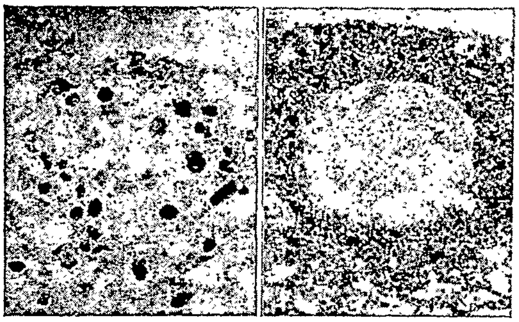

Fig. 1. Autoradiographs of embryos of *Pteridium aquilinum* after feeding the gametophyte with tritiated nucleotides. *A*, 32-celled embryo, approximately 10 days old at time of fixing. Gametophyte fed with tritiated thymidine. *B*, Larger embryo, probably about 15 days old at time of fixing. Gametophyte fed with tritiated uridine. (× 200)

These results indicate that at least two nucleotides cross the boundary between gametophyte and sporophyte with difficulty or not at all. On general principles of permeability, it would be expected that other molecules of similar or larger size would also fail to cross this boundary. In view of the clear-cut result with thymidine, it may be that the appearance of some radioactivity in the embryo when labelled uridine is fed results not from its entering the embryo directly but from catabolism of some of the uridine in the metabolically active cells adjacent to the embryo, and the passage into the embryo of simpler derived molecules, such as orotic or even aspartic acid. There is a strong possibility, therefore, that the sporophytic embryo draws only simpler molecules from the gametophyte, and that the sporophyte has much metabolic autonomy *ab initio*. This would explain why Jayasekera and I[2] were able to grow normal sporophytes from very young embryos of *Thelypteris*, surrounded by only small amounts of gametophytic tissue, placed on a simple mineral-agar medium.

That the cytoplasm of the fertilized egg comes away cleanly from the wall of the archegonium on fixation, whereas that of the unfertilized does not, suggests that the change in the bounding layer of the cytoplasm leading to the separation of the gametophytic and sporophytic metabolisms occurs on fertilization. Possibly the alteration in the surface of the egg which is believed to prevent polyspermy also results in a permanent alteration in its permeability to large molecules.

Sexual Differentiation in *Hydra* in Relation to Population Density

Recent reports by Loomis and by Loomis and Lenhoff[1] of controlled induction of sexual differentiation in *Hydra littoralis* have stimulated considerable interest in this process. One of the observations reported is that hydras differentiate sexually in crowded cultures but remain asexual when uncrowded unless the cultures stagnate. This observation is of particular interest because mass cultures of the clone of *Hydra littoralis* used by Daniel and Park and by Park[2] remained continuously asexual for as long as three years. Although culture conditions were considerably different from those described by Loomis, population density and degree of stagnation were apparently comparable.

The Daniel–Park clone of hydras is no longer in existence. However, the present mass cultures in this Laboratory, derived from a single male of Loomis' stock, and maintained for two years according to the methods described by Loomis and Lenhoff, have exhibited cycles of sexuality in both sparse and crowded cultures[3]. It therefore seemed desirable to examine more critically the relation between population density and sexual differentiation.

Hydras were cultured in Loomis' bicarbonate–versene-tap water medium (BVT) at 24° ± 2° C. Daily except Sunday the cultures were fed on brine shrimp larvæ in excess for $\frac{1}{2}$ hr., rinsed with tap water and re-covered with BVT medium. Concurrently the numbers of hydras with and without gonads were recorded. Two sets of observations were made, one comparing the percentage of hydras with gonads in mass cultures of differing population densities, and the other dealing with the occurrence of gonads in isolated individual hydras.

In the mass population comparisons, a group of randomly chosen hydras in a container giving a population density of 2·5 hydras per ml. of medium served as a control. The culture was maintained at 100 by daily random thinning for 217 days. It was compared with a culture of 100 asexual hydras in a container such that the population density was originally 0·67 hydra per ml. of medium. This experimental culture was followed through the following four successive population régimes: (1) Allowed to increase to 400 individuals (attained on day 11) and thereafter maintained at 400 (density 2·67 individuals per ml.) by daily random thinning for 34 days; (2) immediate repetition of (1), 400 individuals being reattained on day 65, and the population being at 2·67 individuals per ml. for 24 additional days (total days from set up of culture, 89 days); (3) culture then reduced to 100 individuals (density 0·67 individual per ml.) and maintained at this level for 92 additional days; (4) all but 20 males with gonads discarded (density 0·13 individual per ml.) and these individual hydras maintained, all buds being discarded as soon as dropped for 52 additional days (total 233 days). The records for this experiment show that although there were transitory drops in percentage of gonad-bearing hydras in the experimental culture each time its population density was reduced, the two cultures were strikingly similar in the time sequence of sexuality and asexuality. Both cultures concurrently went through several periods, one of nearly 30 days, in which not a single individual had gonads, and both also went concurrently through several periods when 35–80 per cent of the hydras bore gonads.

In the second set of observations, 24 male hydras with gonads were transferred from the stock into individual culture dishes of a size such that the population density was 0·1 hydra per ml. of medium. Each hydra was fed, washed and re-covered with medium, as with the mass cultures, and newly dropped buds were removed within 24 hr. The hydras were kept on this régime for 86–180 days.

All the hydras became asexual after 4–13 days of isolation. However, all again became sexual within an additional 2–23 days. Thereafter, several more

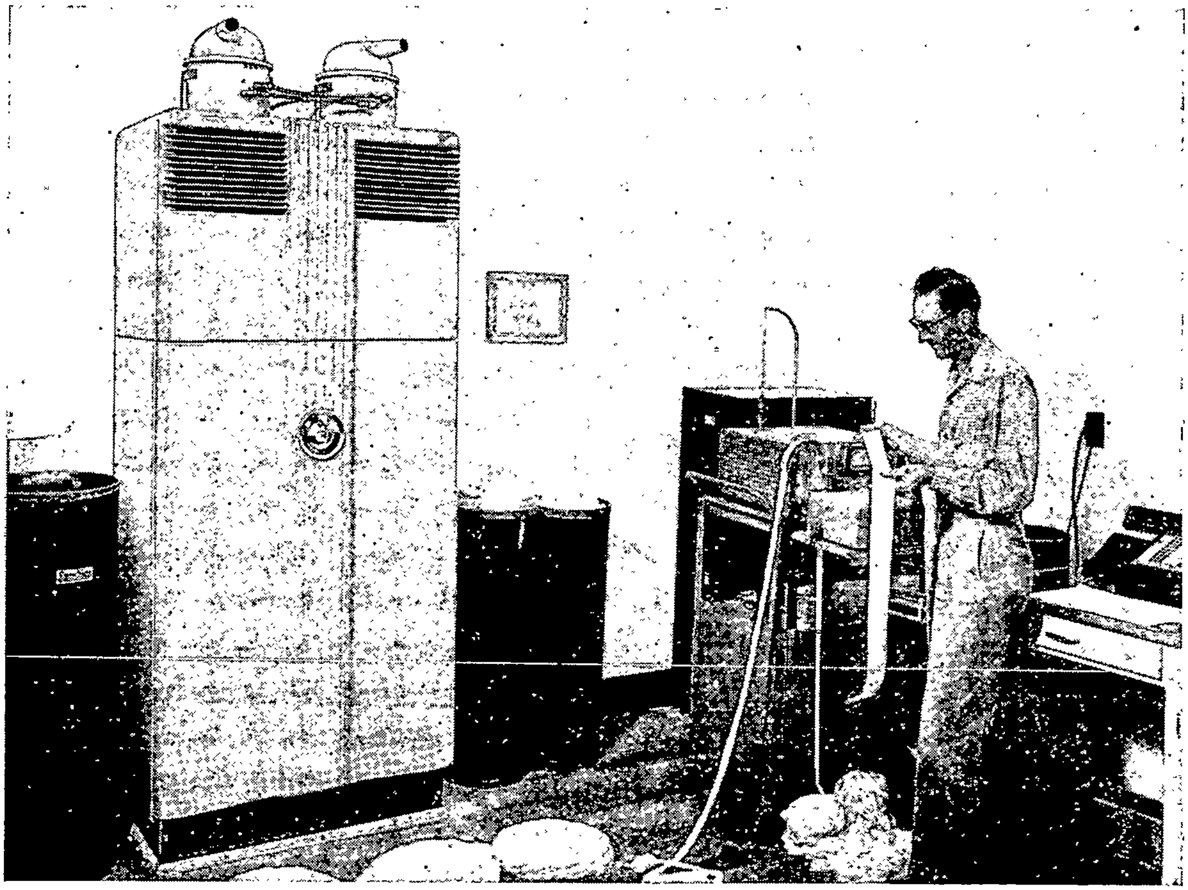
CARLYLE

LABORATORY CONDITIONERS



give you 'PRECISION CONTROL' of temperature and humidity

No one knows better than you that varying air temperatures and humidity can affect the properties of materials, and the accuracy of instruments and experimental results. These problems can be overcome by the installation of a Carlyle Laboratory Air Conditioner. This completely self-contained unit—specially designed for laboratory work—will ensure year round control of temperature and humidity to within ±1°F and ±1½% R.H. The Carlyle Unit is the result of years of specialised experience in all phases of atmosphere control involving application of air conditioning and refrigeration to industrial plants and processes.

Capacities from 29,000 to 80,000 Btu/hr

Larger capacities are also available on special order. We shall be glad to co-operate with organisations in recommending the unit most suitable for their purpose.

CARLYLE

CARLYLE AIR CONDITIONING & REFRIGERATION LTD

1 King Street, St. James's, London S.W.1 Tel: WHItehall 5356

asexual–sexual cycles of varying lengths occurred. Extreme variability in the length of sexual and asexual periods was in fact an outstanding characteristic. Asexual periods varied in length from one to 97 days; sexual periods varied from one to 103 days.

In summary, although we cannot at present explain the alternating periods of sexuality and asexuality which occur in mass and isolation cultures and at population densities ranging from 0·1 to 2·7 individuals per ml., it is clear that neither crowding nor stagnation is necessary for sexual differentiation to occur.

The Number of Testis Follicles in Miridae

THE male reproductive system of bugs has been investigated in detail for a handful of species[1] or, in a range of species, quantitative data presented on the testis follicles[2]; but the dominant family in temperate climates, Miridae, has scarcely been examined—probably because of the difficulty specific determination presents to non-specialists.

This communication summarizes details of counts made of testis follicles in 90 of the 199 mirids listed as British[3]. Where the follicles were small, convoluted or otherwise obscured aceto-orcein staining, as in routine bug cytology, was used to aid visualization[4]. The seven species seen by Woodward[2] were re-examined.

The non-British Cylapinae and Palaucorinae—the latter of dubious status and monotypic—make up, with the six sub-families listed in Table 1, the family Miridae, a family the limits of which are not in dispute. Kullenberg believed that, as a rule, mirids have seven follicles in each testis, but this is contradicted by my work. From Table 1 it is seen that follicle numbers range from one to eight, while all sub-families in which five or more species have been examined exhibit a marked modal number, namely: Phylinae 3, Dicyphinae 1, Orthotylinae 2 and Mirinae 7. Such distinction between the groups was unexpected: there are no cases within the Arthropoda, so far as is known, in which this apparently fundamental structure, one in which it is difficult to envisage selective advantage in any of the variants, exhibits such division into compartments at sub-family level.

Table 1. TESTIS FOLLICLE NUMBER IN 90 BRITISH MIRIDS

Sub-family	Species	Follicles
Bryocorinae	*Monalocoris filicis*	2
Deraeocorinae	*Alloeotomus gothicus*	3–4 variable
	Deraeocoris lutescens	2
	D. olivaceus	7
	D. ruber	8
Phylinae	23 species	3
	Oncotylus viridiflavus	4–5 variable
Dicyphinae	5 species	1
Orthotylinae	20 species	2
	Cyrtorhinus caricis	1
	Orthocephalus coriaceus	4?
Mirinae	30 species	7
	Notostira elongata	3
	Leptopterna dolabrata	8
	L. ferrugata	8
	Stenotus binotatus	8

Discussion of the bearing of these facts on the phylogeny of Miridae must await a re-assessment of all the structures now investigated in the family: male and female genitalia[5], chromosome numbers[4], ovariole number[6] and eggs[7], in addition to the traditional 'characters' of the systematist (arolia, pseudarolia, wing venation, pronotal structure, etc.). The results do, however, suggest: that Dicyphinae warrants sub-family status, as has been suggested elsewhere on other grounds[4]; that intraspecific variation—which is accompanied by unilateral variation—is a rare phenomenon, only noted in two of the 90 species examined; that in Orthotylinae the position of certain Halticini, here represented by *Orthocephalus coriaceus*, requires investigation, as suggested on other grounds[5]; that *Cyrtorhinus* may possibly be wrongly placed at present; that it is doubtful whether *Deraeocoris lutescens* on one hand and *D. olivaceus* and *D. ruber* on the other are congeneric; that a follicle number of eight occurs only in groups in which seven is perhaps the usual number.

The diverse results obtained from the four deraeocorines, and that for the single bryocorine, mean little at present; both groups are essentially tropical. The clearest case of wide divergence from a well-defined sub-family pattern is that of *Notostira elongata*, a bug the systematic position of which has never been questioned.

The full list of species will be published elsewhere.

Evolution of the Sweet Potato (*Ipomoea batatas* (L.) Lam.)

RECENT work on meiosis[1,2] has given considerable support to the suggestion of King and Bamford[3], based on mitotic investigations, that the sweet potato is an allopolyploid, $2n = 90$, resulting from hybridization and natural doubling of the chromosome number in $F1$. The incidence of secondary associations of bivalent chromosomes at metaphase has been interpreted by Ting *et al.*[2] as indicating that the sweet potato, derived from somewhat related species, is a 'relatively recent species'.

While this interpretation may be of general validity in sexually reproducing plants, its unqualified application in this case may be challenged in respect of the known mode of reproduction of the sweet potato. The plant is propagated vegetatively throughout the areas of its cultivation. In present research under a grant from the Rockefeller Foundation, field collections have been made in Peru, Bolivia, Ecuador, Colombia, as well as in the Pacific Islands, Polynesia and Melanesia. In no case was purposeful propagation by seed recorded either in practice or by local tradition. In Peru and Colombia seeds were collected from cultivated crops, and although informants were aware of the occurrence of these in both coastal and marginal jungle areas, no evidence of their use was found. No wild prototypes of the sweet potato have been found, so that it seems likely that the method of propagation may have existed since very early times, possibly since the plant's domestication. In discussing the likelihood of a South American domestication, Sauer[4] places the sweet potato in "a culture complex that operated by vegetal means of reproduction . . . not by seed production".

The conservative breeding system of the plant, accentuated by the selective activity of man, thus retards the rate of evolution of this species. While chromosome behaviour in meiosis does indicate that in this respect the species has not reached maturity, this behaviour cannot be used as a time-device to signify the age of the species. It is conceivable that chromosome multivalents could have been perpetuated for as long as man has cultivated the plant.

Ames[5] has delineated a sequence of agricultural development that passed through successive horticultural and agricultural phases, an early stage in the former being the use of vegetative reproduction of plants. If this sequence is accepted, the history of some present-day sweet potato clones may have anteceded that of grains in America.

Growth of Fern Embryos in Sterile Culture

In recent years, advances in the field of embryo culture have made possible the successful growth of a number of plant species which would not otherwise have been propagated[1]. These cultural experiments have also enriched considerably our understanding of the physiological and morphological aspects of early plant development[2,3]. Even though considerable information is available from this work on the cultural requirements of embryos, up to the present time it has not been possible to maintain very young, globular plant embryos (30–85μ) *in vitro*[4].

For the most part, experiments have been conducted utilizing embryos from both gymnosperms and angiosperms, and relatively little consideration has been given to embryos of the ferns and mosses. One of the major reasons for neglect of these plants in embryological experiments has been technical and manipulative difficulties of approaching their embryos, for they are formed and develop in the venter of the archegonium surrounded by prothallial tissue. That these difficulties are not insurmountable can be seen from the work initiated at the Harvard Laboratories several years ago by Ward and Wetmore[5], and more recently elsewhere[6,7]. Although Ward and Wetmore, utilizing surgical techniques on the fern *Phlebodium* (*Polypodium*) *aureum* J. Sm., were able partially to free the embryo from the surrounding tissue, they were unable to isolate it completely as it appeared to be attached to the wall of the venter.

In the course of work on the life-history and embryology of the fern *Todea barbara* (L.) Moore[8], it was found that the embryo was not demonstrably adherent to the venter in at least the younger stages of embryo formation. It could be removed easily from the surrounding prothallial tissue without apparent damage. The ease with which quantities of embryos of all ages, 4–20 days following fertilization, could be excised prompted the initiation of work designed to determine whether fern embryos could be grown to maturity in sterile culture when completely removed from the parent prothallus.

Sexually mature prothalli previously grown under sterile conditions on a simple nutrient medium[9] were immersed in sterile water for 3 hr. in order to facilitate fertilization. After the water was removed, the prothalli were watched for growth of embryos which were characteristically numerous. Those utilized in this work were removed aseptically from the prothalli according to the procedure outlined in a previous report[10]. Cultural experiments were conducted, employing a liquid medium consisting of Knudson's solution of half-strength to which was added 10 gm. of sucrose, 10 mgm. ferric citrate, and 1 ml. of trace element solution per litre of nutrient solution[11]. The trace element solution was modified by the addition of 25 mgm. cobaltous chloride per litre. In this basic medium, isolated twenty-day-old embryos (240–260μ) possessing stem and root meristems were grown to advanced sporelings in one month. When later planted in the soil, these young plants give every assurance of becoming adult plants, capable of fruiting. Slightly younger embryos, isolated 17 days after fertilization (160μ), showing an absorbing foot but no other obvious signs of organization, required the addition of 10 per cent autoclaved coconut milk to achieve continuing growth and development. Succeeding experiments have demonstrated that the requirements of coconut milk for 17-day-old embryos cannot be replaced by any known concentrations of varied amino-acids, but a mixture of 50 mgm./l. each of sorbitol and inositol, components of the 'neutral' fraction of coconut milk[12], will do so. Very young, unicellular embryos isolated 4–5 days after fertilization (35–55μ), before the first division of the embryo, can also be maintained in the simple basic medium when supplied with 3 per cent sucrose and 50 mgm./l. of sorbitol and inositol. The first few divisions in the post-fertilized egg stage of young cultured embryos are formed in essentially the same planes as would ordinarily be the case with such young embryos growing in their natural environment of the prothallial-contained archegonium. Succeeding divisions, however, appear to be oriented haphazardly, giving rise to embryos which, even after one month in culture, displayed little evidence of the usual pattern of development. Instead, they develop into irregular, asymmetrical, non-uniform, thalloid plants which do not become vascular, do not develop leaves and roots, but do remain associated closely with the nutritive medium, much as do prothalli. Whether these prothalloid embryos can be altered so as to develop into the usual erect, vascular leaf- and root-bearing *Todea* fern plants is part of the work now being continued.

The results reported here demonstrate that embryos of at least one vascular plant, the fern *Todea barbara*, can be removed from their enclosing archegonial venters and maintained successfully outside the plant at all stages of their development on an artificial nutrient medium. If they are removed after they have become compact, spherical aggregations of cells which have already established nutritional contact with the adjacent prothallial tissue by an absorbing foot, and have already acquired an initial leaf and a root primordium (20 days or older), they will grow into fern plants *in vitro* on a simple medium of mineral salt with a low content of sugar. They are also capable apparently of synthesizing their own hormonal and other organic needs. If they are removed when slightly younger (17 days or less) when they have already become somewhat spherical organisms, each with an absorbing foot but no appendages as yet, and are grown on the medium mentioned but supplemented by coconut milk, they develop into the usual embryos characteristic for *Todea*. Appropriate concentrations of sorbitol and inositol in place of coconut milk produce comparable embryos in approximately the same time. If, however, very young embryos are removed 5–6 days after fertilization, but before the first cell-division occurs, and if they are cultured on either of the agar-enriched nutrient media just mentioned, the embryos develop, but not into spherical organisms. Rather, they become prothalloid in their flattish, extending form until they are spreading, irregular, often branching entities—no two look alike—in close and intimate contact with the nutritive medium. They have not as yet acquired appendages, nor apical meristems nor vascular tissue.

This work suggests that in the early stages of its development the embryo depends on an external source for formative substances, the prothallus. A suggestion from which to start further work might appropriately indicate that the necessary enzymes have not yet been synthesized in very young embryos. But of equal importance, and too often neglected, is the influence of environment on these young embryos. Even when seeming to be nourished adequately, the freed embryo resembles much more the derivative growth of the freely germinating spore—the prothallus. When it develops in the containing archegonial venter, with its turgid cells, the young embryo follows a much more regularized pattern. In this environment, it develops into a spherical entity which ultimately—certainly by the seventeenth day—establishes direct, broad, nutritional contact with its neighbouring prothallial cells. When it is isolated, it clearly acquires the ability to synthesize its own biochemical needs, presumably including its own enzyme systems.

We are also forced to believe that in the venter the planes of cell division in the young embryo are so oriented as to produce a spherical organism. This end-product is clearly not produced in early, excised embryos. If mitotic spindles are formed in specific orientations in the cell under restraints, or pressures, then one could understand better early shapes and organizations of embryos. Nutrition alone does not seem an adequate explanation.

Techniques of embryo isolation and culture provide the possibility of conducting investigations into the various physiological and morphogenetic mechanisms which control the growth and development of plants. The correlations between free and contained development and the orientation of mitotic spindles with consequent cell-plate and cell-wall formation and their relations to shapes of early embryos can now be subjected to electron microscope work and possible subsequent interpretation. Moreover, the accumulating evidence from single-cell cultures must be taken into consideration.

Physiological Significance of Surface Wax on Leaves

A STUDY of the surface wax occurring on the leaves of New Zealand and Spanish white clovers (*Trifolium repens*) has been made with the electron microscope. Pre-shadowed carbon replicas were prepared in a manner similar to that used by Bradley[1], and it was found that the wax had a structure characteristic for each species and was extruded from the cuticle only while a leaf was growing. This work was later extended to include Montgomery, Broadleaf and Moroccan red clovers. During the investigation it was noted that wax was removed by weathering, for example, contact between leaves and between leaf and ground in windy conditions, and that the weathered appearance could be simulated by brushing the leaves with a camel-hair brush. In both cases the wax was removed from the crown of the dome-shaped cuticle overlying the epidermal cells. Fig. 1 shows an adaxial surface of New Zealand white clover before brushing and Fig. 2 after brushing.

To supplement this observation, in particular to provide a ready measure of the quantity of wax, the contact angle of water droplets on the leaves was measured with a microprojector[2]. Removal of wax by brushing or weathering always lessened the angle of contact.

The contribution of wax to the water balance of the plant was assessed by measuring the transpiration-rate of excised leaves using the technique described by Hygen[3]. Pairs of leaves of the same age and size were brought to full turgidity, and losses of weight recorded under fixed conditions. Fig. 3 shows a semi-logarithmic plot of weights against time, typical of brushed and unbrushed leaves. By extending the weighings over a number of hours it was found that

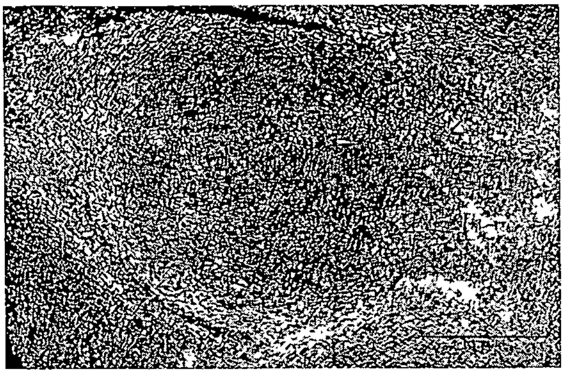

Fig. 1. Surface structure over a single epidermal cell showing undamaged waxy coating. Direct print from a micrograph

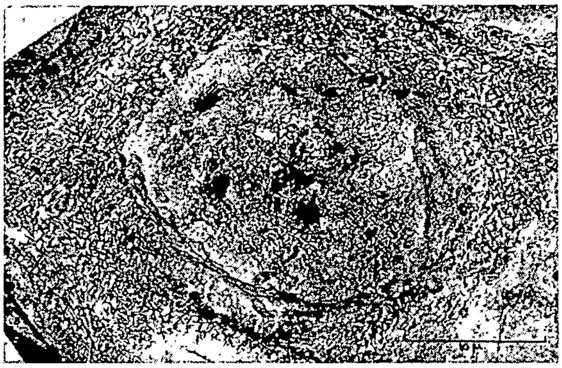

Fig. 2. Leaf surface of similar area to Fig. 1, showing removal of wax particles from dome

the increased transpiration of the brushed leaves was due to greater loss during the cuticular phase, that is, principally after the stomata had closed.

It is suggested here that when growth is interrupted by adverse conditions, the wax that is removed by weathering is not replaced quickly enough and the plant is additionally stressed through having an unusually high cuticular leaf transpiration. This is borne out by observations in the field.

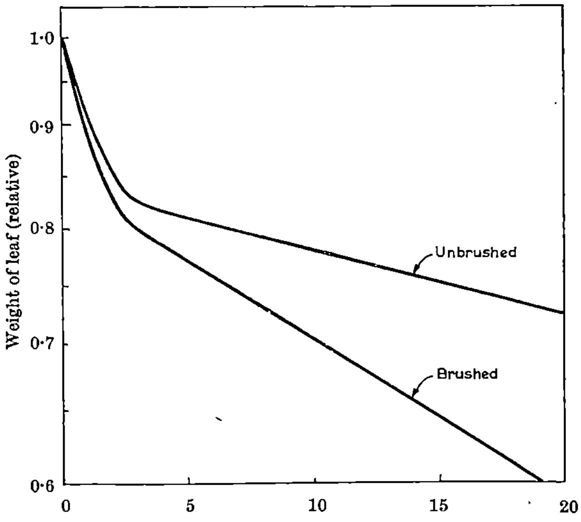

Fig. 3. Loss in weight of leaves of Moroccan red clover, brushed and unbrushed, versus time

Some evidence was also obtained suggesting that the presence and form of wax on leaf surfaces are related to frost hardiness.

VIROLOGY

Unusual Base Composition of the Ribonucleic Acid of Wild Cucumber Mosaic Virus

At the present time the small viruses containing ribonucleic acid (RNA-containing viruses) seem to be useful test objects for discovering the relationship between the amino-acid sequence of proteins and the structure of the RNA which is presumed to code that sequence. It is believed that the RNA of the virus specifies the virus coat protein. In addition, it perhaps carries the code for other proteins and/or plays some structural part. We wish to point out that the RNA from wild cucumber mosaic virus has an unusual base composition, that relatively small pieces of it are obtainable and that these attributes may be useful in the solution of the coding problem.

Wild cucumber mosaic virus has a molecular weight of about 7 million and an RNA content of about 2·4 million[1]. Plants infected with the virus produce two virus-like macromolecular particles (designated T_a and T_b) in addition to the virus. Various physical and chemical tests[1,2] have shown that these particles and the virus are similar (or identical) in so far as their protein portion is concerned, but that they differ in their content of RNA. $T_a (M = 4 \times 10^6)$ contains no RNA, T_b $(M = 4{\cdot}4 \times 10^6)$ contains about $0{\cdot}4 \times 10^6$ molecular weight units of RNA. The relative proportion of nucleotide residues in the RNA from the virus and from the T_b particle are similar but perhaps not identical. Both have an unusually high proportion of cytosine (see Table 1), comparable to the high proportion found in turnip yellow mosaic virus[3].

The fact that the composition of the RNA of T_b is unusual and at the same time similar to that of the virus RNA suggests that it has virus-like nucleotide sequences. In any event, its composition is different from that of ribosomes from small sugar pumpkin (see Table 1), the host on which wild cucumber mosaic virus was grown. However, the RNA of T_b cannot be identical with the virus RNA since the latter is a packet about six times as large. Possibly the virus RNA has similar or identical sub-units, one of which is present in each T_b particle. Alternatively, the individual T_b particles may contain different portions, but similar quantities, of the virus RNA. Thus only on the average would the T_b base composition be similar to that of the viral RNA.

Even though proteins other than the protein of the virus coat may be coded by the RNA of wild cucumber mosaic virus, it might be anticipated that the unusual base composition of the latter would be reflected in an unusual amino-acid composition for the protein of the coat. Evidently this is not so. The amino-acid composition is recognizably—but not startlingly—different from that

Table 1. MOLAR BASE COMPOSITION OF RNA IN WILD CUCUMBER MOSAIC VIRUS AND IN THE T_b PARTICLE OF THE VIRUS
By way of comparison, we show also the base composition of the RNA in ribosomes of uninfected sugar pumpkin (the host on which wild cucumber mosaic virus was grown) and also the base composition of the RNA in tobacco mosaic virus

* Analysed by means of the method of Spackman, Stein and Moore (ref. 6); hydrolysis of the protein was carried out for 24 hr. at 110°.
† Corrected for an assumed loss of 6 per cent in the case of serine and 11 per cent in the case of threonine.
‡ Determined by the method of Goodwin and Morton (ref. 7).
§ Calculated from the amino-acid composition given by Wittmann (ref. 8).
¶ From Ramachandran (ref. 9).

of the coat protein of tobacco mosaic virus, the RNA of which has quite a low proportion of cytosine (18 per cent, see Table 1). It will be seen from Table 2 that of the 15 amino-acids present in greatest abundance in wild cucumber mosaic virus and tobacco mosaic virus, only in two instances, arginine and proline, does the relative abundance differ by more than a factor of two. The situation is not greatly different if the comparison is made instead with bushy stunt virus, which also has a relatively low content of cytosine (22 per cent, ref. 3).

It might be interpolated at this point that, especially in the case of bushy stunt virus, the amount of protein codable by the virus RNA is not large. Coding theory considerations suggest that at least three nucleotide residues would be required to code each amino-acid[5]. Very likely the codes found in Nature would be less efficient than this theoretical value. Thus from a knowledge of the nucleic acid content and the molecular weight of the protein sub-unit[10] of bushy stunt virus, it is apparent that less than 1,600 amino-acids can be coded, about 600 of which are required for the bushy stunt virus sub-unit. For tobacco mosaic virus the corresponding numbers are 2,100 and 150. By a similar computation it can be shown that less than 2,500 amino-acids are codable by the RNA of wild cucumber mosaic virus, about 200 of which are required by the protein sub-unit (the molecular weight of which is about 20,000, (ref. 1)). The RNA from wild cucumber mosaic virus T_b could code no more than 450 amino-acids.

If all the nucleotide residues in the RNA's of wild cucumber mosaic virus, tobacco mosaic virus and bushy stunt virus participate directly in coding, then codes in which one particular sequence of nucleotides determines a particular amino-acid would seem to be unlikely. In order for such a code to hold, a 40 per cent cytosine content in wild cucumber mosaic virus RNA and an 18 per cent content in tobacco mosaic virus RNA would require a very distinctive difference in the relative abundance of the amino-acids coded in the two cases. On the average, those amino-acids in the specification of which cytosine participates would have to be more than twice as abundant in the case of wild cucumber mosaic virus. If the frequently discussed 4-symbol, comma-less, non-overlapping code[11] holds, twelve amino-acids would have to have this high average abundance. Since such differences are not evident in the coat proteins, even larger differences would be required in any other proteins that conceivably are coded.

A more plausible alternative is that a considerable fraction of the nucleotide residues plays a part different from that of participating in direct specification of particular amino-acids. Perhaps they serve as spacers or as structural elements.

Mechanism of Recovery from Viral Infection in the Chick Embryo

THE chick embryo lacks many of the mechanisms which are thought to be required for recovery from viral infections. Production of antibody and delayed hypersensitivity (as measured by ability to reject foreign tissue) do not occur in the chick embryo of any age[1,2], whereas the interferon mechanism begins to function in the embryo at about eight days and increases thereafter[3]. If interferon plays a major part in recovery from viral infection[4,5], then a correlation would be expected between the lethality of viral infections and absence of the interferon mechanism in young embryos. Decreasing mortality with increasing age of embryos has been reported with a number of viruses[6,7]. However, the cells of these variously aged embryos yield equal amounts of virus[3,8]. The present work was undertaken to determing whether the appearance of the interferon mechanism during development of the chick embryo is parallel to increased ability to recover from viral infection.

Groups of ten chick embryos, aged 4, 7, 10, and 13 days, were infected with each of four different

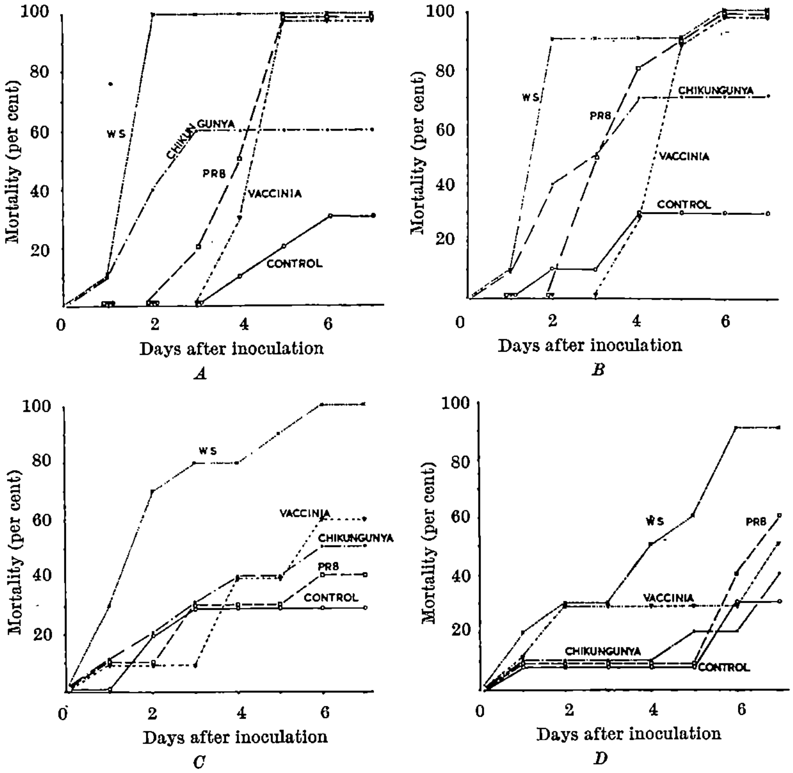

Fig. 1. Mortality following injection of four viruses into chick embryos of different ages. Eggs: *A*, 4-day; *B*, 7-day; *C*, 10-day; *D*, 13-day

viruses. Inoculations of 0·05 ml. containing 10^4–10^5 infectious doses of vaccinia, Chikungunya (Arbor virus group *A*), or influenza (*WS* and *PR* 8 strains) viruses were made into the yolk sac. Controls were injected with broth diluent. The eggs were then candled daily to determine viability of the embryos. Eggs containing embryos, which were non-viable on candling, were opened to confirm death and all embryonated eggs which survived for seven days were opened to confirm viability.

As shown by the graphs in Fig. 1 the mortality-rate of embryos decreased as the age of embryos increased. The lethality among 4- and 7-day embryos, infected with vaccinia, Chikungunya or *PR*8 viruses, was high, whereas the mortality among 10- and 13-day embryos tended to be close to that of the controls. The more virulent *WS* virus caused early deaths in young embryos, but delayed deaths in older embryos.

Fig. 2 summarizes the effect of the age of the chick embryo on its *in vitro* sensitivity to the antiviral action of interferon and on its ability to survive infection with these four viruses. Between the seventh and tenth days there was a rapid development of sensitivity to the antiviral action of interferon and an equally rapid increase in the ability to recover from viral infections. The close correlation of enhanced recovery of embryos with development of the interferon mechanism is consistent with previous findings which related recovery from viral infection of mice to production of interferon[4,9].

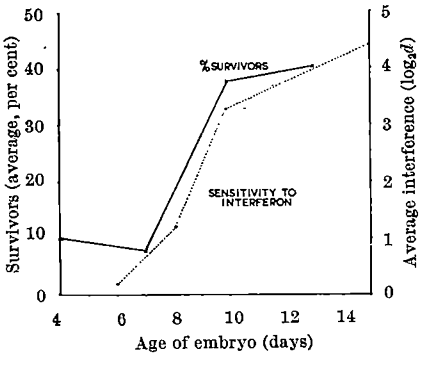

Fig. 2. Effect of age of chick embryo on its ability to survive infection and on its sensitivity to the antiviral action of interferon *in vitro*. Survival in each group was determined by averaging the percentage of embryos surviving 7 days after infection with the four viruses (Fig. 1). Sensitivity to the antiviral action of interferon was determined from the results of a previous study (ref. 3) by averaging the sensitivity of each age group at three doses of interferon

Evidence indicating that antibody is not essential for recovery from many viral infections has been reviewed[10]. In the present work survival of embryos was enhanced in the presence of a functioning interferon mechanism[3] and in the absence of antibody formation or delayed hypersensitivity[1,2], suggesting that interferon alone may be an essential factor in recovery from many viral infections.

GENETICS

Basis of the Diploid-like Meiotic Behaviour of Polyploid Cotton

The cultivated cottons (*Gossypium barbadense* and *G. hirsutum*) are allotetraploids derived from two geographically isolated diploid species; one, an Asiatic species, donating the A genome and the other, an American species, donating the D genome. The chromosomes of the diploid progenitors differ in length, those of the A genome species being longer than those of the D genome species. Furthermore, this size difference is maintained in the polyploid, in which chromosomes of two size-categories can be recognized. A histogram (Fig. 1) of the lengths of the

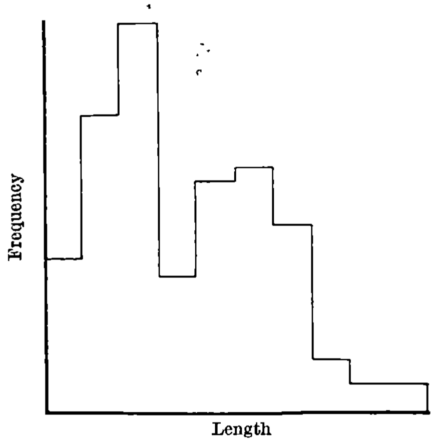

Fig. 1. Chromosome lengths in seven plants of *G. barbadense*

somatic chromosomes from root-tips of seven plants of *G. barbadense* shows a bimodal distribution of the chromosome lengths and also indicates that there is a small overlap between the two groups.

Several workers[1] have employed this differential in chromosome length to categorize meiotic configurations in interspecific hybrids. The difference in size can also be used to recognize the univalent chromosomes seen at meiosis in haploids of the tetraploid species. Chiasma formation occurs infrequently in these haploids, but the univalents often associate in pairs as though synapsis had occurred but no chiasmata had been formed. These associations can be classified into three types depending solely on the lengths of the chromosomes involved; first a long chromosome associated with another long (abbreviated to *LL*), secondly a long chromosome with a short (*LS*) and finally a short with a short (*SS*).

If the chromosomes were associating with each other randomly, and since there are equal numbers of long and short chromosomes, then the numbers of *LL*, *LS* and *SS* associations should be in the ratio 1 : 2 : 1. Table 1 shows the totals of each class of association from 124 cells that were analysed from five haploids of *G. barbadense*. These figures, when tested against the hypothesis of random association, differ significantly ($P < 0{\cdot}001$, $n = 2$) from the expectation; the *LS* associations being considerably in excess. Also it can be shown that since the frequencies of the *LL* and *SS* groups are approximately equal, then the inflation of the *LS* class cannot be due to the consistent misclassification of long for short chromosomes or vice versa.

Table 1. ASSOCIATION OF LONG AND SHORT CHROMOSOMES AT MEIOSIS IN HAPLOIDS OF *G. barbadense*

Association	*LL*	*LS*	*SS*	Total
Observed	65	202	62	329
Expected (1 : 2 : 1)	82·25	164·5	82·25	329

$\chi^2 = 17{\cdot}15$. $n = 2$. $P < 0{\cdot}001$

Since it is plausible that the A and D genome diploids diverged from a common archetype and since duplicate loci have been demonstrated frequently in the allotetraploids, the chromosome association observed in these haploids probably results from a basic similarity of the two genomic sets. In the tetraploid, however, the chromosomes only form bivalents, so that if chromosomes of the different genomes are as similar as these results would indicate, it is probable that there is a genetic system of diploidization in cotton, analogous to that in wheat, organizing the meiotic behaviour so that only homologous and not homœologous chromosomes can pair.

The identification of the chromosome, and the particular chromosome arm, involved in the cytological diploidization of wheat is only possible because of the complete range of aneuploids available in that species[3]. In the absence of a similar range of aneuploids in cotton a precise identification of a genetically controlled mechanism cannot be made. However, by a consideration of certain hybrid combinations, further corroborating evidence can be adduced indicating the existence of genetic diploidization in cotton. The pertinent data are given in Table 2.

Table 2. ANALYSES OF MEIOSIS IN THE A AND D GENOME COMBINATIONS IN *Gossypium*

Hybrid or haploid	Genome	Chromosome pairing	Author
Triploid	A × AD	13 I, 9 II and 2 IV	Gerstel (ref. 5)
Triploid	D × AD	13.00 I, 12.15 II, 0.51 III and 0.04 IV	Endrizzi (ref. 1)
Diploid	A × D	9.6 I, 7.8 II, 0.2 III and 0.05 IV	Skovsted (ref. 1)
Haploid	(AD)	26 I	Kimber

The chromosomes of the A genome diploids pair with the long chromosomes of the AD allotetraploids in hybrids, leaving 13 short univalents. Similarly, the chromosomes of D genome diploids pair with the short chromosomes of the AD allotetraploids and there are 13 long univalents (Table 2). In this way the cytological equivalence of the diploids to their respective genomes in the tetraploids was shown. A similar, and considerable, cytological equivalence between the two diploids is also shown by the high mean synapsis observed in the AD hybrid *G. arboreum* × *G. thurberi*.

These relationships can be expressed diagrammatically (Fig. 2) when it is immediately apparent that an incongruity exists. If the A genome of the diploid is equivalent to the A genome of the tetraploid, and the D genome of the diploid similarly equivalent to the D genome of the tetraploid, and simultaneously the D diploid is equivalent to the A diploid, then the AD tetraploid should have a cytological behaviour characteristic of an autotetraploid. Since the tetraploid cottons are regular bivalent formers, it is most reasonable to suppose that a genetical change has

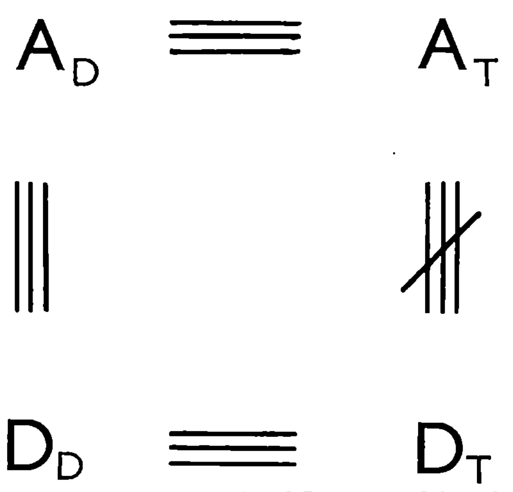

Fig. 2. Equivalence of the A and D genomes of *Gossypium*. The subscripts indicate diploid (*D*) and tetraploid (*T*)

occurred, since the inception of the polyploid, such that pairing is restricted to homologous chromosomes only.

This method of recognizing the genetical control of the cytologically diploid behaviour of allopolyploids can be applied to *Nicotiana tabacum*. Again it is easy to demonstrate the equivalence of the diploid genomes both to their respective genomes in the allopolyploid and also to each other, while the polyhaploid of *N. tabacum* shows almost no pairing.

The effective isolation of genomes in allopolyploids, when the same genomes can pair in diploid hybrids, provides a generalized method for recognizing the genetical control of the diploid-like behaviour of the allopolyploids. Theoretically, the method is applicable to any allopolyploid, but it is difficult in practice to accumulate sufficient data to make a complete cycle of comparisons. Because of the generalized nature of the method, it lacks the precision of the situation in wheat where a single chromosome arm can be held responsible for the effect. However, the method is applicable to all cases where the parents and a haploid of the allopolyploid are known and therefore can be used, even when a complete range of aneuploids is not available.

It is not possible in cotton, at the present, to obtain information on the mode of action of the genetical diploidization, and it would be unwise to assume, *a priori*, that the functioning is identical to that in wheat. However, with the development of a monosomic series in cotton more precise information may be obtained.

Other allopolyploid species may also have become diploidized by genetical processes and not by the slow accumulation of many small structural changes in the chromosomes. The efficiency of a single-step change, if the diploidization is governed by a single gene, to regular meiotic behaviour presents an attractive hypothesis. This hypothesis is conceptually simpler than that required to explain the vague and randomized processes of the addition of small chromosomal changes to already existing alterations. The acceptance of the idea that allopolyploids other than wheat have become diploidized by genetical processes does not mean that some species may not have a regular chromosome behaviour that is governed solely by differential affinity[4]. However, it is worth while considering that, for an allopolyploid to be formed, first of all an F_1 hybrid must be made. The occurrence in Nature of an F_1 hybrid implies some similarity of the two parental species. If the species are so similar that they are able to hybridize, then their chromosomes will rarely be so dissimilar that pairing is entirely autosyndetic in the derived allopolyploid.

The impact of genetical diploidization on a raw allopolyploid needs little stressing. A single-step change that could confer regular chromosomal pairing and a resultant rise in fertility would have such an evolutionary potential that it would become rapidly selected to fixation.

STATISTICS

A Combinatorial Assignment Problem

IN an establishment, there are $v = nk$ officers, r departments and k types of jobs in each department. Each officer has to be assigned a job in each department such that in any department there are equal numbers of officers in different jobs and any two officers have common jobs in exactly λ departments.

It may be seen that the combinatorial problem is the same as that of a resolvable balanced incomplete block design for $v = nk$ varieties, r replications and k plots per block[1]. We have to identify varieties with officers, replications with departments, and blocks in a replication with jobs in a department. We have the obvious identity $\lambda(v-1) = r(k-1)$.

An important case is when $n = k$. The question arises : What is the smallest value of λ for which the problem admits a solution for any given number k ? We thus have a classification of numbers by this minimum λ.

When k is a prime or a prime power it is known that $(k-1)$ mutually orthogonal Latin (Euler) squares exist[2,3]. Let the cells of a $k \times k$ square be taken as officers, the rows as different jobs in the first department, the columns as different jobs in the second department and the letters of the ith Latin square as different jobs in the $(i + 2)$th department. This provides an assignment of jobs to the officers such that any two officers have a common job only in one department (by virtue of the orthogonal property of the Latin squares). Thus in this case $\lambda = 1$, and therefore all primes and prime powers are of type 1.

For $k = 6$, which does not admit even two orthogonal squares, the solution is impossible with $\lambda = 1$. I have been able to find a solution with the next number $\lambda = 2$. Represent the 36 officers by pairs of residues (x, y) mod $(5, 7)$ and an invariant number I. Consider the arrangement in two departments.

Job	Department 1	Department 2
1	01, 06, 12, 15, 23, 24	01, 06, 32, 35, 13, 14
2	11, 16, 22, 25, 33, 34	11, 16, 42, 45, 23, 24
3	21, 26, 32, 35, 43, 44	21, 26, 02, 05, 33, 34
4	31, 36, 42, 45, 03, 04	31, 36, 12, 15, 43, 44
5	41, 46, 02, 05, 13, 14	41, 46, 22, 25, 03, 04
6	00, 10, 20, 30, 40, I	00, 10, 20, 30, 40, I

Adding unity to the second member of each pair (x, y) in the arrangement for any one of the two departments and reducing to mod 7, and keeping I unchanged yields the arrangement for another department. This operation applied to the arrangements for the first two departments leads to the arrangements for two other departments, which by the same operation provides two other arrangements and so on. We thus derive the arrangements for all the fourteen departments. It is not known whether the problem can be solved for any k, with $\lambda = 2$. The next number to investigate is 10, which is unlikely to have 9 mutually orthogonal squares. An arrangement with $\lambda = 4$ is, however, possible. In any event, the open problem is that when a number k is not a prime or a prime power, can we say that it belongs to at least type 2 ?

The combinatorial problem of assignments is thus a general formulation of a wider variety of problems than the problem of orthogonal Latin squares.

FORTHCOMING EVENTS

(Meeting marked with an asterisk is open to the public)*

Wednesday, July 5

Society for Endocrinology (at the Royal Society of Tropical Medicine and Hygiene, Manson House, 26 Portland Place, London, W.1), at 5.30 p.m.—Sir Charles Dodds, F.R.S.: "Rime and Reason in Endocrinology".*

Wednesday, July 5—Friday, July 7

European Organization for Research on Fluorine and Dental Caries Prevention (at the Royal College of Surgeons, Lincoln's Inn Fields, London, W.C.2—Eighth Congress.

Thursday, July 6

Borough Polytechnic (at Borough Road, London, S.E.1) at 10 a.m.—Symposium on "Internal Stresses in Electrolytically Produced Coatings and their Influence on the Properties of the Basis Metals".

APPOINTMENTS VACANT

Applications are invited for the following appointments on or before the dates mentioned:

Research Fellow (Senior or Junior) in the Agricultural Biochemistry Division of the Department of Biological Chemistry, for research on the immunology of the pituitary gonadotrophic hormones—The Secretary, The University, Aberdeen (July 7).

Lecturer (graduate in agricultural chemistry, physics or geology) in Soil Physics in the Department of Agricultural Sciences at the School of Agriculture, Sutton Bonington—The Registrar, The University, Nottingham (July 8).

Research Assistant (graduate in agricultural chemistry, biochemistry or chemistry) to Prof. E. G. Hallsworth at the School of Agriculture, Sutton Bonington, for work on the nutrition and biochemistry of the Leguminosae—The Registrar, The University, Nottingham (July 8).

Senior Lecturer (male, British, with an appropriate honours degree) in Applied Mechanics at R.N. College, Greenwich, London, S.E.10, for duties which include lecturing and conducting laboratory work to degree standard and postgraduate teaching—The Director (P), Education Department, Admiralty, London, S.W.1 (July 10).

University Lecturer in Mathematical Statistics—The Secretary of the Appointments Committee of the Faculty of Mathematics, The Arts School, Bene't Street, Cambridge (July 12).

Chair of Mathematics—The Registrar, University College of Sussex, Stanmer House, Stanmer, Brighton (July 15).

Extra-Mural Tutor in Social Anthropology or related fields—The Registrar, University College, Singleton Park, Swansea (July 15).

Vokes Research Fellow (preferably with a special interest in fluids or elastic theory) in the Department of Mechanical Engineering—The Secretary and Registrar, The University, Southampton (July 15).

Head (with high qualifications in botany or zoology and experience in teaching to university degree level and in research) of the Department of Botany and Zoology (Grade V)—The Clerk to the Governors, Chelsea College of Science and Technology, Manresa Road, London, S.W.3 (July 17).

Postdoctoral Fellow in Organic Chemistry, to carry out research in the carotenoid field in collaboration with Prof. B. C. L. Weedon—The Registrar, Queen Mary College (University of London), Mile End Road, London, E.1 (July 17).

Research Fellow or Assistant Lecturer in Mathematics—The Secretary, Royal College of Science and Technology, Glasgow (July 17).

Research Associate (graduate in mathematics or physics), to perform theoretical work on semiconductors, as a member of a small group in the Department of Applied Mathematics—Prof. P. T. Landsberg, Department of Applied Mathematics, University College, Cardiff (July 20).

Lecturer (physicist, chemist, or glass technologist, preferably with some industrial experience) in the Department of Glass Technology—The Registrar, The University, Sheffield (July 22).

Chemist (with a degree in chemistry or equivalent qualification, and preferably experience in pesticide analysis) in the Plant Protective Chemistry Section, to assist in studies of pesticides in fruit culture—The Secretary, East Malling Research Station, Maidstone, Kent (July 24).

Senior Lecturer or Lecturer (preferably with previous research experience (theoretical or experimental) in upper atmospheric physics and in palæomagnetism or an allied subject) in Physics; a Lecturer in Geography; and a Lecturer in Mathematics at the Royal College, Nairobi—The Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 (July 26).

Proctor Memorial Fellow (science or technology graduate with postgraduate research experience) in the Department of Leather Industries, for research on a subject pertaining to the leather or allied industries—The Registrar, The University, Leeds 2 (July 28).

Chair of Theoretical Physics; and Senior Lecturers and Lecturers in Anatomy, Biochemistry, Chemistry, Engineering, Ethology and Vertebrate Palæontology, Mathematics, Physics, and Philosophy at Monash University, Clayton, Victoria, Australia—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Australia, July 31).

Lecturer or Senior Lecturer in Zoology at the University of Melbourne, Australia—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Australia and London, July 31).

Research Fellows and Students in the Physics Department, to work in the surface physics group—The Secretary and Registrar, The University, Southampton (August 1).

Senior Lecturer or Lecturer in Parasitology; and a Senior Lecturer or Lecturer (with a special interest in hæmatology or clinical chemistry) in Pathology at the University of Khartoum—The Registrar, University of Khartoum, c/o Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1 (August 12).

Reader in Veterinary Medicine at the Royal Veterinary College—The Academic Registrar, University of London, Senate House, London, W.C.1 (August 22).

Chair of Agricultural Botany in the University of Sydney, Australia—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Australia and London, August 23).

Chair of Soil Science in the University of Sydney, Australia—The Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1 (Australia and London, August 23).

Agricultural Officer (male, aged 25–45, with a degree in agriculture or a related subject, and experience in tropical agriculture) in Gambia, for general agricultural extension work—The Director of Recruitment, Colonial Office, London, S.W.1, quoting BCD.63/12/03.

Assistant Lecturer (preferably with a knowledge of elementary virology and/or micology, and some teaching experience) in Microbiology in the Department of Health Education—Clerk to the Governing Body, Battersea College of Technology, London, S.W.11.

Demonstrator in Physics—The Registrar, The University, Nottingham.

Lecturer (graduate at present engaged in industry, research or teaching) in the Department of Electrical Engineering, West Ham College of Technology, to teach either telecommunications or measurements to full-time students preparing for the University of London Internal B.Sc.(Eng.) Degree in Electrical Engineering—Chief Education Officer, Education Department, 95 The Grove, Stratford, London, E.15.

Lecturer (Grade I) in Theoretical Physics; a Lecturer (Grade I) in Physics; and a Lecturer (Grade II) in Physics—The Registrar (Room 22, O.R.B.), The University, Reading.

Lecturer (graduate of a British university, teaching experience, and preferably qualified to undertake some teaching of biology) in Physiology in the Department of Health Education—The Clerk to the Governing Body, Battersea College of Technology, London, S.W.11.

Mineralogist (preferably under 35, with a good honours degree in geology, with emphasis on mineralogy and preferably experience of spectrograph and X-ray apparatus) with the Government of Tanganyika, to be engaged in the identification of minerals—The Director of Recruitment, Colonial Office, London, S.W.1, quoting Ref. C1/BCD105/8/04.

Research Assistants (2), for work with Prof. R. M. Barrer on the physical and hydrothermal chemistry of soil-forming minerals—Prof. R. M. Barrer, F.R.S., Chemistry Department, Imperial College of Science and Technology, London, S.W.7.

Research Students in the Department of Chemical Engineering, Mechanical Engineering, and one other Department—The Academic Registrar, Loughborough College of Technology, Loughborough, Leicestershire, quoting Ref. 17/G.

Senior Lecturer (graduate of a British University) in Biochemistry—Clerk to the Governing Body, Battersea College of Technology, London, S.W.11.

WILD BARFIELD NRC

Laboratory Vacuum Furnace

Model 2904

2 lb. to 8 lb. capacity

(FOR OPERATION UP TO 2,000°C)

Made in Britain to the designs of the National Research Corporation of Mass., U.S.A. who have built more high vacuum furnaces now in successful operation than any other firm in the world. The Model 2904 Vacuum Furnace is a self-contained unit for high-temperature operation at high vacuum or under controlled atmosphere. It is heated by a tungsten resistance heating element with molybdenum heat shields in a water-cooled stainless steel sleeve.

This permits:

- Close control of temperature
- Good heat distribution
- Long life
- No outgassing or contamination from refractories

FOR MELTING • POURING • SINTERING ALLOYING • HEAT-TREATING • ANNEALING

Vacuum Arc and Vacuum Induction Furnaces
Vacuum Analysis Equipment • Vacuum Diffusion Pumps

STANDARD EQUIPMENT

- High vacuum pumping system with Wild-Barfield-NRC oil diffusion pump and Gas Ballast mechanical pump.
- Metal cabinet base, overall dimensions 35" x 43" x 34" high.
- Pyrex bell jar, 18" diameter x 12" long, protected with a wire mesh guard, or optionally a stainless steel bell jar.
- Water-cooled basin to shield the bell jar and to catch spilled metal.
- Feed-through for thermocouple wires or heater leads for special work.
- 15 kW. power supply, controlled with a variable auto-transformer. Power is supplied to the split tungsten sleeve through water-cooled coaxial leads.

* NRC *is the trade-mark of the National Research Corporation, registered in the United States Patent Office.*

APPOINTMENTS VACANT

SOUTH AFRICAN COUNCIL FOR SCIENTIFIC AND INDUSTRIAL RESEARCH

NATIONAL BUILDING RESEARCH INSTITUTE

SOIL MECHANICS AND FOUNDATION ENGINEERING DIVISION

HEAD OF DIVISION

Applications are invited for the post of Head of the Soil Mechanics Division of the National Building Research Institute, Pretoria.

Applicants should have a University degree or equivalent qualification and experience in the field of Soil Mechanics research and application. Details of past publications should accompany all applications, together with evidence of proven research ability.

The Head of the Division is required to lead a team of about twelve persons, giving guidance to several specific research projects. He must also encourage the application of research findings within the building and construction industry in South Africa and maintain close liaison with the industry and co-ordinate the Division's work with other research bodies in the country particularly in regard to work of a fundamental nature.

The present research programme includes the following projects:

- (i) studies of expansive clays and the development of economical solutions to the problem of founding structures on these clays;
- (ii) research on the stability of slopes of waste dumps, particularly sand and ash dumps;
- (iii) the application of air photo interpretation to foundation soil mapping for township development;
- (iv) studies of thermo-dynamics aspects of the swelling and strength properties of soils; and
- (v) studies of the engineering properties of particular types of weathered soil profiles.

Work with industry involving deep drilling and undisturbed sampling and specialized testing of a research nature is also undertaken.

Appointment will be made according to qualification and experience in the salary range £1,620 to £2,400 per annum.

Further information on service conditions may be obtained from:

South African Scientific Liaison Office,
Africa House, Kingsway,
LONDON, W.C.2,
England.

Applications should reach the Director, National Building Research Institute, P.O. Box 395, Pretoria, South Africa, from whom further information can be obtained, not later than August 31, 1961.

UNIVERSITY OF NOTTINGHAM

LECTURER IN SOIL PHYSICS

Applications are invited from graduates in agricultural chemistry, physics or geology for appointment as Lecturer in Soil Physics, in the Department of Agricultural Sciences at the School of Agriculture, Sutton Bonington. The successful candidate will be required to specialize in the field of either (a) X-ray spectrophotometry or (b) particle transport in fluids. Applications will also be considered for appointment initially at the Assistant Lecturer level from candidates recently graduated or graduating this summer in physics. Salary scales: Lecturer, £1,050 by £50 to £1,400 by £75 to £1,850; Assistant Lecturer, £800 by £50 to £950. Initial salary according to qualifications and experience, with membership of Universities Superannuation Scheme and children's allowance.

Conditions of appointment and form of application, to be returned by July 8, from the Registrar.

UNIVERSITY OF MANCHESTER

Applications are invited for the post of Lecturer in Engineering (Mechanical). Preference will be given to candidates with a major interest in applied mechanics, especially theory of machines, stress analysis and properties of materials, or applied thermodynamics. An interest in mechanical design would be an advantage. University regulations permit teaching staff to read for the degree of M.Sc. and Ph.D. The salary scale £1,050 to £1,850 per annum. Membership of F.S.S.U. and children's allowance scheme. Initial salary according to qualifications and experience.

Applications should be sent not later than July 8, 1961, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained. Applications by airmail letter, in the first instance, will be considered from overseas candidates.

AUSTRALIA

COMMONWEALTH SCIENTIFIC AND INDUSTRIAL RESEARCH ORGANIZATION

RESEARCH PHYSICIST

The Organization's **Division of Textile Physics, Ryde, N.S.W.**, invites applications for a position as Physicist from honours graduates in Science majoring in Physics (or equivalent qualifications) with at least three years' post-graduate research experience.

The organization is undertaking an investigation into the physical, chemical and physiological bases for the commonly accepted view that wool possesses natural advantages over other fibres in respect of warmth and comfort. This is important to the interest of wool use and it is hoped thereby to exploit the advantages found for wool and to find means of rectifying any disadvantages found.

The Physicist, who will be required to spend a substantial amount of his time at the School of Public Health and Tropical Medicine, University of Sydney, will carry out investigations into the role of the physical properties of cloth in determining the comfort, warmth and health aspects of clothing and such coverings as blankets. He will work in co-operation with the Environmental Health Section which is concerned both with Moist Tropic and Antarctic Conditions and is having a laboratory with temperature and humidity controllable over a wide range, and a wind tunnel added to existing facilities. It is expected that the physicist will occupy an increasingly important position in the textile field as a consultant in the design of clothing and coverings for special purposes.

Salary: Dependent on qualifications and experience within the ranges: £A.1,510—£A.2,265 per annum or £A.2,395—£A.2,720 per annum.

Salary for a woman will be £A.180 per annum less than corresponding rates for men.

Promotion within C.S.I.R.O. is by merit and may ultimately go beyond the upper limit of the scale within which the original appointment is made.

Fares paid. Further particulars of conditions, etc., are supplied on application to:

Mr. E. J. Drake, Chief Scientific Liaison Officer, Australian Scientific Liaison Office, Africa House, Kingsway, London, W.C.2,

to whom applications (quoting Appointment No. 465/139), should be addressed by July 29, 1961.

AUSTRALIA

COMMONWEALTH SCIENTIFIC AND INDUSTRIAL RESEARCH ORGANIZATION

PLANT PHYSIOLOGIST

The Organization's **Irrigation Research Station, Griffith, N.S.W.**, invites applications for a position as Plant Physiologist from Honours graduates in Science or Agriculture (or equivalent qualifications), with post-graduate research experience in Plant Physiology or Agronomy.

A wide range of subjects connected with problems in irrigation are studied at the Station and a plant physiologist with special interests in plant growth is required to study the response of plants and fruit to irrigation practice. Modern laboratories with extensive research facilities are available, including constant temperature rooms and an isotope laboratory and constant environment cabinets are in process of development.

Housing may be available at an economic rent.

Salary: Dependent on qualifications and experience within the range: £A.1,510 to £A.2,265 per annum.

Salary for a woman will be £A.180 per annum less than corresponding rates for men.

Promotion within C.S.I.R.O. is by merit and may ultimately go beyond the upper limit of the scale within which the original appointment is made.

Fares paid. Further particulars supplied on application to:

Mr. E. J. Drake, Chief Scientific Liaison Officer, Australian Scientific Liaison Office, Africa House, Kingsway, London, W.C.2,

to whom applications (quoting Appointment No. 500/136), should be addressed by July 29, 1961.

UNIVERSITY LOVANIUM OF LEOPOLDVILLE

Applications are invited from candidates with doctor's degree for appointment as Lecturer in Chemistry (lecturing in French language) to teach up to master's degree. Duties to commence in October, 1961. Salary scale, including overseas pay, £2,500 to £2,900 per annum. Free housing, medical care and insurance. Post is pensionable. Free passage, once each way for each tour of service for person appointed and wife; either passage allowance or maintenance allowance for children under 18. Tours of service: nine months.

Write for further information (with curriculum vitae), to Rector L. Gillon, University Lovanium, B.P. 121, Leopoldville XI, Republique du Congo.

UNIVERSITY LOVANIUM OF LEOPOLDVILLE

Applications are invited from candidates with doctor's degree for appointment as Lecturer in Mathematics (lecturing in French language) to teach up to master's degree. Duties to commence in October, 1961. Salary scale, including overseas pay, £2,500 to £2,900 per annum. Free housing, medical care and insurance. Post is pensionable. Free passage, once each way for each tour of service for person appointed and wife; either passage allowance or maintenance allowance for children under 18. Tours of service: nine months.

CRISIS IN MATHEMATICAL EDUCATION IN BRITAIN

THERE is a strong possibility that mathematical education, as we have known it in Great Britain and in this century, will come to an end within twenty years, a possibility of incalculable consequences for the life of the nation as a whole. This warning, so often sounded by teachers of mathematics during the past decade and so often ignored, was given again with even greater urgency by Dr. Bryan Thwaites, the new professor of theoretical mechanics in the University of Southampton, in an inaugural lecture on May 23. With industry demanding and attracting more mathematicians, university teaching posts are left unfilled, and school teaching posts are unfilled or filled by those who have little interest in or knowledge of mathematics ; thus there is a shortage of pupils having enough mathematical equipment to enable them to proceed to university or technical college training in science or technology. Hence, in the near future there will be a grave shortage of engineers and technologists, at a time when our export trade and our economic well-being will be more than ever dependent on the skill and availability of such people. Nothing less than measures on the largest scale, prosecuted with great vigour and determination, have any chance of restoring the position ; such measures must be undertaken, not in some vague future, not in the next few years, but within the next few months. Even so, the schools would not feel any significant benefit before 1965 or 1966, and the universities and technical colleges not much before 1968 or 1970. While precise statistics are difficult to obtain, Thwaites's rough estimate serves to indicate the magnitude of the crisis. In the universities, the present staffing deficiency is equal to one year's Ph.D. output, and maintenance of staff at the present level requires double that output. In the grammar schools, the deficiency is equal to three years output of honours graduates, and maintenance requires again a doubling of output. This estimate takes no account of the needs of the newly founded or promised universities, of the technical colleges and of the secondary modern schools.

What measures does Prof. Thwaites propose ? First he suggests that the mathematicians should set their own house in order. There must be a greater sense of unity among all types of mathematician, with the formation of a professional institute to which all would naturally belong ; he regrets that the Mathematical Association does not have a standing comparable with that of other recognized professional bodies. Then the dichotomy between teaching and research must be bridged. It should not be axiomatic that the only career for a first-class honours student is in research ; the appointment and promotion of a lecturer should not depend solely on his success in getting his name into print. Here Prof. Thwaites perhaps fails to do justice to the Mathematical Association ; it has never claimed or wished to be concerned with anything except the promotion of good methods of teaching mathematics. The London Mathematical Society caters for the research worker, and Prof. Thwaites might have reinforced his argument by deploring the recent tendency for a mathematician to join either the Mathematical Association or the London Mathematical Society but not both. Further, the Mathematical Association has made a significant contribution towards easing the crisis by establishing a diploma in mathematics; by passing this, those teachers who, with no specialized mathematical training, are being drafted into teaching mathematics, may equip themselves with at least the basic knowledge which they will require.

Prof. Thwaites then looks at the outside aspect of the problem, and divides it into two parts : the problem of recovery, and the problem of maintenance. For recovery, demands for mathematicians made by other professions must be voluntarily and severely contracted ; salary scales for teachers must be interpreted with great flexibility ; interchange between the school and the university on one hand, and industrial, commercial and Government establishments on the other, should be widespread, on a part-time or full-time basis. This programme must have national acceptance, and must therefore be presented as an urgent national necessity by a fully organized publicity campaign. For maintenance, we must double the mathematical entry over the whole of Britain at the earliest possible moment. Since we have not enough teachers to cope with the present entry, this would appear to be an impossible demand. But Prof. Thwaites thinks that much could be done if the syllabus for school mathematics could be reformed, if the universities revised their standards of entry, and if more undergraduates could be encouraged to take the unduly disparaged general degree in which mathematics would be read in conjunction with other subjects. Here resolute leadership from the centre is essential.

Already, this lecture has excited much comment. Questions have been asked in Parliament (see p. 127 of this issue). In the *New Scientist* of June 1, Prof. C. A. Coulson and Dr. J. M. Hammersley have directed attention to this bottleneck in British science and technology. They note the success of the National Science Foundation of the United States, set up by the Federal Government in 1950, to provide courses for the further training of practising teachers, and to establish groups charged with the revision of the school curriculum and with writing of new text-books. In particular, they stress the value of the summer institutes, which provide genuine refresher and training courses lasting 6 or 8 weeks. Letters from leading mathematicians to *The Times* have welcomed some of Prof. Thwaites's proposals, have been severely critical of others, and have suggested alternatives; but none has impugned his statement of the magnitude and urgency of this problem. There is fairly general agreement that an effort must be made to force the country to understand that a shortage of mathematics teachers is not a small, sectional matter, but the symptom of a coming national catastrophe, that, in fact, we may already have passed the point of no return. Although various bodies have seen the danger and have issued warnings, none of them has so far been able to command the attention of the nation as a whole.

If the danger is great—and no one has yet suggested that it is not—then the responsibility for meeting it lies not only on the teaching and research associations, but also on the University Grants Committee, the Ministry of Education and the Ministry for Science. Action at Cabinet-level may be needed; but a fact-finding committee would be useless. There is no time for a minute inquiry into minor statistical detail, and no salvation in a report that the problem is insoluble and so may safely be left to solve itself. A small strong committee, taking for its motto Florence Nightingale's words, "Reports are not self-executive", might yet retrieve the situation.

WAVE PROPAGATION AND GROUP VELOCITY

Wave Propagation and Group Velocity
By Léon Brillouin. (Pure and Applied Physics: a Series of Monographs, Vol. 8.) Pp. xi+154. (New York: Academic Press, Inc.; London: Academic Press, Inc. (London), Ltd., 1960.) 6 dollars.

IT is difficult to see what purpose this book is meant to serve. Ostensibly it is to make available certain original papers which are not easily accessible because they were published in Germany in 1914. In his foreword, Dr. Brillouin says: "All these modern developments made it advisable to assemble here a systematic presentation of the original papers, which are rather difficult to find nowadays. It is hoped that the present book will be helpful to many readers and save them time and trouble, especially the trouble of recomputing and rediscovering many important features of the general theory". And again in the preface: "I discussed the solution in great detail and gave a complete answer. . . . These problems have come again into the foreground in connection with radio signals and radar. Reflection in the Heaviside layer requires a real knowledge of all these definitions (of group velocity)". But the "modern developments" referred to are in fact very old history now. Of more than sixty references given to the literature only seven are later than 1930, and of these only three are really relevant. The latest reference to propagation in the Heaviside layer is 1931.

One gets the impression that in Dr. Brillouin's view "les jeunes" have much to learn and little to teach concerning the propagation of waves, and that if they will just take the trouble to read this little book they will find all that is important about the subject. This cannot be accepted. The papers are badly written, and they do not by any means give the "complete answer" even to the limited problem with which they deal.

This is not to say that the book lacks interest. The subject is in fact a fascinating one. When a nearly monochromatic light wave with a sharp front falls on a transparent medium the disturbance that travels through the medium consists of three parts: a first forerunner, travelling with the same speed as light *in vacuo*; a second forerunner; and then the main signal, travelling with a velocity which is, except near regions of anomalous dispersion, the group velocity.

The forerunners have a very small amplitude in comparison with the main signal. The first forerunner has a very high frequency. If the incident signal rises from zero to a steady sine wave suddenly, then the frequency of the first forerunner is at first much higher than the frequency of the light, and then gets progressively less, the amplitude meanwhile increasing. But if the incident signal is not so idealized, this rapidly oscillating aspect of the first forerunner is blurred. The second forerunners are of lower frequency, comparable with the signal frequency and their onset travels with a velocity characteristic of the medium (and less than the velocity of light *in vacuo*). They then increase rapidly in amplitude as the main signal arrives, and merge with it.

These deductions from the electromagnetic theory of matter show that no signal travels faster than vacuum light velocity. The first forerunners travel with exactly that velocity. There is, of course, no mystery here. The medium is supposed to consist of electrical particles which on average are at rest before the signal arrives. When it comes, the particles take a little while to get moving, and so to modify the primary field, which, of course, is travelling with vacuum light velocity in the empty space between the electrical constituents of matter.

The book looks at this problem from several slightly different points of view, bringing forward some interesting considerations, in particular the idea of velocity of energy propagation, as distinct from signal velocity, and group velocity. These three velocities are for all practical purposes the same except in regions of anomalous dispersion, where strong absorption of the signal confuses the picture. Unfortunately, much of the value of this discussion is marred by the repetitive nature of the chapters. Had the subject been treated in a unified manner, instead of a 're-hash' of several published papers, the book could have been shorter and very much clearer. There is a deal of inelegant mathematical detail, particularly in Chapter 3, which one presumes to have been Dr. Brillouin's doctor's thesis under Sommerfeld. By contrast, Chapter 2, which is a survey of the subject by Sommerfeld himself, is a masterpiece of clarity and style. It is a pity that Dr. Brillouin did not rewrite the rest of the book nearer to this model. The final chapter is an odd one, having really very little to do with the rest of the book. It deals in a rather cursory manner with wave-guide propagation and looks strangely out of place.

The translation into English from the German and French of the originals is inept. The figures are difficult to follow because the labelling of different curves is not clearly distinguished in the legends. There are many misprints.

M. H. L. PRYCE

THE CYCLOL REVIVED

Chemical Aspects of the Structure of Small Peptides
An Introduction. By Dr. Dorothy Wrinch. Pp. viii+194. (Copenhagen: Ejnar Munksgaard, 1960.) 3.50 dollars.

REVIEWING the chemistry of the proteins in 1937, D. Jordan-Lloyd wrote "the chemistry of the proteins is a mystery no longer", and this enthusiastic overstatement was not out of touch with much informed opinion at that time. The prevailing optimism of the late 'thirties concerning our understanding of protein chemistry was, to a large extent, based on two newly postulated general hypotheses; these were the Bergmann–Niemann periodicity hypothesis and Dr. D. Wrinch's cyclol hypothesis. Although neither hypothesis was ever completely accepted, the former, indeed, being later conclusively disproved, both were of crucial significance in the development of protein chemistry, leading as they did to a renewed interest in the subject and to much important experimental work; for this reason their proponents will always occupy an honoured position in the history of protein chemistry. Very recently, something like the Bergmann–Niemann hypothesis, in much modified form, has been revived by Prof. Šorm, while, in the present book, Dr. Wrinch modifies the cyclol hypothesis and extends it to small peptides.

It is most unlikely that the views now advanced by Dr. Wrinch will command widespread acceptance; the reason for this is fundamentally semantic. Dr. Wrinch starts from the undoubted fact that in certain compounds containing amino-acid residues, such as the ergot alkaloids and the aspartyl-lysine 'dipeptide' from bacitracin *A*, these residues are not combined through simple amide linkages. She then argues that the existence of such compounds "means the repudiation of the peptide hypothesis, for if a hypothesis is subject to unpredictable exceptions, no predictions from it are reliable", and proceeds to a detailed examination of all the possible ways in which amino-acid residues might be combined, arriving finally at a generalized structural theory in which the 'cyclol' and 'amide' structures figure as special cases. Such an approach is, however, mathematical rather than chemical and will not be accepted by organic chemists. For an organic chemist, a peptide is defined as a compound made up of amino-acid residues joined head-to-tail by amide linkages, and the exceptional compounds cited by Dr. Wrinch are, quite simply, not peptides; Dr. Wrinch, on the other hand, appears to define a peptide as a compound made up of amino-acid residues, without restriction as to the manner in which these residues are joined together. In her earlier writings, Dr. Wrinch posed the question "Are proteins peptides?" and gave a possible answer to this meaningful question; now, however, she asks "Are peptides peptides?" and most organic chemists will find this a meaningless question.

In spite of these objections to her main thesis, Dr. Wrinch's new study is both significant and valuable. It is certainly possible, and some think probable, that the active centres of enzymes and other biologically active proteins involve some chemical modification of the simple peptide chain; Dr. Wrinch's systematic classification of such modifications will be of real value in stimulating further thought on this important topic. All organic chemists and biochemists interested in biologically active proteins should read this little book for, although they will probably disagree with its conclusions, they will derive from it much stimulation.

H. N. Rydon

OPERATIONS RESEARCH AND SYSTEMS ENGINEERING

Operations Research and Systems Engineering
By Charles D. Flagle, William H. Huggins and Robert H. Roy. Pp. x+889. (Baltimore, Md.: The Johns Hopkins Press; London: Oxford University Press, 1960.) 116*s*. net.

THIS book consists of a collection of the lectures given in the annual two-week course for management at the Johns Hopkins University, under the same title as the book. The lectures came from various academic departments and also the Applied Physics Laboratory and the Operations Research Office. They will be useful to the student entering on a career in operations research or industrial engineering, and also to directors, managers, and men of business generally who want to know what operations research is about, how it works, and what are its methods and achievements.

There are three parts, the first dealing with philosophical, historical, social and psychological aspects of the subjects. Some of the lectures, considering their length, are rather thinly spread with ideas of significance or importance; and it would surely be possible to say as much with fewer words. However, the lecture by Ellis A. Johnson, on "Operations Research in the World Crisis in Science and Technology", is a most important exposition and assessment of some of the great global forces which are shaping the future of mankind. The second part (more than half of the book) deals with methods and includes accounts of models, statistics, computers inventory, programming, queueing, simulation, design of experiments, information theory, system dynamics, and feed-back and stability. It must be stated that while each lecture is informative the accounts are only introductory. For example, the chapter on queueing theory gives an admirable account of what the subject is about and what it can do, but it does not go very much into mathematical methods. The third part, possibly the most valuable section of the book, is concerned with case studies. Three of these are industrial and concern the functioning of a hospital, a newspaper firm, and a telephone company. For the last-named it is the cost and value of reports which are studied. All three present thorough investigations and reveal the complex structure of practical operations research problems.

The subjects of operations research and systems engineering have developed rapidly in recent years, and the book under review demonstrates conclusively that what has been developed is not just a fashion but something much more permanent. The new way of looking at the operation of the total system, consisting of men and machines, has come to stay—at least in a society concerned with the reduction of waste, the improvement of efficiency, and progress towards a generally higher standard of living. To anyone concerned with this new point of view the book may be thoroughly recommended.

L. S. Goddard

COCKROACH ECOLOGY

The Biotic Associations of Cockroaches

By Louis M. Roth and Edwin R. Willis. (Smithsonian Miscellaneous Collections, Vol. 141, whole volume). Pp. vi+470+36 plates. (Publication 4422.) (Washington, D.C.: Smithsonian Institution, 1960.) n.p.

During the past decade the researches of Drs. Roth and Willis have contributed very greatly to our knowledge of the biology and behaviour of cockroaches, particularly those of economic importance. Not only have they published the results of much painstaking original work, but they have also brought together in the form of comprehensive compilations the fruits of the work of hundreds of other workers in this field. The present work is a compilation of this kind and its bulk is an indication of the thoroughness with which the authors have undertaken their task.

As the title of the book suggests, the authors are primarily concerned with the animals and plants associated with cockroaches; but, as a chapter of some eighty pages is devoted to the physical environment of these insects, the compilation may fairly be said to cover the whole subject of cockroach ecology. In classifying the cockroach's associates the authors begin, commendably, by defining their use of the words symbiosis, mutualism, commensalism, parasitism, and predatism. They then set out a comprehensive biological classification with page references to the account of each category in the text.

After a brief chapter on mutualism, most of the remaining plants and animals associated with cockroaches are dealt with group by group; they are classified down to the level of family and are then listed alphabetically under the generic name. The cockroaches associated with each organism are listed as natural or experimental hosts, vectors, or prey. Then follows a most useful check-list of the naturally occurring symbiotic associates of cockroaches arranged alphabetically under the cockroaches concerned, with page references to the preceding classified section of the book. The remaining few short chapters deal with such topics as commensal and predatory cockroaches, associations among cockroaches, and the biological control of cockroaches.

The bibliography covers more than eighty pages and comprises some fifteen hundred entries; it must include almost every publication having any bearing on cockroach ecology that has appeared up to the end of 1959, and certainly represents the first attempt to bring together the vast literature on this subject.

There are a few text-figures, mostly of Protozoa, and thirty-six half-tone plates showing some excellent photographs of living cockroaches and some of the more important organisms associated with them. These plates include photographs of both sexes of all the major cockroach pests and are a most valuable supplement to the book.

This compilation has achieved a very high standard and is beyond criticism in all important respects. There are, however, a few minor instances of inconsistency: English common names, for example, are given for many but not all organisms that have them, and dates—in addition to authors—are cited for the specific names of helminths, but not for those of any other group (these dates serve no useful purpose in a book of this type and might well have been universally omitted). In the Contents the page references from p. 308 onwards are all out by two pages.

It may be said in conclusion that this book can be unreservedly recommended to any worker on cockroach biology, and particularly to those concerned with the economic importance of these insects. Together with the two previous monographs by the same authors on the reproduction of cockroaches (1954) and their medical and veterinary importance (1957), it forms a most worthy contribution to the literature of cockroaches. DAVID R. RAGGE

TESTING TEXTILES

Handbook of Textile Testing and Quality Control

By Prof. Elliot B. Grover and Prof. D. S. Hamby. Pp. vi+614. (New York: Textile Book Publishers, Inc.; London: Interscience Publishers, Ltd., 1960.) 132*s*.

The control techniques used in laboratories in the textile industries have increased enormously in range in recent years and become more widely and intensively applied. Despite this, text-books on the subject are much as they were ten years ago, with most students having to rely on the *British Standards Handbook* No. 11, which is not a textbook about principles but a series of sets of instructions commended for doing certain tests chosen for their reproducibility. The appearance of Grover and Hamby's book is therefore especially welcome in that it does describe up-to-date instrumental techniques in regular use in the United States.

More than a hundred pages are given to statistical methods, vital in interpreting test results on textile materials and also in the theory of yarn structure. Another hundred pages are devoted to tests on cotton fibres for length, strength, fineness and maturity and other properties. Considerable space is given to yarn tests, including the most up-to-date tests for irregularity and strength. Methods of test for fabric receive less attention, though a chapter on the evaluation of fabric defects is valuable.

The book is thus concerned with physical testing only—methods of fibre identification, or chemical analysis of blends, or estimation of damage or degree of polymerization are not mentioned, nor, oddly enough, are the highly developed methods of test for the abrasion resistance, crease resistance and water repellency of fabrics. The book is strongly oriented towards cotton, and neither wool nor synthetic fibres receive much attention, although much has been published on test methods appropriate to them.

The treatment of the selected subject-matter is thorough but elementary, perhaps too elementary in some parts. An honest attempt has been made to present some difficult concepts in simple terms—as in the chapters on statistical methods and yarn evenness—but parts of the book are taken up with instructions for operating particular instruments that would have been better left to the makers' handbooks. Whether the tests measure the right parameters, their limits of accuracy, the reproducibility of tests made on different instruments or by different operators, their relative convenience—these are matters that might have been given more space in a book on quality control. The bibliographies at the end of each chapter are generally unsatisfactory and should be thoroughly overhauled in any reprinting—some have no bibliography at all, sometimes an author is listed but with no journal or date, sometimes a reference made to unpublished work appears alone, and practically all the lists are absurdly short. The manner of presentation leads one to speculate about the kind of reader envisaged, and to the conclusion that the American executives, technical personnel and students, for whom this is written, are no better trained in science than their English counterparts. W. J. Onions

A CATALOGUE OF THE ULTRA-VIOLET

Organic Electronic Spectral Data

Vol. 1: 1946–1952. Edited by Mortimer J. Kamlet. Pp. xiv+1208. 215*s*. Vol. 2: 1953–1955. Edited by Herbert E. Ungnade. Pp. x+919. 132*s*. (New York: Interscience Publishers, Inc.; London: Interscience Publishers, Ltd., 1960.)

THE object of this work is to present all useful published data on the ultra-violet and visible absorptivity of organic compounds. The criterion of usefulness is adequacy to define the molar absorptivity for at least one stated wave-length of maximum absorption. The solvent used, or *p*H of an aqueous solvent, is also stated, if known, though the concentration is not; and literature references are given for all entries. Compounds are arranged as a molecular formula index, and the number comprised must be between twenty and thirty thousand, for many of which more than one set of data is supplied. Gas-phase measurements are included.

Critical treatment of this material, difficult in view of its great bulk, becomes nearly impossible because of the chaos of modes in which the data have originally been expressed. The editors give candid warning that, despite their best endeavours, a proportion of the figures may thus be out by a factor of ten, or of the molecular weight, or both, and that the reference to the original paper should be followed up in any case of doubt. Within this limitation, absorptions are here uniformly expressed as molar absorptivity, log ε, where ε has the value $\log(I_0/I)/cb$, c being in cm. and b in moles/l. The latter expression is now adopted as the definition of 'extinction coefficient' preferred by the Optical Data Commission of the International Union of Pure and Applied Chemistry. A statement of only two significant figures of the mantissa, however, can be appreciably less precise than the measurement it reports. Thus a figure of 4·23, signifying the range 4·225–4·234, would cover (for 0·001 per cent of a solute of molecular weight 300) measured extinctions from 0·559 to 0·571. For quantitative purposes, significance in the third figure is desirable and attainable, and it seems matter for some regret that, in cases where such precision has been recorded, it must be lost in the editorial reduction to two figures.

The search for material in more than seventy journals appears to have been extremely thorough. Other sources—to judge by the omission of, for example, amodiaquine (*British Pharmaceutical Codex*, 1954), chlorpheniramine (*U.S. Pharmacopoeia*, 1955) and the chlorosalicylanilides (*American Medical Association's Standards for New and Non-official Remedies*, 1955)—have not been drawn on.

The choice between systematic and coined names is not always made consistently; for example, "Antazoline" is used, but not "chloroquine" (*U.S. Pharmacopoeia*, 1955, and *Chemical Abstracts Index*, 1954), though the latter is an example where the coined name would make for easier reference among the seven entries under its molecular formula.

The numerals in the formulæ of Volume 2 are smaller but sharper than in Volume 1; a combination of the best qualities of both would seem ideal. That a work of such enormous scope should realize everyone's ideal in every respect, however, is scarcely conceivable; and the measure achieved here, and promised in the further volumes by which the project will be brought up to date, must claim the gratitude and respect of all users of data of this kind.

E. G. Kellett

EUROPEAN PARASITES OF MAN

Parasitologie für Ärzte

Von Prof. Otto Jírovec. Unter Mitarbeit von Dr. J. Jíra, Dr. E. Kmetý, Dr. J. Kramář, Dr. M. Petrů und Dr. B. Rosicky. Pp. xi+684. (Jena: Gustav Fischer Verlag, 1960.) 93.65 D.M.

THERE are, Dr. Jírovec says in his preface, several good books on medical parasitology; but most of these deal more especially with parasites found in man in tropical and subtropical countries and few concentrate on species found in European climates. This book, however, gives more of its space to these, the tropical and subtropical species being relatively briefly described. The emphasis throughout is on bionomics, epidemiology, diagnosis and therapy, less space being given to the clinical signs of parasitic disease.

The chief author, Dr. Jírovec, has written the general account of parasitism (Part 1), the description of parasitological techniques (Part 2) and the sections on the Protozoa (Part 3) and helminthology (Part 4). The section on the Protozoa occupies almost half the book and reflects, in considerable detail, the work of Dr. Jírovec and his colleagues, and many will be glad to have the accounts here given of parasites such as *Pneumocystis*, *Toxoplasma* and *Trichomonas vaginalis*, which are less extensively discussed in other text-books. The section on the arthropods (Part 5), on parts of which Dr. Rosický collaborated, is on the whole less evenly covered. The section on the leptospiroses was written by Dr. Kmetý, the account of *Toxoplasma* by Dr. Jírovec in collaboration with Dr. Jíra and the sections on the rickettsias, *Trichomonas vaginalis* and *Pneumocystis* were revised by Prof. Vaněk, Prof. Peter and Dr. Syrůček respectively. Other collaborators were Dr. Kramář on the Diptera and Dr. Petrů on paragonimiasis and ascariasis of the lung.

The book, which is written in clear and simple German, fully maintains the high standard of production of the house of Gustav Fischer. The 285 illustrations are all good and many of them, supplied by the author or his colleagues, are not available in other books. They include useful photographs of helminth eggs and of parasites in the host's tissues, and some of these were taken through the phase-contrast microscope. There are several illustrations in colour, and, although most of these will be helpful to the reader, some of them raise the question, also raised by coloured illustrations in other text-books, whether colour, especially when it depends on the staining techniques employed, is worth its high cost. The reproduction of all the illustrations is, no doubt, improved by the use of glazed paper throughout the book, but this also increases the weight of the volume. The bibliography is scarcely adequate for so comprehensive a book; it might have been better to have given to it the eight pages taken up by the list of equipment needed for a parasitological laboratory and the notes on the transport of diagnostic material. The book, nevertheless, strikes out a new line in the balance of its material, and anyone who has to deal with parasites encountered in European climates will find it a useful addition to his library. G. LAPAGE

EFFECTS OF SMOKING

Smoking

Its Influence on the Individual and Its Role in Social Medicine. By C. Van Proosdy. Pp. viii+319. (Amsterdam: Elsevier Publishing Company; London: D. Van Nostrand Company, Ltd., 1960.) 57*s*. 6*d*.

EVER since its introduction into Europe at the end of the fifteenth century, tobacco-smoking has met with periodic opposition from temporal and ecclesiastical authorities, and other self-appointed guardians of public health and morals. Much of the criticism of the use of tobacco has been ill-founded and based on ignorance or prejudice, but in recent years a considerable body of scientific evidence has accumulated which indicates that tobacco-smoking may have deleterious effects on the smoker's health. The relationship between cigarette-smoking and lung cancer is now well established, and there is evidence that cigarette-smoking may also be connected with some forms of heart disease and certain other diseases. Most smokers would probably argue that smoking has beneficial effects as well, and it obviously has very strong attractions. These appear to be associated with the nicotine content of the smoke, and psychological and social factors may also be important.

In his book, Dr. Van Proosdy has brought together a great deal of the available evidence relating to the medical, psychological and social aspects of smoking. This is a very wide field with an extensive literature, and the herculean nature of Dr. Van Proosdy's labours is indicated by the bibliography, which occupies forty pages of the book. The pleasures of smoking are not entirely disregarded, but the emphasis is on its dangers and drawbacks, and nearly half the book is devoted to a discussion of "The Damage done by Tobacco to the Human Organism". This reviews the epidemiological and clinical evidence and also, where available, the experimental evidence, relating to the influence of smoking on the development of cancer of the lung, larynx and mouth, on other diseases of the respiratory tract, on diseases of the heart and blood vessels and on the digestive organs, nervous system and sexual organs. Other chapters are concerned with the psychological and pharmacological aspects of smoking and the use of tobacco as a socio-psychological phenomenon. Techniques used for investigating the effects of smoking and possible methods of making smoking less harmful are also discussed.

The coverage appears to be fairly complete, at least in the field with which I myself am most familiar, and moderately well up to date with references to results obtained up to and during the year 1959. The large amount of information given in a relatively small book makes for succinctness; the book is to be recommended as a useful work of reference on the medical, psychological and social aspects of smoking. W. CARRUTHERS

FROM BUTTONS TO BULLION

Two Hundred Precious Metal Years

A History of the Sheffield Smelting Company Limited, 1760–1960. By Ronald E. Wilson. Pp. xxii+316+54 illustrations. (London: Ernest Benn, Ltd., 1960.) 63*s*. net.

IN these days of large corporations, it is rare to find a sizeable firm where a family has maintained a big interest for 200 years. The author of this book is a great-great-great-grandson of John Read, the founder of the Sheffield Smelting Co., which has been for a long time one of the most important precious-metal smelting firms in the country. He is thus in a unique position to survey the development of the firm which reflects, in some measure, the growth of Sheffield as a metallurgical centre. While this book will interest particularly those people familiar with the Sheffield scene, it provides the general reader with an accurate account of the early days of precious-metal smelting in Hallamshire. At first, the prosperity of the infant firm rested in the skill with which gold and silver were recovered from jewellers' waste or sweep. As the Sheffield plate trade developed in the latter half of the eighteenth century Read's business flourished and already by 1783 he was selling more than 50,400 ounces of silver a year in Sheffield. In the early days the business contacts of the firm already ranged from the Royal Mint to the scores of button makers in Birmingham and Sheffield.

By the end of the century, the firm was smelting waste from many parts of the country and from Europe. There is ample evidence that dealings in precious metals were never without risk, for much depended on the skill of the assayer and the accuracy of the sample, not to mention the reliability of the Company's agents, which varied from time to time. Add to this the habit of gold and silver prices to change unpredictably, and the occasional imposition of precious-metal taxes, and one has all the necessary ingredients for an exciting commercial life. Consequently, in the nineteenth century, the fortunes of the Company waxed and waned, and disaster threatened from time to time. However, it is a measure of the resilience of the family that the firm survived to become the leading precious-metal smelters in Britain towards the end of the nineteenth century. The part of the book dealing with the eighteenth and nineteenth centuries is likely to be of greatest interest because of the many side-lights both on the social life and industrial development of the times.

While the twentieth century led to continued expansion and broadening of activities, the actions of Governments could turn fair wind into foul, as when the U.S. Treasury ceased to support the silver market in 1935. The author is perhaps more reticent about progress after the Second World War, but it is clear that since then there has been great development and that the Sheffield Smelting Co. commands a very important position among the refiners and fabricators of precious metals.

This book is an interesting historical survey against an ever-changing social and economic background, with sufficient technological information for the reader to appreciate the development of this rather exotic industry from humble beginnings.

R. W. K. Honeycombe

THE RETRIEVAL OF PUBLISHED INFORMATION

Retrieval Guide to Thermophysical Properties Research Literature

Vol. 1. Edited by Y. S. Touloukian. Book 1, Part A: Guide to Substance Classification and Numerical Codes. Book 1, Part B: Dictionary of Synonyms and Trade Names. Book 1, Part C: Directory of Substances. Pp. xii+1352. Book 2: Classified Search Index. Pp. vii+169. Book 3: Master Bibliography; Author Index. Pp. ix+372. (New York: McGraw-Hill Book Company, Inc.; London: McGraw-Hill Publishing Co., Ltd., 1960.) £46 10*s*. 0*d*.

THIS massive work constitutes the first fruits of one particular plan to master the enormous wealth of knowledge which is the outcome of scientific research. The general problem is well known. As laboratories are multiplied and scientists grow in numbers, any use of the information they obtain is liable to become increasingly patchy, because it is becoming increasingly difficult to locate every mention of a subject in published scientific literature. Often much of the information available has, in fact, not been used because its existence was not known. In quite a few cases there is wasteful duplication of effort in planning research to obtain scientific information that is already adequately available, for the purpose in view, in published literature.

The Thermo-Physical Properties Research Centre, Purdue University, has been working since 1957 to overcome the present limitations to the use of acquired knowledge in a strictly defined and fairly narrow field of thermophysical properties of matter. These aim to be those of importance primarily to engineers, and these three books of Volume 1 are the first publication from this Centre. They deal with 10,000 references concerning the thermal conductivity, specific heat, viscosity, emissivity and related optical properties, diffusion coefficient, and Prandtl number of a long list of materials. By the time Volume 3 is published, the aim is to include linear and cubical coefficients of thermal expansion surface tension, vapour pressure and *P.V.T.* data, a group of derived thermodynamic parameters, latent heats of fusion, critical and phase transformation constants, thermo-electric constants, and electrical conductivity.

One of the main goals of this *Retrieval Guide* is to reach the ultimate in comprehensiveness of coverage of information about these thermophysical properties, part of which may never be found by merely consulting the abstracting journals. To reach this goal, a high level of financial expenditure and intellectual effort has obviously been involved. An interesting feature is that unlike other collections of similar data, this group of books develops its own method of coding substances, which needs to be mastered carefully to use the interlocking method of coding properties and of the 10,000 literature references given in Book 3 of Volume 1.

It need scarcely be stated that effective retrieval systems are becoming of increasing importance for applied and even for pure science. Before deciding just how good the present system will prove to be, one would wish to proceed experimentally, and to expose one or two working librarians to the use of this volume by comparison with other methods of retrieving desired information from scientific literature.

Sampling suggests that the present publication is likely to prove most useful and to repay handsomely its initial cost for central libraries that deal with many inquiries. For smaller libraries, appropriate, if clumsier, books of tables of physical properties are likely to remain more acceptable for some time to come, even though they suffer from the grave defect of lack of comprehensiveness. The standing of the Research Centre is a warrant for the continuation of this series in further volumes. Their production is of high quality, and the series should prove itself to be increasingly indispensable as more volumes increase the range and dates of publication of the information covered. A. R. Ubbelohde

DICTIONARY OF THE FUNGI

Ainsworth and Bisby's Dictionary of the Fungi

Fifth edition by Dr. G. C. Ainsworth. Pp. viii+547. (Kew, Surrey: Commonwealth Mycological Institute, 1961.) 30*s*.

AINSWORTH and Bisby's *Dictionary of the Fungi* has been regarded as a major work of scholarship since the publication of the first edition in 1943. It has earned for itself a place on the bookshelves of all interested in the study of fungi, and so the appearance of the fifth edition is warmly welcomed by mycologists and plant pathologists alike.

The new edition resembles closely the previous one. In the dictionary proper, which occupies 440 pages, the information is organized under headings arranged alphabetically on the lines of Willis's *Dictionary of the Flowering Plants and Ferns*. More than 5,000 corrections and alterations have been made to the text of the fourth edition, and much new material has been added. The inclusion of 500 more generic names than in the fourth edition ensures that most genera included in the *Index of Fungi* up to the end of 1960 are to be found in the *Dictionary*. The taxonomic position of each genus is indicated, together with the number of species in a genus and their distribution. Full attention is paid to synonyms. Excellent short accounts are provided of the chief families, orders and classes of Fungi and of bacteria and lichens. Definitions are given of many terms used in mycology and plant pathology, while the general articles on such subjects as collection and preservation of fungi, the genetics, nutrition, and phylogeny of fungi are valuable. Throughout the text there are numerous references to appropriate literature.

Following the alphabetical dictionary, 55 pages are devoted to listing the genera of fungi by classes, orders and sometimes by families. A revised key to the families of fungi by G. W. Martin occupies 21 pages. A new set of drawings illustrating fungal structure and terminology is provided.

The *Dictionary of Fungi* may be regarded as a mine of carefully compiled and well-presented information, being undoubtedly one of the landmarks of mycology. The new edition is good value at the price of thirty shillings. John Colhoun

The Major Achievements of Science

By A. E. E. McKenzie. Vol. 1. Pp. xvi+368+24 plates. 30*s*. net. Vol. 2: Selections from the Literature. Pp. xii+195. 17*s*. 6*d*. net. (Cambridge: At the University Press, 1960.)

IN the first of these two volumes the author attempts to describe, in twenty-four chapters, the progress made in various branches of science during the past four centuries. The first chapter introduces the subject with an outline of the development of science and technology from the Stone Age to the Renaissance; and four chapters, appropriately placed, give some account of the state of philosophy in each century from the seventeenth to the present, showing how the changes in outlook are related to advances in science. Of the remaining chapters, more than half are devoted to the physical sciences; chemistry occupies two chapters, geology one, and some aspects of biology, including medicine, five. Neither botany nor zoology is mentioned in the index. Chapter twenty-four is philosophical rather than historical.

This work is intended primarily as an introduction to science for students of the humanities, either in the sixth form at school, or at universities, and is an expression of the belief of its author that such an introduction is best effected by the historical approach. In furtherance of this object, the second volume consists largely of selected extracts from scientific literature that are historically significant, and it supplements, chapter by chapter, the text of volume 1. Again some philosophy is included. Most of the extracts are quite short, and have been chosen so that they offer no technical difficulties to the non-scientific reader. All are in English, many of the translations having been supplied by the author, Mr. A. E. E. McKenzie. As seems usual in modern works on the history of science, and is perhaps inevitable in the 'space age', there is a bias towards the physical rather than the biological aspects of science. With this limitation, and provided it is realized that, though covering a wide field, the work is not comprehensive, it can certainly be recommended as likely to serve its purpose. The book is well produced, and contains numerous attractive illustrations.

J. M. EYLES

Principles of Human Genetics

By Curt Stern. Second edition. Pp. x+753. (San Francisco and London: W. H. Freeman and Company, 1960.) 68*s*.

PRINCIPLES OF HUMAN GENETICS possesses all the attributes of the perfect text-book: a wealth of accurate, up-to-date, well-illustrated information evenly covering every aspect of the subject presented in a logical, intelligible and interesting way. The form of the first edition is retained in the second, but the book has been extensively rewritten to include the enormous advances that have been made during the past twelve years. These have particularly necessitated considerable revision of the sections dealing with linkage, sex determination, biochemical genetics, mutation and the role of selection, and completely new chapters are now included on polymorphism and the genetic hazards of radiation. True to its title the book is primarily concerned with principles and all the detail is presented in exemplifying these. Particularly meritorious is the way that Stern has managed to explain simply the basis to the mathematical and statistical procedures that are necessary in human genetics.

The recent studies of human populations have spectacularly elucidated many general genetic principles. This is, no doubt, why Stern's consideration of population genetics seems especially brilliant, but it would be unjust to single out any one topic for particular praise if by doing so it is implied that others are not as well treated as they could be. The only adverse criticism that might reasonably be made is that polygenic inheritance is not considered so comprehensively as the other topics, for no systematic attention is given to the statistical methods of analysing quantitative variation such as have been used by S. B. Holt in her rigorous study of dermatoglyphic patterns. However, in all, it is confidently predicted that *Principles of Human Genetics* will long be indispensable to those who study human biology, and many will be permanently indebted to the author of this magnificent book.

G. AINSWORTH HARRISON

Ovum Humanum

Growth, Maturation, Nourishment, Fertilization and Early Development. By Prof. Landrum B. Shettles. Pp. viii+78 (64 figures). (New York: Hafner Publishing Company, Inc., 1960.) 55*s*.

INTEREST in the development of the mammalian embryology dates from the dawn of medical science, and there was much speculation as to the origin of embryos. It was not, however, until 1827 that Von Baer discovered the mammalian ovum. More than one hundred years passed before a human ovum was recovered from the uterine tube by Allen *et al.* (1930). Once the mammalian ovum had been recognized the science of mammalian embryology was established on a sound basis.

The author of the present atlas is to be congratulated for giving us a pictorial presentation in sixty-four superb photomicrographs of the development, growth, maturation, ovulation, fertilization and cleavage of the human ovum.

In the captions of different illustrations the following topics, among many, are discussed and illustrated: the enzymatic action of the tubal mucosa on the corona radiata cells, the movements of the vitellus within the zona pellucida, the presence of two primary oocytes within a single follicle and its possible bearing in twinning, and the nourishment of the ovum by the cells of the corona radiata.

The book makes a valuable contribution to our knowledge of the development of the human ovum, and it can be recommended without reserve.

W. J. HAMILTON

Mammals of the British Isles

By Philip Street. Pp. 185+32 plates. (London: Robert Hale, Ltd., 1961.) 21*s*. net.

THIS is an exceptionally lucidly written book, which will appeal to a wide public. It will provide easy and enjoyable reading for anyone wishing to improve his knowledge of the huge subject of mammals. It may, in some ways, be too straightforward for the specialist, yet even he will appreciate the interesting and well-organized treatment of fundamentals, and the fact that much of the information is based on recent research.

There are thirteen chapters to the book, an index, and fifty-six excellent photographs of mammals.

Although these are not colour plates, they are carefully produced pictures, all large enough to be detailed and revealing.

The first chapter is a general introduction to mammals, covering their evolution, and the distinctive features of all the Orders. The eight Orders found in Britain are dealt with in detail, including both wild species and alien species bred in captivity. From this chapter alone, an enormous amount can be learnt about mammals in general.

Chapters 2–12 deal, by groups, with the different species of mammals in Britain, including domestic animals, including domestic pets. Among a host of interesting information, there are accounts of origins, and of present-day efforts to preserve species that are gradually becoming extinct. The final chapter is on breeding animals for fur.

This would be an excellent book for a senior school library, or for any layman's shelf.

B. J. G. MAITLAND

A Biology of Crustacea

By Dr. J. Green. (Aspects of Zoology Series.) Pp. xv+180. (London: H. F. and G. Witherby, Ltd., 1961.) 30*s*. net.

IF the severe limitations of length are accepted, then this is an excellent book. It deals mainly with the biology of the intact animal, and it is said that the aim "is to provide a general background of biological knowledge for all who may encounter the Crustacea"; however, a background of biological knowledge is required to read this book. Although a good attempt is made to keep technicalities to a minimum, a fair number of terms are introduced without explanation.

Most chapters are over-condensed and, unfortunately, the first suffers most. This chapter endeavours to give a picture of the origin and radiation of the entire class, introducing, what, to the non-specialist, must be a bewildering array of names from sub-class to species. The account of radiation is confused by details of classification and it is suggested that the book would be much improved if the appendix (a systematic classification of the genera mentioned in the text) included a short list of the diagnostic characters of each group. Other chapters deal with feeding, growth, behaviour, blood, distribution etc., and the species used to exemplify the subjects are well chosen and from a wide geographical range. A considerable proportion of the subject-matter is taken from recent works. As might be expected, Dr. Green has drawn largely from studies of the Branchiopoda, but this certainly does not detract from the value of the book or invalidate the generalizations made. Typographical errors are few and errors of fact less.

J. A. ALLEN

Biochemistry of Steroids

By Erich Heftmann and Erich Mosettig. (Reinhold Organic Chemistry and Biochemistry Textbook Series.) Pp. xi+231. (New York: Reinhold Publishing Corporation; London: Chapman and Hall, Ltd., 1960.) 55*s*. net.

THE authors acknowledge the help of 28 well-known colleagues who reviewed part or all of the manuscript. It is not surprising, therefore, that this book is both well written and remarkably free from errors. Although the text occupies only 169 pages, the most important features of the biochemistry (with relevant chemical and physiological background where necessary) of cholesterol and related sterols, tetracyclic triterpenes, vitamin D, sapogenins, steroidal alkaloids, cardiac glycosides, bile acids, progesterone, corticosteroids, androgens and œstrogens are presented in a concise, readable style. At the end of the text, 774 references to recent books and reviews are appended; the headings and sub-headings to this bibliography simplify the search for more detailed accounts of selected topics. In addition, there is an extensive subject-index, which enables structural formulæ in the text to be found rapidly. Moreover, reference numbers in the bibliographic section are quoted in the subject index under the various entries, thereby facilitating a search of the literature. Honours students and those research workers who wish to acquire a working knowledge of an important and rapidly developing field with the minimum of reading will find this book very valuable. Unfortunately, the price suggests that their access to it is likely to be through the medium of a library.

D. T. ELMORE

Plant Viruses

By Dr. Kenneth M. Smith. (Methuen's Monographs on Biological Subjects.) Third edition. Pp. xii+209+8 plates. (London: Methuen and Co., Ltd.; New York: John Wiley and Sons, Inc., 1960.) 16*s*. 6*d*. net.

AT a time when virus research is so thriving, it is regrettable that plant viruses are so little studied in British universities. A book intended for "the student who has no previous knowledge of plant viruses" may encourage such study and is therefore very much to be welcomed, especially when its author is so experienced in plant-virus work as Dr. Kenneth Smith. But although the new edition of this little book contains more than twice as many pages as the old, one feels that it is still too small to do justice to the subject, which has grown immensely in recent years. No doubt, to limit the book's size, the author has left out many of the new lines of work which have developed in his "fourth period" in the history of virus study, starting in 1935. Thus, for example, the chemical nature of plant viruses is scarcely referred to, although the fact that all those yet sufficiently adequately studied have proved to be ribonucleoproteins is basic to any attempt to understand their stability, serological properties, multiplication, and methods of purification. Then again, the student, like myself, may not understand the techniques of X-ray crystallography in detail, but he should know more of what X-ray studies have contributed to knowledge of the structure of virus particles.

In the first part of the book are described symptomatology, modes of dissemination, electron microscopy and effects on physiology of host plants; all students of biology should read the chapter on the relation of plant viruses to their vectors. The chapters on practical methods in plant virology which form the second part cannot fail to benefit students. There is, however, little to indicate which of the methods described are of greatest practical use and which are the most reliable. Some, such as neutralization of infectivity, and anaphylactic shock, are unfashionable; some others, such as certain of the diagnostic colour tests, are unreliable.

In short, although there is plenty of good information for the student in this book, the spice of modern work might have been a little more liberally applied.

B. D. HARRISON

THE NATIONAL PHYSICAL LABORATORY

OPEN DAYS

MORE than 4,000 people visited the National Physical Laboratory during May 10–11, when items of the work of all the scientific divisions were on display. In addition to the usual number of invitations sent to industry, public and national boards and Government Departments, this year saw a greater number of visitors from the universities and colleges of advanced technology.

A new feature of the open days was the lectures given by Dr. H. Barrell on "Industrial Measurement Standards", and Dr. J. A. Pople on "Research in the Basic Physics Division", in the new lecture theatre of Glazebrook Hall.

The work of the Laboratory falls into three main categories, and examples from each of these were included in the programme for the two open days. The Laboratory has the national responsibility for establishing and maintaining the standards and units on which all measurements ultimately depend. Secondly, the Laboratory carries out basic research in the scientific disciplines covered by its nine divisions and publishes the results. Thirdly, the Laboratory assists industry by undertaking sponsored research, making tests and calibrations for fixed fees, and giving advice on problems that come within its scope.

It is impossible to describe, or even mention, all the items on display—more than 170 in all. But the three functions of the Laboratory can adequately be illustrated by a selection of exhibits covering each.

Standards

In October 1960 the eleventh General Conference of Weights and Measures adopted the metre defined in terms of the wave-length of the orange line of krypton-86. This marks the attainment of an objective towards which the National Physical Laboratory has been working since 1923. The use of metal bars as fundamental standards of length has been eliminated and another step taken towards the complete use of natural phenomena as fundamental standards in place of arbitrary material standards.

The Standards Division of the Laboratory celebrated this culmination of nearly 200 years of development of the metric unit of length by an exhibition of the "History of the Metre". Exhibits were shown beginning with the original Paris end-standard used by La Condamine in the measurement of the length of a degree at the equator and ending with the International Prototype Metre of 1875. The second group of exhibits showed some of Michelson's work, which estimated the possibility of measuring lengths of about 1 metre accurately in terms of wave-lengths of light emitted by a cadmium lamp.

The third group of exhibits showed developments since 1945 leading to the use of the orange line of krypton-86, the wave-length of which should be reproducible to an accuracy of one part in a hundred million. Recent work at the Laboratory, however, has been carried out with an accuracy approaching one in a thousand million.

The definition of the metre in terms of the orange line of krypton-86 maintains the previously accepted value of the wave-length of the cadmium red line in terms of the International Prototype Metre. (1 metre is 1 650 763·73 wave-lengths of the orange line of krypton-86.)

Industrial firms are always under pressure to meet increasing demands for greater precision in the manufacture of their products. They can be assisted in this by an increase in speed and accuracy in the calibration of standards used in engineering measurement. An exhibit was shown of recent work in the Standards Division which is effecting such improvements in the calibration of slip-gauges and angle standards. An automatic comparator is being developed in which slip-gauges are compared with reference standards by a pneumatic calliper. The calliper, automatically adjusted by a servo-system to accommodate different sizes, receives the gauges from a mechanical feed. Any known errors of the standard gauges are injected into the measuring system, so that the errors of the gauges being calibrated are shown directly on the machine. It is hoped that in the final model the results will be printed automatically. Visitors were informed that the machine should ultimately possess an accuracy of ± 1μ in. (± 0·025 μm.), and will, therefore, be able to undertake work which is at present carried out by the much slower interference techniques.

A second exhibit showed the results of an investigation into some of the factors which influence the accuracy with which angle standards in the form of polygons can be calibrated. Photo-electric auto-collimators were used for the experimental observations. An eight-sided steel polygon had been calibrated at three different establishments under normal industrial inspection-room conditions and it was found that some of the limitations imposed by commercially available equipment could be partially removed by improvements in its design and handling.

The Light Division staged a demonstration based on the illumination of prints of paintings and coloured fabrics, showing the latest developments in its work on colour-rendering or the ability of a light to give a correct presentation of colour values. This work has been made necessary by the general adoption of fluorescent and other discharge lamps, the light from which can depart considerably from the 'black-body' type of spectral distribution to which the eye is naturally adapted. A general theory of the tolerance of the eye to such departures, worked out in the Laboratory, has now been confirmed on a practical scale at the National Gallery and the Victoria and Albert Museum with the aid of numerous observers, and it will soon be possible to lay down rules for defining the effectiveness of colour rendering in lamp and lighting specifications.

Basic Research

The preliminary work on solids at extremely high pressures demonstrated last year by the Basic Physics Division has now been extended, and some very interesting results were shown. The apparatus demonstrated last year builds up pressures of the order of 100,000 atmospheres and creates, at the same time, working temperatures ranging from −200° to +2,000° C. The high pressures are obtained by squeezing, with four anvils, the focus of a tetrahedral pressure cell of ¾-in. edge-length. High temperatures are obtained by heating electrically an inner cell containing the sample; low temperatures by circulating a cryogenic liquid around the anvils. Since the latter also serve as electrical contacts, the apparatus is suitable for making electrical conductivity measurements. These have been made on inter-metallic semi-conductor compounds. For example, indium antimonide has been found to change abruptly from the semi-conducting to the metallic state at 30,000 atmospheres and room temperature, a phenomenon probably due to the melting of the compound.

In addition to studying the behaviour of known materials, ultra-high pressure techniques may be used for the synthesis of new ones. The simultaneous application of high pressures and temperatures sometimes causes a re-arrangement of atoms in the sample under pressure. When normal conditions are restored, this arrangement remains 'frozen in', thus forming a new material. The Division has synthesized, in this way, coesite from quartz and diamond from graphite, the conditions for the latter transition being 80,000 atmospheres and 2,000° C. with nickel as a catalyst. Although diamond was first synthesized in the United States six years ago, this is the first time equipment with this capability has been set up in the United Kingdom.

The same Division displayed a technique for identifying new species of radicals in irradiated materials by utilizing spectron-spin resonance. Identification is by interpretation of the hyperfine coupling pattern. Emphasis is being laid on measurement of typical coupling constants in simple cases as a means of predicting the pattern to be expected for any particular chemical species. Work has been done on γ-irradiated amino-*iso*butyric acid; evidence has been obtained for CO_2^- in irradiated sodium formate.

The Metallurgy Division demonstrated how the use of the modern electron microscope has provided a means of studying the processes that occur during the ageing of iron. It had been thought for some time that the increase in strength of alloy steels above that of pure iron was due to fine dispersion of precipitate particles; but the nature of this strengthening process could not be investigated in its entirety until the advent of the electron microscope, since the particles were below the resolution of the optical microscope (about 1/100,000 in.). Particles less than 1/100 of this size can now be examined *in situ* in the metal. The specimen to be studied is thinned by electro-polishing until it is about 1/100,000 in. thick; it is then transparent to the electron illumination of the 100-kV. electron microscope. The internal structure can now be observed, both the precipitates and the lattice defects or dislocations being seen. It is the movement of these dislocations that causes plastic flow in metals, and where they can move easily, as in a pure metal, the metal is soft. It is thought that precipitate particles strengthen the metal by acting as obstacles to dislocations. The Division expects to be able to study the details of the interaction and to extend its investigations to commercial steels where the additional elements present can affect the precipitation processes.

The Ship Hydrodynamics Laboratory at Feltham displayed some new experiments to determine the effects of entrained water for typical arrangements of ship control surfaces. In the experiments a ship

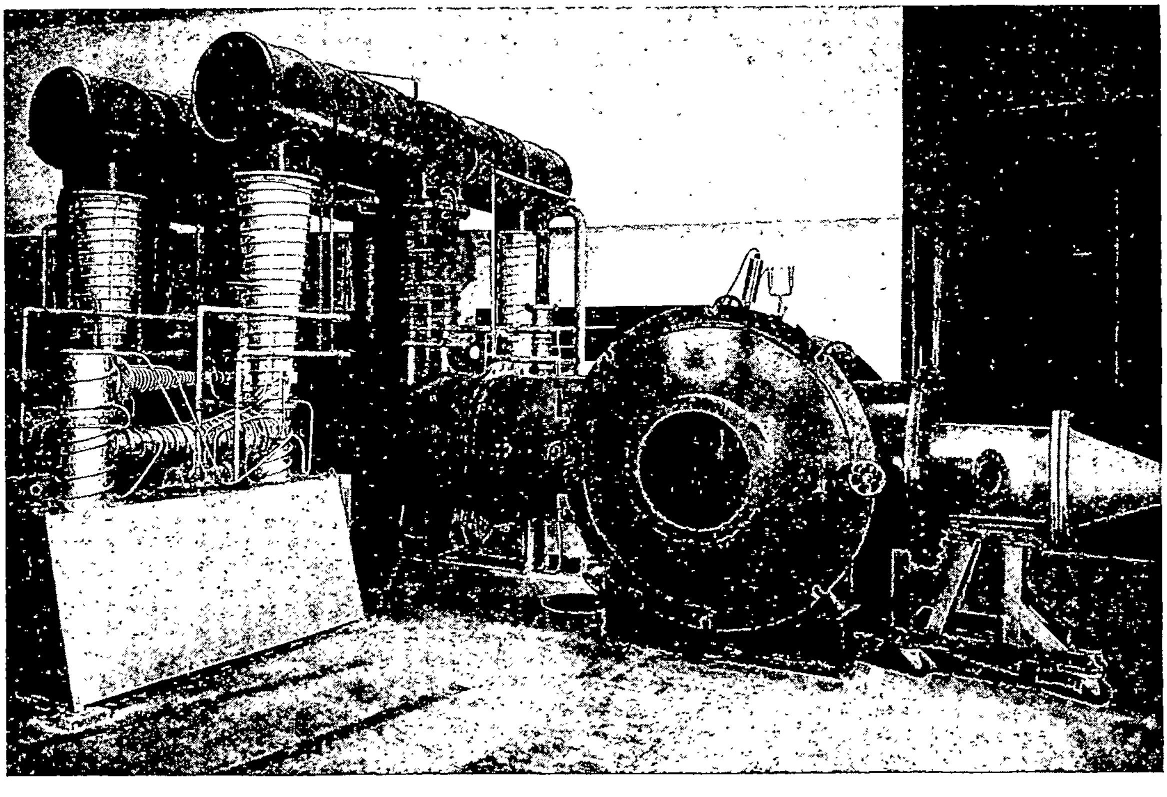

Fig. 1. New low-density tunnel of the Aerodynamics Division. Stagnation pressures, 0·0001–5 atmo.; Mach number range, 0–10
(*Crown copyright reserved*)

rudder is represented by a vertical, rigid plate capable of rotating about a vertical axis and of lateral deflexion by bending this axis. This is then vibrated in either or both of its torsional and flexural modes and measurements made to distinguish between four sets of pairs of natural frequencies, with the assembly in air and in water, uncoupled and coupled. From these measurements, the Division will be able to calculate the hydrodynamic masses and moments of inertia for conditions of restraint corresponding to those in which ship control surfaces operate.

In the Aerodynamics Division, new hypersonic shock facilities were demonstrated, including a low-density wind-tunnel and plasma jet (Fig. 1), a 'hot-shot' wind-tunnel and a magnetically driven shock tube.

Some initial experiments were shown on the noise generated by air jets. The object of the work is to investigate the basic relationship between jet turbulence and noise.

Test and Research Work for Industry

The amount of work for industry carried out by the Aerodynamics Division is steadily growing. An interesting exhibit this year was that showing the aerodynamic stability investigation for London's new micro-wave tower, which has to be sufficiently high (500 ft.) to enable transmission and reception of micro-wave signals without interruption from other tall buildings. Periodic forces set up by vortex shedding tend to cause tall slender structures of circular section to oscillate in a bending motion when exposed to a steady wind. The exceptional dimensions of the new tower and its location make considerations of aerodynamic oscillations an important factor in its design. The design engineers therefore needed a wind-tunnel investigation. The scale-model, which was more than 8 ft. high, was tested in a 13 ft. × 9 ft. tunnel; its shape, elastic stiffness and mass distribution simulated those of the final tower, so that the oscillatory behaviour of the tower could be predicted from that of the model.

The sugar industry and manufacturers of products of biochemical interest should derive great satisfaction from the recording spectropolarimeter exhibited by the Light Division. The measurement of optical rotatory dispersion through the visible and ultra-violet regions of the spectrum has applications in the analysis of sugar mixtures and other optically active compounds. Up to the present time, this technique has not been appreciated fully by industry, because of the lack of an instrument which would give accurate results over a wide range of the spectrum. The new instrument demonstrated allows light transmission at the shorter wave-lengths; its range is 600–220 mμ, but this can be extended to 200 mμ by using prisms with better ultra-violet transmission. This facility would be of great value to those wishing to study biological compounds, since many of these are expected to have informative rotatory dispersion curves in the wave-length region of 200–260 mμ.

The merging of the Test House with the Applied Physics Division in 1958 made possible simplification and rationalization of thermometer testing. The display this year demonstrated improvements which will help to meet the increasing demands of industry for the testing of a greater quantity of instruments over wide temperature-ranges and with higher accuracy. Improvements include trunking of services, centralization of marking operations, mechanization of the production of ice-shavings and modernization of the testing baths to ensure uniformity of temperature and simultaneous testing of similar instruments. One of the chief advantages of the new layout is that it will link routine calibrations more closely with the final standard of reference, which is a platinum resistance thermometer as specified in the International Practical Scale of Temperature of 1948.

The Standards Division has provided the civil engineering industry with a new instrument which was demonstrated for the first time this year. It will be known as the 'NPL Microwave Mekometer' and rapidly measures long distances, with an accuracy of a few thousandths of a centimetre, by utilizing an elliptically polarized light-beam modulated at 9300 Mc./s. The distance of a reflector from the modulator is determined in terms of the wave-length of the polarization modulation. The device should be usable in full sunshine, since it is insensitive to background illumination.

The control of complicated industrial processes by trial-and-error methods is becoming accepted by industry. The Autonomics Division demonstrated analogue equipment for the study of adaptive control systems. Two items were shown, a simultaneous three-parameter controller and high-speed analogue computing equipment.

The Mathematics Division invited visitors to discuss with members of its staff the contents of the revised edition of its manual on modern computing methods which was on display, and also any computational problems of interest to them.

J. R. ILLINGWORTH

DENSITY OF THE UPPER ATMOSPHERE DETERMINED FROM SATELLITE ORBITS, AND ITS VARIATION DURING 1957–61

By D. G. KING-HELE and MRS. D. M. C. WALKER
Royal Aircraft Establishment, Farnborough

IN the past few years a consistent and satisfactory picture of atmospheric density at heights between 180 and 700 km. has been obtained from the rate of contraction of satellite orbits[1–5]. It has been found that the main variations in density are linked with: (1) solar activity and (2) changes between day and night. In this article (which is based on ref. 6, where fuller details are given) an improved method of calculating air density is applied to the orbits of 29 satellites to obtain a picture of the air density at heights of 180–700 km., which shows the general decrease in density as sunspot activity declined between 1957 and 1961, and the large day-to-night variation at heights greater than 400 km. The influence of latitude on density is also examined.

Appearing in July

Metallurgy and Fuels

Progress in Nuclear Energy, Series V, Volume 3

Edited by H. M. FINNISTON and J. P. HOWE

Papers contained in this issue include Advances in the Physical Metallurgy of Uranium and its Alloys—H. H. CHISWIK; Irradiation induced Phase Changes in Uranium Base Alloys—M. L. BLEIBERG; The Corrosion of Plutonium and Uranium—J. T. WABER; Sources of Fuel Element Instability—A. H. WILLIS; The Assessment and Testing of Fuel Elements—H. K. HARDY and H. LAWTON. £5 5*s. net* ($15.00)

Mechanism of Action of Steroid Hormones

C. A. VILLEE and L. L. ENGEL, *Harvard Medical School*

This volume contains the proceedings of a recently held conference where the attention of participants was concentrated on the chemical and physical events which may occur at the molecular level when a steroid hormone affects some living tissue. Also dealt with at the conference were theories regarding mechanism of action of all the steroid hormones—androgens, estrogens, corticoids and progestins. 70*s. net* ($10.00)

Treatment and Disposal of Radioactive Wastes

C. B. AMPHLETT, *Chemistry Division, A.E.R.E. Harwell*

After describing the sources, characteristics, and hazards of radioactive wastes, particularly in relation to atomic energy programmes, the underlying principles of active waste treatment and disposal are discussed under the different types of waste involved. 70*s. net* ($12.00)

Report of the Commission on Enzymes

of the International Union of Biochemistry 1961

The terms of reference of the Enzyme Commission were as follows—"To consider the classification and nomenclature of enzymes and coenzymes, their units of activity and standard methods of assay, together with the symbols used in the description of enzyme kinetics"—and this volume includes chapters on Enzyme Units; Symbols of Enzyme Kinetics; The Nomenclature of Coenzymes; The Classification and Nomenclature of Cytochromes; The Classification and Nomenclature of Enzymes; The Terminology of Enzyme Formation; General Conclusions; Summary of Recommendations with 5 useful appendices including a valuable Enzyme List and Index. 50*s. net* ($7.50)

Functions of a Complex Variable

and Some of their Applications—Volume II

B. A. FUCHS and V. I. LEVIN

This book deals with the analytic theory of differential equations, the Laplace transformation and its applications, and Hurwitz's problem for polynomials. In each chapter the reader will find a large number of worked examples which are intended to serve not only as illustrations of the theoretical conclusions, but also as models for solving independently any similar problems encountered. 50*s. net* ($7.50)

A TECHNICAL WRITING SERVICE FOR INDUSTRY

Do you need the services of professional technical writers, highly competent illustrators and compilers of modern, effective technical literature? A technical writing service is available to industrial companies and research organizations to prepare, illustrate, print and disseminate instruction manuals, parts lists, user handbooks, sales brochures, internal reports, etc.

The Technical Writing Division is staffed with experienced and highly qualified technical writers, engineers and illustrators and at their disposal are all the very extensive resources and connections of the Pergamon Press.

For further information please write to:

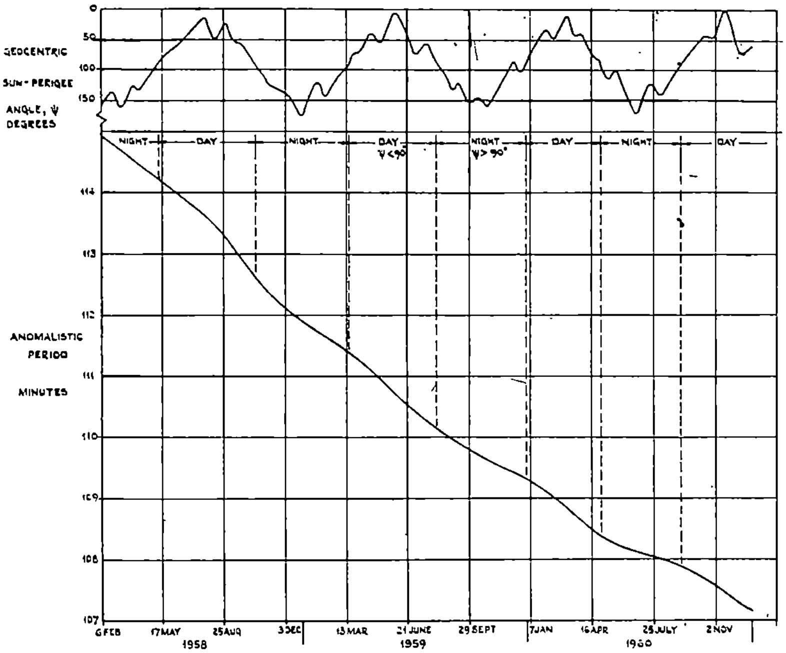

Fig. 1. Orbital period and geocentric Sun-perigee angle for *Explorer I*, 1958α

Method of Analysis

The air drag acting on a satellite rises to a maximum where it comes closest to the Earth, at the perigee, and is very small by comparison at heights more than about 100 km. above perigee. Therefore the integrated effect of air drag, which decelerates the satellite in the neighbourhood of perigee and hence causes the orbital period T to decrease, is a measure of the air density at some mean height within a band extending upwards for roughly 100 km. above perigee: and the best height at which to evaluate density is a little above that of perigee. If the air density ρ at heights above that of perigee is assumed to vary exponentially with height y above the Earth's surface, so that:

$$\rho = \rho_p \exp\left(-\frac{y - y_p}{H}\right) \qquad (1)$$

where suffix p denotes perigee and H is taken as constant, the optimum height for evaluating air density is found[6] to be $\frac{1}{2}H$ above perigee, for orbits with eccentricity e between 0·02 and 0·2. The appropriate value of H varies with height and with time, and furthermore is not known exactly. Let H^* be the best estimate of H, subject to maximum errors of perhaps 30 per cent. Then it can be shown[6,7] that the air density ρ_A at a height $\frac{1}{2}H^*$ above perigee is given, with error less than 3 per cent if H^* differs from H by a factor of less than 1·5, by the equation:

$$\rho_A = -\frac{0{\cdot}158\,\dot{T}}{\delta}\sqrt{\frac{e}{aH^*}}\left\{1 - 2e + \frac{5}{2}e^2 - \frac{H^*}{8ae}\left(1 - 10e + \frac{7H^*}{16ae}\right) + \frac{\varepsilon}{e}\sin^2 i \cos 2\omega\right\} \qquad (2)$$

if $0{\cdot}02 < e < 0{\cdot}2$. In this equation, $\dot{T}$ is the rate of change of the orbital period of the satellite, a is the semi-major axis of the orbit, ε is the ellipticity of the atmosphere (which may be taken as equal to the Earth's ellipticity, 0·00335), i is the inclination of the orbit to the equator and ω is the argument of perigee.

The quantity δ in equation (2) is given by:

$$\delta = \frac{FSC_D}{m} \qquad (3)$$

where F is a factor allowing for rotation of the atmosphere (usually lying between 0·9 and 1), S is the mean cross-sectional area of the satellite perpendicular to its direction of motion, C_D is a drag coefficient, taken[8] as 2·2 for most satellites, and m is the mass of the satellite. In calculating S, it is assumed that the satellites have rotated about an axis of maximum moment of inertia, and S is taken as the mean of the cross-sectional areas for the two extreme modes of motion, which for a satellite with large length/diameter ratio are: (1) rotating like an aeroplane propeller, and (2) tumbling end-over-end. The estimated resulting error (s.d.) in δ is[6] between 5 and 10 per cent. These assumptions are the same as in ref. 1, except that the equation for ρ_A has been improved.

If $0 < e < 0{\cdot}02$, equation (2) becomes inaccurate, and it is found best to evaluate the density ρ_B at a height $\frac{1}{4}H^*$ above perigee height. ρ_B is given[6,7] by:

$$\rho_B = -\frac{\dot{T}}{3\pi a\delta}\cdot\frac{\exp(z + c\cos 2\omega - 0{\cdot}25)}{I_0 + 2eI_1 + cI_2\cos 2\omega + \frac{1}{4}c^2 I_0} \qquad (4)$$

where $z = ae/H^*$, $c = \dfrac{\varepsilon a}{2H^*}\sin^2 i$, and I_n is the Bessel function of the first kind and imaginary argument, of order n and argument z. This equation is much less satisfactory than (2), having a maximum error not exceeding 9 per cent if H^* differs from H by a factor of less than 1·2. Fortunately, however, only 4 of the 92 values of density given in this article depend on equation (4).

Variations in Air Density

If the air density at a given height were constant from day to day, the orbital period of a satellite would decrease in a smooth and predictable manner. In practice, the rate of decrease is found to be erratic, and the irregular variations in air density thus revealed have proved to be linked with solar disturbances[9–14], the density being highest when the Sun is most active. In 1958, at sunspot maximum, the short-term fluctuations in density about its mean value from this cause sometimes amounted to ± 20 per cent at a height of 200 km. and ± 40 per cent at 700 km. This correlation also implies that there will be a long-term variation in density during the course of a sunspot cycle, a topic to be discussed in more detail later.

The variation in density between night and day is small at heights between 200 and 300 km., the density being about 10 per cent higher by day[3,10,15]. But above 300 km., this day-to-night variation is much

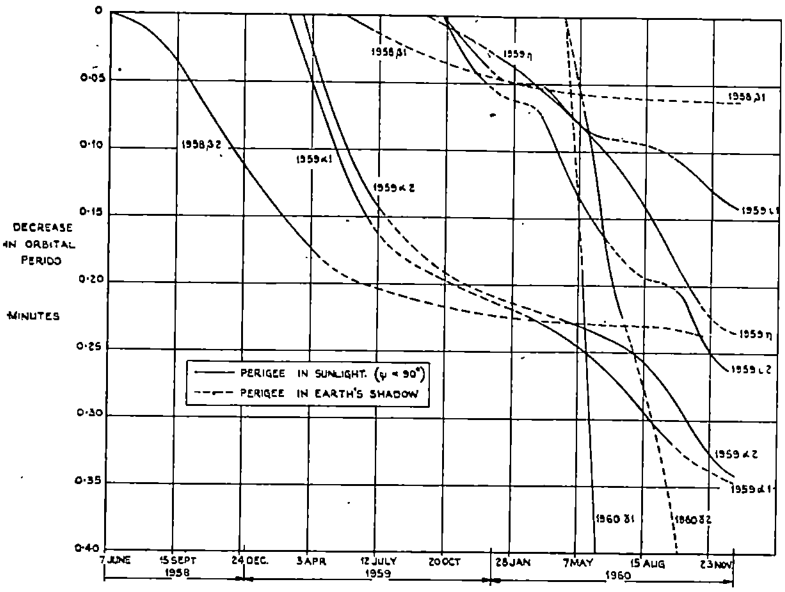

Fig. 2. Decrease in orbital period for satellites with perigee heights of 280–700 km.

greater, and is the dominant feature of the atmosphere. At a height of 600 km. the density is 5–10 times greater at its day-time maximum (attained in the afternoon) than at its night-time minimum (attained between midnight and dawn)[1-3] and consequently the temperature is several hundred degrees higher by day.

Changes in density between day and night have been clearly revealed by satellites, because their perigees move only slowly relative to the Sun: it takes at least two months and sometimes several years for perigee to accomplish a full day-to-night cycle. If therefore the orbital period of a long-lived satellite is plotted against time, the slope of the curve, $\dot{T}$, can be regarded as proportional to the air density ρ_A, since the quantities a, e, H^* and δ in equation (2) undergo little change. So day-to-night variations in density are at once apparent from the slope of the curve.

Fig. 1, which gives the orbital period of *Explorer* 1 (1958α, perigee height 350 km.), shows clearly that the slope is greatest by day and least by night. The quantity plotted at the top of Fig. 1 is the angle $\psi = SCP$ subtended at the Earth's centre C by the Sun S and the perigee point P: if ψ is greater than 90°, the point on the Earth's surface vertically beneath perigee is in darkness, and ψ equal to 90° is taken as forming a convenient boundary between 'day' and 'night'.

For orbits which are inclined to the equator at angles less than about 40°, the perigee moves eastward relative to the Sun, like a point on the Earth's surface, and experiences the normal progress from morning to evening conditions. *Explorer* 1, with inclination 33°, is in this category, and Fig. 1 thus shows that the slope of the period-versus-time curve (and hence the air density) increases only slowly during the morning, reaches a maximum some 2–3 hr. after noon, and then begins to decrease appreciably just before dusk, reaching a minimum between midnight and dawn.

The change in density between day and night has now been exhibited by nine other satellites with perigee heights between 280 km. and 700 km., and the decreases in their orbital periods are shown in Fig. 2: all the curves tend to be steeper by day (full lines) than by night (broken lines). Four of the curves, for *Explorer* 7 and its rocket (1959ι 1 and 2) and *Transit* 1*B* and rocket (1960γ 2 and 1), refer to orbits inclined at about 50° to the equator, for which the perigee moves westward relative to the Sun, going from evening to morning. The maximum slopes of these curves should therefore be attained soon after the perigee emerges into the evening sunlight. This expectation is confirmed by Fig. 2, most clearly for 1959ι2, while the slopes of the other curves, which refer to *Vanguards* 1, 2 and 3, increase much more slowly when the perigee enters the (morning) sunlight.

The decrease in density between 1958 and 1960 can also be recognized from Fig. 1. For if the density had been constant during these years, the 'average' slope of the curve in Fig. 1, with the oscillations smoothed out, would have tended to increase. In fact, it plainly decreases, thus reflecting a substantial decrease in density.

Influence of Latitude

The perigee latitude of a satellite usually varies widely, and since the value of $\dot{T}$ depends primarily on the density of the air near perigee, any strong and systematic variation with latitude would show itself in the period-versus-time curve. So far there has been no obvious sign of any such variation for the many satellites with inclinations less than 50°. For latitudes greater than 50°, evidence is so far available only for heights between 200 and 300 km., the best information being provided by *Sputnik* 3, for which the perigee moved slowly in the course of the life of the satellite from 50° N. to 65° S. and then back again to a point north of the equator. Fig. 3 shows the density of the air at a height of 235 km. as found from the orbit of Sputnik 3 by a method described in detail in ref. 6 : the error (s.d.) in the values is estimated as 7 per cent. The full line gives the calculated values: but, since some points refer to darkness and others to sunlight, a better comparison is obtained by correcting the values to conditions corresponding to the maximum day-time value of density, as shown

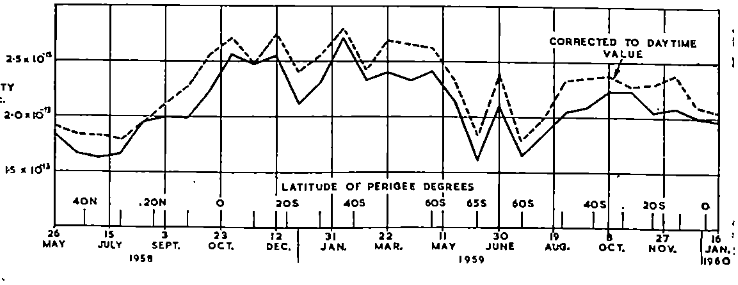

Fig. 3. Air density at height of 235 km., as given by *Sputnik* 3

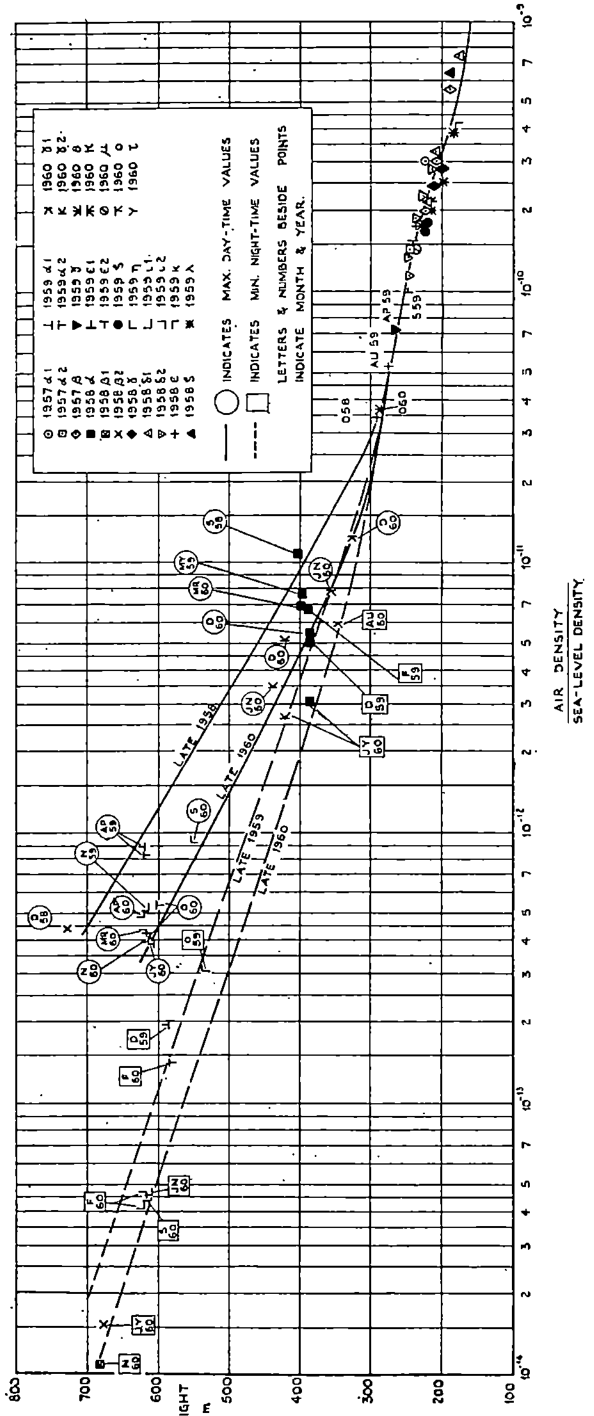

Fig. 4. Upper-atmosphere density obtained from the orbits of 29 satellites launched before January 1961

by the broken line. Because of the spread of drag about the perigee, the values of density can be regarded as referring to a band of latitude between 15° and 40° wide—the band being narrowest when perigee is at 65° S. and widest at the end when eccentricity is lowest and perigee near the equator. We can conclude from Fig. 3 that the day-time density at a height of 235 km. did not depart from its average value by a factor of more than 1·25, and most of this variation could well be ascribed to the influence of solar activity. Investigations of *Discoverer* satellites[6,15–17], with perigee latitudes up to 84°, have also revealed no sign of any significant variation of density with latitude.

Density of the Air during the Years 1957–61

In order to arrive at a general picture of the density of the upper air during the past four years, it is necessary to make due allowance for the well-established variations already discussed—the changes due to solar activity and between day and night. It is also advisable to utilize every possible satellite, so as to minimize the unknown individual bias associated with each.

Both these policies have been followed here. The curves of density-versus-height are divided according to date, that is, the particular year of the sunspot cycle, and a distinction is drawn between day- and night-time values. Also, a scrutiny was made of 66 satellites with the view of obtaining values of density: more than half these had to be rejected either because their weights and dimensions were unknown or because their orbits have not changed sufficiently. There remained 29 satellites, from which values of air density could be obtained, ranging from *Sputnik* 1 (1957α) to *Discoverer* 19 (1960τ).

The results are presented in Fig. 4, the density being expressed as a fraction of its sea-level value, taken as 0·00123 gm./c.c. The various satellites are distinguished by different symbols, and for heights above 300 km. each of the calculated points is labelled to show its date and whether it refers to day or night. The error (s.d.) in the majority of values of density, due to errors in δ and the orbital data, is estimated as about 15 per cent.

At heights less than 280 km. the points in Fig. 4 are closely packed, and a single curve has been drawn through them. Replotting of the points on a larger scale shows that they can be separated according to date, and that the density of the air at heights between 180 and 250 km. decreased by about 20 per cent between mid-1958 and mid-1960, so that the mean curve in Fig. 4 can be taken as referring to mid-1959. When, on the larger-scale diagram, curves appropriate to mid-1958 and mid-1960 were drawn, 27 of the 30 points at heights between 180 and 250 km. differed from the curve appropriate to their date by factors of less than 1·2. Thus the scatter among the points, which are quite independent, is rather less than would be expected from the estimated standard deviation of 15 per cent and, since the values refer to a wide variety of latitudes, Sun-perigee angles, seasons, etc., they confirm that there is little variation of density with any of these parameters at heights between 180 and 250 km.

At heights above 300 km. the curve in Fig. 4 divides into four parts: the two full lines indicate the maximum day-time density at the end of 1958 and of 1960; the two broken lines show the minimum night-time density at the end of 1959 and of 1960. Once again the points, although independent, fit into a consistent pattern. The curves indicate that the maximum day-time density decreased between late 1958 and late 1960 by a factor of about 2·0 at a height of 400 km. and about 2·7 at 600 km. The minimum night-time density decreased between late 1959 and late 1960 by a factor of about 1·8 at 400

Table 1. Values of Air Density and H given by Fig. 4

Height (km.)	Density (gm./c.c.)				H (km.)			
180	$6\cdot2 \times 10^{-13}$				35			
190	$4\cdot8 \times 10^{-13}$				46			
200	$3\cdot9 \times 10^{-13}$				53			
210	$3\cdot3 \times 10^{-13}$				58			
220	$2\cdot8 \times 10^{-13}$				55			
230	$2\cdot3 \times 10^{-13}$				51			
240	$1\cdot8 \times 10^{-13}$				39			
250	$1\cdot4 \times 10^{-13}$				32			
260	$9\cdot8 \times 10^{-14}$				32			
270	$7\cdot0 \times 10^{-14}$				34			
	Day		Night		Day		Night	
	Late 1958	Late 1960	Late 1959	Late 1960	Late 1958	Late 1960	Late 1959	Late 1960
300	$3\cdot6 \times 10^{-14}$	$2\cdot5 \times 10^{-14}$	$2\cdot8 \times 10^{-14}$	$2\cdot3 \times 10^{-14}$	70	46	46	39
350	$2\cdot0 \times 10^{-14}$	$1\cdot1 \times 10^{-14}$	$1\cdot1 \times 10^{-14}$	$6\cdot2 \times 10^{-15}$	94	74	57	47
400	$1\cdot2 \times 10^{-14}$	$5\cdot7 \times 10^{-15}$	$4\cdot5 \times 10^{-15}$	$2\cdot4 \times 10^{-15}$	96	81	58	52
450	$6\cdot9 \times 10^{-15}$	$3\cdot1 \times 10^{-15}$	$1\cdot9 \times 10^{-15}$	$9\cdot4 \times 10^{-16}$	97	84		53
500	$4\cdot1 \times 10^{-15}$	$1\cdot7 \times 10^{-15}$	$8\cdot1 \times 10^{-16}$	$3\cdot9 \times 10^{-16}$	98	86		
550	$2\cdot4 \times 10^{-15}$	$9\cdot6 \times 10^{-16}$	$3\cdot3 \times 10^{-16}$	$1\cdot6 \times 10^{-16}$	99	88		
600	$1\cdot5 \times 10^{-15}$	$5\cdot5 \times 10^{-16}$	$1\cdot4 \times 10^{-16}$	$6\cdot6 \times 10^{-17}$	100	90		
650	$9\cdot1 \times 10^{-16}$		$5\cdot7 \times 10^{-17}$	$2\cdot6 \times 10^{-17}$	101	92		
700	$5\cdot5 \times 10^{-16}$		$2\cdot3 \times 10^{-17}$		102	94	↓	↓

km. and about 2·1 at 600 km. In late 1960 the maximum day-time density exceeded the minimum night-time density by a factor which increased from 1·1 at 300 km. height to 2·4 at 400 km., 4·3 at 500 km. and 8·3 at 600 km.

Numerical values of air density at the heights covered by Fig. 4 are listed in Table 1, together with values of the quantity H defined in equation (1). The individual values of H are obtained from the local slope of the density-versus-height curve and are therefore sensitive to the form of the curve in Fig. 4, with a possible maximum error of up to perhaps 30 per cent. But the average values of H over a height-range of, say, 100 km. should be much more accurate than this.

The air temperature can be determined[18] from H and the molecular weight M. Unfortunately, M is not known exactly at these heights. If, as is customary, M is assumed to fall from 25 at a height of 200 km. to 16 at a height of 500 km., and then to be constant up to 700 km., the following temperatures are obtained: at heights between 180 and 280 km. the average temperature is about 1,100° K.; between 400 and 600 km. it is, by day, 1,600° K. in 1958, decreasing to 1,450° K. in 1960, and by night about 900° K. in 1959–60. The error (s.d.) in these figures is probably about 15 per cent. At heights above 400 km. the temperature shows a tendency to be constant, in good accord with the theories of Nicolet[25].

The values of density given in Fig. 4 agree well with two independent determinations, from the expansion of a sodium cloud, and from manometers in *Sputnik* 3. The sodium vapour diffusion method[19] gave a density of $(6\cdot7 \pm 2) \times 10^{-15}$ gm./c.c. at a height of 430 km. in September 1958 at a time near sunrise. The corresponding value from Table 1, extrapolated and therefore less accurate than the tabulated values, is $(6 \pm 1\cdot5) \times 10^{-15}$ gm./c.c. The results[20] from the manometers in *Sputnik* 3, for example $8\cdot7 \times 10^{-14}$ gm./c.c. at 260 km., also agree well with Table 1.

Evidence on the density at heights up to 1,600 km. has now become available, from the orbit of *Echo* 1. At these heights, however, the validity of the method and the accuracy of the results are more questionable, particularly because of uncertainty about the drag coefficient and the effects of charged drag. For *Echo* 1, too, the effect of solar radiation pressure must be taken into account. The contribution of radiation pressure to $\dot{T}$, to be subtracted from $\dot{T}$, is given[21] by:

$$\dot{T}_s = 3Fh\left(\frac{T}{2\pi a}\right)^2$$

where F is the radiation force per unit mass acting on the satellite (to be taken negative) and h is the increase in the distance of the satellite from the Sun between entering and leaving the Earth's shadow. The values of air density obtained from *Echo* by various authors[22–24] are somewhat scattered: the values they derive, for maximum day-time conditions in 1960 at 1,500 km. height, lie between 10^{-18} and 5×10^{-18} gm./c.c.

We are grateful to the Smithsonian Astrophysical Observatory and the U.S. National Space Surveillance Control Center: many of the results given in this article are derived from the orbital data issued with their satellite predictions.

LIMNOLOGICAL TRENDS IN LAKE KARIBA

By D. HARDING

Joint Fisheries Research Organization, Samfya Laboratory, Northern Rhodesia

ON December 2, 1958, the great dam across the Kariba Gorge was closed and Lake Kariba began to fill. The importance of hydrological study to the future Lake had been appreciated before this event, however, and water analyses, etc., had been collected from the Zambezi River in the future dam basin since 1956[1]. This work was done by the Joint Fisheries Research Organization from its base at Samfya, and it was even at that time hoped that at least one permanent scientist would be appointed to do research work at Kariba on a full-time basis. Up to the present, however, this has not been possible owing to the lack of the necessary funds, though the importance of hydrobiological research at Kariba has been stressed by various authors[2]. Sufficient data have nevertheless been obtained by periodic visits to the Lake to form a good general picture of the trends from the time of closure, though unfortunate gaps in our records have occurred from time to time. But further work is essential to make the most of Kariba, not only as a producer of hydro-electric power but also as potentially one of the most important fishing industry centres in Central Africa. Similar schemes, also, are in various stages of progress in other parts of Africa, and Lake Kariba, which at high water will cover 1,087,000 acres and be about 175 miles long by 50 miles wide, offers a unique opportunity for research in a variety of fields, which will be of value to all concerned with the lakes so formed by these projects.

The observations from this fifth largest body of water in Africa, and largest man-made lake in the world, which are presented here, were mainly collected at a station about a mile from the dam site in Kariba Gorge, between February and December 1960. The depth of water here at a lake-level of 1,500 ft. above mean sea-level (as against an eventual height of 1,580 ft. above mean sea-level) was a little more than 70 metres. Other records have been taken elsewhere on the Lake and are mentioned briefly. As the Lake filled in 1959, the few records of temperature distribution with depth which were taken at the wall of the dam indicated that no permanent stratification had taken place by the time high-water mark for the year had been reached in July. The next available record is for November of that year, and this showed a distinct thermocline at approximately 10 m. In February 1960, this thermocline was still well established at 12 m.[3] and records of oxygen distribution in depth at several widely separated stations on the Lake indicated that only the epilimnion above the discontinuity layer contained oxygen (Fig. 1). Below this level there was no trace of oxygen even in shallow sheltered areas, although in the middle of the shallow western basin the Lake was 50 per cent saturated with oxygen down to the bottom at 15 m. As the year progressed into the cold season the epilimnion cooled and the thermocline moved gradually deeper under the stress of winds at the surface of the Lake. On May 26, 1960, the thermocline was still well established at 30 m.; the water above was homothermal at 25·3° C., and dissolved oxygen was again limited to this layer. Stratification broke down on July 6, 1960, and the Lake 'overturned', the water being homothermal at 23·4° C. Unfortunately, no oxygen records were taken at this period, but on June 28 the epilimnion was approximately 35 per cent saturated down to 36 m., when the temperature difference between surface and bottom water was less than 1° C. and the thermocline just detectable at 40 m. Shortly after the period of overturn, on August 23, when the Lake was homothermal at 22·2° C., records of dissolved oxygen showed a gradual decline from 65 per cent saturation at 4 m. to 35 per cent saturation at 51 m., and a gradual increase to 45 per cent saturation at 70 m. Similar conditions prevailed at the end of September. Warming began in late August, and by November 1, 1960, temperature conditions were similar to those of November 1959, a thermocline being well established at 12·5 m., and on December 2, 1960, dissolved oxygen was again confined to the epilimnion, which was approximately 17·5 m. deep.

Isotherms for the nine months between February and November illustrate the regime of temperature variation in Lake Kariba during 1960 (Fig. 2). A study of these isotherms indicates the presence of a layer of colder water in the deeper part of the Lake in October, which may be attributed to a source other than by direct mixing with the surface water in this area. The station is sited over the old Zambezi River channel in the gorge and is the deepest part of the Lake. Thus one would expect colder water from as far afield as the inflowing Zambezi to maintain its identity in the submerged Zambezi River channel and eventually accumulate in the deepest part of the Lake in Kariba Gorge. This

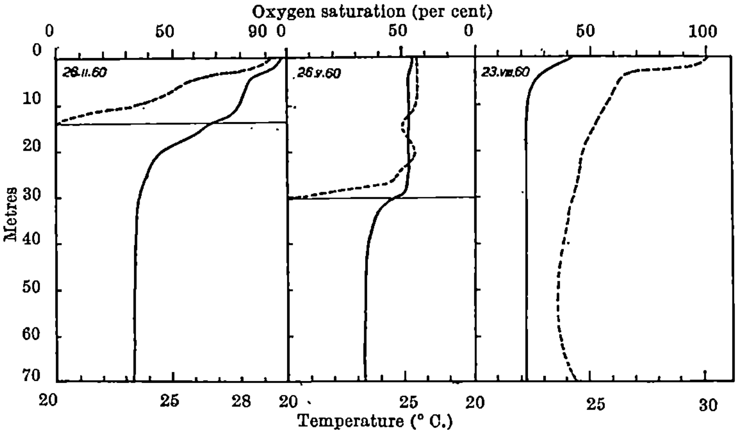

Fig. 1. Oxygen saturation (broken line) and temperature at three dates in Lake Kariba

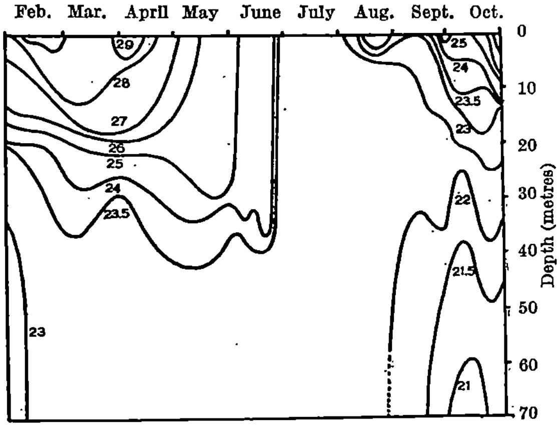

Fig. 2. Isotherms in Lake Kariba, 1960

water also differed from the overlying water mass in its higher dissolved oxygen content (Fig. 1), which tends to support this theory.

No mention of Kariba would be complete without reference to the water fern *Salvinia auriculata*, which has covered between 150 and 200 square miles of the surface of the Lake during the past two years. Apart from the mechanical effects of choking backwaters and river estuaries, and blocking access routes to cleared fishing pitches, harbour sites, and indeed the main Zambezi River channel itself, a number of side effects, such as that on the dissolved oxygen content of the Lake water, have been observed during recent work in the affected areas. Long-established patches of the fern, in sheltered backwaters and river estuaries, have prevented exchange taking place with the atmosphere, resulting in deoxygenation of the water lying beneath the floating mat of closely packed plants. The more mobile patches of *Salvinia* have no such lasting effects on the water beneath, and in the main Zambezi inflow and inflowing river estuaries, oxygen values are relatively high beneath the mat (Table 1). The effects of water movements in the open Lake also tend to maintain a circulation beneath patches of *Salvinia* bordering on the open water. Thus a transect beneath a stable patch, which has been immobilized among semi-submerged trees in the Songwe estuary, showed an oxygen gradient decreasing from a saturation value of 71 per cent in the open Lake to 37 per cent approximately two miles into the weed, then increasing once again to 69 per cent in an area of open water a mile farther on near the shore.

Table 1. Dissolved Oxygen in Lake Kariba, 1960

	Percentage saturated*	
	February	April
River Zambezi at Devil's Gorge	140	—
River Zambezi near River Masumo confluence beneath *Salvinia* mat	74	78
River Songwe estuary beneath *Salvinia* mat	62	6
River Songwe estuary 8 m. beneath *Salvinia* mat	69	2
Open lake near River Chezia estuary	93	79
Open lake at edge of *Salvinia* mat	93	66
Beneath marginal *Salvinia* mat	67	39
Beneath marginal *Salvinia* mat at 5 m.	43	24

* Oxygen saturation values corrected for an altitude of 1,500 ft. above sea-level.

† Present as bicarbonate.

‡ Results in milligrams per litre.

The implications of reduced oxygen tensions either by thermal stratification or by mats of *Salvinia auriculata* are obviously important to the fishery in Lake Kariba. On one hand, the process of stagnation of water below the thermocline, followed by an overturn, may be of general benefit to the Lake fishery, in so far as the nutrient salts released to the hypolimnion under anaerobic conditions as a result of the decomposition of drowned vegetation are made available for the growth of certain elements of the plankton and ultimately to the fish. On the other hand, the extensive oxygen-poor hypolimnion will prevent the development of the profundal fish fauna, and *seiche* movements could result in killing juveniles and breeding fish, should deep water devoid of oxygen reach the surface near the margins of the Lake. The extensive *Salvinia* mats may also exclude fish from their breeding grounds or, by deoxygenating water close in shore, result in deaths of juvenile fish. Furthermore, the position of *Salvinia auriculata* is such that salts leached from the surrounding land during a succession of annual inundations will be immediately available to the plant and this may well be the reason for the 'explosive' growth of the fern.

Conditions in Lake Kariba during 1960 simulate the cycle of events which occur in the surface layers of the deep tropical lakes Nyasa and Tanganyika. Stratification occurs during the hot season, accompanied by a depletion of oxygen below the thermocline. This is followed by a breakdown of stratification during the cold season, which results in a complete overturn in Lake Kariba; but because of their great depths and in some cases a second thermocline, only the upper levels of Lakes Nyasa[4] and Tanganyika[5] are affected, the abyssal water remains isolated and reduced, and there is never a complete overturn. Furthermore, even when Lake Kariba is full, almost a third of its total volume will be replaced each year from the inflowing rivers. Thus large quantities of nutrients will be available for biological production from two sources, the inflows and the bottom deposits, and for this reason the Lake may be extremely productive. Chemical analyses (Table 2) show there has been an overall decrease in the total concentration of dissolved solids since 1958, which may be accounted for by remarkable plankton blooms, *Salvinia auriculata* and the expansion of the fish population during the past two years.

Limnological research at Kariba during 1961 will include such specific studies on the abundance of phytoplankton, the hydrology and chemistry, the ecology and abundance of fishes and the autecology and control of *Salvinia auriculata*, and will continue throughout the period of filling, which is expected to be completed in 1963/64, until the Lake enters its permanent phase of development.

OBITUARIES

Prof. J. H. Andrew

THE death on May 5 of Prof. John Harold Andrew, at the age of seventy-four at Ruthin Castle Hospital in North Wales, was no surprise to his friends; he had been in ill health for a number of years, and Mrs. Andrew, to whom he was devoted, had died in January. Andrew retired from the chair of metallurgy in the University of Sheffield in September 1950, having been advised medically to take this step two years before the end of his statutory period of office; he was made emeritus professor. For reasons of health and because they loved the country, he and Mrs. Andrew retired to Llandudno.

A native of Ashton-under-Lyne, he was educated at Bickering House School, Birkdale, and the University of Manchester, where he graduated in chemistry in 1907 and was awarded the degree of D.Sc. in 1915. In 1910 he was appointed a Research Fellow and demonstrator at Manchester, where he was a Dalton Scholar. After six years as head of the Metallurgical Research Department of Sir W. G. Armstrong Whitworth and Co., Ltd., he was, in 1920, appointed professor of metallurgy at the Royal Technical College, Glasgow, succeeding the late Dr. C. H. Desch. With an established reputation in the field of metallurgy, he again succeeded Desch as professor of metallurgy and dean of the Faculty of Metallurgy at Sheffield in 1932.

Andrew was an original member of the Institute of Metals, was elected a member of the Iron and Steel Institute in 1911 and was a founder Fellow of the Institution of Metallurgists. He was a prominent member of the Heterogeneity of Steel Ingots, Alloy Steel Research and Steel Castings Research Committees of the Iron and Steel Institute, all which have now been incorporated in the committees of the British Iron and Steel Research Association.

During his thirty years as a professor at Glasgow and at Sheffield he published a very large volume of research covering extensive fields of interest. As a director of research, his fertility of mind, his unorthodox points of view and his continuing encouragement were a source of inspiration to many postgraduate students. The number of joint papers he published bears testimony to his great sense of loyalty and co-operation.

Andrew was not only well known for his research work. His administrative ability and great talent for organization brought about a striking development of the Departments of Metallurgy at Glasgow and at Sheffield. In recognition of his work in metallurgy, he was awarded in 1949 the Bessemer Gold Medal of the Iron and Steel Institute, an honour which he richly deserved. Shortly after his retirement in 1950, a group of Sheffield steel firms established the J. H. Andrew Senior Research Fellowship tenable in his old department, where a laboratory is also named after him.

To his staff, from the most senior to the humblest laboratory assistant, he was a friend who, with his sympathetic understanding and lively sense of humour, made difficulties seem trivial.

Prof. and Mrs. Andrew leave friends in Glasgow and Sheffield in all walks of life who will not forget their unfailing kindness, courtesy and generous hospitality. It was the hope that some of the happiness they had given should have been theirs in retirement; unfortunately, their retirement was sadly marred by continued ill-health. W. R. MADDOCKS

Dr. H. Horn af Rantzien

ON September 15, 1960, Dr. Henning Horn af Rantzien was killed at Montmorency, France, by a stone which slipped while, in the company of his wife and a French friend and colleague, he was examining a quarry for fossil plant remains.

Henning Horn graduated at Stockholm and, from 1945 on, held research positions in the Botany and Palæobotany Departments at the Riksmuseum, Stockholm, and later in the Geology Department of the University of Stockholm, where he taught historical geology. During 1948–51, he was an editor of *Svensk Botanisk Tidskrift*. At the time of his death, he was pursuing a long-term research programme on the taxonomy and phylogeny of the Charophyta, a work to which he had devoted most of his time during the past ten years and which had carried him, at the age of thirty-eight, to a leading position in the field of micropalæontology.

Those who knew him only as a highly specialized palæobotanist may be surprised to learn that a great part of his early writings were on recent vascular plants. He paid particular attention to the taxonomy and distribution of *Phleum*, *Pleurospermum*, and the West African and Latin American species of *Mayaca*, *Najas*, and *Triglochin*. Simultaneously, he revised the American *Nitellae* and thoroughly reviewed the literature available on all American Charophyta. In 1951, following extensive field-work, he published an ecological–geographical study of aquatic and amphibious plant associations (including bryophytes and charophytes) of the shallow lakes and temporary pools of the peculiar 'alvar' limestone barrens of the island of Öland, in the Baltic. It was in the course of this work that his interest in the charophytes became definitively established.

This broad approach did not shatter his conviction that only on a firm morphological basis can useful work be done on plant systematics and distribution. Therefore, when extending his attention to the fossil Charophyta, he ventured on a detailed description of the fructifications of modern, Cenozoic and Mesozoic forms. In doing this work he developed his own techniques for preserving and examining these minute objects. The newly recognized value of such fructifications as layer markers over a wide range of geological strata, from Upper Silurian to late Tertiary, lends special importance to the results he achieved. It is sad to reflect that this voluminous pioneer work was but the first step on a road which he was not to complete.

Privately, Henning Horn had a gift for finding pleasure in all manifestations of living Nature and in the most diverse fields of learning. He took particular interest in history and archæology, and in the life-history of land vertebrates (he was an expert herpetologist). A shyness which he never quite overcame usually caused him to avoid gatherings of more than a few people, a fact much to be regretted, for his versatile mind, coupled with a great sincerity as soon as basic facts were under discussion, made him an impressive and uncommonly stimulating partner in discussions with friends within and outside his own scientific domains. He is survived by his wife and five children.

C. EDELSTAM

NEWS and VIEWS

Royal Institution Fullerian Professorship of Physiology: Prof. R. J. Harrison

THE Managers of the Royal Institution have elected Prof. R. J. Harrison to be Fullerian professor of physiology, Royal Institution, in succession to Prof. J. Z. Young. Prof. Harrison is University professor of anatomy in the London Hospital Medical College, a post he has held since 1954. He was educated at Oundle School and Gonville and Caius College, Cambridge, and received his medical training at St. Bartholomew's Hospital Medical College. He has held appointments in the University of Glasgow and Charing Cross Hospital Medical School, and is the author of *Anatomical Terms* and *Man the Peculiar Animal*, in addition to numerous papers on embryology and anatomy. He is especially known for his research on the physiology of diving seals. The Fullerian professorship of physiology was endowed in 1834 by the gift of John Fuller, an early generous benefactor of the Royal Institution. P. M. Roget was the first holder of this office. Richard Owen, Thomas Huxley and Sir Charles Sherrington are among the other previous Fullerian professors. The appointment is normally for a period of three years.

Research on the Effects of Radioactivity in the Sea: Prof. Ilmo Hela

PROF. ILMO HELA, at present director of the Institute of Marine Research, Finland, has been appointed chief scientist in charge of the programme of research on the effects of radioactivity in the sea, to be conducted in Monaco under a trilateral agreement between the International Atomic Energy Agency, the Government of the Principality and the Institute of Oceanography. Prof. Hela is expected to take up his new appointment at the beginning of October. Prof. Hela was educated in the Universities of Helsinki, Königsberg and Hamburg. He received his Ph.D. in oceanography from the University of Helsinki in 1945; earlier he had studied physics and meteorology as well. After several years research work at the Institute of Marine Research in Finland, he joined the Marine Laboratory of the University of Miami as associate professor of oceanography and meteorology in 1951. In 1955 he returned to the Institute of Marine Research as director and professor. The programme of research in Monaco, which Prof. Hela will direct, has three major objectives. First, it will be aimed at acquiring knowledge about the movement of water and marine organisms and the deposition of organic and inorganic matter. Secondly, there will be a special study of the distribution in marine organisms of radioactive materials already existing or that may be introduced into various locations. Finally, investigations will be carried out on the effects of radioactive materials at various concentration-levels on the marine ecology. The research will be conducted at the Oceanographic Museum in Monaco, but the laboratories and working facilities of the scientific centre of the Government of the Principality, including a wide variety of electronic and monitoring equipment, will also be available.

Mathematics at Leeds: Prof. J. W. Craggs

DR. J. W. CRAGGS, reader in applied mathematics in the Newcastle division of the University of Durham, has been appointed to the newly created chair of mathematics in the University of Leeds. Dr. Craggs graduated with first class honours in mathematics at the University of Manchester and afterwards obtained the degree of doctor of philosophy both at Manchester and Cambridge. At Cambridge he held a senior studentship awarded by the Commissioners for the Royal Exhibition of 1851. Dr. Craggs has had teaching appointments at the Military College of Science, at the University of Manchester, University College, Dundee, and at King's College, Newcastle upon Tyne, University of Durham. He has been at Newcastle since 1951 and was later appointed to a senior lectureship and then to a readership. Dr. Craggs's research interests have ranged over a wide field. His first work was concerned with potential and diffusion problems and with three-dimensional elastostatics. He then moved on to compressible fluid-dynamics and more recently has made important contributions to problems of wave-propagation in elastic and plastic bodies.

The Leopoldina German Academy of Sciences: Elections

THE Deutsche Akademie der Naturforscher Leopoldina, Halle, recently elected the following new members in the sections indicated: *Physics*, Prof. Helmut Hönl (Freiburg-Br.). *Chemistry*, Prof. T. R. Seshadri (Delhi). *Biology*, Sir Ronald A. Fisher (Cambridge). *Agriculture*, Prof. Walter Fuchs (Göttingen). *Anatomy*, Prof. Joachim Hermann Scharf (Halle). *Physiology*, Sir John C. Eccles (Canberra). *Pathology*, Prof. A. von Albertini (Zürich); Prof. Ernst Letterer (Tübingen). *Biochemistry*, Prof. Marcel Florkin (Liège); Prof. Otto Westphal (Freiburg-Br.); Prof. Edgar Lederer (Paris). *Hygiene*, Prof. Walter Liese (Berlin); Prof. Josef Tomcsik (Basle). *Stomatology*, Prof. Richard Trauner (Graz).

Scientific Societies and the Rating and Valuation Bill

At the Committee stage of the Rating and Valuation Bill in the House of Lords on June 22, Lord Brabazon of Tara, speaking as President of the Royal Institution, moved an amendment removing from the Bill the repeal of the Scientific Societies Act, 1843. Emphasizing the national importance of the scientific work which the Royal Institution had done during the past 160 years, and was still doing, he said that under the Bill the Royal Institution, which received no State funds of any kind, would be called on to find a further £3,000 a year, and scientific societies altogether would have to find £128,000 a year. Lord Brabazon indicated his willingness to withdraw the amendment if the Treasury could give any assurance that such a sum would be made available for the purpose to the Joint Committee of the Royal Society and the British Academy, and did in fact do so after hearing Lord Hailsham's reply and on the understanding that his point about the Royal Institution's Laboratory would be borne in mind on Clause 9 on the Report stage. Lord Hailsham fully agreed as to the national importance of the scientific work of the Royal Institution, mentioning also its library, but did not agree either that the Royal Institution should be treated separately or that the anomalies of the Scientific Societies Act should be perpetuated. Confirming all that he had said earlier as to the value of the work of the scientific societies and the needs of the societies, Lord Hailsham maintained that the correct course was to examine sympathetically any hardship resulting from the Act in the context of their needs.

The International Council of Scientific Unions, 1961

The Year Book of the International Council of Scientific Unions, 1961, includes, besides the calendar of arrangements for 1961, the usual details of the membership of the Executive Board, the National and Scientific Members of the Council, of the Special Committees, Joint Commission and Executive Bodies of the Permanent Services of the International Council (Pp. 110. The Hague: International Council of Scientific Unions, Paleis Noordeinde, 1961). There are also the statutes and bye-laws of the Union rules for Special Committees and their charter. The organization of the Commissions of the several Unions, the relations of the International Council with the specialized agencies of the United Nations, the alphabetical list of members of the Bureau, Executive Board, Special Committees, Joint Commission, and other organs of the Council and of officers of the Scientific Unions add further to the value of a most useful and handy work of reference, which well displays the manifold ways in which scientific work is interlocked at the international level.

Scientific Research in the U.S.S.R.

At a recent conference in Moscow attended by two thousand Soviet scientists, impressive figures were given of the Soviet research effort. Government spending on science in 1950 was 874 million (old) roubles, but by 1960 this had increased to 3,260 millions and during 1961 it is expected to reach 3,800 millions. Last year there were more than 354,000 scientific workers, about 11,000 of whom had a doctor's degree and 100,000 had a master's degree. There were 3,800 scientific establishments, including 1,500 research institutes. Academician Keldysh, president of the U.S.S.R. Academy of Sciences, outlined a new national research plan. He proposed that such a plan should be in three parts: the first to deal with economic problems at the experimental stage; the second for long-range projects aimed at solving already known problems; and the third to investigate the laws of Nature to open up new fields of progress. He described as "Task No. 1" the total electrification of the entire country. In that connexion the problem of finding new sources of power was of vital importance.

Oil Consumption in the United Kingdom during 1960

Following precedent, the Petroleum Information Bureau (on behalf of the U.K. Petroleum Industry Advisory Committee) has published recently statistics relative to oil consumption in Great Britain for 1960. (*U.K. Petroleum Industry Statistics relating to Consumption and Refinery Production 1959 and 1960*. Pp. 8. London: Petroleum Information Bureau, 1961.) The trend continues upwards, there being a 16·9 per cent increase in the total consumption of oil compared with 1959, reaching more than 42·5 million tons (excluding bunkers for ships engaged in foreign trade). Of the major oil products, fuel oil registered the greatest increase by more than 25 per cent over 1959, reaching a total of 17,437,805 tons. Gas/diesel oil deliveries were up by 13 per cent. Motor spirit consumption accounted for 7,625,184 tons, an increase of 7 per cent over the 1959 total. Diesel-engined road vehicle fuel (*DERV*) consumption rose by 13·5 per cent, a pointer to the growing demand for this commodity. As might also be expected, there was a remarkable uprise in the amount of chemical feedstock delivered, totalling 1,562,060 tons compared with 1,067,265 tons in 1959, representing a 46·4 per cent increment. This record reflects the magnitude of present-day commercial activities concerned with 'petro-chemicals' as distinct from traditional petroleum products, and at the present state of evolution of this now vital branch of the industry a commensurate increase in these 'by-products' may be anticipated confidently for 1961. There was in the year under review an increase in demand for bitumen, much of which was due to extension of the road-construction programme in so far as asphalt surfacing is concerned.

Shortage of Scientific Teachers in the United Kingdom

In answer to a question in the House of Commons on June 22, Sir David Eccles gave the number of vacancies at March 31, 1960, for teachers of mathematics in the technical colleges as 64 in an authorized establishment of 1,464; for physics the corresponding figures are 61 and 893, and for chemistry, 55 and 994. About 1,500 full-time women teachers employed in maintained grammar schools had degrees which included mathematics. Surveys made last year by the Incorporated Association of Headmasters and the

Association of Headmistresses showed that about 100 grammar, including maintained, independent and direct grant, schools had unfilled vacancies for teachers of mathematics. In addition, about 370 schools had posts which were not filled with teachers having satisfactory qualifications. About 225 graduates with at least a pass-level degree standard in mathematics out of nearly 3,100 students were at present taking the teacher's diploma in university departments of education. Of the 62 general training colleges for women, only 45 had full-time lecturers in mathematics and 14 had part-time lecturers. Five such colleges and 8 mixed colleges provided specialist courses in chemistry and physics; 6 colleges and 11 mixed colleges provided main courses with full-time lecturers in chemistry or physics; 51 women's colleges and 21 mixed colleges had no full-time lecturers in chemistry or physics.

Replying to further questions in the House of Commons on June 29 about the supply of teachers of science and mathematics, the Minister of Education, Sir David Eccles, said he believed that the universities now realized the importance of the problem. He had asked local education authorities last November to take the initiative in providing local courses for serving teachers in those subjects, such as mathematics, in which there was a shortage of well-qualified teachers. Institutes of education had been asked to collaborate closely and he would ask university extra-mural departments to consider if they could help. Industry was already lending many teachers of science and mathematics to the technical colleges. Research into methods of teaching mathematics in primary schools was being undertaken by the National Foundation for Educational Research, and close attention to this was also being given by the inspectorate, training colleges and university departments of education, teachers and local education authorities. Many local short courses for teachers being arranged resulted in setting up of study groups for informal research. Much experimental work was being carried out, and Sir David agreed to take a special interest in seeing that the results of these experiments were diffused throughout the teaching service.

Trade in European Birds for Caging

In the autumn of 1960 information was received from the chairman of the Belgian National Section of the International Council for Bird Preservation, Monsieur E. Kesteloot, of the considerable export of live wild birds to England, particularly goldfinches and serins. As outlined in the British Section's annual report for 1960 (Pp. 38+4 plates. London: International Council for Bird Preservation, British Section, c/o British Museum (Natural History), 1961. 3*s*.), these birds are exported both direct and also through Belgium from other countries. Though in Great Britain goldfinches and other birds may not be sold alive unless they are close-ringed specimens bred in captivity, there is reason to believe that this law is being evaded. In 1956–57 the Royal Society for the Protection of Birds successfully prosecuted three different dealers who had imported hawfinches and other birds from Belgium and forced close-rings on their legs. The British Section has set up a subcommittee, consisting of Guy Mountfort (chairman), Miss P. Barclay-Smith, P. J. Conder, R. H. Spencer and R. S. R. Fitter as honorary secretary, to make recommendations which will control this unfortunate practice. A request has also been made for the subject to be discussed by the Conference of the European Section of the International Council for Bird Preservation which is being held in Norway.

Science in Space

The publication of a report by the National Academy of Sciences—National Research Council, entitled *Science in Space* (Washington, D.C.: National Academy of Sciences—National Research Council, 1961), which consists of nine chapters (each published as a separate volume), has now been completed with the issue of the four remaining chapters (Chapters 1, 6, 8, 9). The report is divided as follows: Chapter 1, Dimensions and Problems: a general review; Chapter 2, The Nature of Gravitation; Chapter 3, The Earth; Chapter 4, The Moon; Chapter 5, The Planets; Chapter 6, The Sun; Chapter 7, Physics of Fields and Energetic Particles in Space; Chapter 8, Galactic and Extragalactic Astronomy, and Chapter 9, The Biological Sciences and Space Research. The aim of this report is to interest scientists working in the fields covered by the nine chapters of the report in the possibilities offered by space research. As such the report is of value since the major problems in each of the above fields are concisely discussed with reference to the relevance of research in space for their solution. In this connexion each chapter contains a short factual section relating these problems with our present knowledge of the respective field of study and a short bibliography of some of the more important recent references. However, since the background is surveyed so concisely and the outstanding problems are presented with such clarity and with the minimum of technicalities, the report could well serve as an introduction to some of the problems confronting astronomy and physics at the present time. In particular it could influence the young research worker in the choice of a fruitful field study. Each chapter (costing one dollar) can be obtained from the Publications Office of the National Academy of Sciences, 2101 Constitution Avenue N.W., Washington 25, D.C., but it is hoped to produce the report, revised and expanded, in book form published by the McGraw-Hill Book Co., Inc., New York.

British Museum (Natural History) : Recent Acquisitions

Among the more important recent acquisitions of the British Museum (Natural History) is the unique collection of British Microlepidoptera belonging to the late Mr. L. T. Ford. This collection, of upwards of 40,000 specimens, is stated to be the best of its kind in existence, its unique merit being the high proportion of material which was reared by Mr. Ford himself. Most species are represented by long series such as are indispensable for modern systematic research, and all are provided with full and accurate data. It forms the basis of Ford's published work.

Museum of Applied Science of Victoria

The report of activities of the Museum of Applied Science of Victoria for the year ended June 30, 1960, records progress in the construction of a new wing adjoining the Museum and also in the establishment of the Radiocarbon Dating Laboratory. (Pp. 23. Melbourne: Museum of Applied Science of Victoria, 1961.) The persistent difficulties with the latter work have now been overcome and the complicated equipment has functioned satisfactorily and age determinations of check specimens have been made. Several new major displays, including those illustrative of economic minerals and metals, economic botany, and the deterioration of timbers, have been set up. It should be noted that as from January 23 the name of this Museum has been changed to the Institute of Applied Science of Victoria.

Swimming Ability of Reptiles

SYSTEMATIC experiments have been carried out by R. R. Tercafs to test the swimming ability of non-aquatic reptiles (Bulletins de la Société Royale de Zoologie d'Anvers. No. 20. Pp. 19 (6 planches). Anvers: Société Royale de Zoologie d'Anvers, 1961). Among snakes, the following species have been studied: *Vipera verus, Boa canina, Thamnophis sauritus, Coronella austriaca, Chlorosoma schottii, Vipera ammodites* and *Eryx johnii.* The first two species cannot co-ordinate their movements, nor keep their heads out of water; the remaining species can swim very well, by movements similar to those they make on the ground. Some lizards (*Trachydosaurus rugosus, Tarentol mauritanica, Chamaeleo dilepis* and *Anguis fragilis*) have the same behaviour: they go forward in water by walking (thus using the same movements as on the ground). On the other hand, other species (*Lacerta viridis, Tiliqua scinoides, Lacerta muralis, Crocodilurus lacertinus, Iguana iguana* and *Tropidurus torquatus*) change their usual movements and swim in the same way as aquatic Caudata: they keep their members close to the body and go forward by waving with body and tail. The adaptation to swimming seems to be more ethological than morphological; the inability to swim of some reptiles might be explained by the lack of nervous co-ordination in response to stimuli in water; in the same way integration of these stimuli could explain the adaptation to swimming of some reptiles. Two adaptive stages exist, co-ordinated movements like the movements on the ground and swimming movements, identical with those of aquatic Caudata.

Reactions of Salt Solutions and Calcium Chloride on Mortar and Concrete

THE December issue of the *Australian Journal of Science*, 2, No. 4, December 1960) contains two significant communications to concrete specialists; one by J. A. Roberts and H. E. Vivian on "The Widening of Expansion Cracks in Mortar by Salt Solutions", the other by M. Lawrence and H. E. Vivian on "The Action of Calcium Chloride on Mortar and Concrete". In the former paper a new mechanism is described by which pre-existing cracks in mortar are enlarged and expanded by salt solutions, for example calcium nitrate and sodium silicate. Action of salt solutions tends to accelerate disintegration of concrete by opening of fine cracks therein, especially where the concrete is exposed to weathering conditions, for example roads. A conclusion is reached that concrete road-surfacings may be damaged by application of such salts as calcium chloride for the purpose of removing ice. It may be that certain aggregates may be similarly affected by salt reaction. In the second paper cited, it is shown that severe reaction, causing disruption of mortar and concrete, occurs when strong calcium chloride solution comes into contact with them. The disruption is similar to that caused by sulphate attack, but in this case it is considered to be due to formation of chloroaluminate, derived from the 'susceptible' compound in cement paste, tricalcium aluminate hydrate. It is anticipated that control of severe sulphate or chloride attack may develop from further work by employing "some method of rapidly modifying the susceptible hydration products of tricalcium aluminate and tetra-calcium alumino-ferrite to ensure that no reactable material is available after the cement sets".

U.S. National Science Foundation: Office of Antarctic Programs

AN Office of Antarctic Programs has been established within the National Science Foundation. This new Office replaces the Antarctic Research Program, formerly a part of the Foundation's Office of Special International Programs. Dr. Thomas O. Jones has been appointed head of the new Office. Dr. Albert P. Crary has been appointed chief scientist and will also serve as science adviser on Antarctica to the director, Dr. Alan T. Waterman. The Office of Antarctica Programs is responsible for the United States Antarctic Research Program, which is the name used in the field to include all U.S. scientific work carried out in Antarctica. Scientists from colleges, universities and Government agencies, working under sponsorship of the National Science Foundation, carry out research in biology, geodesy and cartography, geology, glaciology, meteorology, oceanography, upper atmosphere physics and seismology.

U.K. Courses in Nuclear Energy, 1961–63

A CATALOGUE entitled *Nuclear Studies* has been compiled by the Science Department of the British Council. This lists courses in pure and applied sciences concerning the use and development of nuclear energy which may be undertaken in the United Kingdom. These courses are full-time, and are generally of one week or more duration. The information provided by the catalogue includes notes on each of the courses and the institution at which it takes place; also the fee and the qualifications required for participation. Further information can be obtained from the Science Department, The British Council, 65 Davies Street, London, W.1.

Eleanor Roosevelt International Cancer Fellowships

THE International Union against Cancer, by means of funds made available by the Eleanor Roosevelt Cancer Foundation, will award annually fellowships for research on cancer. These are senior post-doctoral awards designed for the support of persons who, as full-time members of the staff of universities, teaching hospitals, research laboratories or other institutions, have demonstrated interest and ability or promise as independent investigators in the field of research on basic cancer, and who wish to broaden their experience by a period of study in another country. The duration of the fellowships ordinarily will be one year, but this period may be extended or shortened in special circumstances. The stipend will be based on the current salary of the applicant and the salary of persons of comparable qualifications in the place where the applicant expects to study. Application forms can be obtained from the International Union against Cancer, P.O. Box 400, Geneva 2.

Nutrition and Metabolic Defects

THE Nutrition Society is organizing a symposium on "Nutrition and Metabolic Defects", to be held at the Laboratory of Physiology, Oxford, on July 15. The programme will include the following subjects: historical aspects of inborn errors of metabolism, by Dr. H. M. Sinclair (Oxford); clinical aspects of inborn metabolic defects, by Dr. Philip Evans (London); nutrition in relation to phenylketonuria, by Dr. L. I. Woolf (Oxford); the metabolism of copper and Wilson's disease, by Prof. J. N. Cumings (London); chronic magnesium deficiency, by Dr. Paul Fourman (Cardiff); the possible role of dietary factors in the ætiology and pathogenesis of sprue, cœliac disease and idiopathic steatorrhœa, by Prof. A. C. Frazer (Birmingham). Further information can be obtained from Miss D. F. Hollingsworth, c/o Ministry of Agriculture, Fisheries and Food, Great Westminster House, Horseferry Road, London, S.W.1.

Royal Statistical Society

At the annual general meeting of the Royal Statistical Society, Prof. M. G. Kendall was re-elected president for the ensuing year. Dr. B. Benjamin, Dr. P. Armitage and Mr. B. P. Emmett were re-elected honorary secretaries, and Mr. C. T. Saunders honorary treasurer. Prof. David R. Cox, professor of statistics in the University of London (Birkbeck College), was awarded the Society's Guy Medal in silver.

Royal Society and Nuffield Foundation Commonwealth Bursaries

Awards under the Royal Society and Nuffield Foundation Commonwealth Bursaries Scheme have been made as follows:

Mr. L. G. Campbell, of the Imperial College of Tropical Agriculture, Trinidad, to enable him to study aspects of drainage and irrigation in Ontario and Alberta during July and August, 1961.

Dr. Rosalie F. Ewer, research associate, Rhodes University, to assist her to study fossil material of the early archosaur reptile *Euparkeria* at University College, London, for four months from September 1961.

Dr. K. A. Kermack, lecturer in zoology, University College, London, to enable him to examine in museums in South Africa specimens of reptiles which were the ancestors of the Mammalia and to make collections from the beds of Uppermost Triassic age in South Africa, from October 1961 for five months.
